Total.....	£99,433,965	£83,495,761

The following table gives the values of imports from foreign countries in 1898 and of the exports to them of British produce and manufactures:

FOREIGN COUNTRIES.	Imports.	Exports.
United States.....	£126,062,155	£14,710,480
France.....	51,396,793	13,706,240
Germany.....	28,534,159	22,525,987
Netherlands.....	28,532,904	6,618,710
Belgium.....	21,534,318	8,902,075
Russia.....	19,489,514	9,227,968
Spain.....	13,188,258	2,847,698
Egypt.....	8,855,689	4,419,078
China.....	2,668,034	5,089,264
Brazil.....	4,101,773	6,190,286
Italy.....	3,332,213	5,647,707
Sweden.....	9,738,681	3,968,470
Turkey.....	4,890,792	6,118,316
Argentine Republic.....	7,788,832	5,586,278
Denmark.....	11,708,384	3,337,743
Portugal.....	3,448,056	1,529,009
Roumania.....	2,579,601	1,333,284
Chili.....	3,638,552	1,690,505
Japan.....	1,158,184	4,918,126
Norway.....	4,986,500	2,440,729
Java.....	406,943	1,915,082
Greece.....	1,448,859	1,139,712
Foreign West Africa.....	563,597	1,094,023
Austria.....	1,135,482	1,371,874
Peru.....	1,537,428	305,733
Central America.....	1,170,801	550,049
Uruguay.....	392,014	1,256,110
Spanish West Indies.....	15,464	273,841
Mexico.....	264,022	1,751,503
Philippine Islands.....	1,496,594	215,178
Colombia.....	635,488	789,692
Venezuela.....	45,570	468,822
Algeria.....	675,306	300,749
Morocco.....	399,068	433,135
Ecuador.....	267,164	323,454
Hayti and Santo Domingo.....	91,483	185,323
Tunis.....	231,064	295,136
Foreign East Africa.....	91,586	1,210,065
Persia.....	193,291	317,845
Siam.....	63,749	211,175
Bulgaria.....	94,732	302,705
Madagascar.....	30,880	34,804
Cochin China and Tonquin.....	51,459	78,393
All other countries.....	1,541,234	1,597,165
Total.....	£370,944,628	£149,932,470

The imports of live animals for food were £10,385,676 in value in 1898 and £9,515,012 in 1899; articles of food and drink free of duty, £106,913,341 in 1898 and £109,140,654 in 1899;

articles of food and drink paying duty, £26,817,470 in 1898 and £26,375,134 in 1899; tobacco, £3,887,010 in 1898 and £5,616,458 in 1899; metals, £21,852,381 in 1898 and £28,263,843 in 1899; chemicals, colors, and tan, £5,484,420 in 1898 and £5,768,890 in 1899; oils, £8,356,405 in 1898 and £9,688,760 in 1899; raw textile materials, £71,268,713 in 1898 and £65,683,636 in 1899; raw materials for sundry industries and manufactures, £52,226,006 in 1898 and £56,666,589 in 1899; manufactured articles, £97,076,479 in 1898 and £91,293,485 in 1899; miscellaneous articles, £14,797,076 in 1898 and £15,914,563 in 1899; imports by parcel post, £1,313,606 in 1898 and £1,139,490 in 1899. The exports of live animals were £1,103,984 in value in 1898 and £1,003,075 in 1899; articles of food and drink, £12,104,608 in 1898 and £12,568,666 in 1899; raw materials, £21,076,823 in 1898 and £26,581,956 in 1899; yarns and textile fabrics, £94,508,128 in 1898 and £99,454,533 in 1899; metals and metal manufactures other than machinery, £32,746,700 in 1898 and £40,912,443 in 1899; machinery and mill work, £18,389,978 in 1898 and £19,650,881 in 1899; ships not registered as British, not recorded prior to 1899 and in that year, £9,195,192; apparel and articles for personal use, £9,577,084 in 1898 and £9,554,511 in 1899; chemicals and chemical and medicinal preparations, £8,389,215 in 1898 and £8,855,523 in 1899; all other articles either manufactured or partly manufactured, £33,322,075 in 1898 and £35,016,514 in 1899; exports by parcel post, £2,139,680 in 1898 and £2,467,353 in 1899. The imports of wheat, not including flour, were 15,569,370 quarters in 1899, against 15,240,000 quarters in 1898, 14,656,600 quarters in 1897, 14,063,760 quarters in 1896, 12,752,800 quarters in 1895, and 7,131,100 quarters in 1870. Including flour, the imports of cereals were 194,297,707 hundredweight in 1899, against 191,827,817 hundredweight in 1898, and 179,762,948 hundredweight in 1897. The imports of wheat in 1899 were 17,151,730 hundredweight from British possessions and 49,485,248 hundredweight from foreign countries. Of the total 34,650,640 hundredweight came from the United States, 11,368,600 hundredweight from the Argentine Republic, 8,192,200 hundredweight from India, 5,256,500 hundredweight from Canada, 3,703,030 hundredweight from Australia and New Zealand, 2,518,800 hundredweight from Russia, 466,030 hundredweight from Germany, 265,600 hundredweight from Chili, 32,100 hundredweight from Roumania, and 27,300 hundredweight from Turkey. The quantity of flour imported was 22,945,708 hundredweight, of which the United States supplied 18,405,790 hundredweight. The imports of tea in 1898 were 271,593,000 pounds. In 1878 China supplied 80.85 per cent. of the tea imported into the United Kingdom, India 17.29 per cent., the Netherlands 1.54 per cent., and other countries 0.32 per cent. In 1899 the proportion of India was 51.38 per cent., while Ceylon sent 35.94 per cent., China only 9.91 per cent., the Netherlands 1.37 per cent., and other countries 1.40 per cent. The imports of potatoes in 1899 were 5,157,811 hundredweight; of rice, 5,749,223 hundredweight; of bacon and hams, 7,783,204 hundredweight; of fish, 2,482,693 hundredweight; of refined sugar, 17,808,100 hundredweight; of raw sugar, 13,121,709 hundredweight; of tea, for consumption, 242,560,814 pounds; of butter, 3,389,851 hundredweight; of margarine, 953,175 hundredweight; of cheese, 2,389,313 hundredweight; of beef, 3,980,805 hundredweight; of preserved meat, 652,424 hundredweight; the number of sheep and lambs, 607,755; the number of cattle, 503,504; imports of eggs, 16,174,760 great hun-

dreds; of spirits, for consumption, 8,643,661 proof gallons; of wine, for consumption, 16,661,975 gallons. The value of the grain and flour imported was £62,909,264 in 1898 and £58,088,561 in 1899; of raw cotton, £34,125,554 in 1898 and £27,073,039 in 1899; of wool, £22,437,188 in 1898 and £23,579,769 in 1899; of sugar, raw and refined, £17,222,001 in 1898 and £18,058,928 in 1899; of butter and margarine, £18,346,167 in 1898 and £19,762,892 in 1899; of timber and wood, £21,283,947 in 1898 and £22,890,645 in 1899; of silk manufactures, £16,623,210 in 1898 and £16,109,583 in 1899; of flax, hemp, and jute, £9,042,711 in 1898 and £9,248,421 in 1899; of tea, £10,335,643 in 1898 and £10,751,164 in 1899; of woollen manufactures and yarn, £11,901,747 in 1898 and £12,173,292 in 1899; of seeds, £6,012,692 in 1898 and £6,277,100 in 1899; of fruits and hops, £8,000,942 in 1898 and £7,971,590 in 1899; of currants and raisins, £1,965,532 in 1898 and £2,130,800 in 1899; of leather and dressed hides and skins, £7,778,261 in 1898 and £8,581,310 in 1899; of wine, £6,575,691 in 1898 and £5,632,647 in 1899; of cheese, £4,970,242 in 1898 and £5,515,091 in 1899; of copper ore and regulus, £2,614,188 in 1898 and £3,514,736 in 1899; of copper partly wrought, £3,597,665 in 1898 and £4,313,455 in 1899; of iron ore, £4,034,048 in 1898 and £5,375,038 in 1899; of iron in bars, £556,549 in 1898 and £577,358 in 1899; of iron manufactures, £7,321,577 in 1898 and £7,905,415 in 1899; of lead, £2,521,356 in 1898 and £2,888,837 in 1899; of tin, £1,389,601 in 1898 and £3,298,182 in 1899; of zinc and zinc manufactures, £1,920,291 in 1898 and £2,257,311 in 1899; of eggs, £4,457,117 in 1898 and £5,044,392 in 1899; of coffee, £3,590,871 in 1898 and £3,470,796 in 1899. The value of cotton manufactures exported in 1898 was £55,977,506 and of cotton yarn £8,923,272, making a total of £64,900,777, whereas in 1899 the export of cotton fabrics was £50,501,957 and of yarn £8,054,664, a total of £58,556,621. The exports of woollen manufactures were £13,699,435 in 1898 and of woollen yarn £6,443,739, a total of £20,143,174, and in 1899 the figure for woollen manufactures was £14,784,837 and for yarn £6,723,023, a total of £21,507,860. The exports of linen manufactures were £4,392,854 in value in 1898 and £5,075,280 in 1899; of linen yarn, £885,330 in 1898 and £909,012 in 1899; of jute manufactures, £1,854,567 in 1898 and £1,962,860 in 1899; of jute yarn, £469,165 in 1898 and £460,860 in 1899; of apparel and haberdashery, £6,200,179 in 1898 and £6,170,083 in 1899. The value of the exports of pig iron was £2,739,093 in 1898 and £4,784,357 in 1899; of bar, angle, bolt, and rod iron, £993,973 in 1898 and £1,227,336 in 1899; of railroad iron of all sorts, £3,011,645 in 1898 and £3,130,512 in 1899; of wire, £772,604 in 1898 and £888,201 in 1899; of tin plates, £2,744,077 in 1898 and £3,167,683 in 1899; of hoops, sheets, and plates, £3,311,557 in 1898 and £4,053,790 in 1899; of cast and wrought iron of all sorts, £4,732,459 in 1898 and £5,232,098 in 1899; of old iron, £238,561 in 1898 and £390,524 in 1899; of steel and manufactures part of iron, £4,086,693 in 1898 and £5,218,279 in 1899. The value of hardware and cutlery exported in 1898 was £1,986,692, and £2,140,236 in 1899; of copper, £2,796,739 in 1898 and £3,748,766 in 1899; of machinery, £18,389,973 in 1898 and £19,650,881 in 1899; of coal, pressed fuel, etc., £18,135,502 in 1898 and £23,105,691 in 1899. The value of goods transhipped in transit in 1898 was £9,792,635, against £10,752,108 in 1897, and £10,266,379 in 1896.

The value of gold imports in 1899 was £32,533,497, and of gold exports £21,536,052; of silver

imports £12,727,960 and of silver exports £13,955,132. In 1898 the gold imports were £43,722,960 and exports £36,590,050, the silver imports £14,677,799 and exports £15,023,651. In 1897 the gold imports were £30,808,858 and exports £30,808,571, the silver imports £18,032,000 and exports £18,780,988. In 1896 the gold imports were £24,468,337 and exports £30,123,025, the silver imports £14,329,116 and exports £15,048,134.

Navigation.—The total number of vessels that entered the ports of the United Kingdom during 1898 was 358,030, of 100,547,373 tons; the total number cleared, 355,107, of 100,300,683 tons. This includes 293,285, of 55,422,029 tons, entered coastwise and 290,688 coasting vessels, of 54,462,061 tons, cleared. The number of vessels engaged in foreign commerce entered at British and Irish ports during 1898 was 64,745, of 45,125,000 tons, of which 38,722, of 31,857,000 tons, were British and 26,023, of 13,268,000 tons, were foreign. The number cleared was 64,419, of 45,839,000 tons, of which 38,360, of 32,360,000 tons, were British and 26,059, of 13,479,000 tons, were foreign. The tonnage of vessels entered with cargoes was 34,516,000, of which 25,172,000 tons were British and 9,344,000 tons were foreign. The tonnage cleared with cargoes was 39,463,000, of which 27,950,000 tons were British and 11,503,000 tons foreign. The total tonnage entered and cleared was 73,979,000, and of this 53,131,000 tons were British. The foreign tonnage entered and cleared with cargoes amounted to 20,847,000 tons. With cargoes and in ballast the total foreign tonnage entered and cleared was 26,747,238, and of this Norway had 6,604,693 tons, Germany 4,539,912 tons, Denmark 2,828,918 tons, Sweden 2,728,160 tons, the Netherlands 2,614,124 tons, France 2,027,726 tons, Spain 1,377,669 tons, Belgium 1,404,946 tons, Russia 790,397 tons, Italy 643,926 tons, the United States 314,445 tons, and Austria-Hungary 247,790 tons. The tonnage entered and cleared at the port of London was 15,003,187 tons; at Liverpool, 11,373,277 tons; at Cardiff, 7,887,007 tons; at Newcastle, 5,218,879 tons; at Hull, 4,237,958 tons; at Glasgow, 3,527,277 tons; at Southampton, 2,843,406 tons; at North and South Shields, 2,372,041 tons; at Leith, 1,835,444 tons; at Sunderland, 1,806,202 tons; at Middlesboro, 1,708,011 tons; at Swansea, 1,659,696 tons; at Grimsby, 1,654,980 tons; at Kirkcaldy, 1,515,467 tons; at Newport, 1,497,192 tons; at Grangemouth, 1,345,120 tons; at Bristol, 1,076,875 tons; at Manchester, 1,041,528 tons; at Hartlepool, 696,416 tons; at Belfast, 513,509 tons; at Dundee, 260,321 tons.

The number of vessels registered as belonging to the United Kingdom on Jan. 1, 1899, was 20,404, of 9,001,860 tons, of which 11,556, of 2,387,943 tons, were sailing vessels and 8,838, of 6,613,917 tons, were steamers. The number of vessels engaged in the home and foreign trade in 1898 was 15,207, of 9,080,728 tons. The number of seamen employed was 242,553, of whom 35,308 were foreigners. The total number of vessels belonging to the British Empire was 35,000, of 10,460,643 tons. The number of vessels built and first registered during 1898 was 1,370, of 695,997 tons, of which 665, of 41,839 tons, were sailing vessels and 705, of 654,158 tons, were steamers. Besides these 179 merchant vessels, of 167,879 tons, were built by foreigners, comprising 31 sailing vessels, of 3,051 tons, and 148 steamers, of 164,828 tons. Of the total number of vessels belonging to the United Kingdom, 6,521 sailing vessels, of 407,626 tons, and 3,102 steamers, of 438,382 tons, were employed in the home trade and the coasting trade between the mouth of the Elbe and Brest; 199 sailing vessels, of 26,174 tons, and 320 steamers,

of 265,144 tons, were employed partly in the home and partly in the foreign trade; and 1,388 sailing vessels, of 1,878,896 tons, and 3,677 steamers, of 6,064,506 tons, were employed in the foreign trade altogether. The crews of the sailing vessels in the home trade numbered 26,989 men, in those partly in the foreign trade 1,115 men, of those in the foreign trade alone 31,063, of the steamers in the home trade, 35,682 men, of those partly in the foreign trade 6,722 men, of those in the foreign trade alone, 140,982 men.

Railroads, Posts, and Telegraphs.—The total length of railroads open to traffic in the United Kingdom on Jan. 1, 1899, was 21,659 miles, of which 15,007 miles were in England and Wales, 3,476 miles in Scotland, and 3,176 miles in Ireland. The paid-up share and loan capital amounted to £1,134,468,462. The number of passengers carried during 1898 was 1,062,911,116, exclusive of holders of season tickets. The receipts from all sources were £96,252,501, of which £41,847,074 came from passengers and £49,218,964 from freight. The working expenses were £55,960,543, being 58 per cent. of the gross receipts. There were on June 30, 1898, 1,064 miles of tramways, the receipts of which for the year were £4,500,126 and expenses £3,507,895; number of passengers carried, 858,485,542; paid-up capital, £15,920,404; net receipts, £1,052,231.

The number of letters that passed through the British post office during the year ending March 31, 1899, was 2,186,800,000, of which 1,859,700,000 were delivered in England and Wales, 190,600,000 in Scotland, and 136,500,000 in Ireland, being 54 letters per head of population for the whole United Kingdom, 59 letters per head in England and Wales, 45 per head in Scotland, and 30 per head in Ireland. The number of postal cards carried by the post office in 1899 was 382,200,000; book packets, 701,500,000; newspapers, 154,100,000; parcels, 71,900,000; money orders, 11,475,201; for the total amount of £33,278,517, of which 9,721,047, for £28,604,078, were inland orders; of postal orders, 76,755,217, for the gross amount of £27,217,436. The receipts of the postal service were £13,049,317 and the expenses £9,194,437, leaving a net revenue of £3,854,880. The telegraph receipts were £3,260,145 and expenses £3,477,949, leaving a deficit of £217,804, not including £298,888 interest on the debt created for the purchase of the telegraph lines in 1870. The telegraph lines had on March 31, 1899, a total length of 43,803 miles, with 309,629 miles of wire. The number of messages sent during the year was 87,043,652, of which 73,249,702 were sent in England and Wales, 9,064,629 in Scotland, and 4,729,321 in Ireland.

Dependencies.—The total area of the British Empire was estimated in 1899 at 11,726,217 square miles and the total population at 385,782,293. The area and population of British colonies is given in the table on page 278.

The area of the colonies added to that of the United Kingdom and India makes 9,445,017 square miles, with a total population of 349,552,293. The British protectorates in Africa have an estimated area of 2,160,000 square miles, with 35,000,000 population; protectorates in the Pacific, 800 square miles, with 30,000 population; protectorates in Asia, 120,400 square miles, with 1,200,000 population; total area of protectorates, 2,281,200 square miles, with 36,230,000 population.

The colonies and dependencies not elsewhere treated of (see AUSTRALASIA, BRITISH COLUMBIA, CANADA, CAPE COLONY, EAST AFRICA, INDIA, NEWFOUNDLAND, WEST AFRICA, WEST INDIES) are described below.

Gibraltar is a Crown colony and military and naval station at the entrance of the Mediterranean. The Governor, Gen. Sir Robert Biddulph in 1900, is commander in chief and has full executive and legislative power. The area is about 2 square miles, containing 24,093 inhabitants in 1898, including the garrison of 4,065 men. The local revenue in 1898 was £56,019; expenditure, £48,878; military expenditure of the British Government, £256,552.

Malta is a naval and refitting station in the Mediterranean and an important port of call. Owing to its malarial climate and the smallness of the harbor it has been partly superseded as a naval base by Gibraltar, where enormous docks have been made. Lieut.-Gen. Sir Francis Wallace Grenfell was Governor in 1900. The revenue in 1898 was £332,488; expenditure, £339,082. Cotton, potatoes, oranges, figs, honey, and corn are produced and cotton cloth, filigree, and matches are manufactured. The imports in 1898 were valued at £10,025,131, and exports at £9,379,140; but it was mainly transit trade, the imports for home consumption being only £828,567. Vessels entered, 3,890, of 3,563,728 tons; cleared, 3,874, of 3,581,993 tons. There are 8 miles of railroads, 65 miles of telegraphs, and 360 miles of telephones. The area of the island, with Gozo and Comino, is 117 square miles; population, 180,328.

Cyprus, an island off the coast of Syria, is administered by Great Britain under a convention concluded with Turkey on June 4, 1878. The High Commissioner, Sir William F. Haynes Smith in 1900, is assisted by a Legislative Council composed of 6 official members, 9 members elected by the Christian population, and 3 members elected by Mohammedans. The Christians, mostly Greek Orthodox, numbered 161,360 in 1891 and the Mohammedans 47,926. The birth rate is 33.4 per mille; death rate, 24. The revenue for the year ending March 31, 1899, was £210,284; expenditure, £132,973. Tithes of produce paid in kind, land and house taxes, taxes on trade profits, the

military exemption tax, a tax on sheep, goats, and pigs, customs, excise, stamps, fees, and the salt monopoly, supply the revenue as under Turkish rule. The sum of £92,000 is paid annually to Turkey under the convention. The public debt consists of an advance from the British treasury in 1899 of £314,000 for harbors, railroads, and irrigation. A grant of £33,000 was voted by Parliament in 1899 in aid of revenue. The principal products are wheat, barley, olives, cottons, wine, raisins, fruits, vegetables, carobs, linseed, cocoons, cheese, wool, and hides. There were 62,174 horses and asses, 47,242 cattle, 289,155 sheep, and 265,706 goats in 1898. There are valuable gypsum quarries and a sponge fishery yielding £30,000 per annum to sponge fishers from other countries. The value of imports in 1899 was £288,258; exports, £343,687.

Aden, a volcanic peninsula on the Arabian coast near the Strait of Bab el Mandeb, is a strongly fortified coaling station on the Suez Canal route to the East. The island of Perim, at the entrance of the Red Sea, and a part of the mainland opposite belong to the colony, which is administered under the direction of the Governor of Bombay by a political Resident, who has command of the troops. The area is 75 square miles, and that of Perim 5 square miles; population, 41,010. Coffee and tobacco, partly the produce of Arabia, and gums and skins from the opposite African coast, are exported. The imports by sea in 1899 were 38,992,990 rupees in value; by land, 1,651,236 rupees; exports by sea, 31,638,659 rupees; by land, 1,651,236 rupees; precious metals, 5,191,961 rupees. The number of vessels entered in 1899 was 1,395, of 2,636,294 tons, not counting 1,527 dhows, of 47,325 tons. The local revenue, derived from liquor, opium, and salt, was £388,507 in 1899; expenditure, £387,060. The island of Sokotra, off the coast of Africa, 1,382 square miles in extent, with 12,000 inhabitants, pastoral nomads and fisher folk, producing dates, gums, sheep, goats, and cattle, is attached to Aden. So, also, are the Kuria Muria Islands, near the coast of Arabia, a cable landing, yielding only guano.

The *Bahrain Islands*, in the Persian Gulf, where there are valuable pearl fisheries, are a British protectorate. The area is about 200 square miles, the population 25,000. The imports in 1898 were valued at £551,728; exports, £496,305.

British North Borneo, a protectorate administered by a chartered company, has an area of 31,106 square miles and about 175,000 inhabitants. The protectorate has been extended over Tambunan, about 500 square miles in extent, with 25,000 inhabitants. The jurisdiction of the Governor, Hugh Charles Clifford in 1900, extends also over the island of Labuan, which has an area of 50 square miles and 5,853 inhabitants. The Government has granted large tracts in North Borneo on perpetual leases to planters of Sumatra tobacco, coffee, cocoanut palms, Manila hemp, pepper, and gambier. The revenue in 1898 was £503,307 from ordinary sources and £2,214 from sales of land; expenditure, £387,261. The imports were £2,831,851 in value; exports, £2,419,087. The value of tobacco was £1,388,666. Other exports are timber, sago, rattan, gutta-percha, gums, coffee, wax, trepang, edible birds' nests, pepper, and gambier. There is a military force of 350 native soldiers. The sultanate of Brunei, 15,000 square miles in extent, with 45,000 inhabitants, and the territory of Sarawak, 50,000 square miles in extent, with 500,000 inhabitants, are under British protection. The products of Sarawak are the same as in North Borneo. Coal is mined and exported. The total value of imports in 1898 was £4,488,497; exports,

£4,686,401. The revenue was £638,188; expenditure, £543,506. The military force is 250 men. Import duties are levied on kerosene, spirits, tobacco, and salt, and export duties on gambier, sago, jungle products, and dried fish.

Ceylon has a representative system of government, and in the Legislative Council of 17 members are 8 representatives of different races and classes of the population. The Governor in 1900 was Sir Joseph West Ridgeway. The area is 25,333 square miles, and the population was estimated in 1898 at 3,448,752, consisting of 6,577 Europeans, 24,071 burghers descended from Europeans, 2,195,947 Singhalese, 993,856 Tamils, including recent immigrants from southern India, 11,119 Malays, 207,425 Moors or Mohammedans other than Malays, 810 Veddahs, the remnant of the aborigines, and 8,947 others. The birth rate is 38.2, the death rate 26.2 per mille. The once flourishing coffee plantations have disappeared; now the tea culture is flourishing, and the English planters have developed the most advanced and scientific mechanical processes for treating the leaf. Tamils are brought over from India to work on the plantations for a fixed term of years. The arrivals in 1898 were 136,864; departures, 105,706. The revenue for 1898 was 25,138,669 rupees; expenditure, 22,843,852 rupees. The population of Colombo, the capital, is about 30,000. The naval station of Trincomalee, on the east coast, is the headquarters of the British fleet in Indian waters. The colony pays to the Imperial Government 1,884,934 rupees a year as the cost of the military garrison. Of the total area of 16,233,000 acres, 2,231,948 acres are cultivated and 826,427 acres are pasture land, feeding 4,127 horses, 1,310,447 cattle, 83,620 sheep, and 163,987 goats. The tea plantations occupy 424,856 acres; rice and other grains, 753,872 acres; coconut plantations, 864,296 acres; coffee plantations, 19,023 acres; cinnamon plantations, 46,117 acres; cacao plantations, 33,260 acres; tobacco plantations, 11,127 acres. There are 1,692 plumbago mines and 412 mines for precious stones. The total value of imports in 1898 was 97,893,059 rupees, and of exports 95,097,692 rupees. Rice and grain, coal, cotton goods, salt fish, and spirits are the leading imports. The export of tea was valued at 47,734,252 rupees; coconut products, 16,904,955 rupees; plumbago, 7,174,770 rupees; areca nuts, 1,160,838 rupees; coffee, 878,693 rupees. The exports of coffee, owing to the ravages of disease among the plants, fell from 824,509 hundredweight in 1879 to 12,692 hundredweight in 1898, while those of tea increased from 2,392,975 pounds in 1884 to 122,395,518 pounds in 1898. The export of cacao has increased from 7,466 hundredweight in 1885 to 38,099 hundredweight in 1898. In 1899 a revenue of 25,913,141 rupees was collected, giving a surplus of 962,202 rupees over expenditure. In 1900 a still greater increase of revenue was obtained, and for 1901 it was estimated at 26,320,000 rupees.

Hong-Kong, a Crown colony, was acquired from China in 1841. The Governor in 1900 was Sir Henry A. Blake. The peninsula of Kaulung, opposite the island of Hong-Kong, was ceded to Great Britain in 1861, and in 1898 an extension inland embracing about 400 square miles, with 100,000 inhabitants, was leased for ninety-nine years. The new territory was occupied in August, 1899. The estimated population of the old settlement was 254,400 in 1898, of whom 15,190 were whites, including about 7,000 of Portuguese origin. There were about 5,000 British, and the rest were Germans, Americans, French, Spanish, Italians, Turks, etc. The police and military are largely composed of East Indians. The male whites outnumber the

females more than three to one, and the discrepancy is nearly as great among the Chinese. There is a constant immigration from China and an emigration of Chinese to various parts of the world. The arrivals of Chinese in 1898 numbered 60,432; departures, 105,441. The ordinary revenue in 1898 was £2,672,107; premiums from land and water account, £246,050; ordinary expenditure, £2,607,424; expenditure for defensive works and water account, £234,381. The receipts from land tax, licenses, and the opium monopoly exceed the expenses of administration, but the maintenance of a strong body of police requires a heavy expenditure. The public debt of £341,800 was incurred for water works, fortifications, and sanitary works. The military contribution of the colony in 1898 was £519,275. Hong-Kong is the center of the Indian opium trade with China, and to a great extent of the Chinese tea and silk export trade and of the import trade in cotton goods, kerosene, flour, and all kinds of Western products and manufactures; also of the trade in salt, earthenware, amber, sandalwood, ivory, betel, sugar, and many other articles. It is a free port and keeps no record of imports and exports. Of British manufactures £1,224,158 worth of cotton goods and yarns were imported in 1898, £210,618 worth of woolen goods, £208,534 worth of iron, £77,058 worth of machinery, and £25,684 worth of copper. The exports to Great Britain of tea were valued at £80,821; of silk, £134,647; of hemp, £270,990; of preserved fruits, £42,966. The merchant shipping of the colony on Jan. 1, 1899, consisted of 23 sailing vessels, of 6,928 tons, and 37 steamers, of 19,555 tons. The number of vessels entered during 1898 was 5,539, of 6,539,702 tons, not counting 20,466 junks, of 1,814,281 tons. There are about 52,000 native vessels in Hong-Kong, of 1,300,000 tons. A mint has been established, in which \$1,421,487 in silver dollars and half dollars have been coined. The total coin in circulation—Mexican, Chinese, and British—is about \$22,600,000, and the bank notes amount to \$10,000,000. Hong-Kong is the headquarters of the British fleet on the China station. The dockyard is being extended.

Wei-Hai-Wei, a naval harbor on the peninsula of Shantung, was leased to Great Britain on July 1, 1898, for a period to be determined by the termination of Russia's occupation of Port Arthur. The lease includes the port and bay, with the islands in the bay, and a strip of 10 miles inland from the shore. The old defenses were destroyed by the Japanese. New fortifications are being constructed on the island of Liu-Kung. A Chinese regiment has been recruited and trained, to form with a British contingent the permanent garrison. In a zone beyond the limit of British jurisdiction Great Britain has the right to erect defensive works and acquire sites for water supply and communications.

The *Straits Settlements*, comprising Singapore, Penang, and Malacca, form a Crown colony which was taken away from the control of the Indian Government in 1867. Sir F. A. Swettenham, Resident General for the Federated Malay States, is acting Governor. The island of Singapore has an area of 206 square miles; the island of Penang, 107 square miles; Province Wellesley, on the western side of the Malayan peninsula, 270 square miles; Malacca, on the western coast also, about 500 square miles; the Dindings, 389 square miles. The population of Singapore in 1891 was 184,554; of Penang, 235,618; of Malacca, 92,170; total, 512,342, comprising 5,290 European males and 1,299 females, 3,409 Eurasian males and 3,648 females, and 335,852 Asiatic males and 162,844 females.

The Asiatic population consisted of 213,073 Malays, 227,989 Chinese, and 53,927 natives of India. The number of Chinese immigrants in 1898 was 150,529; of Indian immigrants, 19,026, of whom 2,989 were indentured; returned to India, 11,500. The revenue of the colony in 1898 was \$5,071,282; expenditure, \$4,587,372. There are no duties levied on either imports or exports, and the trade of Singapore is principally in transshipment of the products of the islands of the Indian Archipelago and those of the Malayan peninsula and of goods destined for those places. The value of the imports in 1898 was \$248,110,547, of which \$31,904,164 came from Great Britain, \$84,570,258 from British possessions, and \$131,636,125 from other countries; value of exports, \$212,308,029, of which \$28,385,028 went to Great Britain, \$33,580,296 to British possessions, and \$150,342,705 to other countries. The principal exports are tin, sugar, pepper, nutmegs, mace, sago, tapioca, rice, buffalo hides, rattan, gutta-percha, rubber, gambier, gums, copra, coffee, dyes, and tobacco. Rice was imported of the value of \$28,059,813; cotton cloth, \$13,396,302; opium, \$10,129,302; fish, \$5,774,730; coal, \$5,666,640; tobacco, \$4,347,915; kerosene, \$1,967,992. The value of tin exported was \$32,296,134; spices, \$12,555,422; gums, \$12,808,503; sago and tapioca, \$5,537,661; gambier, \$5,847,282; copra, \$4,910,205; rattan, \$4,083,597. The number of vessels entered during 1898 was 8,922, of 6,331,790 tons, exclusive of 15,509 native vessels, of 604,751 tons; the number of vessels cleared was 8,915, of 6,329,652 tons, exclusive of 15,601 native craft, of 616,357 tons. The post office received 3,238,110 letters, etc., in 1898 and dispatched 3,422,858. The standard of value is the Mexican dollar, as proclaimed in 1895, and the British and Hong-Kong dollars are also legal tender. The export of tin from Perak amounted in 1898 to 19,703 tons; from Selangor, 16,301 tons; from Negri Sembilan, 2,455 tons. Mines are worked also in Pahang. The tin exported from the protected states in 1899 was valued at \$46,139,399, and besides this coffee was exported for \$530,232 and sugar for \$1,283,165. The total value of exports reached \$54,895,139, while the imports were valued at \$33,765,073. With the growth of commerce the revenue keeps pace, amounting to \$13,486,410 in 1899, compared with \$9,304,467 in 1898 and \$8,434,083 in 1896, the first year of federation, while in 1891 the combined revenues of the 4 states amounted to \$4,572,310. The increased value of exports is mainly attributable to the high price of tin, also the remarkable expansion of revenue, as the export duty is a progressive one, higher in proportion to value when the price of tin is higher. A regiment of native riflemen has been raised. The police force consists of 2,000 Malays, Sikhs, and Punjabis. Lands have been sold to planters under an enactment of 1897, and the revenue obtained from this source was \$730,013 in 1899. The Europeans have planted cocoanut palms and rubber as well as coffee, and are endeavoring to get laborers from India. Alluvial tin is obtained by hydraulic mining. Companies have been formed recently to dredge the rivers for either tin or gold. Laborers have become so scarce, both for public works and private enterprises, that double or treble the former wages are paid for either Chinese or Indian labor. The Tamils of India can not be induced to immigrate even by a free passage and high wages, and for Chinese laborers engaged for a term of years the Government offers a bounty of \$5 a head.

The Federated Malay States of Perak, Selangor, Negri Sembilan, and Pahang are under British protection. British Residents, assisted by a staff

of European officers, aid and direct the native authorities; the supreme legislative and executive functions being vested in each state in the State Council, composed of the superior British and native officials. The area of Perak is about 10,000 square miles, with 214,254 inhabitants; Selangor, 3,500 square miles, with 81,592 inhabitants; Negri Sembilan, comprising Sri Menanti, Johol, Jelebu, Rembau, and Tampin, 3,000 square miles, with 41,617 inhabitants; besides 23,602 in Sungei Ujong, which was placed under the same Resident in 1895; Pahang, 10,000 square miles, with 57,482 inhabitants. By a treaty concluded in July, 1896, the 4 protected states were federated under the general administration of a Resident General, and the states agreed to furnish troops for the defense of the colony in the event of a war between Great Britain and any foreign power. The state of Johor, having an area of about 9,000 square miles and 200,000 population, placed its foreign relations in the hands of the British Government in 1885. Coffee of the Liberian variety, pepper, sugar, rice, gambier, sago, and tapioca are produced in the native states and in British territory, and the states on the western coast of the peninsula furnish a great part of the world's supply of tin. The mines are owned and worked mostly by Chinese, and the duty on exports of tin yields the bulk of the abundant revenue of the natives states. Gold is also obtained, and 22,160 ounces were exported from Pahang alone in 1898. The revenue of Perak in 1898 was \$4,575,842, and expenditure \$5,560,529; revenue of Selangor \$3,862,439, and expenditure \$4,470,843; revenue of Negri Sembilan \$701,334, and expenditure \$730,859; revenue of Pahang \$224,856, and expenditure \$372,719.

Mauritius, an island in the Indian Ocean east of Madagascar, was a French colony before the Napoleonic wars. The Governor, Sir Charles Bruce in 1900, is assisted by a Council of Government consisting of 27 members, of whom 10 are elected. Of the estimated population of 378,872 on Dec. 31, 1898, the general population numbered 117,650, including 3,389 Chinese. The creoles of French extraction are the original proprietors, and the bulk of the fixed population consists of African natives and mixed races. The Indian coolies and other laborers working under indentures on the sugar plantations or settled in the island numbered 261,222. The population at the end of 1899 was 379,659, and of the total 261,739 were Indians, of whom 62,387 were immigrants and the rest were born in the island. The number of arrivals in 1897 was 426; of departures, 917. The property in St. Louis, the capital, which had 55,645 inhabitants, and the lands of the island are rapidly passing into the possession of East Indians and Chinese. The revenue in 1898 was 7,620,320 rupees; expenditure, 8,131,470 rupees; debt, £1,195,690. The merchandise imports in 1898 were valued at 24,006,970 rupees; exports, 27,537,930 rupees. The chief exports were raw sugar, 24,727,690 rupees; rum, 85,800 rupees; vanilla, 140,100 rupees; aloe fiber, 427,130 rupees; cocoanut oil, 59,180 rupees. The trade is mainly with South Africa, Australia, and India. The number of vessels entered in 1898 was 302, of 327,246 tons; cleared, 293, of 328,298 tons. The length of railroads is 105 miles, and there are 135 miles of telegraph and cable communication with Zanzibar. The postal traffic in 1898 was 1,296,408 letters, 51,444 postal cards, 1,432,114 newspapers, and 9,246 parcels. The number of telegrams was 62,552. Dependencies of Mauritius are the Seychelles, containing a population of 16,440 and exporting cocoanut oil, soap, vanilla, tortoise shell, coffee.

and cacao; Rodrigues, with a population of 2,870; Cargados Islands, the Eagle and Cosmoledo groups, and the Chagos Islands, the largest of which is Diego Garcia, which exports 4,813 hectolitres of cocoanut oil. The sugar crop of Mauritius has been increased by the transfer of small holdings to the Indian population, and the yield of sugar has been improved by the use of modern machinery. The imposition of countervailing duties on bounty-fed sugar by the United States, India, and Canada has benefited the export trade, and this has reacted on the revenue, which exceeded 9,000,000 rupees in 1899, a part of the increase being due to higher taxation. The imports exceeded 20,000,000 rupees in 1899 and the exports 24,750,000 rupees. The plague was introduced from Madagascar early in 1899, and spread through the island in spite of vigorous measures of disinfection, the destruction of rats, and general sanitation.

The *Cook Islands*, in the Pacific, were formally annexed on Oct. 10, 1900. Among their population are 2,300 Maoris and 70 Europeans. The volcanic soil is exceedingly fertile, producing coffee, cacao, cotton, coconuts, oranges, limes, and all tropical fruits with little cultivation. A British protectorate was declared in 1888, and since 1892 the New Zealand Government, to which they are now subordinated, has supported a Resident. This group of small islands, of which Raratonga, Mangaia, and Atui are the chief ones, contain with the Hervey Islands 8,400 inhabitants on the space of 142 square miles. *Pitcairn Island* has 126 inhabitants. The *Manihiki Islands*, 12 square miles in extent, have a population of 1,000. The *Tokelau Islands*, with 7 square miles of area, contain 1,050 people. The *Phoenix Islands*, 16 square miles in area, have 59. The *Ellice Islands* have 2,400 on an area of 14 square miles. The *Gilbert Islands*, on an area of 166 square miles, have a population of 35,200. The British part of the *Solomon Islands*, over which a protectorate was proclaimed in 1897, had an area of 8,357 square miles. Choiseul and Isabel, with neighboring groups and islets, were transferred by Germany to Great Britain by the Samoan agreement of 1899. They produce copra, tortoise shell, and ivory nuts, and coffee plantations have been started. The natives are often engaged for a term of years to work on other islands.

Christmas Island has an area of 234 square miles and 100 inhabitants. *Malden Island*, with an area of 35 square miles, has 168. *Jarvis Island*, less than 2 square miles in extent, has 30. *Fanning Island*, with an area of 15 square miles, has 150. Other coral or guano islands and groups annexed by Great Britain are the *Santa Cruz* and *Duff* groups, *Starbuck* and *Washington Islands*, *Palmyra*, *Sucaroff Islands*, *Dudoza*, *Emerald Island*, *Campbell Island*, *Macquarie Island*, and the *Antipodes* and *Bounty Islands*. Cocoanut trees are abundant on most of them. The High Commissioner for the Western Pacific, Sir G. T. M. O'Brien, has jurisdiction over all of them and over any others that are not under the dominion of a civilized power for the purpose of adjudicating disputes between British subjects and of protecting the natives from being carried off by force to work on plantations or from other oppression. *Tonga*, which was declared neutral by the Berlin declaration of April 6, 1886, was relinquished to British control by the Anglo-German Samoan agreement of Nov. 14, 1899, subsequently accepted by the United States. The *Tonga*, *Haapai*, and *Vavau* groups, formerly known as the *Friendly Islands*, lying east of Fiji, form a native kingdom, whose sovereign is George

II, born June 18, 1874. There is a Legislative Assembly, half of hereditary nobles, removable for cause, and half of elected representatives of the people. The area of the kingdom is 374 square miles; the population in 1893 was 17,500, including 250 foreigners, most of them British. The revenue, obtained mainly from customs duties, a poll tax, and leases of land, is about \$125,000 a year, the expenditure a little less. The imports in 1898 were valued at £35,176, exports at £39,464, of which £29,610 represent copra and £3,264 fruit. The tonnage entered in 1898 was 81,100, of which 74,388 tons were British, 5,177 tons Norwegian, 931 tons German, and 604 tons Danish. A British protectorate was proclaimed over *Tonga* on May 19, 1900. Sites for a coaling station and a fortified harbor were selected at *Vavau*. The King would not agree to a protectorate except against foreign powers, and insisted that the sovereignty should be guaranteed to himself and his successors. Basil Thomson, who was sent out as British Commissioner to the *Tonga Islands*, could offer no guarantee, but decided that the acceptance of British help in case of difficulty with foreign powers constituted a protectorate, and concluded a treaty by which the King agreed to make no treaties with other powers without the consent of the British Government, and to apply for British assistance only in any trouble. He was supported by the House of Nobles in his refusal to accept a more complete form of protectorate. Jurisdiction over Europeans, however, was conceded to the British court of law, and the two naval harbors were granted. The *Tongans* have retained the ownership of the land, none of which is occupied by Europeans except under lease, and they are proud of the independence which they alone of the races of the Pacific who were taught civilized methods of government by the missionaries have succeeded in preserving.

Ascension is an island in the Atlantic used as a coaling and victualing station for the British squadron on the west coast of Africa.

St. Helena, formerly important as a port of call on the Cape route, is a coaling station for naval vessels on the Cape and West African stations. The revenue in 1898 was £9,152; expenditure, £12,349.

Tristan da Cunha, a group of islands in the south Atlantic, is inhabited by the families of shipwrecked sailors, who got their wives from *St. Helena*. They numbered only 64 persons in 1897.

The *Falkland Islands*, east of the Straits of Magellan, have in proportion to their population a large trade in wool. They are a Crown colony, having a land surface of 6,500 square miles, with 2,050 inhabitants. The revenue in 1898 was £13,039; expenditure, £14,278. The imports were £72,987 in value; exports, £106,984. Of the total trade 94 per cent. is with Great Britain. There are 2,325,154 acres of pasturage, on which 732,010 sheep were kept in 1898, with 2,758 horses and 7,343 cattle. Live animals were exported to England in 1898, but the enterprise was abandoned or interrupted.

The *Bermudas*, 580 miles from Cape Hatteras, are a group of small islands having a total area of 20 square miles, one third of it under cultivation. The population was 16,219 in 1898, of whom 6,239 were whites. The number of marriages during the year was 143; of births, 613; of deaths, 378. The Governor in 1900 was Lieut.-Gen. G. Digby Barker. There is a Legislative Assembly of 36 members. The trade is with the United States and Canada, whence provisions and bread-stuffs are brought to feed the people and whither are shipped in winter and spring potatoes, onions,

and tomatoes. The bulbs and plants of the Easter lily are also an important article of export. The value of imports in 1898 was £113,903; exports, £351,274, the value of onions being £58,373, of potatoes £19,955, and of lily bulbs £15,452. The tonnage entered and cleared was 471,956, of which 409,751 tons were British. The shipping of the colony consisted of 2 steamers, of 651 tons, and 23 sailing vessels, of 5,469 tons. There are 36 miles of land telegraph, 15 miles of cable, and 700 miles of telephone wire. A cable connects Bermuda with Jamaica.

British Guiana is administered by a Governor, Sir Walter J. Sendall in 1900, assisted by a Court of Policy, consisting of 7 official and 8 elected members. Taxes and expenditures are voted by the combined court, composed in addition to these of 6 financial members elected by the registered voters, who numbered 2,815 in 1899. The Roman Dutch law is in force in civil cases, while the criminal jurisprudence is based on that of England. Of 278,328 population enumerated in 1898 there were 99,615 of negro blood, 105,465 East Indians, most of them coolies, 3,714 Chinese, and 2,533 born in Europe. The number of births in 1898 was 8,500; of deaths, 9,706. The revenue for 1899 was £525,865; expenditure, £525,387. Of the revenue £304,366 came from customs, £85,548 from licenses, £34,292 from the duty on rum, and £21,209 from the royalty on gold. The public debt amounts to £975,791. The sugar estates, 74 in number, had an area in 1891 of 69,814 acres, on which 90,492 persons were living. Gold mining began in 1886, and in ten years £2,796,300 worth of gold was taken out. In 1897 the product was 126,702 ounces; in 1898, 125,080 ounces; in 1899, 112,464 ounces. Cloth, flour, rice, fertilizers, hardware, fish, machinery, and coal are the principal imports. The total value of imports in the year ending March 31, 1899, was £1,371,412; exports, £1,775,691. The export of sugar was £1,040,982; of molasses, £11,068; of rum, £144,712; of gold, £415,746. There are 40 miles of railroad. The tonnage entered and cleared in 1899 was 632,000. The shipping of the colony consisted of 15 steamers, of 1,171 tons, and 33 sailing vessels, of 1,682 tons. The telegraphs have a length of 559 miles; telephones, 677 miles.

British Honduras is a Crown colony south of Yucatan. The population of 34,747, as computed in 1897, consisted of 481 whites and 34,266 colored. The number of marriages in 1898 was 281; of births, 1,469; of deaths, 1,146. The Governor is Col. Sir David Wilson. The revenue for 1898 was \$274,690; expenditure, \$301,413. Customs and excise duties, license fees, the land tax, and sales and leases of Crown lands furnish the revenue. The debt was \$168,815 in 1898. The value of imports in 1898 was \$1,248,910; exports, \$1,282,593, consisting, besides mahogany and logwood, which have always been the staple products of the country, of bananas, plantains, and cocoanuts shipped to New Orleans. Coffee, rubber, and sarsaparilla, the products of Yucatan, are also shipped from the port of Belize. There were 618 vessels, of 183,332 tons, entered and 609, of 153,552 tons, cleared during 1898. The shipping of the colony consisted of 225 sailing vessels, of 4,950 tons, and 7 steamers, of 1,992 tons. United States gold has been the legal standard currency since 1894.

Preservation of Wild Animals in Africa.—Representatives of England, France, Germany, Italy, Portugal, and Spain, and of the King of the Belgians acting for the Independent State of the Congo, met in London, and on May 19, 1900, signed a convention for the protection of wild animals in Africa between 20° of north latitude

and the Zambesi. It is not allowable to hunt or destroy vultures, owls, secretary birds, or rhinoceros birds, on account of their usefulness, or giraffes, gorillas, chimpanzees, mountain zebras, wild asses, white-tailed gnus, elands, or the little Liberian hippopotamus, on account of their rarity, and the prohibition may be extended to other useful or rare species threatened with extermination. The hunting or destruction is prohibited of young elephants, rhinoceroses, hippopotamuses, zebras, buffaloes, ibexes, chevrotains, and antelopes and gazelles of the genera *Bubalis*, *Damaliscus*, *Connochetes*, *Cephalophus*, *Oreotragus*, *Oribia*, *Rhaphiceros*, *Nesotragus*, *Madoqua*, *Cobus*, *Cervicapra*, *Pelea*, *Æpyceros*, *Antidorcas*, *Gazella*, *Ammodorcas*, *Lithocranius*, *Dorcotragus*, *Oryx*, *Addax*, *Hippotragus*, *Taurotragus*, *Strepsicerus*, and *Tragelaphus*; also of females of any of these species when accompanied by their young or of any females that can be recognized as such. Of adult males of the same species only limited numbers may be killed, and the restriction is extended to various pigs, colobi and all the fur monkeys, aardvarks, dugongs, manatees, small cats, servals, cheetahs, jackals, aardwolves, small monkeys, ostriches, marabouts, egrets, bustards, francolins, guinea fowls and other game birds, and large tortoises. Harmful animals, of which it is desired to reduce the numbers within sufficient limits, may be hunted, and measures will be applied to effect their reduction. In this category are lions, leopards, hyenas, the hunting dogs, otters, baboons and harmful monkeys, large birds of prey except vultures, secretary birds, and owls, crocodiles, poisonous snakes, and pythons. Measures will be taken to destroy the eggs of crocodiles, poisonous snakes, and pythons, to insure the protection of ostrich eggs, and to supervise sick cattle in order to prevent the transmission of contagious diseases to wild animals. Export duties will be imposed on skins of giraffes, antelopes, zebras, rhinoceroses, and hippopotamuses, and on rhinoceros and antelope horns and hippopotamus tusks. Severe penalties will be enforced against hunters of young elephants and all tusks weighing less than 10 kilogrammes will be confiscated. Reserves will be established, within which it shall be unlawful to hunt, capture, or kill any bird or wild animal except those specially exempted from protection: the reserves to be sufficiently large tracts of lands having abundant food and water and, if possible, salt for preserving birds and wild animals and affording them the necessary quiet during the breeding season. Outside of the reserves close seasons will be established to facilitate the rearing of young, and only holders of licenses, revocable in case of breach of the provisions of the convention, will be permitted to hunt. The use of nets and pitfalls will be restricted, and the use of dynamite or other explosives or of poison for the purpose of taking fish is forbidden. The contracting parties undertook to promulgate the provisions of the convention within a year, and to communicate within eighteen months information as to the areas established as reserves. The prohibitions and restrictions may be relaxed in order to permit the collection of specimens for museums or zoölogical gardens or for scientific purposes, and also where it is desirable for important administrative reasons or necessitated by temporary difficulties of administration. The domestication of zebras, elephants, and ostriches will be encouraged. The convention will remain in force fifteen years, and will continue in force from year to year thereafter, any of the signatory powers having the right to withdraw at the expiration of the period or in any subsequent year by giving twelve months' notice.

The Session of Parliament.—The seventh session of the fourteenth Parliament of the reign of Queen Victoria was opened on Jan. 30, 1900. The royal speech deplored the many valuable lives that had fallen a sacrifice in South Africa without being able to restore the peace recently broken, but exalted the devotion and enthusiasm with which the people had responded to the appeal to resist the invasion of the South African colonies and the heroism of the soldiers in the field and the co-operating sailors and marines, which had not fallen short of the noblest traditions of British military history, also the patriotic eagerness and spontaneous loyalty with which British subjects everywhere had come forward to share in the common defense of imperial interests, and the brilliant courage and soldierlike qualities of the colonial forces. The Samoan treaty with Germany was mentioned, and the accession of the United States to its stipulations regarding Samoa and Tonga. A bill was promised to sanction the scheme of federation adopted by five of the Australian colonies, the establishment of which great federation would prove advantageous not only to the colonies immediately concerned, but to the empire at large. Timely measures were said to have been taken to relieve suffering and prevent starvation in the parts of western and central India where, owing to insufficient rainfall in the autumn, the harvests and pasturage had failed to such an extent as to create a famine. The offers of the native rulers of India to send troops to South Africa were spoken of as gratifying proofs of loyalty and of devotion to the cause of the empire. No prospect of the diminution of the plague in India was foreseen, though its severity had not increased. The provision for military expenditure would be largely increased on account of the great war in South Africa, the lessons derived from which would be important to the military administration, and reliance was placed upon the House of Commons not to shrink from any outlay that might be required to place the defensive preparations on a level with the responsibilities entailed by the possession of so great an empire. At a time when several other nations were perfecting their naval preparations at the cost of increasing sacrifices provision would have to be made for the efficiency of the British navy and coast defenses. For domestic reforms involving large expenditure the time was not propitious, and the proposals to be made would not be open to this objection. Amendments in the laws governing limited liability companies and in those relating to agricultural tenancies were required. Measures were also proposed for amending the law of ecclesiastical assessments and in regard to education in Scotland and for the relief of tithe rent payers in Ireland. Attention would be invited to proposals for better enabling local authorities to aid secondary and technical education in England and Wales; for controlling the contracts of money lenders; and for the amendment of the factory law, of the law of lunacy, and of the housing of the working classes act. A bill would be brought in framed with the object of lessening of accidents to railway servants in accordance with the recommendations of a commission appointed to inquire into the nature and causes of such accidents. Parliament would be asked to sanction a measure to prevent the injustice of the existing law which appeared to have the effect of disfranchising those serving in South Africa. The bills relating to limited liability companies and money lenders had been before Parliament before. The one had repeatedly passed through the House of Lords, and was now brought

into practical shape by the labors and criticism of lawyers and men of business. The money-lenders bill was rejected in the form in which it was presented in 1899 because the House of Commons would not assent to the tampering with contracts except in cases of proved fraud. The bill for the relief of payers of tithe rent charge in Ireland was a measure long promised to Irish landlords. The measure in aid of secondary and technical education was the financial consequence of the act already passed on the subject. The other measures, none of which were contentious, would only be introduced if there was time to deal with them.

The debate on the address turned mainly on the war. In the vote on Lord Edmond Fitzmaurice's amendment condemning the ministry for its incompetency in preparing for and in the conduct of the war the cleavage of the Opposition was revealed by the abstention of 30 Liberals and also of the Irish Nationalists, who would not vote for it because it did not go far enough. The amendment had the effect of uniting the ministerialists, who rejected it with the crushing majority of 213. Sir Henry Campbell-Bannerman had a divided party to lead, in which Sir Henry Fowler, Sir Edward Grey, and others ranged themselves more and more with Lord Rosebery on the popular imperialist side, while Mr. Morley and Mr. Labouchere remained steadfast in their opposition to the war and Sir William Harcourt took little part in the discussions until he came forward to criticise the supplemental war loan. The reunion of the Irish Nationalist factions was not so complete but that Mr. Healy came into frequent conflict with the majority of his party, in which Mr. Redmond was able to maintain only a slight degree of discipline. The basis of the reunion was the return of the Irish Nationalists to a policy of independent opposition, separating them from their British Liberal allies, who were already eager to renounce Irish home rule as a practical policy. Lord Salisbury and Mr. Balfour, in apologizing for the mistakes and miscalculations of the war, denied that the Government could have known of the Boer preparations, and complained of the scantiness of the secret service fund and of the interference of the treasury in other departments. Lord Lansdowne's exposition of the Government policy of national defense drew criticisms from Unionists and warnings from the Liberal imperialists, represented by Lord Rosebery and Lord Kimberley, as to the inadequacy and temporary character of the military measures. A month's training was first proposed for the volunteers, and this was cut down to fourteen days. The plan of establishing a reserve available for service abroad under certain conditions was condemned as impairing the original character of the volunteer force without making any substantial addition to the fighting strength of the nation. The reduction of the vote for the Colonial Office was moved by Sir Wilfred Lawson as a protest against the ministerial policy in South Africa, which was described as bringing upon the country discredit, degradation, and demoralization. Sir Robert Reid, Mr. Courtney, and Mr. Bryce supported the motion, but only 52 members, of whom 22 were Irish Nationalists, could be mustered against Mr. Chamberlain, who boldly defended his course, and obtained the indorsement of Sir Edward Grey and 39 other Liberals.

The Irish tithe rent charge bill was intended to remedy the grievance of Irish tithe payers who were still paying tithes at the rate fixed in 1872, although English tithes had fallen a third and Irish rents had been cut down twice, while

the terms exacted for exemption were fixed at twenty-two and a half years' purchase when few landowners could obtain fifteen years' purchase for their lands. The bill regulated the tithe rent charge by the average reductions in rent. Payers of church tithes were placed on the same footing as payers of lay tithes. An Irish intermediate education act and a Scotch ecclesiastical assessment act were passed. The secondary education bill was dropped. The act for the prevention of accidents to railway employees empowers the Board of Trade to make rules regulating lighting of stations during shunting after dark, brake vans on trains, protection of men relaying or repairing tracks, or reducing or removing the danger or risk of other operations of railway service, after first giving the company opportunity to act. The company may appeal to the Railway Commissioners to determine whether the rules materially interfere with trade or the necessary operation of the railroad. One effect of this act will be to compel British railroad companies to use automatic coupling. An act relating to merchant shipping extends the liability of shipowners to loss or damage caused to property by improper navigation, although without their actual fault or privity, the liability being limited to £8 a ton. The housing of the working classes act enables local authorities that establish lodging houses for the working classes to establish them outside of their proper jurisdiction, lodging houses including separate houses or cottages, with gardens. If rural district councils fail to adopt the act when they ought to do so the county council may establish lodging houses in the negligent parish, and land acquired anywhere for lodging houses may, with the consent of the county council, or in urban districts with that of the Local Government Board, be let on lease to persons who undertake to build and maintain lodging houses exclusively for occupation by the working classes.

The agricultural holdings act adds to the list of improvements for which a tenant may claim compensation, though they may have been effected without the consent or the knowledge of the landlord. For the consumption of purchased feed by stock and for laying down temporary pasture he may demand compensation, and he can send in his claim up to the last day of his tenancy. If he has acquired fixtures or buildings they become removable at the end of his tenancy to the same extent as if he had put them up himself. The liability for breach of covenant is limited to the actual damage suffered, except in the case of penal covenants against breaking up permanent pasture, burning heaths, and felling trees. The landlord gains the right to enter a farm at any reasonable time for the purpose of ascertaining its condition, and both parties may refer to arbitration any dispute even if not covered by the act. The amount of compensation that can be claimed of a landlord for an improvement is such sum as fairly represents the value of the improvement to an incoming tenant, but nothing due to the inherent qualities of the soil can be claimed as part of the improvement. In the case of buildings and various other improvements the consent of the landlord must be first obtained, in case of drainage notice must be given, but for consumption by stock of grain not produced on the holding, for the application of lime or commercial fertilizers, and for some other kinds of improvements, neither notice nor consent is required. This act applies to Scotch as well as to English holdings. The proposal to bring in the Irish doctrine of compensation for disturbance was rejected by 207 votes against 111.

A workmen's compensation act was passed which

extends the benefit of the act of 1897 to workmen in agriculture, including horticulture, gardening, forestry, and the keeping of live stock. The original act was limited to railroad, factory, and other dangerous employments. The employer is liable to pay compensation to a workman physically injured or to the dependents of a workman killed by accident arising out of and in the course of his employment, provided the accident is such as to disable the workman from earning full wages for at least two weeks and is not attributable to his own serious and willful misconduct, but the compensation must not exceed half his ordinary wages and the compensation for death by accident must not exceed £300.

After the outbreak of trouble in China an act was passed prohibiting the exportation of arms, ammunition, military and naval stores, and any article capable of being converted into or made useful in increasing the quantity of arms, to any country or place named in a royal proclamation whenever it may be deemed expedient for the prevention of their being used against British forces or their allies. On Aug. 7, the day after this act was passed, the exportation of arms and ammunition to China was prohibited by royal proclamation. The electoral disabilities of reservists, militiamen, yeomen, and volunteers resulting from their absence on military service were removed during the continuance of the war in South Africa. The Uganda Railroad bill provided for carrying on a work that has far exceeded already the original estimate.

Besides the Commonwealth of Australia act, Parliament passed more than 60 other acts, half of them of little general interest or applying to Scotland and Ireland. The most important were the companies act, the agricultural holdings act, the workmen's compensation act, and the housing of the working classes act.

The companies act is the outcome of the report of a committee appointed by the Board of Trade in 1894. Hereafter no person can become a director or be named in a prospectus as a director of a company unless he has contracted to pay for the shares necessary for his qualification. No allotment of shares may be made and offered to the public for subscription unless the minimum amount specified in the prospectus or else the whole capital has been subscribed; otherwise subscribers may reclaim their money and recover from the directors. Any brokerage, commissions, or discounts for subscribing or the procurement of subscriptions may be only of such amount or rate as is authorized in the articles of association and disclosed in the prospectus. Every prospectus or notice offering shares, debentures, or debenture stock for public subscription must be dated, signed by all the directors, and registered. No new company will be allowed to commence business or borrow money until a declaration has been filed that the minimum amount of cash subscriptions has been paid in and every director has paid his proportion. A list of subscribers must be filed, and an account given of shares allotted otherwise than for cash. The companies act of 1867 declared a prospectus fraudulent unless it stated every contract. The new act demands in a prospectus the memorandum of association, the qualification for directors, the minimum subscription requisite before allotment, the commissions, preliminary expenses, and payments to promoters, the dates of and parties to every material contract, and full particulars of the interest of every director in the promotion of the company, with a statement of all sums paid in cash or shares by any person for his services or to qualify him as

a director. A waiver of rights secured by the act is void, but a director can not be held liable for a defective prospectus if he proves that he was not cognizant of the matters not disclosed. When a new company is started a meeting of the shareholders must be held, after they have already received a report of the number of shares allotted, distinguishing those not allotted for cash, the names of shareholders, the particulars of contracts or modifications of contracts to be voted upon, and a statement of receipts and payments. All mortgages given by companies have to be registered, and all mortgage debts must be published in the annual report, also the names and addresses of the directors, and at every annual meeting auditors must be appointed, otherwise on the application of a member. One object of the bill is to do away with the spurious qualifications of directors and the gift of paid-up shares. Not only must the minimum amount to be subscribed before allotment be stated in the prospectus, but 75 per cent. of the amount due on application must be paid up *bona fide* before business is begun.

An elementary education act was passed enabling poor law guardians to contribute to school funds so as to provide for the education of pauper children, reckoning average attendance annually in granting school fees, and changing the maximum age of compulsory attendance from thirteen to fourteen years. An amendment to the mining law prohibits the employment below ground of any boy under thirteen, instead of the former limit of twelve years.

The money lenders act is practically identical with the measure that failed to pass in the preceding session. Every person whose business is lending money or who advertises or holds himself out as carrying on that business is obliged to register himself as a professional money lender, and is liable to have his contracts judicially varied in the interest of a borrower where the borrower is sued for a loan and there is evidence which satisfies the court that the interest or the charge for expenses is excessive and that the transaction is harsh and unconscionable, or is otherwise such that a court of equity would give relief. The court may in such case reopen the transaction and relieve the borrower from the payment of any sum in excess of that adjudged to be reasonable, may order the money lender to repay such excess, may set aside or alter any security or agreement, and if the money lender has parted with the security may order him to indemnify the borrower, who on his side may also initiate proceedings to obtain judicial relief as if he had waited to be sued. The rights of a *bona fide* assignee or holder for value without notice are not to be affected, however. The money lender is required to register his name or his usual trade name, and the address or addresses where he carries on business. Any money lender fraudulently inducing or attempting to induce a person to borrow is guilty of a misdemeanor, and any money lender or other person who sends circulars inviting an infant to borrow is presumed to know that the invitation was sent to an infant unless he proves that he had reasonable ground for believing the infant to be of age.

An act for the preservation of ancient monuments empowers county councils to purchase or at the request of the owners become the guardians of any structure or monument of historic or architectural interest which in the opinion of the Commissioners of Public Works is worth preserving for the public by reason of its historic, traditional, or artistic interest. The Commissioners of Public

Works may likewise become guardians of ancient monuments, and may, as well as the county councils, receive voluntary contributions for their maintenance, all such monuments to be freely accessible to the public.

The decennial census, first taken in 1801, was authorized to be taken of all persons abiding in any house in Great Britain or in Ireland on the night of March 31, 1901, overseers of the poor and relieving officers to act as enumerators when required. The census papers are left at every house to be filled up with the name, sex, age, occupation, condition as to marriage, relation to head of the family, and birthplace of every person in the house, whether any such person is defective, the number of rooms occupied if less than five, and in Wales and Monmouthshire the language spoken. The burial acts were amended with the object of doing away with complications, unjust provisions, and causes of dispute. Consecration or partial consecration is made subject to the approval of the Home Office, while undenominational chapels may be erected on unconsecrated burying grounds, and no fees may be exacted except for services rendered. An act was passed making it an offense wantonly to abuse, cause suffering to, infuriate, or terrify wild animals in captivity.

In accordance with the Commonwealth of Australia act a royal proclamation was issued on Sept. 17 declaring the union of the Australian colonies under the constitution they had approved, with the compromise as to appeals to the Privy Council to which Mr. Chamberlain agreed (see AUSTRALASIA). A bill was passed admitting to practice in the United Kingdom colonial solicitors of three years' standing and of good character, either on passing an examination or in certain cases without examination. Another bill empowers trustees to invest in colonial stocks. An eight-hour bill for miners was rejected by 199 votes against 175. The Scotch education bill, the lunacy bill, the factory acts amendment bill, and several minor measures of the Government were withdrawn. A sequel to Mr. Chamberlain's veto of the Australian claim to have all appeals tried by the Supreme Court of the commonwealth was a measure for the appointment of four colonial judges to the Privy Council. The bill had been prepared by the last Colonial Secretary, and was only a temporary expedient, a partial fulfillment of Mr. Chamberlain's pledge, and was not pressed. The ultimate intention is to merge the Judicial Committee of the Privy Council with the appellate jurisdiction of the House of Lords, and thus constitute a High Court of Appeals for the entire empire, in which colonial jurists will be amply represented. Sir Henry Wedderburn and Sir Henry Fowler appealed to the Government and to Parliament to vote a grant in aid to India for famine relief, but unsuccessfully, although Lord George Hamilton admitted that the extent and cost of the famine surpassed all estimates. An Irish proposition to establish a Roman Catholic university in Ireland was repelled by the Government on the plea that it could not be known what would be acceptable to the Roman hierarchy. The Irish landlords put forward a demand for compensation for injury caused by agrarian legislation, and obtained a majority in the upper house, but the ministry, which had just given them relief from the burden of tithes, rejected their abstract claim. An investigation was ordered into the hospital service in Africa in consequence of charges brought by Mr. Burdett-Coutts; also an investigation into the use of Belleville boilers in the navy and one into War Office contracts.

During the session the Duke of Norfolk resigned

as Postmaster-General in order to serve with the troops in South Africa. He was succeeded by Lord Londonderry. Sir Richard Webster became Master of the Rolls, and was succeeded as Attorney-General by Sir Robert Finlay. Sir Edward Carson became Solicitor-General. Parliament was prorogued on Aug. 8. The lament over the inconclusive campaign in Africa was repeated in the speech from the throne, although brilliant skill and the heroism and high military qualities of the troops had succeeded in driving the invaders beyond the frontiers. The Orange Free State had been annexed by proclamation in the belief that the continued political independence of the two republics would be a constant danger to the peace of South Africa, and that it would be the first step toward the union of races under institutions which, while establishing from the outset good and just government for all, may be in time developed so as to secure equal rights and privileges in the South African dominions. The disturbances in China and Ashanti were mentioned, and the famine and plague still raging in India.

The General Election.—The parliamentary elections were held in the week beginning Oct. 14. In the electoral campaign Sir Henry Campbell-Bannerman, the accepted leader of the Liberals, denounced the policy advocated by Sir Alfred Milner in South Africa of governing the Orange River and Transvaal colonies, as the Boer republics were termed when their annexation was proclaimed, as Crown colonies. The Conservatives obtained 332 seats, the same number as in the last Parliament, and the Liberal Unionists increased theirs from 67 to 69, making 401 ministerialists, compared with 399 in the former Parliament, and 269 in the Opposition, compared with 271. Of the Liberals with imperialistic tendencies, however, of whom the outgoing Parliament contained 63, there were 81 in the new house, while the Radicals and Labor members fell off from 126 to 106, the Irish Nationalists retaining their 82 seats. The Cabinet was reconstituted on Nov. 12 as follows: Prime Minister, Lord Salisbury; Lord Chancellor, Lord Halsbury; Lord President of the Council, the Duke of Devonshire; Lord Privy Seal, Lord Cross; Chancellor of the Exchequer, Sir Michael Hicks-Beach; Home Secretary, Mr. Ritchie; Foreign Secretary, Lord Lansdowne; Colonial Secretary, Mr. Chamberlain; Secretary for War, W. St. John Brodrick, previously Parliamentary Secretary for Foreign Affairs; Secretary for India, Lord George Hamilton; Secretary for Scotland, Lord Balfour of Burleigh; First Lord of the Admiralty as successor of Mr. Goschen, Lord Selbourne; First Lord of the Treasury, Mr. Balfour; Lord Lieutenant of Ireland, Lord Cadogan; Lord Chancellor of Ireland, Lord Ashbourne; President of the Board of Trade, Gerald Balfour, previously Chief Secretary for Ireland; President of the Local Government Board, Walter Long, previously President of the Board of Agriculture; Secretary of Works and Public Buildings, Mr. Akers-Douglas; Chief Secretary for Ireland, George Wyndham, previously Parliamentary Secretary for War; Postmaster-General, Lord Londonderry; Vice President of the Council, Sir John Gorst; Attorney-General, Sir Robert Finlay; Solicitor-General, Sir Edward Carson.

Edward VII.—The Prince of Wales took the oath as King in St. James's palace, Jan. 23, under the style chosen by his mother, and on the 24th was proclaimed throughout the kingdom as "Edward VII, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Defender of the Faith, Emperor of India." Parliament was not dissolved on the decease of the sovereign, the law

having been changed a few years before. The first proclamation of the King retained in office all persons in the employment of the Crown.

Albert Edward (now Edward VII) was born Nov. 9, 1841. He was taught in his childhood by Lady Lyttleton, a sister of Mrs. Gladstone, and after he was six years old by the Rev. Henry Mildred Birch for four years, and then Frederick W. Gibbs became his tutor. He legally attained his majority at the age of eighteen, and traveled through Continental Europe incognito as Baron Renfrew, with Mr. Tarver, who thenceforth directed his studies. He entered upon a course of study at Edinburgh so severe that the newspapers made complaint that the heir apparent was being overeducated. Later at Christ College, Oxford, he joined freely in the sports and social life of the undergraduates, and at Trinity College, Cambridge, he led a life of ease and pleasure. In 1860 he visited Canada, accompanied by the Duke of Newcastle, in recognition of the services of the Canadian regiment in the Crimean War. Before returning to England he made a journey through the United States as Baron Renfrew. He fell in love with Princess Alexandra of Schleswig-Holstein, daughter of the heir designate of the Danish throne, when he first met her in the autumn of 1861, and on March 10, 1863, they were married. With his wife he made many journeys in Europe. In 1875 he visited India. The expense of this official tour was a subject of complaint, but the popular mood changed when its political effect in India was appreciated, and he was welcomed home with ceremonies eclipsing those of the thanksgiving over his recovery from typhoid fever four years before. He made himself very popular by presiding at public feasts and ceremonies and by his modest and tactful addresses on such occasions. When he consented to officiate at a festival of the licensed victualers in 1876, the temperance societies raised a protest; and Radicals complained constantly about the sums allowed him by Parliament and about his extravagance and readiness to make debts. They thought the debts ought to be paid by his mother, who was accused of niggardliness. The seclusion of the Queen and her abstention from the public duties of royalty made it necessary for the prince to take her place whenever law and etiquette would allow. In social life he surrounded himself with a jovial and pleasure-loving set, some of them such as his mother would scarcely admit to court. Following his father's example, he took a keen interest in promoting exhibitions, notably the Colonial and Indian Exhibition of 1886. His first speech in the House of Lords was one in 1884 supporting a measure to secure the better housing of the poor, and the interest that he showed led to his being appointed a commissioner to study the question. The British public was once scandalized when the Prince of Wales was summoned as a witness in a divorce suit, and years later when through his testimony an officer was cashiered for cheating at cards. As a sportsman, however, a good shot, a daring fox hunter, an owner of race horses since 1877, who won the Derby with Persimmon in 1896 and with Diamond Jubilee in 1900, a yachtsman, commodore of the Royal Yacht Squadron since 1882, and winner of the Queen's cup with the cutter *Britannia*, and as a patron of the stage, the Prince of Wales pleased the great majority of the English people, and also by his popular tastes and democratic ways, such as riding in cabs and mingling with the common run of pleasure seekers. The practical interest that he took in agriculture, evinced in the development and management of his model estate at Sandringham, where he bred prize

cattle, horses, and dogs, won the approval of the serious-minded, and still more the fidelity with which the prince discharged his dull and trying public duties, his interest in charities and beneficial enterprises, the businesslike system that enabled him to go through the schedule of his public appearances and to carry on his extensive correspondence, his more sober and earnest life during the past ten years, and the lively interest that he took in the public affairs and international relations of England, coupled with a conscientious and studious avoidance of all interference, of even the slightest exertion of personal influence or betrayal of his private predilections or prejudices in political matters. He learned German as well as English while a boy, and to converse also in French, Italian, and Russian.

His eldest child, Prince Albert Victor Christian Edward, Duke of Clarence, born at Frogmore on Jan. 8, 1864, died at Sandringham on Jan. 14, 1892. Prince George, Duke of York, succeeds through his father's accession to the throne to the title of Duke of Cornwall; that of Prince of Wales must be conferred on him by Parliament. The younger children are Princess Louise Victoria Alexandra Dagmar, born at Marlborough House Feb. 20, 1867, and married to the Duke of Fife July 27, 1889; Princess Victoria Alexandra Olga Mary, born July 6, 1868; Princess Maud Charlotte Mary Victoria, born Nov. 26, 1869, and married July 22, 1896, to Prince Charles of Denmark. Prince Alexander, a son born April 6, 1871, died the next day.

GREECE, a monarchy in southeastern Europe. The legislative authority is vested in a single chamber called the Boule, composed of 207 members elected for four years by universal adult male suffrage. The reigning King is Georgios I, born Dec. 24, 1845, second son of King Christian of Denmark, elected King of the Hellenes on March 18, 1868, after the deposition of King Otto, with the assent of the protecting powers England, France, and Russia, under whose auspices the Hellenic kingdom was originally established in 1830 after the overthrow of Turkish rule. The heir apparent is Prince Konstantinos, Duke of Sparta, born Aug. 2, 1868. The Cabinet, formed on April 14, 1899, was composed as follows: President of the Council and Minister of the Interior, M. Theotokis; Minister of Finance, M. Simopoulos; Minister of Foreign Affairs, M. Romanos; Minister of Worship and Instruction, M. Eutaxias; Minister of War, Col. Koumondouros; Minister of Marine, Capt. Bourdouris; Minister of Justice, M. Karapoulos.

Area and Population.—The area of the Hellenic kingdom is 25,014 square miles. The population in 1896 was 2,433,806, being 97.3 per square mile. Athens, the capital, had 111,486 inhabitants. There are about 100,000 Albanians in Greece who have preserved their distinct nationality, while in the Turkish Empire there are over 6,000,000 persons who are Greek in language and religion, and the Greek strain is apparent in a considerable part of the Mohammedan population in Asia Minor especially and on the islands.

Finances.—The revenue for 1899 was estimated at 107,085,658 drachmai, of which direct taxes produce 20,077,800 drachmai; duties and excise, 38,395,000 drachmai; stamps and fees, 19,209,900 drachmai; monopolies, 11,940,500 drachmai; state property, 4,217,065 drachmai; sales of state property, 832,400 drachmai; deductions, etc., 1,554,560 drachmai; various receipts, 7,969,258 drachmai; international telegraphs, 472,000 drachmai; lighthouses, 400,000 drachmai; instruction, 42,000 drachmai; police contributions of com-

munes, 442,000 drachmai; extraordinary receipts, 1,473,175 drachmai. The expenditure was estimated at 103,418,273 drachmai, of which the public debt consumed 29,014,277 drachmai; allowances, 116,300 drachmai; various obligations, 200,000 drachmai; pensions, 6,093,603 drachmai; the civil list, 1,325,000 drachmai; the Chamber of Deputies, 919,220 drachmai; the Ministry of Foreign Affairs, 2,198,373 drachmai; the Ministry of Justice, 5,758,200 drachmai; the Ministry of the Interior, 13,077,505 drachmai; the Ministry of Worship, 5,431,630 drachmai; the Ministry of War, 18,008,340 drachmai; the Ministry of Marine, 7,608,739 drachmai; the Ministry of Finance, 2,018,688 drachmai; collection of taxes, 9,041,858 drachmai; various expenditures, 2,606,630 drachmai. For 1900 the revised estimate of revenue was 111,315,528 drachmai, and of expenditure 110,240,731 drachmai. For 1901 the estimate is 114,000,000 drachmai of revenue and 111,000,000 drachmai of expenditure.

The public debt, payable in gold, on Jan. 1, 1900, amounted to 699,617,000 drachmai in gold, requiring an annual expenditure for interest and amortization of 14,657,535 drachmai. There was, moreover, a paper debt of 173,690,760 drachmai, requiring 5,083,500 drachmai a year.

The International Committee of Control during the year ending Jan. 12, 1900, received 10,685,108 drachmai in gold and 55,174,450 drachmai in paper, and expended 9,981,103 drachmai in gold and 50,212,090 drachmai in paper.

The revenues appropriated for the service of the public debt yielded 3,533,755 drachmai over the estimate, of which 60 per cent., after deducting 18 per cent. for the expense of control, was available, as also the profit on the rate of exchange, for the service of the debt, one half to increase the interest and one half to augment the amortization. The amount of this surplus was 1,712,078 drachmai, allowing an increase of 2 per cent. on the interest of one class of bonds and 4 per cent. on others. The revenues assigned to the commission are those from the salt, petroleum, emery, and other monopolies, the tobacco duty, the stamp duty, and the import dues of the port of Piræus. The customs revenue in 1898 amounted to 34,437,374 drachmai, salt revenue to 2,467,926 drachmai, petroleum revenue to 5,115,165 drachmai. The administration of the monopolies is intrusted to a company. Smuggling of petroleum and salt and frauds in the collection of the tobacco, customs, and stamp duties deprive the commission of a part of the assigned revenues. The rates of interest paid in 1899 were 47 per cent. of the original interest on the monopoly loan and 40 per cent. of that of the funding loan and the other loans. Germany, Austria, France, Great Britain, Italy, and Russia, the mediating powers between Greece and Turkey, have representatives in the commission. Of the new loan of 170,000,000 drachmai guaranteed by the powers, 93,930,000 drachmai were paid to Turkey as a war indemnity, 31,350,000 drachmai were applied to paying off the floating gold debts, 2,440,000 drachmai were used to settle other debts, 21,960,000 drachmai were given to the Government to cover the deficit of 1897, and 20,000,000 drachmai were available to meet the deficits of other years.

The Army and Navy.—Every Hellene is liable to serve in the army for two years from the age of twenty-one. Whoever is not drawn for active service is inscribed in the reserve and pays a tax. The army in 1898 numbered 1,880 officers and 23,453 noncommissioned officers and privates; total, 25,333 men, with 3,294 horses and 180 guns. The war strength is about 82,000 of all ranks.

The navy consists of 5 armor clads, 17 large torpedo boats, 1 torpedo ship, 2 corvettes, 2 unarmored cruisers, and 12 gunboats. The newest and best vessels are the French-built belted cruisers Hydra, Spetsai, and Psara, having a displacement of 4,885 tons, 11.8 inches of armor at the water line, and 3 10.6-inch and 4 5.9-inch Canet guns, 7 6-pounder quick firers, and 16 smaller guns.

Navigation.—The number of vessels entered at Greek ports during 1898 was 6,428, of 3,289,298 tons; cleared, 5,979, of 3,205,892 tons. The Greek vessels among the total numbered 2,933 entered and 2,712 cleared. The merchant shipping of Greece on Jan. 1, 1898, consisted of 1,152 sailing vessels, of 238,196 tons, and 118 steamers, of 87,845 tons.

Commerce and Production.—The most important product of Greece is the dried currant, of which an average crop of 350,000,000 pounds is gathered. The production having outgrown the demand, a law was passed in 1895 and renewed every year since, by which 15 per cent. of the crop is retained by the Government and sold to distillers, the proceeds furnishing capital for an agricultural bank for the benefit of currant growers. The crop of 1898 was 160,000 tons, of which 24,000 tons were retained, leaving 136,000 tons for export, which was still in excess of the world's requirements, the quantity exported having been 102,078 tons. In 1899 the crop was fair, but in 1900 disease caused a serious failure in Peloponnesus and the Ionian Islands, causing distress among the farmers, though not impairing the revenue because the price rose to double what it had been.

The land in Greece is cultivated by the owners. It is exceedingly fertile, producing wheat, barley, corn, and other grains, tobacco, olives, and fruits. Capital is scarce and agricultural methods are backward. The annual yield of cereals is over 20,000,000 bushels; of tobacco, 16,500,000 pounds. There are 2,025,400 acres of forest. The yield of valonia in 1898 was 5,200 tons. In Messenia, the seat of the silk culture, 150,000 kilogrammes of cocoons and 8,000 kilogrammes of silk were produced in 1897. There are 843 tons of powder and 112 tons of dynamite manufactured annually, and the product of soap factories is 8,240 tons. Olives and wine are important products. There are about 100,000 horses, 360,000 cattle, and 2,900,000 sheep, the pasturage amounting to 5,000,000 acres. The mineral products in 1898 were 262,782 tons of manganese ore, 169,443 tons of hematite, 24,024 tons of zinc ore, 2,536 tons of dressed galena, 1,255 tons of dress lead and zinc blend, 2,800 tons of lead smokes, and 300,724 tons of low-grade lead ore, yielding 18,820 tons of pig lead with silver. The total value of special imports in 1898 was 152,083,634 drachmai in gold; domestic exports, 80,734,074 drachmai. The chief imports were cereals for 37,116,931 gold drachmai, textiles for 31,522,983 drachmai, coal and raw materials for 16,250,034 drachmai, fish and caviar for 6,849,034 drachmai, timber for 7,709,726 drachmai, live animals for 5,061,430 drachmai, chemicals for 5,385,800 drachmai, ores and metals for 6,327,004 drachmai, sugar for 3,629,171 drachmai, hides for 3,446,255 drachmai, and coffee for 2,765,547 drachmai. The export of currants was valued at 37,791,773 drachmai in gold; ores, 20,960,786 drachmai; wine, 4,530,809 drachmai; olive oil, 3,658,824 drachmai; figs, 2,961,600 drachmai; tobacco, 1,964,196 drachmai; gall nuts, 1,896,631 drachmai; silk and cocoons, 1,248,053 drachmai; brandy, 1,165,533 drachmai; sponges, 1,083,500 drachmai; gunpowder, 820,850 drachmai; olives, 704,317 drachmai; emery, 536,227 drachmai. The quantity of tobacco cut in the Government factories in 1898 was

3,188,088 pounds, besides 126,896 pounds of tumbeki, and the duties collected were 6,873,022 drachmai. The values in gold drachmai of the special imports from and domestic imports to different countries in 1897 are given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	29,486,910	26,768,302
Russia	29,256,722	2,434,927
Austria-Hungary	11,583,966	8,066,969
France	11,646,838	7,641,507
Turkey and Egypt	9,628,051	7,016,371
Germany	7,550,463	4,739,690
Belgium	2,951,694	7,616,747
Italy	2,778,343	5,233,428
United States	8,890,662	3,644,286
Netherlands	761,598	6,459,978
All other countries	6,798,121	2,078,621
Total	116,363,348	81,708,626

Railroads, Posts, and Telegraphs.—The railroads of Greece had a total length of 591 miles, and 300 miles were building, principally the extension of the railroad terminating at Athens to the Turkish port of Larissa, there connecting with the railroad running north to the trunk line through Serbia, Bulgaria, and Turkey. The extension of the line from Piræus to Larissa as far as Demerli near the Thessalian frontier was intrusted to a syndicate in March, 1900, the Government issuing a 4-per-cent. loan of 43,750,000 drachmai for the purpose and the company raising 10,000,000 drachmai of capital entitled to a profit of 6 per cent. under international control.

The telegraph lines had a total length of 560 miles on Jan. 1, 1899, with 6,090 miles of wire. The number of internal telegrams in 1898 was 902,872; international, 97,939; official, 19,320. The receipts were 1,981,681 drachmai.

The postal business in 1898 was 5,233,000 letters and post cards and 5,860,000 papers and samples carried in the internal and 5,362,000 letters and post cards and 3,525,000 papers and samples in the international service; receipts, 1,792,000 drachmai; expenses, 1,895,543 drachmai.

Politics and Legislation.—On Jan. 10, 1900, Col. Koumondouros resigned his portfolio as Minister of War, having made an error in his estimates and being prevented from carrying through the reorganization of the army. Col. Tsamados was appointed to the post, which he had filled under Trikupis and Rallis. An army bill was passed in March which practically transfers the administration of the army from the Minister of War to the Crown Prince and intrusts the reorganization of the army to foreign officers. Some of the junior officers of the infantry in the summer incurred punishment by making a demonstration against the exclusion of their arm from staff appointments.

GUAM, the largest of the Ladrões or Marianne Islands, ceded to the United States by Spain in the treaty of Dec. 11, 1898, the other islands of the archipelago being subsequently transferred to Germany. Guam has an area of nearly 200 square miles and about 9,000 inhabitants, who are the descendants of immigrants from the Philippine Islands, the original population having died out. About two thirds of the people live in Agana, the chief town. Spanish and the native Chimorro are the languages of ordinary intercourse, but many of the inhabitants understand English. There are 18 schools, and 90 per cent. of the natives can read and write. The island is fertile and to a great extent covered with woods containing valuable timber. The first American Governor was Capt. Leary, who was residing in Samoa at the time when Guam was occupied by American troops

in July, 1898. He sold to collectors the first postage stamps that were printed in Washington for use on the island and other lots afterward, thus eking out the scanty revenue. He ordered the people of Agana who were living in irregular wedlock to have their unions legalized, and compelled them to conform their dress and customs to civilized usages. On Washington's Birthday he issued a proclamation declaring that personal liberty was the inalienable right of all men, and that the mild form of slavery hitherto practiced on the islands was at an end wherever the United States had jurisdiction. A breakwater for the roadstead has been designed, and the fortification of the harbor of San Luis d'Apra is contemplated in order to fit it for a coaling station on the route between Honolulu and Manila. A store of coal has already been accumulated, and transports bound for Manila are usually compelled to take in coal there.

GUATEMALA, a republic in Central America. The legislative power is vested in the National Assembly, a single chamber of 69 members, 1 to 20,000 inhabitants, elected for four years by universal adult male suffrage, and in the Council of State, consisting of 13 members, part elected by the Assembly and part appointed by the President. The executive power is vested in the President, who is under the Constitution elected by the people for six years and can not be a candidate for the next succeeding term. Manuel Estrada Cabrera was proclaimed President by the National Assembly on Sept. 25, 1898, for the term ending March 15, 1905. The Cabinet in the beginning of 1900 consisted of the following members: Secretary of the Interior, Justice, and Foreign Affairs, Dr. Francisco Anguiano; Secretary of War, Gen. Gregorio Contreras; Secretary of Fomento, Rafael D. Ponciano; Secretary of Public Instruction, Domingo Morales; Secretary of Finance, Pedro Galvez Portocarrero.

Area and Population.—Guatemala has an estimated area of 63,400 square miles. The population in 1898 was 1,535,632. There is a small proportion of pure Spanish blood, but nearly all who are not Indians are of mixed blood, and three fifths of the inhabitants are Indians. There are about 12,000 foreigners. Most of the foreigners and native whites live in Guatemala la Nueva, the capital, which has about 73,000 inhabitants.

Finances.—The revenue in 1897 was \$12,479,741, and expenditure \$21,433,194. In 1898 the revenue was \$9,738,061, and expenditure \$9,964,833. For 1899 the revenue was estimated at \$9,815,000, of which \$4,402,000 come from customs, \$1,567,000 from taxation, and \$3,546,000 from monopolies. The expenditure was estimated at \$13,708,781, of which \$6,211,901 were assigned to the Department of Finance, \$1,349,588 to the interior and justice, \$1,569,997 to education, \$2,254,762 to the War Department, and \$1,725,380 to agriculture and public works. The revenue is collected in currency. There is very little metallic money in the country, and the premium on silver coin rose in 1899 to 70 per cent., and on gold to 430 per cent.

The foreign gold loan of 1895 amounted in 1899,

with £29,656 arrears of interest, to £1,512,456. The silver debt, including outstanding cedulas, railroad loans, and floating obligations, amounted on Jan. 1, 1899, to \$18,638,281 in silver, and gold debts separate from the loan of 1895 to \$1,203,205 in gold. The banks by a decree issued on Oct. 29, 1898, were authorized to issue \$6,000,000 in notes that are legal tender to the exclusion of former issues of notes and in preference to silver, even though debts are made payable in silver by the contract.

Commerce and Production.—The coffee crop in 1898 was 826,033 quintals. There is an export duty on coffee of \$1 silver per quintal. The quantity of tobacco grown on 2,500 acres is 9,900 quintals a year; of sugar on 66,700 acres, 25,000 quintals. Bananas are cultivated for food and export, and corn is grown. Cacao is planted for the foreign market. The planting of rubber trees is encouraged by the Government, which in a decree issued on Jan. 14, 1899, offers a caballeria of the national land for every 20,000 plants grown, to be given when they are four years old. Cattle are pastured on the high table-land, about 500,000 head in 1895. The number of horses is estimated at 62,000; of mules, 42,000. The national lands, by the law of 1894, excepting on the seashore and the land frontiers, are open to settlers in lots of 15 caballerias or less at prices ranging from \$250 to \$500 per caballeria of 112½ acres. Wild lands may be granted without price to immigrants or colonization companies or to municipalities or villages, or in consideration of road making or for school funds. Gold, silver, and salt are mined to a small extent, and lead, tin, and copper are found. The value of imports in 1898 was \$4,850,835 in gold, equivalent to \$13,207,656 in silver; exports, \$15,377,460 in silver. The gold value of cotton imports was \$588,608; flour, \$422,833; liquors, \$261,838; preserved foods, \$117,126; iron wares, \$169,888; silk goods, \$106,808; gold and silver coin, \$439,704. The value in silver of the coffee exported was \$14,062,598; bananas, \$93,246; hides, \$55,891. Of the imports, \$1,549,146 came from the United States, \$937,839 from Germany, \$648,445 from Great Britain, and \$217,337 from France. Of the coffee exported, 498,270 quintals went to Germany, 180,000 to Great Britain, and 128,473 to the United States. The number of vessels entered at Guatemalan ports in 1898 was 825, and 845 were cleared, nearly all United States vessels.

Railroads, Posts, and Telegraphs.—The railroad from Champerico to Retalhuleu, 32 miles, was extended to San Felipe. New lines between Port Barrios and Iztapa and the capital have recently been undertaken, and the line from the port of Iztapa has been completed, the Government paying a subsidy of £1,630 a mile. An American company had 130 miles of the other line (210 miles in total length) in operation in 1898, receiving a subsidy of \$40,000 a month.

The number of letters, cards, papers, parcels, etc., dispatched through the post office during 1898 was 2,769,543; received, 2,771,035. There are 3,126 miles of telegraphs. The number of messages sent during 1898 was 653,462.

H

HAWAII, a Territory of the United States, formerly an independent kingdom. Queen Liliuokalani, the last sovereign, having proclaimed alterations in the Constitution favorable to the native Kanaka population which threatened the ascendancy of the whites, was forced to abdicate

by a revolution in which the United States naval forces intervened by a demonstration that was construed as menacing. Liliuokalani declared that she yielded to superior force, and afterward appealed to the President of the United States to restore her throne. The revolutionary party, most

of whose leaders were descendants of American missionaries, proclaimed in January, 1893, a provisional government to carry on affairs pending annexation to the United States. On July 4, 1894, a republic was constituted in which native Hawaiians and white residents who could read and write either Hawaiian or English had the right to vote indirectly for Senators and members of the House of Representatives. On Aug. 12, 1898, in accordance with a joint resolution of Congress, the Hawaiian Islands were formally annexed to the United States, an annexation treaty having, on June 16, 1897, been signed at Washington by envoys of the Hawaiian Republic and John Sherman, Secretary of State, in which it was stipulated that, until Congress should provide for the government of the islands, the civil, judicial, and military powers were to be vested in such persons and exercised in such manner as the President of the United States should direct, and the power was conferred on him to remove officers and fill vacancies. The United States assumed lawful debts of the Hawaiian Government not to exceed \$4,000,000. The existing Government of Hawaii was confirmed, and its members continued in office for such period as existing customs relations of Hawaii with the United States and other countries remain unchanged. Until otherwise determined by Congress the municipal laws of the republic were continued in force so far as they were not inconsistent with the treaties or the Constitution of the United States, but all treaties of the Hawaiian Government forthwith ceased and determined. Chinese were henceforth to be excluded from Hawaii in accordance with the law of Congress prohibiting their ingress into American territory, and the Chinese already in Hawaii were barred from immigrating into the United States. In accordance with the recommendations of a commission appointed to recommend legislation for the Hawaiian Islands all whites, including Portuguese, all persons of African descent, and all descendants of the Hawaiian race, either on the paternal or maternal side, who were citizens of the Hawaiian Republic were declared citizens of the United States. There were 2,687 electors on the register in 1897. President Sanford B. Dole and all the administrative and judicial officers were continued in their functions. For military purposes the islands were attached to the department of California. The Cabinet was composed in the beginning of 1900 of the following members: Minister of Foreign Affairs and of Public Instruction, E. A. Mott-Smith; Minister of the Interior, J. A. King; Minister of Finance, S. M. Damon; Attorney-General, H. E. Cooper.

Area and Population.—The area and population of the different islands on Sept. 27, 1896, were as follows:

ISLANDS.	Square miles.	Population.
Oahu	600	40,305
Hawaii	4,210	83,285
Maul	780	17,726
Kauai and Niihau	687	15,392
Molokai and Lanai	480	2,412
Kahulawe	63
Total	6,740	109,020

The total population was composed of 72,517 males and 36,503 females. There were 31,019 native Hawaiians, 8,485 Hawaiians of mixed blood, 24,407 Japanese, 21,616 Chinese, 15,191 Portuguese, 3,086 Americans, 2,250 English, 1,534 Germans, and 1,420 of various other nationalities. The religion of 26,363 was Roman Catholic; of 23,773 Protestant; of 4,886 Mormon; of 44,306 Buddhist,

Confucian, Shinto, etc.; of 10,192 unknown. The immigration in 1894 was 8,114, and emigration 5,477; immigration in 1895 was 8,090, and emigration 4,636; immigration in 1896 was 13,984, and emigration 6,857; immigration in 1897 was 11,379, and emigration 6,504; immigration in 1898 was 17,229, and emigration 7,313. Most of the later immigrants are Japanese, brought under contract to labor. The total population was estimated in 1898 at 117,281. The native Hawaiians are rapidly declining in numbers, owing to excessive infant mortality. On June 1, 1900, the population of the islands was 154,001, showing an increase of 41.2 per cent. in four years. This increase was due to the influx of newcomers and the growth of the alien and mixed population. The number of pure Hawaiians in 1853 was 71,019. The smallpox, measles, and other contagious diseases which formerly decimated them because they are peculiarly susceptible to infectious disorders are now held in check, and so is leprosy, to which a great many fell a prey in later times. One cause of the declining number of pure Hawaiians is their frequent intermarriage with Americans, Portuguese, Japanese, Chinese, and other foreigners. Oahu in 1900 had 58,504 inhabitants, two fifths of them living in Honolulu. Hawaii had 46,843, the large expansion of the sugar industry having drawn immigrants to that island in numbers sufficient to increase its population 75 per cent. since 1890. The population of Maui, where nearly all the tillable land has been brought under cultivation and production, has been enormously increased by irrigation, was 25,416, showing a growth of 30 per cent. in four years. Kauai, where there are rich sugar and rice plantations and good pasture lands, with a very small native population, had 20,562 inhabitants. Molokai, on whose north shore two leper settlements are situated, and the neighboring little island of Lanai showed the smallest increase in population, having together 2,504. Niihau, which is practically owned by one white man, had only 172 inhabitants on an area of 97 square miles. The percentage of increase in the entire group was 71.1 per cent. in ten years. The population of Honolulu was 39,306, having nearly doubled in the decade and grown into a modern seaport with street cars, electric lighting, and good architecture from a native village of 3,000 souls since the first coming of the missionaries in 1810.

Finances.—The revenue in 1898 was \$2,568,499 and expenditure \$2,186,278. The chief items of revenue were \$896,975 from customs, \$811,818 from taxes, and \$1,585,057 from internal revenue duties. The chief expenditures were \$102,659 for the public debt, \$229,115 for education, \$54,534 for the army, \$239,157 for public works, \$194,966 for sanitation, and \$241,031 for the Attorney-General's office. The debt on Jan. 1, 1899, amounted to \$4,457,605, paying from 5 to 12 per cent. interest.

Commerce and Production.—Sugar is the principal product, and next in importance comes rice. Coffee has been planted extensively, and bananas are largely grown. Hides and skins and wool are exported in considerable quantities. The soil, composed of volcanic detritus and alluvium, is exceedingly fertile. The growth of the sugar industry has been the chief factor in promoting the extraordinary increase in the population and wealth of the Hawaiian Islands, which are now the third largest producer of cane sugar in the world. Nearly all the money invested in agriculture has been put into sugar plantations. The production of raw sugar in 1899 was 282,807 tons, having nearly doubled in five years. There were 51 plantations, employing about 40,500 laborers, of whom 30,000 were Japanese, 6,000 Chinese, 2,150

Portuguese, and the remainder of various nationalities. Scandinavians have been tried, also Poles and Austrians, and in 1900 Porto Ricans and American negroes were taken out.

The total value of imports increased from \$5,730,000 in 1894 and \$5,714,000 in 1895 to \$7,165,000 in 1896, \$8,838,000 in 1897, and \$11,650,000 in 1898; that of exports of Hawaiian produce from \$9,141,000 in 1894 and \$8,358,000 in 1895 to \$15,436,000 in 1896, \$16,022,000 in 1897, and \$17,346,000 in 1898. Foodstuffs for the population, as well as textiles and clothing, timber, machinery, and hardware, are imported. Cereals and provisions, cotton goods, and a majority of other goods are brought from the

necting Oahu with Hawaii, have 250 miles of line. Honolulu already had a thorough telephone system before the fall of the monarchy. The number of letters and other mail matter handled by the post office in 1897 was 5,079,872. The postal savings bank in 1897 had \$953,981 belonging to 10,620 depositors. Cables will soon connect all the islands.

Politics and Legislation.—The tariff and navigation laws of the United States have been extended to the Hawaiian archipelago. The time labor contracts by which laborers engaged to work on the sugar plantations could be restrained by the public force from leaving before the stipulated

HONOLULU.

United States, which supplies 74.64 per cent. of the total imports, while 11.05 per cent. come from England. On many articles imported free from the United States 10 per cent. duty is paid if they come from other countries. Of the exports 99.44 per cent. go to the United States. The imports into the United States from Hawaii were valued at \$17,187,380 in 1898 and \$17,831,463 in 1899, the exports from the United States to Hawaii at \$5,907,155 in 1898 and \$9,305,470 in 1899. The total trade of the islands in 1899 showed an increase of 44 per cent. over that of the previous year. The proportion of the United States in the import trade was 78.8 per cent., that of the British Empire 11.25 per cent. There was a notable increase in the importation of machinery, fertilizers, building materials, clothing, and provisions. Sugar amounted to 97 per cent. of the total exports, all going to the United States. The export of rice has declined, owing to the increased domestic demand. Bee culture is growing into an important industry, especially in Oahu, and the export of honey to Australia and New Zealand has reached a considerable figure. The imports from the Hawaiian Islands into the United States in 1900 reached \$20,707,903 and exports from the United States to the Hawaiian Islands \$13,509,148.

Navigation.—The shipping belonging to Hawaii consisted in 1898 of 71 vessels, of 33,576 tons. Lines of steamers run between Honolulu and American, Australasian, Chinese, and Japanese ports.

Railroads, Posts, and Telegraphs.—On the islands of Oahu, Hawaii, and Maui are railroads having a total length of about 100 miles. The telegraphs in these three islands, with the cable con-

necting Oahu with Hawaii, have 250 miles of line. Honolulu already had a thorough telephone system before the fall of the monarchy. The number of letters and other mail matter handled by the post office in 1897 was 5,079,872. The postal savings bank in 1897 had \$953,981 belonging to 10,620 depositors. Cables will soon connect all the islands.

Politics and Legislation.—The tariff and navigation laws of the United States have been extended to the Hawaiian archipelago. The time labor contracts by which laborers engaged to work on the sugar plantations could be restrained by the public force from leaving before the stipulated term of years expired have been abolished as repugnant to the United States Constitution. The trade between the United States and the Hawaiian Islands is now coastwise in character. No duty is paid on Hawaiian products brought into the United States or on American products brought into Hawaii. As Honolulu is no longer treated as a foreign port the merchants of San Francisco who conduct most of the business no longer report the quantity and value of the imports and exports.

The first election held in Hawaii since it became a Territorial part of the United States took place in November, 1900. A Delegate to Congress was chosen. There were three parties—Republicans, Democrats, and Independents, the last representing specially the native Hawaiians and the principle of home rule. Samuel Parker, of native descent, the chief cattle breeder of the islands, was the Republican candidate; Prince David Kauanaukoa, a nephew of ex-Queen Liliuokalani, was the candidate of the Democrats; and Robert W. Wilcox, who was a leader in the revolutionary uprising of the natives against the Americanizing Government in power in 1889, was the nominee of the Independents, whose object is to gain the rights of statehood for Hawaii. Mr. Wilcox was the successful candidate, and in the Legislature elected at the same time, comprising 15 Senators and 30 Representatives, the Independents obtained a majority of the seats.

HAYTI, a republic in the West Indies, occupying the western third of the island of Hayti. The legislative power is vested in the National Assembly, consisting of a Senate of 39 members, chosen for six years by the lower house from two lists, one submitted by the President and one by an

electoral college, and a House of Representatives, 95 in number, elected for three years by the votes of all adult male citizens who have regular means of livelihood. The President is elected for seven years by the people. Gen. Tiresias Augustin Sam was elected on April 1, 1896, to fill the unexpired term of President Hippolyte, ending in May, 1902. The Cabinet at the beginning of 1900 was composed as follows: Secretary of Foreign Affairs, Brutus San Victor; Secretary of Finance and Commerce, Herard Roy; Secretary of the Interior and Police, Tancredi Auguste; Secretary of Agriculture and Public Works, C. Leconte; Secretary of Justice and Worship, L. Cauvin; Secretary of War and Marine, V. Guillaume; Secretary of Public Instruction, M. Chanzy.

Area and Population.—The area of the republic is estimated at 10,204 square miles. An ecclesiastical census taken in 1894 made the population 1,210,825. Nine tenths of the people are negroes and the rest of mixed blood. The state religion is the Roman Catholic, but all creeds are tolerated. The people speak the French language, corrupted in the country districts into a patois known as Creole French. Elementary education is free, and nearly \$1,000,000 are spent to support 400 public schools and 5 lyceums; yet the mass of the people, especially in the country, lack the rudiments of education and are extremely ignorant and superstitious, relapsing at times into the savage rites of African witchcraft.

Finances.—Nearly the whole of the public revenue is derived from customs duties, levied in United States gold coin on exports and on imports in gourdes or national dollars, which are 15 per cent. or more below the par of the American dollar. The export duties collected in 1897 amounted to \$2,993,338 in gold, the import duties to \$3,957,857 in currency; the export duties in 1898 to \$3,212,239 in gold, the import duties to \$2,640,574 in currency. For the year ending Sept. 30, 1899, the revenue was estimated at \$5,626,260 in currency and \$2,337,205 in gold; the expenditure at \$5,633,068 in currency and \$2,325,284 in gold.

The public debt on Dec. 31, 1898, consisted of 5 and 6 per cent. foreign gold loans amounting to \$13,141,751, \$4,407,055 of internal debt payable in gold and secured by the export duty on coffee, and \$9,227,713 payable in currency. There were \$3,749,000 of paper money and \$3,500,000 of silver gourdes having the same contents as the French 5-franc piece in circulation in 1899, with \$225,000 in copper. The amount of American gold in the country was about \$1,200,000. A loan of \$3,500,000 in United States gold was authorized in February, 1898, for the purpose of retiring the paper money. The money could not be borrowed, and subsequently a law was passed imposing a supplementary duty on imports, equal to 25 per cent. of the former duties, which was to be applied to the redemption of the paper currency until a loan could be raised.

The Army and Navy.—A Government guard of 650 men with 10 generals among its officers is kept to protect the President. An army of 6,828 men, mostly infantry, has been authorized since 1878. A fleet of small cruisers and gunboats has been acquired at different times.

Commerce and Production.—The staple product of Hayti is coffee, for which the country is admirably adapted. An export duty of \$3.87 a hundredweight is a serious impediment to the extension of the industry, and much of the coffee is gathered from old, neglected plantations. Cacao has been planted in recent times. Cotton also is now planted, and the export is becoming important. Tobacco cultivation has been undertaken

by a company organized lately. The sugar cane is grown mainly for rum, which is distilled and consumed in the country. Copper, iron, and nickel exist, but there is no mining. The chief forest product is logwood. The export of coffee in the year ending Sept. 30, 1898, was 67,437,593 pounds; of cacao, 4,037,129 pounds; of cotton, 1,276,946 pounds; of logwood, 66,603,168 pounds. Minor exports are hides and skins, honey, and mahogany.

There were 196 vessels, of 268,196 tons, entered and cleared at Port-au-Prince in 1898; 192, of 286,577 tons, at Cape Haytien; 134, of 164,644 tons, at Les Cayes; and 177, of 426,552 tons, at Jacmel.

HENDERSON, DAVID BREMNER, Speaker of the United States House of Representatives, was born in Old Deer, Aberdeenshire, Scotland, March 14, 1840. He is a son of Thomas and Barbara Henderson and a grandson of Walter Henderson on his father's side. He was taken to the United States by his parents, who settled on a

DAVID BREMNER HENDERSON.

farm in Winnebago County, Illinois, in 1846. In 1849 they removed to Fayette County, Iowa, where the son was educated, attending district schools and Upper Iowa University at Fayette. He enlisted in the National army, Sept. 15, 1861, and was mustered into service Nov. 5 as first lieutenant of Company C, Twelfth Iowa Infantry. He participated in the battles of Fort Henry, Fort Donelson, Shiloh, and Corinth, was severely wounded at Fort Donelson, and lost a leg at Corinth, Oct. 4, 1862. He re-entered the army, June 10, 1864, as colonel of the Forty-sixth Iowa Infantry, and served until the close of the war. He was admitted to the bar at Dubuque in 1865, and was appointed collector of internal revenue at the close of the war, serving until June, 1869, when he resigned to become a member of the law firm of Shiras, Van Duzee & Henderson. He was

Assistant United States District Attorney for the northern division of Iowa about two years, and resigned in 1871. In 1882 he was elected as a Republican to the Forty-eighth Congress, and he was re-elected to the Forty-ninth, Fiftieth, Fifty-first, Fifty-second, Fifty-third, Fifty-fourth, Fifty-fifth, Fifty-sixth, and Fifty-seventh Congresses. He was elected Speaker of the House of Representatives, Dec. 4, 1899. Upper Iowa University has conferred upon him the degree of LL. D.

HOLLAND. (See NETHERLANDS.)

HONDURAS, a republic in Central America. The legislative power is vested in the Congress, a single chamber of 46 members, 1 to 10,000 of population, meeting biennially and elected for four years by universal male suffrage. The President of the republic is elected for four years by popular suffrage. Gen. Terencio Sierra was elected President in 1899 for the term ending in January, 1903, and Gen. José M. Reina was elected Vice-President. The following were members of the Council of Ministers in the beginning of 1900: Minister of Foreign Affairs, Dr. C. Bonilla; Minister of Public Works, F. Altschul; Minister of Justice and Public Instruction, Dr. E. C. Fiallos; Minister of Finance, D. Fortin; Minister of War, Gen. M. Rosales.

Area and Population.—Honduras has an area estimated at 45,250 square miles, with a population of about 407,000, mostly of Indian descent. Education is gratuitous, secular, and compulsory, the school age being from seven to fifteen. There are 23 superior schools with 1,588 pupils besides a university at Tegucigalpa, and 683 elementary schools with 23,767 pupils. The Government spends on the latter \$139,000 a year.

Finances.—The bulk of the revenue is derived from duties on liquor and tobacco and from customs. The revenue for the year ending July 30, 1897, was \$2,388,500, and expenditure \$2,400,272. For 1898 the revenue amounted to \$3,049,365, of which \$1,263,654 came from internal revenue duties, \$1,059,116 from customs, \$192,148 from stamps, \$21,462 from taxation, and \$512,985 from various sources. For 1900 the revenue was estimated at \$2,388,500, and expenditure at \$2,400,272.

The Government of Honduras contracted between 1867 and 1870 four foreign loans, on which interest ceased to be paid in 1872. On the first loan, which was £78,800 at 5 per cent., £100,470

interest was owing in the middle of 1898; on the second loan of 1897, which was £900,700 at 10 per cent., £2,341,820 of unpaid interest had accumulated; on the loan of 1869, which was £2,176,570 at 6 per cent., the arrears were £3,700,169; and on £2,242,500 borrowed at 10 per cent. in 1870 they were £5,830,500. The nominal principal amounted to £5,398,570; the defaulted interest reached £12,436,324 at the end of July, 1899. There is an internal silver debt amounting in 1899 to \$5,518,822.

Commerce and Production.—The chief crop grown for export is bananas, which are sent to New Orleans. Tobacco, sugar, coffee, and corn are cultivated, and to a less extent indigo, rice, and wheat. There are large herds of cattle in the interior. The mineral resources of the country are great, but undeveloped. Gold is washed from the river beds by the natives, and recently companies have been organized to conduct mining operations on a commercial scale. Silver, copper, lead, platinum, zinc, antimony, nickel, and iron ores are abundant. The scarcity of labor is the greatest obstacle to production. The people braid Panama hats and carry on other small industries and till the soil sufficiently to supply their necessities, but will not work steadily for hire. The value of the imports in 1898 was \$1,166,441 in gold; exports, \$1,235,952 in gold; the value of bananas being \$425,000, cattle \$117,000, coffee \$80,000, cacao \$72,000, and wood \$44,000. Of the total imports the value of \$816,022 came from the United States, \$132,000 from Germany, and \$103,914 from Great Britain; of the exports, \$988,987 went to the United States, \$21,470 to Germany, and \$11,596 to Great Britain. Gold bars of the value of \$28,937 were exported from Amapala, and silver bars of the value of \$967,273, silver coin to the amount of \$55,952, and \$29,150 worth of other metals.

Railroads, Posts, and Telegraphs.—The railroad from Puerto Cortez to La Pimienta, 60 miles, will be carried through to the Pacific coast and a line built from Puerto Cortez to San Lorenzo.

The post office in 1898 received 304,039 and sent out 337,589 internal letters, etc., and in the foreign service received 95,500 and sent out 200,548. There are 2,730 miles of telegraph line; the number of messages in 1898 was 458,593. There are telephones in the capital, Tegucigalpa, a town of about 14,000 inhabitants, and in some other places.

I.

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population in 1890, 84,385; in 1900, 161,772. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, Frank Steunenberg; Lieutenant Governor, J. H. Hutchinson; Secretary of State, Mart Patrie; Auditor, Bartlett Sinclair; Treasurer, Lucius C. Rice; Attorney-General, S. H. Hays; Adjutant-General, J. N. Weaver; State Engineer, D. W. Ross; Superintendent of Schools, Permeal French; Mine Inspector, Jay A. Czizek—all fusionists; Chief Justice of the Supreme Court, J. W. Huston; Associate Justices, J. N. Sullivan and Ralph P. Quarles; Clerk, Solomon Hasbrouck.

Population.—The population of the State in 1900, by counties, was as follows: Ada, 11,559; Bannock, 11,702; Bear Lake, 7,051; Bingham, 10,447; Blaine, 4,900; Boise, 4,174; Cañon, 7,497; Cassia, 3,951; Custer, 2,849; Elmore, 2,286; Fremont, 12,821; Idaho, 9,921; Kootenai, 10,216;

Latah, 13,451; Lemhi, 3,446; Lincoln, 1,784; Nez Percés, 13,748; Oneida, 8,933; Owyhee, 3,804; Shoshone, 11,950; Washington, 6,882; total, 161,772.

Finances.—The State's bonded debt is \$427,500. The floating debt is all provided for, and cash is being paid for warrants as presented. Sinking funds to pay the bonded debt amount to \$75,000. The bonds are to be paid as fast as the option of the State matures. The bonds run twenty years, with the option to pay at the end of ten years. The first bonds to which the State applied its option were the \$11,000 wagon-road bonds of 1889, which were paid July 1. C. J. Bassett, Commissioner of Immigration, Labor, and Statistics, in his latest report says: "The present is the first time in the history of the State that it has been on a cash basis. The tax levy for State purposes has been cut down from 86 cents on the \$100 valuation to about 52 cents."

Valuation.—The total assessed valuation of the State, as equalized, is \$47,545,905.82, an increase of \$825,915.43 over 1899. The total acreage of

patented lands in 1900 was 2,587,259, with a valuation, as equalized, of \$12,631,359.55. The total valuation of county assessments, as equalized in 1900, is \$38,444,937.49, exclusive of railroad, telegraph, and telephone assessments, which are, respectively, \$8,931,115, \$84,692.68, and \$85,160.65, making a total of \$47,545,905.82, against \$46,719,990.39 in 1899. The amount of State tax levied for 1900 was \$245,000. The value of mines and mining improvements, as given by the assessors, amounts to \$1,214,211.

Mineral Yield.—The State official reports of the output of precious metals in 1899, with comparisons from 1898, reaches the following showing: Gold—1899, \$1,550,958; 1898, \$1,895,566. Silver—1899, \$2,688,102; 1898, \$6,796,541. Total, 1899, \$4,239,060; 1898, \$8,692,107. The output of lead, 1899, was valued at \$3,760,553. The grand total for gold, silver, lead, and copper reached \$11,163,928. That is \$2,427,350 less than the State's output for 1898, the decrease being due very largely to the falling off in Owyhee and Shoshone Counties. The fact that the Black Jack mine was closed down last year accounts for a large portion of the Owyhee decrease, and the labor troubles in Shoshone County are accountable for the falling off there. The value of the copper output for 1899 was \$60,000. The number of quartz mills in the State is 79.

Railroads.—The amount of railroad mileage is 1,291.82 miles, the three counties having the greatest mileage being Kootenai, 258.96 miles; Bannock, 124.53; and Lincoln, 116.75. In southeastern Idaho 51 miles of new railroad have been built, connecting the town of St. Anthony with the Short Line system at Idaho Falls. This road was constructed by the Short Line because of the rapid development of the rich agricultural region through which it passes.

Telegraphs and Telephones.—There are 1,200.77 miles of telegraph line in Idaho. The telephone wires reach 1,232 miles, with 985.50 of additional wires.

Live Stock.—From the reports of the county assessors it appears that the State contains 162 mules, 170,476 cattle, 25,497 hogs, 80,390 horses, and 1,247,693 sheep.

Irrigation.—The greatest irrigation enterprise in the Northwest has been launched in Idaho. Water is to be taken from Snake river to irrigate the vast fertile plains on either side of the stream in the vicinity of Shoshone Falls. The project is to reclaim the land under the Carey act and the State legislation supplementary thereto, and it has progressed so far that the segregation of the land by the State has been made. Altogether, 248,000 acres of land have been withdrawn from entry to be reclaimed by the proposed canal system, and of this 200,000 acres are arable and of the highest fertility and can be recovered from the canals projected. The proposed canal on the north side of the river is to be 20 miles long and 25 feet wide on the bottom, and will carry 400 second feet. On that side the State has segregated 31,000 acres, and 2,000 acres of school land are also covered. On the south side the canal will swing back toward the hills and cover the entire Rock Creek section. It will be 90 feet wide on the bottom, and will carry a stream 9 feet deep, or 3,000 second feet. It will be 65 miles long, ending at Salmon river. On that side the State has filed on 217,000 acres of land. In addition, 18,000 acres of school land are covered. The cost of the dam and canals will be about \$1,500,000.

The Prison.—The total expenditure for the State Penitentiary amounted to \$39,819.80 for the fiscal year. From this amount \$14,028.38 is de-

ductable as not being chargeable to maintenance, leaving \$25,791.42 as the net cost. The average daily number of prisoners was 1504, the whole number of prison days served 54,854, making the average daily cost per capita 47¹/₄ cents. On Nov. 30 there were in the prison 147 State prisoners and 9 United States prisoners; total, 156.

Insane.—The number of patients remaining at the Blackfoot Institution on Sept. 30 was as follows: Male, 118; female, 74. This represents about the average number of patients.

Labor Troubles.—The report of the congressional Committee on Military Affairs, which conducted an investigation of the Cœur d'Alene labor agitation, was submitted on June 5, having been approved by a majority vote of the committee, the minority favoring a substitute report. The majority report says:

"1. The Governor of Idaho, in his efforts to establish order and enforce the laws of the State, is to be commended for his courage and fearlessness. The blind hatred excited by the mob, the consequent disturbance of public business, and the reign of lawlessness are in a fair way to be adjusted. The citizens of Idaho are to be congratulated on the removal of a dangerous cancer that has long threatened the peace and order of the State. The better ideas that prevail as to the rights and duties of men in relation to the preservation of society and this improved condition of affairs are in a great measure due to the conduct of the Governor of that State.

"2. The conduct of the military from May 2 to the present, amid the disturbing elements of the Cœur d'Alenes, when fierce passions flamed unchecked, when no hand was raised to stay the dynamiter and the murderer, where the mob has been supreme, is a matter of earnest congratulation to the country."

The report takes up in detail the various meetings of the miners' unions the day before and on the day the Bunker Hill mill was blown up with dynamite, the distribution of firearms and masks, and the march on the mill. "This," it says, "was accomplished with military precision under direct command of leaders and without any delay, from which fact, and from the evidence adduced at the Corcoran trial, it is found that there existed in the mining district of the Cœur d'Alenes a widespread, deep-seated, and thoroughly organized conspiracy."

The report says the district had been in a state of insurrection since 1892, and the condition in 1899 culminated in the violent state of insurrection and riot. The Legislature could not have been convened to meet the emergency, and the committee holds that "under the circumstances the Governor was warranted in calling on the President for troops."

As to the President's course, the report says: "It is conceded on all sides that the President of the United States was justified in sending troops to Shoshone County, Idaho, in response to the application of the Governor. The United States troops have now gone into garrison 8 miles from the scene of the trouble, and they are retained at the request of the Governor, supported by a petition of 1,500 citizens.

"None of the charges pending against the United States army and its officers in Idaho, as set forth in the various paragraphs of the resolution, have been sustained by the testimony. The military force in Shoshone County, under command of Gen. Merriam, was used strictly in aid of the civil authorities. The sheriff and many other county officials were in collusion with the rioters, and therefore civil authority could not be enforced.

Some of the county officials were afterward duly removed from office by judicial process because of said collusion and malfeasance in office. The United States army and its officers acted strictly within their instructions and the law. President McKinley and the War Department exercised every precaution, and the military acted solely within the Constitution and did not encroach in the distinct sphere of the civil authorities."

Political.—The vote of the State at the election in November was as follows: For presidential electors—Democratic, 29,414; Republican, 27,198. For Supreme Judge—C. O. Stockslager (Democrat), 28,164; E. C. Steele (Republican), 26,501. For Governor—Frank W. Hunt (Democrat), 28,628; D. W. Standrod (Republican), 26,468. The remainder of the Democratic ticket was elected. The State officers to succeed in January, 1901, are: Governor, Frank W. Hunt; Lieutenant Governor, T. F. Terrel; Secretary of State, C. J. Bassett; Auditor, E. W. Jones; Treasurer, J. J. Plumer; Attorney-General, Frank Martin; Superintendent of Instruction, Permeal French; Mine Inspector, M. H. Jacobs.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; 3,826,351 in 1890; and 4,821,550 in 1900. Capital, Springfield.

Government.—The following were the State officers during the year: Governor, John R. Tanner; Lieutenant Governor, William A. Northcott; Secretary of State, James A. Rose; Auditor, James S. McCullough; Treasurer, Floyd K. Whittemore; Attorney-General, Edward C. Akin; Superintendent of Public Instruction, Alfred Bayliss; Adjutant General, J. N. Reece; Superintendent of Insurance, James R. B. Van Cleave; Printer Expert, John H. Barton; Chief Justice, James H. Cartwright—all Republicans; President of Board of Agriculture, W. H. Fulkerson; Board of Arbitration, H. R. Calef, D. J. Keefe, and W. S. Forman; President of Board of Health, C. B. Johnson; Justices of Supreme Court, C. C. Boggs, J. J. Phillips, J. W. Wilkin, J. N. Carter, A. M. Craig, and B. D. Magruder. The following additional State officers were created by act of April 24, 1899: Food Commissioner, A. H. Jones; Game Commissioner, Henry W. Loveday; Super-vising Architect, R. Bruce Watson; Board of Inspectors of Commission Merchants, W. H. Whitcomb, J. W. Stanton, A. M. Crawford, Joseph Newman, and A. M. Smith.

Population.—The population of Illinois in 1900, according to the bulletins of the Federal census, was 4,821,550, against 3,826,351 in 1890, an increase of 26 per cent. The population by counties was: Adams, 67,058; Alexander, 19,384; Bond, 10,078; Boone, 15,791; Brown, 11,557; Bureau, 41,112; Calhoun, 8,917; Carroll, 18,963; Cass, 17,222; Champaign, 47,622; Christian, 32,790; Clark, 24,033; Clay, 19,553; Clinton, 19,824; Coles, 34,146; Cook, 1,838,735; Crawford, 19,240; Cumberland, 16,124; DeKalb, 31,756; Dewitt, 18,972; Douglas, 19,097; Dupage, 28,196; Edgar, 28,273; Effingham, 20,465; Fayette, 28,065; Ford, 18,359; Franklin, 19,675; Fulton, 46,201; Gallatin, 15,836; Greene, 23,402; Grundy, 24,136; Hamilton, 20,197; Hancock, 32,215; Hardin, 7,448; Henderson, 10,836; Henry, 40,049; Iroquois, 38,014; Jackson, 33,871; Jasper, 20,160; Jefferson, 28,133; Jersey, 14,612; Jo Daviess, 24,533; Johnson, 15,667; Kane, 78,792; Kankakee, 37,154; Kendall, 11,467; Knox, 43,612; Lake, 34,504; LaSalle, 87,776; Lawrence, 16,523; Lee, 29,894; Livingston, 42,035; Logan, 28,680;

McDonough, 28,412; McHenry, 29,759; McLean, 67,843; Macon, 44,003; Macoupin, 42,256; Madison, 64,694; Marion, 30,446; Marshall, 16,370; Mason, 17,491; Massac, 13,110; Menard, 14,336; Mercer, 20,945; Monroe, 13,847; Montgomery, 30,836; Morgan, 35,006; Moultrie, 15,224; Ogle, 29,129; Peoria, 88,608; Perry, 19,830; Piatt, 17,706; Pike, 31,595; Pope, 13,585; Pulaski, 14,554; Putnam, 4,746; Randolph, 28,001; Richland, 16,391; Rock Island, 55,249; St. Clair, 86,685; Saline, 21,685; Sangamon, 71,593; Schuyler, 16,129; Scott, 10,455; Shelby, 32,126; Stark, 10,186; Stephenson, 34,933; Tazewell, 33,221; Union, 22,610; Vermilion, 65,635; Wabash, 12,583; Warren, 23,163; Washington, 19,526; Wayne, 27,626; White, 25,386; Whiteside, 34,710; Will, 74,764; Williamson, 27,796; Winnebago, 47,845; Woodford, 21,822.

Valuations.—The total assessment of the counties for 1900, as given by the Auditor, was \$779,513,978, against \$895,869,600 for 1899. The decrease is accounted for by alleged evasions of property owners, a new law intended to secure accurate returns having proved ineffectual. Detailed published statements from the reports of the State Board of Equalization, which adjourned on Dec. 3, show the following figures for 1900: Lands, \$265,588,643; lots, \$304,031,170; personal property, \$157,426,634; capital stock, \$4,808,630; railroads, \$77,928,418.

Banks.—In May the State Auditor had received statements of the condition of all the State banks. One hundred and fifty-seven showed total resources and liabilities of \$207,576,168.25. This included the following items: Resources—loans and discounts, \$119,171,187.20; United States bonds, including premiums, \$641,865.34; other bonds and securities, \$25,902,864; other real estate, \$1,040,595.77; gold coin, \$5,383,292.15; gold Treasury certificates, \$7,403,125; silver coin, \$307,700.85; silver Treasury certificates, \$1,267,649; national bank currency, \$4,415,925; legal tender and Treasury notes, \$2,521,151. Liabilities—capital stock, \$18,432,000; surplus fund, \$7,141,201.43.

In August the Auditor published the following figures in his report as to the condition of 139 State banks for the year ending June 30, 1900: Capital, July 1, 1899, \$16,887,000; surplus, \$6,929,558; undivided profits, \$4,794,014; total investments consisting of loans, bonds, stocks, and realty, \$146,698,062; total investments consisting of part of reserve due from banks, \$37,690,909; gross earnings for the twelve months, \$8,774,891; net earnings for the twelve months, \$2,876,134. Of the 139 banks, 117 report dividends paid during the twelve months, amounting to \$1,385,470. The percentage of dividend per capital, surplus, and undivided profits was 5.3, and the percentage of dividend per capital was 9 per cent.

Agriculture.—In June the State Department of Agriculture issued a report, which included an interesting account of Illinois's agricultural fairs held in 1899. The totals represent results at 70 distinct fair holdings, including the State fair. The total entries of cattle exhibited were 3,555; horses and equestrianism, 7,917; sheep, 2,533; hogs, 4,227; poultry, 11,869; farm products, 25,430; horticulture and floriculture, 7,880; fine arts, 8,399; textile fabrics, 20,477; dairy products, 7,457. The entries reached a total of 111,169. The amount of premiums offered was \$241,704.10, and the amount of premiums actually paid was \$168,617.38.

Arbitration.—In March the miners and operators of Illinois came to an agreement on the scale of wages to govern the mines of Illinois for the year beginning April 1, 1900. The advance of 9 cents for pick mining, as provided for in the

international agreement, was granted in every district except the thin veins of northern Illinois and the Fulton and Peoria County districts, the differential for machine mining to be 7 cents. This scale began April 1.

Early in November, 1899, there was a strike at the piano and organ factory of Story & Clark, in Chicago, and three days later all the other piano and organ factories in Chicago were closed by their proprietors. The number of employees thus thrown out of employment was about 3,500, whose aggregate earnings prior to the strike and lockout had averaged about \$45,000 a week. The trouble had its origin with the action of the Piano and Organ Workers' Union in making a large number of demands to which the manufacturers refused to accede. On Nov. 21 the board received by mail from Charles Dold, business agent of the Piano and Organ Workers' Union, a petition for arbitration, purporting to be signed by a majority of the employees of the several manufacturers.

RICHARD YATES,
GOVERNOR OF ILLINOIS.

The board, after an unavailing effort to induce the manufacturers to join in the petition, proceeded to make an investigation. The points of difference set forth in the petition were: (1) A nine-hour work day; (2) restoration of former wages (wages paid up to 1892); (3) payment of wages in lawful money; (4) a weekly pay day; (5) regulation of the apprentice system; (6) abolition of the contract and subcontract system; (7) abolition of the piecework system; (8) all future differences to be settled by arbitration.

In the board's report the following recommendations were made: (1) That the strike at the factory of Story & Clark and the lockout at all other factories be declared off immediately; (2) that work be resumed at all factories at once; (3) that all the employees at work at the time of the strike and lockout be re-employed without discrimination; (4) that a day's work in all the factories in all departments shall consist of nine hours; (5) that in case of a difference involving a proposed increase in wages, each employer shall meet a committee of his employees and endeavor to settle such difference by mutual agreement.

The manufacturers expressed their willingness to resume operations upon the terms recommended. The employees, however, rejected the decision on the ground that it did not provide for the recognition of the union. The suspension of work was thereupon continued. Eventually the Federation of Labor instituted an inquiry, and agreed, in a letter to the union, upon the following terms of settlement: "Your union is to declare the strike off in Story & Clark's. The manufacturers will declare off the lockout. Nine hours to constitute a day's work in all the piano and organ factories in Chicago. The reinstatement of all the old employees without discrimination, the manufacturers being glad to meet their old employees in their respective shops, and wherever differences as

to wages exist to take them up and adjust them, and upon the adjustment of the differences work to be resumed."

The men still refused to go to work, standing out for the formal recognition of their union. Several weeks later, however, operations were resumed at all the factories on the basis recommended by the board and approved by the president and treasurer of the Federation of Labor.

Charities.—In the Illinois Institute for the Education of the Blind, at Jacksonville, the number of pupils enrolled during the biennial period ending June 30, 1900, was 291. Of these, 19 were adult males admitted as apprentices in the shop department; 5 were adult females admitted to the manual training department. The remainder were in the school proper during a portion of each school day. Of the members of the school, 159 are males and 108 are females.

At the Illinois Soldiers' and Sailors' Home, Quincy, the average attendance for the two years ending June 30 was 1,532, and the average cost of maintenance was \$103.76. The actual amount expended for the ordinary expenses of the home during the past two years is \$318,177.57. During the same period there has been received, or is now due, from the General Government, \$306,475.

The report of the Illinois Soldiers' Orphans' Home, Normal, shows as present, June 30, 1900, 186 males and 127 females. The ordinary expenses for the year ending June 30, 1899, were \$57,422.62.

The Soldiers' Widows' Home of Illinois, Wilmington, on June 30, had 49 inmates, with 53 others approved and awaiting admission.

The Illinois Asylum for Feeble-minded Children, on July 1, had 756 inmates, the average daily attendance, 1898-1900, being 765. In addition, 1,943 were awaiting admission.

The four State asylums or hospitals for the insane make the following reports: Eastern, Kankakee, 1,893 males, 1,646 females (1898); Western, Watertown, 328 males, 292 females (1900); Central, Jacksonville, 643 males, 622 females (1900); Northern, Elgin, 538 males, 564 females (1900).

Education.—The school statistics for the year ending June 30, as issued by the Superintendent of Public Instruction, include the following figures: Persons under twenty-one years of age—males, 1,130,254; females, 1,110,091; increase in two years, 21,029. Children enumerated between the ages of six and twenty-one—males, 804,857; females, 784,038; increase in two years, 31,225. Pupils enrolled in schools—males, 483,792; females, 475,119; increase in two years, 19,748. Average daily attendance, 737,576; increase in two years, 8,349. Average number of days public schools were kept, 160.4; increase in two years, 1.7 day. Buildings used for schoolhouses, 12,809; increase in two years, 69. Pupils enrolled in private and parochial schools, 142,496; decrease in two years, 799. Public school teachers employed—males, 6,950; females, 19,363; increase in two years, 1,046. Average monthly salaries of teachers—males, \$60.34; females, \$52.45.

Balance on hand June 30, 1899 (district funds), \$4,585,741.81. Receipts for the year ending June 30, 1900—for income of township fund (rent of school lands and interest on school notes), \$900,183.94; from State appropriations, \$1,000,000; from district taxes, \$15,909,436.67; from sales of bonds, \$590,769.14; from all other sources, \$769,229.84; total receipts from all public money, excluding balance on hand, \$19,169,619.59. Total expenditures, \$18,327,121.12; cash on hand, June 30, 1900, \$5,428,240.28.

Fisheries.—The fourth annual report of the Illinois Fishermen's Association was issued in

February. It includes the output from 22 places on Illinois river. This represents only a portion of the fish taken from that river and used commercially. The report includes only such fish as have been handled by members of the association. The fish included in this report have nearly all gone to Eastern markets, and the showing is a substantial increase over the last report. The total weight of the year's catch was 11,205,516 pounds, valued at \$362,246.77.

Insurance.—In February the State Insurance Superintendent reported: Companies doing a general fire, marine, and inland navigation insurance business in this State at this date are as follow: Illinois joint stock fire and marine companies, 6; Illinois mutual fire insurance companies, 11; joint stock fire and marine insurance companies of other States, 126; foreign fire and marine insurance companies, 48; mutual fire insurance companies of other States, 12; total, 203. This shows a net gain of 2 companies, compared with the number at the date of the last report.

The result of the past year shows a large addition to the volume of business written and carried by fidelity, surety, and casualty companies in this State. Exclusive of the industrial business transacted by the 3 companies, the new business written during 1899 in this State exceeded that written during 1898 by 9,929 policies and \$15,348,281 of insurance. There is shown a net increase of insurance in force of \$54,664,212 on \$95,387,490 of new insurance written during the year. This net increase is 57 per cent. of the new business written, against 47 per cent. in 1898 and 28 per cent. in 1897.

In the entire industrial business of the companies carrying on this branch of business 536,987 more policies and \$88,670,430 more insurance were written in 1899 than in 1898. The net increase in insurance in force at the end of the year was \$175,600,322.

The total business of all companies for 1899, compared with the business of 1898, shows an increase in total income of \$37,998,853.61, an increase in total expenditures of \$24,345,208.25, an increase in total admitted assets of \$130,328,487.26, an increase in total liabilities of \$119,981,221.03, and an increase in total surplus of \$10,347,266.23.

At the date of the last report 40 life and 10 accident-assessment companies were authorized to transact business in Illinois. One company has since been organized in the State. The last report showed 82 fraternal societies in the State.

Building and Loan Associations.—Official reports show the total assets of 599 associations, in 1899, as \$54,104,602.06.

Railroads.—From the report of the Railroad and Warehouse Commission for the year ending June 30, 1899, made public in February, 1900, it appears that the total mileage in Illinois, including all tracks of steam railroads, is 16,417.87, an increase over 1898 of 288.11. The total mileage of elevated and interurban lines reported to the commission is 97.06 miles. The total capital of the steam railroads at the close of the fiscal year, June 30, 1899, was \$3,038,929,990, which shows an increase over that of 1898 of \$319,318,144. The total railway capital of the elevated and interurban lines for the year ending June 30, 1899, reporting to the commission is \$75,926,852.

The gross earnings from operation of all steam roads entering Illinois for the fiscal year 1899 is \$408,580,535, which is an increase over the fiscal year of 1898 of \$67,248,805. The total increase in the gross earnings of the steam, elevated, and interurban lines over the fiscal year 1898 was \$67,832,632.

The operating expenses of the steam roads were \$44,393,463 more than for 1898. The number of passengers carried by the roads reporting was 37,329,824, and the passenger earnings per mile were \$1,963. The number of tons carried by the steam roads reporting was 73,335,755; freight earnings per mile of road, \$5,012.

Mining.—The coal mining statistics for 1899, published in May, 1900, show that 36,991 men were employed, the tonnage product being 23,434,445, and the number of days of actual operation 205.7. The price paid per ton for mining is given as 47.1 cents; value of coal per ton at the mine, 91.86 cents.

Military.—The report of the Adjutant General, made public in January, says that the militia consists of 7 regiments of infantry, 1 battalion of colored infantry, 1 regiment of cavalry, 3 batteries of artillery, 1 engineer company, 1 signal corps, and 1 hospital corps.

Political.—The canvass of the vote at the election held on Nov. 6 shows McKinley's plurality over Bryan in the State to be 94,924, and his majority over all the candidates 64,073. Yates's plurality over Alschuler for Governor was 61,233, and his majority over all the gubernatorial candidates 33,570.

The total vote for electors, reckoned by the highest on each ticket, was: Herbert, Republican, 597,985; Schubert, Democrat, 503,061; Bannen, Prohibitionist, 17,626; Randolph, People's, 1,141; Louis, Socialist-Labor, 1,373; Wullner, Socialist-Democratic, 9,587; Struble, United Christian, 352; Dean, Union Reform for Direct Legislation, 672.

The total vote on Governor was: Yates, Republican, 580,199; Alschuler, Democrat, 518,966; Barnes, Prohibitionist, 15,643; Van Tine, People's, 1,106; Hoffman, Socialist-Labor, 1,319; Perry, Socialist-Democratic, 8,611; Cordingly, United Christian, 334; Spencer, Union Reform, 650; total, 1,126,828.

INDIA, an empire in southern Asia, under the sovereignty of the King of Great Britain and Ireland, who bears the title of Emperor of India, on the basis of a personal union, and governed under general acts of the British Parliament by a Governor General in consultation with and under instructions from the Secretary of State for India, a member of the British Cabinet. The Governor General, popularly called the Viceroy, is advised by a Council of 5 ordinary members, besides the commander in chief of the forces, who are appointed for five years. The Legislative Council, composed of the members of the Governor General's Council and 16 additional members appointed by him on the recommendation of certain public bodies, has power to make laws subject to the approval of the Governor General and the Secretary of State, for all persons within British India, for all British subjects in the native states, and for native Indian subjects of the King in foreign countries. British India is divided for purposes of administration into the presidencies of Madras and Bombay, each of which has a governor, the lieutenant governorships of Bengal, the North-west Provinces and Oudh, the Punjab, and Burmah, and the chief commissionerships of Coorg, Assam, and the Central Provinces. Each governor and lieutenant governor has a legislative council. The nine provinces are subdivided into about 250 districts. More than 600 feudatory native states are subject to the control of the Governor General.

George Nathaniel Curzon, created Baron Curzon of Kedleston, succeeded the Earl of Elgin as Governor General in 1898. The members of the Council in the beginning of 1900 were Major-Gen. Sir

E. H. H. Collen, Sir A. C. Trevor, C. M. Rivaz, Sir Edward Fitzgerald Law, and Thomas Raleigh. Gen. Sir W. S. A. Lockhart was commander in chief of the forces. The Governor of Bombay was Sir Henry Stafford Northcote; Governor of Madras, Sir A. E. Havelock; Lieutenant Governor of Bengal, Sir John Woodburn; Lieutenant Governor of the Northwest Provinces and Oudh, Sir A. P. Macdonnell; Lieutenant Governor of the Punjab, Sir W. M. Young; Lieutenant Governor of Burmah, Sir F. W. R. Fryer; Chief Commissioner of the Central Provinces, D. C. Ibbetson; Chief Commissioner of Assam, H. J. S. Cotton; Chief Commissioner of Coorg and Resident of Mysore, Col. D. Robertson; Resident at Hyderabad, Sir T. J. C. Plowden.

Area and Population.—The area of British India is 965,005 square miles, and the population in 1891 was 221,289,445, of whom 71,346,987 were in Bengal, 46,905,085 in the Northwest Provinces and Oudh, 20,866,847 in the Punjab, 5,476,833 in Assam, 542,358 in Ajmere and Merwara, 35,630,440 in Madras, including the Laccadive Islands, 18,857,044 in Bombay and Sind, 44,079 in Aden and Perim, 10,784,294 in the Central Provinces, 2,897,491 in Berar, 173,055 in Coorg, 4,658,627 in Lower Burmah, 3,063,426 in Upper Burmah, 15,609 in the Andaman Islands, and 27,270 in the district of Quetta. The feudatory states had a total area of 992,000 square miles, with 69,286,000 inhabitants, making the total area of the Indian Empire 1,957,000 square miles and the total population at the last census 290,575,445.

Of the population of British India 112,542,739 were males and 108,630,213 females; of the population of the native states, 34,184,557 were males and 31,865,922 females. Of the total male population of India, amounting to 146,700,000, the number reported as married was 62,100,000, widowed 6,400,000, unmarried 65,100,000, and 13,100,000 were not reported; of the female population, 140,500,000 in number, 62,400,000 were married, 22,700,000 widowed, 43,600,000 unmarried, and 11,800,000 not reported. The birth rate in 1897 as near as the imperfect registration indicates was 36.94 per thousand and the death rate 32.94 in Bengal, the birth rate 31.10 and the death rate 40.46 in the Northwest Provinces and Oudh, the birth rate 42.60 and the death rate 31.05 in the Punjab, the birth rate 26.80 and the death rate 69.34 in the Central Provinces, the birth rate 31.82 and the death rate 26.26 in Lower Burmah, the birth rate 32.59 and the death rate 50.61 in Assam, the birth rate 28.70 and the death rate 25.40 in Madras, and the birth rate 33.46 and the death rate 39.84 in Bombay. The number of coolie emigrants from India was 17,185 in 1891, 13,751 in 1892, 12,636 in 1893, 17,932 in 1894, 13,103 in 1895, 12,148 in 1896, 10,712 in 1897, and 10,306 in 1898. The number of scholars receiving instruction in India in 1891 was 3,195,220, of whom 2,997,558 were males and 197,662 females; the number not under instruction who were able to read and write was 12,097,530, of whom 11,554,035 were males and 543,495 females; the number of those who were not able to read and write was returned as 246,546,176, of whom 118,819,408 were males and 127,726,768 were females, and 25,384,505, comprising 13,356,295 males and 12,028,210 females, were not reported. The expenditure on education in 1898 was Rx 3,554,026, having risen from Rx 67,100 in 1865. Of the amount expended in 1898 the sum of Rx 567,120 came from local rates, Rx 146,972 from municipalities, Rx 851,255 from subscriptions and endowments, Rx 1,058,214 from fees, and Rx 930,464 from provincial revenues. The Indian universities are examining bodies having supervision over

numerous colleges. In all the provinces are training schools for teachers. The following numbers of students were matriculated in the universities in 1898: Calcutta, 2,721; Madras, 1,515; Bombay, 1,042; Punjab, 1,082; Allahabad, 637. There were 160 colleges with 19,192 male students and 4 with 118 female students, 4,883 secondary schools with 509,125 male scholars and 450 with 42,016 female scholars, 388 training and special schools with 21,604 male scholars and 70 with 2,468 female scholars, 94,827 public primary schools with 2,788,367 male scholars and 5,680 with 316,216 female scholars, and 41,083 private schools with 536,521 male scholars and 1,284 with 38,648 female scholars, making the total number of 148,829 schools, with 4,274,275 scholars, 3,874,809 males and 399,466 females. The number of vernacular newspapers in 1897 was 758, printed in Hindi, Bengali, Marathi, Telegu, Sanskrit, Tamil, Gujrathi, Sindhi, and twelve other languages.

Finances.—The revenue in 1898 was Rx 96,442,004 and the expenditure Rx 101,801,215, of which Rx 76,481,391 were expended in India and Rx 25,319,824 in England. The revenue of the Government of India was Rx 17,249,537, and the expenditure of the General Government was Rx 25,088,712; the revenue of the Central Provinces was Rx 2,120,483, and expenditure Rx 2,932,356; the revenue of Burmah was Rx 6,368,294, and expenditure Rx 4,185,849; the revenue of Assam was Rx 1,341,107, and expenditure Rx 986,998; the revenue of Bengal was Rx 20,288,493, and expenditure Rx 10,324,105; the revenue of the Northwest Provinces and Oudh was Rx 11,183,480, and the expenditure Rx 6,702,003; the revenue of the Punjab was Rx 9,015,123, and expenditure Rx 5,069,422; the revenue of Madras was Rx 14,142,046, and expenditure Rx 10,209,315; the revenue of Bombay was Rx 14,430,724, and expenditure Rx 10,982,631; the receipts in England were Rx 193,662, and expenditure in England Rx 16,198,263; the gain by exchange on receipts in England was Rx 109,055, and loss by exchange on remittances to England Rx 9,121,561. The land revenue in 1898 was Rx 25,683,642, not reckoning the addition charged on account of irrigation; opium revenue, Rx 5,179,772; revenue from salt, Rx 8,594,225. The land revenue in the parts of India where it was fixed permanently a century ago, comprising most of Bengal, a quarter of the area of Madras, and certain districts in the Northwest Provinces, is about 20 per cent. of the renting value of the land, averaging two thirds of a rupee per acre. In the rest of India the assessment, readjusted at intervals of twelve to thirty years, averages 1½ rupee per acre, amounting to half the rental.

The revised estimates for the year ending March 31, 1899, made the total revenue Rx 101,566,100 for that year, the land revenue yielding according to the estimate Rx 27,679,400, opium Rx 5,679,400, salt Rx 9,047,200, stamps Rx 4,839,900, excise Rx 5,731,000, provincial rates Rx 3,952,100, customs Rx 4,898,400, assessed taxes Rx 1,930,100, forests Rx 1,838,000, registration Rx 454,000, tribute Rx 939,700, interest Rx 970,100, post office and telegraphs Rx 3,054,400, civil departments Rx 1,748,400, miscellaneous sources Rx 984,700, railroads Rx 22,736,400, irrigation Rx 3,461,700, buildings and roads Rx 696,400, military departments Rx 924,800. The total expenditure for 1899 according to the revised estimates was Rx 97,506,700; excluding Rx 1,417,900 of provincial balances it was Rx 96,088,800, of which interest took Rx 3,076,800, refunds and compensation Rx 1,853,400, charges of collection Rx 8,858,900, the post office, telegraphs, and mint Rx 2,890,900, civil salaries Rx 15,715,900, miscellaneous civil charges Rx 5,

774,200, famine relief and insurance Rx 1,176,100, railroad construction charged against revenue Rx 4,200, railroad revenue account Rx 23,614,500, irrigation Rx 3,222,100, buildings and roads Rx 5,842,100, the army Rx 24,051,300, and defense works Rx 8,400. The budget estimate of revenue for the year ending March 31, 1900, was Rx 101,961,500, and expenditure Rx 98,953,600, which was reduced to Rx 98,028,909 by receipts from provincial balances amounting to Rx 924,700. The provinces in 1899 received grants amounting to Rx 1,129,300 in aid of their resources, which had been exhausted by special expenditures occasioned by famine, plague, and earthquake. The deficit of Rx 5,359,211 in 1898 is attributable to these causes and to the war on the northwest frontier. The cessation of the war and the good harvests of 1897 came as a great relief to Indian finance, warranting the expectation of a considerable surplus in 1899 and 1900. The surplus realized in 1899, estimated at £2,700,000, counting 15 rupees to the pound sterling, was actually £2,640,000. For 1900 a surplus of £2,600,000 was looked for also before the failure of the monsoons deranged all calculations. The expenditure incurred in connection with the famine, together with remissions of revenue, amounted to nearly £3,500,000 up to March 31, 1900, of which £730,000 was available for direct famine relief out of the famine insurance fund, leaving the net cost of the famine £2,631,000. The revenue, however, was so much better than the estimate that this loss was balanced by gains and the year closed with a surplus of £2,800,000. After the summer monsoon first broke in 1900 the Finance Minister, Clinton Dawkins, counted on a deficit of only £826,000 for the financial year 1901 notwithstanding the loss of revenue inflicted by drought. This estimate included an additional allowance of £1,200,000 for famine relief and remission of land revenues on account of the lateness and the intermission of the monsoon on the west coast. The Government had a balance of £9,000,000 unexpended of the loan authorized in 1897 and decided to raise a new loan of £3,000,000. A rupee loan of Rx 3,000,000 at 3½ per cent. was subscribed in Bombay at the rate of 94. The cost to the Government of the famine of 1900 up to July was £6,189,000 for direct relief, £3,400,000 for remission of land revenue, £2,346,000 loaned to native states, and £1,100,000 for advances to individuals. The failure of the British public to respond to the Viceroy's appeal for contributions to supply seed and plow cattle and to succor the sick, orphaned, aged, and those who shrank from receiving the form of public relief offered drove the Government to include these objects in its scheme of relief. A motion made in the British House of Commons for a grant in aid of £5,000,000 to the Indian Government in its emergency was rejected by the ministry and voted down by a vote of 112 to 65.

The debt of British India on March 31, 1898, amounted to Rx 242,989,003, of which Rx 111,695,634 was permanent debt in India, Rx 117,274,680 permanent debt in England, and Rx 14,018,689 unfunded debt in India.

Defense.—The military forces in India in 1898 numbered 5,194 European and 3,209 native officers and 206,525 noncommissioned officers and privates; total of all ranks, 214,928. The British army in India had a strength of 3,616 officers and 70,672 men, or 74,288 of all ranks, composed of 914 officers on the staff, 9 cavalry and 52 infantry generals and 29 general officers unemployed, 14 invalid and veteran officers and men, 491 officers and 12,916 men of the Royal Artillery, 261 cavalry officers and 5,409 men, 347 officers and 158 men of the Royal

Engineers, and 1,508 infantry officers and 52,180 men. The native army consisted of 1,578 European and 3,209 native officers and 135,853 noncommissioned officers and men, a total strength of 140,640, made up of 33 native and 54 European officers and 2,001 men in the artillery, 358 European and 619 native officers and 21,955 men in the cavalry, 65 European and 488 native officers and 3,142 men in the sappers and miners, and 1,122 European and 2,048 native officers and 108,755 men in the infantry. The estimates for 1900 provided for a total strength of 219,369 of all ranks, composed of 788 miscellaneous officers, 17,896 artillery, 28,975 cavalry, 4,462 engineers, and 167,248 infantry. The British army was depleted in 1900 by drafts of troops for service in South Africa and to replace garrisons that were sent to South Africa. In July the British Government ordered three new regiments of native infantry to be raised for the garrisoning of colonial stations like Mauritius and Singapore. A regiment of sepoy was sent to Mauritius to take the place of the Central African regiment that had come into conflict with the Indian inhabitants of that colony. Sepoys of the Bengal and Punjab commands were passed into the reserve in order to train new recruits.

The European and Eurasian volunteer bodies on March 31, 1899, had 30,749 men enrolled, of whom 28,346 were counted as efficient, 1,802 being in the Punjab, 12,230 in Bengal, 8,744 in Madras, and 5,570 in Bombay. The imperial service troops, consisting of picked corps from the armies of the feudatory princes, trained under the inspection of 18 British officers, numbered 17,987 men in 1899, consisting of 7,820 cavalry, 9,874 infantry, and 293 artillery. The contingent of Kashmir was 3,168; of Patiala, 1,799; of Alwar, 1,572; of Gwalior, 1,462; of Jodhpur, 1,190; of Bhartpur, 1,085; of Jaipur, 796; of Hyderabad, 786; of Kapurthala, 739; of Nabha, 736; of Bahawalpur, 573; of Jind, 649. Indore, Mysore, Bhopal, Rampur, and the Kathiawar states held small bodies of cavalry, and Bikanir, Maler Kotla, Faridkot, and Sirmur a company or battalion of infantry at the call of the India Government.

The naval force maintained by the Indian Government consists merely of two monitors, of 3,340 and 2,900 tons, armed with 4 14-ton guns, a dispatch boat, 2 torpedo gunboats, 7 small torpedo boats, and a mining flotilla. Bombay, Karachi, Rangoon, Madras, and the Hugli are defended by forts. The guns are said to be obsolete or defective, and black powder only is provided. The field artillery used black powder till 1899, and many of the guns are old muzzle-loaders. The cavalry are still armed with the Martini carbine and the Lee-Metford rifles furnished to the infantry are not of the best type. The native troops have till now been armed with the old Martinis discarded by the British regiments. These are now being passed on to the local militia organized for the defense of the northwest passes as fast as the native regulars can be rearmed with Lee-Metfords.

Commerce and Production.—The survey department furnished returns in 1898 respecting 542,860,615 acres in British India out of 732,792,973 acres in British and native territory covered by the surveys. Of the net area for which returns were made 138,118,424 acres were not available for cultivation, 64,546,530 acres were covered with forests, 106,530,103 acres were waste lands capable of being utilized, 37,159,326 acres were cultivated lands left fallow, and 196,497,232 acres were under crops. Of the area cropped 70,781,408 acres were under rice, 19,946,164 acres under wheat, 92,017,559 acres under other food grains, 2,648,498 acres under sugar cane, 12,564,664 acres under oil seeds, 8,916,-

229 acres under cotton, 1,366,513 acres under indigo, 465,593 acres under tea, 1,048,439 acres under tobacco, 2,159,908 acres under jute, 585,421 acres under other fiber plants, 5,750,080 acres under food crops other than grain or pulse, and 151,092 acres under coffee. Counting double 27,245,474 acres on which double crops were raised, the total area cropped was 223,243,566 acres. The irrigated area was 18,616,253 acres, of which 10,245,732 acres were served by minor works, paying Rx 3,709,946 for the service, and 8,370,521 acres by major works, paying Rx 2,072,880, making the gross revenue collected for irrigation Rx 5,872,826. The net profits from irrigation works for which capital accounts are kept were 7½ per cent. The area cultivated, counting double for double crops, was 30,418,454 acres, and the value of the irrigated crops was estimated at Rx 45,000,000. The reserved forests cover nearly 76,500 square miles, the area in the Central Provinces being 19,206, in Burmah 14,706, in Madras 13,775, in Bombay 13,281, in Bengal 5,880, in the Northwest Provinces and Oudh 3,851, in Assam 3,590, in the Punjab 2,283, in Berar 4,175 square miles, besides which there are Government forests in Coorg, Ajmere, Baluchistan, and the Andamans.

The value of the sea-borne commerce of India in the financial year 1898-'99 was Rx 89,997,141 for imports and Rx 120,211,145 for exports, a decrease of 4.45 per cent. in the imports and an increase of 14.73 per cent. in the exports compared with 1897-'98. Of the imports, Rx 72,101,528 consisted of merchandise and Rx 17,895,613 of treasure; of the exports, Rx 112,799,725 of merchandise and Rx 7,411,420 of treasure. Of the bullion and specie imported, Rx 8,840,054 represent gold and Rx 9,055,559 silver imports, while the exports of gold were Rx 2,336,646 and of silver Rx 5,074,774. The imports of merchandise, excluding Government stores, were Rx 68,380,341 in value and the imports of treasure not for the Government were Rx 17,883,957, making the total imports on private account Rx 86,264,298. Of the total exports of merchandise Rx 109,350,276 were products of the country and Rx 3,371,197 re-exports. Excluding Government stores and treasure, the imports and exports of the principal commercial divisions of India in the foreign commerce of 1898-'99 were as follow:

DIVISIONS.	Imports.	Exports.
Bengal	Rx 27,949,005	Rx 46,713,296
Burmah	5,544,296	11,725,267
Madras	5,267,291	11,429,118
Bombay	25,651,902	41,306,515
Sind	3,967,845	8,955,456

The imports of live animals in 1899 were valued at Rx 329,306, and exports at Rx 159,979; imports of articles of food and drink at Rx 9,189,556, and exports at Rx 38,576,728; imports of chemicals, drugs, and colors at Rx 2,013,412, and exports at Rx 11,333,926; imports of oils at Rx 3,552,005, and exports at Rx 800,887; imports of raw materials at Rx 2,971,876, and exports at Rx 39,143,998; imports of hardware and cutlery at Rx 1,430,123, and exports at Rx 15,739; imports of metals at Rx 5,179,246, and exports at Rx 110,896; imports of machinery at Rx 3,055,931, and exports at Rx 882; imports of railroad material and rolling stock at Rx 2,824,815, and exports at Rx 8,832; imports of yarns and textile fabrics at Rx 30,325,847, and exports at Rx 13,945,656; imports of clothing at Rx 1,380,486, and exports at Rx 151,928; imports of all other articles at Rx 6,127,738, and exports at Rx 5,100,825. The value of cotton manufactures imported was Rx 27,229,

720; metals, hardware, and cutlery, Rx 6,009,369; sugar, refined and raw, Rx 4,016,999; silk, raw and manufactured, Rx 2,159,450; liquors, Rx 1,647,520; woolen goods, Rx 1,523,731; provisions, Rx 1,531,667; chemicals and drugs, Rx 1,236,305; spices, Rx 889,054; dyes and tans, Rx 777,107; salt, Rx 661,227; coal, Rx 696,379; glass, Rx 662,293; paper, Rx 382,657; umbrellas, Rx 243,438; grain and pulse, Rx 31,265. The exports of rice were valued at Rx 15,813,954; oil seeds and other seeds, Rx 11,847,194; raw cotton, Rx 11,188,538; wheat, Rx 9,719,688; tea, Rx 8,044,804; cotton manufactures, Rx 7,788,470; hides and skins, Rx 7,449,218; opium, Rx 7,126,009; raw jute, Rx 6,941,245; jute manufactures, Rx 5,798,359; indigo, Rx 2,970,478; coffee, Rx 1,749,824; wool, Rx 1,253,483; timber, Rx 1,085,705; lac, Rx 871,394; oils, Rx 800,887; spices, Rx 618,596; provisions, Rx 609,729; dyes other than indigo, and tans, Rx 510,886; silk, raw, and cocoons, Rx 458,003; salt-peter, Rx 349,344; woolen manufactures, Rx 229,285; sugar, Rx 198,437; silk manufactures, Rx 128,189. Of the rice exported the value of Rx 9,582,038 came from Burmah, Rx 4,698,436 from Bengal, Rx 612,941 from Bombay, Rx 766,230 from Madras, and Rx 144,309 from Sind; of the wheat, Rx 3,399,587 from Bombay, Rx 4,700,047 from Sind, and Rx 1,620,015 from Bengal; of the opium, Rx 4,318,148 from Bengal and Rx 2,807,861 from Bombay; of the indigo, Rx 1,870,553 from Bengal, Rx 934,266 from Madras, and smaller amounts from Bombay and Sind; of the cotton, Rx 8,144,818 from Bombay, Rx 1,305,380 from Madras, Rx 917,859 from Sind, Rx 676,992 from Bengal, and Rx 143,489 from Burmah; of the seeds, Rx 5,864,868 from Bombay, Rx 4,114,756 from Bengal, Rx 1,455,451 from Sind, and Rx 409,028 from Madras. On rice is collected the only export duty, amounting in 1899 to Rx 1,006,651. Of the import duties, amounting to Rx 6,192,940, salt paid Rx 2,588,993. Of the total value of the imports of merchandise Rx 58,087,914, and of the exports Rx 68,011,394, passed through the Suez Canal. The export and import trade of the port of Calcutta was Rx 72,578,339; of Bombay, Rx 60,578,339; of Rangoon, Rx 14,044,212; of Karachi, Rx 12,896,636; of Madras, Rx 8,623,601; of Tuticorin, Rx 2,187,869.

The shares of the principal commercial countries in the foreign commerce of India in 1898-'99 are shown in the following table, giving the total imports and the exports of Indian produce:

COUNTRIES.	Imports.	Exports.
Great Britain	Rx 47,032,169	Rx 32,006,018
China	1,691,889	12,707,913
Germany	1,737,875	8,245,806
France	1,081,845	7,815,970
Straits Settlements	2,006,210	5,644,409
United States	1,362,669	5,364,191
Egypt	125,706	6,847,060
Belgium	2,230,432	4,749,180
Ceylon	702,005	4,907,212
Japan	545,005	5,215,587
Austria-Hungary	2,428,375	2,067,180
Italy	556,927	3,306,063
Mauritius	1,959,345	1,271,087
Russia	2,062,995	122,724
Arabia	443,794	1,397,086
Australia	325,708	1,281,956
East Africa	265,941	1,142,525
South America	364	1,274,558
Persia	583,953	705,340
Netherlands	352,301	471,782
Spain	13,086	155,050

The import and export trade over the land frontiers with Nepal, the Shan States, Kashmir, Kandahar, Cabul, Bajaur, western China, Zimme, Khelat, Tibet, Siam, Lus Bela, and the Karen amounted to Rx 10,142,000 in 1899, the imports be-

ingvalued at Rx 5,501,600 and exports at Rx 4,640,400. The value of the coasting trade, excluding Government stores and treasure, was Rx 68,701,877 for imports and exports. The trade with Afghanistan has fallen away in consequence of the restrictions imposed by the Ameer, who has forbidden the export of horses and the import of salt and created Government monopolies of several important articles.

The indigo plantations, the most important of which are in Behar, the most densely populated province of India, are threatened with the competition of artificially produced indigo, which is now made in Germany more cheaply than the natural indigo can be grown. The use of cheap chemical substitutes already interfered with the expansion of indigo cultivation before German chemists invented the process of manufacturing synthetic indigo on a commercial basis. The planters still hope to be able to compete with the German product by increasing the yield and improving the methods of preparation. The planters have applied to the Government for pecuniary aid to help them resuscitate the cultivation of sugar, which was once carried on by Europeans before they turned to indigo, and which might once more become profitable with modern methods and machinery, at least as an auxiliary or alternative crop. The food crops of India, except in famine years, are superabundant for the meager requirements of the population, and usually there is a large surplus for export. The variableness of rainfall causes great fluctuations from year to year in the quantities of the different agricultural products that are exported. Wheat is grown in almost every province, yet the main production is in the northern half, while two thirds of the cotton crop is raised in the southern half of India, though this plant also is cultivated everywhere. Rice is produced in Burmah, eastern Bengal, and Madras far in excess of the needs of those provinces. Maize is the staple food in many of the districts of central and southern India lately stricken with famine, and millet is the staff of life for a majority of the population of the empire. Nine tenths of the flax crop is grown in the Northwest Provinces, the Central Provinces, and Bengal. In 1900 the failure of rain over a great part of India caused a great deficiency in staple export crops, such as wheat, cotton, and oil seeds, but stocks remained for export from the abundant harvest of 1898. The imports for the year ending March 31, 1900, excluding treasure and Government stores, amounted to Rx 70,712,000, exceeding the total for 1899 and falling but little short of the average for the five years previous. The merchandise exports for private account, although less than in 1899, exceeded the average for the quinquennial period ending with 1898, amounting to the total of Rx 105,714,000, not including Rx 3,293,000 of re-exports. The exports of 1899 were swollen by abnormal shipments of rice and wheat, whereas in 1900 large quantities of food grains were diverted to the famine-stricken provinces. No less than 40 per cent. of the total imports consisted of cotton manufactures, nearly all of which came from England. The opium exports have increased in the last two years, owing to the adulteration of the Chinese drug and the increased purchasing power of the Chinese people, but it is probable that the downward tendency of opium exports is only temporarily suspended. The increased exports of raw hides and skins, of which two fifths went to the United States, bears witness to the heavy mortality among cattle consequent upon famine. The exports of raw cotton to Europe were less than in previous years, while the

Japanese requirements were larger. The area under cotton, jute, and oil seeds was smaller owing to the superior claims of food crops in consequence of the last famine, and short supplies entailed higher prices, which were further enhanced by the crop failures of 1899-1900. The sugar imports from Germany have been replaced by the product of Mauritius, China, Java, and the Straits Settlements as the result of countervailing duties against bounty-fed sugar, and the imports from Austria from the same cause have declined. The imports of metals and metal manufactures declined, especially copper on account of its high price and machinery in consequence of the depression in the manufacturing industries of Bombay. The imports of petroleum, which came from the United States before 1894 and since then from Russia, were smaller in 1900, but still of great magnitude notwithstanding the development of the oil wells of Burmah. The exports of tea rose to 175,000,000 pounds in 1900, having doubled in twelve years. Of the total 90 per cent. went to England, constituting 50 per cent. of the English imports of tea. New plantings have begun to yield, increasing the annual production.

The chief effect of the unparalleled drought of 1900 on the foreign commerce of the financial year 1900 was to stimulate exports and to a certain extent imports. In 1901 there will be little to export of the staple products. The crop of oil seeds, usually worth Rx 27,000,000, failed utterly; the cotton crop, of the average value of Rx 18,000,000, amounted to not more than Rx 7,500,000; the wheat crop, in normal years worth Rx 36,000,000, was reduced to Rx 15,000,000. The loss of nine tenths of the cattle entails diminished production for years to come.

Navigation.—The number of vessels entered during 1898-'99 at the ports of British India was 4,915, of 4,583,186 tons, of which 2,365, of 3,770,391 tons, were British; 775, of 108,641 tons, were British Indian; 1,181, of 60,305 tons, were native; and 594, of 637,849 tons, were foreign. The number cleared was 4,771, of 4,532,460 tons, of which 2,317, of 3,697,915 tons, were British; 762, of 108,062 tons, were British Indian; 1,121, of 66,728 tons, were native; and 571, of 659,755 tons, were foreign. Of the vessels entered 662, of 1,628,559 tons, were steamers that passed through the Suez Canal, and of those cleared 1,004, of 2,341,220 tons. The number of vessels entered with cargoes in the inter-portal trade was 100,865, of 11,097,652 tons; cleared, 91,861, of 11,210,614 tons. The number of vessels built in India during 1898-'99 was 67, of 3,409 tons; the number first registered, 105, of 7,668 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in India on March 31, 1899, was 22,491 miles, having increased from 18,500 miles in 1894, 15,242 miles in 1889, and 10,828 miles in 1884. Of the total length 11,078 miles were Government lines operated by companies, 5,566 miles were Government lines operated by the Government, 2,588 miles were lines of guaranteed companies, 1,102 miles were assisted lines, 922 miles were lines belonging to native states worked by companies, 146 miles were lines of the native states worked by the Indian Government, 1,016 miles were lines owned and operated by native states, and 73 miles were foreign lines. The total capital outlay was Rx 297,424,318 at the end of 1898, including unfinished lines and surveys, and of this Rx 174,868,574 was on the state railways, Rx 41,164,344 on state lines leased to companies, Rx 51,272,732 on guaranteed railways, Rx 13,636,605 on the lines of assisted companies, Rx 13,941,746 on the railways of the native states,

Rx 1,758,766 on foreign lines, Rx 486,651 on surveys, and Rx 294,900 on coal mines. The guaranteed companies had raised Rx 46,955,105 of capital and the companies leasing Government railroads Rx 29,491,022. The gross receipts of all the railways during 1898 were Rx 27,464,235, of which Rx 8,689,220 were from passengers and Rx 17,885,888 from freight. The number of passengers carried was 152,584,321; tons of freight, 36,350,900. The operating expenses of all railways was Rx 13,064,353, being 47.57 per cent. of the gross earnings, and the net earnings were Rx 14,399,882, giving a net return on the capital of 5.37 per cent.

The number of letters, postal cards, and money orders that passed through the British Indian post office in the year ending March 31, 1898, was 408,797,236; of newspapers, 31,891,484; of parcels, 2,965,990; of packets, 21,364,415.

The Government telegraph system at the end of the fiscal year 1898 had 50,306 miles of line, with 154,824 miles of wire. The number of private telegrams was 5,713,227 during the year. The receipts were Rx 1,309,330, and expenses Rx 1,051,494.

Currency.—By the act passed on Sept. 15, 1899, on the recommendation of a committee of British financiers appointed by the Secretary of State in London, the legal standard of value in British India is the gold sovereign. The British sovereign is legal tender, the mints have been declared open to the free coinage of gold, and measures are taken by the Government with a view of introducing a gold currency. Since Sept. 11, 1897, sovereigns have been received at the reserve treasuries at the exchange rate of 15 rupees for the sovereign, the rate at which by the act of June 26, 1893, closing the Indian mints to the unrestricted coinage of silver, gold coin of full weight and gold bullion were declared receivable at the two Government mints in Calcutta and Bombay in exchange for rupees and by the Government in payment of dues, and also in exchange for currency notes issued in Calcutta and Bombay. The mints were closed to the free coinage of silver in accordance with the recommendations of a committee, of which the Lord Chancellor was chairman, in consequence of the fall of silver which brought the exchange value of the rupee below 1s. 3d., entailing a loss by exchange so serious as to embarrass the Indian Government and render the estimates of expenditure extremely uncertain. Fluctuations continued after the closure of the mints, and the Government withheld remittances to arrest the fall of the market rate, until this gradually approached the ratio fixed by the Government of 1s. 4d. for the rupee or 15 rupees for the sovereign. From 1835 to 1893 the legal standard was the silver rupee, and before the ratio of 15½ to 1 between silver and gold began to vary in 1873 the exchange rate of the rupee remained steady at 2s. During the whole period the Indian mints coined Rx 373,774,632 of silver, all rupees excepting Rx 11,863,641 worth of British dollars intended for the Straits Settlements and Hong-Kong. Gold mohurs were coined, but not to an appreciable amount. Since the closing of the mints to free coinage the Government has coined rupees to the amount of Rx 94,595 in 1895, Rx 292,713 in 1896, Rx 573,353 in 1897, Rx 985,692 in 1898, and Rx 698,365 in 1899. The Bombay mint has also struck British dollars for use in China and the silver-paying colonies of the value of Rx 752,445 in 1896, Rx 1,392,230 in 1897, Rx 4,830,083 in 1898, and Rx 4,888,883 in 1899. The Government has issued a paper currency since 1861, the amount of notes in circulation in January, 1899, being Rx 28,203,275, of which Rx 15,670,000 were covered by coin,

silver rupees mainly, gold to the extent of Rx 480,000, and the remainder was covered by Government securities. The metallic reserve changed from silver into gold after the proclamation of the gold standard, so that on May 1, 1900, it consisted of Rx 14,000,000 of gold and Rx 4,500,000 of silver. The Government was obliged to buy silver with a part of the gold, sufficient to coin rupees to the amount of Rx 4,400,000, in order to have a sufficient silver reserve to meet the demands; and to supply a deficiency of silver coin in the country Rx 16,890,000 in rupees were added to the circulation between April 1 and July 1.

Famine.—Agriculture is the chief occupation of the people of India, and it is carried on under conditions that render it peculiarly difficult and precarious. The soil is remarkably fertile in most of the agricultural districts, but the taxes imposed on the cultivator are more severe than in any European country and more rigorously collected than in any Oriental country. In the south-western Punjab and in Sind a system of irrigation canals is maintained as essential to successful agriculture. In the Central Provinces and immediately north of them wells, tanks, reservoirs, and canals have been made and kept up both at public and at private expense to store water against the hour of need. In the narrow coast strip between the Ghats mountains and the Arabian Sea from Bombay southward to the extremity of the peninsula rains never fail, and on the eastern side, in Bengal, Assam, and Burmah, a failure of the autumnal rains is of rare occurrence, though partial or local droughts may occur. In all other parts of India the crops depend on the monsoon, which may be deficient or unequally distributed in any year, and at periods which seem to recur every ten or twelve years may fail entirely over expanses of hundreds of thousands of square miles, and the failure may be repeated in the following year, or may extend over a period of three or four years with good years intervening. Such repeated widespread droughts are the cause of Indian famines. Drought is never universal even in the endangered territory. A surplus of food products in some of the provinces is usually available for the partial but ready relief of the stricken area. The average annual rainfall in India is 41 inches. In 1896 there was a deficiency of 5 inches, and as a result an area of 205,000 square miles with a population of 40,000,000 was affected with famine by May, 1897. Before the disastrous Orissa famine of 1860 India had enjoyed immunity from serious scarcity for many years. Since that year, from causes ascribed variously or collectively to the periodicity of sun spots, to increasing pressure of the population on the land, or to the denudation of forest areas, India has passed through a long series of lean years and a number of famines. Since 1880 14 scarcities have occurred, of which that of Ganjam in 1889 and that of Madras in 1892 were grave, down to the serious calamity of 1897. The famine code first promulgated in 1883 and the local codes devised to suit the conditions of the various provinces were revised in accordance with the recommendations of a commission appointed in 1898. The Government of India as early as 1874 acknowledged its responsibility for the saving of lives, and in the serious famine that began in that year spent Rx 17,953,000 to relieve distress, an unregulated and wasteful expenditure, which taught the lesson that to borrow for direct famine relief was a disastrous financial expedient and that it was necessary to reserve in prosperous years a substantial surplus of income which should be devoted to reducing debt or preventing the increase of debt for productive public works, so that

when famine comes money can be borrowed to the extent of the amount by which debt has been reduced or prevented. Fresh taxes were imposed in 1878 to secure a surplus revenue, known as the famine insurance fund, to the amount of Rx 1,500,000 a year. In 1881 the plan was modified by applying half the annual fund to special works for protection against famine, such as irrigation canals and reservoirs and railroads for the conveyance of supplies in time of scarcity and for the development in normal years of the districts liable to famine. Between 1880 and 1898 the Government spent Rx 7,791,989 on direct famine relief, for which, when occasion demands, the insurance fund is always available; on protective irrigation works, Rx 1,883,071; on protective railroads, Rx 6,550,931; for guaranteed interest on the Midland Railroad bonds, Rx 4,438,507, a questionable application of the fund; for reduction or avoidance of debt, Rx 25,991,797. This makes a total of Rx 25,991,797 and an annual average of about Rx 1,530,000. Down to 1896 the average was but Rx 1,176,279, and it was only brought up to the normal figure by the expenditure on relief during the severe famine of 1897 and 1898. The Government diverted the fund, although a great part of it is raised by a supplementary tax on salt, to the great military defensive works carried out on the northwestern frontier as the result of the Russian war scare. Until the great famine came in 1898 the authorities fell into the belief that a crore and a half of rupees was too much to reserve every year for famine insurance.

In 1897 the rainfall was generally sufficient to produce fair crops, and in 1898 the rains were profuse and harvests of 1899 were consequently abundant. In 1899 the monsoon failed again, this time more completely than in any previous recorded year. The deficiency was 11 inches, 27 per cent. of the average rainfall. The drought came earlier in the year than was ever before known. It fell upon provinces not yet fully recovered from the famine of 1896-'97 and upon others where famine was till then unknown. It brought unprecedented mortality among cattle in central and western India, impoverishing classes superior to those ordinarily coming to relief works, and rendering the task of recuperation much more arduous because years must elapse before the live stock can be renewed. The autumn and spring harvests both failed utterly. In February, 1900, there were 4,000,000 persons in the relief camps, twice the number relieved at that part of the season of 1897. The scale of wages at first adopted was soon reduced. The Government would promise only to stave off absolute starvation, not to prevent suffering. The affected areas had an extent of 417,000 square miles, nearly a quarter of the Indian Empire, and the population affected reached 54,000,000 in May, 1900. The number receiving Government relief in that month was 5,607,000, compared with 3,811,000 in the corresponding part of 1897. The southwest monsoon, which breaks in June on the Malabar coast and floods the central parts of India with 100 inches of rain in good years before the end of September, was from a half to a total failure in 1899, but it was still hoped that the autumnal crops of southern India might be saved by a good northeast monsoon and in central and upper India by abundant winter rains. The northeast monsoons, however, which break on the eastern coast in November and December, failed to a great extent likewise, injuring or destroying the autumn crops and cutting off the spring harvest in a vastly larger extent of country than that previously affected, and intensifying the distress there also.

The autumn harvest was the worst for many years, and the spring harvest was little more than half a crop for India as a whole. Peasants sold their bullocks worth 60 rupees for a single rupee and great numbers died on their hands for want of fodder, so that it will take twenty years to restock the country with farm animals. In many places no drinking water could be had.

The benevolence of the public of Great Britain and India enabled the Relief Committee in 1897 to supplement the Government expenditure of Rx 7,272,123 by Rx 1,549,901 of private contributions. This charitable fund was spent: (1) in supplying clothing and blankets to the destitute, special food and medical comforts for the aged and infirm and for hospital patients and children, and in adding to the Government dole in the case of respectable persons and secluded women who were driven to accept gratuitous relief; (2) in supporting orphans during and after the famine; (3) in selling grain at a cheap price to such as would not apply for relief and relieving respectable people, especially women, who shrank from the public inquiry inseparable from state relief, also craftsmen and artisans who could not go to the works; (4) in giving relief in districts not officially recognized as affected; and (5) in furnishing seed and implements and giving a fresh start in life to such persons as would otherwise lapse into pauperism. The number of persons in the first category who were relieved by the charitable fund in 1897 was 1,342,802; in the second, 26,957; in the third, 832,949; in the fifth, 1,540,464. Although the need was much greater, the charitable fund raised in Great Britain up to the middle of May, 1900, was only £370,000, little more than half as much as was contributed in 1897. When drought occurs in India, where 80 per cent. of the people are engaged in agriculture, afflicted localities not only suffer from the curtailment of their food supplies, but all means of earning wages cease. It is possible during the worst famine years to supply food, of which there is always a sufficiency in India, and with the improvements made in railroad communications it can be carried into the famine districts. It can not, however, be distributed to the villages when the cattle die, for they are the sole means of transport in rural India. Hence it is necessary to take the people from their villages and gather them into immense famine relief camps, where their wants can be supplied under the supervision of the officials, who are far too few for the work. The labor of the people crowded in these places is utilized, rather for the purpose of keeping them from idleness and pauperism than with an intelligent purpose, though it is chiefly employed on protective works for the prevention of future famines. The European officials carry out the directions of the famine code to ignore caste and social distinctions, but when native officials have charge of the camps their prejudices and weaknesses interfere with the efficient discharge of their duties.

The famine of 1900 embraced most of central and southern India. The northern tier of provinces, including Burmah, Assam, Bengal, the Northwest Provinces and Oudh, the Punjab, and Sind, were generally free from famine, although the crop deficiencies in many districts of this territory make an enormous total. The wheat crop of Bengal was equal to the average of 16,376,000 bushels, but in the Northwest Provinces and Oudh, where the average for nine years has been 52,344,000 bushels, it fell 25 per cent. below this figure, although a third of the land is irrigated, and in the Punjab, where 55 per cent. of the land is irrigated and an average crop of 70,341,000 bushels

of wheat is produced annually, was only 65 per cent. of what was harvested this year. In the Central Provinces, where 18,000,000 bushels of wheat are raised on the average, this and most other crops failed entirely, and in Bombay only a third of the average wheat crop of 19,000,000 bushels was obtained, and other crops show a like deficiency. In Berar the crops were almost a total failure. The relief was divided between Bombay, the Punjab, the Central Provinces, Berar, Ajmere, Rajputana, Central India, the Bombay native states, and Baroda, and later relief works were started in the Central Indian native states, the Northwest Provinces, and the Punjab native states. The true famine area covered over 300,000 square miles, with a population of 40,000,000, while the area of scarcity and distress extended over 150,000 square miles more and affected 25,000,000 or 30,000,000 persons.

Although the provincial authorities had not yet readjusted their local systems in accordance with the suggestions of the commission appointed to digest the experiences of the famine of 1897, the methods of public relief were more promptly and efficaciously applied in 1900 because the machinery was already in working order and the officials were trained in the famine code. Mortality in many of the worst districts, as in the Central Provinces, was kept down to figures only a little above the normal. In some isolated areas, however, where the distress was acute, where destitute immigrants streamed across the boundary from native states, and where cholera and other diseases attacked the frames already emaciated by privation, the death rate was abnormally high, and in some of the native states it was appalling. The appearance of cholera in the famine camps caused a large proportion of the people on the relief works to flee. When the famine reached the acutest stage in June, notwithstanding the flight of numbers to perish of hunger outside and the mortality in the camps from disease, the relief camps contained over 6,500,000 people. The total population affected grew to 95,000,000.

The Indian Government advanced to the native states Rx 503,800 to aid them in combating the famine, besides a loan of Rx 1,000,000 to the state of Hyderabad, and granted Rx 1,228,800 to the provincial governments to loan out to cultivators on easy terms. The provincial authorities had also Rx 64,500 of charitable funds with which to buy seed and cattle to give to the poorest villagers and to provide for their needs until they could harvest a crop. The ravages of the cholera in Bombay and Rajputana, added to the mortality from starvation, literally decimated the population in the hilly tracts, and among the Bhils, who were with difficulty induced to enter or to stay in the relief camps, 40 per cent. of the people are believed to have perished. Although the contributions from the British public were smaller than could have been expected, popular subscriptions from the United States and Germany and from China and the Straits Settlements came as unexpected windfalls to eke out the charitable funds.

When the summer rains came and the famine camps began to diminish it is estimated that 1,000,000 people had died of starvation or had been carried off by cholera, dysentery, the plague, and smallpox as a result of the famine and that 1,000,000 more were so emaciated that they would not have the strength to recover. There were 500,000 orphaned and homeless children, and 90 per cent. of the cattle had perished in the famine districts. The Government fixed the wages on the relief works at $1\frac{1}{2}$ anna, equal to 3 cents, for nine hours of labor in breaking stone, building reser-

voirs, or making roads. Such a low rate made the Government money go further, and avoided all danger of pauperizing the people. The measures adopted for enabling the ryots to replant the ground when the rain came—in parts of western India the first rain in two years save one brief shower—were more complete than after the last or any previous famine. The advances to working cultivators and to those who employ laborers were made without interest for a year, and the money will not be reclaimed at the end of this term if its recovery entails eviction or hardship. By the end of June the area of scarcity covered 417,000 square miles, with a population of over 100,000,000, of whom 10,000,000 were absolutely destitute, 7,000,000 of them in the famine camps and the rest too proud to accept relief or be dependent on private charity. The famine death rate was 4,000 a day. The expenditure of the Government for relief amounted to Rx 28,800,000. Government relief was administered (1) by giving payment in money or food for work in the great relief camps; (2) by remitting the rent collected from cultivators under the land settlement; (3) by establishing poor-houses, hospitals, and kitchens for the sick and debilitated, delicate and nursing women, children, and aged people; and (4) by advancing money for the purchase of seed and cattle. The first crops were gathered in the middle of September. The number of persons on the famine works had then dwindled to a little over 1,000,000, but 2,500,000 were still receiving gratuitous relief. The monsoon was an unusually good one, and abundant food crops were obtained.

The Plague.—The bubonic plague, endemic in parts of Mesopotamia, in certain Himalayan valleys, and for the last thirty years in the mountain villages of Yunnan, was carried in 1894 down the West river to Canton and Hong-Kong, and from the latter place by sea to Bombay. For five centuries no plague epidemic, except isolated outbreaks, has extended east of Persia until this last one. The disease has reappeared at the accustomed season in Bombay and the other parts of western India where its first ravages were experienced for several successive years, and has come to be regarded by the medical and governmental authorities as endemic and not to be stamped out, but by sanitation and cleanliness to be kept under control. The area of its visitations has gradually spread into the mountain regions of the north and to the eastward. Calcutta, being a great seaport, was liable to an outbreak at any time, more so than the ports of Asia, Africa, and Europe into which the disease has been introduced. The Government endeavored to guard against it by cleaning the slums, but at the approach of the wet season in 1899 the plague appeared. The preparations to hold it in check and to prevent it from spreading into the country were as much completer than they were at Bombay as forethought and experience could dictate, and for a time they seemed to be effective. Before the winter ended the infection passed the barriers and invaded Patna and other districts of Behar, while still confined to two wards in Calcutta, where the Government promptly disinfected every house that was attacked. In March the mortality rose in Bengal to nearly 5,000 a week, exceeding that of all the rest of India. Two fifths of the deaths were in Patna, less than a sixth in Calcutta. The precautions taken in Patna having provoked the people to tumult, the Government gave way to their wishes by intrusting the duty of detecting and reporting imported cases to their leading men, whose systematic concealment of such cases was responsible for the great mortality. A commission

appointed in November, 1898, to study the plague and modes of prevention or cure reported favorably on the system of preventive and curative inoculation developed by M. Haffkine.

The Native Princes.—The new press laws and other regulations repressing the free expression of opinion in India have prevented any manifestations of unrest and dissatisfaction such as formerly were common from reaching the outside world during the last and worst of Indian famines. Even the officers of the civil service have been fettered by a rule forbidding them to utter any criticisms upon the policy or conduct of their superiors. When the English colonies began to send contingents of volunteers to fight in South Africa some of the native princes offered their troops also, calling forth praises from the Indian and British governments. In August, 1900, Lord Curzon issued a circular forbidding any of the native chiefs to travel abroad without the permission, not only of the provincial authorities, but of the Government of India. This spoiled the effect of the previous eulogiums on their loyalty, although the reason was given that the attractions of European life and pleasures had a tendency to make them forgetful and neglectful of the welfare of their people.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission, was 147,178 in 1820; 343,031 in 1830; 685,866 in 1840; 988,416 in 1850; 1,350,428 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; 2,192,404 in 1890; and 2,516,462 in 1900. Capital, Indianapolis.

Government.—The following were the State officers in 1900: Governor, James A. Mount; Lieutenant Governor, W. S. Haggard; Secretary of State, Union B. Hunt; Treasurer, Leopold Levy; Auditor, William H. Hart; Attorney-General, William L. Taylor; Superintendent of Instruction, F. L. Jones; Adjutant General, J. K. Gore; Statistician, John B. Conner; Geologist, Willis S. Blatchley; Commissioner of Insurance, C. W. Neal; Commissioner of Public Lands, L. G. Rothschild; President State Board of Agriculture, Aaron Jones; Labor Commission, B. F. Schmid, L. McCormack; Factory Inspector, D. F. McAbee; Secretary of State Board of Charities, Amos W. Butler; Fish and Game Commissioner, Z. T. McSweeney; Tax Commissioners, T. B. Buskirk, J. C. Wingate; Supervisor of Natural Gas, J. C. Leach; Mine Inspector, Robert Fisher; Chief Justice of the Supreme Court, John V. Hadley; Associate Justices, James H. Jordan, Alexander Dowling, Leander J. Monks, Francis E. Baker; Clerk, Robert A. Brown—all Republicans.

The Governor's term is four years, his election taking place in the year of the presidential election. Other State offices are held for two years, the elections in even-numbered years. The Legislature meets biennially, in January of odd-numbered years, and consists of 50 Senators and 100 Representatives.

Population.—The population of the State, by counties, according to the census of 1900, was as follows: Adams, 22,232; Allen, 77,270; Bartholomew, 24,594; Benton, 13,123; Blackford, 17,213; Boone, 26,321; Brown, 9,727; Carroll, 19,953; Cass, 34,545; Clark, 31,835; Clay, 34,285; Clinton, 28,202; Crawford, 13,476; Daviess, 29,914; Dearborn, 22,194; Decatur, 19,518; De Kalb, 25,711; Delaware, 49,624; Dubois, 20,357; Elkhart, 45,052; Fayette, 13,495; Floyd, 30,118; Fountain, 21,446; Franklin, 16,388; Fulton, 17,453; Gibson, 30,099; Grant, 54,693; Greene, 28,530; Hamilton, 20,914; Hancock, 19,189; Harrison, 21,702; Hendricks, 21,292;

Henry, 25,088; Howard, 28,575; Huntington, 28,901; Jackson, 26,633; Jasper, 14,292; Jay, 26,818; Jefferson, 22,913; Jennings, 15,757; Johnson, 20,223; Knox, 32,746; Kosciusko, 29,109; Lagrange, 15,284; Lake, 37,892; Laporte, 38,386; Lawrence, 25,729; Madison, 70,470; Marion, 197,227; Marshall, 25,119; Martin, 14,711; Miami, 28,344; Monroe, 20,873; Montgomery, 29,388; Morgan, 20,457; Newton, 10,448; Noble, 23,533; Ohio, 4,724; Orange, 16,854; Owen, 15,149; Parke, 23,000; Perry, 18,778; Pike, 20,486; Porter, 19,175; Posey, 22,333; Pulaski, 14,033; Putnam, 21,478; Randolph, 28,633; Ripley, 19,881; Rush, 20,148; St Joseph, 58,881; Scott, 8,307; Shelby, 26,491; Spencer, 22,407; Starke, 10,431; Steuben, 15,219; Sullivan, 26,005; Switzerland, 11,840; Tippecanoe, 38,659; Tipton, 19,116; Union, 6,748; Vanderburg, 71,769; Vermilion, 12,252; Vigo, 62,035; Wabash, 28,235; Warren, 11,371; Warrick, 22,329; Washington, 19,409; Wayne, 38,970; Wells, 23,449; White, 19,138; Whitley, 17,328; total, 2,516,462.

Finances.—The report of the Auditor for the year ending Oct. 31 gives the following information: "The public debt has been reduced during the fiscal year of 1899 \$483,000, and for the two years since the Legislature last met \$896,000. The amount of the State debt Oct. 31, 1900, was \$4,704,615.12. Of this amount a substantial payment can be made Jan. 1, 1901, from the December settlement with the counties on account of the State debt sinking fund tax. The State gave notice many years ago of its desire to pay the State stock certificates now amounting to \$5,615.12, and since then interest has been stopped. The \$340,000 due Purdue University is payable April 1, 1901, and can be paid at maturity. The 3-per-cent. refunders of 1889, now amounting to \$3,130,000, are held mostly by savings banks, and the State can pay at its convenience. The State debt sinking fund of 3 cents on each hundred dollars levied for this purpose will amount in round numbers to \$400,000 a year, and this, with the probable excess each year from the general fund, will practically pay off all the State debt that can be paid within the next four years. The tax duplicate of the State amounts to \$1,335,746,698. The taxes from the duplicate amount to \$21,659,295.81.

"In 1899 there was paid on the claim of the State for equipment of soldiers for the Spanish war \$44,382.50.

"The unusual specific appropriations of the Legislature of 1899, the largest in the history of the State, have been paid so far as due, and the entire amount will be readily met as it matures from the general fund, and in 1899 a surplus of \$83,000 was applied from this fund in the payment of the State debt."

Education.—The school enumeration for 1900 was 756,004, of whom 15,076 were colored; the enrollment in 1899 was 556,651; the average daily attendance, 424,725. The value of school property is \$23,244,600. In the school year 1899-1900 233 school buildings were erected, at a cost of \$846,800. The number of institutes held was 6,892, and the amount paid teachers for attending institutes was \$134,350.88. School trustees were paid for managing educational work, etc., \$74,374.

It is reported that the State truant law which has been enforced the past year has brought 9,000 more children into the schools. The board has employed 106 officers.

The State Normal School, at Terre Haute, opened in September with an enrollment of 400. The summer term closed Aug. 9, 538 teachers having been in attendance. In the year 1,405 teachers attended and 86 were graduated.

Rose Polytechnic Institute graduated 15 stu-

dents at its sixteenth commencement in June, and 13 were graduated at the Veterinary College in April. At the Indianapolis College of Law 17 students were graduated this summer.

At the commencement exercises of the State University, June 20, there were 98 candidates for the bachelor of arts degree, 33 for that of bachelor of law, and 12 for the master's degree.

De Pauw University graduated 72 students at its sixty-first commencement, June 14.

The twenty-sixth commencement of Purdue University was held June 6, when 71 students received diplomas. In the winter the class in agriculture was the largest ever attending, the enrollment being 92, of whom 20 were women.

Wabash College celebrated the sixty-eighth anniversary of its founding, Nov. 21.

Charities and Corrections.—Statistics given in September concerning the charitable and penal institutions of the State for the nine months ending July 31, 1900, show that \$423,434.18 has been expended in maintaining the 4 insane hospitals. The Central Hospital, in Indianapolis, consumed about \$200,000, while the others used about \$70,000 each. About \$215,000 was expended in addition for new buildings and repairs.

The Home for Soldiers, at Lafayette, expended \$63,797.72 for its support; the Soldiers' and Sailors' Orphans' Home, at Knightstown, \$71,869.11; Deaf Institute, at Indianapolis, \$24,177.50; Feeble-minded Institute, Fort Wayne, \$86,810.20. New buildings and unusual repairs in these several institutions cost \$20,885.66.

The State Prison, at Michigan City, required \$84,369.61 for its regular expenses during the nine months referred to; the Reformatory, at Jeffersonville, \$101,601.22; Industrial School for Girls and Women's Prison, Indianapolis, \$31,678.57; Reform School for Boys, Plainfield, \$47,800.95. New buildings and extraordinary repairs consumed \$106,575.53 additional. The aggregate cost of maintaining the State's penal institutions for the nine months was \$265,450.35.

The State treasury received from these institutions, in the way of earnings and receipts, \$97,922.01, reducing the cost to \$1,232,908.78.

The National Home for Disabled Volunteer Soldiers, at Marion, had 1,600 inmates in September, and about 700 members out on furlough. The appropriation for the coming year is \$282,500, of which \$20,000 is for buildings.

Banks.—The total resources of the 96 State banks, July 31, as shown by reports at the Auditor's office, were \$22,576,934.42. The call in May showed the total resources of the banks to have been \$23,178,919.84. The individual deposits were less in July than they were in May, and it is shown that there has been an increase in the amount of United States bonds held.

Railroads.—In 1899 77 miles of road were built in the State, and in the first half of 1900 there were 34. The Tax Board increased the valuation of railroads for taxation, making the total \$154,473,491, an increase of \$951,600. Other companies were rated as follows: Telephone, \$3,420,159; telegraph, \$2,610,742; express, \$1,822,840; palace car, \$432,598.

The State sued the Vandalia Railroad for more than \$2,000,000, alleged to be due under the charter under which the Indianapolis and Terre Haute Railroad first operated. It provided that after the stockholders had been reimbursed for the full sum invested, with 10 per cent. per annum, all over a dividend of 15 per cent. per annum should be turned over to the State for the school fund. The company operated fourteen years under this charter, and then reorganized under the general rail-

road law, which did not contain the provisions of the charter. The Legislature of 1897, after twenty-five years of various attempts to include these provisions in a law, passed such a bill, and the Attorney-General immediately brought suit. In the Superior Court a decision was rendered in October in favor of the State for \$745,154.65.

Products and Business.—The annual report of the State Geologist shows that while Indiana ranks thirty-fourth in area among the States, it ranks sixth in the production of coal, fourth in petroleum, second in natural gas, seventh in building stone, and sixth in value of clay products. The values of these resources are: Petroleum, \$2,228,276; coal, \$5,177,044; natural gas, \$5,060,969; stone, \$1,731,914; and clay, \$3,211,512; making a total of \$17,409,715. The production of petroleum for 1899 was 3,818,713 barrels, an increase over 1898 of 67,406 barrels. On Jan. 1, 1900, there were 4,336 producing wells in the State, against 3,628 on the same date the previous year. The wells sunk number 6,978, so that the number of dry wells in the State is 2,642.

Natural gas occurs in an area approximating 2,800 square miles. The average pressure in 1890 was 325 pounds, but it has decreased to 155 pounds, and as the supply is shut off at 130 pounds the outlook is not bright.

In the past year 5,865,123 tons of coal were mined. It is estimated that the coal in the State will last three hundred years.

The output of stone was valued at \$1,686,572.

It was reported in August that the wheat crop in much of the State was a disastrous failure, owing in part to weather conditions, but largely to the depredations of the Hessian fly.

Experiments appear to have shown that only the northern part of the State is adapted to the cultivation of sugar beets, and the officials at the experiment station have announced that no special attention will hereafter be given to the subject.

The Legislature passed a law for protecting Asiatic or Chinese pheasants, imposing a fine of \$50 for killing one, and 52 pairs have recently been distributed through the State.

The business failures for the first six months of the year were reported as 57, against 155 in the corresponding part of 1896.

Reports of mortgages filed and those satisfied show that in the 92 counties the total of those filed in 1899 was about \$10,000,000 less than in 1898.

Labor.—About 8,500 coal miners of the State stopped work April 1 because the wage-scale year came to an end with no agreement reached on the powder provision in the contract for the ensuing year, the operators wishing to bind the miners to buy powder from them at \$1.75 a keg, while the miners wanted the privilege of buying in the open market. An agreement was reached April 13, the right to buy in the open market being conceded on the understanding that operators were not to be held responsible for fluctuations in the price. In November more than 200 hoisting engineers and 7,000 miners went out on account of the refusal of operators to sign with the engineers for a higher scale of wages. There were strikes in the year of glass cutters and workmen of other trades, with the result of advanced wages in many instances. The annual report of the Labor Commissioner in September showed that there had been 28 strikes, of which 19 were successful. In 14 increased wages had been demanded and secured.

A decision was rendered in the Superior Court in May, upholding the constitutionality of the law requiring weekly payment of wages.

Historical.—A meeting was held at the Statehouse, July 4, in observance of the one hundredth anniversary of the establishment of Territorial government in Indiana. Gov. Mount presided, and papers were read by Amos Hanway, Ignatius Brown, and Calvin Fletcher. Other papers on the early history of the State, which for lack of time were not read, were prepared by D. M. Bradbury, T. A. Goodwin, C. T. Dalton, J. R. Wilson, W. H. Smith, Miss Lydia Blaich, W. N. Jackson, G. U. Bingham, W. W. Woollen, and S. N. Chambers.

A commission has been formed to raise \$25,000 for a monument to the memory of Gen. Henry W. Lawton, who was a citizen of the State.

Requisitions on the Governor.—In April the Governor issued a requisition for a prisoner in the Kentucky Penitentiary, which was honored by Gov. Taylor; but the prison officials, not recognizing him as Governor, declined to obey the order, and the officer serving the requisition went to Gov. Beckham, who offered to honor the requisition if Gov. Mount would agree to honor any requisition from him. This the Governor declined to do, regarding Mr. Beckham as a contestant until the final decision of the courts, and, moreover, deeming such a compact unlawful even were there no question of Mr. Beckham's title. Later, requisitions were made on Gov. Mount for the surrender of Charles Finley and ex-Gov. Taylor, accused of complicity in the murder of Senator Goebel, but they were refused on the ground that in the existing state of feeling in Kentucky a fair trial would be impossible.

Lawlessness.—A dispatch from Rockport, Dec. 16, says that two negroes who waylaid, brutally murdered, and robbed a white barber in the morning were lynched in the jail yard at night by a mob of 1,000 citizens. The next day a third negro implicated in the murder was taken from a cell at Booneville and hanged by a mob. Militia ordered from Evansville by the Governor arrived at Booneville fifteen minutes after the hanging.

Auburn.—A special election was held in this place, March 26, to determine whether it should continue under town or city government. The result showed a majority of 150 for the change to city government.

Political.—State officers were elected Nov. 6. Seven tickets were in the field—Republican, Democratic, Prohibition, Populist, Social Democratic, Socialist-Labor, and Union Reform.

The Populist convention was held at Indianapolis, Feb. 22. The resolutions reaffirmed the principles of the party on national issues, and on State matters said: "*Resolved*, That we view with alarm the enormous increase in the assessed values of the property for the purpose of taxation and the increased rate of taxation in Indiana, and we demand more rigid economy in the management of State, county, and municipal affairs; that we favor a State law compelling the letting of all legal advertisements to the lowest bidder; that we favor the election of the county superintendents by the vote of the people; that we demand a stricter enforcement of the State factory and eight-hour-day laws; that the People's party of Indiana, believing that no man can rightfully govern another without the consent of the governed, favors local self-government for the Philippines."

A. G. Burkhart was nominated for Governor, and Messrs. C. M. Walter, W. T. Carmichael, J. W. Wales, W. H. Kunse, G. F. Boyer, C. E. Hoffman, W. P. Beasley, A. L. D. Grindle, Silas M. Holcomb, and — Bull were the candidates for the offices of Lieutenant Governor, Secretary, Auditor, Treasurer, Attorney-General, Reporter of the Supreme Court, Superintendent of Instruction, Chief of the

Bureau of Statistics, and judges of the Supreme Court, respectively.

The Republican convention met at Indianapolis, April 25. The resolutions approved the policy of the national administration on every issue, and favored the Nicaragua Canal, just and liberal pensions, restricted immigration, and legal control of trusts. On State affairs, they approved the administration, especially commending the management of the finances in the reduction of the debt and of the State levy; the "emancipation of the penal and benevolent institutions from partisan control and the provision, through ample appropriation by the last Legislature, for new buildings and appropriate maintenance to accommodate the unfortunate wards of the State—many of whom have been compelled to be quartered in county almshouses"; the establishment of a labor commission; the passage of the mortgage exemption law; and "the fulfillment of the pledge of the Republican party for reform in county and township government, whereby in the first year of the operation of the reform laws over \$1,000,000 will be saved to the taxpayers of the State." The Governor's treatment of unemployed miners was praised, the soldiers of the State were commended, and an adequate primary election law was promised. The ticket follows: For Governor, Winfield T. Durbin; Lieutenant Governor, Newton W. Gilbert; Secretary of State, Union B. Hunt; Auditor, William H. Hart; Treasurer, Leopold Levy; Attorney-General, William L. Taylor; Reporter of the Supreme Court, Charles F. Remy; State Statistician, Benjamin F. Johnson; Superintendent of Public Instruction, Frank L. Jones; Judge of the Supreme Court, First District, James H. Jordan; Judge of the Supreme Court, Fourth District, Leander J. Monks.

At Indianapolis, May 2, the Prohibitionists charged the President with "moral cowardice in refusing to exercise his authority as commander in chief of the army to abolish the sale of liquor in the army canteen, and to prohibit its importation into our newly acquired territory." The following ticket was nominated: For Governor, Charles N. Eckhart; Lieutenant Governor, Rev. Robert H. Clark; Secretary of State, Dr. R. E. Pretlow; Auditor, Rev. M. B. McKinsey; Treasurer, Edwin Hiatt; Attorney-General, Mahlon H. Krauss; Reporter of Supreme Court, Isaac S. Wade; State Statistician, Henry S. Bonsib; Superintendent of Public Instruction, B. W. Ayres; Judge of Supreme Court, First District, C. B. Kessinger; Judge of Supreme Court, Fourth District, James E. Graham.

The Democrats, in State convention at the capital, June 6, declared allegiance to the Chicago platform, instructed delegates for Mr. Bryan, censured the administration policy in the new possessions, demanded repeal of the stamp tax, declared for the election of United States Senators by direct vote of the people, opposed a large standing army, extended sympathy to the Boer republics, demanded the strict enforcement of the Monroe doctrine and the construction of the Nicaragua Canal, and denounced the Hay-Pauncefote treaty as an abject surrender to England; denounced the Dingley tariff law and declared opposition to the protective tariff, saying trusts spring from the tariff, and declaring that the Republican administration has made no effort to abolish them.

On State matters the platform called attention "to the reform legislation which the Democratic party has given the people of this State, the school-book law, the tax laws, the Australian ballot, the fee and salary reform, and the many statutes for the protection of labor," and said further:

"The Republican party is now hypocritically claiming credit for the reduction in our State debt, made possible by the Democratic tax law, the enactment of which it opposed. It has mutilated the Australian ballot and repealed the statute making the bribery of voters a penal offense."

The Democratic candidates were: For Governor, John W. Kern; Lieutenant Governor, John C. Lawler; Secretary of State, Adam Heimberger; Auditor, John W. Minor; Treasurer, Jerome Herff; Attorney-General, C. P. Drummond; Reporter of Supreme Court, H. G. Yergin; Superintendent of Public Instruction, Charles Greathouse; Chief of Bureau of Statistics, Edward Horuff; Judge of Supreme Court, First District, George L. Reinhardt; Judge of Supreme Court, Fourth District, J. W. Adair.

The Social Democratic party nominated in July the following: For Governor, John W. Kelly; Lieutenant Governor, John A. Lloyd; Secretary of State, Edward H. Evinger; Auditor of State, William Croke; Treasurer of State, C. A. Hulsman; Attorney-General, C. A. Thornton; Reporter of the Supreme Court, Mr. Feasier; State Statistician, William Ehrenhart; Superintendent of Public Instruction, M. A. Thorndyke.

The Socialist-Labor party nominated for Governor, Lieutenant Governor, Secretary of State, Auditor, Treasurer, Attorney-General, Superintendent of Instruction, and Chief of Bureau of Statistics, respectively, Messrs. Moore, Dryer, Byram, Soules, Fritz, Youngman, Stoner, and Singer.

The candidates of the Union Reform party were Messrs. Wilson, Perry, Wheeler, Withrow, Carter, and Coppel for the offices, respectively, of Governor, Lieutenant Governor, Secretary, Auditor, Superintendent of Instruction, and Chief of the Bureau of Statistics.

The official report of the vote for presidential electors stands: Republican, 336,063; Democratic, 309,584; Prohibitionist, 13,718; People's party, 1,438; Socialist-Labor, 633; Social Democratic, 2,734; Union Reform, 254.

The Republican State ticket received a majority, the vote on Governor standing: Durbin (Republican), 331,531; Kern (Democrat), 306,272; Eckhart (Prohibitionist), 13,453; Burkhart (People's party), 1,504; Moore (Socialist-Labor), 644; Kelly (Social Democrat), 2,239; Wilson (Union Reform), 244.

The Republicans elected 19 of the 26 Senators chosen, and the Democrats 7. Of the 24 holding over, 14 are Republican. The House will have about 61 Republicans to 39 Democrats.

The two constitutional amendments voted upon received each a majority. They fix the number of justices of the Supreme Court at 5 to 11, instead of, as now, 3 to 5, and authorize the Legislature to prescribe qualifications for admission to the bar. The total vote for the first amendment was 314,710, and the total vote against it was 178,900—a majority for the amendment of 135,750. The vote for the second amendment was 240,031, and the vote against it 144,072—a majority for the second amendment of 95,959.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,193 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; 1,911,896 in 1890; 2,251,829 in 1900. This is an increase of 15.9 per cent. in the past ten years. Capital, Des Moines.

Government.—The following were the State officers during the year: Governor, Leslie M. Shaw; Lieutenant Governor, J. C. Milliman; Secretary of State, George L. Dobson; Treasurer, John

Herriott; Auditor, Frank F. Merriam; Attorney-General, Milton Remley; Superintendent of Instruction, R. C. Barrett; Adjutant General, M. H. Byers; Railroad Commissioners, E. A. Dawson, Welcome Mowry, David J. Palmer; Labor Commissioner, W. E. O'Brien; Librarian, Johnson Brigham; Board of Control for State Institutions, William Larrabee, L. G. Kinne, John Cownie; Fish Commissioner, George E. Delevan; Chief Justice of the Supreme Court, G. S. Robinson; Associate Justices, Scott M. Ladd, C. S. Granger, Josiah Given, C. M. Waterman, H. E. Deemer; Clerk, C. T. Jones—all Republicans. The incoming government is: Governor, Leslie M. Shaw; Lieutenant Governor, J. C. Milliman; Secretary of State, W. B. Martin; Treasurer, G. S. Gilbertson; Auditor, Frank F. Merriam; Attorney-General, C. W. Mullan; Judge of Supreme Court, Emlin McClain; Railroad Commissioner, D. J. Palmer—all Republicans.

Gov. Shaw, in April, appointed as Library Commissioners Capt. W. F. Johnston, Mrs. D. W. Norris, Mrs. H. M. Townner, Miss Jessie B. Waite. On the death of United States Senator John Henry Gear, the Governor appointed Hon. J. P. Dolliver, junior Senator, to the vacancy.

Finances.—Iowa property has increased in value about \$56,000,000. The growth is mainly in personal property and buildings. This increases the taxable value to \$542,000,000. No new assessment of real estate has been made this year. Live stock increased in value \$43,000,000, at actual values.

The following is a statement of the estimated available revenue for the biennial fiscal period ending June 30, 1901, under existing statutes: Net treasury cash balance July 1, 1899, \$414,294. Proceeds of the State levy—3.2 mills last half of 1899, \$763,435; 2.9 mills 1900, \$1,500,000; 2.5 mills first half of 1901, \$750,000; interest on taxes, \$20,000; total, \$3,033,435. Special levies—charitable institutions, \$770,500; United States aid to Soldiers' Home, \$100,000; receipts from institutions under Board of Control, \$84,000; collateral inheritance tax, \$100,000; corporation taxes, \$405,000; fees of State officers, \$223,500; miscellaneous receipts, \$8,500. Grand total for biennial fiscal period, \$5,139,229.

Banks.—The bank deposits have doubled since June, 1896, exclusive of the national banks, which are equally prosperous. The amount due depositors in 1900 was \$91,147,056.88; the capital stock, \$18,054,900; the liabilities, \$114,392,424.

Railroads.—Iowa, according to the statistics of the Railway Age, compiled in November, 1900, is the fourth State in the Union in railway mileage. More than 3,500 miles are in operation, and 1,500 are in course of construction. The total railroad assessment is \$46,085,119, an increase of about \$1,500,000. The Illinois Central has also put in operation this year 131 miles of new road in the State.

Insurance.—Fees to the amount of \$343,561.15 and taxes amounting to \$1,191,069 have been collected since 1890. This includes all insurance concerns. Iowa people had \$551,671,540 in insurance Jan. 1, 1900. On Jan. 1, 1900, there were in force in Iowa fire insurance policies amounting to \$551,671,540, or equivalent to a larger sum than all the property of the State is assessed for.

The number of companies transacting other than life insurance business in Iowa are as follows: Fire insurance, 132; fidelity insurance, 9; employers' liability insurance, 6; plate glass insurance, 4; hail insurance, 4; steam boiler insurance, 1; accident insurance, 2; burglary insurance, 3.

The 132 fire insurance companies mentioned may be classified as follow: Iowa joint stock companies, 9; Iowa mutual companies, 8; non-Iowa joint stock companies, 81; non-Iowa mutual companies, 1; United States branches foreign companies, 33.

Education.—In his message to the Legislature in January, 1900, Gov. Shaw says: "A system which results in the graduation of 1,839 young ladies from the high schools of Iowa the current year, and only 954 young gentlemen, is weak at a vital point. Our girls should be educated, but that does not imply that our boys should not be; and a policy that retires the latter from school at fourteen or fifteen years of age needs amendment. So long as a majority of the teachers in town and city schools are women and girls, so long will a majority of the graduates be of the same sex.

"In several counties of the State the experiment has been tried of maintaining a central township graded school, to and from which the pupils are conveyed in carriages, at public expense. Whenever this plan has been adopted the results have been most satisfactory. The enrollment has been thereby invariably increased, and the attendance has been more regular; better teachers have been employed, with correspondingly improved scholarship, and in addition the expenses have been very considerably reduced.

"Of normal schools," he says, "Iowa possesses one such institution under State control and management. This has facilities to reasonably accommodate 600 pupils. During the last year the attendance has averaged over 1,000."

The Legislature provided for one new normal college, and made the following appropriations: State University, \$110,000; State Agricultural College, \$167,000; State Normal School, \$164,800; total, \$441,800.

The Memorial Military College of the Sons of Veterans is to be built at Mason City, and \$2,000,000 have been raised for it. Mason City gave a site and \$100,000. It is to be a memorial to soldiers and sailors, and is to be supported by endowments.

Charities and Correction.—For the year ended July 1, 1900, the 14 institutions under the management of the State Board of Control cost the people of the State \$1,146,733.41. Gov. Shaw, in his message to the Legislature, said: "The twenty-seventh General Assembly made provision for a board of control, which for nearly two years has had the management of all our State institutions, excepting those purely educational. The policy thus inaugurated has resulted in a very considerable saving to the State, and in addition the service at most of the institutions, I am persuaded, has been improved. The several institutions under the control of the board have in the aggregate 4,189 acres of land, valued at \$300,849. The buildings thereon are valued at \$7,482,735, and the personal property at \$597,134.77, making a total of \$8,380,718.77. There were being cared for at these institutions, June 30, 1899, 6,980 persons. There was expended during the period for the support of inmates, \$2,114,619.75; for improvement to buildings and grounds, \$452,653.80."

The Legislature made the following appropriations for State institutions: Cherokee, \$360,000; Clarinda, \$23,300; Mount Pleasant, \$75,600; Independence, \$19,300; Fort Madison, \$14,400; Anamosa, \$58,241; Eldora, \$37,400; Mitchellville, \$21,750; Vinton, \$6,500; Council Bluffs, \$6,000; Glenwood, \$64,534; Davenport, \$44,600; Marshalltown, \$18,000; total, \$764,175.

Products.—The fall report upon agriculture showed that the year had yielded the most valu-

able crop of staple cereals ever grown in the State. The corn estimate was 353,365,000 bushels, capable of giving \$50 to every person in the State. The State Fair was the largest and most successful ever held. The State has \$7,022 worth of Angora goats.

Six hundred farmers tried an experiment in co-operative farming at Rockwell. They say: "Our people were not students of co-operative philosophy. We have barred from all our proceedings as co-operatives religion, politics, and racial differences. As co-operatives we are only farmers assuming the part of business men, and we find that we can be as successful as business men as those who are only that and not farmers. Where we were once opposed we are now supported. One of the cardinal doctrines of the association is that the middleman is always an instrument of injustice for the buyer as well as the seller, and the main idea in their organization was to get rid of the middleman."

Legislative Session.—The Legislature convened on Jan. 8. The following are the more important of the 200 bills that were passed:

For assessment and taxation of telephone and telegraph companies, applying to these companies the system now in force for assessment and taxation of railroad property.

A special tax levy of one tenth of a mill, not exceeding \$55,000 a year for five years, for the State University for building.

Levy of a tax of one tenth of a mill, not to exceed \$55,000 a year for five years, for the State Agricultural College for building.

Exempting beet-sugar plants from taxation for ten years.

Requiring the Executive Council to fix a levy that will raise \$1,400,000 next year and \$1,500,000 for the next year.

Changing the use of blasphemous and obscene language from an indictable felony to a misdemeanor.

To prohibit gambling in cities.

Making train robbery or attempted train robbery punishable by life imprisonment or any term from ten years up.

Prohibiting the operation of plants that use gasoline for cleaning in tenements.

Prohibiting the soliciting of liquor orders by traveling salesmen.

Making it a misdemeanor to desecrate or deface the United States flag in any way, as by an advertisement.

Requiring the retention of 5 to 15 cents per pupil in township and rural school districts, to be expended in buying a library. This establishes the rural school library in Iowa.

Creating a library commission to promote the establishment and efficiency of free public libraries.

Authorizing the State library trustees to extend the traveling library department.

Authorizing all cities and towns to levy taxes for library purposes.

Establishing a reformatory for women at Anamosa. The bill appropriates \$2,500.

Placing the county asylums and private asylums under the supervision of the State Board of Control.

Providing for compensation of members of the National Guard for drilling, fixing the pay at 10 cents an hour, not to exceed 20 cents a week.

Appropriating \$50,000 for Iowa monuments at the battlefield of Shiloh.

Placing the county and private insane asylums of the State under the charge of the Board of Control.

Reorganizing the National Guard, placing it on

an army basis and footing so that in time of war it can be sent into the service without reorganization at that time.

Authorizing and directing the authorities of the State educational institutions to suspend students who drink or frequent saloons.

Prohibiting the manufacture of pearl buttons and butter tubs in the State penitentiaries.

Creating a department of agriculture.

Requiring the State Board of Educational Examiners to examine all persons to whom State certificates and diplomas are issued. This law removes the complaint of discrimination in favor of the graduates of the State University and the State Normal School.

Empowering the State Board of Educational Examiners to issue certificates to teachers of special branches, as music, penmanship, etc., on the passing of a satisfactory examination.

Increasing the amount that may be paid in rural districts for transporting pupils to and from the public schools from \$5 to \$10 a pupil a year.

Providing for the experimental use of voting machines.

A proposition to amend the Constitution so as to provide for biennial instead of annual elections.

Prohibiting prize fights.

A proposition to amend the Constitution so as to establish woman suffrage was defeated in the House, March 8, by a vote of 54 to 44. It also failed to pass the Senate, where it received 24 votes.

Political.—The People's party held its State convention at Des Moines, April 24, to choose delegates to the national convention. Eugene V. Debs was the choice for presidential nominee.

The Weaver faction of the People's party met in convention at Des Moines, April 17, and the delegates were instructed to vote for the nomination of William J. Bryan. The resolutions condemned the war in the Philippines, favored an income tax, denounced the currency bill, favored initiative and referendum, expressed sympathy with the Boers of the Transvaal, and denounced trusts.

The United Christian party held a State convention on July 4, six members being present. A State ticket was nominated, and a platform was adopted which declared that all temporal governments derive their just powers from God through Christ, and by the consent of the governed; denounced all war; demanded abolition of the liquor traffic, woman suffrage, election of President by direct popular vote, and Government ownership of public utilities. They approved the nomination of Charles M. Sheldon for President of the United States.

The Republican State Convention met in Des Moines, July 30. The following ticket was nominated:

Secretary of State, W. B. Martin; Auditor, Frank F. Merriam; Treasurer, G. S. Gilbertson; Attorney-General, C. W. Mullan; Judge of Supreme Court, Emlin McClain; Railroad Commissioner, David J. Palmer.

The Democratic State Convention was held at Cedar Rapids, Aug. 15. The significant parts of the platform were these: As a phase of trust question, bearing disastrously on manufacturing interests in Iowa and other agricultural States, we point to the fact that the combination of the manufacturing trusts and the railway trust have resulted in closing many such factories. Many plants in Iowa now stand idle because they have either been driven out of business by unfair competition or have been absorbed by the trusts and closed down.

We demand that railway rates and taxation, as well as legislation affecting railways, shall be shaped and fixed for the benefit of the whole people, without improper interference from the special interests involved.

We condemn the subterfuge of the mulct and pharmacy act by which the Republican party has returned the saloon to Iowa while still maintaining the farce of prohibition. The Democratic party believes in majority rule, it favors the honest and open policy of local control with stringent regulations.

The following ticket was nominated:

Secretary of State, S. B. Crane; Auditor, I. M. Gibson; Treasurer, H. L. Williams; Attorney-General, T. G. Harper; Judge of Supreme Court, J. W. Freeland; Railroad Commissioner, J. E. Anderson.

Two amendments to the Constitution were submitted to the people in November. The one providing for biennial elections was carried by a majority of 25,591. In connection with this amendment, arrangements were made for holding legislative sessions in the even years, so that there will not be another session until 1902.

The other amendment provided for a constitutional convention. This was defeated by a majority of 555.

ITALY, a kingdom in southern Europe. The throne is hereditary in the line of Savoy by male descent in the order of primogeniture. The reigning King in the beginning of 1900 was Umberto I, born March 14, 1844; died July 29, 1900. He was the eldest son of Vittorio Emmanuele II of Sardinia, the first King of united Italy. His successor is Vittorio Emmanuele, Prince of Naples, born Nov. 11, 1869. The legislative power is vested in a Parliament composed of a Senate containing at present 372 members nominated for life by reason of public services or eminence in science, literature, or other pursuit tending to the benefit of the nation, and a Chamber of Deputies containing 503 members, 1 to 57,000 of population, elected under the law of 1805 by all adult male citizens who can read and write and who pay 20 lire of direct taxes or occupy a farm renting for 500 lire or a tenement or place of business of a certain minimum rental. Soldiers in active service are disqualified while their term with the colors lasts, and no priest filling a clerical charge nor any salaried official except ministers and others answerable to Parliament for the policy of the Government can be elected a Deputy.

In the Cabinet formed on May 14, 1899, and still in office in the beginning of 1900, the ministers responsible for the different departments were the following: President of the Council and Minister of the Interior, Gen. Luigi Pelloux; Minister of Foreign Affairs, Marchese Emil Visconti Venosta; Minister of the Treasury, Dr. Paolo Boselli; Minister of Finance, Pietro Carmine; Minister of Justice and of Ecclesiastical Affairs, Prof. Adeodato Bonasi; Minister of War, Gen. Giuseppe Mirri; Minister of Marine, Rear-Admiral Giovanni Bettolo; Minister of Commerce, Industry, and Agriculture, Dr. Antonio Salandra; Minister of Public Instruction, Prof. Guido Bacelli; Minister of Public Works, Pietro Lacava; Minister of Posts and Telegraphs, Marchese Antonino di San Giuliano.

Area and Population.—Italy has an area of 110,646 square miles. The population was estimated on Dec. 31, 1899, at 31,856,675, about 288 to the square mile. The emigration from Italy is greater than that from any other country. Besides the emigrants who intend to settle across the sea, and in applying for passports declare their

intention, great numbers leave Italy every year to work in other countries, mainly on railroads, embankments, excavation, and masonry. Many of those who go to other parts of Europe for this purpose do not return, but sail for America from foreign ports. Many others return who have lived in America and saved a capital sufficient to establish themselves at home by acquiring a piece of land or discharging the mortgage on land already held. Out of 282,732 emigrants in 1898, Piedmont contributed 21,743, of whom, however, 13,630 were temporary; Liguria 3,292, including 170 temporary; Lombardy 17,707, of whom 11,515 were temporary; Venetia 102,462, but 94,184 were temporary; Emilia 15,268, of whom 10,003 were temporary; Tuscany 14,259, the temporary ones numbering 9,401; the Marches 4,307, including 224 temporary; Umbria 1,066, including 370 temporary; Lazio 2,491, including 189 temporary; Abruzzi and Molise 15,151, including 3,585 temporary; Campania 32,057, including 6,806 temporary; Apulia 3,387, including 1,546 temporary; Basilicata 8,052; Calabria 15,153, including 29 temporary; Sicily 25,579, of whom 4,259 were temporary; and Sardinia 58, of whom 34 were temporary. The total number of temporary emigrants was 155,945. About 2,000,000 Italians had settled abroad before 1891.

The state universities are Bologna, with 66 professors in 1898 and 1,507 students; Cagliari, with 32 professors and 241 students; Catania, with 48 professors and 906 students; Genoa, with 64 professors and 1,256 students; Macerata, with 11 professors and 310 students; Messina, with 45 professors and 591 students; Modena, with 45 professors and 435 students; Naples, with 81 professors and 5,465 students; Padua, with 71 professors and 1,588 students; Palermo, with 61 professors and 1,222 students; Parma, with 42 professors and 550 students; Pavia, with 53 professors and 1,321 students; Pisa, with 56 professors and 1,087 students; Rome, with 75 professors and 2,300 students; Sassari, with 24 professors and 148 students; Siena, with 31 professors and 231 students; and Turin, with 68 professors and 2,551 students. Besides these are the free universities of Camerino, with 18 professors and 234 students; Ferrara, with 22 professors and 77 students; Perugia, with 26 professors and 320 students; and Urbino, with 14 professors and 100 students, making the total number of 21 universities, with 962 professors and 22,440 students. Of the young men called up for military service in 1897, the proportion of illiterates was 37.38 per cent., showing that the law of compulsory education has not been well enforced. Formerly it was not applied in communes where the supply of teachers was less than 1 to 1,000 inhabitants. Among the persons married in 1897, the proportion of males who could not sign their names was 32.98 per cent., and of females 52.13 per cent.

Although the Italian Government is pre-eminently secular and has curtailed the authority of the Church and antagonized the papacy, and although it has recognized the right of all creeds to freedom of worship, Roman Catholicism is still the religion of practically all Italians except the minority who reject religion altogether. There were at the last census about 22,000 belonging to the ancient Waldensian Church of Piedmont, 10,000 Evangelicals, and 30,000 who had been converted to Protestantism by foreign missionaries. The number of Jews was 38,000. The educational institutions are controlled by the Government, which also supports the public schools or shares their cost with provinces and communes. The law demands that children be sent to school between the

ages of six and nine. There were 50,526 primary schools in 1896, with 51,526 teachers and 2,379,349 scholars; 9,000 private schools, with 9,565 teachers and 210,074 scholars; 4,687 evening schools, with 4,848 teachers and 151,369 scholars; 214 higher schools for girls, with 1,765 teachers and 7,319 scholars; 148 normal schools, with 1,622 teachers and 24,152 scholars; 332 lyceums, with 1,852 teachers and 17,689 scholars; 708 gymnasia, with 4,732 teachers and 59,578 scholars; 74 technical institutes, with 1,314 teachers and 10,274 scholars; 381 technical schools, with 2,574 teachers and 37,305 scholars; and 21 schools of navigation, with 183 teachers and 957 scholars.

The Army.—In the levy for 1897 the number of young men who reported for examination was 376,945, of whom 192,103 were put back for a year, 85,256 were rejected as unfit for service, 104,829 were drawn for active service, 551 were assigned to the permanent army on leave, and 94,215 were enrolled in the territorial militia. Young men having a superior education are admitted as one-year volunteers on paying 2,000 lire a year if they join the cavalry or 1,500 lire in the other arms. Noncommissioned officers are engaged for five years of service, and if they serve twelve years they are entitled to civil employment after retiring. The age at which recruits are taken into the permanent army is twenty-one years, and the term of active service is five years for carabinieri and two or three years for the others. The 12 army corps have their headquarters at Turin, Alessandria, Milan, Genoa, Verona, Bologna, Ancona, Florence, Rome, Naples, Bari, and Palermo. The Ninth Corps, at Rome, has 3 divisions, the others 2. There are 96 regiments of infantry of the line, 12 regiments of bersaglieri, 7 Alpine regiments, and 88 military districts; the carabinieri consist of 11 territorial legions, 1 recruiting legion, and 1 mounted squadron; cavalry—10 regiments of lancers, 14 regiments of light horse, and 6 squadrons, with 4 depots for remounts; artillery—24 field artillery regiments, 1 regiment of horse artillery, 3 mounted brigades, 1 brigade of train, 1 regiment of mountain artillery, 22 brigades of coast and fortress artillery, and 5 companies of mechanicians; engineers—5 regiments, 10 companies of train, and 6 companies of railroad engineers. The mobile militia consists of 51 infantry regiments, 20 battalions of bersaglieri, 38 companies of Alpine troops, 31 squadrons of cavalry, 63 field batteries, 78 companies of coast and fortress artillery, 21 companies of artillery train, 54 companies of engineers, and 4 companies of train. The territorial militia consists of 324 battalions of infantry, 22 Alpine battalions, 100 companies of fortress artillery, 30 companies of engineers, and 4 companies of royal carabinieri. There are 14,084 officers in the permanent army, including 250 on half pay; 9,914 officers on leave assigned to the mobile militia, besides 1,048 auxiliary and retired officers, and 10,719 half-pay and reserve officers for the territorial militia. Of the mobile militia, 2,016 were under arms in 1899, and of the territorial militia, 5,394. The strength of the permanent army was 310,602 men with the colors and 503,857 on unlimited leave; of the mobile militia, 465,349; of the territorial militia, 1,941,918; total, including officers, 3,257,491. The African corps numbered 6,750 troops, of whom 5,465 were natives.

The Navy.—The five monster armor clads of the Italian navy—the Duilio, Dandolo, Lauria, Andrea Doria, and Morosini—were built before 1887, and although the smallest of them displaces 11,138 tons, and their armor is 18 and 22 inches thick at the water line, and their heavy guns are of 17-inch bore, and their speed is from 15 to 17½

knots, they now rank as second-class ships. The later *Ammiraglio di Saint Bon* and *Emmanuele Filiberto*, launched in 1897, displace 9,800 tons, have 10-inch armor, carry 4 10-inch, 8 6-inch quick-firing, and 8 4.7-inch quick-firing guns, and make 18 knots with 18,000 horse power. Three of the first class are being built—the *Regina Margherita*, *Benedetto Brin*, and *Principessa Elena*—of 13,500 tons, to have an armament of 4 12-inch guns in revolving turrets, and 4 8-inch, 12 6-inch, and 8 3-inch quick firers. Italy possesses powerful deck-protected cruisers, most of them having side armor of good thickness. The oldest and the largest are the *Italia* and *Lepanto*, launched in 1880 and 1883, displacing 15,654 and 15,900 tons, capable of steaming 18 knots, and carrying 4 of the 17-inch or 100-ton guns, with 8 6-inch and 4 4.7-inch quick firers. The *Carlo Alberto* and *Vettor Pisani*, launched in 1892 and 1895, of 6,500 tons, carry 12 6-inch and 6 4.7 inch; the *Marco Polo*, launched in 1892, of 4,583 tons, 6 6-inch and 10 4.7-inch quick-firing guns. The *Re Umberto*, *Sardegna*, and *Sicilia*, launched in 1888, 1890, and 1891, of 13,298 to 14,800 tons, capable of making from 18½ to 20 knots, are armed with 4 13.5-inch guns, and 8 6-inch and 16 4.7 inch quick firers, the 67-ton bow and stern chasers being mounted in pairs in inclined armored barbettes. The new battle ships will have their 12-inch guns mounted in turrets fore and aft, their 8-inch quick firers in 4 turrets amidships, and their 6-inch battery on the main deck, and their armor belt will extend the full length of the ship and protect the base of the turrets, being of 6-inch Ternii steel, impervious to shell. A new *Garibaldi* and *Varese* have been launched to replace the cruisers sold to the Argentine Government, larger than they and better armed.

Commerce and Production.—Land is much subdivided in Italy. In Piedmont and Liguria peasant proprietors predominate, and in many other sections some of the cultivators own their farms. In Tuscany, the Marches, and Umbria the system of partnership prevails which was once in common, and is still practiced in different forms in other provinces also. The owner and the cultivator usually share the produce or profits equally, and frequently the same small farm is thus made to support two families. In Venetia and Lombardy the farmers commonly rent their land. Large farms are found in some departments of Lombardy, Emilia, and Tuscany, in Roma and Caserta, in Apulia, Basilicata, and Calabria, and in Girgenti and Trapani in Sicily. The yield of wheat in 1898 was 48,400,000, and in 1899 it was 48,600,000 hectolitres; the yield of maize in 1898 was 26,850,000 hectolitres; of rice, 6,180,000 hectolitres; of wine, 31,500,000 hectolitres; of olive oil, 2,300,000 hectolitres. The number of citrus fruits picked and marketed was 3,930,000,000. The total value of the special imports in 1898 was 1,413,339,346 lire, excluding gold coin and bullion, silver coin, and goods in transit; the value of the special exports was 1,203,569,304 lire. The imports of gold and of coined silver were 3,443,800 lire; exports, 19,612,600 lire. The chief imports of merchandise were wheat of the value of 201,994,050 lire; coal, 137,377,244 lire; cotton, 111,601,392 lire; raw and twisted silk, 61,996,500 lire; machinery, 37,343,770 lire; raw hides, 36,219,252 lire; timber, 35,201,938 lire; wool, 30,631,405 lire; fish, 30,469,190 lire; raw sugar, 19,966,744 lire; leaf tobacco, 15,390,675 lire; coffee, 14,062,055 lire; linen and hemp yarn, 11,163,285 lire; iron and steel bars, 10,079,960 lire; cheese, 5,160,350 lire; printed cottons, 1,692,122 lire; colored and dyed cottons, 1,400,770

lire; bleached cottons, 1,030,880 lire; unbleached cottons, 474,745 lire; refined sugar, 230,399 lire; horses, 21,173,600 lire; refined petroleum, 12,011,265 lire; olive oil, 15,431,805 lire; indigo, 4,768,500 lire; cotton yarn, 2,295,825 lire; railroad materials, 2,038,554 lire; silkworm eggs, 1,480,250 lire. The chief exports in 1898 were raw and thrown silk of the value of 316,025,400 lire; waste silk, 27,059,860 lire; cocoons, 2,776,200 lire; wine in casks, 66,609,356 lire; sulphur, 41,790,810 lire; olive oil, 40,353,122 lire; eggs, 37,786,920 lire; raw hemp and flax, 33,516,754 lire; manufactured coral, 24,045,180 lire; raw hides and skins, 17,141,802 lire; marble, 16,134,109 lire; fresh and salted meat, 15,690,120 lire; rice, 13,713,665 lire; zinc ore, 13,006,400 lire; cattle, 12,505,490 lire; horses, 802,000 lire; hogs, 3,671,457 lire; cereals, 6,351,335 lire; dyes and tans, 9,260,786 lire; raw cotton, 1,869,516 lire; straw braid, 7,461,960 lire; lead ore, 786,100 lire. The value of foreign exports in 1898 was 23,433,000 lire; of the transit trade, 127,889,000 lire.

Railroads and Telegraphs.—Of a total length of 9,592 miles of railroad, 5,608 miles belong to the Government and 92 miles are partly owned by the Government; but the state lines in 1885 were leased to companies for sixty years, though the contracts may be terminated and the Government may resume possession at the end of twenty years or of forty years. The lines built by companies have a length of 3,892 miles. The telegraphs are owned and operated by the Government, except 2,017 miles of line, with 23,311 miles of wire, belonging to railroad companies. The Government lines have a length of 23,698 miles, with 76,510 miles of wire.

Change of Ministry.—The Minister of War, Gen. Mirri, who took an active interest in bringing to the light the secrets of the Sicilian Mafia, was himself implicated by the revelations of the Notarbartolo trial in electoral irregularities, such as are indispensable in Sicilian politics. Partly on this account and partly because of differences of opinion between him and the Treasury Minister in regard to war estimates, he resigned his portfolio on Jan. 4, 1900. On Jan. 7 the Premier, Gen. Pelloux, was appointed by the King to administer the War Office until a new minister could be selected. The question of providing funds for renewing the field artillery stood in the way of the acceptance of the office by any of the generals. In February the Court of Cassation, by a decision quashing a sentence passed upon an anarchist under the provisions of the public safety bill promulgated by royal decree on June 22, 1899, precipitated the discussion of this bill, which the Chamber had decided to postpone, and thus brought on a political and ministerial crisis. The judges took the view that the bill became a mere project of law when the Chamber reassembled after its temporary prorogation at the end of June, 1899; that when the session closed without its receiving parliamentary sanction it lapsed entirely; and that when it was introduced again at the beginning of the winter session it was a draft bill again, not binding upon magistrates until ratified by Parliament. Magistrates were accordingly instructed to suspend the application of its provisions, and debate on the bill was begun on Feb. 24. Its provisions empowered the Government to suppress public meetings, destroy seditious emblems, dissolve subversive societies, punish public servants for striking, and proceed against writers, printers, or publishers of inflammatory articles. It was read twice in the Chamber in the spring session of 1899, but its final passage was blocked by Socialist and Radical ob-

struction. The ministers therefore prorogued the Chamber for a few days, and during the recess promulgated the bill by royal decree. This action was condemned, not by the Socialists and Republicans alone, the Revolutionary Left, but by the Constitutional Left, followers of Zanardelli and Giolitti, and by dissentient Conservatives of the Rudini faction, who maintained that the Italian Constitution as traditionally interpreted permits legislation by royal decree only in case of certain tariff modifications, and that it precludes the promulgation by the initiative of the Crown and without previous sanction of Parliament of any political measures. When the Chamber reassembled a week after the promulgation of the bill of public safety, it passed a bill of indemnity, but was prevented by the turbulent Opposition from adopting the bill of public safety itself, which went into force on July 22, 1899, after the violent demonstrations of the Radicals and Socialists had brought the session to an end. The Government refrained at first from applying the new law. Later its provisions were applied by local tribunals, and in the autumn the second section of the Roman Court of Cassation upheld the law on an appeal based on one of its articles. Assuming from this that the decree was provisionally valid, the Government showed no haste after the winter session opened to bring the bill forward for parliamentary ratification, and thus provoke a renewal of violence and obstruction. Obstruction began when the discussion of the articles began after the ministry had secured a vote of confidence on March 2 of 222 to 189. A roll call was demanded on every motion, even on applications for leave of absence. Any 10 members can make such a demand under the rules, but since it was only intended to call the roll as a safeguard in case of important decisions, President Colombo refused to employ it to aid the obstructionists, who thereupon created such a tumult that the sitting was suspended. The clause for the regulation of public meetings came first, and when the closure was voted, shutting off all except those who had given notice of amendments, the Socialists prevented others from speaking by noise and uproar, then made interminable speeches themselves when the Marquis di Rudini offered a proposal to eliminate this clause, and afterward renewed their turmoil and insults when he withdrew it. The excitement was communicated to the people, leading to disturbances and fights between citizens, especially students, who shouted, some for the Constituent Assembly, others for the King. Count Cambray-Digny moved a set of rules to prevent obstruction, and the Opposition hindered the Chamber from taking action upon them until the president stopped speakers who digressed from the subject of debate. When the members of the Revolutionary Left raised the cry for a Constituent Assembly their allies fell away from them. Their determination to discuss constitutional revision and the referendum in defiance of President Colombo's veto led him repeatedly to suspend the sittings. The ministers on March 30 determined, since they could not break the deadlock over the public safety bill, to withdraw it and proceed with urgent economical measures. The Extreme Left, baffled by President Colombo's rulings, tumultuously demanded his resignation. He had checked all discussion of the Government proposal amending the rules of debate, had put the motion, and the house had adopted the anti-obstructionist rules by means of a technical violation of the existing rules. The violation was the act of the president of the Chamber, and therefore the Extreme Left, who had won a barren victory and

held the field from which the enemy had retreated in good order by the withdrawal of the public safety bill, resolved to continue the campaign by assailing President Colombo. When the house met on March 30 they shouted insults and oburgations, stamped and slammed desk lids, raised such a din, created such a scandal, and affronted the president with such offensive epithets that he left the chair without opening the proceedings, whereupon the Extremists and their Moderate and Conservative allies marched out in triumph. The latter made it more difficult for the president to retain his office than the noisy Socialists by resigning their membership in the presidential bureau. To clear the situation President Colombo offered his resignation. In the secret ballot on April 2 he was re-elected by 265 votes to 158 over Signor Biancheri, many of the Rudinians having voted with the Government. Before Count Cambray-Digny's amendments to the rules of procedure were put to the vote by summary procedure without discussion, on April 3, the Deputies of the Left and the Extreme Left, contesting the regularity of the late proceedings, announced that they would never recognize the validity of the proposed rules and left the house in a body, shouting for a Constituent Assembly. The Chamber then adopted the amended procedure almost unanimously, and adjourned till May 15. When the Deputies reassembled on that date Signor Giolitti proposed a committee to consider a compromise on the question of procedure. Signor Ferri, speaking for the Extreme Left, announced a determination not to permit any discussion under the amended rules, and to oppose their application by every legal means, even by violence, if necessary. When business was opened under the new rules the Socialists began to sing in chorus, and drowned the president's voice by beating desks. On the following day the Chamber was dissolved by royal decree. Elections were held in the beginning of June, so that the new Chamber could be assembled to vote provisional supplies before June 30, the end of the financial year. The Clericals voted in greater numbers than in former elections, disregarding the papal interdiction in spite of the efforts of the clerical organizations to make them give up their ballot papers to be forwarded to the Vatican.

Serious riots occurred in Milan and other industrial centers, which were suppressed only by the firmness of the military authorities and the discipline and fidelity of the troops. The result of the elections was a victory for the Extreme Left, which increased its number of seats from 69 to 97. The ministerial party lost as many, while the Constitutional Opposition returned in about the same strength as before. The Socialists, who numbered 15 in the former house, doubled their representation. Although the ministry had still a majority of nearly 100, the outcome was a moral defeat so serious that after the Chamber met on June 16 and elected a presiding officer—who was not Signor Colombo, because he had lost his seat—and had granted provisional supplies, Gen. Pelloux offered the resignation of the Cabinet on June 18, and insisted on its acceptance. On June 20 King Umberto commissioned Signor Sarocco, president of the Senate, an aged Liberal, to form a new ministry. He constructed one on the basis of the majority that had elected Signor Gallo president of the Chamber. Its composition, announced on June 24, was as follows: President of the Council and Minister of the Interior, Giuseppe Sarocco; Minister of Foreign Affairs, Marchese Visconti Venosta; Minister of War, Gen. Conte Ponza di San Martino; Minister of Marine, Admiral Morin;

Minister of Justice, Signor Gianturco; Minister of the Treasury, Signor Rubini; Minister of Finance, Signor Chimirri; Minister of Public Works, Signor Branca; Minister of Public Instruction, Signor Gallo; Minister of Agriculture, Signor Carcano; Minister of Posts and Telegraphs, Signor Pascolato. The Moderate Liberal element predominated in the new Cabinet, which included three representatives of the Right and three from the Opposition, one a pronounced Zanardellian. When the Chamber met on June 27 the Premier read a conciliatory declaration of policy. Tommaso Villa, a member of the Liberal Opposition, was elected to succeed Signor Gallo as president of the Chamber, and when he took the chair he appointed a commission to draft new rules of procedure. The new Chamber would grant no more than a month's supplies until it received an assurance that the Government would not plunge into Chinese adventures more deeply than was required to preserve Italy's place in the concert of the powers. The new standing orders, dictated by the Opposition, permit the suspension for a week only of Deputies who create a disturbance. On July 10 the Chamber adjourned after voting provisional supply until the end of the year.

Assassination of King Umberto.—On July 29 the King was shot dead at three paces by an anarchist at Monza, where he had taken part in distributing prizes at an athletic competition. The murderer was a young silk weaver, who had resided in the United States since 1897. He left Paterson, N. J., for Italy in the preceding May, and stayed at the house of his brother near Prato, where he practiced with the revolver to give him skill for the deed which up to the time of his conviction at Milan, on Aug. 29, and sentence to penal servitude for life (the extreme punishment permitted by the Italian code) he persisted in declaring was conceived and planned by himself alone. He avowed that he was impelled to kill the King by a desire to avenge the miseries of the people; that he had formed the design after the state of siege was proclaimed in Milan and Sicily. Three shots were fired at King Umberto, who fell back in his carriage and died instantly from one that pierced his heart. In spite of the assassin's denials, there was evidence of a plot and of the connivance and pecuniary aid of anarchists in American and probably in Italian cities and in Paris and London. The assassin was a skillful and industrious worker, who had borne a good reputation and had saved money. His demeanor during

the trial was self-possessed and alert, and he answered all questions calmly, in well-chosen phrases, with an appearance of frankness.

Vittorio Emmanuele III marked his accession to the throne by a proclamation extolling the dead King's courage, his devotion to the people of Italy, and his faithful guardianship of the unity and independence of Italy, declaring his own determination to defend the monarchy and to preserve constitutional liberty as linked together and both indispensable for the supreme welfare of the nation, and asserting the retention of Rome as the surest rampart of his reign and the best guarantee of Italian unity. The new King reorganized and reduced the royal household; he inspected public institutions; he visited the garrisons, where he enjoined upon military officers the duty of wearing their uniforms constantly, setting the example himself; he removed the barrier that has prevented frequent intercourse between the King and politicians by appointing an hour when those who wished could confer with him any day; and he participated actively in the deliberations of the ministry. Premier Sarocco unfolded the programme of the Cabinet in a report to the King, published before the reopening of Parliament in November. All politicians desired to signalize the beginning of the new reign by a reduction of taxation if it could be secured without endangering the stability of the budget, and some suggested the shifting of a part of the burden that oppressed the poor upon the shoulders of the rich. Signor Chimirri had a plan for the diminution of some of the vexatious demands upon small taxpayers, including abolition of the tax on the lowest incomes. After disposing of the budget, the work proposed for Parliament to do was to consider an emigration bill that had long been before the Chamber, then to discuss bills for reform of local administrative bodies, for abolition of the enforced residence of dangerous characters, for repression of anarchist crime, and for improving the position of school-teachers. Military estimates were to be maintained within the limits already reached, and provision would be made for renewing the artillery without extra expenditure. The naval estimates were increased by new credits for construction. Additional legislation was required for the protection of the labor of women and children. The Chambers would also have to decide upon the best conditions for the renewal of the commercial treaties with Austria and Germany, also the terms on which railroad conventions will be renewed.

J

JAPAN, an island empire in the Pacific Ocean, eastward from China, between the Russian and the American possessions, extending from north latitude 21° 48' near the Philippines to 50° 56' near the Kuriles, and from east longitude 150° 32' to 119° 20'. Of the 4,000 known islands, 487 have an area of more than 6 square miles, and about 500 are inhabited, though a majority of the people in the empire live on Hondo, the main island. The five larger islands are Hondo, Kiushiu, Shikoku, Hokkaido or Yezo, and Formosa. The coast line of the entire empire measures 18,542 miles. The total area is 162,372 square miles. The population, Dec. 31, 1898, was 46,540,754. The money standard is gold, a yen being worth 50 cents.

Over this constitutional empire the Emperor Mutsuhito not only reigns, but governs. He is the one hundred and twenty-second of the traditional line of Mikados, and was born Nov. 3, 1852,

and ascended the throne Feb. 18, 1867. The heir apparent, Yoshihito, born Aug. 31, 1879, proclaimed heir Aug. 31, 1887, married, May 10, 1900, the Princess Sada, his cousin, the third daughter of Prince Kujo. Only male descendants—natural children of the Emperor or sons of an Empress—can succeed to the throne. The laws relating to marriages in the imperial family, promulgated in May, 1900, forbid marriage before the age of seventeen in the prince and of fifteen in the princess, and during any period of imperial mourning. The Emperor shares legislative power with the imperial Diet, which consists of two houses—the upper house, having 316 peers and imperial nominees, and the lower house, 300 members, elected by male voters who, according to the new law of elections, pay direct national taxes to the amount of 10 yen (\$5). By the new law of 1900, the House consists of 360 members, from 16 urban and 308 rural

districts. Since 1889 constitutional reform has been almost continuous, and has been effected without popular disturbance.

The fifteenth annual meeting of the Diet took place Dec. 22, 1900. The second Yamagata ministry, after twenty-two months of office, retired in September, 1900, thus ending the last of the 40 ministries since 1868, and of the 7 constitutional cabinets since 1889, composed of the "elders," or statesmen, of the Restoration of 1868. Marquis Hirobumi Ito was called for the fifth time to form the new Cabinet, which begins its work Oct. 19, and consists, with the exception of himself, wholly of young men trained for the most part in the United States and Europe, and under modern constitutional forms. In the three months' session of "the spendthrift Parliament" of 1900, ending Feb. 24, 37 out of the 59 bills brought forward were debated, nearly every measure advocating expenditure from the treasury. Of those withdrawn, a great majority were schemes for fostering private enterprises.

The Emperor's Cabinet consists of the Minister-President of State and the 9 heads of departments. There is also a Privy Council of 20 veteran statesmen, who have great influence, especially in the formation of cabinets and the appointment of envoys and officers. There is also a Court of Accounts, an Administrative Tribunal, and a bureau administrative for each of the chambers of peers and of deputies. These all form the Central Government, in which are employed 49,208 salaried functionaries, whose salaries require 12,599,955 yen. Under imperial control are also the prefecture of the police of Tokio, the Department of Colonization of Yezo, the (46) prefectures and (866) districts, and the government of Formosa, in which 4 provincial governments are employed 19,068 salaried officers, who draw 5,987,755 yen from the treasury, making a total civil list of 58,876 persons, drawing 18,587,170 yen from the national treasury. Since the war with China, in 1895, the number of officials and the amount of salaries have increased more than 50 per cent.

Population.—For more than a hundred years, in the eighteenth and early in the nineteenth century, the population was stationary. Since 1870, when the first scientific census was made, showing that the empire contained 7,107,841 houses and 33,110,825 souls, the population has increased steadily, until at the end of 1898 the number was 46,540,754—the nobles numbering 3,845, gentry 1,666,301, the remainder being the common people, many of the gentry of former years having voluntarily dropped into the ranks of the commons. The average yearly increase for a decade has been nearly 500,000. The excess of births over deaths in 1898 was 531,891, three fourths being on Hondo. The rush of inhabitants from the country to the cities, of which there are 48 called great and 30 more which, like the larger ones, have over 20,000 inhabitants, and the change of Japan from an agricultural to a manufacturing country, are very marked. In Tokio the population is now 1,002,863, the growth being in the suburban districts, and showing an increase of 200,000 since 1887. Osaka, with 821,235 souls, increases relatively even more than Tokio, making increase during 1897 of 59,311, compared with Tokio's 38,194. Emigration is also active. In 1898 33,297 persons received passports to travel abroad, and 70,801 Japanese dwelt outside of Japan. Of these, 15,000 were in China, 6,000 in English colonies, and 44,000 in the United States; 11,589 foreigners resided in the empire and 32,428 tourists traveled in the country. In the Hokkaido 63,629 persons were immigrants and 11,381 went out, the majority of immigrants being

farmers and fishermen from central and northern Japan. The total population of Yezo island is 650,000, or about 18 to the square mile. Of the Ainu aborigines there were counted 17,573; births 534, deaths 529. In 1898 the marriages in the empire were 471,217, divorces 99,469, and of the 1,261,137 births, 108,485 were illegitimate. In the empire there were, in 1897, 42,542 doctors, 35,384 midwives, nurses, and trained women, and 25,000 pharmacists and druggists; 705,028 persons suffering from fire or water were helped at a cost of 734,633 yen, and 736,270 yen were spent for those in famine. In 1897, besides 7,740 suicides, there were 4,542 violent deaths. In 146 prisons, with 12,177 functionaries, there were 70,784 prisoners. In houses of prevention, 190,286 persons entered and 179,098 passed out; the figures for houses of detention were 274,952 and 217,098 respectively.

Finances.—Since Oct. 1, 1897, Japan has employed the gold standard, which was adopted without disturbance of the trade or loss to the national treasury, and the bonds of Japan are now international commodities. From Oct. 1, 1897, until March 31, 1900, the new gold coins struck at the mint amounted to 115,194,600 yen, but in the same period 20,514,364 yen of silver pieces were struck, and these are seen everywhere, there being about 45,000,000 of these silver coins in circulation, whereas the 8,738,730 gold pieces coined during the past three years are rarely seen. The profit of the mint since the introduction of the gold standard in 1897 was 6,681,319 yen; whereas, the total profit in the mint from 1870 to 1897 had been only 12,152,444 yen, the result being from the striking of subsidiary silver coins under the new system, these covering all losses in connection with the change of monetary standard. The tendency of prices to rise continues unabated. The amount of currency in Japan at present is a little over 5 yen per capita, against 70 in France, 38 in Germany, and 33 in England. The funds of the Bank of Japan, for lending, are about 90,000,000 yen, while the volume of negotiable securities offered to it is 700,000,000 yen annually. The outlays of the Japanese Government since the Sino-Japanese War have nearly trebled, the increase being chiefly in military and naval expenses. The total deposits in the savings banks of all descriptions aggregate 45,000,000 yen, or not quite 1 yen per capita. For 1899-1900 the total revenue was 253,000,000, and the expenditures 250,000,000. The budget for 1899-1900 shows an ordinary revenue of 193,000,000 and an extraordinary revenue of 60,000,000 and an expenditure of 250,000,000 yen; that of 1901-'02, ordinary revenue 201,000,000, extraordinary 52,000,000; and of expenditure of 252,000,000 yen. Japanese economists reckon that Japan's war fund, consisting of gold coin in London, deposits in the Bank of Japan, 4-per-cent. bonds, capital fund for war ships, with reserves in connection with national calamities, education, and indemnity, amounts to nearly 150,000,000 yen. The public debt in 1899 was 418,365,389 yen. At the close of 1899 there were 2,032 banks in operation, with a capital of 438,189,469 yen.

The Army.—After the war with China (1894-'95) the army was reorganized into 12 divisions (instead of 6), in addition to the Imperial Guard, with a total of 119 generals, 1,097 superior officers, 7,244 officers, 5,821 underofficers, 32,733 noncommissioned officers, and 269,754 soldiers, making a total of 315,808, with 4,233 civil functionaries in the War Department. Of this total, 125,345 are in the active service, 115,666 in the reserve, and 74,797 in the territorial army. In the recruiting operations of 1897 477,555 males, conscripts and volunteers, came under inspection,

of whom 66,023 were above the conscription age of twenty years. The artillery soldiers garrison the forts, and the 12 divisions are located in different sections of the empire, usually in large camps and barracks, where the drilling, training, and daily education of the soldiers can take place with facility. In army education there has been in recent years vast improvement, since so large a percentage of the volunteers and conscripts are graduates of the middle and elementary schools. The number of illiterates is small—in 1897-'98 only 11,700—while the graduates of the ordinary and the upper elementary schools number more than 60,000, and of the middle schools or academies more than 500. For the campaign in China in the summer of 1900, the Hiroshima division, with some additions from two or three others, making a body of 20,000 men of all ranks and arms, was dispatched under command of Lieut.-Gen. Yamaguchi, under whom were Major-Gens. Fukushima, Terauchi, and Oku. The men were armed for the most part with the new Arisaka rifle, which is very light and simple, carrying a magazine of five rounds. The definitive establishment of officers (on a peace footing) is 3 field marshals, 3 full generals, 21 lieutenant and 48 major generals, 96 colonels, 118 lieutenant colonels, 481 majors, 1,397 captains, 1,500 lieutenants, and 1,302 second lieutenants.

The total membership of the Red Cross Society is 693,170, of whom 46,320 are life members, the annual contribution amounting to 1,904,365 yen. Two hospital ships, with names meaning Savior and Mercy, especially built and equipped for the service, with all modern appliances, were in constant use for natives and foreigners, during the Chinese campaign, in the expedition from Tientsin to Peking, in which the Japanese casualties reached a total of 797.

The Navy.—Most of the new ships contracted for in Europe and the United States after the Chino-Japanese War are afloat and in commission. The resources and classification of the imperial navy of 70 ships and 66 torpedo boats, at the end of 1900, are 8 battle ships (first class, above 10,000 tons, 6; second class, below 10,000, 2); 20 cruisers (first class, above 7,000, 6; second class, above 3,500, 9; third class, below 3,500, 5). Ships for coast defense are rated the same as cruisers, but while the first and second class are wanting, there are 10 in the third class. Of 15 gunboats, there are 2 in the first class above 1,000 and 13 in the second class below 1,000 tons. There are 4 dispatch boats, 1 torpedo depot ship, 12 torpedo catchers. The 66 torpedo boats are rated in 4 classes. The battle ship Mikasa, 15,150 tons, launched in November, is the largest war ship afloat. The total number of sailors, marines, officers of line and staff, construction and administration, under the Navy Department is about 25,000 men.

Communications.—A railway system of 7,000 miles would not be sufficient for the needs of Japan. The first railway, between Tokio and Yokohama, was finished, despite antiforeign clamors, in 1872, and but few more railways were built until 1880. The length of railways now in the empire is 3,700 miles. The number of companies holding provisional charters in 1900 was 16. Of 68 applications for charter to build railways in 1901, 12 were rejected and 56 granted. The aggregate capital of these companies is 80,940,000 yen, and total mileage secured is 1,523, making a grand total for the empire when finished of 5,830 miles. In 1900 227 miles were opened for traffic, 102,115,942 passengers traveled (showing an increase of 3.1 per cent. over last year), paying for passage 23,417,376 yen, while 18,820,024 tons of freight

were carried, on which 12,726,845 yen were paid, giving a balance of net profit on freight and passengers of 19,386,055 yen. The increase in freight traffic, and money paid for the same, was 26.6 and 39.1 per cent. respectively. Most of the roads are single track, only 250 miles being double. The aggregate capital employed in railroads is about 300,000,000 yen. Besides those under Government ownership, there are more than 100 private railway companies. The length of the postal routes by land and sea is 100,000 miles. In 1898 137,514,549 letters, 329,933,823 postal cards and other packages were carried. There were in the postal and telegraph service 4,537 offices, 39,295 postal boxes, and 38,000 employees. To foreign countries 2,922,663 pieces were sent, and from them 2,749,784 pieces received. Over 5,295 miles of telegraph route, having 20,561 miles of wire, 15,342,535 domestic messages were sent. By submarine cable, 333,000 foreign dispatches were transmitted. There are 640 miles of telephone routes and 13 stations, chiefly in the large cities. In 1898 10 street-car companies, with 420 cars and 1,620 horses, carried 36,872,845 passengers. In 1898 there were 1,130 steamers, of 477,430 tons, and 1,914 sailing ships, of 170,894 tons, and 19,097 junks, of 16,601,420 bushels' capacity. In 1899 115 lighthouses built by the Government and 22 by private authorities lighted the coast.

Religion and Education.—According to the Constitution of 1889, all religions are equal before the law. Article XXVIII declares that "Japanese subjects shall, within limits not prejudicial to peace and order and not antagonistic to their duties as subjects, enjoy freedom of religious belief." Legislation, despite the virulent opposition of the Buddhist hierarchy, steadily proceeds toward carrying out the constitutional provisions, especially in freeing impartially from taxation all ground and edifices for religious purposes. In Shinto, no longer a state religion, there are 12 sects, 100,705 priests and shrine keepers, and 1,357 pupils. In Buddhism there are 38 sects, 103,340 priests and preachers, with 10,983 pupils. Shinto temples number 1,962, and Buddhist temples (usually much larger than Shinto) 109,945.

In Tokio the Christians have 70 church edifices and 55 preaching places, with an enrollment of 13,711 members: 5,221 Sunday pupils in 112 schools, with 2,251 Christian students, 9 theological schools, and 9 industrial, poor, and primary schools, having 5,423 pupils. They publish 19 periodicals. The value of mission property in Tokio, including the Christian Association building, is 1,200,000 yen. About 2,000,000 copies of the Bible, or portions of it, have been distributed by sale or gift. The Emperor accepted a copy in 1895. In all 944,000 Scripture portions have been circulated since 1890, in addition to those imported and sold to the trade. In the public schools, out of 7,125,966 children of school age 4,910,380 attend daily, the other 2,215,586 remaining at home, making in 1898 an attendance of 69 per cent. Of Christian schools, despite their having been greatly crippled by the interference of the educational authorities, there are 204, 68 of which are above the middle course, with 15,846 pupils, 9,304 being in the primary course. Mr. Naruse, a Christian educator, has obtained the gift of nearly five acres in Tokio and the sum of 130,000 yen for the establishment of a woman's university. In the Government schools, besides 90,000 native teachers, 270 foreigners are employed, the majority being American, English, and French. Students still go abroad to study, a large number preferring Germany, and there is a distinct trend toward the adoption of German ideas and culture, yet the

vast majority of students and educated people use the English language, and the regulations of the Department of Education, published in 1900, have greatly extended the study of English in the schools. The agitation for the use of the Roman letter in writing Japanese has resulted in official sanction and regulation. The general discussion, on the lecture platform and in the periodical press, in favor of a higher public morality, not only personal but commercial, was one of the features of the year.

In the history of Japanese morals, three eras are noted. Under feudalism, the basis of morals was "loyalty." From 1868 until the Constitution of 1889, the basis was "patriotism." Since then the basis has been "society." Political corruption has extended from the courtier to the bureaucrat, and now to the people at large, and the cry for improvement of personal and commercial morality is the burden of the more respectable of the 800 journals published, with a circulation of 440,000,000. The Yoshiwara, or licensed system of prostitution, centuries old, is in process of radical reform. In Tokio there were 458 houses in which were 6,835 women, most of whom, taken in childhood and trained up by their quasi owners, were not allowed ever to leave the Yoshiwara inclosures except in case of death or illness of a near relative, nor allowed even to walk about inside without guards. The system made the women little better than slaves. Largely through the agitation of the Salvation Army agents new police regulations were issued in 1900, enabling every inmate to receive her freedom if she desires it. As a result, more than 500 women have left the quarters in Tokio, and more in other quarters of the empire.

Resources.—The year has been marked by the discovery of more oil fields on the western coast of Hondo, and of gold at Esashi in Yezo, the total product of gold being, for lack of official oversight in the hasty discovery, three times as great as the figures, which are for nine working months of the year. The Government reports show that 164,366 persons obtained 1,250 pounds of gold. In Hondo the two copper mines of Ashiwo and Besshi produce 1,300,000 pounds of copper annually, which is sold for 4,200,000 yen. In 1897 the production of iron from ore, compared with copper, was as 7 to 5, manganese as 4, coal as 5, sulphur as 3, and petroleum as 9. In general, the mineral products are not reckoned among the best sources of the wealth of Japan, and attention is turned more and more to manufactures and commerce. In 1900 283,460 tons of coal were exported, valued at 1,590,921 yen—the best record yet made in coal. Experts appraise for Japan a fifty-year supply only.

The year has been noted for excellent crops, rice being the most valuable, reports from all the rice producing centers making it 22,200,000 bushels, or 14.3 per cent. above the average crop, which is 194,000,000 bushels. The barley crop has yielded 101,600,000 bushels, or 8.1 per cent. larger than the average. The tea exported in 1899 from Yokohama was 27,969,178 pounds. While the mulberry farms are increasing in area and output, those of the tea plant are diminishing, showing the increase of manufacturing interests. The value realized in 1899 from the export of silk was 62,627,721 yen, against 20,598,621 yen in 1891, while tea yielded 8,251,664 yen for the total crop of 158,282,214 pounds, against the 131,247,564 pounds, valued at 6,786,977 yen, in 1890. The season's crop of silk cocoons is 13.1 per cent. increase over last year. The production of raw silk in 1890 was 2,520,816 pounds, and in 1899 5,257,773 pounds.

Fifteen million yen are invested in cotton spinning, there being, in 1900, 1,088,339 spindles, and the output being for the first half of 1900 154,000,000 pounds of yarn and cloth, of which 2,975,019 yen's worth were exported; the latter low figure being on account of the stoppage of trade through war with China. In fisheries 3,005,420 people are employed, who take 36,476,950 yen's worth. Tobacco is now a sort of Government monopoly, the crop being stored in 66 monopoly offices. The new developments of industry and trade include the formation of a tobacco trust, capitalized at 10,000,000 yen, and another of a cotton-yarn trust. The tobacco crop for 1900 is officially estimated at more than 6,500,000 pounds. In 1899 4,965,000 yen's worth of ceramic wares was exported, but relatively the lacquer and the porcelain trade, both of them still existing as cottage industries, have fallen behind the textile industry, in which there are combination factories with capital. Foreign trade for the first half of 1900 reached a total of 258,196,661 yen, of which there were exports 94,987,854 and imports 136,208,807.

In 1899 the total trade of Japan with the British Empire exceeded 180,000,000 yen, of which 56,000,000 yen was with Great Britain, while the trade with the United States exceeded 104,000,000 yen. Compared with 1893, there is an increase in railway traffic of 4,000,000 to 11,000,000 passengers; in the mercantile marine, from 200,000 to 700,000 tons; in the capital of commercial and industrial companies, from 230,000,000 to 900,000,000 yen; in clearing-house transactions, from 200,000,000 to 1,700,000 yen; of loans paid by the Bank of Japan, 50,000,000 to 150,000,000 yen; of foreign trade, 170,000,000 to 500,000,000 yen.

Politics and Events.—Early in 1900 the bubonic plague invaded Osaka and Kobé, but was stamped out after several score of deaths. Rats having been found to be subjects and vehicles of the disease, rewards were offered for their destruction. In Tokio 110,000 were killed and paid for. Dr. Kitasato discovered a serum believed to be efficacious in counteracting the virus of the pest. Under the new treaties abolishing the extraterritorial and consular courts, Miller, an American, was executed for murder under Japanese law, Jan. 15. Sir Ernest Satow exchanged places with Sir Claude McDonald, the one going to Peking and the other to Tokio. Russia has deprived Japanese subjects of the right to fish in the waters of Saghalien, and 269 stations are to be closed and all Japanese leave the island. Imperial sanction was given to the law providing that name seals are sufficient on documents where hitherto signatures have been necessary. Noticeable changes have been made in the Japanese diplomatic corps—Mr. Takahira, Vice-Minister of State for Foreign Affairs, succeeding Mr. Komura in Washington. Baron Hayashi going from St. Petersburg to London, and Mr. Kato Takeaki from London into the Cabinet. The imperial wedding, bridal tour, and issue of memorial stamps took place in May, with many accessories approaching Western etiquette and customs. Snow fell on Mount Fuji Sept. 24, twelve days earlier, and on Mount Okaru twenty days earlier, than usual. Rear-Admiral Beardslee, in 1853 a lieutenant in Commodore Perry's squadron, was received by the Emperor, and at a large garden party, with many relics of a half century ago, heard addresses from Japan's eminent men recalling early days. A memorial to Perry is to be erected at Uruga, in the form of a lighthouse, surmounted with a bronze statue of the commodore. In November the training ship Tsukishima Maru, with all her crew of 111 persons, was lost off Numadzu.

Formosa.—Despite petty insurrections of savages and bandits, the population—numbering, Dec. 31, 1898, 2,729,503, not including resident Japanese or the inaccessible red aborigines in the mountains—is being rapidly brought into order and prosperity. Hopeful experiments have been made in organizing the native Formosans in military service. Government schools have been opened. In the six years of Japanese possession 140,000,000 yen of public money have been invested, which now yields a revenue of 16,250,000 yen. The estimate of expenditures for the next year is 22,000,000. The island, with its 300 miles of coast line and its 14,000 miles of territory, derives its revenue from the opium, tobacco, and land tax, and the camphor monopoly. In 1898 the opium trade for the benefit of the Chinese and Formosans was placed in the hands of Japanese officers. The sales in 1899 amounted to 470,520 pounds, valued at 4,219,604 yen, on which the profit was 1,120,000 yen. In February, 1900, there were 140,139 opium smokers and 3,372 opium dealers, the known percentage of smokers showing increase of the habit. Of the world's product of 8,000,000 pounds of camphor, Formosa supplies 6,600,000 pounds. At the present rate of consumption, Formosa has an ample supply for the next eighty years, and with judicious planting, even though the camphor tree requires fifty years to reach maturity, the supply may be perennial. The revenues for the current year are 14,601,577 yen, and the budget for 1901 or the next year 16,298,598 yen, the camphor yielding 4,592,310 yen, opium 4,287,888 yen, and salt 723,708 yen. The expenditure on railways is to be increased from 2,500,000 to 4,500,000 yen, and the land surveys from 600,000 to 700,000 yen. The railway from Takao to Tainan, 40 miles, was finished in October, 1900.

The staples of export are sugar, camphor, and tea, and all values have an upward tendency. The enterprises of mining, forestry, and reclamation of land show steady improvement. The Bank of Formosa, now but a year old, has done an encouraging business. Its deposits amount to 40,000,000 yen. In 1898 there were cleared, from the 12 ports open to commerce, 14 steamers and 2,019 Japanese sailing vessels, with a total capacity of 70,000 tons, besides 151 foreign steamers and 1,806 sailing vessels, having a total of 168,000 tons. Of vessels entering, there were 17 Japanese steamers and 2,067 sailing ships, with a total of 68,000 tons, besides 169 foreign steamers and 1,887 sailing vessels, with a tonnage of 186,000. In 1898 3,850 emigrants, half of them women from old Japan, landed in Formosa, in which, with the Pescadores, 2,202 Japanese families, including 9,328 persons, are now permanently settled.

JEWS. The interest that for some years past was felt in organizing agricultural settlements in Palestine, which met with varying success, received a marked impetus early in the year by the announcement that Baron Edmond de Rothschild had ceded his colonies to the Jewish Colonization Association. For some time the baron had aided several small colonies, but as they were not self-supporting, and never likely to be so long as they could depend on his aid, the step was taken which secured the efficient co-operation of a society that was Baron de Hirsch's chief heir at law.

The visit of the delegates of the American Council of Jewish Women to London resulted in the organization of a Jewish Study Society, for lectures and research in Jewish history and literature, which will co-operate in some degree with the Jewish Chautauqua that Rev. Dr. Berkowitz founded in Philadelphia.

The blood accusation was revived both in Bohemia and in West Prussia, and riots against the Jews followed. There was a trial and an indictment, a quashing of the verdict and a retrial, and the incident is not yet closed. It has been marked by great excitement among the peasantry and excesses against the Jewish inhabitants. The courage of Prof. Masaryk, who is not an Israelite, in writing against the blood accusation, was a happy feature of the situation; and the Semitic section of the Congress of Orientalists at Rome passed unanimously a resolution to the same effect. In Austria there has been no pause in the anti-Semitic movement, which has been combined with clericalism. It has acquired a virulence, however, which can not endure if the better class of electors assert themselves.

In Roumania an emigration *en masse* began, owing to harsh anti-Jewish laws, but it was checked in time to prevent the departure of more than a comparatively few thousands, most of whom came to the United States and were distributed to interior towns by the co-operation of Jewish societies.

The fourth International Congress of Zionists, held in London, shed no new light on the movement, but showed the continued enthusiasm of its adherents, without as yet any tangible and practical fruit of their labors. It would seem that there is a disposition to lay stress on the political side of Zionism, so far as a Jewish state is concerned, but more emphasis is directed to the need of colonization in Palestine, to which a further impetus was given by a meeting in March, in Frankfort, of societies that are interested in that line of work. Anti-Jewish riots that broke out in Odessa (July 29) were promptly checked, and a large number of the rioters were arrested by the police and the troops.

In France, perhaps owing to the sense of solidarity strengthened by the Dreyfus trial, a new society was formed, L'Union Libérale Israélite, to develop a love for Judaism, with special efforts to interest the young. In Paris, Sunday lectures on Judaism and its history were given for some months. The literary activity of the French Jews was attested not only by the continued success of the *Revue of the Société des Études Juives*, but by the first volume of a new French translation of the Old Testament, with a special edition for the young, and by M. Schwab's List of Articles relating to Jewish History and Literature which were published in *Periodicals from 1783 to 1798*.

In Germany there was no cessation in the appearance of works on Judaica and Hebraica, showing the continued interest in such studies, a complete list of which for the greater part of the year is given, from the pen of Israel Abrahams, in the *Jewish Yearbook (1900)*, issued by the American Jewish Publication Society of Philadelphia.

At home the educational impetus of the past few years was remarkably well sustained. The second triennial convention of the Council of Jewish Women, at Cleveland (March 4-9), indicated the great progress of that society, with nearly 5,000 members, and its special sections devoted to Jewish studies, philanthropy, and educational work. A junior organization was to be effected. The Jewish Chautauqua was authorized at the quinquennial convention of the I. O. B. B., to co-operate in the formation of a lecture bureau, which shall secure lectures for the lodges so as to improve the intellectual standing of the order. The growth of agricultural work was shown by a further development of the National Farm School, at Doylestown, Pa., the organization of a special society in Chicago for that purpose, and increased

efforts by the Baron de Hirsch Fund in connection with its New Jersey settlements. The first convention of the National Conference of Jewish Charities in Chicago (June 11) marked a distinct step forward in the history of Jewish benevolence. The death of the Rev. Dr. Isaac M. Wise led to a general movement to establish a memorial fund for the Hebrew Union College, and about \$100,000 was received or promised out of the half a million desired. Among the new institutions opened were the dispensary of the Chicago United Hebrew Charities, the Philadelphia Young Women's Home, the Lucien Moss Home for Incurables, the New York Young Men's Hebrew Association building, and the Brooklyn Hebrew Educational Institute. The literary movement included the first volume of Lazarus's *Ethics of Judaism* (Jewish Publication Society), a *Heft* of Jastrow's Talmudic Dictionary,

a volume of Rodkinson's Talmud in English, a specimen of the Mexican Inquisition documents, by the Jewish Historical Society, and the co-operation of our scholars in the production of a Jewish encyclopædia, the first volume of which is almost ready for publication.

New life is exhibited by the B'nai B'rith, which took upon itself with success the distribution of Roumanian immigrants and is establishing lodges among the Russian newcomers, besides pushing its work abroad in Germany and the Orient and considering the advisability of entering France. Two synagogues in San Francisco and one in Cleveland celebrated their fiftieth anniversaries. President McKinley visited the Nathan Barnert Memorial Temple, in Paterson, N. J., during service on the seventh night of Passover. Dr. Jacob H. Hollander was appointed treasurer of Porto Rico.

K

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 996,096 in 1880; and 1,427,096 in 1890. By the State census of 1895 it was 1,334,688; by the Federal census of 1900 it was 1,470,495. Capital, Topeka.

Government.—The following were the State officers in 1900: Governor, William E. Stanley; Lieutenant Governor, Harry E. Richter; Secretary of State, George A. Clark; Treasurer, Frank Grimes; Auditor, George E. Cole; Attorney-General, A. A. Godard; Superintendent of Education, Frank Nelson; Commissioner of Agriculture, F. D. Coburn; Adjutant General, S. M. Fox; Superintendent of Insurance, W. V. Church; Oil Inspector, S. O. Spencer; Grain Inspector, A. E. McKenzie; State Printer, W. Y. Morgan; Board of Charities, John Hannan, G. W. Kanavel, Reuben Vincent, Grant Hornaday, Edwin Snyder; Bank Commissioner, J. W. Breidenthal; Labor Commissioner, W. L. A. Johnson. All the elected officers are Republicans. Chief Justice of the Supreme Court, Frank Doster, Populist; Associate Justices, W. A. Johnston and W. R. Smith, Republicans.

Population.—According to the Federal census of 1900, the population of Kansas was 1,469,490. In 1890 it was 1,427,096; therefore the gain for the decade was 42,400, an increase of 3 per cent., while that of the total population of the United States was 21 per cent. This small percentage is in great measure due to the fact that between 1890 and 1900 many thousands of people removed from Kansas to settle the neighboring Territory of Oklahoma. For several years after 1890 the population of Kansas declined, but the census of 1900 shows that the tide has turned. In 1900 the State had 111 cities and towns with 1,000 or more inhabitants, against 109 in 1899 and 103 in 1898.

Finances.—The amount of money in the State treasury, Jan. 15, was \$1,014,890.63. The Auditor's report of Aug. 9 showed the aggregate credit balances of the State funds to be \$866,452.03.

The Auditor's compilation of the tax reports was completed in April, and showed that the taxes for all purposes in the State for 1899 amounted to \$15,497,307.86, divided as follow: State tax, \$1,811,114.75; school district, \$4,147,538; township, \$1,601,660.68; county, \$3,718,222.64; city, \$2,014,793.95; railroad, \$2,203,977.84. The assessors' returns for 1900 show an increase in valuation of property in the State of about \$13,500,000. On this basis, owing to the high levy fixed by the last Legislature, about \$80,000 more of taxes would

have been collected than the necessities of the State government required. It was impossible to reduce the levy, but the State Board of Equalization reduced the valuation as returned by the assessors \$11,675,044. The total valuation as returned by the board for 1900 is \$328,936,054, an increase over 1899 of \$1,770,524. The total State tax levied in 1900 was \$1,807,898, an increase over 1899 of \$8,489.

The February apportionment of the State school fund among the counties involved the distribution of \$226,858.50, being 45 cents per capita, and an increase of 4 cents per capita over the August apportionment of 1899.

In the three years from July 1, 1897, to July 1, 1900, the counties of Kansas reduced their bonded debts in the aggregate \$2,928,371, reductions being made in 95 counties and increases in only 10.

The Auditor's statement in June showed the total amount of municipal bonds of the State refunded during the two previous years to have been \$6,232,233.44. The settlements included county, township, city, and school bonds. More than \$500,000 of bonds in addition were paid off. The Auditor's list embraces 89 of the 105 counties. The tax accounts of Harper County have been checked up, with a saving to the State of \$6,103.43.

The twelfth biennial report of the Treasurer, covering the period from June 30, 1898, to June 30, 1900, shows a reduction during that period in delinquent taxes due the State from \$164,831.58 to \$75,815.34. The Treasurer informs the Governor of a considerable amount of bonds in the treasury upon which no interest has been paid for several years, and which were mostly imposed upon honest settlers by professional boomers, who immediately left the State. "When the temporary inflation subsided, the bonded municipalities were left with property greatly depreciated and, in many instances, almost depopulated. This causes great hardship to the worthy people who are endeavoring to establish homes in those localities, and prevents the settlement and development of the bonded Territories."

Although the Attorney-General had held that the Quantrell raid scrip could be turned into the treasury in payment of State taxes, the Treasurer decided not to receive the scrip in such payment, basing his decision on the Titus law (chap. 247, Laws of 1899).

For the period of nine months ending with March, 1900, the net income to the State from the oil-inspection department was \$10,334.61.

In April the Governor was officially advised that

the claims of the State against the Federal Government for expenses incurred in raising troops for the war with Spain had been allowed to the amount of \$36,681.19. The claims aggregated \$37,787.84.

Final payments to the Indians of the Ottawa reservation have been made by the Federal Government, the amount paid being \$42,000, or \$491.48 per capita.

Banks.—According to the biennial report of the State Bank Commissioner, Dec. 13, there were 334 State and 55 private banks in Kansas, 59 banks having been organized during the year. Eleven private banks were reorganized as State banks and 11 State and private banks reorganized as national banks. Twelve State and 5 private banks went into voluntary liquidation, while 5 were closed. In the last two years the capital stock of the State and private banks in the State had increased \$100,023, and the surplus \$488,160. While the deposits in the same length of time increased \$9,000,000, yet the cash on hand was only \$178,099 greater. The total number of depositors was 111,132.

Building and Loan Associations.—By the Legislature of 1899 building and loan associations were placed under the control of the State Bank Commissioner, who in June submitted a report showing the cost of management of local associations to be 1.31 to 8 per cent. of the total receipts from stock sold, and of Kansas national (or "general") associations to be from 18.3 to 80 per cent. Regarding foreign associations, the commissioner says: "The losses sustained by Kansas investors in foreign loan associations in the past aggregate millions of dollars. Eighty per cent. of the foreign associations that were doing business in Kansas five years ago have failed." During the year, when the number of building and loan associations doing active business in the State increased to more than 50, several associations went into voluntary liquidation, and some were closed by the Bank Commissioner.

Education.—At the State University the graduates in 1900 numbered 200, with the following distribution among the various schools: Art, 91; law, 73; engineering, 15; graduate school, 13; fine arts, 6; medicine, 2. In all, the university has graduated 1,745 students. The formal dedication of the Fowler Shops building occurred on June 5.

The graduating class at the Agricultural College had 59 members. The degree of M. S. was conferred upon 3 post-graduates. At the end of the second week of the winter term the increase of attendance over that of the same week in 1899 was 32.1 per cent., the number of students being 888. The agricultural department now has permanent quarters in the fine hall completed in 1900. The chemical building was destroyed by fire in May. In March Congress granted to Kansas the old Fort Hays military reservation in Ellis County for educational purposes. The bill provides for an experiment station of the Agricultural College on this tract.

At the State Normal School the enrollment for the year was 1,983, representing 93 counties in Kansas, and also 14 other States and Territories. The graduating class numbered 109. The Fort Hays grant makes provision for a western branch of this school.

The College of Liberal Arts, Baker University, conferred degrees upon 14 graduates. During the year the university built a new gymnasium.

At Washburn College 27 students were graduated. The thirty-fifth anniversary of the founding of the college was celebrated Feb. 6.

Ottawa University had 500 students during the year, and graduated 7.

The graduates of McPherson College, in all departments, numbered 31. During the year the college debt was liquidated.

The school population of the State in 1900 was 504,130—white persons, 487,953 (males 247,330, females 240,623); colored persons, 16,177 (males 7,895, females 8,282).

Kansas has \$11,665,511 invested in school buildings, of which there are 9,297 in the State. The number of teachers in 1900 was 11,428. The money paid in wages to teachers for the year ending June 30, 1899, amounted to \$3,033,248.40. For the same period the total expenditure for school purposes was \$4,360,472.94. The semiannual distribution of the State school fund in August, 1900, divided among the counties \$221,836.68—about 44 cents per capita for the school population.

According to the statistics of the Federal Department of Education, Kansas has the largest percentage of school children enrolled among the States of the Union.

Charities and Corrections.—In March, 1900, the number of inmates in each of the 8 charitable institutions of Kansas was as follows: School for the Blind, at Kansas City, 84; Imbecile and Idiotic Asylum, at Winfield, 182; Reform School, at Topeka, 171; Deaf and Dumb School, at Olathe, 246; Girls' Industrial School, at Beloit, 112; Soldiers' Orphans' Home, at Atchison, 139; Topeka Insane Asylum, 850; Osawatimie Insane Asylum, 1,025.

Seventy-seven counties own their poor farms. Their total number of inmates, according to the latest report of the Labor Commissioner, was 1,595, and their aggregate expense in 1899, \$135,403.02. Revenues from them amounted to \$32,618.22.

The State Board of Charities in its last report commends the work of the 16 independent charities which receive State aid. The value of their real estate and equipment is about \$500,000. In ten years they have given relief to more than 37,000 persons.

The number of inmates at the State Industrial Reformatory, at Hutchinson, July 1, 1900, was 227. During the first year of the fiscal period 97 inmates were paroled, and during the second year 110.

In the State Penitentiary the prisoners in May numbered 1,000, of whom 215 were from Oklahoma, which has no prison.

The present Governor has made experiments in the matter of conditional pardons for criminals, with results of practical interest. In March, 1900, ten months after his plans were put in operation, he was able to make known that 18 prisoners of the Penitentiary had been conditionally pardoned. "All of them," he says, "are now employed, and their monthly reports show that they have fulfilled the strict letter of their conditions, are caring for those dependent upon them, and are leading industrious and honest lives."

Military.—According to the annual report of the Adjutant General's Office at Washington, issued in July, the organized militia force of Kansas was 1,244. The number of men in the State available for military duty, but unorganized, does not appear in this report.

The twelfth biennial report of the Adjutant General of the State, issued Oct. 8, in addition to other information regarding the department, contains the complete roster and histories of the 4 regiments put in the field by Kansas during the Spanish-American war. At the date of the report there were 1,205 Kansas soldiers in the Philippines. All but 43 of them were in the infantry service.

In May an organization, to be known as the Twentieth Kansas, was formed by the election of officers. Its membership is designed to include all honorably discharged soldiers of the Twentieth

Kansas Infantry. Medals for the members of this regiment have been made from captured Spanish cannon.

In honor of Company K a memorial gateway has been erected at Forest Park, Ottawa, by the citizens of Franklin County.

Calvin P. Titus, of Wichita, a musician of the Fourteenth United States Infantry, was the first to scale the walls of Pekin in the assault of the allied forces upon the city in August.

Railroads.—The Auditor, as secretary of the State Board of Railroad Assessors, reports the total assessments of railroad, telegraph, and telephone properties for 1900 as reaching \$59,320,032, an increase over 1899 of \$279,975.

The present railroad mileage of Kansas is about one third that of Germany, almost half that of Great Britain and Ireland, slightly less than that of Spain, and nearly the same as that of Italy. Only 5 of the 105 counties, and only 7 county seats, are without railroad communications.

In April the Kansas Midland Railway, from Wichita to Ellsworth, 106 miles, was sold to the St. Louis and San Francisco Railway Company.

Insurance.—The mutual insurance companies reported no large profits for 1899, while two report a loss.

The amount collected by the Superintendent of Insurance for the Firemen's Relief fund, as returned in May, was \$20,140.81.

A form of insurance new in Kansas, which has worked successfully in other States, has been introduced by the organization of the Farmers' Mutual Hail Association, at Topeka.

Products.—According to the final report of the secretary of the State Board of Agriculture for 1900, the value of the year's crops and products, exclusive of live stock, was \$187,796,406. The value of live stock was \$143,457,753. This makes a grand total of \$331,254,159, a net increase over 1899 of \$28,348,780.40, or 9.35 per cent. The acreage of winter wheat sown in 1900 exceeded by 7 per cent. that sown in 1899. The corn crop of 1900 was 90,000,000 bushels short, but the winter wheat crop, 76,595,443 bushels, was the greatest ever grown in Kansas, exceeding that of 1899 by 33,779,972 bushels, and having a home value of \$41,624,096. Of corn, the yield was 134,523,677 bushels, valued at \$39,581,835. Oats yielded 31,169,982 bushels, with a value of \$6,626,443. Notwithstanding the \$13,948,741 shortage in the value of the corn crop, the total value of the year's winter and spring wheat, corn, and oats combined was \$88,182,423, an increase over 1899 of \$7,293,801, or 9 per cent. Other noteworthy productions of the year were: Flax, 1,693,238 bushels, value \$2,201,209.40; Irish and sweet potatoes, 7,573,962 bushels, value \$2,872,454.46; barley, 3,319,333 bushels, value \$972,358.29; dairy products, value \$7,459,693.46; poultry and eggs sold, value \$5,060,332; animals slaughtered or sold for slaughter, value \$54,321,888; horticultural and garden products and wine, value \$1,364,927.75. The combined value of sorghum, Kafir corn, milo maize, and Jerusalem corn for forage was \$8,647,507. Sorghum for sirup, 1,622,963 gallons, was valued at \$551,807.42. Several first prizes were awarded at the Paris Exposition for Kansas fruit exhibits.

Legal Decisions.—In an opinion handed down May 7 by the Supreme Court, the law creating the Court of Visitation, enacted by the Legislature at the special session of 1898-'99, was declared to be unconstitutional and void.

The decision of the court in the Harper County tax case, rendered in June, affects about half the counties in the State and insures about \$100,000 increase in the State's general revenue fund. The

court's decision is that Harper County and all counties are liable to the State for uncollected State taxes.

The Supreme Court, in reversing the decision of a lower court, declares that "improvements placed upon real estate by a railroad company necessary to the operation of the road are to be regarded as trade fixtures and not accessories of the land to which they are attached."

Another decision of the court is that chapter 167, Laws of 1897, an act to require railroad companies to furnish free transportation to shippers of stock, is unconstitutional and void under the fourteenth amendment of the Federal Constitution.

The Supreme Court of the United States, in January, in a case involving the constitutionality of the Kansas law authorizing cities to extend their borders so as to include some lands and not others, rendered a decision upholding that law.

A suit of long standing for possession of Leavenworth island, in Missouri river, has been decided by a special judge in the circuit court in favor of David Atchison, of Leavenworth. This island, subject to changes of area and outline by the action of the river, now contains about 1,000 acres, and is believed to have valuable coal deposits.

A decision rendered by the Federal Court in May will, if sustained, permit liquor houses outside of the State to sell liquor through their representatives to parties in Kansas, on the ground that such action is allowed by the interstate commerce law. The Attorney-General filed notice of an appeal to the Supreme Court of the United States.

Lawlessness.—At Fort Scott, Jan. 20, a mob hanged two men who had been convicted of murdering a farmer in Bates County, Missouri. A third man, convicted of the same crime, was saved from the hands of the mob by the determined stand of the sheriff and his deputies, aided by some of the less violent among the lynchers. The immediate cause of the lynching was a murderous assault by the prisoners upon a deputy sheriff in an attempt to escape.

A desperate battle took place at Goodland, Aug. 10, between a sheriff and his posse, re-enforced during the struggle by a large party of armed citizens, and two train robbers from Colorado. Two citizens of Goodland were seriously wounded, one of the outlaws was shot to death, and the other was burned in a house where he had taken cover, which was fired by his pursuers.

Labor.—From answers to questions sent to laboring men in nearly every county, the Bureau of Labor and Industry has compiled statistics of comparison between organized and unorganized day laborers. From these it appears that the working day of the organized laborer averages 8.6 hours; of the unorganized, 10.4. Average rate of wages per hour indicated—organized, 16.7 cents; unorganized, 13 cents. Average total wage for 1899—organized, \$293.03; unorganized, \$293.19. Average annual cost of living—organized, \$326; unorganized, \$307.14.

At the second annual convention of the State Society of Labor and Industry, in February, 35 resolutions were adopted calling for as many kinds of special legislation. A legislative committee was appointed. The resolution asking for the passage of an arbitration law declared emphatically against strikes.

Disagreements between the Big-Four coal mining companies and their employees were settled in June through the friendly counsel of the Governor and the Commissioner of Labor.

An interesting feature of the report of the State Labor Commissioner deals with statistics gathered by him, from which it appears that: the home

owner supports a family on an average 13.3 per cent. larger than the average family of the rent payer; that the average annual earnings and income of the home owner is 15.5 per cent. more than the average for the rent payer; that the cost of living of the home owners is 10.6 per cent. greater than the average for the rent payer; that the average annual saving of the home owners is 32.3 per cent. more than the average saving of the rent payer; and that of the total amount permanently invested during the year, 80 per cent. is invested by the home owners. The rent payers expend an average of 14.1 per cent. of their earnings and income for rental for homes.

New Temperance Movement.—A Temperance Commission Club was organized at Topeka in March, to work for the creation by law of a State department of temperance under a board of three commissioners. The movement, which aims to secure uniform and practical enforcement of the prohibitory law, has resulted in the organization of similar clubs in different parts of the State. The State Temperance Union, through its committee, reporting on Nov. 28, while recommending further prohibitory legislation, disapproved of the commission project as inexpedient.

Good Roads Congress.—The first gathering of its kind in the West was the Good Roads Congress, held at Topeka in September, which brought together a large number of persons from Kansas and other States. The most important action of the congress was the forming of a permanent State organization to be called the Kansas Good Roads Association. A committee was named to prepare a good roads bill for the Legislature, and delegates were chosen to attend the National Good Roads and allied congresses at Chicago in November.

Kansas Semicentennial Exposition.—On June 14 the State Charter Board granted a charter to the Kansas Exposition Association of Topeka, with a capital stock of \$50,000, divided into 10,000 shares at \$5 each. This is but one of many movements in the State whose special object is the holding of an exposition in 1904 to celebrate the semicentennial of the organization of the Territory of Kansas.

Political.—The Republican State Convention was held at Topeka, May 16. It reaffirmed the principles of the platform of the National Republican party of 1896; approved the administration of President McKinley, and declared that the highest interests of the country demanded its continuance through another term; congratulated the country on the maintenance of the gold standard and the parity of all our forms of money; condemned "the false cry of imperialism," and the Democratic policy based thereon, "as being responsible for the continued war in the Philippines"; denounced the disfranchisement of colored citizens in Southern States, and urged remedial legislation for this injustice by Congress. It demanded "the prompt, efficient, and faithful enforcement of the antitrust act of 1890, and such additional and supplementary legislation as will meet the defects thereof, as indicated by the Supreme Court of the United States in its recent decisions," and denounced "the combination and creation of corporate trusts and monopolies which seek to become the controllers of industry and the arbitrators of prices, as contrary to the common law, destructive of individual effort and enterprise, and inimical to the welfare of the people and the State and the nation." It reaffirmed allegiance to the principles of reciprocity and protection as exemplified in the Dingley law.

The convention commended in the highest terms the administration of Gov. Stanley and his asso-

ciates in the State government; commended the representatives of Kansas in Congress; denounced recent fusion railroad legislation in the State, and pledged the Republican party to "such legislation as will provide adequate protection against the greed of the corporations without crippling them with unjust exactions." It favored the re-establishment of the Board of Railroad Commissioners, with fuller powers, and recommended the election of its members by the people.

Another demand of the convention was for "the amendment of the interstate commerce act in such manner that it will compel compliance with and enforcement of just and equitable freight rates." Hearty sympathy was expressed with generous pension legislation and liberal interpretation of the pension laws. The resolutions of the convention concluded with a pledge to work for some measure that will make it possible for railroad men engaged in running their trains on Election Day to cast their votes without embarrassment to their work.

At this convention the Republicans chose delegates at large to the national convention and presidential electors, and nominated Charles F. Scott for Congressman at Large and the following State ticket: Associate Justice, W. A. Johnston; Governor, W. E. Stanley; Lieutenant Governor, Harry Richter; Secretary of State, George A. Clark; Treasurer, Frank Grimes; Attorney-General, A. A. Godard; Auditor, George E. Cole; Superintendent of Public Instruction, Frank Nelson; Superintendent of Insurance, W. V. Church.

The State convention of the People's party to choose national delegates was held at Clay Center, April 24.

The Democratic State Convention to choose national delegates met at Wichita, May 23.

The Prohibition party held its State convention at Topeka, June 20. The usual resolutions on prohibition and one favoring woman suffrage were passed, also resolutions against trusts and the army canteen.

Candidates for presidential electors were chosen, B. C. Hoyt was nominated for Congressman at Large, and candidates for State offices were named as follow: Governor, Frank Holsinger; Lieutenant Governor, W. L. Coryell; Secretary of State, R. H. Moore; Treasurer, H. C. Zink; Attorney-General, M. V. Bennett; Auditor, W. M. Howie; Superintendent of Insurance, A. H. Griesa; Superintendent of Public Instruction, G. I. Winans.

The State conventions of the Democratic, People's, and Silver-Republican parties, all assembled at Fort Scott, July 24, effected a fusion, chose candidates for presidential electors, and nominated Jerry Botkin (People's party) for Congressman at Large, and these candidates for State offices: Associate Justice, David Martin, Silver Republican; Governor, John W. Breidenthal, People's party; Lieutenant Governor, A. M. Harvey, People's party; Attorney-General, Hugh P. Farrelly, Democrat; Secretary of State, Abraham Frakes, Democrat; Auditor, E. J. Westgate, People's party; Treasurer, Conway Marshall, Democrat; Superintendent of Public Instruction, Levi Humbarger, People's party; Superintendent of Insurance, Webb McNall, Silver Republican.

The platform of the People's party reaffirmed the declaration of principles made by the national convention at Sioux Falls, S. D., May 9, 1900, and accepted its nominees; invited comparison between the last administration of the People's party in the State and preceding and succeeding Republican administrations, "believing that such comparison will everywhere inure to the credit of Populists"; denounced militarism and imperialism as

the direct outgrowth of the spirit of greed which is the chief characteristic of modern commercialism as embodied in trusts and private monopolies; declared that there is no affinity between political democracy and commercial aristocracy, and proclaimed unalterable opposition "to absolutism, whether practiced upon the people of this nation by imperial commercial trusts and private monopolistic corporations or whether practiced upon political subjects either of Queen Victoria in South Africa or of William McKinley in Porto Rico and the Philippines." The platform favored the election of United States Senators by a direct vote of the people; denounced the illiberal and unjust administration of the Pension Bureau; demanded that the initiative and referendum be embodied in the State Constitution; criticised Republican action with respect to railroad legislation, and appealed for Government ownership of railroads as the only means of permanent relief from evils of their present management. Demanding the withdrawal of all special privileges granted by law to corporations or individuals and the application of the principle of Government ownership as a remedy for monopolies of every kind, the platform specifically favored "the municipal ownership and operation of plants for the supply of water, light, heat, and power, and also of all street-car lines and telephone systems."

An amendment of the State Constitution permitting State stock yards and markets and providing for State insurance was favored, as also was State development of oil resources and refining. Other features of the platform were the condemning of the combination of grain buyers existing in violation of the Kansas antitrust law; a demand for an amendment to the State banking laws which will provide for taxing the banks to create a fund for reimbursing depositors in banks that become insolvent; the favoring of a civil service that will put the State institutions upon a business basis; of additional penalties for violation of the tax law; of the graduated taxation of property, incomes, and inheritances; and of such laws, State and national, as will prevent abuse of the power of Federal judges by means of the writ of injunction and otherwise, so that the right of trial by jury shall remain inviolate, and "no matter with what offense a man may be charged, he will at all times be assured a fair and impartial trial."

At the general election of Nov. 6 the Republicans were successful with their State and national tickets. Gov. Stanley was re-elected by a majority of 17,100, and the rest of the State ticket by majorities averaging somewhat higher. The election gave the Republicans a majority of 59 on joint ballot in the Legislature.

The constitutional amendment increasing the membership of the Supreme Court from 3 justices to 7 was carried by 123,721 to 35,474. By this amendment the Appellate Court, with 6 justices, ceases to exist.

Of the presidential vote McKinley received 185,955; Bryan, 162,601; Woolley, 3,605; Debs, 1,605. McKinley's plurality, 23,349; majority over all, 18,139.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 44,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 406,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,684 in 1860; 1,321,011 in 1870; 1,648,690 in 1880; 1,858,635 in 1890; and 2,147,174 in 1900. Capital, Frankfort.

Government.—At the beginning of the year the offices were filled by the Republicans who were inaugurated in December, 1899, after the official

count had been declared. They were: Governor, William S. Taylor; Lieutenant Governor, John Marshall; Secretary of State, Caleb Powers; Attorney-General, Clifton J. Pratt; Auditor, John S. Sweeney; Treasurer, Walter R. Day; Superintendent of Instruction, John Burke; Commissioner of Agriculture, J. W. Throckmorton. The Democratic candidates for the offices of Governor and Lieutenant Governor made a contest before the Legislature, which decided in their favor; appeal was taken to the courts, where it was decided that they had no jurisdiction. The following were therefore declared to be the rightful claimants to the offices: Governor, William Goebel, who died Feb. 3 and was succeeded by the Lieutenant Governor, J. C. W. Beckham; the president *pro tem.* of the Senate, Lillard H. Carter, became the acting Lieutenant Governor. The contestants for the minor offices were: Secretary of State, Breck Hill; Attorney-General, R. J. Breckenridge; Treasurer, S. W. Hager; Auditor, G. C. Coulter; Commissioner of Agriculture, J. B. Nall; Superintendent of Public Instruction, H. V. McChesney. The Railroad Commissioners were J. F. Dempsey, C. C. McChord, and John C. Wood; the State Inspector, Henry B. Hines. Gov. Goebel appointed John B. Castleman to succeed D. R. Collier as Adjutant General. The Chief Justice of the Court of Appeals was James H. Hazelrigg, Democrat; the Associate Justices, J. D. White, T. H. Paynter, and J. P. Hobson, Democrats, and B. L. D. Guffy, George DuRelle, and A. Rollins Burnam, Republicans; Clerk, S. J. Shackelford, Democrat.

Elections for State officers are held in November of the years preceding the presidential elections. The term of office is four years. The Legislature, consisting of 38 Senators and 100 Representatives, meets biennially the first Tuesday after the first Monday of January in even-numbered years.

Population.—The population of the State, by the census of this year, 2,147,174, is made up by counties as follows: Adair, 14,888; Allen, 14,657; Anderson, 10,051; Ballard, 10,761; Barren, 23,197; Bath, 14,734; Bell, 15,701; Boone, 11,170; Bourbon, 18,069; Boyd, 18,834; Boyle, 13,817; Bracken, 12,137; Breathitt, 14,322; Breckenridge, 20,534; Bullitt, 9,602; Butler, 15,896; Caldwell, 14,510; Calloway, 17,633; Campbell, 54,223; Carlisle, 10,195; Carroll, 9,825; Carter, 20,223; Casey, 15,144; Christian, 37,962; Clark, 16,694; Clay, 15,364; Clinton, 7,871; Crittenden, 15,191; Edmonson, 10,080; Elliott, 10,387; Estill, 11,669; Fayette, 42,071; Fleming, 17,074; Floyd, 15,552; Franklin, 20,852; Fulton, 11,546; Gallatin, 5,163; Garrard, 12,142; Grant, 13,239; Graves, 33,204; Grayson, 19,878; Green, 12,255; Greenup, 15,432; Hancock, 8,914; Hardin, 22,937; Harlan, 9,838; Harrison, 18,570; Hart, 18,390; Henderson, 32,907; Henry, 14,620; Hickman, 11,745; Hopkins, 30,995; Jackson, 10,561; Jefferson, 232,549; Jessamine, 11,025; Johnson, 13,730; Kenton, 63,591; Knott, 8,704; Knox, 17,372; Larue, 10,764; Laurel, 17,592; Lawrence, 19,612; Lee, 7,988; Leslie, 6,753; Letcher, 9,172; Lewis, 17,863; Lincoln, 17,059; Livingston, 11,354; Logan, 25,994; Lyon, 9,319; McCracken, 28,733; McLean, 12,448; Madison, 25,607; Magoffin, 12,006; Marion, 16,290; Marshall, 13,692; Martin, 7,580; Mason, 20,446; Meade, 10,533; Menifee, 6,818; Mercier, 14,426; Metcalfe, 9,988; Monroe, 13,053; Montgomery, 12,834; Morgan, 12,792; Muhlenberg, 20,741; Nelson, 16,587; Nicholas, 11,952; Ohio, 27,287; Oldham, 7,078; Owen, 17,553; Owsley, 6,874; Pendleton, 14,947; Perry, 8,276; Pike, 22,686; Powell, 6,443; Pulaski, 31,293; Robertson, 4,900; Rockcastle, 12,416; Rowan, 8,277; Russell, 9,695; Scott, 18,176; Shelby, 18,340; Simpson, 11,624; Spencer, 7,406; Taylor, 11,075;

Todd, 17,371; Trigg, 14,073; Trimble, 7,272; Union, 21,326; Warren, 29,970; Washington, 14,182; Wayne, 14,892; Webster, 20,097; Whitley, 25,015; Wolfe, 8,764; Woodford, 13,134; total, 2,147,174.

The population of Louisville is 204,731; Covington, 42,938; Lexington, 26,369.

Of those having smaller population are: Paducah, 19,446; Owensboro, 13,189; Henderson, 10,272; Frankfort, 9,487; Bowling Green, 8,226; Hopkinsville, 7,280; Ashland, 6,800; Maysville, 6,423; Bellevue, 6,332; Dayton, 6,104; Winchester, 5,594.

Finances.—The bonded indebtedness of the State at the opening of the year was \$3,483,991. Of this only \$1,000,000 must be ultimately discharged by payment of the principal—in 1905 and 1907—and the resources of the treasury were more than sufficient to discharge them. A small part, \$6,394, was in old issues supposed to be lost, and the remainder was educational, college, and normal school bonds. The floating debt was \$23,276. The total value of taxable property in the State, as reported by the Board of Equalization in July, is \$574,867,964; this will produce \$2,730,622 in taxes at 47.5 on \$100, the rate this year, instead of 52.5 cents, which has been collected for the past three years. Owing to the failure of county assessors to make the assessment, about \$12,000,000 worth of stock in national banks escaped taxation this year, the decision of the Supreme Court making it the duty of the owner of the stock to list it for taxation. The board in November fixed the tax valuation of whisky at \$10 a barrel instead of \$7 as heretofore.

Education.—The school population is 719,654; the per capita of apportionment for the year ending June 30, 1900, was \$2.70; this is larger than for the previous year, as the school fund was increased in consequence of the collection of large amounts of bank taxes from railroads and other sources after the per capita for the year ending June 30, 1899, had been fixed. The most serious defect of the school system is the limited term of instruction, the schools in rural districts being open not usually more than five months of the year.

Charities and Corrections.—There are three insane asylums—the Eastern, the Western, and the Central. New buildings have been erected for the Institute for the Feeble-minded.

The penitentiaries, at Frankfort and Eddyville, are under the care of three prison commissioners, who receive salaries of \$2,000 each. There is also an institution for juvenile offenders near Lexington. For the sixteen months ending Nov. 30, 1899, the expenses of the Frankfort penitentiary were \$349,623, and its income from earnings, etc., \$261,851. The amount paid and charged to the Eddyville penitentiary during the same period was \$91,469.83, an amount greater by \$57,075.83 than the amount of earnings and materials on hand.

Lawlessness.—A feud dating from the time when Kentucky troops were at Anniston, Ala., during the Spanish war, between Col. D. G. Colson and Lieut. Ethelbert Scott, resulted in a tragedy at Frankfort, Jan. 16, in which three persons were killed and four others wounded. While the officers were at Anniston they had an encounter, in which Colson was wounded by Scott. The encounter of Jan. 16 resulted fatally for Scott. It took place in the lobby of the Capitol Hotel, which was crowded with visitors drawn to Frankfort by the legislative contests. The accounts of the beginning of the fray are conflicting, but the first fire was instantly returned; and when Scott retreated to the stairway Colson pursued him and fired at him as he ran down the stairs. Scott was wounded in six places, and died almost instantly. Two

bystanders also were killed, one of whom Scott was said to have used as a shield from Colson's first bullets. Colson was indicted, tried, and acquitted.

Five men were killed in quarrels over politics, Nov. 6.

Osteopathy.—A graduate of a school of osteopathy asked an injunction restraining the State Board of Health from interfering with his practice. The lower court refused, but the Court of Appeals granted the injunction, and held that the practice is not a violation of the statutes, the Chief Justice dissenting.

The Contest for Offices.—The official count, after the State election of 1899 gave the offices to the Republican candidates, and they were inaugurated Dec. 12. Notices of contest were served. The contests for the two higher offices came before the Legislature, according to the election law; those for the remaining offices were to come before the Election Board sitting as a board of contest. Two members of this board resigned before the time for hearing the contests, and each of the contestants for the office of Governor made appointments to fill the vacancies.

In the Legislature the Committee on Contests was chosen by lot, according to the law of 1899. The drawing fell out greatly to the advantage of the Democrats, and unfairness in the drawing was charged. On Jan. 25, according to Frankfort dispatches, a special train arrived there, bringing from 500 to 1,000 men armed with Winchester rifles, the so-called "mountain men" from the southeastern and southern parts of the State, many of whom were said to belong to the State militia, but this was denied. They held a meeting and adopted a petition to the Legislature in the form of resolutions, asking that the contest be decided according to the will of the people expressed at the polls. A dispatch of the evening of that day said they had returned to their homes.

A contest for a seat in the House was decided, Jan. 27, in favor of Van Meter, the Democrat, against Berry, the Republican; and this decision was regarded as forecasting the vote on the governorship. The House stood 60 Democrats to 40 Republicans, and the Senate 26 Democrats to 12 Republicans.

While on his way to the Statehouse, Jan. 30, Senator William Goebel fell by a shot from an assassin. Great excitement prevailed, and Gov. Taylor adjourned the Legislature (see Legislative Sessions in this article), declaring that a state of insurrection existed, and placed military guards around the Capitol. He called the Legislature to meet at London, which is in the Republican part of the State. Jan. 31, the legislators favorable to Senator Goebel, unable to enter the Capitol to hold a session, and also shut out by militia from the opera house and other places where they attempted to meet, prepared a statement setting forth these facts and declaring Goebel and Beckham Governor and Lieutenant Governor. This was signed by 19 Senators and 56 Representatives. Mr. Goebel's death was hourly expected, but he was sworn in as Governor in the evening, Chief-Justice Hazelrigg holding that the action of the members was valid, and Mr. Beckham took the oath as Lieutenant Governor. Gov. Goebel died Feb. 3, and Mr. Beckham was sworn in Governor an hour later.

It was held that the law called for the decision of such a contest by the two houses separately. The Republicans refused to abide by this decision or to give up the offices. Applications for injunctions were made by both sides; a conference committee consisting of 7 men from each party pre-

pared an agreement by which, if the Legislature should ratify their action, the Republicans should submit without further protest; that all parties should unite in an effort to bring about such changes in the laws as would secure free and fair elections; that the troops should be removed from the Capitol; and that the Republican officials and officers of the State Guard should have immunity from charges of treason, usurpation, or any such offenses. This agreement Gov. Taylor refused to sign; the injunction suits were consolidated into one, and it was agreed that both parties would abide by the decision of the courts. The case was carried to the circuit court of Jefferson County, where a decision was given, March 10, sustaining the contention of the Democrats that the Legislature is, under the Constitution, the proper tribunal for the settlement of such contests, and that, although the Legislature was not in session, the showing of the records that the reports in favor of the Democratic contestants were adopted by a quorum of each house was sufficient. Appeal was taken to the State Court of Appeals, where the decision was affirmed; and lastly the Republicans carried the case to the United States Supreme Court, where judgment was given, May 21, that that court had no jurisdiction, Justices Brewer, Brown, and McKenna dissenting from portions of the opinion, and Justice Harlan from the whole. He said in part: "So that, while we may inquire whether the citizen's land or his mule have been taken from him by the legislative, executive, or judicial authorities of his State without due process of law, we may not inquire whether the legislative or judicial authorities of the State have, without due process of law, ousted one lawfully elected and holding the office of Governor for a fixed term, and put into his place one whom the people have said should not exercise the authority appertaining to that high position. When the Fourteenth Amendment forbade any State from depriving any person of life, liberty, or property without due process of law, I had supposed that the purpose was to guard citizens against being deprived of any legal right in violation of the fundamental guarantees that adhere in due process of law."

As soon as the decision was made known, Gov. Taylor directed D. R. Collier, Adjutant General, to dismiss the militia from the Capitol and surrender his office to Mr. Beckham's appointee as soon as the mandate of the court should be filed.

The Goebel Murder Trials.—The Legislature offered a reward of \$100,000 for the apprehension and prosecution of the assassin of William Goebel, and warrants were issued for men suspected of complicity. On March 10 Gov. Taylor issued pardons to these men. The pardon to John L. Powers was respected in Barboursville and at Harlan Courthouse, where he was arrested, but the power of the ex-Governor to grant pardons was not generally recognized, as the Legislature had then decided against his claim to the office. Executions of the suspected men were held at Frankfort, and the grand jury returned indictments against ten. The principals named were: Henry E. Youtsey, who was a clerk in the office of Auditor Sweeney; James and Berry Howard, cousins known in connection with the old Howard feud; Holland Whittaker, who was alleged to have been in the room in the executive building from which the shot was fired, and "Tallow Dick" Coombs, a colored man who went to the Capitol with the "mountain men." Those indicted as accessories before the fact were: Caleb Powers, the Republican Secretary of State, and his brother, John L. Powers; Charles Finley, Secretary of

State in Gov. Bradley's administration; W. H. Culton, a clerk in Auditor Sweeney's office; and F. Wharton Golden, a member of the State Guard. Finley went to Indianapolis just before the warrant for him was issued. An indictment against Gov. Taylor, who, together with Green Golden and John W. Davis, special policeman at the Capitol, was mentioned in the indictment of the other accessories, was found by the grand jury about the same time, but was not made public till about June 1.

Requisition was made on the Governor of Indiana for the return of Taylor and Finley, but he refused to honor it, saying in his letter: "I deplore the assassination of the late William Goebel, and would not for a moment refuse to return Mr. Taylor or any other man charged with complicity in that crime if I could persuade myself that the party so charged, under existing conditions, would be accorded a fair trial. I do not believe a fair and impartial trial can or will at this time be given Mr. Taylor. When Judge Cantrill, of the trial court at Frankfort, declares that he would not subject a sheep-killing dog to a trial under such circumstances as exist, may I not justly refuse to send Mr. Taylor back to be subjected to a trial with this prejudice intensified and fanned into hate? When a man who is a controlling spirit in the prosecution, witness in this case and prominent in its counsels, uses the monstrous language that when they should get control they would hang Republicans 'like pigs to a pole' (and the anarchistic words have not to my knowledge been denied), the question of guilt seems of little consequence in this conspiracy against innocent men, the furtherance of which is indicated by indictments found by a partisan grand jury. Upon such finding is based the requisition papers which I now refuse to honor. I regret the fact that the peace of your State is marred by bitter political strife. When partisan rapacity leads to acts that endanger liberty and jeopardize life, it is time to remedy the cause by reforming the evil instead of persecuting the wronged. Of the law that has caused this strife in your State, while its passage was pending, the Louisville Courier-Journal said: 'The Goebel bill will never be enacted into a law. The Democrats of Kentucky have not sunk so low as that. There is a limit even to the fury of factional passion. There are bounds set upon the prosperous rapacity of sectional leadership.' It seems that this prophecy was not fulfilled and the 'limit even to the fury of factional passion' did not find its bounds in the 'prosperous rapacity of sectional leadership.' This bill thus denounced was enacted into law, and under its iniquitous provisions the people of Kentucky were deprived of their will expressed at the ballot box."

A change of venue for the trials was granted, and that of Caleb Powers began at Georgetown, July 9. Several of the principal witnesses for the prosecution were among those accused of having been in the plot—F. Wharton Golden, W. H. Culton, Robert Noakes. Their testimony was to the effect that the "mountain men" that went to the capital were brought there at the instance of Powers and others; that they were to start a riot in the legislative chambers and kill Democrats enough to leave the Republicans in a majority; that this plan was given up, and that it was decided instead to have Mr. Goebel shot from the office of the Secretary of State. Powers admitted that he organized the mountaineers, but said that he brought them to Frankfort to petition the Legislature, not to intimidate or to commit crime. On Aug. 18 a verdict of guilty was rendered against Powers, with the punishment fixed at im-

prisonment for life. The sentence was "hard labor for life." The jury was composed of 11 Democrats, 3 of whom were opposed to the Goebel faction, and 1 Republican. A motion for a new trial was overruled by Judge Cantrill, Aug. 24. James Howard was tried in September. The prosecution endeavored to show that he fired the shot that killed Senator Goebel. The jury in the case reported, Sept. 25, that they were unable to reach a verdict. The judge sent them back for further deliberation, and the next day they gave a verdict finding him guilty and fixing the death penalty. It was explained that the jury were agreed at the first ballot on the verdict of guilty, the disagreement being on the question of punishment. There was 1 Republican on this jury and there were 11 Democrats, 2 of whom were of the anti-Goebel faction. Henry E. Youtsey's trial was called Oct. 2, but it was delayed somewhat by the illness and apparently demented condition of the defendant. Testimony was introduced by the defense to show that Golden had said he was to get \$5,000 for his evidence, and that if he could see Col. Campbell he could get \$10,000, and that Cul-ton had said he had a contract for immunity, and that Golden had "got them all into trouble because he wanted a part of the \$100,000." Oct. 20 the jury brought in a verdict of guilty, fixing the punishment at imprisonment for life. The defense filed a motion for arrest of judgment, and the second day of the February term was set for the hearing.

Legislative Sessions.—The Legislature met for its regular session Jan. 2, and the final adjournment was taken March 13. An incident at the opening of the session is given as follows: "In the Senate caucus Senator Harrel created a sensation by declaring that he had been approached by J. H. Whallen, of Louisville, an anti-Goebel leader, and paid \$4,500 to remain out of the caucus. The money, he said, had been placed in a box with the Louisville Trust Company, the key to which he passed up to Senator Goebel, who was presiding over the caucus. Harrel concluded by declaring that he had entered into the deal for the purpose of exposing Whallen, and further that there was not money enough in the world to make him disloyal to his party and his State." The matter went to the grand jury. J. H. Whallen and C. H. Ryan were indicted for attempt at bribery. An indictment was afterward found against Mr. Harrel for obtaining money on false pretenses. It was asserted that Harrel made the first advances, representing that he was possessed of evidence that would stop the contest, and would use it for the consideration named; and an agreement to that effect was exhibited, signed by the parties to the contract. Whallen declared there was no question of Harrel's vote.

Senator Goebel was elected president *pro tem.* of the Senate, and South Trimble Speaker of the House, by the vote of 58 Democrats against 42 Republicans.

The Governor submitted a message giving reasons for the repeal of the Goebel election law, which he called the "infamy of 1898 that had demoralized, disturbed, and disgraced the State." He recited at length how many citizens he believed had been disfranchised, and declared that even after the ballots were cast there was injustice in counting the votes and in making the returns. He pointed out the great danger to the commonwealth of having all the power at elections vested in any one party to the exclusion of all other parties. The Governor recommended a new State Capitol, a stringent law against lynching and all mob violence, prohibition of the use as well

as the sale of cigarettes, and a separate prison for women.

Notices of contest for the offices of Governor and Lieutenant Governor were served in behalf of the Democratic candidates in the election of 1899. Nine grounds of contest were named in the notice, as follow:

1. Alleged use of tissue ballots in 40 counties.
2. Military interference with the election, and intimidation of voters in Jefferson County by troops under orders and personal command of Gov. Bradley.

3. Alleged unlawful issuance of mandatory injunctions by Judge Toney in Louisville on Election Day by which election officers were compelled to sign false returns.

4. Intimidation of railroad employees by chief officers of the Louisville and Nashville Railroad in several counties.

5. That the leaders of the Republican party corruptly entered into a conspiracy with the Louisville and Nashville Railroad, the American Book Trust, and other corporations and trusts, by which these corporations furnished large sums of money for the purpose of defeating the contestant.

6. Alleged unlawful issuance of mandatory injunctions in Knox and Lewis Counties, compelling county election boards to certify to false returns.

7. Alleged interference of United States marshals in the elections which was the result of a conspiracy between the marshals and the Republican leaders to intimidate the voters.

8. That before the meeting of State election commissioners, Dec. 4, the Louisville and Nashville Railroad, through its paid agent, John H. Whallen, entered into a conspiracy with the Republican leaders to bring to the State Capitol large bodies of desperadoes to intimidate and overawe the election commissioners into giving the certificates of election to the Republican candidates; that Gov. Bradley had here for like purposes soldiers in citizen's clothing, etc.

9. That the Jefferson County election commissioners were forced through threats of personal violence and incendiarism, inspired by the Louisville and Nashville Railroad, to sign returns which were not true.

The notice asserted that any one of these grounds was sufficient to change the result of the election.

J. S. C. Blackburn was the choice of the Democratic caucus as the successor of Senator Lindsay in the United States Senate. William O. Bradley was the nominee of the Republican members. Mr. Blackburn was elected by a vote of 79 to 54.

According to a law of 1898, committees to try the gubernatorial contests were chosen by lot. The Clerk of the House was accused of manipulating the names, placing those of Democrats in one end and drawing from that end or having them thus drawn. Ten of the eleven members of the committee on the contest for Governor and nine of the eleven on Lieutenant Governor were favorable to the Democratic contestants, according to the newspaper statements. "In the drawing over the formation of the legislative contested election committees the results were somewhat more evenly divided. In the case of the two senatorial contests the Republicans got only one member out of nine of each committee, but in the House they got majorities of ten out of eighteen committees to try contests."

The former rules were amended so that the committees on the contest might be called upon to report at any time by the Committee on Rules.

After the assassination of Senator Goebel, Gov. Taylor issued the following address:

"To the People of Kentucky:

"The most lamentable condition of affairs ever experienced by our people has rendered prompt action on the part of the chief executive of the State absolutely necessary. A long series of unprecedented and unlawful acts practiced by those in charge of the legislative interests of the State has culminated in the most fearful condition of the period to the State. The dreadful tragedy which occurred yesterday shocked and startled all, and can be no more sincerely deplored by any one than myself.

"To attempt to legislate under such conditions of excitement and threatened violence as now prevail in Frankfort would be sheer madness, and I have therefore, in the exercise of my constitutional powers, adjourned the Legislature to convene in London, Ky., on Feb. 6.

"I have taken every precaution to preserve the peace, that every citizen may know that life and property are safe and will be protected with every resource of the commonwealth. I trust that in this laudable effort I will have the support of every law-abiding citizen of Kentucky.

"W. S. TAYLOR, Governor of Kentucky."

The First and Second Regiments of militia were called to Frankfort. They guarded the Capitol, preventing legislators and others from entering, and were stationed about other buildings. The Democratic members, who, of course, did not go to London, being refused admittance to the Capitol, went to the opera house with no better success, and to the courthouse; prevented from entering there, they went to the Capitol Hotel, but were told that "any meeting they might attempt to hold in the building would be suppressed, all taking part in it would be arrested, and the hotel occupied by soldiers."

As soon as Gov. Goebel was declared, he ordered the militia to disperse and return to their homes; he also issued an order dismissing Adjutant-General Collier and appointing John B. Castleman in his place.

The Republican members met in London. B. J. Bethurum was their Speaker. In regard to the compromise proposed at Louisville, they sent the following dispatch to Gov. Taylor: "Make no compromise of our rights under the Constitution and the laws. We represent the people of this commonwealth for a free election and a fair count. An attempt on the part of any man or set of men to set aside the result of the last election by force, fraud, or vicious legislation without the consent of the people is treason. We therefore pledge you our support and lives if you will but stand by the election returns as counted by the electoral commission. All members agree to this."

The Democratic members afterward met in Louisville. About Feb. 12 Gov. Taylor judged the capital to be safe from the threatened insurrection, and adjourned the Legislature to the Statehouse. The Democratic members adjourned to meet there, Feb. 19. The contest for the gubernatorial offices being still before the courts, Lieut.-Gov. Marshall claimed to be the presiding officer of the Senate by virtue of his office, while the Democrats had chosen Senator Carter president *pro tem.*, and acknowledged him as presiding officer. The two sections of the Senate, therefore, held each to its own organization, and continued to do so until the final adjournment. They met each day in the chamber, and the two claimants to the chair sat side by side upon the platform and called the body to order. The Republicans, having no quorum, simply answered to the call and then adjourned from day to day. The proceedings in the double

Senate, Feb. 19, are described in a dispatch of that date:

"Senator Carter directed the clerk to read the journal, while Mr. Marshall directed Rev. Dr. Dorsie of the Christian church to pray. Dr. Dorsie was quicker than the clerk and he began his prayer before the clerk had a chance to read.

"It is the custom in the Kentucky Legislature for the members to rise when prayer is being offered. The Democrats all kept their seats and Senator Carter sat down while the Republicans all stood up. The moment Dr. Dorsie had finished, the clerk was at it and the Lieutenant Governor was asking if there was any business before the Senate."

During the session in Louisville a resolution was passed in the House, by a vote of 45 to 8, to invite "the ministers of the city of Louisville of every denomination 'who had not engaged in the unjust and unholy crusade against the late Gov. Goebel' to open the proceedings each day with prayer."

After the proceedings in the Senate on the opening day the pastors of the two Presbyterian, the Christian, the Catholic, and the Episcopal churches sent in the following communication:

"To the Legislature of the State of Kentucky:

"The pastors of the churches of the city of Frankfort having been invited by your honorable body to open your sessions with prayer, and one of our number having had his services ignored when he presented himself in regular course at to-day's sessions, we must hereby respectfully decline to longer officiate as chaplains."

Upon this the following resolution was adopted:

"Whereas, no such indignity as that mentioned was ever intended to any of said ministers; and whereas, no such indignity was ever committed so far as known to any member of this body; now be it resolved by the Senate of Kentucky, that this body regrets that any minister of the Gospel feels that he had been so treated by this body; and be it further resolved, that Rev. T. F. Taliaferro, of Frankfort, be, and he is hereby, invited to attend and open the sessions of the Senate with prayer."

A joint session was held Feb. 20 to ratify the proceedings of the Democratic members in regard to the gubernatorial contests. The Republican members did not attend. The resolution of ratification was passed by a vote of 74 to 2.

Among the measures of the session was the so-called "McChord" railroad bill, authorizing the Railroad Commission to fix the maximum of freight rates, and to punish for discrimination and extortion. It has been declared unconstitutional by the United States district court.

Another act provides that the Board of Prisons Commissioners may parole convicts in the Penitentiary for the first time. Paroled prisoners are not required to remain in the State, but if they do so they are required to report their place of residence and conduct to the Board of Prison Commissioners through the county judge at least every six months.

A resolution was passed appropriating \$100,000 for reorganizing and equipping the militia and recovering the arms and munitions of war supposed to have been taken from the arsenal and carried to London. The money was to be expended under the direction of Gov. Beckham.

Another resolution was for the appointment of a joint committee to consider amendments to the election law, and report to an extraordinary session, if such should be called.

An appropriation of \$60,000 was made for improvements at the Agricultural and Mechanical College.

Among other measures were:

Making it a felony for corporations to contribute to campaign funds.

To prevent the adulteration of food.

Allowing the establishment of free libraries in cities of the second class.

Allowing the pensioning of indigent firemen in cities.

Prohibiting railroad companies from transporting persons having the intention of intimidating State officers in the discharge of their duty.

Offering a reward of \$100,000 for the apprehension and conviction of the assassin of Gov. Goebel, and providing for a commission to have charge of it.

Gov. Beckham called an extraordinary session of the Legislature to meet Aug. 28. The only subject named for consideration was "the modification or amendment of the existing laws regulating elections in this State." In his message the Governor said:

"I consider that some changes in our election laws at the present time would be productive of much good and would remove some of the unfortunate bitterness and dissatisfaction that now exists among our people. The present laws on the subject are undoubtedly distasteful to a large number of people in the State, and their amendment is earnestly desired by all those who want to relieve as much as possible the friction and ill feeling engendered by hostile political factions. I do not believe the present law in its operation to have been unfair or unjust, and I know it to have been passed with the earnest and honest intention to remedy the evils which existed under the system which it supplanted. It was a great improvement upon that system, but by reason of a strong prejudice against it many people have been led to believe that the change was a mistake and the law a bad one. This prejudice against it, whether reasonable or not, is sufficient to justify your consideration and warrant you to take some action in securing a more satisfactory law."

Various election bills were offered, but none was passed until Oct. 20, when one reported by a conference committee was made a law by vote of a large majority, and was signed by the Governor, Oct. 24. It provides for a State board of two election commissioners appointed by the Governor, one from each of the two parties that polled the largest number of votes at the last preceding election, the appointments to be made in July. The clerk of the Court of Appeals is to be a third member, to preside at the meetings and give the casting vote when the others disagree. This State board in August is to appoint two commissioners to constitute an election board in each county, with the sheriff of the county to preside and vote in cases of disagreement; the two commissioners are to be one from each party. The county board is to appoint, not later than Sept. 20, the precinct officers, likewise equally from the two parties. "When the election of a Governor or Lieutenant Governor is contested, a board for determining the contest shall be formed in the manner following: 1. On the third day after the organization of the General Assembly which meets next after the election the Senate shall select, by lot, three of its members, and the House of Representatives shall select, by lot, eight of its members, and the eleven so selected shall constitute a board, seven of whom shall have power to act. 2. In making the selection, by lot, the name of each member present shall be written on a separate piece of

paper, every such piece being as nearly similar to the other as may be. Each piece shall be rolled up, so that the names thereon can not be seen, nor any particular piece ascertained or selected by feeling. The whole, so prepared, shall be placed by the clerk in a box on his table, and after it has been well shaken and the papers therein well intermixed the clerk shall draw out one paper, which shall be opened and read aloud by the presiding officer, and so on until the required number is obtained. No decision shall be made but by the vote of six members. The decision of the board shall not be final or conclusive. Such decision shall be reported to the two houses of the General Assembly in joint session for the further action of the General Assembly, over which the Speaker of the House shall preside, and the General Assembly shall then determine such contest. In cases of contests for minor offices, where there is no provision by law for determining the contested election, the contest shall be made by the filing of a petition in the circuit court of the county where the contestee resides, except where the officer is one elective by the voters of the whole State, in which event the petition shall be filed in the Franklin circuit court. Either party may appeal from the judgment of the circuit court to the Court of Appeals." This law did not go into effect before the election of 1900, since the appointments must be made in July, August, and September.

The session adjourned Oct. 22.

Political.—An election to fill the office of Governor, made vacant by the death of William Goebel, was held at the time of the presidential election in November. Republicans held a convention May 17 to choose delegates to the national convention and electors. The delegates—W. S. Taylor, W. O. Bradley, George Denny, and W. A. Gaines—were instructed to vote for William McKinley. On State issues the platform said:

"We demand the unconditional repeal of the existing election law, under the operation of which individual citizens have been denied the right to vote and whole counties have been deliberately disfranchised, by authority of which certificates of election have been issued to men defeated at the polls, and as a disastrous result of which the government of the State has become involved in hopeless confusion and chaos. We demand the prompt enactment, in place of this revolutionary statute, of an election law that shall absolutely secure to every voter the free exercise of the right of suffrage and that shall guarantee the restoration and permanence of government by the people.

"We denounce the course of the Democratic majority in the last General Assembly from the hour when it adopted rules in defiance of right and the Constitution, down to the final action by which it attempted to deprive Gov. Taylor and Lieut.-Gov. Marshall of the high offices to which they had been elected at the polls."

At the convention, July 17, John W. Yerkes was nominated for Governor. The resolutions said, in part: "Officials elected by the people at the polls have been denied their offices, and the people of Kentucky deprived of the right of choosing their State officials. Republican members of the Legislature were unlawfully unseated, the city of Louisville deprived of the right to any part in the conduct of the government, the counties of Johnson, Magoffin, and Martin have been denied all voice in the choice of our officers, and the courts declare that the only remedy for such invasions of personal liberty rests with the people at the polls. We demand for each child a free school, but we deny that education or accumulated prop-

erty alone confers the right of suffrage. The first duty of Kentucky citizenship is to repeal the Goebel election law, which is the source and continuing strength of the wrongs done in this State."

The Democrats, in State convention at Lexington, July 20, nominated J. C. W. Beckham for Governor. Among the resolutions adopted were the following:

"We recommend that the election law of 1898, which was enacted to prevent the repetition of well-known Republican frauds in certain districts of this State and which was a marked improvement upon the then existing law, but which has not proved sufficient for that purpose, be amended so as to secure this end so thoroughly that the most hypercritical can find no excuse for charging fraud or unfairness to our party in the conduct of the election. Until such amendment can be enacted by the General Assembly we declare that the Republican party shall have representation upon both the State and all county boards of election commissioners.

"We declare to the world that the mob and the assassin shall not be the arbitrators of the rights of the citizens of Kentucky, nor shall the penalty of an appeal to the law and the regular constituted authorities be death at the hands of assassins. Law and order must and shall prevail in Kentucky.

"We present to the people of Kentucky the picture of an army of intimidation, unlawfully quartered in the public buildings of the State; a State Senator, in the discharge of his duty to the State, stricken down by an assassin's bullet, fired from ambush in the executive building, then occupied by his political adversary, who hoped to profit by his death; that adversary arming, filling, and surrounding the building with armed men, instructed to defy the civil authorities and prevent search for the assassin; the same political adversary and Republican pretender, by force, dissolving the Legislature, in violation of the Constitution; attempting by military power to force the Legislature to meet in a veritable slaughter pen for the Democratic members; driving its members through the streets of Frankfort at the point of the bayonet, forcibly preventing the Legislature from meeting in its lawful and proper place; keeping armed riotous and disorderly men under the very window of the room where lay dying the assassin's victim; driving the Court of Appeals from the Capitol; aiding with the soldiery and spurious pardons those lawfully accused of capital crimes to flee from justice, and by military force defying the writ of habeas corpus; the same Republican pretender fleeing from the State after indictment and remaining a fugitive from justice, protected by an open violation of the Constitution of the United States, after having declared to the people of the State, 'I am a citizen of this State and amenable to its laws; I am not a criminal, neither shall I ever be a fugitive from justice. Whenever indicted I shall appear for trial.'"

The convention of the People's party, at Louisville, Aug. 1, made W. H. Carden the candidate for Governor, demanded the repeal of the Goebel election law, and recommended the initiative and referendum.

The Prohibitionists named John D. White as their candidate for Governor. Besides reaffirming the general principles of the party, they declared in favor of an election law that would insure the counting of every voter's ballot as it is cast.

The vote on presidential electors stood: Democratic, 234,899; Republican, 226,801; Prohibitionist, 2,429; People's party, 2,017; Social-Democrat, 760; Social-Labor, 289. Mr. Beckham was elected Governor, and he was inaugurated Dec. 11.

KOREA, or **CHO-SEN** ("Morning Radiance"), a country in eastern continental Asia, between Japan and China and adjacent to Russian, British, and German possessions on what was once Chinese territory. It is separated from Siberia and Russian Manchuria by the Ever-White mountains and the two rivers—the Tumen on the north and the Yalu on the west. Without an exact census, estimates of population vary from 10,000,000 to 15,000,000 souls, females being in the minority, owing to less care being taken of the girls in infancy and childhood. Of the three social classes, the gentry (*yang-bun*, meaning civil and military) live in idleness, not usually paying taxes or tolls, and to some extent in Government employ, or in expectation of it. The common people are almost wholly agricultural, and below them are the seven degraded classes. Physically the Koreans are a finer race than the Japanese, and more refined looking than the Chinese, but they lack moral stamina. Confucianism is the cult of the higher classes, and a debased form of Buddhism the religion of the common people. Sorcery and superstitions abound, influencing nearly all the actions of life. Old evidences of these exist numerous in the grotesque stone and wood sculptures of mythical beasts, the carved wooden distance posts, and the idols set up at the entrances of villages. Christianity, in making rapid headway, is greatly modifying social customs. The old guilds which formerly controlled all industry are abolished in form, but are still powerful.

Government.—Ki-ja, an ancestor of Confucius, is called the founder of Korean civilization, 1122 B. C. Four great historical periods are noted. Old Cho-sen lasted from 1122 B. C. to 9 A. D., giving way to San-Han, or the Three Kingdoms (9-960 A. D.), and these to the one kingdom of Korai (960-1392), and this to the Cho-sen of to-day, founded by the present ruling dynasty in 1392, when Seoul, on Han river, was made the capital. The ancient limits of Korea were far greater than at present. In 1864 the dynasty failed of direct heirs, and the present King, then a minor, was nominated, his father, the Tai-Wen-Kun, being the virtual ruler of the kingdom twenty years. The King reached his majority in 1873. Since the war between China and Japan in 1894-'95, as confirmed by the treaty of Shimoseki, Korea is no longer a vassal to China, but an independent state. On Oct. 14, 1897, the King assumed the title of Emperor, naming his realm Dai-Han (Great Han, in distinction from the ancient San-Han, or Three Kingdoms). In August, 1899, the written Constitution of the kingdom was issued. Its nine articles declare the country's independence and the absolute power of the King. He is assisted in government by a Council of State and 9 ministers, presided over by the Premier. The ministries are Royal Household, Finance, Home Affairs, Foreign Affairs, War, Justice, Agriculture, and Education. There are 14 provinces in which is a governor and 360 districts in each of which a magistrate presides. Except revenue vessels Korea has no navy, but her army of 5,000 men is uniformed, armed, and drilled in modern style. Of foreign interests in the domain, those of Japan outweigh all others, but Russian influence is very powerful. To the new and specially appointed envoy to Tokio, in November, 1900, the Mikado's Government declined to assure Korea's complete neutrality.

Open Ports.—Nine ports are open to foreign trade, including Chemulpo, 20 miles south of the capital and connected with it by railway; Fusan, in the southeast coast, between which and the capital surveys and estimates for a railway have

been completed; and Wonsen, in the northeast, on Broughton's Bay. Since 1880 foreigners, mostly nontrading, have lived in Seoul. Two new ports were opened in 1895—Mokpo, in the southwest of Chulla province, halfway between Shanghai and Nagasaki, a growing place with a good harbor, and Chinampo, on the northern shore of the Ping-Yang inlet. Since May 1, 1899, 4 new ports have been opened—Kunsan, on the west coast, south of Chemulpo; Masampo, on the southeast, near Fusan; Sungchin, on the east coast; and the city of Ping-Yang, in the north, as a trade mart. Of 20 lots of land sold at Kunsan in April, 1900, 17 were purchased by Japanese and 3 by Chinese. The Masampo concession consists of 83 acres of level land, 300 acres of hill land, and 25 acres of foreshore. The plot acquired by Russia at Chupok-po, near Masampo, measures 83 acres.

There are about 20,000 Japanese in Korea, of whom 4,258 live at Chemulpo, 1,979 in Seoul, 381 in Chinampo, 140 in Ping-Yang. Most of them live in families, the number of women being about two thirds as great as of the men. A majority live at Fusan. While Korean subjects in China have full treaty rights with the most favored nation, in Korea the Chinese can not do stationary trade outside the treaty ports.

The number of Chinese in Seoul and Chemulpo is 1,500 in each place, and in the other ports the total is 500. Almost the whole of the import trade of Korea is in the hands of Chinese, who, since the war of 1894-'95, when they lost their commercial ascendancy, have regained it by their superior commercial morality, absence of speculative enterprise, firmness in combination, perseverance, and frugality.

Foreign Trade.—Although the gold export in 1899 was 557,567 yen, yet general trade declined to the extent of 13 per cent., in comparison with the figures of the previous year, or more than 2,627,568 yen. The chief factor affecting both export and import trade is rice, the value of the export of which in 1899 was 688,805 yen less than in 1898, in spite of the good crop of 1899. Japan is Korea's only consumer of rice. At Chemulpo the Koreans have formed a Chamber of Commerce to protect themselves against Japanese and Chinese. Japan's ascendancy is limited to yarns and cotton fabrics. In 1898 the Japanese imports reached a total of 3,389,000, and her exports 279,000,000 yen, while the Chinese imports reached a total of 4,396,000 and the exports 1,097,000 yen. In exports the trade for 1899, compared with 1898, declined to the extent of 711,640 yen on account of the decrease in value of the ginseng exported. The crop of 1899, a Government monopoly, yielded 1,030,000 yen. The chief imports were English and Japanese shirtings, lawns, muslins, and piece goods, the former worth 80,000 and the latter 190,000,000 yen, besides metals, grass cloths, millet, railway plant machinery, and building material. Japanese yarn showed an increase of 470,000 yen, American petroleum 150,000 yen, and mining supplies 170,000 yen. While the Chinese control the import trade, the Japanese control the export trade, the Japanese apparently knowing how to deal with the Koreans better than the Chinese, and, with their manufacturing centers so close at hand, excelling the English in most of the textile articles, and especially in the importation of yarn, which rose in 1899 to 1,468,300 yen, as compared with 997,490 yen in 1898, nearly 50 per cent., while English yarn fell from 89,790 to 74,960 yen in the same years, the Japanese yarn being so much lower in price. The imports of cotton goods for 1899 form more than half the total imports of the

country. The imports that are growing in favor with Koreans are candles, window glass, and sewing machines. In shipping, foreign trade shows an excess of 502 steamers and an increased tonnage of 159,129 tons in 1899, compared with the previous year. Of 1,666 steamers, with an aggregate tonnage of 746,020 tons, 1,159 steamers and 602,227 tons were Japanese, 4 vessels, of 3,341 tons, were German, 61 vessels, with 51,863 tons, were Russian, and the remainder Korean. The German vessels were under charter to the Japanese.

Mining and Foreign Interests.—The mineral wealth is apparently the greatest among Korea's possibilities. Gold is exported duty free, hence the known figures of export of this metal, 278,825 yen in 1900, are far below the reality. The British syndicate controls the Unsan gold mines, which employ about 500 men, mostly natives. The American gold mines are near Wonsen. The gold-bearing strata, similar in their nature to the Witwatersrand in South Africa, are in a secondary deposit extending to a great distance. At the Wonsen mine, near Ping-Yang, 20 American crushing mills are in operation, with more on their way. Mr. Leighunt, the concessionaire, employs 1 physician, 20 foreigners, 11 Japanese, and 400 Koreans. The Korean Government receives one fourth of the net profits. At Taion, in the same district, an American concessionaire employs 23 foreigners, 8 Japanese, and 600 Koreans. In April, 1900, a survey of the interests of foreigners in Korea shows that the Japanese own the Seoul-Chemulpo Railway and the concession to build, work, and control the Seoul-Fusan Railway, and to exploit 4 gold mines in 4 different provinces and a smokeless coal mine, and have other mining concessions. The whale fisheries on the eastern coast, the establishment of branches of 3 of their national banks, and the control of 16 secular and 2 religious schools are also theirs. The Japanese Government has the management and control of all the posts and telegraphs in the empire. Russia has secured a coal mine and whaling privileges, the same as the Japanese, but with permission to erect boiling stations on shore, besides timber-felling rights along the Yalu and Tumen rivers and on Ulyung island, in order to obtain lumber for use on the Trans-Asian Railway, with certain rights as to schools. The Americans, besides their gold mines and electric railway in Seoul, have 12 missionary schools in Seoul. The Germans control a gold mine at Tanghyon, employing several hundred men. The English, besides their gold mines and various contract works, have a branch bank, and the customs and finance of the country are under the control of J. McLeavy Brown. Korea has been a member of the International Postal Union since Jan. 1, 1900, and the few foreign officials employed are mostly French.

Finances.—The average income of a Korean family is \$2.50 a month. The income of the Government for 1900 was 6,162,796 yen, and the expenditure 6,161,871 yen. The revenue is from the customs, land tax, household tax, the sale of ginseng, licenses, and concessions, and, when properly collected and paid into the treasury, is ample for all purposes. Japanese newspapers say that of 24,000,000 yen borrowed from Russia, 5,000,000 have been paid. Korea has adopted the gold standard, but coins as yet only nickel and copper. The Japanese currency is used in customs duties and largely at the seaports, the only Korean coins in circulation being the nickel 5-sen and copper 1-sen pieces, besides cash or perforated coins of iron and brass on strings. This cash weighs 7 pounds to the dollar's worth, and suffers from 5 to 50 per cent. discount against the Japanese gold

yen, which is the real currency of the country in foreign trade. The rate of discount, varying suddenly and with a wide margin, makes business at times largely speculative.

Politics and Events.—The year was measurably free from the usual riots and outbreaks of native peasants against their oppressive *yang-ban* and magistrates, or against Japanese traders and workmen, though another attempt was made with violence to wreck the electric railway and hinder Japanese railway laborers. The palace intrigues and *emeutes* have also been fewer than usual. A reversion to barbarism, in the judicial torture and execution of two Koreans, was made the subject of protest from and negotiation with Japan, and the affair was closed after an apology from his Majesty given through the Mikado's envoy in audience. During the Boxer agitation in China there was danger of irruptions across the border at Wi-ju. A Russian escort of 50 soldiers to the refugee Danish missionaries from China was given free passage, and Korea virtually joined the

allies marching to Peking, giving aid and comfort in the form of 1,000 bags of cleaned rice, 2,000 bags of flour, and several hundred cases of cigarettes. Nevertheless, the formation of a Korean secret society in alliance with the Chinese anti-foreign agitators was accompanied by assaults, with robbery of missionaries, in November. Prince Min-Tong-Whan was appointed minister to Washington, and arrived in time for the New Year's reception at the White House. In October a Korean branch of the Royal Asiatic Society was formed in Seoul. J. H. Gubbins was made president, and the membership consisted mainly of English-speaking residents. The year has been one of great activity and marked success in missionary effort. There are now, besides the native Christians of the Greek and Roman forms of the faith, about 10,000 members of the various reformed churches. Government schools for the study of English, French, Russian, and Japanese are in operation in Seoul, besides the military, medical, and pedagogical institutes.

L

LIBRARIES, PUBLIC. The early history of what may be called the new library movement in this country was told in the *Annual Cyclopaedia* for 1886, and subsequent progress was outlined in the volume for 1893. This year the record is to be brought down to the end of the century.

One of the most evident signs of progress is found in the increase of libraries, an increase furthered by special legislation. The most noteworthy newcomer in the library field is found in New York city, where the Astor Library, Lenox Library, and Tilden Trust combined forces in 1895 to form the New York Public Library, a consolidation that prevents much duplication of work and makes possible various innovations (longer hours, more book accessions, improved methods), increasing the usefulness of the newly created library. A building is in process of construction on the site of the old reservoir at Fifth Avenue and Forty-Second Street. In 1900 some of the circulating libraries in the city began to make arrangements for consolidating with this library.

The Bureau of Education in 1896 again issued statistics of public, society, and school libraries, from which most of the following figures are taken. Reports were received by the bureau in 1896 from 4,026 libraries (of more than 1,000 volumes each) in the United States, containing 33,051,872 volumes and 5,444,788 pamphlets. This meant an increase, since 1891, of 523 libraries and 7,074,229 volumes, or 15 per cent. in libraries and 27 per cent. in number of volumes. This difference between 15 and 27 per cent. was explained by the statement that "unfavorable business conditions since 1891 have operated to prevent the establishment of many libraries, yet the cheapness of books has been favorable to the growth of existing libraries with fixed incomes." The North Atlantic division showed an increase in volumes of more than 28 per cent., the North Central division about 28 per cent., the Western division nearly 40 per cent., the South Atlantic 18 per cent., and the South Central 21 per cent. More than half of the actual increase in the number of volumes was made in the North Atlantic division.

Of these libraries, 2,000 were credited to the North Atlantic division, 322 to the South Atlantic division, 255 to the South Central division, 1,195 to

the North Central division, and 254 to the Western division. In addition, 3,167 libraries were reported as having fewer than 1,000 but not fewer than 300 volumes, and nearly 1,000 had fewer than 300 volumes each. This made a total of 7,193 libraries (of 300 volumes and over) and 34,596,258 volumes, compared with 5,338 libraries and 20,722,393 volumes in 1885, and 3,648 libraries and 12,329,526 volumes in 1875.

Two libraries had 500,000 volumes or more; 4 had 300,000 to 499,999; 28 had 100,000 to 299,999; 69 had 50,000 to 49,999; 155 had 25,000 to 49,999; 411 had 10,000 to 24,999; 630 had 5,000 to 9,999; and 2,727 had 1,000 to 4,999.

Of books drawn for home use, 1,852 libraries reported 35,075,055 in 1896, and 594 reported 7,706,830 volumes used in the reading rooms. The statistics of Greater New York for 1897-'98 show a total of 3,226,807 volumes circulated in that year.

Under the heading *Distribution of Libraries and of Volumes*, it is shown that in 1891, with 3,503 libraries containing 25,977,643 volumes, there was one library for every 17,877 people, and 41 volumes for every 100 inhabitants in the country. For 1896 the figures were: 4,026 libraries with 33,051,872 volumes, being 17,376 inhabitants for each library and 47 volumes for every 100 inhabitants. The libraries that occupied their own buildings numbered 765, and 548 paid rent. Of the 2,713 others, many were school libraries, which neither owned buildings nor paid rent. The libraries supported by taxation numbered 1,147; by corporations, 2,346; and by both, 14. The free libraries reported numbered 1,558; 635 were free for reference only, and 772 were free to subscribers. Of the 1,061 not reporting, many were corporation libraries free to members. Six hundred and twenty-seven libraries, containing 9,062,363 volumes, and circulating 27,015,234 volumes for home use during the year, were entirely free to the public. Three hundred and forty-two libraries were strictly circulating, 705 were for reference, and 2,600 were both.

The 4,026 libraries were classified as follows: General, 1,560; school, 940; college, 626; college society, 54; law, 127; theological, 97; medical, 44; Government, 23; State, 26; asylum and reformatory, 87; Young Men's Christian Associa-

BOSTON PUBLIC LIBRARY.

tion, 84; Masonic, 14; Odd Fellows, 17; social, 57; scientific, 78; historical, 60; garrison, 14; mercantile, 10; and society, 108.

As to finances: 600 libraries reported a total of \$1,679,210 received from taxation, and \$1,513,352 was appropriated to 773 libraries by States, counties, and cities in the year. Five hundred and ninety-four libraries received \$1,035,052 from endowment funds; 833 received \$386,441 from membership fees; 303 received \$38,684 from book rents; 625 received \$529,350 from donations; 1,017 received \$729,547 from sources not stated. The total income reported by 2,437 libraries for the year ending April 1, 1896, was \$5,911,636. The permanent endowment funds of 605 libraries aggregated \$17,570,673. The value of the buildings owned by 567 libraries was \$33,291,259. The value of the books added during the year by 2,333 libraries was \$1,574,410.

State Aid and Special Legislation.—A review of the whole subject, with a bibliography, is given in the Report of the Commissioner of Education for 1895, accompanied by the full text of all the laws. This work has been furthered greatly by the creation of library commissions in various States.

The first State library commission was organized in 1890 by Massachusetts, followed by New Hampshire in 1891, Connecticut in 1893, Vermont and Wisconsin in 1895, Ohio in 1896, New York and Georgia in 1897, Pennsylvania, Michigan, Minnesota, Indiana, Kansas, Colorado, and Maine in 1899, and New Jersey and Iowa in 1900.

Buildings.—Among the larger library buildings erected within the last decade are the Library of Congress, which cost \$6,300,000; Boston Public Library, \$2,300,000; Chicago Public Library, \$2,000,000; Columbia University, \$1,200,000; Carnegie Library, Pittsburg, about \$800,000 (the building comprises library, music hall, art gallery, and museum); Princeton University, \$650,000; Milwaukee Public Library, about \$600,000; Wisconsin Historical Society, about \$600,000; Newberry Library, Chicago, \$500,000; Providence Public Library, \$300,000; and Library of Carleton College, Northfield, Minn., \$250,000. Many libraries costing from \$50,000 to \$200,000 have been built, among them the Kansas City Public Library, \$200,000 (site \$30,000 additional); Pratt

Institute Library, Brooklyn, \$190,000; Library of the University of Illinois, about \$165,000; Forbes Library, Northampton, Mass., \$134,529; Carnegie Library, Atlanta, Ga., \$115,000; Orrington Lunt Library, Northwestern University, \$100,000; Peoria, Ill., Public Library, about \$70,000 (site \$16,000 additional); and Hoboken, N. J., Public Library, \$62,000.

Many of these buildings are due to private beneficence. It is said that, as far as the incomplete statistics show, more than \$24,000,000 have been bestowed by individuals for buildings, books, and maintenance, in the past ten years of the nineteenth century; and there was also a generous expenditure of public money in the same period. The yearly proceedings of the American Library Association include a full report on gifts and bequests.

Management.—*Open Shelves.*—A matter that has been much discussed is that of "free access"—that is, the free admission of the public to the shelves, as in the New York Free Circulating Library. Yet this question still awaits solution, for the arguments appear to be about equal, *pro* and *con*. Most librarians evidently agree in believing that a certain number of books, at least, should be freely accessible to the public. Many libraries have "open reference shelves"—in the new building of the New York Public Library, for instance, arrangements have been made for 40,000 volumes thus placed. In such large reference libraries, of 500,000 and more volumes, it is impracticable to allow unlimited access.

Cataloguing.—Co-operative cataloguing was referred to hopefully in 1893, but the expectations of its warmest adherents have hardly been realized, although the publishing section of the American Library Association continues to issue printed catalogue cards for new books. However, the Annual Literary Index (continuing both Poole's Index to Periodical Literature and the A. L. A. Index to General Literature, 1893) is issued regularly, and in Cleveland the Cumulative Index to periodicals began to appear in 1896. Some scientific periodicals are indexed by the co-operative effort of five libraries—the New York Public, Harvard University, Columbia University, Boston Public, and John Crerar (of Chicago), the index entries being printed on cards of standard size.

Much of the work published, like the last named, under the auspices of the American Library Association, is the product of co-operative effort.

Among the special indexes due to the effort of individual libraries must be mentioned that of technical periodicals in the Patent Office Library in Washington, and the one for trade journals in the Commercial Museums in Philadelphia; both are in manuscript, on cards.

Librarians are, naturally, greatly interested in the international conferences on a co-operative catalogue of scientific literature, held in response to a call from the Royal Society of London, the first in 1896, the second in 1898, the third in 1900. This catalogue, which begins with 1901, is to comprise all published original contributions to mathematical, physical, or natural sciences, to the exclusion of what are sometimes called the applied sciences, whether appearing in periodicals or in the publications of societies, or as independent pamphlets, memoirs, or books. It is to be arranged according to subject matter and author's names, with special regard to the requirement of scientific investigation. The management is intrusted to a central bureau established in London and regional bureaus in various countries, to which latter falls the work of dealing each with the literature of its country. Future international conventions (1905, 1910, and every tenth year thereafter) will make any necessary revision of the regulations.

Interlibrary Loans.—These are becoming more frequent, especially between reference libraries as a means of partially overcoming the distances between centers of research; they are naturally of great value to the investigator.

JOHN SHAW BILLINGS,
NEW YORK PUBLIC LIBRARY.

This system of sending books on request from one library to another is in vogue at the library of the surgeon general's office (on a noteworthy scale, introduced there by Dr. John S. Billings), the Worcester (Mass.) Library, the medical libraries of Boston, (New York city), etc., the Academy of Medicine, the Congressional Library, etc.

Circulating Libraries.—The preponderance of the free circulating library in this country has naturally caused much energy to be applied to the improving and simplifying of methods, especially in all that pertains to the keeping of records, as in the charging systems. What is known as the "two-book system" has been introduced in many libraries. This permits the reader to draw two books at a time for home use, but only one of the books may be a work of fiction.

Traveling libraries bring books where the circulating library does not. This system was characterized by R. G. Thwaites, president of the American Library Association in 1900, as "in some respects, perhaps, the most hopeful of all forms of recent library popularization." It provides for small libraries of 25, 50, or 100 volumes, sent from central libraries to "individuals, clubs, and associate libraries in communities roundabout," for

certain periods (usually six months), upon request and under certain conditions. The traveling library was first introduced in 1892 in New

York State, but before that time the Baltimore and Ohio Railroad Company was circulating books to its employees along its line. Since then various systems of traveling libraries have been established, as follows: 1895, Iowa and Michigan; 1896, Colorado, Illinois, Kentucky, Massachusetts, Nebraska, Ohio, Pennsylvania, Virginia, and Wisconsin; 1897, Louisiana, New Jersey, and Tennessee; 1898,

HERBERT PUTNAM,
LIBRARY OF CONGRESS.

Alabama, California, Connecticut, Georgia, Kansas, Maryland, Minnesota, Missouri, Utah, and Washington; 1899, Idaho, Indiana, Maine, Montana, Texas, Vermont, and British Columbia; 1900, Arizona.

In 1893 the first traveling library went out in New York with 100 volumes. In 1898 it was reported that there were more than 1,650 in the country, of which 687 were in New York, with more than 73,000 volumes. Some specialties had already developed, as at the New Jersey Traveling Library at Princeton, which circulated books on forestry only.

The introduction of small collections of selected books directly into the homes of tenement-house residents has also been tried with encouraging results.

Libraries and Schools.—Another recent development in the manifold activity of the American public library is its co-operation with the schools, which, beginning at Worcester, Mass., about twenty-five years ago, has only within the past few years become generally recognized as a department of library work. Boxes of books for instruction and entertainment, selected by the teachers, are sent to the schools—sometimes classified by grades; and traveling school libraries, to assist in certain courses of study, are not uncommon. Other methods of reaching the school children—posting bulletins and lists in schools, the organization of "library leagues" among pupils, etc.—serve to accentuate the community of interests between school and library.

JAMES L. WHITNEY,
BOSTON PUBLIC LIBRARY.

The latest manifestation of this spirit was seen in the year 1900 in New York city, where the Board of Education made arrangements for establishing small libraries in some of the

school buildings, to be open evenings, under the supervision of the New York Public Library. The

FREDERICK H. HILL,
CHICAGO PUBLIC LIBRARY.

children's room is a growing factor in our libraries. New methods — picture exhibitions, short talks, attractive surroundings, even games—are used to draw the little ones to the library at an impressionable age.

The Bureau of Education for the past thirty years has emphasized the importance of libraries as aids to instruction, and in 1896 we saw the establishment of the Library Department of the

National Educational Association.

Librarians.—Schools and Training Classes.—In the Annual for 1893 a list of these was given. Since then summer courses have been offered at the Cleveland Public Library, the Ohio State University, and the University of Wisconsin; the Armour Institute Library School was removed to the University of Illinois in 1897, and elementary classes for training assistants have been put into operation in the public libraries of New York city, Denver, Hartford, Dayton, and Butte (Montana), the New York Free Circulating Library, etc.

The report for 1900 of the committee of the American Library Association on schools sounds a warning against giving undue importance to these various schools and training classes, and points out the one-sided education that the pupils are apt to acquire. While the question of the relative merit of school training and practical service in a librarian's equipment is touched upon in this report, sight is not lost of the unquestionable service that these schools have done in systematizing the details of certain work, especially cataloguing. Perhaps those libraries which maintain preparatory classes for prospective assistants, in which theory and practice are mingled, are doing their share in working out this problem.

FREDERICK M. CRUNDEN,
ST. LOUIS PUBLIC LIBRARY.

formerly the Central California (formed in 1895), and other such "sectional associations" were organized in southern California (1891), north

Wisconsin (traveling libraries), and western Pennsylvania (1896), and Fox River valley (Wisconsin), Bay Path (Massachusetts), and western Massachusetts (1898). City clubs have been formed in the past seven years in Washington, D. C. (1894), Minneapolis and St. Paul (Twin City Library Club, 1897), and Buffalo, N. Y. (1898).

The American Library Association followed up its exhibit at Chicago (1893) by another one at the Paris Exposition of 1900. This association has added to its useful special sections those for small libraries, large libraries, and State and law libraries. Among the new publications issued under the auspices of its publishing section is a List of Subject Headings for Use in Dictionary Catalogues (1895). Here may be noted also the exceedingly useful Catalogue of the "A. L. A." Library of 5,000 volumes for a Popular Library, selected by the American Library Association and shown at the World's Columbian Exposition, published by the Bureau of Education in 1893, and introduced as "a carefully selected list of books adapted to the needs of a small public library and suitable as a basis for a larger collection."

A review of the whole subject of library economy is offered in *Public Libraries in America* (Boston, 1894) by W. I. Fletcher, librarian of Amherst College. And the index to the first twenty-one volumes of the *Library Journal* is a key to a veritable storehouse of information on special topics.

Foreign Libraries.—The foregoing applies, as is seen, to the United States only. The Second International Conference of 1897 at London (the first was in 1877), in which not a few Americans participated, brings us to the foreign field.

Free public libraries, as we understand them in the United States, exist only sporadically on the Continent in Europe. Gräsel, in the *Börsenblatt* for Dec. 5, 1898, made a plea for their establishment in smaller cities in Germany. Beginnings are cited as follows: The German Society of Ethical Culture has established libraries in Berlin, Freiburg, and Frankfort. In Jena this society cooperated with the Comenius Society. In Dresden the Association *Volkswohl* opened reading rooms.

Later reports show that in Germany, especially in the eastern provinces of Prussia, the local authorities and educational associations are founding libraries with great energy. To the *Gesellschaft für Verbreitung von Volksbildung* (headquarters in Berlin) is due the credit of having given the incentive to this work and practically furthering it. From 1892 to 1899 this society founded and aided 1,103 libraries, and in 1900 (to November) it founded and aided 438 libraries, expending \$7,000 for this purpose. The libraries are administered partly by reading, library, and other educational associations, and partly by teachers, ministers, school boards, etc. Unfortunately, the

WILLIAM I. FLETCHER,
AMHERST COLLEGE LIBRARY.

society has not the means for undertaking this work on a larger scale and satisfying all requests.

WILLIAM HOWARD BRETT,
CLEVELAND PUBLIC LIBRARY.

It is noted also that the late Mr. Oswald Ottendorfer founded in Zwickau, Austria, in 1891, a free public library on the plan of the New York Free Circulating Library's branches.

Dziatzko, writing on German libraries, says that the Prussian Ministry of Education in 1892 took a step toward greater uniformity by issuing Rules for the Construction of the Alphabetical Catalogue.

There is increasing liberality in library regulations, making the collections more accessible. As the libraries are usually intended for scholars (all this, of course, refers to university libraries and the like) the conditions for entrance are quite severe. The act in regard to qualifying for trained library service was published in the *Centralblatt für Bibliothekswesen* (vol. ii, pages 77-79). Germany, Switzerland, and Italy have national conferences of librarians.

Italy is startlingly modern. Its system of inter-library loans is so liberal that it will send a rare manuscript from one city to another at Government expense.

A. Chevalley described the poor condition of public libraries in France in the *Library Journal* for 1899, page 21.

Statistics for 1893 show that 1,277,436 volumes were used in the many free circulating libraries established by the city government of Paris.

Poole's Index has now found its counterpart in Germany and France in *Bibliographie der Deutschen Zeitschriften Literatur* (vol. i, 1896) and D. Jordel's *Répertoire bibliographique des principales revues françaises* (first issue for 1897) respectively.

In England the contest over "open access" has raged fiercely. The Clerkenwell Open Lending Library, for example, offers free access to its shelves.

As to Britain's colonies, the Library Association of Australasia was organized in 1896, and the traveling library system has been introduced in British Columbia and New South Wales (1899).

The free library movement has extended to the Orient. Thus a free library was established in Bangkok, Siam, in 1896, and the Manila Public Library in 1900.

It must be remembered that such institutions are usually due to American or English initiative

and support, and are practically libraries for English-speaking people in foreign lands. In Japan, excluding the Imperial Library, there were, in 1899, 30 public and private libraries, containing 346,342 volumes, and these libraries were visited by 48,243 persons in 1897.

The *Library Journal* and *Public Libraries* have notes on foreign libraries each month. There are also various foreign periodicals devoted wholly or in part to library affairs, although, owing to conditions indicated, their contents differ in character from those of our own journals. Among them are the *Centralblatt für Bibliothekswesen* (vol. i, 1884); *Rivista delle Biblioteche* (vol. i, 1888); *Revue des Bibliothèques* (vol. i, 1891); *The Library* (vol. i, 1889); organ of Library Association of the United Kingdom; *Revue internationale des Archives, des Bibliothèques, et des Musées* (first year 1897).

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 152,923 in 1820; 215,739 in 1830; 352,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; 1,118,587 in 1890; and 1,381,627 in 1900. Capital, Baton Rouge.

Government.—The following were the State officers this year until May, when the newly elected administration came in: Governor, Murphy J. Foster; Lieutenant Governor, R. H. Snyder; Secretary of State, John T. Michel; Treasurer, A. V. Fournette; Auditor, W. W. Heard; Attorney-General, M. J. Cunningham; Superintendent of Education, J. V. Calhoun; Adjutant General, Allen Jumel; Commissioner of Agriculture, Leon Jastremski; Commissioner of Insurance, J. J. McCann; Bank Examiner, F. G. Freret; Railroad Commission, C. L. DeFuentes, R. N. Sims, W. L. Foster. The Secretary of State and the Superintendent of Education were re-elected. The other State officers for the remainder of the year were: Governor, W. W. Heard; Lieutenant Governor, Albert Estopinal; Attorney-General, Walter Guion; Treasurer, Ledoux E. Smith; Auditor, W. S. Frazee; Registrar of the Land Office, J. M. Smith; President of the Board of Control of the Penitentiary, C. Harrison Parker; President of the State Pension Board, J. A. Chalaron; Quarantine Physician, J. N. Thomas; Commissioner of Agriculture and Immigration, Jordan G. Lee; Jury Commissioners, J. R. Todd, L. H. Joseph, E. S. Maunsell. All the State officers are Democrats. Chief Justice of the Supreme Court, Francis T. Nicholls; Associate Justices, Newton C. Blanchard, Lynn B. Watkins, Joseph A. Breaux, Frank A. Monroe; Clerk, T. M. C. Hyman—all Democrats.

The term of the State officers is four years. They are elected in April of the years of presidential elections. The Legislature meets biennially in May of the even-numbered years; the session is limited to sixty days.

Population.—The population by parishes, according to the census of 1900, was as follows:

JOHN COTTON DANA,
SPRINGFIELD (MASS.) CITY LIBRARY.

INA COOLBRITH,
SAN FRANCISCO PUBLIC LIBRARY.

Acadia, 23,483; Ascension, 24,142; Assumption, 21,620; Avoyelles, 29,701; Bienville, 17,588; Bossier, 24,153; Caddo, 44,499; Calcasieu, 30,428; Caldwell, 6,917; Cameron, 3,952; Catahoula, 16,351; Claiborne, 23,029; Concordia, 13,559; De Soto, 25,063; East Baton Rouge, 31,153; East Carroll, 11,373; East Feliciana, 20,443; Franklin, 8,890; Grant, 12,902; Iberia, 29,015; Iberville, 27,006; Jackson, 9,119; Jefferson, 15,321; Lafayette, 22,825; Lafourche, 28,882; Lincoln, 15,898; Livingston, 8,100; Madison, 12,322; Morehouse,

WILLIAM WRIGHT HEARD,
GOVERNOR OF LOUISIANA.

16,634; Natchitoches, 33,216; Orleans, 287,104; Ouachita, 20,947; Plaquemines, 13,039; Pointe Coupée, 25,777; Rapides, 39,578; Red River, 11,548; Richland, 11,116; Sabine, 15,421; St. Bernard, 5,031; St. Charles, 9,072; St. Helena, 8,479; St. James, 20,197; St. John the Baptist, 12,330; St. Landry, 52,906; St. Martin, 18,940; St. Mary, 34,145; St. Tammany, 13,335; Tangipahoa, 17,625; Tensas, 19,070;

Terrebonne, 24,464; Union, 18,520; Vermilion, 20,705; Vernon, 10,327; Washington, 9,628; Webster, 15,125; West Baton Rouge, 10,285; West Carroll, 3,685; West Feliciana, 15,944; Winn, 9,648.

New Orleans has 287,104 inhabitants; in 1890 it had 242,039. Shreveport has 16,013; Baton Rouge, 11,269; New Iberia, 6,815; Lake Charles, 6,680; Monroe, 5,428; Alexandria, 4,760; Crowley, 4,214; Donaldsonville, 4,105; Plaquemine, 3,590; Lafayette, 3,314; Thibodaux, 3,253; Houma, 3,212; Opelousas, 2,951; Franklin, 2,692; Natchitoches, 2,388; Morgan City, 2,332; Jackson, 2,012.

Finances.—From a statement of the Auditor it appears that from April 1, 1894, to April 1, 1900, State obligations to the amount of \$2,649,206 have been retired at a cost of \$1,393,382, some of the bonds having been retired before maturity. The Governor said in his message in May: "The 4-per-cent. bonds command a premium of 9 to 10 per cent., while the bonds of the various levee boards, which, a few years ago, were very difficult to place, are likewise above par. Not a dollar of the floating indebtedness created since 1880 is left outstanding, and all transactions, both of State and district boards, are absolutely upon a cash basis."

The total revenues derived from all privilege tax turned in by the sheriffs is \$329,157.62, against \$307,517.09 in 1899. The privilege license fees paid direct to the State treasury are not embraced in this statement, and will amount to about \$70,000. The privilege tax report gives also the State revenue from saloons. There are now 13 counties that license the liquor business. Taxes amounting to \$131,100 were paid by the 146 liquor saloons. The municipalities are empowered to levy a tax on dram shops not to exceed 50 per cent. of the amount collected by the State, and in some of the towns and cities the maximum penalty is denounced against them.

Valuations.—The total assessment of the State is \$276,568,507, an increase in one year of

\$8,845,004. Following are valuations reported in December by the State Board of Appraisers: Railroads, \$24,865,275; telegraphs, \$338,634; telephones, \$774,210; sleeping cars, \$96,752; express companies, \$62,610; aggregate, \$26,137,481.

Charities and Corrections.—The number of inmates of the State Asylum for the Insane, at Jackson, this year was 1,195, with a total under treatment of 1,653.

There were 140 at the Soldiers' Home, which has an income of about \$18,000. On the roll of pensioners were 240, with 248 applications under consideration. With the \$50,000 available, the board was able to give only small amounts, divided into three grades—\$4.50, \$3.50, and \$2.50.

The Institute for the Blind graduated a class of 5 in May. Its appropriation in 1899 was \$10,000.

Appropriations for the year to other charitable institutions were: Institute for the Deaf and Dumb, \$18,000; Charity Hospital, New Orleans, \$90,000; Charity Hospital, Shreveport, \$18,000; Lepers' Home, \$7,000; Insane Asylum, \$100,000.

There are about 840 convicts in the State Penitentiary. Under the new management most of them will probably be placed on convict farms.

Education.—The biennial report of the public schools was rendered in June. The school population—children between six and eighteen years—was 404,757 in 1899. The enrollment was 196,169, of whom 74,233 were negroes. The average attendance was 90,187 whites and 56,136 negroes. The number reported as in attendance at private schools was 11,896 whites and 2,798 negroes, though this is not complete; the Superintendent says about 10,000 should be added. The number of teachers in the public schools was: White males, 1,455; white females, 1,617; total whites, 3,072. Colored males, 536; colored females, 549; total colored, 1,085. Total teachers, 4,157.

The schools have several sources of revenue, chiefly the current school fund, which is a tax of 1½ mill on the taxable property in the State. Then there are the poll tax and other special taxes and allowances. The poll tax, the payment of which is required of every registered voter sixty years of age or under, as a condition of casting his ballot, amounted in 1899 to \$115,475, with several parishes to hear from. The amount of revenue for the public schools in 1899 was \$1,242,026.

At the State Normal School, at Natchitoches, 17 were graduated in January and 30 in May. The board arranged in July for establishing a model school; a building will be erected for the accommodation of 480 pupils. The attendance for the fall term had reached 492 on Oct. 10.

The State University and Agricultural and Mechanical College is at Baton Rouge. An appropriation of \$20,000 by the Legislature furnished means for a new building, which will have dormitories for 150 students and dining-room accommodations for 500.

A State industrial school is to be built at Lafayette, to be called the Southwestern Louisiana Industrial Institute. Efforts were made in the Legislature to provide for a textile school, which is deemed desirable in view of the prospects of the cotton manufacturing industry.

The Louisiana Chautauqua, at Ruston, opened July 1 with a large attendance. Summer normal schools at Mansfield and Franklin enrolled large classes of teachers.

St. Charles College, at Grand Coteau, was completely destroyed by fire, Feb. 17. The library, of 5,000 volumes, contained some single books of great value that can not be replaced. There was insurance of \$8,000 on the burned property, which

was valued at \$25,000. The sixty-third commencement of the college was held June 27.

Railroads.—A decision was given in March in the State Supreme Court in favor of the State against the Southern Pacific Railroad Company, which reversed the decision of the lower court, and held that under its charter as a common carrier it may not carry on a storage business, for which it had built great warehouses in New Orleans.

The report of the State Board of Appraisers gives the mileage of railroads in the State in 1900 at 2,123 of main track and 744 of sidings, branch tracks, and double tracks, not including street railroads, which are assessed only in the localities where they exist.

Militia.—Since the war with Spain the militia has been reorganized, and in June the Seventeenth Company of infantry was mustered in, completing the number deemed necessary by the military authorities. The State National Guard is composed of 17 companies of infantry, 10 companies or batteries of artillery, 1 troop of cavalry, and 5 divisions of naval militia, comprising altogether a force of about 2,000 men.

Banks.—The condition of the national banks in the State, June 29, was reported: Loans and discounts, \$3,697,049; stocks, securities, etc., \$112,943; gold coin, \$66,188; total specie, \$321,712. United States certificates deposit for legal tender notes, \$402,358; individual deposits, \$4,210,222; average reserve held, 25.87 per cent.

Including savings banks, there are 57 State banks, 8 of which are in New Orleans.

In September, 1900, the capital of all the State banks and savings banks amounted to \$3,920,210.

The last returns of the condition of the State banks, dated June 30, 1900, show that the reported surplus and undivided profits amounted to \$1,548,320.13, against \$1,386,530.31 on Sept. 30, 1899, a gain of \$161,789.82. The average rate of discount on stock paid by the State banks outside of New Orleans for the year 1899 is more than 10 per cent.; this, added to the surplus and undivided profits gained in the same time, shows something over 16 per cent. as the net profits of these institutions.

Insurance.—In a suit of the city of New Orleans against the Liverpool and London and Globe Insurance Company, the State Supreme Court decided in May that the foreign company must pay a license of \$2,400 for the privilege of conducting its business in the city during the year 1899, with 2 per cent. a month interest from March of that year. If it could be shown that a municipal license had been paid by the company in any other town or towns in the State, based on premiums there collected or receipts there received, the city of New Orleans could not afterward claim to include such premiums or receipts in the aggregate amount upon which it demanded a license, even though the returns of such premiums collected elsewhere had been made to the principal office of the company in New Orleans. The company had contended that it was liable only for tax on the business with in the city.

Products and Industries.—The cotton crop is given as 625,000 bales; the consumption in mills of the State, 16,420 bales; there are 6 mills, of which 4 were in operation. The sugar crop was small, as it has been for two or three years; it was estimated at 250,000 long tons.

The timber business has made progress, as shown by the Auditor's report. In 1900 there were 229 licensed sawmills, against 202 in 1899. The cotton-seed-oil mills have increased from 28 to 41.

The Governor's message says of the rice indus-

try: "It has assumed colossal proportions on the shores of the Mississippi, but more particularly in south Louisiana, where great irrigation canals have been made and mammoth pumping plants and rice mills established. Those canals are made by throwing up levees from 10 to 50 feet apart, into which the water is pumped from streams. The canals are navigable by small boats. They range from 2 to 20 miles in length, watering from 1,000 to 20,000 acres. The capital invested will soon approximate \$3,500,000, showing a total length of 300 miles of main canals and 500 miles of laterals, capable of watering 200,000 acres. No less than 14 rice mills have been erected in this territory, and several more are in course of construction. Rice irrigation is also carried on from wells."

Lawlessness.—A series of bloody disturbances occurred in New Orleans in July. The trouble began when, at the request of some frightened colored women, two policemen attempted to arrest two colored men. One of the colored men not only shot one of the policemen, but retreated to one house after another with his Winchester rifle and shot several others who attempted to arrest or shoot him. He was conquered at last only by setting fire to the house in which he was concealed. Meanwhile a mob of boys, very young men, and hoodlums had seized the occasion to go through the streets and kill or maltreat peaceable negroes of both sexes. A colored schoolhouse in which the negroes were reported to have stored ammunition was burned by the mob. The total casualties resulting from this affair were reported as 11 persons killed, 3 mortally wounded, and 28 seriously injured.

Four suspected negro burglars, all ex-convicts, were taken from jail at Ponchatoula, Sept. 20, and hanged.

A negro ex-convict and cattle thief was terribly whipped by whitecappers near Lake Charles, May 12.

On June 23 a man was lynched near Springfield for the murder and robbery of an aged woman.

A negro who shot and seriously wounded a railroad conductor was lynched near Plaquemine, Oct. 19.

A negro who had made threats against the lives of two men was lynched, June 9, at Devall.

For attempted criminal assault a negro was lynched at Lena, May 12, and one at Whitehall, Aug. 27.

A negro who confessed a murder was hanged by a mob, about Aug. 30, at Cheneyville.

April 20, in Livingston Parish, a party of 6 or 8 white men rode up to a negro's house and fired into the dwelling, wounding one of the occupants. They then rode on to the next house and fired a second volley, killing a negro boy. Four young men of the party were arrested. The shooting is said to have been without cause.

A lumber company attempted to work a new sawmill at Tioga with mixed labor, but the whites began shooting at the negroes to force them to leave, as they have been compelled to do at many of the other mills on the line of the Iron Mountain Railroad.

A dispatch of Aug. 15 said: "The commission appointed by the second white mass meeting in Cheneyville, La., to regulate the negroes of that neighborhood went to work yesterday. The resolutions adopted ordered the negroes to give way on the sidewalk to white people and also prohibited them from gathering at the railroad depot. A young negro jumped on a railroad train yesterday and got in the way of some white passengers. It was decided by the commission to discipline him."

He was therefore marched to the business center of the town, straightened out, and given 50 lashes with a cowhide whip, in the presence of a large audience of whites and negroes."

At Allentown, in April, the foreman of a lumber mill was shot and instantly killed by a negro, who then took his own life. Two other negroes were arrested on a charge of having conspired with the murderer to kill the foreman; they were seized by a mob and hanged in the woods.

A riot arose at Lake Charles in September, in consequence of an assault by a negro on an old lady at Chloe station. A mob attempted to take him from the jail where he was placed after arrest, and in the attempt the jailer was killed by a shot from the mob. Three men were arrested, charged with the murder. The negro was sentenced to twenty years' imprisonment.

Political.—The State election was held April 17. It was the first general election held under the new Constitution. The total registration was 129,729; of these it is said that about 7,000 were negroes. Not only negroes, but many naturalized foreigners, were disfranchised by the new election provisions requiring educational or property qualifications. There were three tickets in the field—the Democratic, the regular Republican, and the Republican-Fusion.

The nominations made at the Democratic convention, which was held Dec. 20, 1899, were: For Governor, W. W. Heard; Lieutenant Governor, Albert Estopinal; Secretary of State, John T. Michel; Attorney-General, Walter Guion; Superintendent of Education, Joseph V. Calhoun; Treasurer, Ledoux E. Smith; Auditor, W. S. Frazier.

The regular Republicans, also called the Wimblerly Republicans from the name of the State member of the National Republican Committee, appointed their convention for Feb. 5, when they met at New Orleans and selected the following candidates: For Governor, Eugene S. Reems; Lieutenant Governor, F. B. Earhart; Treasurer, Benjamin Bloomfield; Auditor, James Forsythe; Attorney-General, Robert P. Hunter; Superintendent of Education, D. M. Lines.

On Feb. 6 a convention was held at Alexandria by a section of Republicans, composed in part of the sugar planters who left the Democratic party at the time the sugar bounty was discontinued. They have been called the "Lily Whites." They were joined by other Republicans not favoring the management of the regular party, and the following ticket was named: For Governor, C. Taylor Cade; Lieutenant Governor, W. G. Wyly; Treasurer, T. J. Woodward; Attorney-General, Clay Knobloch; Secretary of State, W. J. Behan; Auditor, J. C. Weeks; Superintendent of Education, C. K. Murray.

The People's party, at Alexandria, Feb. 7, agreed upon the following ticket: For Governor, D. M. Sholars; Lieutenant Governor, T. J. Woodward; Secretary of State, J. T. Howell; Attorney-General, Taylor Beattie; Auditor, O. H. Deshotels; Treasurer, B. W. Marsden; Superintendent of Education, O. B. Staples.

Committees of the independent Republicans and the Populists held a conference about Feb. 20; they were joined by independent Democrats who, under the leadership of Senator Caffery, were opposed to the administration of Gov. Foster and to the election provisions of the new Constitution. Senator Caffery seems to have been out of favor with his party on account of his gold standard principles and his having voted in Congress against some measures deemed of interest to the citizens of the State. The fusion ticket was headed by his son. It was: For Governor, Donelson Caffery,

Jr., independent Democrat; Lieutenant Governor, D. M. Sholars, Populist-Democrat; Attorney-General, W. G. Wyly, Republican; Secretary of State, C. Taylor Cade, Republican; Treasurer, George A. Hassinger, Republican; Auditor, O. H. Deshotels, Populist; Superintendent of Education, O. B. Staples, Populist. Mr. Caffery's letter of acceptance may be taken as a declaration of the principles of the combined parties. He said in part: "The sole memento of the vanished question of race supremacy is found in Democratic majorities based on negro votes counted but not cast; and having fought and prevailed against an unbearable and now impossible domination, it becomes necessary for our people to resist the domination of overgrown power armed with the weapons intrusted to the officers of State for the defense of our civilization. Under our government of majorities without votes, we have learned that there may be a more odious form of oppression than taxation without representation. The Governor must not be the fountain-head of political authority. The school system must be removed from petty politics. The registrars must be elected by the people of the several parishes. The registration must not be a partisan weapon. All candidates must have the right of naming their commissioners of election. The trick laws governing the official ballot and representation at the polls must no longer throttle opposition to the candidates of the party in control, and as the whole system of registration and election laws was designed to prevent the growth and formation of opposing parties and the building up of that spirit of independence which is the life breath of the republic, a new system must be introduced which will hold out to the people all the opportunities now denied them."

There was trouble about the official ballot and the election commissioners. Those to which the Republicans were entitled were in most parishes given to the regular Republicans, though in some to the fusionists. In sending in their nomination papers, the fusionists appended the requisite number of signatures, but in parishes where signers afterward withdrew their names by telegraph, the election board was unwilling to allow the names of the candidates to appear on the official ballot.

The election resulted in victory for the Democrats on the State ticket and on nearly every local ticket. The total vote was less than half as large as at the last State election. The vote for Governor was: Heard, Democrat, 60,206; Reems, Republican, 2,449; Caffery, fusion, 14,215. The vote for presidential electors was: Democratic, 53,671; Republican, 14,233.

A proposed amendment to the Constitution was carried, which will enable New Orleans to issue bonds to pay for water, sewerage, and drainage improvements.

The Legislature elected was wholly Democratic.

The Democratic convention for choosing delegates to the national convention and nominating electors was held June 4, at Baton Rouge. The delegates were instructed for William J. Bryan. The resolutions denounced the imperialistic policy of the administration, condemned the annexation of the Philippines, asked that the government of Cuba be given into the hands of its citizens, denounced trusts, opposed wars of conquest and acquisition of colonies and militarism, asked national aid for the levee system and the deepening of the channel of the Southwest Pass at the mouth of the Mississippi, favored the construction of the Nicaragua Canal immediately by the United States alone and the election of Senators by direct vote of the people, and expressed sympathy for the Boers.

The so-called "Lily Whites" sent out an address, July 9, in which was said in part: "The National Republican Convention, assembled at Philadelphia, recognized this State committee as the regular Republican organization of the State of Louisiana. This happy event awakens the liveliest enthusiasm throughout the whole State and among all classes of people. In it they see the great advantage of a strong and vigorous opposition party to the ruling dynasty in this State, which has usurped all the functions of government and appropriated the whole power of the people. The excuse for padding the registration, stuffing the ballot boxes, and forging the election returns heretofore given by the Democratic leaders has now disappeared, and even the instruments of their conspicuous and admitted frauds will not dare to perpetrate them again.

"The State of Louisiana is as much interested in Republican success at the coming election as New York or Illinois. All of the important industries of Louisiana are dependent on Republican policies. The sugar, rice, lumber, salt, cotton, iron, tobacco, and other industries are directly dependent on the protection accorded them by the Dingley bill. The business of our people, the volume of business and their prosperity are dependent on a sound and stable currency which the Republican party maintains and which the Democratic party threatens to destroy.

"Louisiana is a Republican State on a free vote and a fair count. With all of the machinery of the State government, the most complete and drastic campaign which the Democratic party could prosecute, with every State, parish, and local office in dispute, with all of its padding of returns, the Democratic party was able to poll in April but 46 per cent. of the registered vote of the State."

The Central State Committee of the People's party sent out an address calling upon their party to vote for the presidential and congressional candidates of the Republican party.

The vote for presidential electors stood: Bryan, 53,671; McKinley, 14,233. The members of Congress elected were all Democrats. The amendment to increase the amount available for pensions for Confederate soldiers to \$75,000 was carried by 31,320 against 1,440; the limit heretofore was \$50,000. W. L. Foster was elected Railroad Commissioner for the Third District.

Legislative Session.—The Legislature assembled May 14 and adjourned July 12. Jared Y. Sanders was Speaker of the House. Gov. Heard and Lieut.-Gov. Estopinal were inaugurated May 21.

Two United Senators were elected May 22—Senator Samuel D. McEnery to succeed himself at the expiration of his present term (1903), and ex-Gov. Murphy J. Foster to succeed Senator Caffery in 1901.

A new law for primary elections was enacted, regulating the manner of calling and conducting them, the appointment of officers, the taking of votes and counting them, and providing penalties for illegal voting, acceptance of illegal votes, bribery, and intimidation. The penalties are a fine of \$25 to \$300, or imprisonment for terms from ten days to three months, or both. The general election law was amended in details regarding nominations.

An amendment to the bank reserve act provides that every bank, banking association, corporation, or company organized under the laws of the State shall at all times have on hand in lawful money of the United States and cash due from other banks an amount equal to 25 per cent., 8 per cent. of which shall be kept at all times on their respective

premises in cash, of the aggregate amount of its demand deposits. The amount to be thus kept on hand shall be called its lawful money reserve. For the remainder of said liabilities to depositors an amount equal thereto in lawful money of the United States on hand or due from other banks, bills of exchange or discounted paper maturing within twelve months, bonds of the United States, bonds of the State of Louisiana, bonds of the city of New Orleans, or bonds of the several levee districts of the State of Louisiana.

A measure that met with much opposition, but passed and became a law without the consent of the Governor, modified the civil service law of New Orleans, exempting certain offices from the operation of the law requiring academic examination, and making other changes.

An important law provides for the care and control of the State convicts. When the present lease for their labor expires, March 3, 1901, they are not to be leased to private contractors again. A board of control is created, to be composed of three citizens appointed by the Governor. The first appointees are to serve two, four, and six years respectively, and after appointments will be for six years. This board has authority to appoint and discharge at its discretion all officers and employees, designate their duties and fix their salaries. It must prohibit harsh and cruel punishments, establish a system of work and discipline conducive to the reformation of the prisoners, and give them the right to communicate directly with the board without the interference of an officer. It is authorized to purchase or lease such lands as may be necessary for occupation by the convicts, who are to be employed in agriculture or manufacturing and in the construction and repair of public works. It is further stipulated that the board shall, as soon as possible, establish a reformatory branch of the Penitentiary, in which all convicts who are between the ages of seven and seventeen years shall be separated from the other convicts.

A Bureau of Labor Statistics was created.

A special license tax was imposed on the sale of pistols and cartridges—\$125 on wholesale dealers in pistols and \$50 retail; on cartridges, \$50 and \$25.

A revenue act provides for increased income to the State. The tax on oil corporations was reduced one half. Secret or fraternal societies not exclusively benevolent must pay a license tax.

The board of examining dentists is replaced by a State Board of Dentistry—5 members, appointed by the Governor for seven years.

Acts relating to insurance companies are: To prevent combinations among fire companies to fix rates; to provide that the value of immovables by nature shall be fixed by the insurer when the policy is issued, and that he is to pay the total loss or restore property damaged; and companies taking marine and river risks on the stock plan must have capital of \$100,000 instead of \$200,000, as formerly.

The game laws were amended.

Other acts were:

To encourage high schools by appropriations from the general fund.

Requiring examination of homestead and loan associations.

Requiring employers to provide seats for woman employees.

Prohibiting marriage between first cousins.

Appropriating \$300 to the fund for placing in Memorial Hall, Washington, a bronze bust of George Peabody.

Making appropriation for a permanent home for lepers.

Permitting sugar mills and refineries, sawmills, rice and cotton-seed-oil mills, and irrigating plants to issue bonds.

Incorporating the city of Monroe.

Creating a State museum at New Orleans.

Authorizing the City Council of Lafayette to issue bonds to raise \$14,000 to construct buildings for the Southwestern Industrial Institute, and the police jury of Lafayette Parish to raise in the same way \$32,000 for the same purpose.

Prohibiting the use of trading stamps.

Requiring factors, brokers, commission merchants, and middlemen to embody in all accounts of sales of cotton and other agricultural produce the name of the person to whom such produce is sold, the date when sold, the actual classification of such produce, and the name of the person by whom such classification was made.

To provide a system of obtaining, compiling, and promulgating official reports of the conditions and yield of agricultural products of the State and other statistical information.

Providing for settlement of successions under \$500.

Two constitutional amendments were passed and submitted to vote in November, when they were adopted. One was to increase the amount of money that may be used annually for Confederate pensions to \$75,000, and stipulating that not less than \$50,000 be distributed. The purpose of the other amendment was to ratify the special tax for public improvements voted by New Orleans in June, 1899.

LUTHERANS. The official reports of synods and congregations of Lutherans in America show a net increase in 1900 of 95,744 communicant members. The statistics gathered for the Lutheran Church Almanac present the following results: Sixty-one synods, 6,710 clergymen, 11,123 congregations, 1,665,878 confirmed members, 4,097 parochial schools, 3,964 teachers and 190,896 pupils, 4,961 Sunday schools, 60,133 officers and teachers, and 568,837 pupils. The statistics of Sunday schools are, however, very defective, the actual number being much larger than here indicated. The benevolent contributions—for missions, education, and other charitable purposes—aggregate \$1,171,765.30. There are in connection with the various synods or under Lutheran control 23 theological seminaries, 47 colleges, 34 academies, and 11 colleges for women, whose property is valued at \$5,121,060, with endowments amounting to \$1,646,293, employing 859 professors and instructors, and having 12,854 students, of whom 2,338 have the ministry in view. The benevolent institutions number 99, of which 43 are orphanages, 19 homes for the aged, 18 hospitals, 8 deaconess institutions, and 11 immigrant and seamen's missions, with property valued at \$4,392,896, endowments amounting to \$462,029, and 24,913 inmates. The property used for educational and benevolent purposes is valued at \$9,513,956, and the endowments amount to \$2,108,922. Many of these institutions, some of the strongest and most influential, have no endowment at all, but are supported by voluntary offerings of the members of the congregations. This is especially true, though not exclusively, of the institutions established and maintained by German and Scandinavian Lutherans.

The polity of the Lutheran Church in this country has assumed the synodical form, the synods being composed of clerical and lay delegates of congregations. The number of synods is now 61, most of which are merely territorial or linguistic divisions. Of these, 15 occupy independent positions, the rest are united in 4 general bodies, as follow:

SYNODS.	Memb- ers.	Congre- gations.	Communi- cant mem- bers.	Benevolent offerings.
Synodical Conference	2,089	2,650	581,089	\$370,679.09
General Council.....	1,156	2,019	870,408	286,307.43
General Synod.....	1,926	1,568	194,443	260,018.72
United Synod, South.	315	390	28,639	24,183.73
Independent synods..	2,064	4,496	481,350	250,686.38
Totals	6,710	11,123	1,665,878	\$1,171,765.30

Of the general bodies, the Synodical Conference is almost exclusively German, the General Synod and United Synod are almost exclusively English, and the General Council embraces English, German, and Scandinavian pastors and congregations. The Synodical Conference and the United Synod of the South held conventions this year, reports of which follow. For the reports of the last conventions of the General Council and General Synod see Annual Cyclopædia for 1899.

Synodical Conference.—The Evangelical Lutheran Synodical Conference held its eighteenth biennial convention at Bay City, Mich., Aug. 8-14, 1900. The election of officers resulted as follows: President, the Rev. John Bading, Milwaukee, Wis.; Vice-President, the Rev. P. Brandt, Pittsburg, Pa.; Secretary, Prof. John Schaller, New Ulm, Minn.; Treasurer, Mr. C. Christiansen, Detroit, Mich. The Rev. Olaf E. Brandt, of Decorah, Iowa, brought the greetings of the Norwegian Synod. The following named synods were represented by clerical and lay delegates: Synod of Missouri, Ohio, and other States, the General Synod of Wisconsin, Minnesota, and Michigan, and the English Synod of Missouri and other States. The Committee on the Revision of the English Translation of Luther's Catechism presented its report, which was discussed, and the committee was continued, with instruction to present its final report at the next convention. A large portion of the business sessions was devoted to discussion of missionary operations among the colored people of the South. The financial report of the board showed a total income for the two years of \$38,300.53, and expenditures of \$36,789.75. A memorial from the Immanuel Conference of the negro missionaries in North Carolina was presented, praying for the establishment of a Lutheran college for the colored race in the South. The board was instructed to make a thorough investigation of the matter during the next biennium and report at the next convention. The doctrinal discussion at this convention was on the subject of The Necessity of the Christian Parochial School for the Christian Family, the Church, and the State. A cheap edition of the report of the discussion, in German and English, is to be printed for general distribution. The next biennial convention of this body will be held in Milwaukee, Wis., in 1902.

United Synod.—The United Synod of the Evangelical Lutheran Church in the South held its seventh biennial convention in Augsburg Church, Winston-Salem, N. C., May 16-20, 1900. The following named officers were elected: President, the Rev. James B. Greiner, Rural Retreat, Va.; Vice-President, the Rev. Robert A. Yoder, D. D., Hickory, N. C.; Secretary, the Rev. Melancthon G. G. Scherer, Newberry, S. C.; Treasurer, Charles H. Duls, Esq., Charlotte, N. C. The next convention will be held in May, 1902, at Charleston, S. C. The synods of North Carolina, South Carolina, Tennessee, Virginia, Southwestern Virginia, Georgia, Mississippi, and Holston of Tennessee were represented at this convention by 42 clerical and 34 lay delegates. The Rev. Stephen A. Repass, D. D., of Allentown, Pa., attended the

convention as the official visitor of the General Council.

The work of the convention consisted chiefly in considering and acting on the reports of the various boards. The Board of Missions and Church Extension has charge of the work of home and foreign missions, and employs a general secretary, with headquarters at Atlanta, Ga. The board supports 21 missions, of which 6 are in Virginia, 1 in West Virginia, 4 each in North Carolina and Tennessee, and 3 each in Georgia and Mississippi, for the support of which \$7,531.23 was expended in the past two years. In these missions there are 1,500 communicants and 1,300 Sunday school pupils. The church property belonging to these missions is valued at \$82,900. At present 15 missionaries are employed and 2 mission points are without pastors. The board say: "The work continues to increase on our hands—more missionaries are needed, more churches are to be built, more territory is to be occupied than ever before. As a consequence, more money is needed to carry on the work successfully. We fully appreciate the faithfulness and liberality of many pastors and congregations and societies as manifested by the continued contributions to our home missionary treasury. If, however, this work is to be in the future what it ought to become, we feel that some means must be devised to secure from the synods a larger part—the entire amount, if possible—of the apportionment asked from them by the United Synod.

The report of the board concerning its work in Japan shows encouraging progress. The mission, begun only a few years ago, is in a flourishing condition. A congregation has been established at Saga, and in 1898 work was begun in Kumamoto, one of the largest cities in the Kyushu district, with a population of 80,000, and in 1899 work was begun in the city of Kurume, midway between Saga and Kumamoto. Since the last report of the board 2 natives have been ordained to the office of the ministry. The board now employs 3 ordained missionaries, 2 native pastors, and 4 unordained helpers in 4 stations and 3 out stations. The mission force in Japan has organized 4 Sunday schools, in which 150 pupils are taught. The mission has 82 baptized members.

On the territory of this general body there are 7 educational institutions and 1 orphanage, supported either by the general body or by the district synods. Among these is Roanoke College, Salem, Va.

The committee on the common service and cooperation with other English-speaking Lutheran bodies reported progress in the work of securing a common book of worship and ministerial acts. The translation of Luther's Small Catechism, prepared by the joint committee with a view of making it the standard English translation for the entire Church, was adopted in the form in which it had been adopted previously by the General Council and the General Synod.

M

MADAGASCAR, an island colony of France near the southeast coast of Africa, formerly a kingdom, proclaimed a French protectorate in 1885, when a French force occupied Diego Suarez. The protectorate was denied by the Hova Queen until, after a French expedition, a treaty of peace was signed on Oct. 1, 1895, and as the result of another expedition to suppress an insurrection which occupied the capital the island was declared a French colony on Aug. 6, 1896. Queen Ranavalona III was deposed on Feb. 27, 1897, in consequence of fresh disturbances. Great Britain recognized the French protectorate in 1890 in return for the renunciation by France of consular jurisdiction in Zanzibar. A dispute subsequently arose about the application of the special French tariff to British goods, Great Britain claiming most-favored-nation treatment under a treaty made with the Hova Queen in 1865 by virtue of an assurance, asked for and received from France in connection with the British recognition of the protectorate, that none of the rights and immunities enjoyed by British subjects in Madagascar would be affected. The French Government took the view that the assurances applied only to the protectorate, and that when it exercised the right of changing the status of the island to a French colony all treaties made by the Hova Government became void. The French claims to Madagascar date from the earliest period of French transmarine colonization, and were first asserted in 1642 by a company that obtained a charter from the King of France. Trading settlements were planted on the coast, and viceroys were appointed at different periods, but the factories were abandoned and French authority was ephemeral and disappeared entirely after the King of the Hovas, the part Malay tribe in the center of the island, reduced the greater part of Madagascar to his sway about 1810. In the semicivilized kingdom that

was developed English Protestant missionaries acquired great influence, and American and British traders controlled the commerce of the island until at the beginning of the new era of colonial expansion the French revived their ancient claims and established their authority by means of a series of armed expeditions. The deposed queen was deported to Réunion in March, 1897, in consequence of continued intrigues against the French Government, and in March, 1899, for a like cause, she was taken to Algiers. The Governor General rules the island with the assistance of an Administrative Council sitting in Antananarivo, and of residents in the coast towns and the principal military stations. He is commander in chief of the troops. Gen. Gallieni is Governor General, and during his absence Gen. Pennequin has acted in his place.

The area of the island is estimated at 228,500 square miles and the population at 3,500,000 or upward. The females are considerably more numerous than the males. Creoles from Mauritius and Réunion, Chinese, and East Indian Banyans are settled as traders in the coast towns. The Hovas formerly kept garrisons among the other tribes, and appointed governors over them. Their language is generally understood throughout the island. They number between a quarter and a third of the total population. The Sakalavas are more numerous. The Betsileos are the third largest tribe, and after them the Betsimisarakas and Baras. Many African blacks interspersed among the people were originally brought over and sold as slaves by the Arab traders, who are still numerous along the coast. The slave trade was declared illegal by an edict of the Hova Queen in 1877, but was not suppressed. Since the French introduced a colonial administration they have abolished slavery wherever their authority is exercised; in the central province of Imerina, the

Hovas' country, they have freed all slaves. The emancipation proclamation was issued on Sept. 27, 1896. The Hova Government compelled the common people to work without pay at all times when the Queen desired their services. This system of forced labor the French have retained in a modified form, requiring the natives to labor on the roads or other public works for thirty days in the year. Besides duties on foreign goods exceeding 50 per cent. ad valorem, many money taxes are imposed. Duties on French imports are 4 per cent.

The Hovas and the tribes in the central districts who were under their immediate dominion were nominally converted to Christianity before the French occupation. English Congregationalism was adopted as the state religion, and was professed by the aristocracy generally. The Anglicans, the Friends, and the American and Norwegian Lutherans also established missions, and French Catholics secured 50,000 converts, the number of Protestants being about 450,000. Since the establishment of French rule the English Protestant missionaries, who encouraged the Hovas to resistance, have been discountenanced, and many of the natives have embraced the Roman Catholic faith. Through this wholesale conversion of former Protestants by the French priests the property of many of the Protestant missions was forfeited in 1897, but some of their churches have since been restored to the Protestant societies. The missionaries used to teach 170,000 Malagasy children in 1,800 schools. The French have established secular schools, and in 1897 they opened a technical school in which natives are taught to be blacksmiths, tinsmiths, painters, carpenters, tailors, potters, etc. The natives can work skillfully in their own way in metal and wood and weave cloth from cotton, silk, and raffia fiber. Their principal occupations are agriculture and the breeding of cattle. Rice, sugar, cotton, coffee, cacao, cloves, vanilla, and yams are cultivated. The forests are of vast extent and rich in valuable woods. The most important commercial product at present is rubber, which is shipped to London and Hamburg. French enterprise and colonization are encouraged by free grants of land, and land is offered for sale to foreigners. Mining companies must be under French management, and some have lost their concessions and American and other claimants to lands conceded by native chiefs have been ousted because their rights were not recognized by French law. Many mining concessions have been granted, but only a few are worked, mainly gold mines. Besides gold, copper, iron, galena, sulphur, graphite, and lignite have been found. The chief ports are Tamatave, on the east coast, and Majunga, on the west coast, each with about 6,000 inhabitants. Antananarivo, the capital, has 70,000 or more. The local revenue of Madagascar is about 10,000,000 francs. The expenditure of France in 1900 was 25,181,048 francs. The debt was converted in 1897 into 2½-per-cent. bonds amounting to 20,000,000 francs, requiring an annual expenditure for interest and amortization of 960,000 francs. By the operation 3,854,478 francs were saved, and the savings were applied to building roads and other improvements. For the construction of railroads, telegraphs, lighthouses, and harbor works a new loan of 60,000,000 francs is authorized. Telegraphs connect Antananarivo with Tamatave and with Majunga, whence a cable has been laid to Mozambique. Other telegraph lines run to Mananzary, on the east coast, from the capital and from Fianarantsoa. A railroad from Antananarivo to Tamatave is projected, to be built by a French company which will receive concessions of lands, mining rights, etc. The lagoons running along

the east coast are to be dredged out so as to form a continuous canal. During 1898 the ports of Madagascar were visited by 6,061 vessels, of 879,362 tons, and of this tonnage 734,068 tons were French, 78,053 British, and 39,305 German. Of the imports, amounting to 21,041,000 francs, 17,030,000 francs were French, 1,048,000 francs British, and 435,000 francs German. Of the exports, amounting to 4,960,000 francs, 1,867,000 francs went to France, 823,000 francs to Great Britain, and 1,052,000 francs to Germany. The legal coin is the French 5-franc piece, which the people formerly cut into pieces to be used for fractional currency. The Government has forbidden this practice and redeemed the cut coins, allowing 5 francs for 30 grammes of the silver, the weight of the 5-franc piece being 25 grammes, and now fractional French coins, silver and copper, are coming into use. The military force maintained by France in Madagascar in 1900 consisted of 9,187 infantry and 2,118 artillery and engineers. There were 375 French officers, 764 French and 285 native noncommissioned officers, and 2,700 French and 7,215 native privates; total, 11,305 of all ranks. The French budget appropriated 22,375,482 francs for military expenses in Madagascar.

About the beginning of 1900 the plague broke out in Tamatave, and in spite of the enforced isolation of the town, entailing much hardship, it spread to other places. The gold mines in 1900 yielded three times as much as in the preceding year. The Transvaal war interfered with trade to some extent. Fortifications were erected at Diego Suarez, and two artillery batteries were sent out. A total force of 4,100 men was dispatched to Madagascar, comprising besides these 100 French gunners, 2 battalions of the foreign legion of Algiers, 1 battalion of Soudanese and 1 of Senegalese sharpshooters, and a battalion of marine infantry.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census since admission, was 298,269 in 1820; 399,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,278 in 1860; 626,915 in 1870; 648,936 in 1880; 661,086 in 1890; and 694,647 in 1900.

Government.—The following were the State officers during the year: Governor, Llewellyn Powers; Secretary of State, Byron Boyd; Treasurer, F. M. Simpson; Attorney-General, William T. Haines; Adjutant General, John T. Richards; Superintendent of Schools, W. W. Stetson; Bank Examiner, F. E. Timberlake; Insurance Commissioner, S. W. Carr; Liquor Commissioner, James W. Wakefield; State Librarian, Leonard D. Carver; Land Agent, Charles E. Oak; Commissioner of Fish and Game, H. O. Stanley; Railroad Commissioners, Joseph B. Peaks, Benjamin F. Chadbourne, Frederic Danforth; State Topographical Survey, Lealie A. Lee, William Engel, Charles S. Hichborn; State Board of Health, C. D. Smith, President; Inland Fish and Game, Leroy T. Carleton; Commissioner of Labor and Industrial Statistics, Samuel W. Matthews; Pension Agent, E. C. Milliken; Chief Justice, John A. Peters; Supreme Court Judges, L. A. Emery, Thomas H. Haskell, Andrew P. Wiswell, S. C. Strout, A. R. Savage, William A. Fogler; State Detective, Fred A. Porter; Clerk, W. S. Choate; Census Superintendents, Elmer P. Spofford, James A. Place—all Republicans except Justice Strout.

Population.—The population in 1900, by counties, was as follows: Androscoggin, 54,242; Aroostook, 60,744; Cumberland, 100,689; Franklin, 18,444; Hancock, 37,241; Kennebec, 59,117; Knox,

30,406; Lincoln, 19,669; Oxford, 32,238; Penobscot, 76,246; Piscataquis, 16,949; Sagadahoc, 20,330; Somerset, 33,849; Waldo, 24,185; Washington, 45,232; York, 64,885; total, 694,467.

Finances.—The total receipts of the State Treasurer for the two years ending Dec. 31, 1900, were \$3,798,923.03; amount of cash on hand, Jan. 1, 1900, \$154,726.73; amount disbursed during 1899 and 1900, \$3,754,767.75; balance on hand, Jan. 1, 1901, \$198,879.01. The State tax from

JOHN F. HILL,
GOVERNOR OF MAINE.

cities, towns, and organized plantations for 1899 and 1900 was \$1,815,901.96. Of this, \$450,168.50 was paid by the 20 cities, \$224,923.79 by towns and organized plantations, and \$91,650.34 by wild lands. The 20 cities paid into the treasury \$450,168.50 more than they received from the school fund, and 239 towns and plantations received more from the school fund than they paid into the treasury.

The average net rate of State tax on the 20 cities was \$1.56½ on each \$1,000 valuation; for towns and organized plantations the average rate was 66½ cents. The tax on savings banks for the two years was \$851,566.06; on railroads, was \$323,052.32; on telegraph and telephone companies, \$32,888.48; on express companies, \$10,032.67; on insurance companies, \$131,405.62; on collateral inheritances, \$54,226.64; on new corporations, \$71,565; other taxes and miscellaneous items, \$308,284.28; a total of \$1,783,021.07. One hundred thousand dollars was paid on the public debt in 1899 and 1900, and the State's bonded indebtedness is now \$2,103,000, a reduction of \$516,300 since 1890. The State's outstanding temporary loans amount to \$350,000.

Education.—The total amount of the school fund and mill tax for 1900 was \$520,019; the amount of school money raised in towns was \$818,001, an increase of nearly 47 per cent. since 1880. The normal schools are flourishing, and about 30 per cent. of the public school teachers are normal school graduates. School improvement leagues have been formed throughout the State, and work in co-operation with the superintendents. There are nearly 10,000 of these leagues, and they have secured for the schoolhouses a large quantity of material, from a library to a scrap basket, from an attractive playground with swings and trapeze to wash basins and clean windows. School savings banks have been established in some of the rural districts, and have met with marked success. In 8 schools, where the attendance was 245, the number of depositors was 130; 35 pupils deposited more than \$1, and they have bank books. Deposits are rapidly increasing.

In 33 unorganized townships schools have been maintained at a cost, the past year, of \$2,382.13. Many married persons avail themselves of the privilege thus afforded. The public schools have been maintained at a high standard, and much time and labor have been expended in enlarging and beautifying school grounds and rooms and providing libraries and works of art. The teach-

ers' institutes and summer schools have not only improved the standing of the schools, but have stimulated the teachers to attend the colleges.

There are 360 students in the State University. This institution offers special facilities in engineering and agriculture, and has courses in preparation for medicine, chemistry, and pharmacy, as well as thorough classical courses. In the past two years the trustees have built a drill hall, a gymnasium, and an astronomical observatory. The law school is at Bangor, and is proving successful.

Agriculture.—More than half the population is supported by farming, the market for their products being constantly enlarged by the popularity of the State's seaside and inland summer resorts.

The Prohibitory Law.—By comparing present conditions with those previous to the enactment of the "Maine law" fifty years ago, it is seen, says the Governor in his address, that in a large majority of country towns there is practical prohibition, and in the cities as uniform enforcement as of other legislation.

Banks.—On Oct. 27, 1900, the total assets of the 51 savings banks was \$71,076,211.67. The resources of the 17 trust companies were \$13,295,402.92. There were 180,914 depositors whose balance was less than \$2,000, and the total amount of their deposits was \$53,558,289.84; while the number of depositors having a balance of \$2,000 or more was 5,413, and the total amount of their deposits was \$13,681,809.23. The amount of tax paid on savings bank deposits in 1900 was \$448,827.93, an increase of \$128,434.21 over the sum paid in 1890.

The whole number of depositors in savings banks and trust companies, and shareholders in building and loan associations, was 213,980, a gain of 11,428 during the year. The Governor says: "If we take from this total the 6,019 demand depositors in the trust companies, it will be seen that nearly one third of the entire population of the State are directly interested in our various savings institutions. The aggregate amount of their capital, if apportioned among the people of the State, would give about \$125 to each person, or nearly \$600 to each family."

State Institutions.—At the Bath Military and Naval Orphan Asylum 24 orphans were admitted in 1900, the largest number for many years.

There has been a gradual increase in the number of patients in the Maine Insane Hospital, and it is overcrowded. Nov. 30, 1900, it had 771 patients, an increase of 38 in two years. A new hospital at Bangor is nearly completed.

The State Prison report shows that there has been a decrease of 37 in the number of convicts. The total gain from goods manufactured last year was \$5,937.74. As it cost an average of 9 cents a day to support a prisoner, the State paid \$106.66 more than it received as profit from the work. Other expenses amounted to \$10,092.19.

There are 60 boys in the Reform School housed in cottages under the best modern conditions, and 90 in the main building. The cottage system has proved its value, and more will be built.

The Industrial School for Girls has 165 girls under its care. Of these, 61 are in the school, 14 boarding out, 44 working for their board, and 46 receiving wages. They are taught the common English branches, and to sew and knit, do housework, and care for health and morals. Two buildings were destroyed by fire within a year, and one has been rebuilt and equipped.

Fish and Game.—The season of 1900 was the most successful in the history of these industries.

Including the amount paid to transportation companies, \$5,000,000 was expended by more than 50,000 visitors to the forests and lakes. The shore and sea fisheries employ 20,000 persons and have an invested capital of nearly \$3,000,000. The total value of the products, ready for market, is about \$6,000,000 annually.

Trade.—The State Board of Trade, at its semi-annual meeting, reported unprecedented prosperity. In the first two months of 1900 Maine shipyards launched 10,000 tons of new shipping, and every trade and business was sharing in the revival.

Railroads.—The Maine Central road had a year of exceptional prosperity. Its total receipts were \$5,698,666.26, and its expenditures \$3,753,971.53.

Political.—The Democratic State Convention was held in July. The platform accepted the national platform adopted at Kansas City, and pledged unqualified support to the candidates. On State issues it opposed the proposed creation of the office of State Auditor; favored abolition of the fee system, revision of the system of taxation, and election of railroad commissioners by popular vote; and declared that the prohibitory liquor law was a failure. Samuel L. Lord was nominated for Governor.

The platform adopted by the Republican State convention accepted the platform of the national convention and praised the administration of President McKinley. On State issues it favored readjustment of the taxation system, the creation of the office of State Auditor, and the construction of good roads; and it commended the public services of Gov. Powers and the Maine delegation in Congress. John F. Hill was nominated for Governor.

In the election the Republican ticket was successful by a plurality of about 33,000. The Legislature has 30 Republicans and 1 Democrat in the Senate, and 132 Republicans and 19 Democrats in the House.

On presidential electors the vote was 65,435 for McKinley, 36,822 for Bryan, 2,585 for Woolley, and 878 for Debs.

MANITOBA, PROVINCE OF. Government and Politics.—Toward the end of 1899 the province was greatly stirred with the political campaign. Mr. Greenway's government had been in power since 1888, and the prospect of defeating it appeared slight indeed. The Conservatives, however, had induced the Hon. Hugh John Macdonald (son of the late Sir John Macdonald) to accept the leadership in the contest. Mr. Greenway had with him in the Cabinet Messrs. J. D. Cameron, Robert Watson, C. J. Mickle, and D. H. McMillan. He had all the support that the Liberal Government at Ottawa could render. Opposed to Mr. Greenway was the revolt of Mr. L. R. Richardson, M. P., and the Winnipeg Tribune, of which he was proprietor, and of other discontented Liberals. Mr. Macdonald had the support of Sir Charles Tupper and the Hon. G. E. Foster, the Conservative Federal leaders, in a vigorous speaking tour, and the influence of his own extraordinary popularity. On Dec. 9, after the elections, the returns showed a new assembly of 22 Conservatives, 16 Liberals, and 2 elections to be held—which afterward gave one to either party. On Jan. 8, 1900, the Greenway Government resigned, Mr. Macdonald was called upon, and the following ministry was formed: Premier and Attorney-General, Hon. Hugh J. Macdonald; Provincial Treasurer and Minister of Agriculture, Hon. J. A. Davidson; Provincial Secretary and Minister of Public Works, Hon. D. H. McFadden;

ministers without portfolio, Hon. C. H. Campbell and Hon. James Johnson. R. P. Roblin, formerly leader of the party in the province, declined a place in the new ministry. All the ministers, on returning to their constituencies, were re-elected, and when the Legislature met, on March 30, the Government had a compact and enthusiastic majority behind it. William Hespeler was elected Speaker, and the Hon. J. C. Patterson, Lieutenant Governor, then read the speech from the throne, in which he said:

"Two contingents of Canadian troops have already reached the scene of action, and a third, equipped at the expense of Lord Strathcona and Mount Royal, is now on the ocean, on its way to South Africa. The first contingent, which left our shores some months ago, has already received its baptism of fire, and, I am proud to say, has proved itself worthy to fight shoulder to shoulder with the most celebrated regiments in the British service. I deplore the death of Major Arnold, who commanded the Western company of this contingent, and of the many gallant men who fell with him in the battles of Modder river; but I recognize that, while dead, they are not forgotten, and that their memories will long be treasured by all who hold loyalty, courage, and the honor of their country dear.

"Legislation will be asked with a view to restoring that equilibrium in the finances which, I regret to say, has not been maintained in the past; and it will be of a character which will, I believe, accomplish this difficult task. In pursuance of this object a bill will be introduced reducing the number of ministers receiving salaries to three. I regret to say that the Government is under the necessity of refusing to submit for your ratification certain orders in Council granting aid to certain railways. You will be asked to repeal the present costly and unsatisfactory election act, and to enact in its stead one much simpler, more just, and less expensive. The people of Manitoba having on two occasions declared themselves, by their votes, in favor of prohibiting the liquor traffic, my Government has decided to give effect to their views, in so far as the powers of the provincial Legislature will permit them to do so, and a bill dealing with this important subject will be submitted to you. My attention having been called, by a regrettable accident in one of the laundries in Winnipeg which resulted in the death of a young girl, to the fact that in some of the factories here the machinery is left unprotected, and that thereby the lives and limbs of the employees are endangered, a bill will be submitted for your consideration dealing with the liability of employers in such cases, and also one dealing with factories and workshops, and providing adequate protection for the men and women therein employed."

The legislation that followed was mainly a carrying out of pledges made by the new Premier. On Feb. 14, referring to the much-discussed railway matters, Mr. Macdonald had declared that "as to the railway corporations, the Conservative Government of Manitoba has no friends and no enemies. It will deal with everything on its merits from the standpoint of the people, and with that alone in view." Between the time of the new ministry's assuming office and the meeting of the Legislature various indications of maladministration on the part of the Greenway Government had come to light. Speaking at Emerson, Mr. Macdonald declared that on entering office they had made a discovery that almost took his breath away. Mr. Greenway, notwithstanding statements and pledges repeated by his colleagues and himself throughout the province, and boasts

that lines built last year had not cost the province one dollar, had passed orders in Council and written a letter promising a bonus of \$1,750 for every mile of new line built by the Canadian Pacific Railway last year. In the case of some of these lines, Mr. Greenway had merely written letters to the managers, saying that he had promised aid, and would have given it had he remained in power, and would support the Macdonald Government in paying it over. For other lines aid had been promised by orders in Council, with the knowledge of the whole Cabinet, and contracts were made subject to ratification by the Legislature. On considering the matter fully, he had come to the conclusion that the good faith of the province did not require that even bonuses promised by orders in Council should be paid; that there would be no breach of good faith, and the good name of the province would not suffer, by refusing to pay them, for he found an order in Council had been passed on July 14, when the Legislature was in session. There was plenty of time to pass a bill. A bill involving much larger amounts had been passed after that and before the close of the session—the Manitoba and Northwestern bill. But Mr. Greenway did not wish the electors to know that he was granting a bonus to the Canadian Pacific Railway and standing in with that company. It had struck Mr. Macdonald and his Government that the Canadian Pacific Railway must have been a party to the suppression of the facts and concealment of them from the province. The present Government had decided to refuse to pay these bonuses.

Meanwhile Mr. Greenway made a determined effort to retrieve himself. He declined a seat in the Senate, offered to him by the Dominion authorities, although his late colleague, Mr. R. Watson, accepted one, and the Hon. D. H. McMillan, in October, became Lieutenant Governor. He declared himself unwilling to let the "system of slander and falsehood" that had been adopted by the Conservative Government go unchallenged, and expressed himself as determined to retain the leadership of the provincial Liberals. Replying in more detail to the railway charges, he said: "If my Government is now to be condemned for that policy, condemnation should have been meted out to them a good many years ago, because that policy has been consistently pursued since the year 1888, when we came into office, and on account of which policy such a large mileage has been added to our railway system for the purpose, as I have time and again pointed out, of not only securing, as far as possible, competitive lines, but keeping in view the great need of the farmers for convenient marketing facilities. As will be remembered, this policy included the introduction of the Northern Pacific Railway, the Souris extension of the Canadian Pacific Railway, the Pipestone branch, the Foxstone branch, and the Belmont extension of the Northern Pacific, all of which have been aided on exactly the same plan of \$1,750 per mile, a policy in which the House was practically unanimous." As to the concealed order in Council, giving aid to the Canadian Pacific Railway on the Snowflake and Lac du Bonnet branches, he said: "In the former case, it was a matter that had been urged upon my Government for years and years by the settlers there, to relieve them of their hardships, and I had repeatedly interviewed the railway authorities, and made a promise of the usual bonus if they would build, and they finally agreed to the construction. As to the latter, a deputation of Winnipeg citizens waited upon me several times, urging the necessity of aiding the Lac du Bonnet

line for the purpose of being able to get out of that country the valuable wood and building material, and for colonization purposes. A promise for the usual aid was made to that deputation. This contract was made in the usual way as all others (including one for the building of a branch from the Dauphin Railway into Gilbert Plains country), all of which contracts were to be brought before the House at a future date for ratification."

A distinct demand from the Liberal press came for Mr. Greenway's resignation of the leadership, and one of his followers, Mr. C. A. Young, resigned from the Legislature as a protest against his acting any longer as leader of the party.

On April 4 a petition to the Dominion Parliament was passed in the Legislature by a unanimous vote. It asked that in pending legislation for railways, and all future legislation for railways to be built and constructed within the bounds of the province of Manitoba, Parliament would make provision: (1) For complete and more effectual control of rates thereon, including the fixing of maximum charges for freight and passengers; (2) the right of acquisition of such lines of railway by the province on equitable terms, based on the cost of construction, and in the event of the province and said railways being unable to agree upon the price so to be paid, the same to be determined by arbitration; (3) the right of the province to use such lines of railway in connection with any lines of railway that may hereafter be owned or operated by the province, the rental to be on equitable terms, determined as in the preceding paragraph; (4) that the province shall have the first option of purchase on any of the said lines of railway."

Mr. Macdonald and his colleagues next turned to the matter of the franchise, and in June introduced and carried a measure for the repeal of the existing law, which the Conservatives said had rendered it easy for unscrupulous men to tamper with the voters' lists and to interfere with a free expression of the popular will. The new elections act was framed largely upon the manhood suffrage system of Ontario. It gave the preparation of the voting lists into the hands of the municipal authorities, and provided for a revision by judicial officers. It abolished the system by which a property owner could vote wherever he owned property, and established the "one man, one vote" principle. A clause that was widely discussed provided that the recent Galician, Doukhober, and other foreign immigrants should not have a vote for seven years unless they could read in either the English, French, German, Swedish, or Icelandic language.

This session was the longest in the history of the province, and 82 bills, embodying much new legislation and amending much old legislation, were passed. The House finally adjourned on July 5, after a speech from the Lieutenant Governor, and his assent in the name of the Queen to a large amount of legislation, of which the following acts were the most important:

For the protection of persons employed in factories.

To amend the assessment act.

The Manitoba voters' list act.

The manhood suffrage registration act.

To amend the devolution of estates act.

To amend the public schools act.

Respecting the taxation of corporations and others for the purpose of supplementing the revenues of the crown.

Respecting mortgages and sales of personal property.

To incorporate the Selkirk Railway Company.

To incorporate the Winnipeg, Selkirk and Lake Winnipeg Railway Company.

To amend the Manitoba insurance act.

The liquor act.

To amend the shops regulation act.

Respecting writs of execution against land.

To amend the Lord's Day act.

Respecting real property in the province of Manitoba.

To consolidate and amend the acts relating to the property of married women.

Respecting the protection of game.

To incorporate Brandon College.

Prohibition.—One of the chief subjects of discussion in the province was Mr. Macdonald's prohibitory liquor law. Manitoba is strongly in favor of prohibition, and had voted in two plebiscites—a Dominion and a provincial one—in favor of the principle. Mr. Macdonald had declared before the election that, although not personally in favor of it, he would abide by a distinct expression of public opinion in the choice of representatives, and would present such a law if the majority of the new members were in its favor. When he became Premier he found that such was the case, and at once proceeded to put his pledge into operation. The measure was prepared by a leading Manitoba lawyer, Mr. J. A. M. Aikins, Q. C., and it prohibited the wholesale or retail sale of intoxicating liquors within the province as a beverage. The measure was introduced June 1, and appears to have been sufficiently definite and to have been really intended to effect the purpose aimed at.

The sale of liquor was to be permitted for use in arts, medicine, and sacraments only, although the act did not apparently aim to prevent absolutely its use in private hospitality. Druggists were placed under a stringent license law, with severe penalties, and the giving away of liquor in any public place, office, factory, hall, club, hotel, store, or house where there was a boarder or roomer, or a gathering of people, was strictly forbidden. The penalties were not less than \$200 and costs and not more than \$1,000 for the first offense—all offenses to be registered; for the second offense, not less than six months in jail nor more than two years. A corps of salaried inspectors was to be appointed, responsible to the Attorney-General's office, and they were to have power of search. While the province could not prevent importation of liquors for export or sale outside its boundaries, it was proposed to place a heavy tax upon such traffic. There were weighty protests, and the License Holders' Association presented a petition to the Legislature, claiming to represent an investment of \$2,000,000, and demanding compensation. On June 20 a large deputation waited on the Legislative Committee having the measure in hand and protested vigorously against it. F. H. Phippen, Q. C., made the principal speech. He declared that the bill was in no sense a prohibition measure, and that the only effect would be to drive the venders from the province to adjoining parts of Ontario or the Northwest Territories. The act, if passed, would not hinder any man from obtaining any quantity of liquor he might desire, the only change was that he had to buy outside of the province. This might be called prohibition if it were necessary to purchase in the Transvaal, but when people were allowed to buy from adjacent territories it was simply leaving licenses to other provinces. It placed liquor in every man's house, a bottle in every man's sideboard. The lighter beverages—wines and ales—would be prohibited, as the expense of importing them would be greater, and people would be driven to drinking heavier liquors. It had been said the present

law was not strictly administered; if so, there would be innumerable breaches of the proposed law, as every person would have an opportunity to carry on illicit business. The measure finally passed the House, with the approval of a great majority of the people, as shown by the press, the platform utterances, and the result of ensuing by-elections, in all of which the Government were sustained. It was not to become law until June 1, 1901, and a new development has since appeared in the protest of the Hudson's Bay Company and their claim that the legislation infringes the trading privileges granted them under Dominion enactment when the province entered Confederation. This point has been referred to the courts.

The Federal Elections.—Manitoba was greatly affected by, and in turn considerably influenced, the Dominion elections of October and November, 1900. Partly because Sir Charles Tupper had been for thirty years a chief supporter and friend of his father's, partly because Sir Charles had helped in the provincial elections, partly because he had been with him previously in Dominion politics, Mr. Hugh J. Macdonald consented in September to retire from the Manitoba premiership and help the veteran Conservative leader in the Federal campaign. Before definitely resigning, however, he accompanied Sir Charles and the Hon. George E. Foster in a tour of Ontario. In the later announcement that he was to be a candidate in the Liberal constituency of Brandon against the Hon. Charles Sifton, a clever member of the Dominion Government and the Liberal leader in the West, came one of the most dramatic incidents of the campaign. The battle in Brandon was keen and vigorous. It resulted in a victory for Mr. Sifton, and was one of the most significant Liberal successes of the campaign. For the time Mr. Macdonald retired from public life. His action necessitated his retirement from the Manitoba Government, and, on Oct. 29, a new Conservative ministry was sworn in, with R. P. Roblin as Premier and President of the Council, J. A. Davidson as Provincial Treasurer and Minister of Agriculture, D. H. McFadden as Provincial Secretary and Minister of Public Works, and the Hon. C. H. Campbell, Q. C., as Attorney-General, Railway Commissioner, and Minister of Education. Robert Rogers became a minister without portfolio, and Mr. Johnson retired from his similar place in the previous ministry. All the new ministers were re-elected.

Finances.—The financial situation in Manitoba, as shown on Dec. 31, 1899, indicated receipts of \$776,234 and expenditures of \$972,462 for the current year. The former sum included the Dominion subsidy of \$483,687, interest on school lands of \$23,196, land title fees of \$65,786, liquor licenses \$27,487, miscellaneous receipts making up the remainder. The chief items of expenditure were \$155,691 charged to the Finance Department, \$154,508 upon education, \$101,128 upon agriculture and immigration, \$59,780 paid to the Canadian Pacific Railroad and \$100,500 to the Northern Pacific, \$124,516 charged to the Attorney-General's department and \$187,524 to the Public Works Department. The gross debt of the province was given as \$8,190,688, and against this was a Dominion debt allowance of \$3,707,196. The position of the province in a financial sense was not satisfactory when the Macdonald Government took office. It was declared by the Conservative that Mr. Greenway's legacy in this connection included a bonded indebtedness of \$2,500,000, drainage debentures of \$300,000, unpaid railway subsidies of \$148,000, bank overdrafts of \$80,000, unpaid school grants of \$100,000, unpaid election expenses of

\$30,000, a federal subsidy of \$240,000 used to replace trust funds, and railway bonds of \$300,000 unsecured owing to the release of lands held as security. Early in the session of the new Legislature Messrs. G. H. Halse, C. A. Kennedy, and Campbell Bartlett were appointed a commission to inquire into the state of affairs. Their report, as presented on May 9, somewhat diminished the unpleasant character of these charges, but left much that was not capable of adequate explanation. They reported that they found the amount of the bank overdraft on general account to be \$76,036, the amount of trust funds used for general purposes to be \$15,485, and the amount of unpaid liabilities to be \$156,613. The commissioners said they found that the employees of the Government intrusted with the handling of public funds had not been required to furnish bonds, and the securities for investments made by the Government had not been kept in joint custody. In connection with the management of the Treasury Department, they reported that certain transactions appeared to have been irregular.

School Lands and Education.—For many years a much discussed question had been the right to direct provincial control of certain school lands valued at about \$300,000 and held in trust by the Dominion Government. In the Dominion session of 1899 a measure had passed the Commons handing this amount of money over to the province but the act was rejected by the Senate, mainly on the ground that it would go into the hands of a Liberal ministry in Manitoba and be used as a part of its general funds rather than utilized for the benefit of education. In June, however, Mr. Macdonald took up the old issue in behalf of the province, and a resolution was passed by the House of Assembly which, after reference to a previous memorial addressed to the Dominion Parliament on April 10, 1899, declared that, "in the opinion of this House, the time has arrived when the lands held by the Federal Government for school purposes in this province and the funds derived from the sale or other disposition of any of the same should be handed over, for the future administration thereof for such school purposes in manner as to the said province may seem advisable." No action has yet been taken by the federal authorities.

An interesting point came up about this time in connection with the school regulations of the province as they affected the Roman Catholic ministry, and the compromise of the famous Manitoba school question between the Laurier Government at Ottawa and the Greenway Government at Winnipeg in 1897. It was really an effort to reopen the controversy, and early in June a deputation of the Catholic schools committee waited on the Premier with a strong protest against the existing condition of affairs. Mr. Macdonald replied by letter as follows:

"I have given careful thought and attention to the question, and I am sorry to say that I fear it will be impossible to meet the wishes of the delegation which waited upon me. The public have been informed, both by Sir Wilfrid Laurier, the Premier of the Dominion of Canada, and the Hon. Thomas Greenway, who at the same time was Premier of the Province of Manitoba, that this vexed question was settled, and that the settlement had been reduced to writing and made law in the amendment to the school act which was passed in 1897."

An effort was then made to obtain relief from alleged disabilities at Ottawa, but Sir Wilfrid Laurier refused to take further action. The latest available statistics of education in Manitoba are

for 1898, and show the existence of 1,250 schools, 1,301 teachers; a school population of 57,431, an average school attendance of 24,958, and pupils numbering 44,070.

Agriculture.—For several years the farmers of Manitoba have complained of what was called the elevator monopoly—a practical protection accorded by the Canadian Pacific Railway to elevator owners, by which encouragement was given to the building and maintaining of these elevators in such a way as to place the shipping of grain at important points almost entirely in their hands. No one could ship grain in bulk, on cars, except through the elevators, and the capacity of the latter had to be at least 25,000 bushels, thus doing away with small warehouses. The system destroyed competition in buying, and the farmers complained of various charges and exactions which they deemed unfair. A commission of inquiry was appointed, and on April 4 it reported to this effect: "We consider that proper relief from the possibility of being compelled to sell under value and being unduly docked for clearing is only to be had by giving the fullest obtainable freedom in the way of shipping and selling grain. The law should require railways to furnish cars to farmers for the shipping of their own grain, and should allow the establishment at shipping points, if required, of flat warehouses, under proper regulations, by means of which a farmer who can not conveniently load on cars direct can, for a comparatively small sum, obtain for a limited number of days the use of a bin of the capacity of a car load. Though the furnishing of cars to farmers has been given as a privilege, they should with proper restrictions enjoy it as a legal right."

The crops of 1899 in this province exceeded all previous production. Wheat yielded 27,922,230 bushels; oats, 22,318,378 bushels; barley, 5,379,156 bushels; potatoes, 3,226,395 bushels; and various kinds of roots, 2,670,108 bushels, with a scattering production of flax, rye, and peas. The total was, in round figures, 62,000,000 bushels, against 53,000,000 in 1898. The number of horses in Manitoba in 1899 was 102,655; of cattle, 220,248; of sheep, 33,092; of swine, 66,011. The beef cattle exported were 12,000 in number, the stockers 3,500, and the total value of dairy products was \$470,559. In 1900 the crops were good, but exact figures were not available at the time of writing.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; 1,042,390 in 1890; and 1,190,050 in 1900. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, J. Walter Smith; Secretary of State, Wilfred Bateman; Comptroller, Joshua W. Hering; Treasurer, Murray Vandiver; Adjutant General, John S. Saunders; Attorney-General, Isidor Rayner; Superintendent of Education, M. Bates Stephens; Commissioner of Insurance, Lloyd Wilkinson; Commissioner of Public Lands, E. Stanley Toadvin—all Democrats; Chief Judge of the Court of Appeals, James McSherry; Associate Judges, David Fowler, A. Hunter Boyd, Henry Page, I. Thomas Jones, John B. Briscoe, Samuel D. Schmucker, and James A. Pearce; Clerk, Allan Rutherford—all Democrats except Schmucker and Rutherford, Republicans.

Population.—The following table exhibits the population of the State by counties, as deter-

mined by the decennial census, compared with similar returns for 1890:

COUNTIES.	1890.	1900.	Increase.
Allegany.....	41,571	53,994	12,123
Anne Arundel.....	34,094	40,018	5,924

Worcester.....	19,747	20,935	1,118

* Decrease.

Finances.—According to the report of the Comptroller for the fiscal year ending Sept. 30, 1900, the total treasury receipts were \$3,622,493.42, which, together with the balance of \$707,926 in the treasury on Sept. 30, 1899, and \$206,326.80 to the credit of the funds account, makes a total of \$4,536,746.22. The disbursements aggregated \$3,480,534.26, being \$169,189.81 less than in 1899. This decrease is accounted for by the fact that there was paid during the fiscal year of 1899 to the "consolidated loan of 1899" \$522,579.14, which was the proceeds of the bonds issued. The receipts for 1900 to the sinking funds, including the balances to the credit of those funds on Sept. 30, 1899, aggregated \$686,587, and are held in the sinking funds for the benefit of the loans mentioned, as follow: Consolidated loan of 1899, \$523,587; penitentiary loan, \$113,000; insane asylum loan, \$25,000; general sinking funds, \$25,000; total, \$686,587; deduct balances Sept. 30, 1899, \$374,813.18; actual receipts, \$311,773.82. The funded debt was shown to be at the close of the fiscal year \$6,309,326.13, an increase of \$600,000. This increase is accounted for by the issue on Jan. 1, 1900, of the remaining \$300,000 of the "consolidated loan of 1899" for the completion of the Fifth Regiment Armory, as authorized by the Legislature in 1898, together with the issuing on July 1, 1900, of a part of the "State building improvement loan," amounting to \$300,000, and authorized by the Legislature in 1900. As an offset to this interest-bearing debt, the State holds bonds, stocks, and cash aggregating \$3,424,057, leaving the net debt on Dec. 30, 1900, \$2,885,269.13.

River and Harbor Improvement.—The National Government authorized the expenditure of \$221,000 for the improvement of Spring Gardens Channel in Baltimore, with an appropriation of \$88,000 for the coming fiscal year. The total cash appropriation for the harbors of Maryland amounted to \$113,000, and in addition to the improvement of Spring Gardens Channel there was authorized the expenditure of \$5,000 each for Cambridge, Rockhall, Queenstown, Clayborne, and Breton Bay. The appropriations for the improvement of the rivers in Maryland were as follow: Choptank river, \$8,000; Chester river, from Crumpton to Jones's Landing, \$5,350; Warwick river, \$2,000; Pocomoke river, \$3,000; Elk river, \$10,000; Patuxent river, \$6,000.

Coal.—The total coal production of the year 1900 was 3,900,000 tons, against 5,080,248 tons in 1899. The value of this coal was \$4,173,000, compared with 1899, when the production was valued at \$4,318,211. The coal in 1900 was worth on an average \$1.07 a ton at the mine, while in 1899 it was worth only 85 cents a ton at the mine. The reduction in the output was due to the strike of the united mine workers, which lasted four months. The mine workers demanded 60 cents, but failed, and after four months of idleness returned to work at 55 cents a ton. An inadequate car supply interfered with the shipments of coal subsequent to the resumption of work. The shipments of coal over the Baltimore and Ohio Canal during the season aggregated 175,000 tons, compared with 192,423 tons in 1899.

Mason and Dixon's Line.—In 1900 the survey of the famous Mason and Dixon's line was begun by the United States Coast and Geodetic Survey, under the authority of a resurvey designated under the acts of Pennsylvania and Maryland for 1899 and 1900. It was to be made without expense to the States, but \$5,000 was appropriated by each State to be devoted to the expenses of subordinate members of the survey to the purchase and location of the monuments, and other contingent expenses connected with

the actual remarking of the line. The history of the original running of the famous Mason and Dixon's line was the result of an agreement between the Calverts and the Penns, concluded in 1760, after protracted negotiations. There had been a conflict in the grants of Maryland and Pennsylvania, and there were other complications affecting the titles. The Penns were fortunate in having friends at

JOHN WALTER SMITH,
GOVERNOR OF MARYLAND.

court, and Calvert was finally coerced into conceding everything Penn demanded. The original grant to Calvert placed the northern limit of his domain at the fortieth parallel, while the grant to Penn placed his territory north of Maryland. The map of Virginia made by John Smith represented the fortieth parallel as running below the head of the navigable waters of the Susquehanna, and it was urged by the Penns that the spirit of the grant, based upon the assumption that Smith's map was used, should be followed rather than the letter of the charter, which permitted Lord Baltimore to govern the inhabitants of the principal settlement in Penn's colony. On the other hand, the Calverts insisted upon the letter of the grant. A compromise resulted, and the claim for a portion of Pennsylvania was abandoned by Lord Baltimore. At that time a commission was appointed to survey the line between the two colonies, but its progress was so slow that Charles Mason and James Dixon were engaged to complete the work. They arrived in Philadelphia in November, 1764, and began their survey in the following spring. They continued work two years, reaching a point 244 miles from Delaware river and 36 miles short

of the northwest corner of Maryland, when their Indian guides left them, and they abandoned the work, which was completed many years afterward by other surveyors. Mason and Dixon did their work with the utmost care. Through the forests they cut a "vista" 8 feet wide, and set up a stone at the end of each mile. Every fifth stone was larger than the others, and had on the north side the arms of Thomas and Richard Penn, and on the south face the arms of Frederick, Lord Baltimore. The intermediate stones have the letter "P" on the northern and "M" on the southern surface. These stones were hauled as far as Fort Frederick, in Washington County, and it was found impossible to carry them farther through the mountains. The removal of many of the historic landmarks left the boundary line between Maryland and Pennsylvania in doubt in places; and it is to remedy this, as well as to perpetuate the historic line, that provision was made for the resurvey.

Legislative Session.—The regular biennial session of the Legislature began on Jan. 3, and continued until April 2. As elected, the Senate consisted of 15 Democrats and 11 Republicans, and the House of Delegates 65 Democrats and 26 Republicans. The Senate chose as its President John Hubner, Democrat, in preference to Stephenson A. Williams, Republican, while Lloyd Wilkinson, Democrat, was named Speaker of the House in preference to James De B. Walbach, Republican. There were 1,421 bills presented before the Legislature, of which 790 were passed by both houses. Among the more important measures that were enacted are the following:

Organizing the Board of Police Commissioners of Baltimore by taking the election of commissioners out of the Legislature, legislating the present board out of office, and giving the Governor the appointment of the board. The term of office is two years, and one of the three members must belong to the minority party.

Creating a Board of Police Examiners, consisting of 3 members, to be appointed by the Governor, with a salary of \$800 each, and with authority to appoint a clerk at \$1,200. This board is to examine applicants for places on the force, and all appointments to the force except marshal and chief of detectives are to be made from lists furnished by the Board of Examiners.

Increasing the present force by 80 policemen, 10 detectives, and 1 lieutenant of mounted police. This bill will increase the cost of the police department more than \$75,000 a year.

Authorizing an increase in the number of directors of the United Railways Company of Baltimore. It has a clause protecting the rights of the city, and requiring the principal office to be in Baltimore.

Repealing the clause of the new charter which authorizes the street car companies to charge 3 cents for transfers, and re-enacting it so as to require free transfers to be given under certain restrictions.

Appropriating \$3,000 annually, and empowering the Governor to employ an expert to examine the books of officials who have to account with the State treasury, and also those of institutions receiving State aid. This is the so-called State Auditor bill.

Reducing the price of gas in Baltimore from \$1.25 to \$1.10 for 1,000 feet.

Reorganizing the boards of county school commissioners, and requiring new boards to be appointed by the Governor.

Requiring employers to give employees time to vote.

Creating a board of charities to hear all applications for State aid by charitable and educational institutions.

Amending the charter of Baltimore, by authorizing the Mayor and Council to abolish the Water Registrar's office, and in several other particulars.

Giving the city three fourths of the money received for the liquor licenses paid by the clubs in the city.

Taxing spirits in bond. This is to meet the decision of the Court of Appeals declaring a former law invalid.

Two constitutional amendments which, if approved by the people, will give the city of Baltimore another legislative district, one additional Senator, and six delegates.

Creating the office of State Superintendent of Education, with a salary of \$3,000 and expenses.

Political.—In the election in November the vote for the presidential electors was as follows: Republican, 136,212; Democrat, 122,271; Prohibition, 4,582; Social Democrat, 908. Out of a total vote of 264,511, the Republican candidates received a plurality of 13,941. Six representatives for Congress were voted for with the following results: First District, William H. Jackson, Republican, who received 19,714 votes, against John P. Moore, Democrat, who received 18,173; Second District, A. A. Blackney, Republican, 27,710, as against J. F. C. Talbott, Democrat, 27,420; Third District, Frank C. Wachter, Republican, 21,641, as against Robert F. Leach, Jr., Democrat, 19,570; Fourth District, Charles R. Schirm, Republican, 21,932, as against J. W. Denny, Democrat, 20,149; Fifth District, S. E. Mudd, Republican, 20,866, as against B. H. Camalier, Democrat, 17,305; and Sixth District, George A. Pearre, Republican, 23,541, as against Charles A. Little, Democrat, 20,161.

MASSACHUSETTS, a New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; 2,238,943 in 1890; and 2,805,346 in 1900. Capital, Boston.

Government.—The State officers during the year were: Governor, William Murray Crane; Lieutenant Governor, John L. Bates; Secretary of State, William M. Olin; Treasurer, E. S. Bradford; Auditor, John W. Kimball; Attorney-General, H. M. Knowlton; Secretary of the Board of Education, Frank A. Hill; Secretary of the Board of Agriculture, James W. Stockwell; Insurance Commissioner, F. L. Cutting—all Republicans; Chief Justice of the Supreme Court, Oliver Wendell Holmes; Associate Justices, Marcus P. Knowlton, James M. Morton, John Lathrop, James M. Barker, John W. Hammond, and William C. Loring.

Population.—The population of the State, according to the Federal census of 1900, is 2,805,346—a gain in ten years of about 25 per cent. Of the 14 counties, 12 show gain and 2 decrease. The figures, by counties, for 1890 and 1900 are as follow:

COUNTIES.	1890.	1900.	COUNTIES.	1890.	1900.
Barnstable..	29,172	27,826	Hampshire.	51,869	58,820
Berkshire ..	81,108	95,687	Middlesex..	431,167	565,096
Bristol.....	186,465	253,029	Nantucket..	3,268	3,006
Dukes.....	4,369	4,561	Norfolk....	118,950	151,539
Essex.....	299,995	357,090	Plymouth..	92,700	118,985
Franklin...	88,610	41,909	Suffolk....	494,780	611,417
Hampden..	135,718	175,608	Worcester..	280,787	346,958

Of the 33 incorporated cities in Massachusetts, 8 have between 12,000 and 20,000 inhabitants, 5 have between 20,000 and 25,000 inhabitants, and 20 have more than 25,000 inhabitants. All the 20 principal cities show an increase in population since 1890, the largest percentages being 53.5 for Somerville and 53.2 for New Bedford, and the smallest (5.9) for Gloucester. Boston, with 560,892 inhabitants in 1900, shows an increase of 25 per cent. since 1890, which is a slightly higher rate of increase than that for the preceding decade, when it was 23.6 per cent. Worcester, the second largest city in the State, had a population in 1900 of 118,421, compared with 84,655 in 1890, constituting an increase during the ten years of 33,700, or 39.8 per cent. Fall River, with 104,863 inhabitants, is the third city in the State, and shows an increase since 1890 of nearly 41 per cent. Lowell, with 94,969, and Cambridge, with 91,886 inhabitants, rank fourth and fifth among the cities of the State, the next largest city being Lynn, with a population in 1900 of 68,513.

Finances.—The gross debt of the State is divided into two classes—the indebtedness for which the whole State is directly liable and the indebtedness for the payment of which certain cities and towns are liable. These two classes of indebtedness may be described as the actual State debt and the contingent debt. From each of these classes of indebtedness must be deducted the accumulations in the sinking funds applicable to them, in order to show the net actual State debt and the net contingent debt. The actual State debt is made up of the following loans: Abolition of grade crossings loan, \$8,000,000; Fitchburg Railroad securities loan, \$5,000,000; harbor improvement loan, \$500,000; Massachusetts Hospital for Consumptives loan, \$172,500; Massachusetts Hospital for Epileptics loan, \$270,450; Massachusetts war loan, \$1,230,000; Medfield Insane Asylum loan, \$1,025,000; metropolitan parks loan, series two, \$1,512,500; State highway loan, \$3,100,000; four Statehouse loans, \$6,185,000; Boston, Hartford and Erie Railroad loan, \$973.30; total actual State debt, \$26,996,423.30.

The sinking funds applicable to the actual State debt are: Abolition of grade crossings loan sinking fund, \$718,147.11; Fitchburg Railroad securities loan sinking fund, \$10,000,000; Boston, Hartford and Erie Railroad loan sinking fund, \$973.30; harbor improvement loan sinking fund, \$71,660.28; Medfield Insane Asylum loan sinking fund, \$220,559.85; prison and hospital loan sinking fund, \$41,906.26; State highway loan sinking fund, \$283,333.99; Statehouse loans sinking fund, \$3,858,031.85; Massachusetts war loan sinking fund, \$97,644.21; total, \$15,292,256.85.

One of the Statehouse loans (\$2,335,000) will become due July 1, 1901, and will be paid out of the Statehouse loans sinking fund.

The contingent debt is as follows: Armory loan, \$1,460,000; metropolitan parks loans, \$8,317,500; metropolitan sewerage loans, \$8,265,912; metropolitan water loan, \$21,000,000; total, \$39,043,412.

The accumulations in the sinking funds applicable to the payment of the contingent debt are: Armory loan sinking fund, \$435,718.67; metropolitan parks loan sinking fund, \$467,288.13; metropolitan sewerage loan sinking fund, \$454,520.57; metropolitan water loan sinking fund, \$1,573,619.72; total, \$2,931,147.09.

Of the net contingent debt of \$36,112,264.91, \$34,652,264.91 is to be paid by the cities and towns in the metropolitan water, parks, and sewerage districts. This sum will be increased many millions by loans already authorized but not yet issued.

The Statutes.—In 1896 a commission was appointed to consolidate and arrange the statutes. The work has been completed, and is in the hands of the printer.

Education.—The public schools were kept open in 1900 on an average nine and a half months—a month and a half more than the law requires. The expenditure for school support, exclusive of buildings, was \$10,677,486; for buildings, \$3,148,757. Of the total expenditure for both purposes, all but \$275,849 came from local taxation. The local taxation for school support amounted to \$3.62 for each \$1,000 of the State's valuation, or the same as in 1899; for school buildings, to \$1.09, or 21 cents less than in 1899.

In the spring a fund of \$50,000, guaranteed by Harvard University, was raised for the purpose of bringing 2,000 Cuban teachers to attend the Harvard Summer School, and that number of teachers came. Phillips Brooks Memorial Hall was kept open for the exclusive use of the woman teachers, with a Spanish-speaking matron in charge. Most of the instruction was given in Spanish.

By the will of the Hon. Dorman B. Eaton Harvard University has a bequest of \$100,000, to found a professorship of the science of government. The States that had more than 100 students in the university in 1900 were: Massachusetts, 2,409; New York, 430; Ohio, 155; Pennsylvania, 149; Illinois, 148; Maine, 121.

Civil Service.—The Civil Service Commissioners report an increase in the number of applicants examined for the classified public service of the Commonwealth and the cities. There are now under the protection of civil service rules about 8,000 public employees, with an aggregate compensation of, approximately, \$8,000,000. The Governor recommends that the Legislature give the commissioners more authority to deal with violations of the law.

The Insane.—In his message, Gov. Crane says there is urgent need of additional accommodations for the increasing number of the insane in the hospitals and asylums. These institutions are now so crowded that it is necessary to make up each night in the corridors and day spaces about 1,000 cot beds. The State care act provides that the State shall assume, Jan. 1, 1904, the support, and so far as possible the care, of the insane who may be in the city and town almshouses. This class now numbers about 900. The increase in the population of the insane hospitals and asylums during the past ten years has averaged about 300 annually. The Board of Insanity, in its report, recommends the adoption of a policy to reduce overcrowding by 100 each year, and at the same time to provide for the annual increase of 300.

The Statehouse.—The cost on construction account of the Statehouse extension is \$3,522,313.79; for the restoration of the Bulfinch front, \$335,496.37; cost of lands purchased, \$1,669,859.88; cost of furniture, \$576,446.93; total cost of land, buildings, and furniture, \$6,104,116.97. The Governor says: "All the bills have been paid, and the unexpended balance will be quite sufficient to cover the cost of the paintings and the completion of Memorial Hall."

Political.—At the election, in November, the following State officers—all Republicans—were chosen: Governor, Winthrop Murray Crane; Lieutenant Governor, John L. Bates; Secretary, William M. Olin; Treasurer, Edward S. Bradford; Auditor, Henry E. Turner; Attorney-General, Hosea M. Knowlton. To the Executive Council 7 Republicans and 1 Democrat were chosen. The Senate consists of 32 Republicans and 8 Democrats; the House of 177 Republicans, 60 Demo-

crats, and 2 others. Of the 13 Congressmen elected, 10 are Republicans. The vote on presidential electors gave McKinley, 239,495; Bryan, 156,507.

METALLURGY. Iron and Steel.—Having mentioned the part played in the industrial evolution of the world by the iron and steel metallurgists as evident to all, Sir W. C. Roberts-Austen said in his address at the meeting of the Iron and Steel Institute that the fact that they have contributed with commensurate success to the advancement of pure science is less generally known. He therefore spoke of some of the instances in which this had been the case. The carburization of iron offered the first example in which the diffusion of solids in solids had been observed. The study conducted by metallurgists of the associations of carbon and iron afforded the most complicated case yet known, and indeed the only one which had been worked out, of metallic solid solutions. It presented, moreover, a unique instance of the importance of allotropy in connection with metals. Metallurgists had carefully investigated, and conducted daily operations of vast industrial importance, in which the presence of a third body enabled either elementary bodies or compounds to react on each other. Habitually conducting operations at high temperatures, which often inverted ordinary chemical reactions, had led to the acquisition of a mass of information as to the relations that occur and of the compounds that are formed under such conditions. Pyrometric records had, moreover, enabled the equilibrium of the less fusible metals in their liquid as well as their solid state to be studied—a branch of work which chemists generally have not been in a position to undertake. The necessity of submitting the physical and mechanical properties of iron and its alloys to rigorous tests as a routine operation in works has afforded a rich store of information as to the molecular constitution not only of metals, but of matter generally. Metallurgists have to deal with cases in which a mass of metal is acted upon by added matter in proportions that are too minute to intervene directly by the formation of chemical compounds with the whole of the mass, while in some cases no compounds are formed. The influence of the atom must, therefore, be more or less directly exerted. The author believed that the most comprehensive view possible to take of the achievements of British and French investigators and experimenters admitted of concise expression in the brief statement that the main characteristic of the metallurgical work of the century had shown the interdependence of minute quantities of matter on the masses of metal in which they are hidden. The century's work had, moreover, to a great extent, revealed the way in which the small quantities of added matter act, and it had been shown that they exert profound influence even in solid metals. The fact that certain varieties of steel are "solid solution" is now accepted, and the recognition of molecular movements in solids has become familiar. In no branch of the work had the outcome of such knowledge been more striking than the one to which all the members of the Institute were in different ways devoted. Metallurgists have again and again shown that no dependence is to be placed on the once famous maxim of the Duc de la Rochefoucauld that those who apply themselves too much to little things commonly become incapable of great ones. The influence of the apparently little on the obviously great is recognized, and the result is remarkable. By adding small amounts of matter to iron, the metallurgist has literally made it possible to change the aspect of the world.

Speaking of the several universal expositions that have been held in Paris, the author said that the progress made in the successive periods between them might be indicated by the three words, "novelty," "quantity," and "quality." In 1855 the metallurgy of iron and steel was almost stationary, and technical workers were seeking fresh guidance. In 1867 the results of new efforts were shown in the improvements contributed through the labors of Bessemer, Martin, Siemens, Cowper, and Armstrong. In 1878 the extraordinary development the new processes had attained was shown, and the quantity of the new products was remarkable. Then came the period during which the quality of material improved, and the metallurgical exhibits in 1889 showed that a high point of perfection had been reached.

The Grondal-Dellwick method of magnetic concentration of iron ores is used with great success at Pitkäranta, Finland. Magnetite is worked there in large quantities, but the presence of sulphides—copper pyrites and zinc blende—unfit it for use unless these minerals can be removed. To do this the ore is first finely crushed in a net-crushing ball mill. The separator consists of two rotating cylindrical portions—the separator proper and the discharging drum. The former comprises four circular electro-magnets, with ends separated by brass rings, but brought together at the shaft. The discharging drums consist of eight concentric rows of soft iron pins, set in a wooden drum. Pulp is conveyed to the magnets, which attract the magnetic part, while the nonmagnetic part flies away. The points of the discharging drum receive temporarily induced magnetism as they approach the magnets. The result of this arrangement is that particles of iron ore adhering to the magnets are transferred to the former. Whenever these iron points recede from the magnets they lose their induced magnetism, the grains drop off, and are thus delivered to a separate trough, by means of which they are carried away. The process is automatic, and one workman can look after several separators.

In a paper on the use of finely divided iron ore obtained by concentrating processes, Prof. J. Wiborg, of Stockholm, said that the advantage arising from magnetic and other methods of separation was very largely qualified by the circumstance that the product or concentrate was usually obtained as a comparatively fine powder, which limited its utility to the smelter when compared with that of similar or even poorer ores obtained in large masses. The question, therefore, of how such material could best be applied was now becoming of importance. The author showed how this concentrate could be utilized by direct addition to the charges in the blast furnace by agglomeration previously to charging as a refining or softening material in the open-hearth furnace, and for the production of sponge iron for use in the open-hearth furnace. The paper concluded with an account of a furnace the author had designed for reducing pulverulent ores.

A new mechanical apparatus for casting sandless pig iron is described by Mr. R. Wainford, of Stoke-on-Trent, as capable of maintaining a good crystalline fracture equal to that of the pig iron made in sand beds at a very reduced cost of production. It is competent to deal with 60 tons of iron per hour; and, assuming that the workmen have eight-hour shifts, the labor cost is about a half penny per ton cast.

From results obtained in his regular business practice rather than from laboratory experiments, Mr. Charles James has found that in annealing white iron the only change effected is one of con-

dition in the carbon, a large proportion of which passes from the combined into what is for convenience called the graphitic state, although the condition is different from that of graphite either as found free in nature or as modified out from gray iron during cooling. The substance is an allotropic form of graphite corresponding with what Ledebur has called "tempering graphitic carbon," and differs from graphite and from amorphous carbon in specific gravity, specific heat, and calorific power. It can, however, be separated from the iron and chemically determined in the same manner as graphite. The author found, contrary to a statement of Ledebur that iron containing this allotropic graphite hardened and tempered exceedingly well, and when not fully developed by overannealing the whole of the carbon will pass into the hardening state and leave the iron without a trace of free carbon. By prolonged heating this allotropic form becomes changed into graphite identical with that found in gray iron, when it occupies a similar position in the iron structure and is very injurious to the physical qualities of the material. The effect of other components of iron on the carbon change has been investigated by the author as to silicon, manganese, and phosphorus. Silicon and manganese exert great influence upon the carbon during the annealing process. The presence of silicon is a necessary condition of the change. Indeed, the relative amount of carbon that can be changed from the combined to the graphitic state during annealing seems to be directly proportionate to the amount of silicon present. The influence of manganese is not so readily marked as that of silicon, and its action is further obscured by the high silicon which always accompanies high manganese. Comparatively high manganese, however, assists the change and shortens the time necessary for its completion. The action of silicon is apparently of an essentially different character from that of manganese. That of silicon is direct upon the carbon, while the influence of manganese is only indirect through the silicon by protecting it from oxidation during the melting of the iron, and so causing the percentage of silicon in the casting to be higher than it would be if the manganese had been more completely oxidized from the bath. In every case irons low in silicon and manganese are practically worthless after annealing. Such irons may be softened by the process so as to machine easily, but are always deficient in tenacity. They generally have a white fracture, in appearance like that of a 30-per-cent. carbon Bessemer steel bar. Low carbon—at least comparatively low carbon—does not prevent the change in the carbon condition from taking place. This change can also be produced by the author's method of annealing in other combinations of iron and carbon than white iron. The carbon change described, though gradual, was found to be coextensive throughout any given section of the casting.

The results of the researches of Dr. A. Stansfield into the solution theory of carburized iron are that carbon is less soluble in iron when presented in the form of graphite than when presented in the form of cementite, and that the apparent reversal of this in steel is due partly to the absence of nuclei of graphite, on which further deposits might take place; partly to the length of time required for the separation of the graphite, involving as it does the gradual passage of carbon through the iron to reach the nuclei; and partly to the mechanical pressure which must oppose the formation of graphite in solid steel.

In his experiments on the effect of aluminum

on carbon in cast iron, H. W. Waldron has observed that, as compared with silicon, traces of aluminum have a greater effect in producing graphite in the material, although the whole of the carbon is never thrown down as such by it, as occurs with silicon when present in active quantities. With less than 0.5 per cent. of silicon, practically no separation of graphite takes place. A few comparative tests showed that 0.35 per cent. of aluminum reduced the resistance by nearly 60 per cent. when slowly cooled, and that further quantities still rendered the metal soft, but not quite so much so. Rapid cooling increased the resistance by compression of those alloys, but not in anything approaching the original strength of the cast iron.

One of the features of the Paris meeting of the Iron and Steel Institute was a demonstration by Mr. J. E. Stead, of Middlesborough, of the ways in which iron is affected by phosphorus, more especially in conjunction with carbon. According to the late Dr. Percy, there are at least seven definite chemical compounds of phosphorus and iron. The way in which carbon drives out phosphorus was illustrated in a manner which may possibly lead to further important results. Mr. Stead pointed out that the white constituent in gray iron was formerly looked on as carbide, but it had been proved to be phosphide. He exhibited a highly phosphoric specimen of iron having crystals from $1\frac{1}{2}$ to 2 inches across. He explained how, following the researches of Sir W. C. Roberts-Austen and of Dr. Stansfield, he accounted for brittle and imperfect steel by the formation of a eutectic alloy. The substitution of carbon for phosphorus led him to suppose that pieces of steel might be welded together without pressure by placing plates of steel together with layers of phosphide between, and he had succeeded in obtaining this result. He explained, however, that the junction was more in the nature of a brazed joint than a weld.

From experiments with wrought iron and various steels exposed to sea water, river water, and the weather for two periods of about a year each, H. M. Howe has drawn the conclusion that the difference in the rate of corrosion between wrought iron and soft steel is rarely enough to be of much moment, except in the case, perhaps, of marine steam boilers; and that the ratio of corrosion of given soft steel to that of given wrought iron may vary greatly with the conditions of exposure. In view of the widespread belief that wrought iron oxidizes less readily than soft steel, the author puts forward a theory, based on the different protective powers of the "cinder" or "scale" flakes in wrought iron and the cementite flakes in soft steel, to explain the discrepancy between the belief and the results obtained in his experiments.

The question of the most desirable form of steel ingot for gun tubes and propeller shafts was dealt with at the spring meeting of the British Iron and Steel Institute in a paper by Mr. F. J. R. Carulla. Although the circular form of ingot possesses many advantages, it has the serious drawback of being liable to develop skin cracks during cooling. The author said that the octagonal ingot, said to have been used in the gun factories at Woolwich, was a sounder form, but a hexagon was better, and a square section the best. The form of ingot which had come into use, but not so generally as its merits deserved, was a hexagonal section with concave sides, each of which offered the resistance of the arch to pressures arising from within, and which are set up by the expansion of the metal in cooling.

The Taylor-White tool-steel process in use at

the shops of the Bethlehem Steel Company, while the details of it have not yet been published, is understood to be a special heat treatment of a peculiar brand of self-hardening tool steel. It is said to be exceedingly simple and inexpensive, and is automatic in action. The process is applied after the tool has been dressed to shape, and the effects of the treatment penetrate through the steel. It has been applied to a number of standard tool steels with increase of their efficiency, but the best results are obtained from a special composition. Steel treated by this process has the quality of retaining a degree of hardness at a red heat, and it is possible for tools made of it to cut at a speed great enough to heat the point of the tool to redness. Cutting steel with a tool thus treated leaves an unusually smooth finish on the work, thus greatly decreasing the labor of finishing. This special steel forges so readily that tools of difficult and irregular shape can be made from it. A simple rapid method of annealing the steel has been found by which tools may be easily machined to shape, making it applicable to twist drills, chasers, inserted cuttings, etc.

The investigations of Mr. A. L. Colby, as described by him in a paper read before the American Section of the International Association, go to show that small percentages of copper have no deleterious effect upon the physical properties of steel. Experiments made with steel containing 0.565 per cent. of copper upon strength and elongation resulted satisfactorily, as also did those with high carbon steel having a similar copper content. Bars containing this proportion of copper responded well to bending and quenching tests, but some bars bent transversely to the direction of rolling developed cracks. The material was successfully welded. Experiments were referred to which showed that copper has little tendency to segregate from a steel ingot. The author thinks that good steel may contain as much as 1 per cent. of copper without suffering, provided only that the sulphur content is not too high, in which case the metal is liable to crack in rolling. But even if the proportion of sulphur is as large as 0.05 per cent. in steel in which as much as 0.75 per cent. of copper is present, there is not much danger of its cracking while being rolled.

The progress in the use of mild steel for shipbuilding purposes, said Mr. B. Martell before the Institution for Naval Architects, may be judged from the fact that while in 1876 7 steel vessels, of 4,470 tons, were classed in Lloyd's Register, and 435 iron vessels, of 517,692 tons, the record for 1885 showed 119 steel vessels, of 165,437 tons, as compared with 260 iron vessels, of 290,429 tons. As wood was superseded by iron as a material for shipbuilding, so in its turn iron has given place to steel. Of the total output of the United Kingdom during the past year (1899), 98.8 per cent. of the tonnage was built of steel and 1.1 per cent. of iron. The iron tonnage was principally made up of trawlers, and comprised no vessels of more than 303 tons. Experience has shown that where proper care is taken to cleanse and paint the surface thoroughly, the deterioration of steel is not appreciably greater than that of iron. In some parts, however, such as the deck plating and plating of inner bottoms and floors under boilers, steel appears to be more liable to deteriorate, and in consequence of this iron is often used in those parts of vessels otherwise constructed of steel.

In respect to microscopical analysis in steel industries, Mr. C. H. Ridesdale has expressed the opinion that the stage has been reached when from the time of receiving a sample it can be sectioned, ground, etched, examined, photographed,

and worked into a finished print in about two hours. This is less time than that in which the analysis for carbon, silicon, phosphorus, and manganese is performed, to say nothing of sulphur, microscopic examination, and other evidences. Mr. Alfred Harvey remarked in a discussion of Mr. Ridesdale's paper that the special point on which microscopical examination gives information was the particular heat treatment to which steel had been subjected, and it was in this branch that more assistance might be expected than in any other.

The breaking of a rail at St. Neots station on the Great Northern Railroad of England into 17 pieces, in 1895, led to the appointment of a committee of experts to investigate the question of the loss of strength in steel rails caused by prolonged use. Each member of the committee took a special feature of the steel, with particular reference to this rail, as the subject for his investigation. The St. Neots rail was found to be of ordinary composition, and under the mechanical tests of variable, but on the whole good, quality. Its defects were brought out by microscopical examination. Good rail steel, according to Roberts-Austen, consists of ferrite, or iron free from carbon, and pearlite, a combination of alternate bands of ferrite and cementite. Well-developed pearlite with a conspicuous banded structure is characteristic of a good rail steel. When, however, steel is hardened by quenching the pearlite disappears, and the whole mass consists of interlacing crystalline fibers devoid of banded structure, and is called martensite. Sir W. C. Roberts-Austen says concerning this, that "the detection of martensite in a rail should at once cause it to be viewed with extreme suspicion, as showing that the rail is too hard locally to be safe to use." In the St. Neots rail a surface layer about $\frac{1}{10}$ of an inch thick existed, in which the carbide was in the form of martensite. Martensite was also found in small patches in some other worn and broken rails, but to a far less extent. In the inquiry as to how far this structure could account for the brittleness of the rail, it appeared that the rolling surface of the St. Neots rail was traversed by a number of transverse cracks of various depths. The upper surfaces of rails are subject to tension over chairs by the weight of passing trains applied between the chairs, and cracks are formed in this way. It was found that a heavy steel rail nicked with a chisel to the depth of $\frac{1}{4}$ of an inch broke under the impact of 600 weight let fall from a height of 12 feet, while the same rail, if not previously nicked, resisted successfully the fall of a ton from the height of 20 feet. The loss of strength due to these minute cracks is therefore amazing, and is accounted for by supposing that shallow nicks are readily induced by shock to spread through the mass. Yet as minute transverse fissures are, according to Prof. Unwin, common on the surface of old rails, while few of them break on the road, it must be rare for them to spread into the substance of the rail. All old rails become "hammer hardened" on the surface by long use, and their strength and percentage of elongation may be increased by annealing, but no clear case of any production of martensite in this way could be obtained, and what induced its formation in rails was not clearly determined. Roberts-Austen quotes an experiment which points to the probability that local heating of a rail by skidding, followed as it would be by rapid abstraction of the heat by the mass of the cold rail, can produce patches of martensite. Though the investigation is not definitely satis-

factory, one of its results is the illustration it affords of the fact that steel possesses a complex structure that can be studied with the microscope; that this structure varies greatly with the mechanical and thermal treatment to which it has been subjected; and that the durability of the rail depends on its structure. It was found from the mechanical tests that rails generally break near their ends, "owing to greater straining action due to discontinuity at the joint," and that the fish joints are an unavoidable source of danger.

The limonites, or "brown iron ores," which are used almost entirely in Virginia, and to a large extent in Tennessee and Alabama, are found principally in the valley along the Appalachian mountains extending from Canada to middle Alabama. The deposits, while they can not be called seams, are generally found along certain definite lines, the ore occurring in lenticular masses, sometimes overlying and sometimes alone, but always inclosed in clay. On account of its intimate association with clay, this ore universally requires washing to fit it for the furnace. The irregularity of the size in which it occurs (from the size of a pinhead to boulders weighing several tons), the richness of the material, and the sand rock or "white horse" encountered are mentioned by Mr. J. C. Foster as some of the uncertainties to be contended with in working the ore. The percentage of iron varies widely in different localities from an average of not more than 45 per cent. in Pennsylvania and Virginia to an average of 50 per cent. in the furnace at Sheffield, north Alabama, and adjacent parts of Tennessee; and within this monthly or yearly average it ranges greatly from day to day.

Among the conditions enumerated in an article in the *Chemiker Zeitung* as indispensable for a protective coating for iron ships that shall meet the requirements of service are that the composition should protect the ship's hull from corrosion; that it should form a smooth surface, so as to decrease the friction; and that it should dry quickly, so that the cleansing of the submarine parts of the hull and the application of a double coating can be done in a single day. In new steel vessels the black scale on the plates must be removed before applying the coating. Preference is given among the paint compositions which have been used for this work to that proposed by Rahtjen, which consists of a solution of shellac in spirit as the vehicle, with iron oxide and a small proportion of linseed oil, for the first or insulating coating, and the same materials with the addition of arsenic and quicksilver for the second coat. These compositions are highly commended for their permanency—for the shellac vehicle is but little acted upon by the salt of the sea water. The attachment of marine growths to the hull is prevented by the slow action of the sea water on the mercury of the second coating, causing the formation of the poisonous mercuric chloride. These paints have the further advantage of drying quickly. Their defects arise from the smallness of the quantity of mercury that can be incorporated and the gradual decrease of their effectiveness through the slight solubility of the shellac. Copper and mercury have been found the best mineral poisons to incorporate with the paints.

The most severe tests of the durability of preservative paints for iron work, as described by Mr. Harry Smith before the Newcastle section of the Society of Chemical Industry, consists of painting shallow dishes with the pigment and filling them with water, which is allowed to evaporate slowly. The red lead paints came best out of this trial, being practically unaffected. The

zinc whites and white leads came next. All the other paints suffered badly, boiled oil the worst. When painted iron slips were merely exposed to the weather, and when the slips were constantly immersed in water, the results were similar. Good iron oxide was not far behind the lead and zinc paints. Iron oxide makes a tougher paint than red lead, and is, further, more convenient to use. Zinc white is preferable to white lead. The Forth Bridge ironwork is cleaned and painted outside at intervals of three years with a mixture of red lead and iron oxide paint, followed by a finishing coat of brown oxide paint. Where the salt water sprays the ironwork, this is scraped and painted once a year.

Gold, Silver, and Platinum.—Speaking in the Institute of Mining and Metallurgy on the readiness with which a little grease affects the conditions of gold washing, W. S. Welton remarked that the mere touch of a speck of gold with the finger will cause the gold or sand to rise to the surface of water, where it continues to flow. The effect is apparently brought about by a minute portion of grease from the fingers becoming attached to the particles. The disastrous effects which may be produced in amalgamation of gold or silver by a minute particle of oil, petroleum, or resin in the water are remarkable. These substances appear to be specially attracted by gold and mercury, and for this reason, at hydraulic mines, it has been found necessary to prohibit washing clothes, dishes, etc., in ditches and streams, and dumping into ditches and sluices. Mercury contaminated with grease or resin becomes sluggish in running. Comparatively large grains of gold will float upon its surface without becoming amalgamated. The brightness of the metal is changed to a dull lead color, and it will "flour" easily. Distillation will not purify mercury from grease or resin, for that goes over too. The author has found great benefit from washing mercury in a strong solution of potash obtained by leaching wood ashes. Flouring and "sickening" are thus overcome, and the yield of gold is much increased.

In the process of J. Diether and M. Merz for winning gold from refractory ores the ores are mixed with alkali sulphide and sulphur, or with substances that yield those products when heated, and the mixture is raised to a red heat, which is kept up for a short time. It is then leached out with water, sulphur being added if necessary. The gold is precipitated together with a gelatinous mass of colloid material or in a pulverulent condition, and may be separated by means of a filter press or otherwise.

Telluride or other ores in which the gold is or appears to be combined with such an element as tellurium, antimony, or arsenic are treated in a patented process at the Golden Link Consolidated gold mines in closed vessels with a sufficient quantity of a weak solution of a polysulphide of an alkali or alkaline earth metal, to dissolve the tellurium and other bodies without extracting any gold. When heated to from 100° to 200° C. in the closed vessel, and thus exposed to the combined action of heat and pressure for from one to two hours, the action should be complete, especially if agitation is resorted to. The solution contains the tellurium, which may be recovered from it, and should have extracted no appreciable amount of gold. The residue containing the whole of the precious metal may, after washing, be treated with a cyanide solution or otherwise.

In May's gold extraction process, the ore after being crushed is exposed to the action of a solution of caustic alkali or alkaline carbonate con-

tained in specially designed vats, heated by waste steam, and kept in a state of agitation for from one to three hours. By this means the extraction of the total gold contents from refractory ore was greatly facilitated. Ores, slimes, etc., after being subjected to the action of the chemicals, are ready for treatment by amalgamation.

It has been observed by W. Witter that at a gold mill in the province of Småland, Sweden, where the water used in the stamp mill is taken from a river running from peat moors, while the amalgamation of the ores takes place without difficulty in seasons of full water, at periods of low water and when the weather is dry the copper plates are covered with a green slime, which almost prevents the mercury from taking up any gold. This effect of the water remained, notwithstanding all methods employed to counteract it. As soon as the green slime was rubbed off the plates it formed again rapidly, and it finally became necessary to stop amalgamation during the dry season. Yet experiments made in the laboratory at Hamburg with exposure of bright copper plates to the water led to no result.

In a course of Cantor lectures before the British Society of Arts on the nature and yield of metaliferous deposits, Mr. Brewster H. Brough said of gold, that in 1898, of a total product of £57,500,000, the Transvaal produced 27.6 per cent., Australasia 22.5 per cent., the United States 22.1 per cent., Russia 8.8 per cent., Canada 4.8 per cent., Mexico 3 per cent., India 2.7 per cent., and China 2.1 per cent. Thus the Transvaal, Australasia, and the United States together produced 72 per cent. of the whole. In view of the present conditions and prospects, the lecturer concluded that there were no signs of failure in the world's gold production.

For the treatment of gold and silver containing considerable quantities of zinc, for which ordinary retorts are not suitable, B. Sadler has patented a peculiarly constructed retort. It has a body of fire clay or equivalent material with its inner surface coated with a sintering substance adapted to combine chemically under suitable firing with the fire clay and also with the basic material. This sintering substance may also be applied to the more exposed parts of the outer surface of the fire clay. A further lining or coating of basic matter is then applied to the fire clay. The entire body is subjected immediately before using to firing at a temperature ranging about 1,500° F. for two or three days. With a retort of this nature the ore after roasting can be satisfactorily freed from zinc by distillation, while the gold, silver, copper, iron, and about 60 per cent. of the lead are left in the residue, which, being oxidized and containing some carbon, is suitable for treatment in a smelting furnace. The patentee defines as the essential feature of his process the conducting of the distillation under such conditions as will exclude the corrosive action and mischievous chemical combinations which would result if the oxides or corrosive agents had access to the fire clay or other ingredients of the retort for which they have chemical affinity, and in combination with which their action would be destructive.

The German official tests for silver-plated goods are chromate and sulphide reagents. The chromate reagent is a mixture of equal weights of potassium bichromate and nitric acid. A drop of this liquid on the plated surface leaves a brown or red stain on the silver. This reagent, even in a dilute form, is not available when the coating of silver is very thin. The sulphide reagent is a 1.5-per-cent. solution of sodium disulphide. A drop of this should leave a gray stain, but the

results are often very doubtful. A. Munkert proposes dissolving the layer of silver from the goods and testing the solution. The best solvent is a mixture of 10 cubic centimetres of concentrated sulphuric acid with 5 drops of pure nitric acid, both acids being free from chlorine. The metal to be tested is cleaned with alcohol and ether or chloroform, and is then placed in a dry test tube and covered with the acid mixture. The silver coating dissolves readily in the cold, and when the color of the underlying metal is clearly visible the acid is poured off, diluted with twice its volume of water, and one or two drops of dilute hydrochloric acid 1:10 are added. The extent of the turbidity viewed against black paper is to some extent an indication of the quantity of silver, but in the case of large articles the silver may be estimated quantitatively.

Of 165,000,000 ounces of silver extracted in 1898, Mexico produced 34.4 per cent., the United States 33 per cent., and Australasia 7.3 per cent. Less than half the world's supply was obtained from silver ores. The remainder was procured from the metallurgical treatment of other ores in which silver was an accessory constituent. Since these ores would continue to be mined for the other metals they contained a steady supply of silver was assured, while a slight rise in the price of silver would enable many deposits of true silver ores now untouched to be worked.

The only places where platinum is known to occur in North America otherwise than as a mineral curiosity are in California, Oregon, and British Columbia. Many reports of its occurrence were not substantiated when Mr. D. T. Day made his investigation of the subject. Although a number of deposits are known on the Pacific coast, the platinum in them is very fine and difficult to save. Most of the platinum product has come from inland diggings, where the grains are closer, particularly from the placers of the American river and those in Plumas, Shasta, Trinity, and Siskiyou Counties, California. These occurrences confirm the idea that the platinum originates in the serpentine rock in which the region abounds, for the platinum-bearing gravels are sure to be associated with some prominent serpentine ridge. The value of platinum metals in a large number of the platinum-bearing gold sands of California and Oregon ranges from nil to \$1,934 per ton. They contain generally less platinum than gold, but occasionally more, even up to three times the quantity, platinum being generally less than the other platinum metals, in proportions ranging from one sixth to one half.

Aluminum.—Speaking in the Franklin Institute of recent advances in the aluminum industry, Prof. Joseph W. Richards said that in the line of pure metallurgy, or reduction and refining, there was little to chronicle. The process of reduction had certainly been somewhat improved in details, but in principle it was the same as the Hall process of ten years ago. The operators of the process were naturally averse to publishing the details of their method, but it might be said that all the items of expense had been gradually notched down, so that the cost price of the metal had been reduced to about 20 cents a pound, while its selling price was a little more than 30 cents in the United States and 25 cents abroad. As was proved by certain instances adduced by the author, aluminum has become cheaper for almost every practical purpose for which it can be used than all the common metals excepting zinc, lead, and iron. In verifying this statement it should be borne in mind that aluminum is only about one third the weight of these other metals, and that

it is the cost of one third of a pound of it that is to be compared with the cost of one pound of them. The labors of metallurgists in searching for light strong alloys of aluminum are bearing fruit in abundance. Aside from its color, aluminum resembles copper in many of its qualities, and especially in that both metals are soft and rather weak, susceptible of being greatly hardened when alloyed. Five per cent. of copper, nickel, or manganese or 30 per cent. of zinc added to aluminum make strong metals as rigid as bronze, yet only one third as heavy. Such light, strong, good casting and machining alloys have an extremely large field of usefulness. An alloy principally of aluminum and zinc, selling at the same price per pound as pure aluminum, is hard and white, of specific gravity 3.1, melts clean, runs fluid, makes beautifully sharp and perfect castings, turns and machines like the finest brass, polishes well, and is fully as strong as gun metal or the best of the ordinary bronzes. The use of aluminum for culinary utensils is extending steadily. These vessels are described as possessing all the advantages of copper utensils, with none of their disadvantages. They need only as much attention as ordinary tinware to keep them bright and clean. Aluminum, on account of its harmlessness, is superseding zinc for fruit-jar caps. It is winning an important place in the artistic branch of lithographic printing, for which aluminum plates offer considerable advantages over lithographic stone. Electric conductors can now be laid more cheaply in aluminum than in copper. While the aluminum wire has, in order to give equal conductivity, to be one fourth as large again in diameter as a wire of copper, it weighs only one half and costs only two thirds as much as the copper wire it replaces. Long-distance transmission lines and trolley feed wires are being set up in aluminum as fast as the makers can supply the metal. Aluminum can be rolled out to $\frac{1}{16}$ of an inch in thickness, and then beaten out to $\frac{1}{32}$ or even $\frac{1}{64}$ of an inch. As thin sheet it has found some application in place of cardboard for business cards, etc., but as leaf it has entirely superseded silver leaf in decorating. This leaf can be ground to powder, and in that condition is used by printers for silvery printing, and as a paint. For the latter use it is simply mixed with a varnish like ordinary bronzing powders. Powdered aluminum has recently received an extremely interesting metallurgical application in the reduction of refractory metallic oxides to the metallic state.

In a paper on the same subject, also in the Franklin Institute, Mr. J. A. Steinnetz undertook to enumerate the uses of aluminum that have proved satisfactory and extensive, with a view of encouraging further applications along kindred lines, and to speak words of caution regarding improper uses of the metal. His list of useful applications includes those mentioned by Prof. Richards and some others, among which are the making of patterns, for which, when stiffened by the addition of about 5 per cent. of zinc and a like amount of copper, aluminum forms an excellent substitute for brass, with the advantage of the great difference in weight, and for models and salesmen's samples. At the author's suggestion it had been used instead of wood for making models for castings, with excellent results in freedom from defects to which wooden models are liable. It has been found an excellent material for making steam-jacketed kettles and caldrons for boiling fruit juices, honey, and wax, and for certain acid work for which the peculiar qualities of the metal well adapt it. But it is not suitable for bath tubs and plumbing fixtures or for any pur-

poses in which it is exposed to the action of the alkali of soaps. In the powdered condition aluminum furnishes an excellent material for photographic flash lights, being cheaper than magnesium powder and free from the unpleasant smoke that accompanies the use of that metal.

The principle underlying a new method of producing high temperatures, described by Mr. E. F. Lange at the autumnal meeting of the Iron and Steel Institute, is based upon the heat energy developed by the chemical action of aluminum upon oxygen, or that between aluminum and certain metallic oxides. The practicability of the process was shown by the welding together during the meeting of two short lengths of heavy girder rails. Besides opening up another field for aluminum, the new method promises to be of considerable importance in engineering work. In the discussion of Mr. Lange's paper, Sir W. C. Roberts-Austen pointed out the extreme precision with which the reduction took place, and Sir Lowthian Bell dwelt on the value of the process if it should prove that carbonless iron could be obtained by it for electrical purposes.

Metallurgy by means of secondary electrical furnaces is the name which Herr Goldschmidt, of Essen, has given to a process of reduction by aluminum for which no extraordinary heat is required. It has been found useful in the preparation of metals employed in the manufacture of special varieties of steel. In the preparation of metallic manganese, for instance, the binoxide of that metal is mixed with pulverized aluminum, a substance capable of deoxidizing it and setting the metallic manganese free. The reaction is brought about whenever any point of the mixture is raised to the temperature of ignition, and will go on of itself, just as in the case of a mixture of oxygen and hydrogen, or of an explosion of gunpowder, without its being necessary to make any further application of heat. In the process of abstracting oxygen from the metallic oxide, the aluminum disengages a considerable quantity of heat, and the mass under treatment is raised to a dazzling white so that the aluminum oxide melts into a mobile liquid, while the melted manganese collects in the bottom of the crucible. A temperature is reached approaching that of the electrical furnace. Besides manganese, chromium, tungsten, molybdenum, and vanadium have been prepared within a few months through the reduction of their oxides by aluminum. By virtue of the character of the process, metals thus prepared are absolutely free from carbon, a feature of great value in their application to the improvement of steel. In this they have a distinct advantage over the same metals prepared in the electrical furnace which contain carbon. Besides metals available for use, the secondary electrical furnace furnishes aluminum oxide in the form of a very hard corundum or emery, which is sold for a polishing and grinding powder. The high temperature of the reactions in this process can be applied to the soldering and brazing of metals. Easily reducible oxides, like those of lead and copper, give explosive reactions with aluminum.

Copper, Nickel, Tin, and Zinc.—The electro-deposition of copper is now carried on, according to Mr. Sherrard Cowper-Coles, in many large engineering works for the production of large copper vessels. Most of the copper used by electrical engineers, and more than one third of the total copper output of the world, is now electrolytically refined. The demand for electrolytic copper is on the increase, and the capacity of most of the electrolytic refining works has been or is being enlarged. According to estimates published in In-

dustries and Iron, the world's total output of electrolytic copper fifteen or twenty years ago did not exceed from 15 to 20 tons a week. In 1881 and 1882 this amount was increased by the erection of new refineries to about 60 tons. In years succeeding several American refineries began operation, and between 1888 and 1890 the world's total production was between 280 and 300 tons per week. Since that time a very large number of refineries have come into existence in different countries, and it is safe to estimate the world's production at the present time as not less than 500 tons per day, or about 180,000 tons per annum. During the refining of this quantity of metal not less than 20,000,000 ounces of silver and 100,000 ounces of gold are recovered. Converted into a money value, these weights represent \$45,000,000 in copper, \$12,500,000 in silver, and \$2,000,000 in gold.

Of the physical properties of electro-deposited copper, the same authority said, in a lecture before the Institution of Electrical Engineers, that copper prepared by electrolysis may have a density as low as 8, while the density of normal copper is 8.9. Hard rolling, cold hammering, and hard drawing increase the tensile strength and limit the elasticity of copper considerably. The extensibility of annealed copper becomes less at high temperatures, and that of mechanically worked copper becomes higher. Some copper sheets (not annealed) deposited by the electrolytic centrifugal process, 0.0245 of an inch in thickness, broke at 433 pounds, which is equivalent to 22.1 tons per square inch. Hard-drawn wire made by this process has a tensile strength of 29 tons per square inch, and annealed wire 20 tons, the electrical conductivity being 99 per cent.

Of the recent improvements in the production of electrolytic copper, having in view both increase of the deposit and smoothness and homogeneity, one of the earlier plans for increasing the output was that introduced by Elmore, in which an agate burnisher was caused to pass continuously over the surface on which the deposit was being made. A metal of very great strength was thereby obtained. In a more recent development a sheepskin impregnated with animal fat is used as a burnisher. In a method introduced by Mr. Sherrard Cowper-Coles, the copper is deposited upon a vertical mandrel, which is caused to rotate very rapidly. The centrifugal force developed and the wash of the electrolyte over the rotating surface keep it clean and free from gas, making a smooth and dense deposit nearly certain.

The physical tests of metallic nickel, as Mr. David H. Browne shows in a paper on The Properties and Possible Uses of Nickel Steel, furnish no explanation of its remarkable effects when alloyed with iron. The most notable of these effects is the manner in which nickel increases the elastic effects of the steel to which it has been added, a fact exhibited in the much greater resistance which the metal develops against numerous and repeated strains; or, in other words, in the extension of the limit at which molecular fatigue begins as distinguished from molecular distortion, which is effected by the addition of the small percentage of nickel. This is the property that emphatically distinguishes nickel steel from simple steel. After discussing the advantages of nickel steel for bridge construction, for plates for boiler and tank work and ships' hulls, armor plates, shaftings and forgings, Mr. Browne mentions as among the purposes for which the alloys of that name are applied resistance wire, bicycle tubing and spokes, staybolts, fire-box sheets, boiler tubing, firearms, safes, and vaults, bobbin spindles, and a great variety

of other purposes for which some peculiarity of strength, ductility, or incorrodibility gives it special fitness. One of the most promising of these uses is the making of tool steel. For this purpose the alloy containing about 0.80 per cent. carbon with 3 per cent. of nickel is probably the best for everyday use. Increasing the nickel to 5 or 6 per cent. increases the strength, but necessitates skilled treatment in forging. Tool steel with 0.80 per cent. carbon and from 3 to 5 per cent. nickel possesses all the properties of high carbon simple steel without its brittleness. Nickel steel shows very pronounced toughness. A nickel-steel tool containing 4 or 5 per cent. of nickel with 0.80 per cent. carbon is as hard after tempering as the best simple tool steel of from 1 to 1.25 per cent. carbon without the brittleness and glassy nature which distinguish the latter. When used for drills the nickel steel appears to work with much less than the usual friction, and does not become so hot in use as carbon steel. Nickel steels are exceedingly sensitive to heat treatment, but are less easily spoiled by overheating, and may therefore be worked at a somewhat higher temperature than a carbon steel that will give the same temper.

A molecular transformation of tin organ pipes, under which the metal crumbled to a gray powder, was first noticed in 1851 by Erdmann. It was observed again by Fritsche at St. Petersburg, and has since been studied repeatedly by various observers. The matter has more recently been taken up by Messrs. Cohen and Van Eijik, who in a preliminary dilatometric study of a gray tin discovered the existence of a transition temperature at about 30° C. A transition element was therefore constructed, having gray tin as one electrode and ordinary white tin as the other. A study of the electro-motive force of this cell with varying temperatures showed that the reaction, gray tin to white tin and white tin to gray tin, was a reversible one, with a transition point at 20° C. A careful determination of the same point by the dilatometric method gave the same value. All the observations of early workers are brought into line by this research. The authors point out that, except during a few warm days, all tin is in an unstable equilibrium, and tends to transform itself slowly into the gray powder modification.

Three commercial methods for the extraction of zinc are defined by Capt. C. C. Longridge in a paper on that metal and its treatment. They are the dry, or most usual process, by reduction, distillation, and condensation, by which metallic zinc is obtained; the chemical, a little-used method, which results in the formation of zinc compounds from which the metal has to be won in the dry way; and the electrolytic process, which is more or less in an experimental stage. Not only ores, but furnace and refinery products, furnace or retort residues containing zinc ore, calcined silver ores rich in zinc, and alloys of zinc with lead, silver, and gold are treated by the dry process. In many cases zinc extracted from ores or by-products by the dry process is too impure. Refining is accomplished by slow fusion at the lowest possible temperature, the melted metals being retained in this state for a considerable time, while the lighter impurities rise as scum, the heavier metals sink to the bottom, and the purified zinc forms a middle layer. This process has been improved in this country by the utilization of natural gas.

The chemical or wet process is characterized by the author as unsuitable and costly. Its use is chiefly confined to separating zinc from valuable alloys, etc., and converting it into marketable by-

products. The solvents mainly employed are sulphuric acid, hydrochloric acid, ammonia, ammonium carbonate, magnesium chloride, calcium chloride, carnallite, etc.

The electrolytic method is attended by obstacles that have so far not been surmounted. Among them are the enormous amount of power required and the difficulty of producing compact zinc. This method promises better for treating alloys, and is said to be carried out in a secret process at Aaron Hirsch's works at Inselberg in the Harz; and it has been applied to zinciferous pyrites, which, after treatment for the production of sulphuric acid, are intended for use as iron ore.

Mr. H. Van F. Furman, in a paper on zinc and its treatment, after remarking that extraction by electrolysis of molten compounds has not so far been attempted on a commercial scale, although numerous methods for accomplishing it have been proposed, says that most of the zinc as it comes from the adapters is sufficiently pure after skimming in the ladles to cast into bars ready for the market. Such scrap metal as is produced and any zinc which contains too high a percentage of lead is remelted with stirring, and then allowed to settle, when the lead collects at the bottom of the kettle.

In some places zinc ores are treated for the production of marketable zinc products, such as zinc oxide (zinc white), mixtures of zinc oxide, lead oxide, and lead sulphate (pigment), or zinc sulphate (zinc vitriol). For these processes ores are selected which are not generally suitable for the extraction of metallic zinc, either because they contain other valuable or detrimental qualities or because the percentage of zinc in them is too small. The production of zinc white from the New Jersey (franklinite) ores has been brought to a high state of perfection by the earlier inventions of Samuel C. Wetherill and the later ones of his son, J. P. Wetherill. The ores, which are mixtures of franklinite, willemite, zincite, and a calcite gangue containing various minerals and silicates, are passed over Wetherill magnetic separators, and a fairly clean franklinite and a mixed or middle product of franklinite and various iron and manganese silicates are obtained. The tailings from the separators pass to wet jugs, when the willemite and the zincite are removed from the silicate. The concentrates from the Wetherill machines are sent to the zinc-oxide works, and the concentrates from the jugs (principally willemite), which carry about 50 per cent. of zinc, are sent to Germany for distillation into a very pure spelter. The residues from the treatment of the franklinite in Wetherill furnaces after collection of the zinc oxide in bags, gathered from the pipes and other parts of the furnace, contain from 1.2 to 6 per cent. of zinc, and as they are rich in iron and manganese, they are smelted in blast furnaces for spiegeleisen.

In the Bartlett process in use at Cañon City, Col., ores containing 20 per cent. of zinc, after being crushed, are mixed with pea coal and dust coal and blown up in a blast furnace to drive off the lead and the greater part of the zinc and sulphur. A cinder is formed containing the silver, gold, and copper in a matte mixed with more or less slag. This cinder is smelted in an inclined low blast furnace with suitable ores to produce a high-grade matte. The zinc in this charge may reach from 15 to 20 per cent., and is mostly driven off as fume. The fume from the "blowing up" furnace and from the blast furnace is caught in bags, mixed and refined in a suitable furnace, whereby carbon, arsenic, sulphur, and other impurities are eliminated and a pure white pigment

is produced, suitable after being ground in oil to be used as a white-lead substitute.

Alloys.—Experiments have been made by Sergius Kern with a number of nickel-bronze alloys, with a view to the production of castings suitable to be used in mechanical work, especially for different fittings in high-pressure marine boilers. The alloys rusted very slightly, and in several cases proved preferable to steel castings. The nickel castings from the alloys designated as No. 1 and No. 2 especially gave very good results when mechanically tested. Alloy No. 1, having the composition copper 70 per cent., nickel 17.5 per cent., and zinc 12.5 per cent., corresponds to the rules prescribed by the English Admiralty for shipbuilding steel. In the cast state it gave a tensile strength of 26 tons and 23 per cent. elongation in 2 inches; fracture fibrous; and to the bending test, 67° over a radius of 1½ inch. Alloy No. 2, having a composition of copper 70 per cent., nickel 20 per cent., and zinc 10 per cent., corresponds to the English Admiralty rules for steel castings. It has a tensile strength of from 28 to 35 tons per square inch and an elongation of 15 per cent. in a length of 2 inches. Its fracture is fibrous, and its response to the test for bending strength gave from 35° to 40° over a radius of 1½ inch. The drop tests were likewise satisfactory. Both alloys were prepared in the same manner, using ordinary copper crucible furnaces. Nickel in the form of cubes was placed upon the bottom of the crucible, next to it copper-zinc alloy, and on the latter some copper, and proceeding in the same way till the crucible was filled. On the top of the charge a layer of charcoal was placed. The alloy was run into flat open molds, and the slabs obtained were remelted twice before being used for castings. At each melting about 0.75 per cent. of zinc was added to the melted alloy when the crucible was out of the furnace and ready to be poured through the molds. The molding was done in exactly the same way as regards the sand as in the casting of copper articles, but, as the alloys have a notable shrinkage in setting down, top ends must be placed on the castings, as is done with steel castings. After pouring the metal, the open top ends must be immediately covered with coarsely ground charcoal.

Magnalium is a silver-white alloy, composed of aluminum and magnesium. It is unaffected by air and water. It even withstands oxygen to a great extent, though alkalis attack it. Its specific gravity ranges from 2 to 2.2, and its melting point lies between 600° and 700° C. It "works" remarkably well, and can be rolled into sheets or drawn into wire. Although other alloys may be formed, that used contains 100 parts of aluminum and from 10 to 15 parts of magnesium. According to Mach, the value of the alloy depends on the purity of the metals; and so long as aluminum was made by reduction with sodium it was impossible to obtain a good alloy. The reflective power is very high indeed, and, unlike most speculum compositions, magnalium does not absorb the ultra-violet. These properties, together with its low density and rigidity, make it almost an ideal composition for specula.

Attention is called in the Engineering and Mining Journal to the remarkable malleability and ductility of alloys containing vanadium. An addition of 0.5 per cent. of vanadium to ordinary malleable iron of about 24½ tons tenacity and 19 per cent. elongation gave 39 tons tenacity and 12 per cent. elongation in the forged bar, and 33.7 tons tenacity and 32 per cent. elongation after annealing. A mild steel of 30 tons tenacity and 17 per cent. elongation gave, with 1 per cent. of vana-

dium, 61 tons tenacity and 14 per cent. elongation, and when annealed 45 tons tenacity and 20 per cent. elongation. These alloys, although very soft when annealed, become very hard by tempering. It is represented that a large supply of vanadium would admit of its use in the manufacture of steel furnace plates, forgings for ordnance and naval machinery, projectiles, tools, rolls, etc., and various bronzes.

The causes of hot boxes in railway service and the methods of preventing them have been investigated and reported upon by Mr. Robert Job. Besides the other usual means of studying the subject, the author was greatly aided by microscopic examination of the material of which the defective bearings were made. A wide variation was found in the composition of the bearings. Among the materials employed were the old copper-tin alloy of 7 to 1; copper-zinc bearings running as high as 35 per cent. of zinc; phosphor bronzes in moderate amount; and most numerous of all, the copper-tin-lead compositions, varying considerably in their proportions, but averaging from 10 to 15 per cent. of tin, with from 15 to 5 per cent. of lead and copper. In the majority of cases, however, the mere general composition was found to have caused but a small part of the difficulty. The main causes of friction and heating are described by the author as segregation of the metals, coarse crystalline structure, dross or oxidation products, and an excessive amount of inclosed gas in the metal. Only a very small percentage of the bearings examined seemed to have been discarded solely on account of defect from lack of proper lubrication. Segregation was found to be due in many cases to attempts to alloy the metals in improper proportions. It is also frequently caused by high heating, combined with rapid pouring. It may be prevented to a certain extent, even in a wrongly proportioned alloy, by rapid chilling of the metal immediately after pouring, but such practice is at the expense of the ductility of the metal, and causes increased brittleness with consequent rapid wear in service. The effect of segregation is explained by the fact that instead of an alloy of uniform hardness and heating capacity, a mixture is formed, some portions of which are relatively very hard and others very soft. The difference combined with that occasioned by the varying heating capacity of the different parts localizes friction. In a homogeneous alloy no such conditions exist. The coarsely crystalline structure observed in certain bearings was in some cases found to be due to the composition of the alloy, especially if antimony was present, and in some others was traced to the foundry practice. It was often due to rapid pouring at high temperature and sometimes to an excess of materials originally added as deoxidizing agents. Its effects were increased local friction and material diminution of the ductility and tensile strength of the metal. By the presence of dross or oxidized metal mechanically inclosed hard cutting surfaces were presented to the journal. The presence of occluded gas in excess had the effect of reducing the actual bearing surface of the brass, and thus of materially increasing the pressure. In both of these cases increased friction and consequent heating were the sure result.

In a paper read before the Mining Society of Nova Scotia, Mr. A. C. Ross said that tungsten was generally found associated with tin in wolframite. Its special value as an alloy of steel was on account of its hardening, toughening, and self-tempering qualities. With an alloy of 9 per cent. of tungsten a self-tempered tool steel of great durability is obtained. "Mushet" steel, manufactured

at Sheffield, contains this percentage, and sells for seven times as much as the highest priced ordinary tool steel. Tungsten steel possesses strong magnetic properties, some specimens of it having the high magnetic moment of 62 units, as against 37 units for "diamond" steel, 5 units for "Martin" steel, and 3 units for "Bessemer" steel. The production of the metal to-day in the world does not exceed 1,000 tons. The demand is greatly in excess of the supply, even with the existing high prices. Ore of tungsten had been discovered during the past year in Nova Scotia of unascertained extent, showing on analysis a composition of tungsten oxide 66.32, silica 4.26, manganese 12.02, iron 0.12. In the real wolfram the percentage of iron is much higher, and this tungsten must be called a hibrenite—a mineral supposed to be rarer than wolfram. Tungsten is a difficult metal to mine owing to bunches in the vein, which itself twists about in an extraordinary manner. Besides the present discovery, tungsten deposits are worked in Germany and Bohemia and Texas, and the ore has recently been found in Nevada. Tungsten also occurs in the Cornish tin mines.

In a paper read before the American Institute of Mining Engineers, Mr. E. S. Sperry pointed out that the occurrence of cracks during the rolling of brass is due, at least in some cases, to the presence of impurities in the copper. In a brass composed of 60 per cent. of copper and 40 per cent. of zinc the author found by adding different quantities of antimony that when the amount of that substance reached 0.02 per cent. its presence was indicated by fracture in the rolled metal.

Motor-car builders in France are using largely in the construction of their vehicles an alloy of aluminum and tungsten which they call "partinium." It is much cheaper than aluminum, is nearly as light, and possesses greater resisting qualities. The relative percentages of the constituent metals are varied according to the qualities that are desired in the alloy. Cast partinium has a specific gravity of 2.890. In the rolled form the specific gravity is 3. The elongation varies from 6 to 8 per cent., and the resistance is given as from 32 to 37 kilogrammes per square millimetre.

Experiments on the alloys of gold and copper made by Sir W. C. Roberts-Austen and T. Kirk Rose show that the gold-copper series of alloys present many points of similarity with the silver-copper series, and that the main difference is only one of degree, copper being apparently more soluble in gold in the solid state than in silver.

Processes.—A new combustion process, described by Mr. Paul J. Schlicht before the Franklin Institute, is based upon the fact, which the inventor has discovered, that if a current of air is properly introduced into a chimney or flue through which hot products of combustion are escaping the air current will flow in a direction contrary thereto, and becoming heated in contact therewith will reach the sphere of combustion in a condition highly favorable to the union of its oxygen with all the combustible elements of the fuel. By this system there is no solid and varying resistance to the air supply as in the old process, due to accumulations of ashes and varying thickness of fuel, but there is a constant supply of heated air that flows in contact with the combustion products, and which is regulated by the quantity of combustion products passing through the flue or chimney. The air for combustion may be admitted at the top of the chimney or through a flue leading to the same, the place for admission being determined by the conditions. The author finds that by the use of his process he can, in both domestic and manu-

facturing furnaces, effect a considerable economy of fuel, prevent the production of coal gas (carbonic oxide), burn profitably the smaller sizes of anthracite coals, and effect a great saving through the less frequent necessity of cleaning boiler-furnace fires.

A plant for welding iron, as for trolley rails, by electricity, operated in Buffalo, N. Y., consists of five cars. One of them, termed the sand-blast car, goes ahead and prepares the rail joint for the welding apparatus. Following this come three cars, the first of which is the welder car, next the car containing a rotary transformer, and then the motor and booster car. The coupling of this train is adjusted so that the welder car can move ahead or back several inches without any change of position of the cars following. It can thus change its position along the joint that is being made without disturbing the other two cars. The welding of joints can be made on either old or new track and on paved or unpaved streets, but where old track is welded the pavement has to be removed for a few inches in front of the rail joint. On new track the weld may be made before the pavement is laid or replaced. When a joint is to be welded a bar of steel 1 inch by 3 inches, and 8 inches long, on which are 3 bosses, is placed at each side of the rail web and the jaws of the welding machine are allowed to grip it. A pressure of about 1,400 pounds is applied by means of a hydraulic jack connected to the upper end of the welding machine. As soon as this pressure is applied the electric current is turned on. Instantly the metal between the welder jaws begins to heat. It grows brighter and brighter until a welding temperature is reached, when the current is immediately cut off, while the pressure on the weld is increased to about 35 tons. Artificial means of cooling are at once applied to the weld, in order that the process may be hastened while the pressure is on. The comparatively cold portions of the bars about the boss prevent the more plastic metal from spreading, and the heavy pressure so confines it as to give no opportunity for coarse crystallization while cooling. The center weld is made first, and the ends of the bar are next similarly treated, so that three welds are made at one joint. As the welding bars cool they exert a most powerful influence to bring the ends of the rail together and make a perfectly tight joint. A car with emery wheels operated by a motor follows and dresses any rough parts of the joint.

Among the characteristic disadvantages attending the use of blast-furnace gases as compared with other gases, M. Enrique Disdier, of Bilbao, enumerates variable composition, low ratio of combustible to noncombustible gases, admixture of large quantities of dust, acid, and metallic vapors, and high percentage of moisture. The economy that would ensue upon the direct application of these gases to the production of power by the gas engine was of great importance. The production of a ton of pig iron involved the consumption of a ton of coal, and one horse power per hour might be obtained by the consumption of 4 cubic metres (1,414 cubic feet) of gas. Assuming these data, then it would be found that a blast furnace was able by means of its waste gas to generate nearly 2,100 horse power for every hundred tons of pig iron produced daily after making all due provision for heating and blasting. While the blast furnace has thus far been considered on its own merits as a source of power, its almost indispensable associate, the coke oven, can not be neglected as a gas generator, and therefore a power producer. With its gases the objection of variable composition does not obtain;

further, these gases are rich in combustible constituents, carry little or no dust, are absolutely free from metallic vapors, and their moisture is low. All existing coke ovens may be divided into two main groups—those in which by-products, chiefly tar and ammonia, are recovered, and those which burn their gases without recovery of any of the by-products. For driving gas engines coke-oven gases possess many advantages over the blast-furnace gases. They give 30 per cent. more power with the same size of engine, and the gas mains and distributing pipes can be made very much smaller, so that the plant is rendered much cheaper. Various opinions were expressed in the discussion of this paper in the Iron and Steel Institute concerning the practicability of using the blast-furnace gases, the dust they carry, contrary to the author's assertion, being specified as the most formidable difficulty in the way.

A difference in method between reverberatory and hearth smelting of lead is marked by Capt. C. C. Longridge in that in reverberatory smelting the two operations of roasting and reaction of which the process consists are repeated one after the other, while in hearth smelting the same operations are performed simultaneously. In the reverberatory furnace the lead is reduced from the ore by the interaction of unaltered galena (sulphide) with sulphate and oxide; in the hearth furnace an additional reduction of lead oxide by carbon takes place. The reverberatory process is performed without a blast; in the hearth process the blast is used, and the ore and fuel do not rest upon a solid bed, but on a bath of molten lead: the charge is never fused, but at intervals the blast is stopped, a part of the charge is removed, the poor slag is separated from it, and after cooling and admixture of lime to stiffen it the charge portion is returned to the furnace. Both processes have their advantages and disadvantages. The hearth process has the advantages that the consumption of fuel is less and that the furnace can be started and stopped without much loss, or serious risk to the structure. Its disadvantages are that power is required for the blast, the fumes are more injurious to the workmen, ore of purer quality and higher grade is required, and on account of the blast ore in fine powder can not be treated without previous agglomeration. It is therefore chiefly suitable for intermittent work with small quantities of high-grade nonargentiferous ores. Both products and the treatment of them are the same as in reverberatory smelting. There is, however, an intermediate product consisting of ore, slag, and fuel, termed "brouse," which is washed and remelted with subsequent charges. Some of the advantages of the reverberatory process are that raw ores can be smelted by it without preliminary or independent calcination, raw fuel can be used, the losses of silver and lead by volatilization are small, and the slag losses are strictly moderate. "Unbricked fines" can be smelted by it without excessive loss in flue dust, extraction is easy, and the plant is cheaply erected. Its defects are that as intimate contact of metallic particles is necessary, only rich sulphides or mixtures of sulphides and carbonates containing, say, 68 or 70 per cent. of lead, are suitable for reverberatory smelting. For the same reason the ore must be fairly pure. Blendes, iron pyrites, chalcopyrites, calc-spar, barytes, silica, lime, magnesia, etc., must not therefore be present in any considerable proportions. Other defects comprise slowness of operation, heavy fuel consumption, the amount of skilled labor required, and the richness of the slags, which necessitates their retreatment.

The fluid open-hearth steel process in use in the works at Pencoed, Pa., is described by B. Talbot as combining the rapidity of the Bessemer process with the efficiency of the open-hearth process. As carried on in the open-hearth furnace it consists in working up a large bath (60 tons) and capping off one third. To the remainder are added oxide of iron and 20 tons of molten pig iron. The heat of the bath causes these materials to react with reduction of the oxide and oxidation of the impurities. A great heat is given out and is utilized in increasing the temperature of the bath. When this metal is sufficiently refined the slag is run out and one third of the steel is tapped out, while the other two thirds are retained for mixing with and purifying another 20 tons of pig iron.

In the application of a similar process at Wishaw, as described by J. Riley, the charge is molten metal from the blast furnace, with additions of small quantities of pig iron for refining, but no storage bath like that described in the Pencoed process is used. The results are satisfactory, and involve a higher yield of steel with increased ore reduction even over that when cold pig iron is used, an increase of about 30 per cent. in the output and a saving in the cost of labor at both blast and open-hearth furnaces.

A smokeless furnace invented by Mr. Pilatt, of Nottingham, and represented as being applicable to all types of boilers or wherever a furnace is required, has as its basis a chilled iron bar, cast hollow longitudinally with lateral openings cast in the web of the bars. These lateral openings or ports enable a regulated and sufficient supply of warm air to be drawn directly from the ash pit and delivered superheated at the back of the bridge. The bridge is contrived so as to deflect the superheated air, which instantly combines with any combustible gas given off by the fuel and not burned into a sheet of flame, and consumes all smoke, at the same time bringing about an increased temperature and a quicker generation of steam. In a "rocking attachment" to this furnace, by a simple movement of a lever the whole grate can be put in motion and clinkers broken up without opening the furnace and suffering an admission of cold air. A forced draught furnace devised by the same inventor, and noiseless, will burn all kinds of fuel, while it is claimed it likewise works without smoke.

A discovery by Mond that metallic nickel forms a volatile compound—nickel-carbonyl—with carbon monoxide has been utilized in a process described by Roberts-Austen for the separation of nickel from cobalt, copper, and other metals with which it is associated in its ores. A similar process is applicable to iron.

In the new process of H. Goldschmidt for welding the clean faces of the metal are brought into contact in the cold, and are then heated by pouring upon the joint the fused product of the reaction of oxide of iron and aluminum contained in a special crucible. The joint is clamped so that the local expansion in heating effects the weld. The clamps may be removed as soon as the weld is complete. Sheet iron or iron gauze may be inserted between the welding surfaces.

A method of superheating the blast described by F. Laret (*Echo des Mines et de la Métallurgie*) consists in interposing between the hot-air stoves and the *tuyères* an injector of heavy oils which pass into the furnace, increasing the temperature and the yield while greatly facilitating the reduction of the ore. It has been tried with satisfactory results. Only smooth-faced iron is produced by the arrangement, and the carbon and silicon contents are considerably increased.

A process of using dense liquids (saturated solutions of certain salts) for the separation of coal and shale is described by M. Maurice in the *Société de l'Industrie Minérale*. The shale sinks and the coal remains in the top of the solution. A list of salts suitable for the process is given in the paper, of which calcium chloride of 1.411 specific gravity is the lightest and zinc bromide, 2.391 specific gravity, is the heaviest.

An improved process for the production of potassium and sodium by the reduction of those metals from their salts consists in forming electrolytically an alloy of some heavy metal, such as lead, with sodium or potassium, and then distilling the latter.

Miscellaneous.—Mr. W. P. Rix, in a paper read before the Society of Arts, expressed the opinion that leadless glazes would ultimately become available for use in nearly all kinds of pottery. Hitherto little success had attended their application to coarse earthenware owing to opalinity, sluggish fusibility, and inequality of texture. Such glazes required to be dipped as thinly as possible and with far greater uniformity than was necessary in the case of the glazes generally used. Until the leadless glazes were advanced to the commercial stage, the problem which potters were invited to solve was the reduction of the amount of lead absolutely essential in the glazes commonly employed. It should also be remembered that the fritting of lead with silica, borax, and stone could only produce innocuous results when the proportions of earth were such that the whole was chemically combined in a stable form. So far there has been little opportunity to test the leadless glazes, but Mr. Rix represents that they have withstood severe exposure and rough usage.

In a lecture before the Royal Institution on the structure of metals, Prof. J. A. Ewing showed, from microscopical examination, that the structure of polished metal is not homogeneous, but presents numerous granules with irregular boundaries. Each of these granules is a crystal essentially composed of a multitude of exactly similar parts all facing the same way. This crystalline structure accounted for the different luminosities presented by a given sample when viewed with light falling at different angles, because the reflections from the different faces were in different directions. Further evidence of the geometrical character of the structure is to be found in the geometrically regular shapes of the pits formed by minute particles of imprisoned air when cadmium, for example, was cast against a perfectly smooth surface, such as glass.

The present use of blast-furnace slag in the form of sand and as made into bricks and cement was described in a paper on the subject by the Ritter Cecil von Schwarz at the spring meeting of the Iron and Steel Institute. Hitherto slag cement appears to have been a somewhat untrustworthy article; but recently a process for the manufacture of cement from blast-furnace slag has been started in Germany and Belgium, the results of which are regarded as highly satisfactory in the points of strength, volumetrical constancy, and reliability. In the manufacture of this cement the slag is first granulated, and is then reduced to sand. In this condition it is mixed with limestone and slaked lime, and the mixture is reduced to a fine powder. This powder is mixed with water and made into bricks, which are air-dried and afterward burned into clinker in a special furnace. The clinker is stored for about six weeks, and is then ground into a fine powder. The cement thus produced is said to be distinguished

for its exceptional tensile strength and resistance to compression.

Because of lack of coal in the country for smelting Swiss engineers have been obliged to import nearly all the iron they use. This difficulty is likely to be overcome by the application of the electric furnace to smelting iron on a large scale, which has been successfully developed by Herr Müller Landsmann near Meivingen.

The following plan for tempering tools is recommended in the *Revue de Chimie Industrielle*: The tools are heated to dull redness, and are then plunged two or three times into a mixture made by dissolving 10 parts by weight of resin in 5 parts of fish oil and stirring in $2\frac{1}{2}$ parts of melted tallow. The tools are then reheated to dull redness and plunged into cold water.

The use of carbide of calcium in metallurgy as a deoxidizing agent is recommended in the *Revue générale des Sciences*. To increase the utilization of this substance a metallic chloride is added, the chlorine of which will combine with the calcium set at liberty in such a manner that the two affinities of the carbon for the oxygen and the calcium for the chlorine will act simultaneously.

Vanadium and platinum have been found in the coals of New South Wales in such proportions as to attract notice. In one analysis the ash yielded 25.1 per cent. of metallic vanadium, 3.6 per cent. of platinum metals, 44 per cent. of combined oxygen, and 27.3 per cent. of sand and earthy matter. In another instance, 1 ton of coal yielded 144 ounces 1 pennyweight and 3 grains of metallic vanadium and 20 ounces 13 pennyweights and 11 grains of platinum metals. Vanadium has also been found in New South Wales in clays, bauxites, micas, igneous rocks, and ironstones. Gold and copper and some other metals have likewise been found in the coal of the country.

METAPHYSICS, AMERICAN, an idealistic and spiritual movement, known under divers names, the most popular of which is "The New Thought." It originated in the United States, and was first heard of forty odd years ago, when the alleged discoveries made through mental or spiritual healing by Phineas Parkhurst Quimby, of Portland, Me., came into notice. Taking root within the last quarter of the century just closed, it has gradually spread until now its disciples may be found in nearly all parts of the habitable globe.

The New Thought is often popularly confounded with Christian Science, with which it has certain salient points of resemblance, while in other fundamental points it is radically different. In the primal belief that all life is one life, that all knowledge is one, that all proceeds from God, its source, and that God is omniscient, omnipotent, and omnipresent; and that, through this oneness of all life with its source, all health, happiness, and prosperity can be recovered and maintained, the two movements are at one and identical. The chief points of difference are these: Christian Science affirms that the whole material world is but an illusion of "mortal mind," and that by denial of this illusion—matter—one realizes more fully one's spiritual origin and power. The disciples of Modern Metaphysics, or New Thought, on the other hand, believe the whole visible universe to be a reality, an expression of God's word made manifest in palpable form; even as they also look upon the body of man as representing more or less clearly his spiritual condition or mental life.

Christian Science, in order to assert more positively the healing power inherent in spirit, begins by denying the reality of sin, sickness, and death, regarding them as part of the illusions of "mortal mind." The New Thought admits sin, sickness,

and death to have an existence, but only such existence as can be overcome by the assertive power of spirit; which when quickened into full perception of its birthright, its acknowledged sonship or oneness with God, can, by putting away the mental picture of disease, and seeing only health and wholeness, proceeding from immanent God, remove the conditions that called disease into being. This, it declares, comes by concentration of spirit on the things desired, and is in perfect accord with the working currents of spirit law and creative power.

Christian Science builds all upon the Bible, the works wrought by Christ, and the alleged special revelation and discovery by its founder. It bids its believers confine themselves to the Bible and the text-book *Science and Health, with Key to the Scriptures*, prepared by its founder, on the ground that other literature, being the product of "mortal mind," might distract from spiritual concentration. The New Thought lets its disciples take all knowledge for their province and accept light wheresoever they find it, on the plea that God gave glimpses of truth in divers ways, at many times, and to all peoples—even to those to whom St. Paul said, "The unknown God whom ye ignorantly worship, him declare I unto you," and that, while Christ is the greatest light yet descended on the world, God also sent other prophets to other peoples, and taught them great truths.

Again, Christian Science is a thoroughly organized body, founding churches and consolidating strength under one visible head. The New Thought shows no desire to found a church at all. Its leading exponents are wont to declare that there are churches enough already, and that the best work of their movement lies in supplementing these—proving the workings of a vitalized faith that takes the great Master Teacher literally at his word as to both example and precept. They declare that Christ put healing, in all its spiritual significance, before preaching, and insisted on his disciples performing the "works"! They waive alike creed and theological propaganda, asserting that man must live from the center of life outward; that the temple of God is in the human soul, and all worship must proceed from within, even as every creative work emanating from man must take vision and form in his mind before taking outward shape at his hand; that man must seek a knowledge of the laws that control and regulate life everywhere, and through conformity with these laws only can he come into possession of his own full powers, control matter, and build the kingdom of Heaven here on earth as truly as in any other sphere of existence.

In short, this new metaphysical movement is not a doctrinal religion, but rather a very eclectic working philosophy of daily life. Its exponents affirm, over and over, that it values whatever it can reduce to practice and apply to man's visible well-being; that its work is with the here and now more than with the hereafter—which will follow in natural sequence from the life here. To the New Thought believer, sickness, sin, warped mentality, selfishness, pride, malice, sensuality, etc., are but lack of spiritual development. There are no good and bad, no high and low, in the scale of humanity; there are the developed (according to degree) and the undeveloped, and the latter have latent within them all the possibilities of the former, evolution being essentially a matter of spirit, to be realized some time, somewhere. There is no dominant evil power in the universe, the conditions called evil being only a negation of good God. Fear is the devil that has played so large a part in the fortunes of man, and the only devil there is—

to be laid forever whenever man enters into a knowledge of his own powers, his birthright. He discovers these powers, not by cringing and begging for them, but by demanding them in accordance with Divine law. Made in God's likeness, man is godlike in possibilities. Ignorance is the only original sin—the sin of low desires. All sin is ignorance of law. Thought is a living thing; it is all the life there is. Every existing thing is a thought of God, and thought makes man what he is. In control of his own mind, he can control the things around him. Without this spirit force he may succumb to circumstance and become the slave of passing effects; he loses vitality, meets with sickness and death. The truly poised mind can not be overcome by anything on the outside. Nothing can harm man but himself. Spirit force, the influx from God, builds up, expands, fills all space, drives out negations, removes what would appear mountains to the unawakened mind; hence those feats which the world has called miracle. There is no miracle; the things so called are but the harmony of higher law taking visible expression. Thought, life, intelligence, can become one with God, and God is all in all!

This is but a brief summary of the tenets of Modern Metaphysics, whose vocabulary is as varied as is the quality and culture of the disciples who express it, and who come from every walk of life. Latterly, however, the growth of the movement is notably larger among the cultured classes; and, according to information recently gathered from leading workers in the cult, it is meeting with friendly favor from several of the "advanced" clergy within the evangelical churches, while, oddly enough, the clergy of the liberal churches still regard it in the main with coldness or aversion. Moreover, it is affirmed that the interest of the clergy is due to the reports brought to them by parishioners and members who proclaim the gospel of cure from various ailments and distempers.

Owing to indifference to organization or anything like a cohesive policy, it is not easy for the leaders of the movement to count their followers. Interfering in no wise with the established order of things, the disciples of The New Thought are to be found mainly within the churches, and a noticeably large number are within the Episcopal Church. According to recent information and estimates, the movement, all told, in this country and others, would count somewhat more than a million interested followers and more or less firm believers, while the people who do not confess belief, and yet seek aid for their ills and misfortunes, can not, of course, be counted.

Although this doctrine was quietly working and gaining ground as early as 1860, the first visible attempt at anything approaching organization took place only about fifteen years ago, when the Metaphysical Club was founded in Boston. This club has several hundred members, and is constantly increasing in outside membership. It is also the headquarters to which people at a distance are wont to send for information. Lately an International Metaphysical League has been formed, the first meeting of which was held in October, 1899, in Boston, and lasted several days. In October, 1900, this same league held its second meeting in Madison Square Garden Concert Hall, New York, where crowded houses were addressed for nearly a week. Many prominent speakers took part, among them the Rev. Heber Newton, D. D., of New York; Prof. George D. Herron, of Grinnell, Iowa; Dr. Lewis G. Janes, of Cambridge, Mass.; John Brooks Leavitt, LL. D., of New York; Prof. J. M. Tyler, of Amherst; Swami Ahedananda, of India—who traced a kinship between much in mod-

ern metaphysics and the ancient Vedanta philosophy of India; also other medical men and clergy. The league will meet in 1901 in Chicago. The movement is still strongest in New England, especially in Massachusetts, while Rhode Island and Maine seem to stand next in numbers and interest. Next to Boston, its strongest hold is Chicago, New York comes third, after which it seems to be fairly disseminated throughout the Middle and Western States and cities, and is quite active in Canada. In England it is said to be growing surprisingly, especially among the upper class and in the Church. Some among the English clergy have written for information concerning its origin and history from this side of the Atlantic. Not long ago the foremost metaphysical magazine of New York published in full a sermon entitled *God is Love*, delivered by Canon Basil Wilberforce in Westminster Abbey, and listened to by the editor, who looked upon it as so strong an exposition of much of the best in The New Thought that he obtained the noted divine's permission to publish it.

The growth of the movement is noticeable in Switzerland and France, and more especially in Australia. In all newer settlements to which people of English speech betake themselves, there appears an active desire to found clubs for its dissemination. Letters come to the centers at Boston and New York, especially, from New Zealand, New South Wales, and settlements in Africa and elsewhere, asking advice concerning this philosophy of living. Among people of leisure in the large cities in America coteries are found, where interested persons meet and discuss New Thought tenets and relate experiences among friends and acquaintances. Several such coteries exist in New York, and there are at least three places where the public in general are welcomed to listen to expositions of this philosophy. Similar ones flourish in other cities. The spread of the cult is doubtless due in a measure to its literature, which is plentiful, ever increasing, and in great variety. No embargo is laid on thought, and a vast amount of vagary sees the light in print. But the cult can claim also some fine and subtle writers. Two magazines devoted to its interests have long flourished in New York.

The question has arisen from time to time in regard to the real origin of this whole modern metaphysical movement. Doubtless much of its loftier thought might trace its inspiration to Emerson's utterances concerning the Immanent God in all things and the glory of living according to one's visions; but when it comes to the practical workings that interest humanity in general—the healing of physical ills and the restoration of disordered mentality—there is room for no dispute that the obscure and almost unknown Quimby was first in the field. Phineas Parkhurst Quimby was born in Lebanon, N. H., Feb. 16, 1802. He was the son of a blacksmith, and was one of a family of seven. When he was two years old his parents removed to Belfast, Me. His opportunities for education were scanty. He is said to have acquired a knowledge of the rudimentary branches and supplemented these with as much reading as he could obtain. His son, George A. Quimby (still living at Belfast), furnished a sketch of his father's life to the *New England Magazine* in 1888. Some time later Mrs. Annetta Gertrude Dresser, one of Mr. Quimby's earliest patients in Portland (to which place he removed in 1859, as his fame grew), compiled a little volume on his life and philosophy. A mass of manuscript is also in the possession of his son. This was penned by the Misses Ware, of Portland, Me., daughters of the late Judge Ashur

Ware, of the Supreme Court, who were also patients of Mr. Quimby's, who is said to have restored them both to health, and who wrote down his sayings as they fell from his lips. These, together with the memory of a few persons still living, save from oblivion the founder of a now widely known cult—a man who never dreamed of fame and died without fortune. His son's account shows him to have been a pioneer in thought and experiment from his earliest years, even inventing many mechanical devices for which he took out patents. He was also a semi-invalid from early youth, whom the doctors had pronounced a victim of an incurable malady of the lungs.

In 1833 a French gentleman, M. Charles Poyan, came to this country, where he had relatives, and brought with him the first practical information known here of mesmerism, through which agency he claimed to have been cured of a chronic disease. Mr. Quimby heard his lectures, and at once seized upon the idea; first with the desire to better his own health, and second, to discover all that might be in it. He met with a youth named Lucius Burkmarr, who proved a wonderful subject, and with him he worked and gave experiments that astonished those who saw them, but did not convince Mr. Quimby himself. He finally came to the conclusion that there was nothing in mesmerism save what was reflected through the mind of the subject from the minds of those about him. Then he gave it up. One day, while he was out for a drive with a horse and buggy loaned by a friend, the exertion made him so weak he could no longer hold the reins, and the horse had it all his own way. The animal took fright and was in danger of ending both himself and the rider. In this emergency, Mr. Quimby grasped the reins, when instantly more strength than he had known for years came back to him, and he was able to control the animal and bring him to terms, and the strength lasted during the whole period of his need for it.

This incident made the turning point in his career. It set him to investigating the nature of that preternatural strength. From this proceeded step by step his subsequent discoveries concerning the latent force within others as well as himself, its connection with universal force, and the source of it all. He experimented, and by degrees was successful. The fame of his strange mode of treatment and its strange results grew till it obliged him to leave Belfast and settle in Portland. During the six or seven years that he practiced in that city people flocked to him from various parts of the country, but especially from New England. It was in the early sixties that the Misses Ware took to writing down his philosophy, which he himself called *The Science of Health*. Among others who came to him for treatment in 1862, persons still living recall Mrs. Eddy (then Mrs. Patterson), whom, it is said, he cured of a supposed to be hopeless trouble. Dr. Quimby died Jan. 10, 1866, aged sixty-four years. In that same year Mrs. Eddy says she discovered Christian Science. Mr. Quimby's son says: "The last five years of his life were exceptionally hard. He was overcrowded with patients and greatly overworked, and could not find an opportunity for relaxation. At last Nature could no longer bear up under the strain. Completely tired out, he took to his bed, from which he never rose again. . . . Mr. Quimby's idea of happiness," continues his son, "was to benefit mankind, especially the sick and suffering, and to that end he labored and gave his life. His patients found in him not only a doctor, but a sympathetic friend, and he took the same interest in treating a charity patient that he did a wealthy one. Until the writer went with him as secretary, he kept no

accounts and made no charges. He left the keeping of books entirely to his patients, and although he pretended to have a regular price for visits and attendance, he took at settlement whatever the patient chose to pay him."

Mr. Quimby, according to concurrent testimony, died poor. It was his wish that his son should succeed him in perpetuating the gospel he discovered and proclaimed; but his son preferred other lines of work than dealing with the sick. One of Mr. Quimby's first patients, the late Julius A. Dresser, of Portland, took up the art of healing for a time. His son, Horatio W. Dresser, a graduate of Harvard, is now one of the foremost of metaphysical writers. Dr. Evans, author of *Primitive Mind Cure and Esoteric Christianity*, was one of the next to make themselves heard of in this line of thought. His turn of mind appears to have been more speculative than logical. In later years Henry Wood, of Boston, gained world-wide fame. His books have been translated into several languages, and his *Ideal Suggestion through Mental Photography* is said to have run through several editions even in the Chinese tongue. Writers of lesser note and varying degrees of merit are numerous. See *CHRISTIAN SCIENCE*, in this volume.

Students of the "Transcendental" movement of the New England of sixty years ago may recall that one of the popular names for it was "The Newness"; they will also recall the remarkable group of men and women who inspired it. Among these were George Bancroft, F. H. Hedge, Thoreau, Alcott, Garrison, Theodore Parker, Wendel Phillips before he gave all his attention to slavery, the Frothinghams, Ripleys, Danas, and, in short, the whole band that afterward tried the Brook Farm experiment. Among the leading women of the movement were Margaret Fuller, Mrs. Bancroft, Lydia Maria Child, Mrs. Emerson, Mrs. Nathaniel Hawthorne, Mrs. Phillips, Mrs. Horace Mann, Elizabeth Peabody, Miss Anna Shaw, Miss Caroline Sturgis, Miss Quincy, Mrs. Theodore Parker, Miss Maria White (afterward Mrs. James Russell Lowell), and Miss Lee. Emerson, of course, was chief of all, but as a looker-on rather than an active participant; he always regarded the vagaries of the band with an indulgent curiosity.

The famous Dial, established in 1840, had for its first editor Margaret Fuller, and later Emerson himself. It had but a short life; its thought shot over the heads of its day, and it died for want of sustenance. Copies of it still exist in libraries, and whoever cares to consult it may easily perceive that its aims, though spiritual, are totally unlike the tenets of New Thought as outlined in this article. The older movement proclaimed with equal ardor the spiritual uplifting of the race, but the way to this was sought through physical conditions. All sorts of theories prevailed for the uplifting of soul through the purification of bodily environment and habit. It was really a sublimation of time-approved doctrines and experimental theories regarding food, clothing, social customs, fashions, etc. The tenor of New Thought is the reverse of all this. Every change in the expression of individual life, it declares, must be wrought through spirit. The body itself can express nothing, save only as spirit informs it. Bodily vicissitudes even can not affect the spirit that does not consent to them. It preaches no crusade against custom, or fashion, or any of the so-called good things of life. Every kind of food is wholesome, because it is of God's giving, and none can disagree when spirit controls appetite. Dyspepsia even is a bugaboo only to the one ignorant of spirit law and his own inherent power

over ills. The full-fledged believer in New Thought proclaims at all times and seasons that the best clothing and best environment that the world has to give is no more than the birthright of every creature coming into it as an expression of "God's Thought." All the good things of life are conducive to spiritual joyousness, and joy, harmony, and love are the creative factors in the universe. Vibrate harmony, and it draws you within the vibratory forces of Nature, which works with you to the possession of all you need. The older spiritual movement had not rid itself of the notion of the efficacy of self-inflictions; it was in its tendency combative, as witness the vehemence of the antislavery crusade led by its adherents. The new movement preaches non-resistance. Create harmony out of discord, and thus gain control; conquer all things through the law of spirit.

This pervaded all Emerson's philosophy, and its practical ethics were attempted even by Alcott in his school-teaching; but its objective results were somewhat crude, and amid the hard ethics of his day resulted only in ridicule from his neighbors. Indeed, the teachings of Emerson himself were far from being understood when he uttered them by most of his nearest acquaintances; their comments on them sound very queer to-day.

Unlike as they are, however, in expression and method, some of the spiritual light of the older period has filtered down, and may be traced in some of the utterances and writings of the present-day movement. It is the boast of its exponents that no one man, or period, or philosophy, inspires it to the exclusion of others. It is emphatically inclusive. But the core of its working value to-day, that which makes it talked about and antagonized, is the widely accepted belief in its power to heal physical and mental ills and moral deformities. On this point no fair-minded adherent denies the priority of practical discovery and demonstration to P. P. Quimby. Whether Mr. Quimby was indebted for inspiration to leaders of the older movement, which was at its height in his young manhood, it is impossible to say. Nothing in his recorded utterances gives evidence that he was. There is in them ample evidence that he was a keen and critical investigator of all that passed under his ken, and that he had no love for the theology of his day. He plainly blamed the religion of the time for a large part of the mental and physical disorders that came to him for cure. At the same time, it is quite evident that he was a deeply religious man and a devoted student of the Bible. The Newness died out for want of cohesion or a practical point around which to rally. Through Quimby New Thought has found a key which it fits to the most vital needs of humanity. Its value is not a matter for comment here, but this latter quarter of a century movement, under one name or another, counts, all told, considerably more than 2,000,000 followers.

See Henry Wood: *Studies in the Thought World; God's Image in Man; The Political Economy of Natural Law*; and two stories, *Victor Serenus*, a tale of the Pauline era, and *Edward Burton*, a story of modern life. Dresser: *The Power of Silence, The Perfect Whole, and In Search of a Soul*. E. D. Babbit: *The Principles of Light and Color, Human Culture and Cure, and Health and Power*. Ernest Loomis: *Your Practical Forces, and How to use Them; Force Massing and Methods; Practical Occultism; and Methods of Self-help*. Among the contributors to the two leading magazines—*Mind* and the *Metaphysical Magazine*—Dr. Alexander Wilder fills a prominent niche. His writing is both scholarly and

searching. Prominent, also, is a younger writer, Stanton Kirkham Davis, a lawyer, author of *Where Dwells the Soul Serene* and other works. A *Better World of Philosophy*, by J. Howard Moore, is also much approved. There are popular writers by hundreds in this line, and there is no doubt many of them draw inspiration from a man who would not be likely to rank himself with this school at all, namely, the famous Dr. Franz Hartmann, of Germany, one of the most noted occultists of any age, author of many noted works, among which may be mentioned *Life and Works of Paracelsus* and *Magic, White and Black*. The latter is one of the most marvelous books ever written, and is now rare.

METHODISTS. I. Methodist Episcopal Church.—The 150 annual organizations of this Church embraced in the plan of episcopal visitation for 1900-'01 comprise 124 annual conferences, 12 mission conferences, and 14 missions in the United States and foreign countries. The statistical returns of these conferences, as published in the *Methodist Yearbook* for 1901, give aggregates of 17,752 ministers in full connection and on trial (including supernumeraries and superannuates), 14,232 local preachers, 2,907,877 lay members (including full members and probationers), 32,119 Sunday schools, with 350,271 officers and teachers and 2,700,543 pupils; 27,382 churches, having a probable value of \$126,273,871; and 11,202 parsonages, valued at \$19,486,073. As the *Yearbook* went to press before the reports of some of the conferences, which were held late in the fall of 1900, had been made up, it was necessary to insert for these conferences the figures given in their journals for 1899; hence the numbers here given will not exactly agree with those which will appear in the official minutes of the annual conferences for 1900. They nevertheless accurately represent the life of the Church for a twelvemonth.

The educational institutions include 25 theological schools, with 100 professors and teachers and 1,230 students; 56 colleges and universities, with 1,821 professors and teachers and 28,619 students; 60 classical seminaries, with 496 professors and teachers and 9,320 students; 8 institutions exclusively for women, with 157 professors and teachers and 1,187 students; 99 foreign mission schools, with 533 professors and teachers and 7,454 students; and 4 missionary institutes and Bible training schools, with 87 professors and teachers and 453 students; making in all (allowing for 24 institutions, with their teachers and students, duplicated), 228 schools, with 3,040 professors and teachers, 46,545 students, grounds and buildings valued at \$16,843,295, productive endowments aggregating in value \$10,573,306, and a total value of property and endowments, productive and prospective, exclusive of debt, of \$28,909,471.

The list of official periodicals of the Church includes 2 English magazines and 1 German magazine, 11 English and 1 German weekly periodicals, and 14 Sunday-school periodicals and lesson helps in English, German, and Swedish. Besides these, a large number of independent and local unofficial periodicals are published, representing many aspects of the life, thought, and interests of the people of the Church.

The institution of deaconesses in the Methodist Episcopal Church was begun under private initiative in 1887. It was recognized by the General Conference of 1888. This General Conference also instituted an order of deaconesses in India, to whom authority was given to administer the sacraments to such women only in that country as could not be reached otherwise. Deaconesses have been the subject of further legislation by

subsequent general conferences. The Methodist Episcopal Deaconess Society was organized in 1895, and has been incorporated. It was intended to form a bond of union between deaconess workers in various fields of labor, and is competent to hold property for the care of disabled deaconesses, and to hold property temporarily till it can be placed under the care of a local board. Deaconess institutions have multiplied rapidly, and are numerous in the United States, at Methodist centers in Europe, and at foreign mission stations.

Fifteen children's and orphans' homes and schools are sustained by various benevolent societies and special organizations within the Church. Among numerous other institutions under the control of boards or members of this Church are 8 homes for the aged and 19 hospitals.

Chapters of the Epworth League are established in all countries where the Methodist Episcopal Church exists. The enrollment for 1900 represents 20,420 regular chapters and 7,300 junior chapters, with a total of 1,900,000 members. The league is under the direction of a board of control composed of ministers and laymen, one half of whom are appointed by the bishops and one half elected by the General Conference districts.

The total receipts of the Sunday School Union for the year ending Nov. 30, 1899, were \$23,381, and the disbursements were \$19,300. It made return, besides the schools in the United States, of 4,204 schools in foreign lands, with 10,357 officers and teachers and 189,369 scholars, showing an increase for the year of 364 schools (foreign), 700 officers and teachers, and 15,559 scholars.

The receipts of the Tract Society for the year ending Nov. 30, 1899, were \$18,747, and its disbursements \$24,723. During 1899 grants of books and tracts were made to China, India, Africa, Japan, Korea, Norway, Finland, Denmark, Germany, Switzerland, Italy, Bulgaria, Mexico, Chili, and the Argentine Republic. Tracts were also distributed in every part of the United States to pastors in their regular work, to immigrants, to inmates of hospitals, prisons, and asylums, and to sailors and soldiers, the aggregate of distribution in the United States being 9,377,000 pages. Besides these, 1,848,000 copies—being a weekly average of 35,338 copies—of the periodical Good Tidings were circulated in the South in connection with the work of the Sunday School Union.

The annual meeting of the Board of Education was held in New York city, Dec. 5. The treasurer reported that the income from Children's Day collections, interest on invested funds, returned loans, gifts, and legacies had been \$129,370. Eighteen hundred and thirty students, representing 20 different nationalities, had been aided with \$81,794. Several large gifts and legacies had been received. The board ordered that hereafter persons contributing to its work \$1,000 or more should have a fund created to bear either the name of the donor or some name suggested by him.

Church Extension.—The General Committee on Church Extension met in Brooklyn, N. Y., Nov. 8. The receipts for the year from all sources had been \$386,410, or \$48,441 more than in 1899. The sum of \$229,118 had been available for use in donations, etc., on account of the general fund, and \$314,576 on account of the Loan fund. Loans to the amount of \$129,290 had been returned. Additional care had been taken in the collection of loans. Mention was made in the report of the losses suffered in many parts of the country from storms and floods, as likely to result in calls for aid in rebuilding or restoring church property. The receipts from the beginning of the

society, in 1865, to Oct. 31, 1900, had been \$6,945,969, and during the same period 11,677 churches had been aided. A call had been issued in 1899 for \$1,000,000 in thank offerings for church extension, for the erection of 1,000 churches each on the Frontier and Mountain fund plans, for securing additions to the Loan fund, and for the payment of debts on churches that had been aided by the board; toward this sum \$298,161 had been received. Appropriations of \$335,547 were made for the ensuing year.

Freedmen's Aid and Southern Education.—The annual meeting of the Freedmen's Aid and Southern Education Society was held in Newark, N. J., Nov. 12 and 13. The reports represented that interest on the part of the Church in the cause for which the society is concerned had considerably increased. The receipts for the year had been \$355,805 (of which \$11,425 were entered "Treasury overdrawn"), and showed a net increase of \$4,124 over those of the previous year. The expenditures had been \$355,805, of which \$171,773 were for schools among colored people and \$47,815 for schools among whites. The amount of indebtedness was \$154,891, showing a reduction of \$23,183 during the year. It was decided at the meeting to ask the conferences to give \$100,000 additional of contributions to be applied to the payment of this debt, and the total amount asked from the conferences for the ensuing year was \$251,950. Secretaries and pastors were advised, when presenting the work of the society to the people, to lay special stress on its industrial aspects, and to appeal for special gifts for the larger development and better support of the industrial plants. An appropriation of \$12,500 for industrial education was recommended, to be distributed among different schools. The following resolution was adopted: "1. That we deprecate the action taken by some of the States of the Union, which, by constitutional provision, is designed to disfranchise a class of voters whose right to all the privileges of citizenship is secured by the amendments to the Constitution of the United States, and that we protest, in the name of justice and of that equality before the law which has been the boast of the American people, against such tests and provisions for voters as can not operate equally with all classes without regard to color, race, or previous conditions. 2. That while we favor the use of an educational test which shall not discriminate against any class on other grounds, we earnestly protest against what is known as the 'grandfather clause' as partial, unjust, un-American, undemocratic, and oppressive. 3. That the time is here when representation in Congress should be based upon the number of voters in the States, and not on the population as a whole, or some other constitutional provision is made that will give to each State an equivalent representation in the House of Representatives."

Women's Societies.—The Woman's Home Missionary Society met in its annual convention at Chicago, Ill., Oct. 17. The treasurer reported an advance of more than \$50,000 in receipts. Of the \$200,000 pledged for the Twentieth Century Thank-offering fund, \$100,000 had been secured. A bequest of \$25,000 and gifts of \$5,000 and \$10,000 were mentioned. Several of the society's homes had been enlarged during the year; the Bohemian industrial building, at Baltimore, Md., had been completed; land had been purchased in Washington, D. C., and paid for, for Rust Hall; and new work had been opened in the Hawaiian Islands and Porto Rico.

The reports made to the General Executive Committee of the Woman's Foreign Missionary

Society at its annual meeting in Worcester, Mass., Oct. 24, showed an increase of more than \$54,000 in receipts, the total amount raised during the year having been \$414,531. About \$70,000 had been contributed to the Thank-offering fund, which now amounted to \$118,000. Thirty missionaries had been sent out during the year, and 13 new missionaries were accepted. Appropriations of \$373,969 were made for the ensuing year.

Missionary Society.—The annual meeting of the General Missionary Committee was held in New York city, Nov. 14 to 20. The treasurer's report showed that the total receipts of the Missionary Society from Nov. 1, 1899, to Oct. 31, 1900, had been \$1,223,904, and the disbursements \$1,202,682; and that the present indebtedness was \$49,813. In addition to the regular income, special gifts of \$76,803 had been received. Appropriations of \$625,324 were made for the foreign missions in Germany, Switzerland, Norway, Sweden, Denmark, Finland and St. Petersburg, Bulgaria, Italy, Eastern and Western South America, Mexico, Africa, China, Japan, Korea, India, and Malaya; \$472,701 for domestic missions, \$179,616 of which were to be applied to non-English-speaking populations in the United States; \$120,160 for the Contingent fund and miscellaneous objects, and \$23,904 for the debt; making a total amount of appropriations of \$1,242,179. In addition to this amount, \$98,500 for special purposes were authorized to be appropriated conditionally. Recommendations were made by the committee in reference to the collection for the Twentieth Century Thank Offering to be taken in connection with the regular collections for missions, to the effect that "whatever is raised in addition to the amount of the collections of the previous year shall be the Twentieth Century Thank Offering for missions, and a sum equal to the collections of the previous year plus 5 per cent. of that sum shall be added to legacies and lapsed annuities and appropriated in 1901, and the remainder of the collections not otherwise designated shall be appropriated to the missions in foreign countries."

Episcopal Address.—The address of the bishops to the General Conference began with a comparative review of the condition of the Church at the time of the meeting of the first delegated General Conference in 1800 and now, showing, among other things, that during the century the various Methodist churches in the United States, all having been derived from the one church of 1800, have increased from 61,000 communicants to nearly 6,000,000. It then described the proceedings had in behalf of the Twentieth Century fund and the present condition of the enterprise; reported the transactions of the bishops and of the Episcopal Board and the work in the mission fields, and reviewed the present state of the Church at considerable length, under the several heads of numerical growth, benevolence, doctrinal fidelity, and spiritual life; attempting to account for some phenomena of a less encouraging character which had been recently developed. Of matters of church polity, the results of the vote of the Church on the proposition for the equal representation of the clergy and laity in the General Conference was mentioned as exhibiting a remarkable approach to unanimity. The working for twelve years of the change of the limit of pastoral service from three to five years was spoken of as not answering the expectations that had been entertained from it, and the bishops expressed the opinion that "if the General Conference shall not approve a return to the three years' limit of annual appointments, with well-defined and carefully guarded provisions for necessary exceptions to this limit, then an

entire removal of the time limit of annual appointments would be of advantage to the work." On the subject of the Church and public morals, the address maintained that the Church could not permit the least abatement of its hostility against the liquor traffic or relax its attitude toward divorce. With regard to amusements, the restrictions prescribed in an earnest age like the ages of Wesley and the Puritans could not be enforced in their full measure under modern conditions of society. "The attempt to enforce absolute abstinence from recreative amusements reacts toward unrestrained indulgence. A discrimination between the admissible and the inadmissible is therefore imperative." Wesley's principle that the taking of such amusements as can not be taken in the name of the Lord Jesus should be often reiterated and emphasized in this time of excessive and questionable amusements. "Without simplicity, moderation, and purity in his pleasure, the Christian can not resist the forces that create an age of triflers and sensualists. So great is this danger that we suggest that it would be profitable to place among the special advice in the Discipline a brief but cogent statement of the perils which attach to many amusements, of the evils inseparable from others, and of the principles by which the Christian should regulate his choice among and his use of them." As regards Christian unity, "the Methodist Church has always held the simple and broad doctrine that all who acknowledge Jesus Christ as Lord and Saviour constitute the one body, of which he is the head," and that their several churches, however diverse in certain respects, "are the several parts of the world-wide and indestructible society which is his visible witness on earth." Yet the practical relations of the several churches lack much of full correspondence to this ideal. In view of this fact, while Methodists must hold the truth as God gives them to see it and do their own work in their own way, they must even more than heretofore give diligence "to keep the unity of the spirit in the bond of peace," must grant to other churches the ample tolerance they claim for themselves, must honor them "as branches of the True Vine, as temples of the Holy Ghost," must seek opportunities for the expression of Christian fraternity and for co-operation, and must study, "with earnest and unselfish desire to solve, the difficult problem of many churches in scanty fields." For political dangers and evils, "a strenuous and militant political righteousness, inspired and directed by Christian ideas, is the only remedy." And the Church "must insist that a wise, persistent, and heroic earthly citizenship has now become a supreme test of noble character."

General Conference.—The twenty-third delegated General Conference met in Chicago, Ill., May 2. A question arose at the beginning concerning the number of lay members to be admitted. The plan of lay delegation in force since 1872 provided for the admission of not more than two from each annual conference. The General Conference of 1896 had submitted to the conferences for their action the draft of a rule making the number of lay delegates from each annual conference equal to the number of ministers; it was entitled to send, so that the General Conference should be composed equally of ministerial and lay delegates. This measure had failed to receive the three fourths vote in the annual conferences required by the constitution of the Church, and had therefore been lost. Thereupon the Rock River Conference had made a proposition, which was submitted to the annual conferences, for so altering the article of the Discipline concerning lay

delegation that it should read, "The lay delegates shall consist of one layman for each annual conference, except such conferences as may have more than one ministerial delegate, which conferences shall each be entitled to as many lay delegates as ministerial delegates"; and so modifying other references to the subject in the Discipline that their reading should be consistent with the amendment proposed. This measure had been carried in the annual conferences, the votes of the ministers members thereof having been 9,270 in its favor and 1,524 against it. In anticipation of the adoption of the amended rule, provisional lay delegates had been chosen in all the annual conferences in addition to the regular ones, so that they might be present and ready to take their places as soon as the new rule should go into effect. The action of the annual conferences in favor of the proposed change in the rule governing the number of lay delegates was concurred in by a unanimous vote. Among the provisional delegates present to be seated was a woman—Mrs. M. Y. McMahan, of Illinois. In order that the actual admission of the other "provisional" lay delegates might not be complicated with the question of the eligibility of women to seats in the General Conference, Mrs. McMahan declined to present her credentials. The secretary of the General Conference was then directed to call the roll of provisional delegates, for the immediate seating of all against whom no objection should be offered. This was done, and the provisional delegates were seated as members of the General Conference.

The commission appointed by direction of the previous General Conference (1896) to prepare and report, "first, a draft which shall set forth in well-defined terms and in logically arranged articles the existing organic law of the Methodist Episcopal Church; and, secondly, any modifications of said organic law which the committee may recommend for adoption by the concurrent action of the General Conference and the members of the annual conference," presented its report, and the consideration of the paper constituted the principal part of the business of the session. This report, in its first part, defined the existing organic law of the Church as being embodied in and limited to the articles of religion, the general rules, and the sections on the General Conference in the Discipline of 1808, enacted by the General Conference of that year, together with such modifications thereof as had been adopted since that time. The second part of the report, embodying recommendations for modifications of the organic law, was taken up, considered section by section, and adopted with such amendments as were accepted, for submission to the annual conferences. With reference to the eligibility of women to be members of the General Conference, an amendment was proposed for approval by the annual conferences, so changing the articles of the Discipline prescribing the qualifications of lay delegates as to substitute the term "lay members" for "laymen" wherever that word occurs. An amendment was proposed to the rule respecting the annual appointments of ministers to their several charges, by striking out the clause limiting the number of years during which a minister may be sent to the same place to five, so that the passage shall read, "He [the bishop] shall appoint the preachers to the several pastoral charges annually." While expressing its judgment that liberal provision should be made by the Book Committee for the support of the bishops and General Conference officers, the Conference resolved that "no bishop or General Conference officer shall receive anything above actual expenses for his services in

the dedication and reopening of churches, attending commencements of our educational institutions, and such other like services as he may render the Church." All the present active bishops were declared effective, and two additional bishops were chosen, namely, the Rev. David H. Moore, D. D., and the Rev. John H. Hamilton, D. D.; also two missionary bishops, for southern Asia, to be co-ordinate in authority, viz., the Rev. Edwin W. Parker, D. D., and the Rev. Frank W. Warne, D. D., already missionaries in India. In addition to the episcopal residences in the United States, additional episcopal residences were constituted at Zurich, Switzerland, and Shanghai, China, to the former of which Bishop John H. Vincent, and to the latter Bishop David H. Moore, were assigned for four years each. It was decided that there be but one general secretary for each of the organized benevolences of the Church, who shall be the executive officer, except in the case of the Freedmen's Aid Society, to which two secretaries were given; with at least one assistant secretary for societies requiring more than one secretary, to be elected by the General Conference. Several of the official newspapers having proved to be not self-supporting, the number of journals was reduced by consolidation or by requiring that arrangements be made for their publication without expense to the Church. The offices of general secretary of the Epworth League and editor of the Epworth Herald were united. The committee to whom a number of memorials on the subject were referred recommended the removal in the disciplinary rule regarding worldly amusements of the words condemning "dancing, playing of games of chance, attending theaters, horse races, circuses, dancing parties, or patronizing dancing schools" from the paragraph relating to conduct liable to reproof or punishment, and their insertion in the paragraph designated as "special advices." The recommendation was not sustained by the Conference, and the advice of the minority report that no action be taken on the subject at this time was adopted. A petition to Congress was adopted, asking the removal of the tax on legacies given for charitable, educational, and religious purposes, because it was, in the judgment of the General Conference, contrary to public policy and to the aim and spirit of our institutions, and practically a direct tax on the institutions that do most to aid government and benefit the people. A resolution was passed expressing regret that after the passage of a law prohibiting the sale of intoxicating liquors at army posts and in forts, camps, reservations used for military purposes, and national soldiers' homes, the plain intent of the enactment had been, "by construction, it seems to us, forced and unnatural, placed upon the law by the Attorney-General," defeated; and appealing to the President to use his influence in favor of the new bill, aiming to be more distinctly prohibitive, which had been introduced in the House of Representatives. The publishing agents were requested to have prepared a map of the United States showing the Conference boundaries in outline. Fuller recognition was given to organizations for city evangelization; their powers were increased, and the general organization was constituted as the National City Evangelization Union. The proceedings of the bishops taken in 1898 (see Annual Cyclopædia for 1898) looking to the collection of a twentieth century thank offering during 1901 were approved; their appointment of a commission to have charge of the collection was accepted, and the commission was continued; the designation of the objects to which the funds collected should be applied was ratified; and the duties of pastors

and educational officers in the matter of aiding in the carrying out of the plans of the commission were defined.

II. Methodist Episcopal Church, South.—The numerical returns of this Church give it 5,950 ministers, 14,190 churches, and 1,460,272 members, with church property valued at \$5,400,000.

The business done by the Southern Methodist Publishing House during 1899 amounted to \$383,746, or \$40,447 more than in 1898. The net gain in assets, \$33,889, was less than heretofore in proportion to the operations of the concern. The capital was returned as amounting to \$920,531. A branch house established in Dallas, Texas, had realized a profit of more than \$4,000 in the first year of its existence. The establishment of a branch in China has been determined upon, to take place as soon as a suitable man can be found to manage it.

The reports of the Board of Education represented it as being in better financial condition, taking everything into consideration, than at any previous time. More than \$800,000 had been raised toward a contemplated twentieth century fund of \$1,500,000. The agitation of this movement, it was believed, had done much to arouse enthusiasm on the subject of education. The entire sum of \$25,000 for Haygood Memorial Hall had been raised.

The report of the Epworth League Board showed that 441 senior and 111 junior chapters had been added during the year, with a total of 23,730 members, making the whole number of chapters 4,977 senior and 606 junior, with 245,175 members in all. A number of lapsed and inoperative leagues had been revived and set to work under better conditions, and a more general understanding of the purpose of the League and its plan of work was being diffused throughout the connection. A growth of missionary spirit was also mentioned in the report.

The report of the Sunday School Board showed gains of 30 schools and 12,637 teachers and pupils, the whole number of schools being 13,940 and of teachers and pupils 951,824. The collections from all sources, including those for the Children's Day fund, amounted to \$2,845, which, added to the balance on hand from the previous year, gave \$15,742, while the disbursements had been \$3,204, leaving a balance, April 1, 1900, of \$12,538. Of this sum, \$10,000 were in the form of a loan to the Board of Missions, only the interest of which is used for helping Sunday schools.

The Board of Missions at its annual meeting, May 11, appropriated \$222,541 for the work of the missions in Brazil, China, Korea, Japan, Mexico, Cuba, and among the Indians, the German populations, and the conferences of the Rocky mountains. The apportionment of amounts to be asked from the several conferences contemplated the raising for the ensuing year of \$300,000.

III. African Methodist Episcopal Church.—The following numbers were given in the episcopal address to the General Conference as representing the statistics of this Church for 1900: Of annual conferences, 65; of churches, 5,095; of ministers, 5,439; of communicant members, 663,706; of adherents, 1,659,765; of colleges, 20, with 165 teachers, 5,237 students, and 660 graduates; value of church property, \$10,310,993. Between 1884 and 1899 \$1,140,013 were raised for education.

The twenty-first General Conference (quadrennial) met in Columbus, Ohio, May 7. The episcopal address began with a review of the progress of the African Methodist Episcopal Church during the four years since the preceding General Con-

ference, in which a considerable increase in numbers was spoken of, and as evidences of growth in vital piety were mentioned the better performance of the Church's duties on all observable lines, the emboldening and enlargement of the missionary spirit, a greater grasp of duty and devotion to the performance of it, and the facts that the denomination had built more churches and educated more persons and had had a greater number of conversions than in any previous four years. A financial scheme for the support of the educational interests of the Church was adopted, under which funds were apportioned to 16 institutions of collegiate and academic grade in sums ranging from \$1,600 to \$200 each, and a plan was arranged for raising money for the educational department, (1) by appropriation from the "dollar money," 6 per cent. of which shall be paid to the Secretary of Education; (2) by private donations and bequests, which shall be paid according to the wish of the donor; (3) by the contributions of educational societies, the formation of which was recommended to the churches of the connection; (4) by public appropriations; (5) by the maturing of life insurance policies; (6) by contributions of pastoral charges for educational purposes; (7) by the proceeds of collections taken at the annual conference educational anniversaries; and (8) by the establishment of a day throughout the connection for taking collections in all the churches, the avails of which shall be used exclusively as an endowment fund for the several connectional institutions after present indebtedness is met—the anniversary to be known as Endowment Day, and held on the third Sunday in each September. The office of Secretary of Christian Endeavor Work was instituted, to be filled by appointment by the bishops. Steps were taken for having the Church represented on the Board of Control of the American Bible Society. Provision was made for the incorporation of the African Methodist Episcopal Church in foreign lands where it is working. A measure was passed for debarring from the pulpit any man who is separated from his wife except for the scriptural cause. The report of the committee on the state of the Church advised against the drawing of the color line, and urged that the negro should be allowed to advance in accordance with his social and economical efficiency. Two native Africans were present as delegates from the conferences in South Africa. Five additional bishops were elected—the Rev. Evans Tyree, D. D.; the Rev. M. M. Moore, D. D.; the Rev. C. S. Smith, D. D.; the Rev. C. T. Shaffer, D. D.; and the Rev. J. L. Coppin, D. D., making the whole number of bishops 14. In the adjustment of episcopal districts, 11 were constituted for the United States (with the Bahama Islands), 1 for Canada, Bermuda, the West Indies, South America, Hawaii, and the Philippine Islands (Bishop Smith), 1 for the west coast of Africa (Bishop Moore), and 1 for South Africa (Bishop Coppin).

IV. African Methodist Episcopal Zion Church.—The statistical reports of this Church give it 9 bishops, 96 presiding elders, 3,200 itinerant preachers, 2,800 churches, and 520,000 members. The general statistician reported to the General Conference that the total value of the church property was \$4,865,372; that \$2,177,000 had been raised during the past four years for pastors' salaries, \$614,800 for current church expenses, and \$3,763,996 for new churches and the payment of debts. The sum of \$114,000 had been raised for the general fund, \$7,500 for home and foreign missions, and \$20,000 for purposes of church extension.

The report of the Varick Christian Endeavor Society gave the number of organized societies as more than 600, and that of members as exceeding 20,000.

The General Conference met in Washington, D. C., May 2. The quadrennial address of the bishops reviewed the condition of the Church and presented a number of recommendations of matters to be considered by the Conference. The report of Livingstone College represented that the institution, besides paying its current expenses, had reduced its debt by the amount of \$3,900. The collecting agents for the institution reported upon the collection of funds approaching \$50,000 in amount. The property of the institution was valued at \$117,950, with liabilities of \$19,055. The agent of the Greenville College reported having obtained \$2,705. The report of the educational secretary represented that the school property had been so improved as to be worth \$143,500; that \$75,000 had been raised and 1,073 students had attended the schools. The Rev. John Wesley Alstork, D. D., was chosen bishop in place of Bishop Jehu Holiday, deceased, but no additional bishops were elected. Among the measures of policy adopted was a rule requiring the appointment of presiding elders directly by the bishop instead of by the annual conference on nomination by the bishop, and the abolition of the office of Conference steward, in consequence of which pastors will hereafter make their financial reports monthly to the general steward. A special service was held in commemoration of the one hundredth anniversary of the birth of John Brown.

V. Methodist Protestant Church.—The Statistical Committee of this Church reported to the General Conference in May that there were connected with the 59 conferences 1,645 ministers, 1,135 local ministers and preachers, 177,066 members, 4,250 probationers, 2,001 churches, 531 parsonages, and 2,042 Sunday schools, with 16,680 officers and teachers and 126,031 scholars. The total value of church property was \$4,756,721.

The receipts of the Woman's Foreign Missionary Society for the year were \$7,804. After meeting current expenses, a balance of \$3,397 remained.

The eighteenth quadrennial General Conference met at Atlantic City, N. J., May 18. The president, Dr. Joshua W. Hering, in his address at the opening of the Conference represented that the recommendation he had made at the previous General Conference for a closer contact through correspondence between the annual conferences and the president of the General Conference had been, he was convinced, the means of accomplishing much good. The correspondence had had a wide range, embracing requests for the construction of law and for advice in the management of what were regarded as difficult cases. The Rev. D. H. Stephens was elected president to succeed Mr. Hering. The Committee on Publishing Interests reported that the assets of the two publishing houses were about \$63,000. The circulation of Sunday-school literature had increased to about 140,000 copies. The report of the Board of Ministerial Education remarked upon a substantial increase in the collections, and showed an increase of the permanent fund from \$5,184 to \$16,520, with additional pledges amounting to about \$10,000. The board had in training for the ministry 39 students beneficiaries and about 75 not beneficiaries. Its receipts for the four years since the preceding General Conference had been \$25,495 and its disbursements \$25,609. The Theological Seminary had 14 students on its roll, while 50 of its alumni were preaching in the Church. Six free scholarships had been established dur-

ing the year. The receipts of the Board of Home Missions for the quadrennium had been \$25,607. The Board of Foreign Missions had received during the past four years \$52,688. It returned for the mission in Japan 12 foreign missionaries, 15 native preachers, and 19 stations, having properties, including schools and colleges, valued at \$40,000. The Woman's Foreign Missionary Society returned an income of about \$7,000 a year and property in Japan having an estimated value of \$15,000. The society does educational and evangelistic work, and has 6 missionaries, 76 pupils in the school, a kindergarten, and a number of native workers. A mission had been started in Shanghai, China, with 2 missionaries. The Woman's Home Missionary Society, which was formed to organize missions among the Indians, reported some evangelistic work done and no debt. The Conference decided that the term for which foreign missionaries shall be engaged be fifteen years, with the privilege of returning home every five years. Provision was made for the election by the Conference of a Board for the Woman's Foreign Missionary Society. A proposal to consolidate the Boards of Home and Foreign Missions was referred to a committee, which brought in two reports, one favoring the continuance of the home board under its own management and the other presenting a plan of consolidation. The plan to consolidate the boards was rejected, and the whole matter was then laid on the table. It was decided that a layman has not the right of appeal from the quarterly conference to the annual conference. The question being raised whether a local preacher can act as a lay delegate in the annual conference next preceding the General Conference, the Conference found that the constitution of the Church required that all such delegates should be laymen. The word "catholic," which had been stricken out from the Apostles' Creed by the previous General Conference, was restored. An overture providing for the exclusion from representation in the General Conference of a conference which fails to raise 25 per cent. of its assessments for the general interests of the Church, and an overture looking to the abolition of the electoral college and the election of delegates to the General Conference by a direct vote of the annual conferences, were sent down to the annual conferences. Provision was made for the preparation of a new hymnal. A higher standard of literary qualification in candidates for the ministry was insisted upon.

VI. American Wesleyan Church.—A summary of the statistics of the spring and fall conferences of this Church (omitting three conferences which failed to make reports), published in the Wesleyan Methodist for Jan. 23, 1901, gives the following numbers: Of elders, 393; of superannuated ministers, 33; of quarterly conference licentiates, 304; of members, 15,653; of Sunday schools, 471, with 465 superintendents, 1,948 teachers, and 17,290 pupils; total amount of contributions, \$119,244, of which \$61,093 were for preaching, \$10,369 for missionary enterprises, \$1,695 for educational purposes, \$5,629 for the support of Sunday schools, \$861 for superannuated ministers, and the remainder for other benevolences and church building and expenses. At the annual meeting of the Connectional Boards of this Church the reports showed the aggregate assets of the Connectional societies to be \$153,294. The Publishing Association had received \$20,080 for the year and added \$2,650 to its capital, while its total assets were \$67,213. The receipts for foreign missions had been \$7,804, those for home missions \$2,995, and those for the Education So-

ciety \$6,991. The first year's operation of a school of college grade had been satisfactory as to number of students and standard of scholarship. Twenty-nine students had the ministry in view.

VII. Free Methodist Church.—The Executive Board of this Church, at its annual meeting, acted upon the memorial of a member who considered himself aggrieved by the operation of the rule of the Church against membership in secret societies, including labor unions. A preamble and resolutions were adopted, in which the position against secret societies, as expressed in the Discipline and affirmed by the committee in 1899, was reaffirmed, with the declaration: "We are unequivocally opposed to all secret societies, and can not make any change in our rules on this subject, nor can we relax in the least our determination to enforce this rule vigorously without exception or favor. We can not, however, allow this position to be misinterpreted and misconstrued as opposition to organized labor as such. We are not opposed to such proper organizations as seek to promote the interests of laboring men. It would be unreasonable and inconsistent for us to do so, as fully three quarters of our membership are found among the laboring classes. To oppose organized labor that seeks the betterment of the laboring classes would be to oppose our own interests. It has been represented to us that there is a possibility of our mitigating the unfortunate condition of many of our members who hold their loyalty to our Church to be above

VIII. Methodist Church in Canada.—The following is a general summary of the statistics of this Church for 1900: Number of annual conferences, 11; of ordained ministers, 1,790; of probationers for the ministry, 242—making in all 2,032 ministers; of local preachers, 2,290; of exhorters, 1,174; of class leaders, 7,133; of members, 284,901; of Sunday schools, 3,405, with 33,023 officers and teachers and 267,654 scholars; of Epworth Leagues, 1,850, with 74,920 members; of churches and places of worship, 4,334; of parsonages, 1,133; of colleges and educational institutions, 19; value of church property, \$15,397,634.

The 1,850 young people's societies of various names include 760 Epworth Leagues, 717 Epworth Leagues of Christian Endeavor, 70 other societies, and 303 Junior Epworth Leagues, with 48,299 active and 26,621 associate members. These societies contributed in 1899 \$24,004 for league purposes, \$19,902 for missions, \$478 for the Superannuation fund, \$119 for the educational fund, and \$62,043 for other purposes.

The Woman's Missionary Society received from all sources \$42,562. Reports were made at the nineteenth annual meeting of the Board of Managers, Oct. 23, from stations and schools in Japan, China, among the Chinese in British Columbia, among the Indians, and among the French.

IX. Wesleyan Methodist Church (Great Britain).—This Church includes, according to the information furnished by the Conference book steward for 1900:

COUNTRIES.	Ministers.	Lay preachers.	Church members and probationers.	Children in Sunday school.	Churches.
In Great Britain.....	2,202	19,956	481,061	967,046	8,462
In Ireland.....	255	598	28,376	25,370	529
In the foreign missions.....	379	2,000	60,660	66,881	2,450
In the French Conference.....	37	101	1,780	2,632	150
In the South African Conference.....	307	3,622	84,062	36,008	754
In the West Indian conferences.....	94	891	47,309	28,175	487

all temporal considerations by conferring with the representatives of organized labor." A committee was therefore appointed to confer with the chief officers of the labor organizations and set before them the true attitude of the Free Methodist Church in reference to secret societies, and to secure, if possible, an arrangement by which its members may continue in their various employments, and may be employed by the various corporations, contractors, and operators, without pledging themselves to secrecy and thereby violating their church vows. A digest of Free Methodist law was submitted in manuscript, and ordered published upon approval by the superintendents.

The report of the treasurer of the Missionary Board showed that the total contributions for foreign missions, including certain special gifts, had been \$27,929, averaging more than \$1 per member for the whole Church, including probationers, and being the largest amount for one year during the history of the board. The missionary work in South Africa had been interfered with to a considerable extent by the Transvaal war, but no injuries to the property were known of. The appointment of a general superintendent of the work in South Africa, the affairs of the mission in Japan, and the sending of missionaries to Cuba or Porto Rico were considered by the Missionary Board at its meeting in October.

The treasurer of the Board of Education reported a little more than \$1,200 on hand. The board decided to begin disbursing its fund by loans to accredited applicants in moderate sums, according to the provisions of the Discipline, at its regular meeting in October, 1901.

The total income of the Education Committee, as shown in its sixtieth annual report (March, 1900), was £272,923, and the total expenditure was £283,275. The sum of £28,936 had been received as "scholars' pence." The collections and subscriptions mentioned, amounting to £5,965, showed an increase of £88 over the previous year. The 743 day-school departments returned 159,716 pupils, with an average attendance of 128,992. The special Government aid grant allotted to the 6 Wesleyan school associations, amounting to £36,146, had been distributed by the governing bodies according to the necessities of the several schools. Full particulars were given in the report of the principal day-school extensions and enlargements, all going to indicate a revival of the interest taken by the connection in elementary education.

The report of the Home Missionary Society to the Conference showed that its total income had been £42,000. Grants had been voted of £9,809 to dependent circuits, £4,251 toward the support of home missionary ministers, and £3,300 to district home mission committees. The Committee on Work in the Army and Navy reported that 193 ministers were wholly or in part engaged in this field, and that there were 31,275 declared Wesleyans in the services. The Chapel Committee reported upon the building of 95 chapels, at a cost of £288,339; of 22 ministers' houses, at an estimated expenditure of £20,594; and of 10 school-rooms. The new chapels, with enlargements, would give a total additional accommodation of 21,488 sittings. The estimated outlay for 387 contemplated cases was £441,017. The present number of Wesley Guilds was 1,130, with 75,154 mem-

bers, the figures showing an increase of 114 guilds and 4,859 members. The report on education represented that the school departments had increased during the year from 743 to 750, while the number of scholars was 16,787, showing an increase of 1,071. The reports on church membership showed a net increase of 6,225 members.

The annual meeting of the Wesleyan Missionary Society was held in London, April 30. Mr. Edward Aston, of Manchester, presided. The total ordinary and special income, home and foreign, had been £133,757, of which £1,834 had been contributed for special missions and £8,787 had been received from the mission districts. In addition to this sum, £1,874 had been contributed for the relief of West Indian distress, £1,358 for the Indian famine fund, and £300 for special extension funds. The total expenditure had been £133,738, and the separate expenditure of the Woman's Auxiliary for Female Education in Foreign Countries amounted to £13,467 additional. The report from the mission fields accounted for 315 central stations or circuits and 2,450 chapels and preaching places, 366 missionaries, 3,090 catechists, day-school teachers, and other paid agents, 6,133 unpaid agents (local preachers, Sunday-school teachers, etc.), 47,372 church members, 13,265 probationers, and 92,488 pupils. Thirty-six missionaries had been sent out during the year to stations in India, Burmah, China, West Africa, Ceylon, the West Indies, Portugal, South Africa, the Bahamas, Honduras, and Cairo, 9 missionaries and 2 wives of missionaries had died.

The Conference met at Burslem, July 24. The Rev. Thomas Allen, D. D., was chosen president. A resolution was adopted in the pastoral session in reference to the appointment of assistant secretaries and Conference letter writers, which had heretofore been made by acclamation, that henceforth a small committee should be designated to select a list of names, from which or from other persons who may be nominated the Conference shall make its selections. The pastoral session recommended that a roll of membership, compiled from the class books, be kept by every society, the names of members standing in their several classes, the lists to be corrected, if possible, once a quarter, or at least once a year, and the superintendent being responsible for seeing that the roll is duly kept.

The committee on the proposed change in the order of the sessions reported that all the synods had accepted the resolution passed by the previous Conference, although some had suggested minor alterations in the details, and the measure was finally adopted. Under it the representative conference will hereafter consist of 300 ministers and 300 laymen, and the representative session, instead of being preceded and followed by a pastoral session, will meet first, to be followed by the pastoral session. The report on the Twentieth Century fund showed that 733,313 guineas had been promised, while the total amount actually in hand was £317,443. There were now required 266,687 additional promises to complete the fund (of 1,000,000 guineas). Out of 814 circuits, only 22 had reported inability to complete their promises, and these only represented subscriptions of less than 2,000 guineas. The Executive Committee had decided to give a year's grace for any additional promises now made. Additional subscriptions of more than 40,000 guineas were taken in the Conference, making the whole amount pledged 771,500 guineas, or £810,075. A proposal to form a fund for meeting the expenses of the Connection—to be called the Connectional fund, the income for which shall come from an annual collection in

each chapel and from special donations—having been approved by the synods, was finally adopted. A proposal by the Home Mission Committee for the institution, instead of small, separate district committees for home missions and chapel affairs, of one larger united committee for both purposes, was provisionally approved and sent down to the synods for consideration. It is contemplated that this committee shall consist of 10 ministers and 10 laymen; that it shall give special consideration to all grants to dependent circuits and home mission stations, to all requests for additional or fewer ministers, and to all proposals for the division or amalgamation of circuits; and that it shall advise respecting the purchase of sites and the promotion of schemes for the extension of Methodism in towns and villages. The report on the proposed Ecumenical Conference of Methodism to be held in 1901 provides that the conference shall be constituted of 500 members, 300 being assigned to the western section and 200 to the eastern. The eastern section will comprehend British Methodism and affiliated conferences and mission fields, and the western section the United States and Canadian conferences and their foreign work. The conference will be held in Wesley's Chapel, London, and will be opened on Wednesday, Sept. 4, 1901. Of the eastern section, there were allocated to the Wesleyan Methodist Church 86, Primitive Methodists 34, United Methodist Free Church 18, New Connection 10, Irish 10, and Bible Christian 8. Others were allocated to the South African, Australian, and French Churches. The Conference decided to send out a secretary to the west coast of Africa. A minister was designated to serve as secretary of the Wesley Guild, to give his time entirely to the interests of that organization. A special committee was appointed to consider during the year the best means of providing for the training and equipment of class leaders and of obtaining a large increase of new leaders, especially from the ranks of the young people. Thanks were voted to Mr. Samuel Smith, M. P., for directing the attention of Parliament to the evils of indecent plays in the theaters and of gross license in the streets of London. In view of proposed legislation in reference to secondary education, the Conference by resolution declared itself opposed to grants of public money being made to denominational secondary schools without the provision of a conscience clause, and also recorded its strong opinion that in cases where public school educational authorities establish secondary schools "no formularies distinctive of any denomination should be permitted to be taught therein, and no dogmatic or ecclesiastical tests should be introduced." The committee appointed to consider the relation of baptized children to the Church recommended in the pastoral session that a larger measure of recognition be given to those children, and that more definite attention should be paid to the instruction of them in their duties and privileges as disciples of Christ; that such instruction should be extended to those not baptized, in order to bring them into membership with the Church; that for these persons special classes should be provided to meet for six or eight weeks in the spring of the year; and that more regular instruction should be given in the duties of the parents of the baptized children. These recommendations were adopted, to be sent down to the synods, and the committee was re-appointed. The committee having in charge the revision and completion of the regulations appended to the rules of the society reported that it had collated the various regulations contained in the resolutions of past conferences, and

that in some instances changes had been suggested. One paragraph dealing with public worship had raised the question of the use of the liturgy in Wesleyan service, relating to which different views were expressed as to the use of the Book of Common Prayer and of the Psalter. These questions were referred back to the committee.

X. Primitive Methodist Church.—A report presented to the Conference in June reviewing the growth of this Church since its foundation in 1810 with 8 members gave the present number of members as 196,408, with nearly 1,200 ministers, 614,093 hearers, and 4,548 chapels having a total value of £3,950,182. These figures represented the present condition of the denomination after setting off more than 5,000 members who had joined the United Methodist Church in Australia.

The Sunday-school department reported 4,359 schools, with 60,867 teachers and 467,790 pupils, 29,166 of whom were members of the Church and 26,177 more were members of catechumen classes. Twelve hundred and twenty-one Christian Endeavor Societies returned 41,681 active and associate members, 27,652 of whom were members of the Church. The connectional temperance secretary reported 2,062 Bands of Hope and 299 adult temperance societies, with nearly 300,000 members in all.

The annual meeting of the Primitive Methodist Missionary Society was held in London in May. The year's receipts of the general fund had been £15,276—£680 less than in the previous year—and those of the African fund £5,898. There were now in Africa 10 principal stations and 31 out stations, 12 European and 3 native missionaries, with 3 trained native evangelists, 53 native local preachers, 8 native class leaders, and 1,466 members, the last number showing an increase of 55. The larger proportion of the African stations were in the field affected by the operations of the South African War, and had suffered considerably therefrom. Others were on the African mainland, opposite the island of Fernando Po, one of the stations being in a district which would probably on the adjustment of boundaries fall to the Germans. In that case the mission and the people would remove to British territory.

The Conference met at Bristol, June 13. The Rev. Joseph Odell was chosen president. Reports were made that the sales at the Book Room had amounted to £37,814, or £2,352 more than in any previous year; that the income of the Connectional fund had reached £7,378, the largest amount in its history; that the Chapel Aid Association had a deposit account of £232,446, and was helping chapel trustees to reduce their liabilities automatically; that the General Chapel fund had made grants of £1,006 during the year, and the Chapel Loan fund had assisted trustees to the extent of £2,000; that the Connectional Insurance Company had 5,237 current policies and a reserve fund of £27,623; that 309 annuitants were supported by the Superannuated Ministers' Widows' and Orphans' fund; that the Aged and Necessitous Local Preachers' fund, with an income increased by £150, had granted aid to 235 applicants; and that the Jubilee Thanksgiving fund had reached its goal of £50,000. The Missionary Society returned a total income of £17,561. A scheme of church extension was approved by the Conference under which an annual expenditure of £20,000 a year for five years in building new churches in populous suburbs and watering places is contemplated. To the special fund which it is proposed to raise for this purpose, Mr. W. P. Hartley, J. P., offered to give 25 per cent. of all the

connection should raise. The Conference determined to continue its mission work and to arrest at all costs the gradual decline to which it had been subject. The proposition for union with the Bible Christian Church submitted by the preceding Conference to a vote of the circuits had been rejected by a very large majority. The present Conference, after discussion, decided, that while no further negotiations for organic union should be pursued, fraternal relations should be maintained, and a committee of 6 members was appointed to act with representatives of the Bible Christians. The resolution on education, which was adopted unanimously, declared that no system of public education is satisfactory which does not give popular management where public money is granted, and which does not entirely abolish all sectarian tests where public grants are received.

XI. Methodist New Connection.—The one hundred and fourth annual Conference met at Newcastle, June 11. The Rev. George Stephenson Hornby was chosen president. The Annual Committee having been charged by the preceding Conference with the consideration of the expediency of providing for Connectional extension, reported adversely to the institution of an entirely new fund, and to the making of another special appeal, and advised the utilization of existing institutions and the larger development of ordinary resources. The Conference, however, decided upon immediate action, for which a committee was appointed, and the whole question was further referred to a larger committee for consideration during the year. The three young people's departments were placed under the care of a single committee. The policy was adopted of making a minister in active service instead of a superannuate, as heretofore, secretary of the two mission funds. Resolutions were passed condemning the state regulation of vice, the endowment of a Roman Catholic university in Ireland at the public expense, the new education code, sectarian training colleges, and "sacerdotalism and lawlessness" in the Established Church. The Twentieth Century Evangelical Mission of the Free Church Federation was commended to the Connection.

XII. United Methodist Free Churches.—The Annual Assembly met at Manchester, July 10. The Rev. Frederick Galpin was chosen president. Reports were made concerning the Connectional funds that by the aid of generous gifts a number of heavy trust liabilities had been removed and new enterprises made possible. Debts on chapel buildings, schools, etc., had been reduced by £30,000, £67,500 had been spent in building, and the value of the connectional property had been increased by £60,000. The capital of the Chapel Loan fund amounted to £13,809. The Beneficent and Superannuation fund returned 78 annuitants and an expenditure of £2,839. The capital of the Insurance fund amounted to £3,000. The Endowment fund of Manchester College amounted to £18,500. The committee of the Twentieth Century fund reported that more than 86,000 guineas had been promised and £21,307 had been paid in. The returns from foreign stations were not yet to hand. The subject of a reorganization of home church extension enterprises, involving a contemplated possible separation of home and foreign interests, was referred to the Connectional and Twentieth Century Committees for consideration. Reports were made of the London Chapel Extension fund, and of the work among young people. The question of appointing a minister to have combined charge of the temperance and young people's organizations was referred to the Connectional Committee. A

message of fraternal greeting was sent to the Wesleyan Conference with the expression of the hope that ere long, by the exercise of brotherly love, a federation of Methodist churches might be brought about.

XIII. The Bible Christian Church.—The eighty-second Bible Christian Conference met at Penzance, Aug. 1. The Rev. John Luke was chosen moderator. The Chapel report showed that £13,485 had been raised toward renovations and the erection of new chapels. The total income, including £8,825 of borrowed money and a balance of £4,935, had been £42,402, and the expenditure £36,957. The Christian Endeavor report adduced facts tending to show that the societies of that name were a source of increasing strength to the churches. The treasurer of the New Century fund reported that nearly two thirds of the sum of £25,000 aimed at had been promised, and one half of the amount promised, or £8,000, had been paid. Provisions were adopted relative to the placing of additional married preachers upon circuits of designated strength and to giving Conference assistance in their support. In view of a reported decrease of 53 members, a resolution was adopted embodying the question whether present-day Christianity is as deep and aggressive as it should be. Regret was expressed by resolution at the complete failure of the negotiations for union with the Primitive Methodist Church, and a committee was appointed to act with the similar committee appointed by the Conference of that Church in maintaining the most friendly relations between the two denominations. The responses of the quarterly and district meetings to the resolution sent down by the previous Conference for excluding holders of licenses for the sale of intoxicating liquors from office in the churches expressed a variety of opinions and embodied diverse recommendations. The Conference reaffirmed its opinion that the Church should be free from complicity with the liquor traffic, and expressed the hope that sellers of intoxicants would not be elected to office or admitted to membership in any of the societies.

XIV. Independent Methodist Churches (British).—At the ninety-fifth annual Conference of Independent Methodist Churches, held at Stretford, June 18, reports were made of 148 churches, 397 ministers, 8,303 members, 26,295 children, and 2,841 teachers and officers in Sunday schools, and 78 Christian Endeavor Societies. The churches were 2 and the Christian Endeavor Societies 20 more in number than in 1899, and the members 241 less. The Book Room Committee reported a slight falling off in sales. The publication of a hymn book and a tune book was decided upon. Eight mission halls were maintained by the churches.

XV. South African Conference.—The reports made to the South African Conference showed that notwithstanding the war there had been an increase of 193 English and 2,244 native members. The native services had been kept up at Kimberley through all the hardships of the siege and under the restrictions of martial law. Out of 91,000 native members reported, 80,000 were pure aborigines.

XVI. Australasian Methodist Church.—This Church returns for 1900 775 ministers, 8,783 lay preachers, 118,984 members and probationers, 3,973 Sunday schools with 21,618 officers and teachers and 214,734 pupils, and 3,438 churches. The question of union with other Methodist bodies into a single Methodist church for the colony having been submitted, in accordance with the terms of the projected plan of union, to the members of the Primitive Methodist Church in New

South Wales, a very large majority (3,474 to 385) voted in favor of the measure. The Wesleyan Conference had already agreed to union if the voting in the Primitive Methodist Church should be decisively in favor of it. The Federal Council of the Methodist Churches in the colony, acting upon this result, has directed a basis of union to be prepared, including the details necessary to give effect to the measure in accordance with the action of the General Conference. The accounts of the Australasian Methodist Board of Missions show an excess in the receipts for 1899 of \$7,603 over the expenditures, while for a few years past the society has had to face a deficiency averaging \$5,500 a year. A sum of \$17,500 still standing to the credit of the society has been placed in a "legacies capital investment account." By the consummation of Methodist union in South Australia the mission maintained for many years at Yunnan-Fu, China, passed under the control of the General Board. A deputation appointed by order of the General Conference is corresponding with the churches in Fiji respecting propositions for giving fuller powers of self-government to the mission district of that country, and is commissioned to consider other matters which have arisen during the state of transition through which the colony is passing. Fiji is the largest contributor of men and money to the Australasian Wesleyan mission work.

MEXICO, a federal republic in North America. The legislative power is vested in the Congress, consisting of a Senate of 56 members, 2 from each state and the federal district, and a House of Representatives containing 227 members, 1 to 40,000 of population. Representatives are elected for two years by the votes of all respectable adult male citizens, and Senators by the same electorate for four years, the same term as the presidency. Porfirio Diaz was first elected President in 1876, and again after an intermission, and since 1887, when the Constitution was so altered as to permit a President to succeed himself, he has been elected consecutively. The Cabinet in the beginning of 1900 was composed as follows: Secretary of Foreign Affairs, I. Mariscal; Secretary of the Interior, Gen. Gonzalez Cosio; Secretary of Justice and Public Instruction, J. Baranda; Secretary of Fomento, Fernandez Leal; Secretary of Finance and Commerce, J. I. Limantour; Secretary of Communications and Public Works, F. Z. Mena; Secretary of War and Marine, Gen. F. B. Berriozabal, Secretary of the Treasury, F. Espinosa. Porfirio Diaz was re-elected President of the republic in the beginning of October, 1900, and was inaugurated on Dec. 1 to serve his sixth consecutive term, his seventh term in the office.

Each of the states has its constitution and autonomous government, with an elective governor and legislature. No state may levy duties on products of other states. All of them have adopted the federal civil and criminal codes with the exception of Vera Cruz and Mexico.

Area and Population.—The area of Mexico is 767,005 square miles. The population in 1895 was 12,630,863, being 16.4 to the square mile, about 10 per cent. being of pure white, 38 per cent. of pure Indian, and the rest of mixed white and Indian blood. All have had the same civil status since 1824, but the Indians and half-breeds are generally of a much lower order of intelligence than the whites. The people are Roman Catholics, except a few converts to Protestantism. Church and state have been separated. Education in nearly all the states is gratuitous and compulsory, and is aided by grants from the federal treasury. There were 6,141 schools of various

grades supported by the federal and state governments in 1897, and 1,953 maintained by municipalities; total number of teachers, 10,327; total average attendance, 391,657; cost of maintenance, \$4,425,512. Besides these the clergy and private teachers taught 71,337 pupils on the average in 2,204 schools, making the total number of schools 10,298, with 462,994 pupils, out of 669,560 on the rolls, in average attendance, 293,732 of whom were boys and 169,262 girls. The higher schools have about 21,000 students.

Finances.—The receipts of the Federal treasury for the year ending June 30, 1898, were \$60,130,212; expenditure, \$53,499,541. The receipts include sums borrowed to pay railroad subsidies and temporary advances in addition to the ordinary revenue. The ordinary revenue for 1900 was estimated at \$54,913,000, and expenditure at \$54,886,756; revenue for 1901 at \$58,234,000, and expenditure at \$58,009,082. About 40 per cent. of the revenue is derived from customs, and 45 per cent. from internal revenue taxes. Of the expenditure over 46 per cent. has been required to pay the interest and sinking fund of the debt, and 10 per cent. for railroad subsidies, leaving 44 per cent. for the expenses of government and the army. The 6-per-cent. gold loans of the Mexican Government and the 5-per-cent. bonds of the Tehuantepec Railroad were consolidated in 1899, and converted into a new loan of £22,700,000, paying 5 per cent. interest. The 6-per-cent. silver bonds were all redeemed except \$162,000. The 3-per-cent. internal consolidated debt amounted to \$50,669,125, the 5-per-cent. redeemable internal debt to \$42,874,900, and railroad bonds to \$9,574,025 at the beginning of 1899, and there was a floating debt of \$1,401,808. The national wealth of Mexico is estimated at \$945,000,000. The revenue of the state governments in 1897 amounted to \$13,382,711, and their expenditure to \$13,441,966; the revenue of the municipalities to \$10,380,023, and expenditure to \$10,092,662.

Mexico has 4 mints, the principal business of which is to coin standard Mexican silver dollars, weighing 27.073 grammes 0.9028 fine, containing therefore 24.440 grammes of pure silver, 0.3936 gramme more than the United States standard dollar. The bulk of this coinage is shipped abroad, and finds its way to China, Farther India, and the islands of the Indian Ocean, where it is the common medium of exchange. Silver is the standard of value in Mexico, although gold is coined to the amount of about \$500,000 a year. The coinage of silver dollars in 1898 was \$21,427,057; in 1897, \$19,296,009; in 1896, \$22,634,788; in 1895, \$27,628,981; in 1894, \$30,185,591; in 1893, \$27,169,876; in 1892, \$25,526,717; in 1891, \$24,237,449; in 1890, \$24,323,728. There is a small circulation of the credit notes of some of the banks, but silver is the main currency of the country. In 1900 the drain of silver to the East was unusually large, owing to the hostilities in China, and this produced a serious scarcity of money in Mexico.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1899 was 8,040 miles, besides 127 miles of tramways. There were 300 miles of railroad under construction.

The telegraphs had a length of 41,532 miles in 1899, of which 27,608 miles belonged to the Federal Government, the rest to the state governments or to railroad and telegraph companies. The number of dispatches in 1898 was 2,178,181. The telephone lines had a length of 7,459 miles.

The number of letters and postal cards that passed through the post office during the fiscal year 1899 was 122,620,216. The postal receipts were \$1,595,818; expenses, \$1,991,921.

The Army and Navy.—The strength of the regular army is 22,605 infantry, 7,249 cavalry, and 2,289 artillery; total, 32,143 men of all ranks. The number of officers is 2,068. In the cavalry are included 261 rural guards and 118 gendarmes. The war strength of Mexico is estimated at 123,500 infantry, 20,000 cavalry, and 8,000 artillery. All able-bodied citizens from the age of twenty to that of fifty are liable to military service. The army has had practice of late in subduing the Yaqui Indians of northern Mexico, who will not submit to the rule and jurisdiction of the Mexicans, and have been encouraged in their rebellion by some of the Americans residing in the state of Sonora. The Mayas of Yucatan in 1900 also rose against the Government and, having secured modern weapons, held Gen. Bravo with 3,000 soldiers at bay.

The fleet consists only of two old dispatch vessels, two small unarmored gun vessels, and a steel training ship, the Zaragoza, of 1,200 tons, built in France in 1891. There are four gunboats and five first-class torpedo boats under construction. The officers number about 90, and about 500 men are in the crews.

Commerce and Production.—Agriculture in Mexico is generally in a backward state. The soil is exceedingly fertile in many districts, and the climate varies with altitude, so that tropical and subtropical vegetation flourish in some places, and the grains and fruits of the temperate zone in others not far distant. The public lands, which are of great extent, are being surveyed by companies which receive a third of the land that they demarcate, while the other two thirds are offered for sale to colonization companies or to private individuals. Down to 1896 the companies had surveyed 59,397,952 hectares, receiving as their share 19,612,866 hectares. Of the remainder the Government disposed of 1,812,517 hectares. There are 32 agricultural settlements, 13 of which, containing 3,926 colonists, were established by the Government and 19, with 4,036 colonists, by companies and individuals by authority of the Government, which has assisted the colonists by providing vines, olive trees, fruit trees, vegetable seeds, and silkworms. Orange cultivation is extending, and the fruit finds a ready market in the United States. There were 21,136 tons of rice, 42,954,684 hectolitres of corn, 263,987 tons of wheat, 65,803 tons of sugar, 61,856 tons of panocha, 44,847 tons of molasses, 5,474,450 hectolitres of spirits, 50,226 tons of henequen, 32,915 tons of cotton, 76,638 tons of logwood, 590 tons of cacao, 21,838 tons of coffee, 8,956 tons of tobacco, and 812,690 hectolitres of rum produced in 1897. There are about 2,900 factories for sugar and aguardiente. In 1896 there were 107 cotton factories, consuming 53,273,397 pounds of cotton, about half of it grown in Mexico and half in the United States.

Mining is being constantly extended. In 1897 there were 109 mines operated for gold alone, 254 for gold and silver, 49 for gold and other metals, 310 for silver alone, 184 for silver and other metals, 18 for copper alone, 8 for copper and lead, 1 for platinum alone, 31 for lead alone, 4 for lead and iron, 12 for iron alone, and 9 for antimony, cinnabar, or tin. The value of the ores raised was \$66,137,240. The number of miners employed was 98,852. The value of gold presented at the assay offices and mints in 1897 was \$3,909,782, against \$4,247,760 in 1896, \$2,674,278 in 1895, \$2,260,865 in 1894, and \$1,902,296 in 1893; the value of silver in 1897 was \$54,946,034, against \$53,797,061 in 1896, \$38,934,192 in 1895, \$34,845,543 in 1894, and \$30,383,429 in 1893.

The total value of imports in the year ending June 30, 1899, was \$50,869,394. The exports of merchandise were valued at \$63,296,540, and of precious metals at \$85,181,600; total, \$148,478,140. The value of silver bullion exported was \$42,438,635; silver coin, \$14,966,358; silver ore, \$9,854,854; gold, \$7,921,704; coffee, \$7,936,908; henequen, \$18,711,325; timber, \$3,263,011; hides and skins, \$3,583,798; cattle, \$4,723,500; tobacco, \$2,515,606; ixtle fibre, \$865,966; zacaton root, \$1,055,669; vanilla, \$1,283,057; beans, \$821,136. The trade was distributed among foreign countries in 1899 as shown in the following table:

COUNTRIES.	Imports.	Exports.
United States.....	\$24,164,897	\$103,553,486
Great Britain.....	9,211,321	14,095,178
France.....	5,917,167	6,252,393
Germany.....	5,677,925	4,030,307
Spain.....	2,969,936	1,172,948
Other countries.....	2,925,258	19,383,928
Total.....	\$50,869,394	\$148,478,140

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,184,059 in 1870; 1,636,937 in 1880; 2,093,889 in 1890; and 2,420,982 in 1900. Capital, Lansing.

Government.—The following were the State officers in 1900: Governor, Hazen S. Pingree; Lieutenant Governor, O. W. Robinson; Secretary of State, Justus S. Stearns; Treasurer, George A. Steel; Auditor, Roscoe D. Dix; Attorney-General, Horace M. Oren; Superintendent of Instruction, Jason E. Hammond; Insurance Commissioner, Harry H. Stevens; Land Commissioner, W. A. French; Labor Commissioner, Joseph L. Cox; Food Commissioner, E. O. Grosvenor; Dairy Inspector, L. H. Kirtland; Salt Inspector, J. B. Caswell; Adjutant General, F. H. Case; Railroad Commissioner, C. S. Osborn; Bank Commissioner, George L. Maltz; Game Warden, Grant M. Morse; Analyst, R. E. Doolittle; President Board of Corrections and Charities, George D. Gillespie; Tax Commission, Milo D. Campbell, A. F. Freeman, Robert Oakman; Forestry Commission, Arthur Hill, C. W. Garfield, W. A. French *ex officio*; Library Commission, D. D. Aitkin, T. P. Hall, C. G. Luce, C. H. Hackley; Chief Justice of the Supreme Court, R. M. Montgomery; Associate Justices, Frank A. Hooker, Joseph B. Moore, Charles D. Long, Claudius B. Grant; Clerk, C. C. Hopkins. All were Republicans.

The term of the State officers is two years. They are elected in November of the even-numbered years. The Legislature, composed of 32 Senators and 100 Representatives, meets biennially in January of the odd-numbered years.

Population.—The census returns for 1900 give the population of the State 2,420,982, and of the counties as follows: Alcona, 5,691; Alger, 5,868; Allegan, 38,812; Alpena, 18,254; Antrim, 16,568; Arenac, 9,821; Baraga, 4,320; Barry, 22,514; Bay, 62,378; Benzie, 9,685; Berrien, 49,165; Branch, 27,811; Calhoun, 49,315; Cass, 20,876; Charlevoix, 13,956; Cheboygan, 15,516; Chippewa, 21,338; Clare, 8,360; Clinton, 25,136; Crawford, 2,943; Delta, 23,881; Dickinson, 17,890; Eaton, 31,668; Emmet, 15,931; Genesee, 41,804; Gladwin, 6,564; Gogebic, 16,733; Grand Traverse, 20,479; Gratiot, 29,889; Hillsdale, 29,865; Houghton, 66,033; Huron, 34,162; Ingram, 39,818; Ionia, 34,329; Iosco, 10,246; Iron, 8,990; Isabella, 22,784; Jackson, 48,222; Kalamazoo, 44,310; Kalkaska, 7,133; Kent, 129,714; Keweenaw, 3,217; Lake, 4,957; Lapeer, 27,641; Leelenaw, 10,556; Lenawee, 48,406;

Livingston, 19,664; Luce, 2,983; Mackinac, 7,703; Macomb, 33,244; Manistee, 27,856; Marquette, 41,219; Mason, 18,885; Mecosta, 20,693; Menominee, 27,046; Midland, 14,439; Missaukee, 9,308; Monroe, 32,754; Montcalm, 32,754; Montmorency, 3,234; Muskegon, 37,036; Newaygo, 17,673; Oakland, 44,792; Oceana, 16,644; Ogemaw, 7,765; Ontonagon, 6,197; Osceola, 17,859; Oscoda, 1,468; Otsego, 6,175; Ottawa, 39,667; Presque Isle, 8,821; Roscommon, 1,787; Saginaw, 81,222; St. Clair, 55,228; St. Joseph, 23,889; Sanilac, 35,055; Schoolcraft, 7,889; Shiawassee, 33,866; Tuscola, 35,890; Van Buren, 33,274; Washtenaw, 47,761; Wayne, 348,793; Wexford, 16,845.

The population of Detroit is 285,704; in 1890 it was 205,876. It is thirteenth in size among the cities of the country. Grand Rapids has 87,565 inhabitants; Saginaw, 42,745; Bay City, 27,628; Kalamazoo, 24,400; Muskegon, 20,818; Port Huron, 19,172; Battle Creek, 18,563; Lansing, 16,483; Ann Arbor, 14,509; Manistee, 14,260; Ishpeming, 13,253; West Bay City, 13,119; Flint, 13,105; Menominee, 12,818; Alpena, 11,803; Sault Ste. Marie, 10,533; Marquette, 10,058. There are 78 chartered cities and 305 incorporated villages.

Finances.—The total State tax for 1900 was \$2,908,680.60, less by \$817,154.35 than that of 1899. It was levied on a total assessed valuation of \$1,105,100,000. Various purposes for which the tax is levied are as follow: University, \$276,275; Agricultural College, \$74,000; Normal College, \$89,800; Central Normal School, \$25,000; Northern Normal School, \$7,500; College of Mines, \$56,250; State Library, \$7,500; Soldiers' Home, \$110,000; Home for Feeble-minded, \$78,000; State Public School, \$51,000; School for the Deaf, \$117,850; School for the Blind, \$28,115; Asylum for Insane, \$12,431; State Prison, \$35,000; Industrial School for Boys, \$62,750; Industrial Home for Girls, \$45,647; Fish Commission, \$25,000; compiling Adjutant General's records, \$3,000; Food Commissioner, \$18,000; Dairymen's Association, \$300; Library Commissioners, \$800; military fund, \$89,665.64; Naval Brigade, \$11,208.20; Board of Health, \$450; Weather Service, 1,000; war loan, 1898, \$138,137.50; current expense of prisons, \$90,000; current expense of asylums, \$504,689.32; general purposes, \$982,262.

The item of \$982,262 for general purposes includes all salaries and expenses of judicial officers, salaries of State officers and department clerks, expense of the Legislature, awards of the Board of State Auditors, expenses of the Pardon Board, cost of conveying persons to and from State institutions, cost of caring for juvenile offenders, expenses of the Game Warden, expenses of the State Live Stock Sanitary Commission, expenses of the banking department, interest and fees collected for counties and paid to them by the State, etc.

The State Tax Commission increased the assessments in some localities, and many of the local assessors in the upper peninsula and other places attacked the authority of the board, declaring that the general tax law specifically stated that the taxes should be spread on the assessments fixed by the local boards of review, and nowhere authorized the use of assessments made by the State commission. The city assessor of Ishpeming having refused to use the figures of the commission, the board applied for a mandamus to compel him to do so. In his answer he attacked the constitutionality of the law creating the commission, as well as the validity of its order and subsequent action in reviewing and certifying the roll, and also the claim that the law requires the tax to be spread on the valuations fixed by the commission. The court granted the mandamus, which virtually sustained the increase made by the board

in all localities, amounting to \$70,000,000. The question of the constitutionality of the law, the court said, must be regarded as settled by the decision of the Tax Commissioners against the Board of Assessors of Grand Rapids.

The total primary school money paid the counties in the year was \$1,531,636.35. Of the 83 counties, 50 received more in school money than they paid in State taxes.

Militia.—The organized militia force is 2,905, and the number of men available for military duty, but unorganized, 260,000.

Education.—The building for the Northern Normal School, at Marquette, was finished in the summer. It stands on a bluff facing Lake Superior. A dormitory has been provided, where 100 students can be lodged and 150 accommodated in the dining hall, at an expense for room and board of about \$3.75 a week.

AARON T. BLISS,
GOVERNOR OF MICHIGAN.

About 1,500 books have been bought for beginning the library, and a gift of \$5,000, in five yearly installments, has been received for the art department. The year began with an enrollment of 45, which increased to 90, 3 of whom were graduated. A summer session of six weeks is held.

The enrollment for the year at the Agricultural College was 627, a gain of 99 over the year next preceding. For the first

time in the history of the institution, the students in the mechanical course outnumber those in the agricultural course—232 mechanicals to 217 agriculturals. There were 111 students in the women's course and 71 in the special short courses.

A new dormitory for the woman students was dedicated Oct. 25. A dairy building is to be dedicated in February, 1901. Prizes have been offered by friends of the college for competitions in stock judging, military drill, and notes on ornamental trees and shrubs. A valuable collection of fungi secured in the vicinity of the school by a former professor, G. H. Hicks, has been bought for the college. An offer was received in November, and taken under advisement, from Ashland College, at Grant, to put that college, with its land and equipment, under the control of the State Board of Agriculture, to be used as a branch experiment station for the benefit of that portion of the State. Ashland College was founded about twenty years ago as a Scandinavian sectarian school, but was reorganized in the spring of 1900.

At the thirteenth commencement of the College of Mines, Aug. 30, the degree of engineer of mines was conferred upon 22 young men, and that of bachelor of science upon 16.

A new course has been instituted at the University of Michigan, at Ann Arbor, called the commercial, designed to fit the student to handle the larger commercial and municipal questions that are coming up for settlement.

Charities and Corrections.—The report of the Asylum for the Insane, at Kalamazoo, shows the number in June, 1899, to have been 1,308, and the expenses \$214,856.

The School for the Blind had 113 pupils in September. An association of the alumni has been formed, which will endeavor to secure from the State an industrial school for the blind; it has also a bureau for securing employment for the blind.

There are 282 inmates at the Home for the Feeble-minded and Epileptic, and 684 applications are on file.

The School for the Deaf and Dumb, at Flint, had an attendance of 431 the past year.

There were 615 boys at the Industrial School in October; the buildings are designed to accommodate 500. About an equal number of boys are out on parole.

The prison at Marquette, at the close of the fiscal year, had 205 convicts; the average cost of maintenance is 35.06 cents a day.

The Board of Corrections and Charities, in its biennial report, suggests an amendment to the Constitution, permitting the enactment of a law for indeterminate sentences.

A very large number of pardons, paroles, and commutations of sentence were granted by Gov. Pingree, especially in the closing weeks of his administration. A list of those in December, 1900, gives about 44 pardons, 49 paroles, and 22 commutations. Nineteen who received them were serving life sentences.

Railroads.—The report of the Railroad Commissioner shows that 81 companies reported in the year, 52 being regularly operated lines, and the others leased or proprietary lines or lines not in operation. The total main line mileage in the State is 7,928.80, an increase of 122.90 miles over the previous year. The total mileage, including sidings and spurs, is 10,497.07 miles.

In 1899 793 persons were killed or injured by railroad accidents, an increase of 197 over those in the previous year. Of the killed, 2 were passengers, 54 employees, and 138 were reported as "others." More than half of the increase of killed and injured were trespassers upon railroad property or trains.

The total tax levied on railroads this year, based on the earnings of 1899, was \$1,240,845.27, an increase of \$153,228.38 or 16.69 per cent. over the last year's levy, the increase being due to the increase of earnings. The tax of but one company shows a decrease from last year. The earnings in the State, to Dec. 1, were \$35,889,644.63, an increase of \$3,109,967.55 over the same period of the previous year.

The Iron Range and Huron Bay Railroad, which was built some years ago as an outlet for the Marquette iron range to Lake Superior, was sold this year for \$110,000, the purchasers' object being only to secure the rails. The cost of the road, including a fine wharf at Huron Bay, was \$1,180,000. Before it was completed the situation in the iron region began to change. Although the road was made ready for business, no train ever ran over the line and not a pound of freight was ever transported.

Building and Loan Associations.—The report on these associations by the Secretary of State, published in November, shows that 66 were doing business, 1 having been incorporated and 4 having closed up their affairs during the year. No foreign associations are authorized to do business in the State. The following totals are given: Assets, \$10,118,876.01; receipts for the year, \$6,417,118.53; liabilities, \$10,118,876.01; disbursements, \$6,280,982.90; number of shares issued in the year, 68,760; number of shares matured, 9,743; number withdrawn and otherwise eliminated, 62,757; number of shares in force at the close of the

year, 265,640. For the first time in several years there is a notable increase in the number of shares issued, and many associations have reduced their loaning rates.

Insurance.—At the time of the annual report in June, 2 Michigan insurance companies, 118 companies of other States, and 46 companies of foreign countries were doing business in Michigan. The risks written in Michigan in the year covered amounted to \$386,973,175; premiums received, \$4,664,195; losses incurred, \$2,895,356. Examinations resulted in the collection of \$12,600 taxes on unreported insurance, a large portion of this amount being collected from companies that, in reporting their business, had deducted premiums received for reinsurance.

Banks.—The report of the commissioner covering the condition of the 191 State banks and 3 trust companies, June 29, shows the resources and liabilities to be \$124,820,305. The loans and discounts were \$52,522,259; bonds, mortgages, and securities, \$44,750,517; savings deposits, \$57,873,126.

The annual report, which was made in February, shows the net increase in State bank capital in a year to have been \$222,000. Nine State banks were in the hands of receivers, but none had failed in the year.

Products and Industries.—In the production of iron ore in the country in 1899, Michigan led with 9,146,157 long tons out of a total of 24,683,173.

While the log and lumber industry is greater now in some other States than in Michigan, which for some time was the leader, the highest point of production having been reached in 1888 with a total of 4,292,189,914 feet, still the production of 1899 was an improvement over that of 1898 by about 170,000,000 feet, and the quantity on hand at the close of the year was smaller. The compilation for 1899 gives the following figures: Total lumber output, 2,338,575,135 feet; total shingle output, 1,444,578,000; lumber on hand Dec. 1, 682,818,930 feet; shingles on hand, 185,020,000.

The copper product for 1898 was 70,462 long tons, of a total of 234,271 in the United States.

The growth of the beet-sugar industry has been remarkable, the State now standing second. The production for the last fiscal year was more than 34,000,000 pounds. The claims filed for the bounty of one cent a pound amounted to \$331,508.73.

Since Jan. 1, 1897, 1,005 new factories have been established, which this year gave employment to 23,000 persons.

Lands.—The lands held by the State at the close of the fiscal year June 30, 1900, were classified as follow: Primary school lands, 155,989.82 acres; university, 40; agricultural college, 62,523.29; salt springs, 280; asylum, 1,122.98; swamp, 81,648.56; tax homestead, 235,441.12; total, 537,045.77 acres. The number of acres sold during the year was 47,211.24, and the amount received \$144,595.07. In addition to these sales, 2,409.13 acres of homestead lands were patented. There were forfeited to the State for nonpayment of interest a total of 897.05 acres.

The General Government patented to the State 1,120 acres of swamp land, and lists embracing 159.65 acres approved to the State were received, for which patents will follow in due course.

Legislative Sessions.—Besides the special session which began Dec. 18, 1899, and ended Jan. 6, 1900, there were two special sessions in this year. In the proclamation calling the session that closed Jan. 6, the Governor said:

"The fortieth Legislature enacted two laws, one of which was an act to provide for the assessment and levy of taxes upon the property of railroad,

express, telegraph, and telephone companies, known as the 'Atkinson law'; the other is an act amending the general tax laws by creating a board of State tax commissioners with supervisory control of tax officers, empowered to review and correct assessment rolls, and with other powers. It is generally known as the 'Oren law.' On April 26 last, the Supreme Court rendered a decision which practically invalidated the 'Atkinson law.' Because of that decision, an amendment to the Constitution is imperatively necessary, before laws can be enacted providing for the equal taxation of all property."

It was for the purpose of providing for the submission of such an amendment that the Legislature was called. The House passed such a resolution, and several bills increasing railroad taxation, but they were all defeated in the Senate. A bill for municipal ownership also was defeated. The Governor sent another message, asking for a joint resolution authorizing a suit against the Henderson-Ames Company to recover the money lost to it by the State in the transactions of the military board, and such a resolution was passed, as was also a concurrent resolution asking the State Board of Auditors to allow all lawful expenses incurred by Ingham County in the trial of State officers. The Auditor General was authorized to pay relief claims of soldiers of the Spanish war to the amount of \$40,000.

A second special session for the same purpose was called to meet Oct. 10. The Governor's message dealt entirely with the issues mentioned in the call, the consideration of a joint resolution permitting submission to the people of a constitutional amendment authorizing taxation of railroads and other corporations on the cash value of their property instead of on earnings, as at present, and the repealing of the special charters of the Michigan Central, Lake Shore, and Grand Trunk Railways. This time the bills recommended were passed, and adjournment was taken Oct. 15.

The only other measure passed was an appropriation of \$2,500 for rebuilding the wall of the industrial school. Following is the text of the constitutional amendments:

"SECTION 10. The State may continue to collect all specific taxes accruing to the treasury under existing laws. The Legislature may provide for the collection of specific taxes from corporations. The Legislature may provide for the assessment of the property of corporations at its true cash value by a State board of assessors, and for the levying and collection of taxes thereon. All taxes hereafter levied on the property of such classes of corporations as are paying specific taxes under laws in force on Nov. 6, A. D. 1900, shall be applied as provided for specific taxes in section 1 of this article.

"That section 11 of Article XIV of said Constitution be amended so as to read as follows:

"Sec. 11. The Legislature shall provide for a uniform rule of taxation, except on property paying specific taxes, and taxes shall be levied on such property as shall be prescribed by law; provided, that the Legislature shall provide a uniform rule of taxation for such property as shall be assessed by a state board of assessors, and the rate of taxation on such property shall be the rate which the State board of assessors shall ascertain and determine is the average rate paid upon other property upon which ad valorem taxes are assessed for State, county, township, school, and municipal purposes.

"That section 13, of Article XIV, of said Constitution be amended so as to read as follows:

"Sec. 13. In the year one thousand nine hun-

dred and one, and every fifth year thereafter, and at such other times as the Legislature may direct, the Legislature shall provide for an equalization of assessments by a State board on all taxable property except that taxed under laws passed pursuant to section 10 of this article."

The amendments having been adopted at the November election, the Governor called another special session, to begin Dec. 12, in order to carry them into effect by appropriate legislation, giving as a reason for a special session that the existing Legislature, being thoroughly familiar with the subject, could deal with it much more expeditiously than the new Legislature at the regular session.

Invalid Laws.—In October the Supreme Court declared the sugar-bounty law, granting manufacturers one cent a pound from the State treasury, to be unconstitutional.

A section of the tax law was declared unconstitutional. It was designed to act as a statute of limitation and to bar owners of property from disputing in any way the validity of a tax sale under which their property had been sold, unless question was raised within six months after service of notice of purchase. The decision is on the ground that there are provisions in section 143 that are not only beyond the natural limits of the title, but are directly antagonistic to its spirit.

A decision in the court of Kent County in a garnishee case holds that no public official can assign his salary before it is earned.

Fraudulent Transactions.—Discovery was made in 1899 that new military goods which had been bought to supply the troops for the Cuban war and had not been used had been sold by officials for \$10,500, and then bought back for about \$60,000. An investigation by the grand jury brought out the fact that on July 17, 1899, at a meeting of the Michigan Military Board, a resolution was adopted authorizing the sale of all military supplies, and in furtherance of this scheme four or five letters were sent to various parties offering all the tents and quartermaster general's supplies for sale. On July 19, a letter was received from Chicago, purporting to come from the Illinois Supply Company (per Edson C. Cobb, manager), offering \$10,500 for the goods without even having seen them. The offer was at once accepted, the goods were sent, and Cobb, without opening the cars or examining the goods, forwarded them to the Henderson-Ames Company, of Kalamazoo. At the same meeting of the board at which the resolution to sell supplies was adopted, another resolution was adopted, and in pursuance of this the board proceeded at once to buy of the Henderson-Ames Company, of Kalamazoo, goods almost identical with those which had been sold to the Illinois Supply Company. The gross amount purchased was more than \$60,000. Subsequently it was discovered that the Illinois Supply Company was a myth; no such company ever had been in existence; that Edson C. Cobb (manager of the company) was an employee of the Chicago Beach Hotel Company, at Chicago; and that he was closely related to at least one of the principal stockholders in the Henderson-Ames Manufacturing Company. The goods were followed through the hands of the cartage company at Kalamazoo, who acknowledged that within two weeks they began shipping the same supplies back from Kalamazoo to Lansing, where they were traced to the quartermaster general's department.

For connection with these frauds, indictments were found, in December and in January, 1900, against William L. White, Quartermaster General;

Howard A. Smith, Assistant Quartermaster; Arthur F. Marsh, Inspector General and chairman of the Republican State Central Committee; and Eli R. Sutton, Regent of the University of Michigan and member of Gov. Pingree's military staff.

The same grand jury brought indictments against other officials and others, namely: Edgar J. Adams, Speaker of the House of Representatives, two indictments for bribery; William A. French, State Land Commissioner, offering bribes; Charles Pratt, agent for a law-book concern, offering bribes; Representative D. Judson Hammond, of Pontiac, soliciting bribes; Frederick A. Maynard, ex-Attorney-General, misdemeanor in retaining portion of his chief clerk's salary.

The alleged bribery was in connection with an antitrust bill and a bill for purchases, from the State treasury, of the national system of reports of the courts of the several States for each county.

White and Marsh left the State when it was known that indictments would be out against them. Marsh soon returned, but White not until November, 1900, when a reward of \$1,000 was offered for his apprehension. Marsh was brought to trial March 20, and after a trial of fourteen days was convicted. His attorneys took steps for an appeal. Sutton's trial was in May and June, and he was acquitted. Smith, having testified in the Marsh and Sutton trials and incriminated himself, pleaded guilty when his case was called in October, and was sentenced to pay a fine of \$1,200 on or before Oct. 22, or be committed to the county jail for two years. When White returned he was tried, convicted, and sentenced to ten years in prison, where he was taken, Dec. 4. The next day Gov. Pingree pardoned him and Marsh, whose appeal was pending, making the condition that each should pay a fine of \$5,000 in five yearly installments to the treasurer of Ingham County; should he refuse to receive it, the money should then go into the State treasury. The State had been reimbursed by the Henderson-Ames Company, the bondsmen of White, and the accused themselves or their friends, for the amounts embezzled. The Governor gave among his reasons for the pardons that the company had not been prosecuted, and that the sentence of White was excessive, since the State had been paid. There is some question as to the validity of the conditions attached to the pardons.

An incident of the Marsh trial was the withdrawal of his counsel, when Judge Wiest refused a continuance, with the statement that there was no chance in his court for justice, or something to that effect. Judge Wiest decided that they were guilty of contempt, and fined the two lawyers \$250 and \$200 respectively. Near the close of the year he summoned Gov. Pingree to answer for contempt on account of criticisms made on his course in the trials in an interview with the Governor, published in a Detroit newspaper. He had previously asked the Governor to have his conduct investigated by the Legislature. The Governor refused to appear to answer for contempt, and the case was continued to January.

The Governor asked the resignation of the officers implicated early in the year, and appointed O'Brien J. Atkinson to succeed White, Ford Starling to succeed Smith, and F. W. Green to Marsh's place. He also asked the resignation of the Adjutant General, on the ground that he was guilty of negligence, but the Adjutant General refused to resign.

The State cases against the ex-Attorney-General, the Land Commissioner, the Speaker of the House, and others were put over to the January term of 1901.

Political.—The Republican convention for nominating presidential electors and choosing delegates to the national convention met in Detroit, May 3. The resolutions approved the administration of President McKinley, and instructed the delegates to vote for his renomination. The convention for nominating State officers was held at Grand Rapids, June 27 and 28. After reaffirming allegiance to the principles for which the party stands, the platform denounced trusts and combinations to control prices, expressed sympathy with the Boers, declared in favor of equal and uniform taxation, and said further:

"We favor the prompt repeal of all special railroad charters granting to any railroad in the State special privileges.

"We condemn the corruption of State officials that has brought shame and disgrace to the State, and we demand the vigorous prosecution of all who are guilty."

For the nomination for Governor there were six candidates—Aaron T. Bliss, Justus S. Stearns, D. M. Ferry, C. S. Osborn, James O'Donnell, and M. D. Campbell. Mr. Bliss was chosen on the nineteenth ballot. The remainder of the ticket was: For Lieutenant Governor, O. W. Robinson; Secretary of State, Fred M. Warner; State Treasurer, Daniel McCoy; Auditor General, Perry F. Powers; Commissioner of State Land Office, E. A. Willey; Attorney-General, Horace M. Oren; Superintendent of Public Instruction, Delos Fall; Member of State Board of Education, J. H. Thompson.

The Democratic convention, May 1, chose delegates to Kansas City, who were instructed for Mr. Bryan. The nomination of C. A. Towne for Vice-President was recommended. The resolutions censured the administration for its colonial policy, saying:

"We believe this policy has been dictated to and forced upon the administration of President McKinley by the mercenary combinations known as trusts. The trust is supreme in political as in industrial activities. In both it is an unmixer public evil. The economic advantages of industrial combinations are entirely lost to the people and swell the profits of arrogant and conscienceless magnates, who feed on the vitals of their victims. We request our delegates to the national convention to urge upon that body the selection of the most practical and effective of the many plans for curtailing the powers of the trusts, and to pledge the party to specific legislation upon the lines adopted."

Further, they declared against a large standing army and in favor of just taxation and municipal ownership of public utilities, a national income tax, and direct election of United States Senators. They expressed sympathy for the South African republics, and condemned "the present Republican administration in this State as the most corrupt and scandalous in the history of this commonwealth."

The second convention was held in Detroit, July 25 and 26. The nominations were: For Governor, William C. Maybury; Lieutenant Governor, Jonathan G. Ramsdell; Secretary of State, John W. Ewing; State Treasurer, Charles F. Sundstrom; Commissioner of the State Land Office, George Winans; Auditor General, Hiram B. Hudson; Attorney-General, James O'Hara; Superintendent of Public Instruction, Stephen H. Langdon; Member of the State Board of Education, James McEntee.

The platform said in part:

"We denounce the last Legislature generally as the crowning infamy in the history of the Republican party in Michigan. We denounce it specific-

ally for its failure to submit to the people the constitutional amendments relative to taxation demanded by the State grange and farmers' clubs; for its failure to increase the specific tax on railroads; for its failure to pass the mining tax measure; for its failure to repeal the special railway charter; for its failure to pass the anticolor oleo law demanded by the State grange and dairymen of the State; for its refusal to submit to the people the constitutional amendment providing for the so-called 'initiative and referendum,' and for which submission every Democrat of both houses voted; for its refusal to pass the measure for the regulation of freight and switching charges."

At its convention, late in August, the Prohibition party made the following nominations: For Governor, Frederick S. Goodrich; Lieutenant Governor, Trowbridge Johns; Secretary of State, Reuben C. Reed; Treasurer, John F. Easley; Auditor General, William D. Farley; Attorney-General, Walter S. Westerman; Superintendent of Public Instruction, David S. Warner; Commissioner of State Land Office, Gideon Vivier; Member of Board of Public Instruction to fill vacancy, Samuel W. Bird.

The platform declared against any act legalizing the traffic in strong drink, and censured the present administration for "its shameless bargain and sale of public interests for private gain."

It censured the past Legislature for the attempt to pass a law allowing the sale of liquor upon a great national holiday. The sincerity of tax reformers was questioned as long as they are silent concerning the liquor traffic. It reindorsed woman suffrage and said there should be no application of public moneys for sectarian purposes, closing with an appeal to voters, especially those who follow Jesus and honor his Church, to unite with the party in killing the liquor traffic.

The People's party nominated D. Thompson for Governor; The Social Democrats, Henry Ramsey; and the Socialist-Labor Party, H. Uhlbriht.

The result of the presidential election was: McKinley, 316,269; Bryan, 211,685; Woolley, 11,859; Debs, 2,826; Barker, 833; Malloney, 903.

Republicans were elected to Congress in all the 12 districts.

For Governor, Bliss received 305,612 votes; Maybury, 226,228; Goodrich, 11,834; Ramsey, 2,709; Uhlbriht, 958; Thompson, 871.

The State Senate in 1901 will stand: Republicans 31, Democrats 1; the House, Republicans 90, Democrats 10.

The proposed amendment to the Constitution, permitting the enactment of laws for assessment and taxation of the property of railroad, telegraph, telephone, and express companies and certain other corporations, upon its cash value, instead of specific taxes upon earnings, was carried.

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; 1,301,826 in 1890; and 1,751,394 in 1900. Capital, St. Paul.

Government.—The following were the State officers in 1900: Governor, John Lind; Lieutenant Governor, Lyndon A. Smith; Secretary of State, Albert Berg; Auditor, Robert C. Dunn; Treasurer, August T. Koerner; Attorney-General, Wallace B. Douglas—all Republicans except the Governor, who was elected on a fusion ticket of Democrats and Populists; Commissioner of Insurance, J. A. O'Shaughnessy; Adjutant General, George C. Lambert; Chief Grain Inspector, A. C. Clausen, till August, when he resigned and was succeeded by Edward S. Reishus; Chief Justice

of the Supreme Court, Charles M. Start; Associate Justices, L. W. Collins, Calvin L. Brown, John A. Lovely, and Charles L. Lewis; Clerk, Darius F. Reese. All the justices are Republicans.

State officers are chosen in November of even years. The Legislature convenes in January of odd years, and the session is limited to ninety legislative days.

Population.—The population of the State, by counties, according to the census of 1900, was as follows: Aitkin, 6,743; Anoka, 11,313; Becker, 14,375; Beltrami, 11,030; Benton, 9,912; Big Stone, 8,731; Blue Earth, 32,263; Brown, 19,787; Carlton, 10,017; Carver, 17,544; Cass, 7,777; Chippewa, 12,499; Chisago, 13,248; Clay, 17,942; Cook, 810; Cottonwood, 12,069; Crow Wing, 14,250; Dakota, 21,733; Dodge, 13,340; Douglas, 17,064; Faribault, 22,055; Fillmore, 28,238; Freeborn, 21,838; Goodhue, 31,137; Grant, 8,935; Hennepin, 228,340; Houston, 15,400; Hubbard, 6,578; Isanti, 11,675; Itasca, 4,573; Jackson, 14,793; Kanabec, 4,614; Kandiyohi, 18,416; Kittson, 7,889; Lac qui Parle, 14,289; Lake, 4,654; Lesueur, 20,234; Lincoln, 8,966; Lyon, 14,591; McLeod, 19,595; Marshall, 15,698; Martin, 16,936; Meeker, 17,753; Mille Lacs, 8,066; Morrison, 22,891; Mower, 22,335; Murray, 11,911; Nicollet, 14,774; Nobles, 14,932; Norman, 15,045; Olmsted, 23,119; Ottertail, 45,375; Pine, 11,546; Pipestone, 9,264; Polk, 35,429; Pope, 12,577; Ramsey, 170,554; Red Lake, 12,195; Redwood, 17,261; Renville, 23,693; Rice, 26,080; Rock, 9,668; Roseau, 6,994; St. Louis, 82,932; Scott, 15,147; Sherburne, 7,281; Sibley, 16,862; Stearns, 44,464; Steele, 16,524; Stevens, 8,721; Swift, 13,503; Todd, 22,214; Traverse, 7,573; Wabasha, 18,924; Wadena, 7,921; Waseca, 14,760; Washington, 27,808; Watonwan, 11,496; Wilkin, 8,080; Winona, 35,686; Wright, 29,157; Yellow Medicine, 14,602; White Earth Indian reservation, 3,486.

Finances.—For the year ended July 31, 1900, the receipts of the State treasury were \$9,015,168.24, and the disbursements \$6,845,830.72, leaving a balance of \$2,169,337.52. The State debt was \$1,279,000, having been reduced \$70,000 in the year and \$380,000 since Jan. 1, 1897. The permanent school and university funds were, respectively, \$6,776,767.27 and \$925,300.

The principal classifications of the State treasury receipts for the year were: Revenue fund, \$3,640,061.15; permanent school fund, \$1,186,198.71; general school fund, \$1,258,446.75. Disbursements: Revenue fund, \$3,582,976.93; permanent school fund, \$1,090,455.57; general school fund, \$1,306,352.19; general university fund, \$383,054.90. The amount of railroad taxes paid was \$1,443,992.13. The principal receipts from taxation of insurance companies were: Domestic fire, \$62,819.17; foreign fire, \$31,127.64; life, \$70,389.85; stock, casualty, fidelity, and title, \$11,357.59.

Charities and Corrections.—The number of inmates of the three hospitals for the insane was 3,364. Two additional hospitals are being built, and the estimated number of inmates in all five hospitals at the close of the next biennial period is 4,100.

The population of the State Training School was 383; of the State Soldiers' Home, 289; School for the Deaf, 173; School for the Blind, 59; School for the Feeble-minded, 668; State Public School, 236; State Reformatory, 153; State Prison, 508. The year's expenses of the 13 charitable and penal institutions were \$969,337, or \$187.20 per capita, and the estimates for the following year were \$1,066,336. The State Prison has one of the largest binder-twine manufacturing plants in the United States, whose capacity was increased in 1900 to 8,000,000 pounds per annum.

Lands.—The most notable event of the year in relation to the State's lands was the termination of the long-standing litigation over the validity of the swamp-land grant to the Duluth and Iron Range Railroad Company. The amount involved was 606,720 acres.

The State had denied the validity of this grant, but was finally beaten by a decision of the United States Circuit Court of Appeals in favor of the railroad. In November a great sale of timber stumpage was held, at which nearly 90,000,000 feet of pine were disposed of at an average price of \$5.57 a thousand feet. The following shows the conditions of various public funds, derived from

S. R. VAN SANT,
GOVERNOR OF MINNESOTA.

the sale of State lands, July 31, 1900: Permanent school fund, \$12,546,529.30; permanent university fund, \$1,286,817.13; internal improvements fund, \$2,754,184.57. The first two funds are invested mostly in Massachusetts, Alabama, and other State bonds.

Products.—There were in the State 582 creameries and 60 cheese factories. The creameries were supplied with milk from 331,512 cows, producing 972,799,299 pounds of milk in the year. The butter manufactured therefrom was 44,007,933 pounds. Of this there was shipped out of the State 36,750,375 pounds. The amount paid to patrons was \$6,959,914.55. The operating expenses were \$930,739.95. The total number of creamery patrons in the State is 40,189. The amount of milk received by the different cheese factories was 29,998,924 pounds. The amount of green cheese made was 3,076,812 pounds; amount paid to patrons for milk, \$217,192.20; total amount of cured cheese sold, 2,970,190 pounds; total number of patrons, 1,226.

Minnesota is the greatest wheat producer of the Union; but in 1900 the crop was considerably under the average yield, being about 65,000,000 bushels. The State, which with one exception produces the most iron of any, turned out 8,000,000 tons of iron ore in 1900.

Educational.—There were in the State 7,303 schoolhouses, of the value of \$4,405,095, with 399,207 pupils. The male and female teachers numbered 2,052 and 8,534, respectively. The average monthly pay of the former was \$47.84, and of the latter \$35.24. The cash on hand and receipts aggregated \$7,447,564.70; disbursements, \$6,054,588.99; cash on hand at close of year, \$1,602,903.23; aggregate indebtedness of school districts, \$4,586,204.31. There were 2,539 public school libraries with over 300,000 volumes. The enrollment in the four normal schools was 2,376, and the graduates numbered 379.

In the University of Minnesota there were 3,236 students, including 907 women. With one exception it has the largest enrollment of any university in the United States. The students of 1900 were thus divided among the different departments: Graduate students, 124 men and 53 women; College of Science, Literature, and Arts, 416 men and 520 women; College of Engineering

and Mechanic Arts, 197 men and 12 women; School of Mines, 77 men; School of Chemistry, 5 men; Department of Agriculture, 423 men and 80 women; College of Law, 520 men and 8 women; Department of Medicine, 524 men and 32 women; University Section of Summer School, 127 men and 262 women.

There are 28 buildings, and the professors and instructors number 245. The library contains 75,000 volumes. The annual resources for current expenses are \$330,000; invested funds, \$1,250,000; value of land, buildings, and equipments, \$1,400,000. Tuition is free to all except in law and medicine, and coeducation has existed from the start, in 1869.

Labor.—The work of the State Bureau of Labor revealed both improvement of method and increased beneficence of result. It inspected 3,338 factories and other industrial establishments, covering 83,237 employees—70,951 men, 11,517 women, 565 boys, and 204 girls. These represented 69 separate industries. The enforcement of the law regulating child labor was more thorough than ever.

Direct Primaries.—Perhaps the most notable event of organic political importance in Minnesota was the first test of the direct primary election law in Minneapolis, to which city the Legislature had restricted the operation of the law after unsuccessful attempts to include St. Paul and Duluth. Under this law, all nominations for elective officers are made at primaries, under the Australian ballot law, instead of at party conventions. The results of this first practical test of the statute appeared to justify the contention of its author (Oscar F. G. Day) and champions that it would be instrumental in weeding out the objectionable element among office seekers and placing a better class of men in public station. Some of these results were surprising, but wholesome. Officeholders who had long thrived at the public "crib" by reason of their skill in manipulating conventions were hopelessly defeated, as were others most eager for nomination; while many good citizens who for years had held aloof from public affairs were now placed in nomination by large majorities and triumphantly elected in November. So delighted were the people with the outcome of this significant reform experiment that a determined movement was at once begun to extend the direct primary election law over the entire State; and the Minneapolis object lesson, furthermore, strengthened the hands of those who are laboring for the enactment of a similar law in other States.

Political.—The Republican State Convention was held in St. Paul, Sept. 5. The following ticket was nominated: For Governor, Samuel R. Van Sant; Lieutenant Governor, Lyndon A. Smith, Secretary of State, Peter E. Hanson; Treasurer, Julius H. Block; Attorney-General, Wallace B. Douglas; Chief Justice of the Supreme Court, Charles M. Start; Associate Justice, Loren W. Collins; Railroad and Warehouse Commissioners—four years, Ira B. Mills, Joseph G. Miller; two years, Charles F. Staples. The platform favored an amendment to the Federal Constitution to regulate trusts and prohibit monopolies; denounced the illegal manufacture and sale of oleomargarine; favored the election of United States Senators by direct vote of the people; declared for fair and equal taxation; and commended the gross earnings system of taxation of railroads.

The Democratic State Convention, held in St. Paul, Sept. 5, nominated this State ticket: For Governor, John Lind; Lieutenant Governor, Thomas J. Meighen; Secretary of State, Michael E. Neary; Treasurer, H. C. Koerner; Attorney-Gen-

eral, R. C. Saunders; (candidates for the Supreme Court the same that were on the Republican ticket); Railroad and Warehouse Commissioners—four years, P. M. Ringdal, T. J. Knox; two years, S. M. Owen. The platform expressed the belief that "the Constitution follows the flag," and therefore denounced the Porto Rican tariff bill; extended sympathy to the Boers; condemned the Dingley protective tariff law; condemned trusts; favored the endeavor to reduce the number of hours of a legal working day; accused the Republicans of gerrymandering the legislative districts; favored tax reform; and demanded that the gross earnings tax of railroads be increased to 4 per cent.

The People's party convention was held in Minneapolis Sept. 5. The Democratic State ticket was accepted through fusion. The platform was largely an argument for free silver. It also favored a graduated income and inheritance tax, postal savings banks, and Government ownership of railroads; condemned trusts, and as a means to kill them off asked for direct legislation giving the people the lawmaking and veto power under the initiative and referendum; denounced the Government's efforts to suppress the Philippine rebellion; extended sympathy to the Boers; called for repression of illegal importation of foreign laborers; advocated municipal ownership of public utilities; denounced the issuing of injunctions in disputes between labor and capital; favored election of United States Senators by popular vote; called for "a full, free, and fair ballot and an honest count" in all the States; favored home rule in the Territories and their early admission to statehood; and denounced the management of the Pension Bureau.

The following partial State tickets were also placed in the field:

Middle-of-the-Road Populist: For Governor, Sylvester M. Fairchild; Lieutenant Governor, Erick G. Wallinder; Treasurer, Stephen W. Powell; Railroad and Warehouse Commissioners—four years, M. R. Parks, M. P. Moran; two years, John J. Hibbard.

Prohibition: For Governor, Berndt B. Haugan; Lieutenant Governor, C. B. Wilkinson; Secretary of State, Frank W. Carlisle; Treasurer, Charles W. Dorsett.

Social-Democrat: For Governor, Thomas H. Lucas.

Social-Labor: For Governor, Edward Kriz.

All the above-named parties nominated presidential electors.

The entire Republican State ticket was elected by pluralities ranging from 2,254 for Governor to 56,645 for Attorney-General. The vote for presidential electors stood: McKinley (Republican), 190,461; Bryan (Democrat), 112,901; Woolley (Prohibition), 8,555; Debs (Social-Democrat), 3,065.

A proposition to amend the Constitution so as to provide for loaning the permanent school and university funds to, or the purchase of bonds of, cities, villages, towns, counties, and school districts was defeated.

MISSIONS, FOREIGN, ECUMENICAL CONFERENCE ON. The Ecumenical Conference on Foreign Missions which assembled in the city of New York in April, 1900, was the third meeting of the kind that has been held. The first conference, which was small in numbers and was chiefly composed of returned missionaries, met in London in 1878; the second was held in London in 1888, when the one hundredth year of the institution of the missionary movement was celebrated, and was attended by 1,759 delegates. In prepara-

tion for the present conference a committee was appointed by the Annual Missionary Conference of the United States in 1896, to communicate with the different Protestant missionary societies throughout the world. The enterprise was finally put under the care of a general committee, of which the Rev. Judson Smith, D. D., of the American Board of Commissioners for Foreign Missions, was chairman, and the Rev. S. L. Baldwin, D. D., of the Methodist Episcopal Board of Missions, was secretary. All the societies invited to participate in the conference accepted the invitation except the Anglican Society for the Propagation of the Gospel in Foreign Parts, and the following societies were represented:

In the United States and Canada—American Advent Missionary Society; American Board of Commissioners for Foreign Missions; American Baptist Missionary Union; American Bible Society; American Christian Convention; Africa Industrial Mission; Africa Inland Mission; African Methodist Episcopal Church; African Methodist Episcopal Zion Church; Associate Reformed Presbyterian Synod of the South; American Tract Society; Baptist Convention of the Maritime Provinces; Baptist Foreign Missionary Society of Ontario and Quebec; Christian and Missionary Alliance; Church of God Foreign Missionary Society; Canadian Church Missionary Association; Canada Congregational Foreign Missionary Society; Cumberland Presbyterian Board of Missions; Evangelical Association Missionary Society; Evangelical Lutheran Church (General Synod); Evangelical Lutheran Church, South (United Synod); Evangelical Lutheran General Council Foreign Missions; Free Baptist Missionary Society; Free Methodist Church General Missionary Board; Foreign Christian Missionary Society; Foreign Sunday School Association; American Friends' Central Board of Missions; German Evangelical Synod of North America; Missionary Society of the Methodist Episcopal Church; Methodist Episcopal Church, South, Board of Missions; Missionary Society of the Methodist Church in Canada; Methodist Protestant Church, Board of Foreign Missions; Mennonite General Conference of North America; Moravian Church Board of Missions; National Baptist Convention; Phil-African League; Protestant Episcopal Church in the United States of America; Presbyterian Church in the United States of America; Presbyterian Church in the United States; Presbyterian Church in Canada, Foreign Mission Committee; Primitive Methodist Church; Reformed Church in America; Reformed Church in the United States; Reformed Church in North America (General Synod); Reformed Episcopal Church; Reformed Presbyterian Church (General Synod); Reformed Presbyterian Church (Synod); Southern Baptist Convention; Seventh Day Baptist Missionary Society; Seventh Day Adventist; United Norwegian Lutheran Church; United Presbyterian Board of Missions; United Brethren in Christ, Foreign Missionary Society; United Brethren in Christ (Radical branch); Wesleyan Methodist Missionary Society; Woman's Union Missionary Society.

In Great Britain and Ireland—British and Foreign Bible Society; Baptist Missionary Society; Baptist Zenana Mission; China Inland Mission; Church Missionary Society; Church of England Zenana Missionary Society; Colonial Missionary Society; Christian Literature Society for India; Edinburgh Medical Missionary Society; Presbyterian Church of England Foreign Missions; Friends' Foreign Missionary Association; "Help for Brazil"; Indian and Colonial Protestant Mis-

sion; Presbyterian Church in Ireland, Foreign Missions; Ladies' Kaffrarian Society; London Missionary Society; Livingstone Medical College; Mission to Lepers in India and the East; North Africa Mission; Primitive Methodist Missionary Society; "Regions Beyond" Missionary Union; Religious Tract Society; Society for the Diffusion of Christian and General Knowledge among the Chinese; Church of Scotland Foreign Missions Committee; South American Missionary Society; Student Volunteer Missionary Union; Free Church of Scotland, Foreign Missions Committee; United Methodist Free Churches Missionary Society; United Presbyterian Church of Scotland, Foreign Missions; Wesleyan Methodist Missionary Society; Woman's Foreign Missionary Society for Female Education in India and South Africa; Zenana Bible and Medical Mission.

In Jamaica, West Indies—Jamaica Baptist Missionary Society.

In Hawaii—Hawaiian Evangelical Association.

In Australia—Woman's Missionary Union, Queensland.

In New Zealand—Presbyterian Church, Otago and Southland.

In Finland—Finland Missionary Society.

In Germany—Neukirchen Mission Institute; Berlin Missionary Society; Berlin Baptist Foreign Missionary Society; Rhenish Missionary Society.

In Holland—Mission Conferences in the Netherlands; Dutch Reformed Missionary Society.

In Norway—Norwegian Missionary Society; Norwegian Lutheran China Mission Association.

In Sweden—Swedish Mission in China, Evangelical National Society.

In Switzerland—St. Chrischona Pilgrim Missionary Society.

The conference was in session during ten days, including Sunday, from April 21 to May 1. The Hon. Benjamin Harrison, ex-President of the United States, was honorary president of the body, while special presiding officers were appointed for each day's sessions. The principal meetings were held in Carnegie Hall and the Central Presbyterian Church, and "overflow meetings" and sectional meetings were held in addition. At the opening meeting, April 21, for welcoming the delegates, ex-President Harrison, presiding, made the opening address; the Rev. Dr. Judson Smith, chairman of the managing committee, delivered the address of welcome; and the Rev. Dr. Wardlaw Thompson, secretary of the London Missionary Society; the Rev. Dr. A. Schreiber, of Germany; the Rev. Dr. A. Chamberlain, missionary in India; and the Rev. Dr. Joseph King, of Australia, responded. In the evening of the same day (April 21) a meeting for national welcome was held, when addresses of welcome were made by William McKinley, President of the United States, and Theodore Roosevelt, Governor of the State of New York, and the response on behalf of the conference by ex-President Harrison. The meetings of Monday, April 23, were devoted chiefly to the general survey of the progress and present condition of missions. A Century of Missions was made the subject of a review of the growth of missionary enterprise by Mr. Eugene Stock, editorial secretary of the Church Missionary Society. A report upon centennial statistics was presented by the Rev. Dr. James S. Dennis, from which the following figures are derived: Number of societies directly engaged in conducting foreign missions, 249, distributed as follows—in the United States, 49; in England, 42; in Asia, 29; in Africa, 28; in Australia and Oceania, 26; in Germany, 15; in the Netherlands, 10; in Canada, 8; in Sweden, 7; in the West Indies, 11; in Scotland, 7; in Ireland,

4; in Norway, 4; in Denmark, 3; in France, 2; in Switzerland, 2; in Wales, 1; in Finland, 1; total income, \$17,161,092, of which \$6,843,031 are credited to English societies, \$5,403,048 to those of the United States, \$1,430,151 to German, and \$1,280,684 to Scottish societies; whole number of missionaries, including ordained ministers, ordained physicians, lay missionaries, married women not physicians, and unmarried women not physicians, 13,607, of whom 5,136 are from England, 4,110 from the United States, 1,515 from Germany, 653 from Scotland, etc.; number of native agents, 77,338; of communicants, 1,317,684, of whom 84,186 were added in 1899; of native Christian adherents, 4,414,236. The total amount of native contributions was \$1,841,757. The educational work of the missions included 20,374 schools of all grades, with 1,046,309 pupils. These schools comprised 93 foreign missionary universities, having 35,414 students; 358 theological and training schools, with 11,905 students; 857 boarding and high schools, with 83,148 pupils; 134 industrial training institutions and classes, with 6,309 students; 63 medical and nurses' schools and classes, with 589 students; 127 kindergartens, with 4,502 pupils; and 18,742 elementary or village schools, containing 904,442 pupils, 267,720 of whom were girls. The Bible has been translated into 421 languages and dialects, and the various agencies engaged in the distribution of Bibles, tracts, etc., returned an aggregate annual circulation of 14,494,098 copies. One hundred and forty-eight mission publishing houses and printing presses returned an annual aggregate issue of 10,561,777 copies of their publications, and 366 magazines and papers in foreign mission lands circulated 297,435 copies. Three hundred and fifty-five hospitals and 753 dispensaries were sustained, at which 93,705 in-patients and 2,579,651 out-patients were treated; besides 90 leper hospitals and asylums and homes for the untainted children, with 5,166 leper inmates. The Woman's Christian Temperance Union had affiliated national branches in 26 foreign mission countries. The Anglo-Indian Temperance Association in India had 281 affiliated temperance societies. Other elements of the missionary force were 87 missionary training institutions in Christian lands, not including theological seminaries, and 67 mission steamers and ships, which were used in evangelistic, medical, and other departments of mission service in the foreign field.

Besides the 249 missionary societies actively engaged, 200 other societies indirectly co-operating or aiding in foreign missions or engaged in specialized efforts, and 68 women's auxiliaries, were mentioned, the income of which would swell the total of income for missions to \$19,126,120. Fifty-four native organizations for extension of knowledge and the furtherance of national, social, moral, and religious reform were said to be affiliated to missions, and most of them due to missions.

From 1649 to 1800 12 missionary societies, and from 1800 to 1830 22 societies, were formed. The subsequent record of new societies, by decades, is: 1830-'40, 16 societies organized; 1840-'50, 25; 1850-'60, 34; 1860-'70, 41; 1870-'80, 57; 1880-'90, 92; 1890-1900, 100. The year in which the largest number of societies were formed was 1890, when 22 societies were organized; the next year in the record was 1896, with 11 new societies.

Nine sectional meetings were held in the afternoon of April 23, at which special surveys were presented of the several mission fields, including those in Japan, Korea, China, Assam, Burmah, Siam, India, Ceylon, Oceanica, Mohammedan lands, Africa, North and South America, and "Hebrews in all lands."

Besides these exercises the sessions of the conference were devoted to the discussion, in prepared papers and addresses and volunteered remarks, of the numerous aspects of a large list of subjects relating to topics which might be referred to the following principal heads: Authority and purpose in mission work; evangelistic work; woman's work—evangelistic, educational, etc.; native agency in evangelistic work; the missionary staff; literature; the study of missions; medical work; work for young women and children; value of foreign missions as an educational agency in training young people; administrative problems of the mission; Bible translation and distribution; educational work; wider relations of missions (in the fields of discovery, geography, commerce, colonization, philology, science, philosophy, etc.); the native church and moral questions; medical training of natives; vernacular literature; normal training; missions and governments; woman's work in foreign missions; comity and division of fields; co-operation and division of fields in occupied and unoccupied territory; higher education in mission fields; mission presses; self-support by mission churches; principles and methods in the evangelistic church; educational and medical work; missionary boards and societies; elementary schools; industrial training; the training of missionaries; students and other young people—their achievements; the volunteer student movement; non-Christian religions; organized movements among the young people of the Church; responsibility of the Church in the light of the working of God's Spirit among the students and other young people; apologetic problems in missions; relation of medical work to missionary work as a whole; hospitals and dispensaries; educational philanthropic work; literary work; missionary literature for home churches; relation of missions to social progress and peace; home work for foreign missions; support of missions by home churches; outlook and demands (the present situation—its claims and opportunities, outlook and demands for the coming century).

A private conference of officers of the several boards, missionaries, and delegates interested in the matter was held, May 1, to consider the best means of preserving the results of the Ecumenical Conference. A resolution was passed, declaring it to be the sense of the meeting that committees should be requested to consider the question of appointing an international committee, who, by correspondence or by conference or by both, shall deal with co-operative work in missions, and make known the result of their deliberations to the societies represented in the conference.

International Missionary Union.—The seventeenth annual meeting of the International Missionary Union, held at Clifton Springs, N. Y., was attended by 85 returned missionaries, representing 17 societies and 18 mission fields. The proceedings were similar in character to those of the Ecumenical Conference of Missions, which were often referred to. Members spoke of the conditions of their fields; and the topics discussed were classified under such heads as missionary apologetics, or evidences afforded by the mission fields of the supernatural character of Christianity; the influence of missions on the trend of governments, international comity diplomacy, etc.; education; medical missions; native churches; missionary comity and co-operation; and woman's work.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,621

in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; 1,289,600 in 1890; and 1,551,270 in 1900. Capital, Jackson.

Government.—The following were the State officers in 1900: Governor, A. H. Longino; Lieutenant Governor, J. T. Harrison; Secretary of State, J. L. Power; Treasurer, J. R. Stowers; Auditor, W. Q. Cole; Attorney-General, Monroe McClurg; Revenue Agent, Wirt Adams; Land Commissioner, E. H. Nall; Adjutant General, William Henry; Superintendent of Education, H. L. Whitfield; Railroad Commissioners, J. D. McInnis, A. Q. May, J. C. Kincannon; Chief Justice of the Supreme Court, Thomas H. Woods till April 1, when, his resignation taking effect, his place on the bench was filled by the appointment of S. S. Calhoun, who was reappointed, at the expiration of the term, May 10, to serve for the following term; Justice Albert H. Whitfield became Chief Justice and S. H. Terral and S. S. Calhoun Associate Justices; Clerk, Edward W. Brown—all Democrats.

The term of the State officers is four years; they are chosen in November of the years next preceding those of the presidential elections. The Legislature meets biennially the first Tuesday after the first Monday of January in even-numbered years.

Population.—The census shows that the increase in population in the past decade has been 20.2 per cent. The figures by counties are as follow: Adams, 30,011; Alcorn, 14,987; Amite, 20,708; Attala, 26,248; Benton, 10,510; Bolivar, 35,427; Calhoun, 16,512; Carroll, 22,116; Chickasaw, 19,892; Choctaw, 13,036; Claiborne, 20,787; Clarke, 17,741; Clay, 19,563; Coahoma, 26,293; Copiah, 34,395; Covington, 13,076; De Soto, 24,751; Franklin, 13,678; Greene, 6,795; Grenada, 14,112; Hancock, 11,886; Harrison, 21,002; Hinds, 52,577; Holmes, 36,828; Issaquena, 10,400; Itawamba, 13,544; Jackson, 16,513; Jasper, 15,394; Jefferson, 21,292; Jones, 17,846; Kemper, 20,492; Lafayette, 22,211; Lauderdale, 38,150; Lawrence, 15,103; Leake, 17,360; Lee, 21,956; Leflore, 23,834; Lincoln, 21,552; Lowndes, 29,095; Madison, 32,493; Marion, 13,501; Marshall, 27,674; Monroe, 31,216; Montgomery, 16,536; Neshoba, 12,726; Newton, 19,708; Noxubee, 23,846; Oktibbeha, 20,283; Panola, 29,027; Pearl River, 6,697; Perry, 14,682; Pike, 27,545; Pontotoc, 18,274; Prentiss, 15,788; Quitman, 5,435; Rankin, 20,955; Scott, 14,316; Sharkey, 12,178; Simpson, 12,800; Smith, 13,055; Sunflower, 15,084; Tallahatchie, 19,600; Tate, 20,618; Tippah, 12,983; Tishomingo, 10,124; Tunica, 16,479; Union, 16,522; Warren, 40,912; Washington, 49,216; Wayne, 12,539; Webster, 13,619; Wilkinson, 21,453; Winston, 14,124; Yalabusha, 19,742; Yazoo, 43,948.

Vicksburg has 14,824 inhabitants; Meridian, 14,050; Natchez, 12,210; Jackson, 7,816; Greenville, 7,642; Columbus, 6,484; Biloxi, 5,467; McComb, 4,477; Laurel, 4,193; Holly Springs, 4,185; Hattiesburg, 4,175; Water Valley, 3,813; Corinth, 3,661; Aberdeen, 3,439; Canton, 3,404; Wesson, 3,279; Yazoo, 3,194; West Point, 3,193; Greenwood, 3,026. The figures are as given in a local newspaper. In another list Greenwood, Holly Springs, and Laurel are given a smaller number and Yazoo a larger.

Finances.—The amount of receipts from all sources during the fiscal year ending Sept. 30, 1900, was \$1,916,491.70, which amount, increased by \$333,765.80 cash in the treasury Oct. 1, 1899, shows the available cash to have been \$2,250,257.50, against which the Auditor's pay warrants to the amount of \$1,627,825.57 and special warrants to the amount of \$30 were paid, leaving a cash balance on hand at the end of the year of \$622,401.93.

The payable debt of the State amounts to \$1,018,429.52, of which \$8,029.80 was in outstanding warrants, \$920.22 railroad tax distribution, \$2,449.90 certificates of indebtedness, and the remainder bonds and unpaid interest on them. The amount of the nonpayable debt is \$1,884,658.89; it is in school and college trust funds. The total State debt is \$2,903,088.41.

The receipts from the Penitentiary were \$219,416.27, including \$35,027.23 balance at the beginning of the year; and the disbursements were \$117,310.05, leaving a balance of \$102,106.22.

The total assessed valuation of property in the State is \$188,716,159; of this, \$57,400,336 is personalty. The increase in the total is \$27,490,038. The largest increase has been made in the piney woods section. The number of polls assessed is 294,515. The amount collected on poll taxes for the year was \$280,074.12. The tax is two dollars, and its payment is a prerequisite for voting, so that about half the population otherwise qualified to vote are disfranchised from this cause alone.

The figures of valuation given above do not include the assessments of railroad, telegraph, express, and sleeping-car property, which are made by the Railroad Commission.

The revenue from saloons, of which there were 146, was for a year \$131,100. There are now 13 counties only that license the business.

The amount of capital invested in manufacturing enterprises is \$4,295,164; in merchandise, \$15,104,641. The value of cattle is given as \$2,167,685; of horses, \$7,251,975; of mules, \$8,208,711. The amount of money going to make up the assessment of personalty is \$7,847,747.

Education.—According to the apportionment of school money made in December for the half year, the 590,222 children in the country districts will receive \$595,758.88 and the 62,777 children in the separate school districts, \$70,907.68. The Legislature appropriated \$1,000,000 for the schools this year—a larger amount than ever before.

The school children have chosen the magnolia, by vote, as the State flower.

The report of the summer normals and institutes says that at least 75 per cent. of the white teachers of the State have attended either the normals or the institutes. At least one third of the white teachers were enrolled in the various normals.

The fund used to defray the expenses of the summer work was composed of a State appropriation of \$3,500, a Peabody apportionment of the same amount, local subscriptions amounting to \$1,650, and the institute fund, which is made up from the examination fees collected from teachers.

The attendance at the colored normals and institutes was no more than is usual, because this has been a year of unprecedented rains.

The Normal School, at Holly Springs, receives \$2,000 each year for maintenance, and \$250 additional for repairs, fuel, and insurance.

The Agricultural and Mechanical College has about 400 students. It receives a maintenance fund of \$25,719, besides special sums for improvements. A textile school is to be established in connection with the college at a cost of \$40,000, and a branch experiment station in the southern part of the State in the piney woods section, on a tract of not less than 200 acres.

Alcorn Agricultural and Mechanical College, for colored students, receives an annual support fund of \$8,000, besides the income from the land received from the Government. The trustees have decided to establish a department for colored girls.

The Industrial Institute and College for Girls, at Columbus, is to have new dormitory and infirmary buildings, provided for by the Legislature.

Mississippi College graduated 8 men in June; 241 were enrolled. Millsaps College conferred degrees on about 30, 16 of whom were from the law class. The University of Oxford conferred the degree of LL. B. on 24 students, A. B. on 9, B. S. on 4; and 5 received that of bachelor of philosophy.

Charities and Corrections.—The number of inmates in the State charitable institutions is about as follows: Hospital for the insane, Jackson, 600; hospital for the insane, Meridian, 354; school for the blind, 44; school for the deaf, 109.

The Legislature appropriated the following sums for maintenance: State Insane Hospital, \$97,460, and \$2,500 for superintendent's salary; East Mississippi Insane Hospital, \$48,000 and \$2,000 salary; Deaf and Dumb Institute, \$18,450, besides salary of superintendent; School for the Blind, \$9,818; State Charity Hospital at Vicksburg, \$12,000, on condition that the city and county give in addition one third that amount.

The Legislature gave \$4,000 to build an annex for colored children to the School for the Blind; but the trustees, finding the sum too small, decided to turn it back into the State treasury, and ask the next Legislature for a sufficient amount.

The Board of Control, which is composed of the Governor, the Attorney-General, and the 3 members of the Railroad Commission, bought land for the new convict farm in December—about 13,000 acres in Sunflower County, at \$5.74 an acre for 11,000 acres, and \$6 for the remainder. The appropriation was \$80,000. The receipts from the Penitentiary for the fiscal year were greater by \$97,627 than those of the year preceding.

Railroads.—The total valuation of the railroads, express, telegraph, and palace car companies operating in the State, according to the report of the Railroad Commission published in March, is \$26,338,476, on which the tax assessed amounts to \$171,200.35, being an increase in valuation over 1898 of \$1,901,290 and an increase of taxes collected of \$12,359.14. The privilege taxes for 1899 amount to \$40,862.22, against \$40,582.90 for 1898, an increase of \$279.32. The figures for 1900, published in July, show a still further increase in value.

The commission ordered a new mileage tariff on cotton seed, to take effect Oct. 1.

The Gulf and Ship Island road was finished to the coast this year, and the first passenger train was run about Aug. 28. The road runs from Jackson to Gulfport through Hattiesburg.

Banks.—From a tabulation prepared by the Auditor it appears that there were 107 State banks on Oct. 1, against 92 banks on Oct. 1 of the previous year. The majority of the new banks are in the southern part of the State and the delta. The loans and discounts on personal indorsements, real estate, and collateral securities were \$13,227,954.61, an increase of \$2,917,817.77 over those of last year.

The stocks, bonds, and warrants, classed as resources, amount to \$1,019,268.55, an increase of \$125,293.17.

The expenses and taxes are stated at \$231,860.16, an increase of \$25,330.45 from last year's figures.

Other items of resources are named to form a total of \$20,782,962.11, an increase of \$3,492,885.73 over that of last year.

The tabulation of liabilities states the capital paid in at \$4,483,096.64, an increase of \$646,584.64 from that of 1899. The surplus this year is \$578,544.35, an increase of \$35,136.47. The undivided profits are \$1,133,045.55, an increase of \$456,579.69. The individual deposits subject to check are \$10,412,325.07, an increase of \$1,217,924.10. The bills payable are \$1,927,019.22, an increase of \$462,209.57.

There are no savings banks, but several banks have savings departments. There are 12 national banks. The branch bank law is found to be ineffective, since it does not provide for separate statements of the property of the branch banks.

Levees.—The board of commissioners for the Yazoo-Mississippi Delta reported for the year ending Dec. 1 that the volume of work had been extensive. The disbursements from Jan. 1 to Dec. 1 were \$601,045.30, which was for contracts, engineering, salaries, interest on bonds, etc. When existing contracts are finished the board will have 120 miles of levees. The levee board has been in existence since 1882, and in his financial statement the president shows that since that time it has issued bonds amounting to \$1,850,000; of this amount, \$773,000 have been retired.

The Brandywine Rock Wall.—A subscription has been started for a fund to be used in an investigation of this mysterious wall in Claiborne and Copiah Counties. The character of the rock, which is thought by some to be artificial, is under examination. It is conjectured that a city was once inclosed by it.

Cotton.—The cotton crop was smaller this year than in other recent years. It is given as 1,230,000 bales. Ten mills were reported as having been in operation, and 7 more were building. There were 2,427 looms and 81,390 spindles. The colored people are raising funds for a cotton factory in Jackson, and it was understood that \$50,000 had been subscribed by the end of the year.

The New Capitol.—The Legislature provided for the immediate building of the Statehouse. It is to be on the Penitentiary site, the prison buildings having been moved to the convict farms. The plans of Theodore C. Link, of St. Louis, were chosen for the building, and the contract was let in December to a Chicago firm, W. A. & A. E. Wells. Their bid was \$831,743, and the time set for completing the work twenty-eight months.

Lawlessness.—The Governor recommended a law to suppress lynching in the State, but a bill with that object failed to pass. There were several lynchings in the year. In March a negro accused of murder was hanged by a mob near Greenville. In June two negroes suspected of murdering a young girl at Biloxi were taken from jail at Mississippi City and hanged, because it seemed certain that one of them must be guilty. One had been taken out a few days before and tortured to make him confess, which he refused to do. In March a negro was shot to death by men of his own race, because of an assault upon a little girl. Another who had murdered his wife was taken from officers near Vicksburg, Oct. 22, and shot to death by a crowd of negroes. Aug. 13, a negro was taken from jail at Corinth and hanged in the public square, for assault upon a little girl. A lynching took place at Gloster, April 13, said to have been without even a pretext of justification, and 12 white men were brought to trial for it in May; but the result of the trial has not come under notice. A negro who shot a marshal at Gulfport was lynched near that place in December. A feud in Winston County was reported to have resulted in the death of 12 men; but a newspaper in that county deplored the sensational reports regarding the feud and said that as a matter of fact the killing of only 7, 5 whites and 2 negroes, could be traced directly to it.

Legislative Session.—The regular biennial session of the Legislature began Jan. 2 and ended March 12. John R. Dinsmore was President *pro tem.* of the Senate, and A. J. Russell was Speaker of the House.

Gov. Longino was inaugurated Jan. 16. In his

address he emphasized the necessity of action on the Statehouse question, the need of a textile school, of a general primary election law, and of another convict farm, considered the subject of the suppression of mob violence, and expressed disapproval of the proposition to divide the school money between white and colored schools according to the proportion of school taxes paid by each race.

Two United States Senators were to be chosen, one to fill out the unexpired term of the late Senator Walthall, and the other to succeed him at the end of the term in 1901. Anselm J. McLaurin was the unanimous choice of the caucus for the long term, and was elected. For the short term two candidates were before the caucus, ex-Gov. Robert Lowry and William V. Sullivan, who had been appointed to fill the place in the interval before the meeting of the Legislature. Mr. Sullivan was nominated by a vote of 88 to 72, and was elected.

Laws to the number of 198 were made, and 9 resolutions were passed.

The antitrust law was revised.

An important bill provides for elections to fill vacancies in offices where they have heretofore been filled by appointment of the Governor. Officials are to be elected where the unexpired term is longer than a year, if it is a district office; or fifteen months if it is a State office.

Corporations, associations, and individuals are authorized to exercise eminent domain in construction of canals, ditches, tramways, and pole roads for private transportation. Another act allows public roads to be worked by contract.

A Statehouse commission was created, to consist of the Governor, the Attorney-General, and three other members, one appointed by the Governor, one by the Senate, and one by the House; and an issue of \$1,000,000 of bonds was authorized for the purpose.

A military board was established, to be composed of the Adjutant General, Judge-Advocate General, and the commanding officers of the regiments of the National Guard; they are to make the order and instruction of the militia conform as nearly as practicable to those of the United States army.

The Governor is to appoint a commission to locate the positions of the State troops in the defense of Vicksburg in 1863, and recommended legislation. An appropriation of \$20,000 was made for a monument at Chickamauga Park.

Acts were passed regulating reinsurance and reports of companies, and requiring foreign fire and marine insurance companies to transact their business in the State through licensed resident agents; exempting mutual assessment insurance companies from taxation; and allowing mutual benefit societies to do business without complying with the law in regard to foreign companies.

The laws on taxation were amended in some particulars: Canning factories, steam laundries, money-lending establishments, oil depots, round-bale presses, and land timber mills are to be taxed; branch banks must be taxed in their own districts, and the amount of capital there assessed must be deducted from the assessment of the main bank. Names of persons delinquent on poll taxes are to be published.

Acts were passed to secure better enforcement of the liquor license laws. Supervisors were authorized to drain overflowed lands and pay by tax on them at ten cents an acre.

New business enterprises established before 1910 are to be exempt from taxation five years.

A branch experiment station is to be established by the board of the Agricultural College where

land is given for the purpose. It is to be in what is known as the "piney woods" region, south of the tier of counties on the line of the Alabama and Vicksburg Railroad.

An appropriation of \$40,000 was made for a textile school at the Agricultural College.

A historical commission was created, to consist of five members appointed by the President of the State Historical Society. Its duty is to make a full, detailed, and exhaustive examination of all sources and materials, documentary and record manuscripts, of the history of Mississippi from the earliest times, whether in this State or elsewhere, and to include therein the records of Mississippi troops in all wars in which they have participated, and also of the location and present condition of battlefields, historic houses and buildings, and other places of historic interest and importance in the State.

The names of the institutions for the insane were changed. The one that has gone under the name Lunatic Hospital will be known as the State Insane Hospital, and the other as the East Mississippi Insane Hospital, instead of asylum. The Board of Control was directed to buy an artesian well-boring outfit for use at State institutions. Provision was made for an additional farm or farms for the Penitentiary of 8,000 to 15,000 acres.

The law on sale of public lands was amended so that when the title has failed the patentee may receive from the State the return of the purchase money, fees, and interest; and if the land has yielded no profit, he may receive also the taxes paid, with interest.

The classification of municipal corporations was changed: Cities, 2,000 inhabitants; towns, 300 (instead of 500) to 2,000; villages, 100 to 300.

An act to raise revenue provides for making valid all contracts made previous to the passage of this act and subsequent to Jan. 1, 1895, which are or were null and void or voidable under previous or existing laws because of nonpayment of privilege taxes due when such contracts were made, upon terms of full payment of all such privilege taxes so in default with 200 per cent. damages thereon within sixty days from the passage of the act.

Among other enactments of the session were:

Regulating the sale and giving of cocaine.

Exempting Confederate soldiers who are infirm or over sixty years of age from the operation of the act imposing privilege taxes on certain industries, except those on the selling of liquor, deadly weapons, pool tables, and some others.

Defining the concealment of a lien in case of sale as false pretense.

Authorizing boards of supervisors to compel vaccination; also to pay for isolation and disinfection in cases of contagious and infectious diseases.

Fixing the number of pounds to the bushel of wheat, corn, rye, and other products—in all, 33.

Providing that a transfer of property between husband and wife shall not be valid against a third person unless it is placed on record.

Providing for pensioning Confederate soldiers and sailors and widows; appropriating \$150,000 for each of the two years to come, instead of \$75,000 yearly, as heretofore.

An appropriation of \$1,000,000 was made for the public schools, and \$272,535 for colleges, white and colored; for hospitals and other charitable institutions, \$289,918.

Two constitutional amendments were passed, to be submitted to vote in November. One requires the poll tax of each county to be retained for the school fund there, repealing the provision that all the poll tax money be apportioned among the

school districts in proportion to the number of children. The other provides for a new legislative apportionment, according to the results of the census. The last was made in 1882. Both these were carried at the election. They become parts of the Constitution only after legislative enactment to insert them.

The so-called Noel amendments were supposed to have been carried at the election of 1899, having received more votes in favor than against their adoption. This Legislature passed a resolution to insert them in the Constitution; but the question of their adoption came before the courts, and the decision was that an amendment should receive a majority of all the votes cast at the election. It was held, also, that they were not properly submitted, having been submitted as one, while they were really four; and the Constitution requires that each amendment be submitted separately. They concerned the judiciary and made it elective. An amendment passed in 1898, and ratified at the polls that year, giving levee commissioners power to cede to the Government their levees and rights of way was inserted in the Constitution by resolution.

Political.—No State election was held this year. The most notable event in State politics was the action of the Democratic State Committee, which met April 30, and ordered a plurality primary for the choice of delegates to the national convention and presidential electors for June 21. This action was contrary to all party precedent; State conventions have been the regular method for electing such representatives. Strong protests came from all over the State, and the committee was urged to reconsider its action and arrange for a convention. It did not do so, and a convention was otherwise called, which met at Jackson, June 5. Resolutions were passed strongly condemning the action, and charging the committee with the design of perpetuating itself, since it has been the custom for a new State committee to be chosen at each convention, and especially condemning the refusal to reconvene the committee to reconsider "their unwarranted, unprecedented, unnecessary, and undemocratic action." Other resolutions declared for Mr. Bryan, and denounced the policy of the administration on currency, expansion, the tariff, and militarism; opposed trusts, favored the Nicaragua Canal, and denounced the Hay-Pauncefote treaty; and commended the State administration. Delegates and electors were nominated and a new State committee. On the part of the committee it was declared that in 1899 the State committee was chosen for four years—that is, till the year of the next State election.

Gross frauds were charged at the primaries, especially in Coahoma, Warren, and Issaquena Counties.

A Republican State convention was held April 26. The party principles were reaffirmed and delegates to Philadelphia selected. The electoral ticket was made up in August.

The People's party met in convention Aug. 15 and named candidates. The most significant part of the platform was the resolutions following: "We do most solemnly and earnestly warn the people of this nation that the action of the Democratic party at Kansas City in relegating the financial question to the rear and making imperialism the paramount issue is the rankest deceit and treachery, and is calculated to mislead the people from the real issue. We hereby most earnestly assert that the financial question and Government ownership and control of public utilities are the paramount issues now before the American people."

The vote for President stood: Bryan, 51,706;

McKinley, 5,753; Barker, 1,644. All the members of Congress elected are Democrats. The vote for the poll tax amendment (omitting that of Bolivar County) was 42,931 for, to 7,522 against. On the apportionment amendment, 32,035 for, to 6,843 against.

MISSOURI, a Western Mississippi valley State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 383,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,295 in 1870; 2,168,380 in 1880; 2,679,184 in 1890; and 3,106,665 in 1900. This is an increase since 1890 of 15.9 per cent. The city of St. Louis had in 1900 a population of 575,238. Capital, Jefferson City.

Population.—The population by counties, according to the census of 1900, was as follows: Adair, 21,728; Andrew, 17,332; Atchison, 16,501; Audrain, 21,160; Barry, 25,532; Barton, 18,253; Bates, 30,141; Benton, 16,556; Bollinger, 14,050; Boone, 28,642; Buchanan, 121,838; Butler, 16,769; Caldwell, 16,656; Callaway, 25,984; Camden, 13,113; Cape Girardeau, 24,315; Carroll, 26,455; Carter, 6,706; Cass, 23,636; Cedar, 16,923; Chariton, 20,826; Christian, 16,939; Clark, 15,383; Clay, 18,903; Clinton, 17,363; Cole, 20,578; Cooper, 22,532; Crawford, 12,959; Dade, 18,125; Dallas, 13,903; Daviess, 21,325; DeKalb, 14,418; Dent, 12,986; Douglas, 16,802; Dunklin, 21,706; Franklin, 30,581; Gasconade, 12,298; Gentry, 20,554; Greene, 52,713; Grundy, 17,832; Harrison, 24,398; Henry, 28,054; Hickory, 9,985; Holt, 17,083; Howard, 18,337; Howell, 21,834; Iron, 8,716; Jackson, 195,193; Jasper, 84,018; Jefferson, 25,712; Johnson, 27,843; Knox, 13,479; Laclede, 16,523; Lafayette, 31,679; Lawrence, 31,662; Lewis, 16,724; Lincoln, 18,352; Linn, 25,503; Livingston, 22,302; McDonald, 13,574; Macon, 33,018; Madison, 9,976; Maries, 9,616; Marion, 26,331; Mercer, 14,706; Miller, 15,187; Mississippi, 11,837; Moniteau, 15,931; Monroe, 19,716; Montgomery, 16,571; Morgan, 12,175; New Madrid, 11,280; Newton, 27,001; Nodaway, 32,938; Oregon, 13,906; Osage, 14,096; Ozark, 12,145; Pemiscot, 12,115; Perry, 15,134; Pettis, 32,438; Phelps, 14,194; Pike, 25,744; Platte, 16,193; Polk, 23,255; Pulaski, 10,394; Putnam, 16,688; Ralls, 12,287; Randolph, 24,442; Ray, 24,805; Reynolds, 8,161; Ripley, 13,186; St. Charles, 24,474; St. Clair, 17,907; Ste. Genevieve, 10,359; St. Francois, 24,051; St. Louis, 50,040; St. Louis city, 575,238; Saline, 33,703; Schuyler, 10,840; Scotland, 13,232; Scott, 13,092; Shannon, 11,247; Shelby, 16,167; Stoddard, 24,669; Stone, 9,892; Sullivan, 20,282; Taney, 10,127; Texas, 22,192; Vernon, 31,619; Warren, 9,019; Washington, 14,263; Wayne, 15,309; Webster, 16,640; Worth, 9,832; Wright, 17,519.

Government.—The following were the State officers during the year: Governor, Lon V. Stephens; Lieutenant Governor, August H. Bolte; Secretary of State, Alexander A. Lesueur; Treasurer, Frank L. Pitts; Auditor, James M. Seibert; Adjutant General, M. Fred Bell; Attorney-General, E. C. Crow; Superintendent of Education, W. T. Carrington; Railroad and Warehouse Commissioners, T. J. Hennessey, J. Flory, W. E. McCully; Secretary State Board of Agriculture, John R. Rippey; Commissioner of Insurance, E. T. Orear—all Democrats, except Flory, Republican; Chief Justice of the Supreme Court, James B. Gantt; Associate Justices, Thomas A. Sherwood, Gavon D. Burgess, L. B. Valliant, W. C. Marshall, Theodore Brace, Democrats, and Walter M. Robinson, Republican; Clerk, J. R. Green, Democrat.

The Legislature, which holds biennial sessions, has in the Senate 25 Democrats and 8 Republicans;

in the House, 75 Democrats, 50 Republicans, and 1 Populist.

Finances.—The bonded debt of the State, on Jan. 1, 1899 (latest official report), was \$3,642,000. This shows a net reduction of \$1,334,000 in the two preceding years. The bonded debt of cities and towns on the same date was \$25,601,478. This will be increased in 1901 by the \$5,000,000 authorized for the St. Louis Fair. County and township bonds to the amount of \$9,530,507 have been issued in 59 counties, while 76 have no bonded debt. The State certificates of indebtedness on Jan. 1, 1899, amounted to \$4,393,639.40.

In 1899 the Treasurer reports \$795,000 of interest-bearing debt was paid off, being \$545,000 more than the constitutional provision relating to State debt requires. The estimate for 1900 is about \$500,000.

Valuation.—By the latest biennial report (1900), the total valuation for the State real and personal property is given at \$1,093,091,204. For St. Louis the figures are \$337,632,192, on a rate of 66½ of real value. The farm areas are given at 41,499,765 acres, valued at an average of \$7.75.

Banks.—On Oct. 31, 1900, there were 67 national banks in the State, with a note circulation of \$12,281,374; capital paid up, \$17,950,000. State banks reported—564, with a capital of \$17,795,900; surplus, \$6,010,122; revenue tax paid, \$54,703. The number of private banks was 41; capital stock, \$1,701,370; tax paid, \$4,866. Loans and trust companies, 9; capital, \$6,551,393; surplus, \$2,569,118. The total State bank capital reported was \$43,844,563. There are 55 savings banks, with deposits to the amount of \$16,535,769.12.

Education.—The State system embraces the University, Agricultural College, School of Mines, 3 normal schools, 1 institute for colored teachers, with 10,326 public schools and 181 high schools and seminaries.

The total amount of the school funds is \$12,447,242.69.

The State University, at Columbia, has 8 departments—academic, normal, law, medicine, military science and tactics, agriculture, and mechanic arts, with school of mines and metallurgy at Rolla. The enrollment for 1900 was 1,035 at Columbia, and at Rolla 165, showing an increase of nearly 28 per cent.

The State normal schools are 4, including the Lincoln Institute (colored), at Kansas City. The others are at Kirksville, Warrensburg, and Cape Girardeau. The number attending the 3 last was—males, 1,028; females, 1,111. The total expenditures were \$59,015.98. The Lincoln Institute had of students—males, 110; females, 131. The annual expenditures at the last report were \$13,501.46. State Superintendent Carrington reported 1,900 private institutions of learning as follows: 1 each sectarian and nonsectarian universities, 36 sectarian colleges and academies and 17 nonsectarian, 14 professional schools, and 10 each separate male and female academies. Thirty-four of these private institutions of higher or special learning are open to both sexes. The school age in Missouri is from six to twenty years, and the expense per pupil is \$16.13 a year. The attendance is 2.30 per cent. of the total population.

A notable addition to colleges is the Ruskin, at Trenton. It is founded on the same general lines as Ruskin Hall at Oxford, England.

State Institutions.—In addition to the State University, at Columbia, and its School of Mines, at Rolla, the State maintains four normal schools, one, the Lincoln Institute, being for the training of colored teachers. There are also schools for deaf and dumb, blind, boys' reform and girls'

industrial, an institution for feeble-minded, three insane asylums, three soldiers' homes, a fruit-raising experimental station, and the State Penitentiary.

On Jan. 1, 1899 (the latest official report), the Auditor presented as total expenses for the blind school, with an average of 327 pupils for the preceding biennial period, \$55,860.56. Under the estimate of Sept. 30, 1900, the Governor's examination gives the year's expenditure as about \$33,000. For a building site, \$82,298.88 was expended. Several light occupations are taught.

For the Deaf and Dumb School in 1900 an estimated cost of \$30,000 was given.

The Girls' Industrial School is credited with good management and progress.

The Boys' Reform School had 435 inmates at the last report, and the institution was crowded, but well cared for and healthful. The average annual expenditure for the boys' school is estimated at \$31,000, and for the girls' school at \$14,000.

The soldiers' homes—two for Confederate and one for National veterans—are estimated as costing \$36,000 yearly. The State maintains three insane asylums, at the estimated cost of \$385,000. It also appropriated \$10,000 in aid of one in St. Louis. The State Penitentiary is practically self-sustaining, the total earnings of the prisoners showing, on Oct. 1, 1900, a balance of \$56,802.96. This includes all running expenses and salaries, besides new buildings and repairs.

Agriculture.—According to the latest report of the United States Department of Agriculture, the 8 principal crops raised in the State in 1900 occupied 9,090,125 acres, an increase over 1899 of 859,741 acres. The yield for corn, wheat, oats, rye, buckwheat, and barley was 224,402,673 bushels, an increase over the preceding year of 39,720,933 bushels. Prices were also higher. The acreage in potatoes for 1900 was 108,677 acres, an increase of 3,165 acres. The yield was 10,106,961 bushels, an increase also of 1,349,465. The acreage in hay was 2,145,748, and the production 2,768,015 tons, a decrease for the year of 112,270 acres and in yield of 326,379 tons. Corn, oats, wheat, and potatoes are the largest producers. Average values were somewhat higher in 1900 than in the year preceding.

Insurance.—The State Superintendent reports (April, 1900) for the year preceding 347 companies doing business in the State, of which 141 were life, 39 fraternal, and the others fire and miscellaneous. The business done in the State was as follows: Life policies in force, 73,192; industrial, 313,527; issued in year, 21,379 and 161,714; claims paid, \$2,433,368.87 and \$480,570.60; premiums collected, \$7,274,719.40 and \$465,189.85. Fraternal insurance was in the State for 1899: In force in Missouri, \$252,233,106.25; paid during year, \$2,303,262.80; assessments collected, \$2,361,795.25. Other life and accident companies showed for the year 8,762 policies issued, 16,858 in force; with amounts for each class of \$15,930,305 and \$32,278,621. All insurance companies other than life showed: Risks written, \$173,671,696.37; premiums received, \$6,661,791.92; losses paid, \$3,439,579.23; losses incurred, \$3,650,227.40.

Railroads.—The State Railway and Warehouse Commission abrogated in 1900 its practice of levying an arbitrary sum per mile to cover "miscellaneous property," having realized that the courts would not sustain the practice. The valuation for taxation (1900) was as follows: Steam roads, \$77,448,204.30; street roads, electric etc., \$21,045,288; bridges, \$2,865,000; telegraph lines, \$2,002,507.71. There are 6 counties without railroads. The num-

ber of railroad employees, June 30, 1900, was 23,092; for street railways (estimated), 45,000. Not including logging, electric, cable, or horse-power roads, there are 147 railroads and 57 companies in the State, 1,632 stations, and 1,256 station houses. One employee in 2,118 was killed, and 1 in 205 injured during the year preceding. Of passengers, 1 in 4,879,447 was killed, and 1 in 324,962 injured. The earnings of the railroads were reported at \$17,296,880; taxes paid, \$904,422.15.

Labor Troubles.—The street-car strike in St. Louis in 1900 was the only movement of importance. It lasted several weeks, and cost the city \$157,000 for police work, and involved 33,000 men, only 4,394 failing to go on strike. The street railways affected involved 436 miles. The losses reached several million dollars in wages and costs to both sides. Gov. Stephens refused to call out the militia, on the ground that the sheriff had not exhausted his powers to keep the peace. The result was an arrangement which granted in some form most of the original demands of the strikers.

Department Store Taxation.—The State Supreme Court, Feb. 20, rendered a decision adverse to the constitutionality of the act passed in the preceding session of the Legislature allowing county and municipal authorities to levy a special license tax on department stores. The case of the State of Missouri *ex rel.* John C. Wyatt *vs.* Thomas R. Ashcrook, Rice D. Greky, and John F. Johnson was brought by mandamus from the Buchanan County court for the purpose of compelling the authorities of St. Joseph to issue a merchant's license to Wyatt for the conducting of a department store.

Under the law appealed from there had been a refusal to issue the license unless the relator would first pay to the city two thirds and to the State one third of the amount required under section 6 of the act, which provided for a license tax on each of 23 groups of goods sold in department stores of \$300 to \$500, at the discretion of the taxing authority. The Supreme Court decided this discretionary provision to be at variance with the State Constitution, in that it was "class" and "special" legislation. The court declared the act to be an "arbitrary and unreasonable classification of merchants for the particular purpose of this particular imposition," involving also "inequality and want of uniformity" in determining the amount of tax. A peremptory writ of mandamus was ordered issued.

Louisiana Purchase Exposition.—In addition to the \$5,000,000 in exposition bonds to be issued by the city of St. Louis and the \$1,000,000 authorized for expenditure by the State for this exposition under legislation of 1890, the first session of the Fifty-sixth Congress also authorized an appropriation of \$5,000,000 in aid of it. It is to be disbursed for the exposition of 1903 under rules and regulations prescribed by the Secretary of the Treasury, but these are to be operative only after the sum of \$10,000,000 has been raised by the corporation having the exposition in charge. It is also provided that the United States is to be repaid in due proportion with such repayments as are made out of the proceeds of the Louisiana Purchase Exposition to the city of St. Louis and the State of Missouri.

Political.—In the presidential election, the State gave 351,912 votes for the Democratic ticket, 314,091, for the Republican, 5,965 for the Prohibition, and 6,128 for the Social-Democratic.

The Democratic State convention met at Jefferson City, June 14, and nominated the following ticket: For Governor, Alexander M. Dockery; Lieutenant Governor, John A. Lee; Secretary of

State, Samuel B. Cook; Treasurer, Robert P. Williams; Auditor, Albert O. Allen; Attorney-General, Edward C. Crow; member of Railroad and Warehouse Commission, — Harrington. All these nominees were elected in November by an average vote of 350,000; Gov. Dockery's vote was 350,045.

The Democratic Judicial Convention met at Sedalia, July 17, and nominated for Chief Justice James B. Gantt; for Associate Justices, Thomas A. Sherwood, Gavon D. Burgess, Theodore Brace, and L. B. Valliant—all of whom were re-elected.

Constitutional Amendments.—At the election in November, 1900, 7 amendments to the Constitution were ratified. Under the first, county courts, in their discretion, may levy a special tax not to exceed 15 cents on the \$100 of tax valuation for roads and bridges. Three other amendments provide that in courts of record three fourths of the jury in a civil case may determine the cause; that in courts not of record, in both civil and criminal cases, two thirds of a jury may render a verdict. Juries may be composed of fewer than 12 men, and criminals prosecuted may be convicted upon either information or indictment. Courts having power to try felony cases may dispense with grand juries, which are to be convened on the judge's order. By the fifth amendment a new system of taxation as to mortgages is made operative.

MIVART, ST. GEORGE (mi-vart'), an English biologist, born in Brook Street, Grosvenor Square, London, Nov. 20, 1827; died at his home, 77 Inverness Terrace, in that city, April 1, 1900. He began his studies as a boy at Clapham Grammar School, went thence to Harrow, and afterward entered King's College, London. It had been his father's wish that he should go to Oxford, but the lad, having at the age of seventeen become a member of the Roman Catholic Church, which at the time was a bar to matriculation at Oxford, took his final course at St. Mary's College, Oscott. He next studied law, and in 1851 was called to the bar at Lincoln's Inn; but it is not recorded that he ever practiced. A strong bent toward scientific pursuits had already declared itself, and, yielding to this, he concentrated his attention first on medical, and later on a wider range of biological study. In 1855 he became a fellow of the Zoological Society of London, and by 1862 had made such progress in the medico-biological sciences that he was appointed lecturer on comparative anatomy at St. Mary's Hospital. In recognition of his valuable researches in structural anatomy he was elected a fellow of the Royal Society in 1867, and two years later was made vice-president of the Zoological Society. From 1874 to 1880 he held the position of secretary of the Linnæan Society of London, afterward serving for many years on its council, and at one time as a vice-president. In 1874 he was appointed Professor of Biology at University College, London; was created Ph. D. of Rome by the Pope in 1876; and in 1884 received the degree of M. D. from the University of Louvain, in which institution later he accepted the post of Professor of the Philosophy of Natural History. In 1896 he was again elected vice-president of the Zoological Society of London, continuing in the position until 1899, when failing health forced him to resign.

Dr. Mivart first became known in scientific circles through his fruitful anatomical researches into the structure of vertebrate animals, his work, though chiefly on the mammals, including also birds, fishes, and reptiles. He was noted as an exceedingly accurate and painstaking observer, who, omitting no detail, unearthed a surprising number of new facts in fields that had already been worked

by many eminent predecessors, while "leaving little to be found out by succeeding naturalists in the animals with which he dealt." The results of these investigations began to appear in 1867 in a series of memoirs on the anatomy of the insectivora, which were published in the *Journal of Anatomy and Physiology* for 1867 and 1868 and in the *Proceedings of the Zoölogical Society* for 1871. In the seventies, in the latter serial there also appeared a Memoir on the Axial Skeleton of the *Struthionidæ*, a second on that of the *Pelecanidæ*, and a third on the structure of the fins of the elasmobranch fishes and the nature and homologies of vertebrate limbs generally. Subsequently turning his attention to the carnivora, he published in 1882, in the *Zoölogical Proceedings*, two papers dealing with the classification, distribution, and anatomy of the æluroid carnivora, and in 1885 there followed another paper in which the arctoid carnivora were treated in a similar manner. In 1890 three papers on the *Canidæ* appeared in the same *Proceedings*, and as late as 1896 two others on the bony structure of certain lorries and parrots. These and many other papers, some fifty in all, contain the results of Dr. Mivart's original investigations, which, taken together, have materially advanced our knowledge of the structure and relationships of the higher animals, while they at the same time form a broad and enduring basis for his scientific reputation.

But extended and valuable as the work they record undoubtedly is, these memoirs represent only a small part of his published writings. Besides the articles on Apes, on the Skeleton, and on Reptiles, written for the ninth edition of the *Encyclopædia Britannica*, he was a frequent contributor to several of the leading English periodicals, such as the *Quarterly*, *Fortnightly*, and *Contemporary Reviews* and the *Nineteenth Century*, and the author of a considerable number of scientific books, several of which have been widely read. His first work, the *Genesis of Species*, appeared in 1871, and was so well received that a second edition was called for in less than a year. It is in this volume that the author sets forth certain original views on the subject of evolution in general, and natural selection in particular, which called out a good deal of pointed criticism at the time from the followers of Darwin. Denying to the principle of natural selection a controlling influence in the evolution of living forms, Dr. Mivart insists on the guiding action of a Divine power, advocates the *creation* theory, but at the same time takes care to distinguish between *absolute* and *derivative* creation, and claims that it is with the latter only that the evolutionist is concerned. He also urges the view that while man's body is the result of evolution, no such origin can be made to account for his intellect. His second book, *Lessons in Elementary Anatomy*, was published in 1872; *Man and Apes*, in 1873; *Lessons from Nature and Contemporary Evolution*, in 1876; *The Cat*, 1881; *Nature and Thought*, 1883; *The Origin of Human Reason*, 1889; *A Monograph of the Canidæ*, 1890; *Birds*, 1892; *Types of Animal Life*, 1893; and *An Introduction to the Elements of Science*, 1894.

Whether combating the hypothesis of natural selection or writing on the relations of science and religion, Dr. Mivart's books, and particularly his essays in the magazines, reached and influenced a wide circle of readers. His style was clear and vigorous, impressive in its earnestness, and although much that he wrote was of a controversial character and on subjects that took strong hold of the feelings, his articles were always marked by a dignity, a respect for fact, and a regard for his opponents that deserved, as they received, the warmest

appreciation. Indeed, it is believed by many who are familiar with his work that his success as a popular writer on his favorite subjects is quite up to, if it does not overshadow, his achievements as a discoverer.

There is nothing in Dr. Mivart's career that affords a better example of the true scientific spirit by which he was animated than the manner in which he met only a short time before his death an attempt to coerce his religious views. Though a consistent Catholic for many years, he late in life became somewhat restive apparently, under what he regarded as illiberal and unprogressive tendencies in his Church, particularly in its attitude toward science. The feeling seemed to grow upon him, until at length he ventured to criticise, in a public way and from a scientific standpoint, certain doctrines of the Catholic faith with which he was unable to agree. This was done, as he afterward explained, with the purpose of testing the question whether it was possible for *liberal* Catholicity to maintain itself and make headway within the Roman communion. For this he was violently assailed by a leading Catholic newspaper, and, feeling that he had been made the victim of a gross injustice, he appealed to Cardinal Vaughan for redress. A considerable correspondence ensued, in which demands were made upon him that he would not obey, the controversy finally resulting in his forced retirement from the Church. Dr. Mivart's part in this correspondence indicates that for some years a conflict had been steadily growing in his mind between the force of private judgment and the necessity of submission to authority. In the end the former proved too strong to be overcome, and, true to his mature convictions, he quietly accepted the consequences.

Personally, Dr. Mivart is described as a man of fine presence and the possessor of a charm of manner that was alike conspicuous before an audience, in the discussions of the scientific society, and in the ordinary intercourse of daily life.

MONTANA, a Western State admitted to the Union Nov. 8, 1889; area, 146,080 square miles. The population, according to each decennial census since admission, was 132,159 in 1890, and 243,329 in 1900. Capital, Helena.

Government.—The following were the State officers in 1900: Governor, Robert B. Smith; Lieutenant Governor, A. E. Spriggs; Secretary of State, T. S. Hogan; Treasurer, T. E. Collins; Auditor, T. W. Poindexter, Jr.; Attorney-General, C. B. Nolan; Superintendent of Education, E. A. Carleton—all elected on a fusion ticket of Democrats and Populists; Adjutant General, Charles F. English; Commissioner of Agriculture and Labor, J. H. Calderhead; Land Commissioner, H. D. Moore; Mine Inspector, John Byrne; Boiler Inspector, Frank A. Burns; President of the Board of Sheep Commissioners, Thomas H. Power; Bank Examiner, J. G. Moroney; Chief Justice of the Supreme Court, Theodore M. Brantley, Republican; Associate Justices, W. H. Hunt, Republican, who resigned and was succeeded in June by Robert L. Word, and W. T. Pigott, Democrat; Clerk, Henry G. Rickerts, Democrat.

The State officers are elected for terms of four years in November of the years of presidential elections. The term of justices of the Supreme Court is six years.

The Legislature meets biennially in January of the odd-numbered years.

Population.—Following is the population of the counties as returned for the census: Cascade, 25,777; Beaverhead, 5,615; Broadwater, 2,641; Carbon, 7,533; Choteau, 10,966; Custer,

7,891; Dawson, 2,443; Deer Lodge, 17,493;ergus, 6,937; Flathead, 9,375; Gallatin, 9,553; Granite, 4,328; Jefferson, 5,330; Lewis and Clarke, 19,171; Madison, 7,695; Meagher, 2,526; Missoula, 13,964; Park, 7,341; Ravalli, 7,822; Silver Bow, 47,035; Sweet Grass, 3,066; Teton, 5,080; Valley, 4,355; Yellowstone, 6,212; Crow Indian Reservation, 2,660.

Butte is the largest city in the State, having this year a population of 30,470, against 10,723 in 1890, and 3,363 in 1880. Great Falls is second with 14,932, and shows the largest percentage of increase; it did not exist in 1880, and in 1890 it had only 3,797 inhabitants. Helena, the third in size, shows a decrease from 1890, when it had 13,834; in 1900 the figures were 10,772. Anaconda has risen from 3,975 to 9,450. The other large towns are: Missoula, 4,329; Bozeman, 3,435; Billings, 3,221; Livingston, 2,780; Walkerville, 2,622; Kalispell, 2,527; Red Lodge, 2,152; Miles City, 1,747; Dillon, 1,530; Fort Benton, 1,024.

Finances.—The State has no bonded debt. The State institutions have bond issues, secured by the land grants, all bearing 6 per cent., running from ten to thirty years, as follows: Agricultural College, \$100,000; Normal School, \$50,000; university, \$100,000; Deaf and Dumb Asylum, \$40,000; Capitol Building, \$350,000; School of Mines, \$120,000. The State is not responsible for either principal or interest on these bonds.

The Treasurer's annual report, published in December, shows a balance on hand in the general fund of \$71.28. The general fund finances are as follow: Outstanding general fund warrants, \$243,970.07; estimated interest, \$3,500; total, \$247,470.07.

The Treasurer estimates that there is due in taxes and licenses \$360,000. Adding to that the cash on hand makes a credit balance of \$112,601.21. It is estimated that outstanding warrants not registered may bring the actual cash credit, Jan. 1, down to \$50,000. This is the first time in the history of the State that the Treasurer has been able to take up all outstanding warrants at the close of the year.

The report shows a balance to the credit of the 24 institution and commission funds of \$514,627.

A comparative statement of receipts from each of the 24 counties shows a net increase of \$58,378.37. With the exception of Dawson, Deer Lodge, Gallatin, Granite, and Silver Bow, an increase of revenue is true of every county.

The receipts from the inheritance tax during the year were \$5,058.66.

The 5-per-cent. wolf bounty tax, levied upon stock interests, netted the State \$157,139.93. During the year warrants amounting to \$142,745.50 were paid, leaving an unexpended balance of \$14,394.43.

A statement of the stock inspector and detective fund is given as follows: Balance in fund, \$16,460.69; receipts, \$21,282.60; warrants paid, \$19,042.50; balance, \$18,700.79.

Cash and securities of credit of the permanent school fund amount to \$340,495.10, bearing interest for the most part at 6 per cent.

The receipts of the Secretary of State in fees, licenses, etc., were \$13,532.15.

Education.—The report of the public schools for the year ending Aug. 31 gives the following data: There are 57,210 children of school age, an increase of 3,578 compared with the preceding year. The enrollment at the end of the school year in the public schools was 39,430, or 2,213 more than that of the preceding year. There were

1,898 children in private schools compared with 1,586 in 1899.

The public schools were taught by 1,214 teachers, all but 202 of whom are women. There were 1,126 teachers in the State in 1899.

The teachers were paid \$570,161.72 during the year. The average salary for men was \$69.04, and for women, \$50.30 a month.

The public school libraries have 32,987 volumes. The State appropriation for 1899 amounted to \$80,246. This sum was apportioned at the rate of \$1.50 per capita for each census child.

The School of Mines was opened for the reception of students Sept. 11. The courses of study extend over four years, and are devoted strictly to those branches of science that are required in the field of mining and mining engineering. Twenty-five students are attending daily recitations. Five others are taking selected studies in mineralogy, geology, physics or assaying. A very large number of applications for admission have been refused because of lack of preparation. The faculty is giving special attention to the building up of a cabinet that shall be as nearly as possible a complete representation of the ores and mineral resources of Montana.

Some very valuable donations of maps, mine models, and mining machinery have been made by some of the great mining companies of Butte.

The estimate of expenses for the Normal School for two years was \$35,355. Money is required for dormitories and other additions. The attendance was reported to have fallen off during the spring term.

The Agricultural College has an attendance of 250.

The enrollment at the State University, not including that of the School of Music, was 243 in the fall term, compared with 203 at the same time in 1899. The cost of maintenance was \$23,810. New departments created at the university are history and philosophy, chemistry and physics, biology, modern languages, ancient languages, English and literature, drawing, mathematics, and mechanical engineering. Fifteen degrees were conferred this year, 14 bachelor's and 1 master's.

Under the law for the establishment of county high schools, 7 or 8 have been opened, but all are in rented quarters. It appears that the law is defective in not prescribing a practicable way of raising money for the schools. Where bonds have been offered for sale, prospective buyers have been advised that they were illegal, and no sales have resulted.

The Montana Wesleyan University received additions to its funds amounting to \$20,000 between Aug. 1 and Dec. 1. The attendance has largely increased, about 130 being present in September.

Charities and Corrections.—The number of patients at the State Institution for the Insane, at Warm Springs, according to the report at the end of the year, was 479; of these, three fourths were men. In the year 50 were discharged as cured, and 19 dismissed as partly cured to the care of relatives, 64 died, and 12 escaped. From 11 inmates who paid in part for their board \$1,427 was received. The expenses for the year amounted to \$115,142.

The membership of the Soldiers' Home at the close of the year was 65 against 51 at the beginning. The resources of the home during the fiscal year were: Balance on hand at beginning of year, \$1,414.06; State appropriation, \$5,196; received from pensions, \$854.25; received from Government, \$4,008.25; from sale of buildings at Fort Maginnis, \$1,700; total, \$13,172.56.

The expenditures amounted to \$11,522.76, of which \$4,000 went for subsistence.

The Montana Children's Home Society has placed 150 children in homes since its organization.

The Institute for the Deaf and Dumb had a larger attendance this year than ever. The building has been improved, and new departments of instruction introduced.

There were 354 prisoners at the State Prison in December. Unconditional pardons were granted to 26 in the year and diminutions were given in 75 cases.

Militia.—The report of the Adjutant General says: "On April 1, 1898, this State had 1 company of artillery, 2 troops of cavalry, 9 companies of infantry, and 1 mounted company of infantry. Of this force all were called for (with the single exception of the artillery) by the War Department for the Spanish-American War, and were mustered into the United States service. The terms of enlistment in nearly all the companies that composed the old guard expired with their muster out of the United States service. The infantry and cavalry arm of the service were not continued, and our State is left with the least number of organized militia to her credit of any in the Union.

"The number of persons in the State subject to military duty is estimated at 31,258, an increase of 3,744 in two years.

"The expenditures from the National Guard fund for the two years were as follow: For 1899, annual appropriation \$2,500, expenditures \$1,447.50; for 1900, annual appropriation \$2,500, expenditures \$1,427.37."

Of the Fort Ellis military reservation he says: "In the possession of old Fort Ellis the State is indeed fortunate. It is centrally located, and is admirably adapted for the site of an encampment. The guard has held no encampment since 1896, and this has led settlers to believe that the State has forfeited its rights to hold it."

Railroads.—According to figures from the office of the State Board of Equalization, the railroads paid in taxes in 1900, exclusive of special school and city taxes, \$364,035.83. The taxes on the railways proper, the roadbeds, rails, bridges, etc., amount to \$290,830.68. The taxes on the roundhouses, depots, shops, and other buildings amount to \$18,121.90, while the taxes on the lands amount to \$55,083.25. There are 2,932.21 miles of railroad in the State upon which taxes were paid.

A line from Kalispell to Flathead lake is building, which will connect the head of the lake with the main line of the Great Northern.

Banks.—Following is the summary of the condition at the close of business, Nov. 30, of the 14 banks, as reported to State Bank Examiner: Deposits, \$7,711,425; loans and discounts, \$6,483,269; cash and clearance items, \$1,319,941; due from other banks, \$2,156,720.

There was an increase of 10 per cent. in the deposits and loans and discounts of the State banks during the last fiscal year. Six of the 14 State banks paid dividends aggregating \$52,000.

Public Lands.—The report of the Land Commissioner shows that during the fiscal year 570 new leases and permits were issued, covering 388,711 acres, giving the State a revenue of \$42,767.34. Including the leases and permits issued during the previous years, 1,912 leases are in existence, producing during the year a revenue of \$144,383.76. Of all classes, there are now under lease and yielding revenue to the State 1,265,895 acres of land, representing an increase of \$35,077.66.

The receipts for the year represent very largely rentals, as the department has considered it good policy to rent State lands rather than place them on the market. Under the existing policy the State receives an income of 6½ per cent. from its land, and still retains title.

During the year the total income from State lands was \$200,275.25.

The State has relinquished lands within the reservations amounting to 315,050 acres, and has secured other lands in their place.

Insurance.—The Auditor attends to the collection of fees and taxes from the insurance companies, which now amount to about \$60,000. There is as yet no State office of Insurance Commissioner.

Wolves and Coyotes.—According to the payments under the wolf bounty law, the number of wolves killed during the fiscal year was 5,117, and of coyotes 22,513.

Products.—Montana is the chief wool-producing State in the Union, and has more sheep than any other State except one. The clip this year exceeded 24,000,000 pounds, and the price received was better than the average.

A great percentage of the gold and silver produced in Montana came from the copper ores of Butte—almost two thirds of the silver and fully one fourth of the gold. The rest is from smelting ores, mill bullion, cyanide vats, and placer mines in other parts of the State. Every coal-mining district in the State where there are developed mines was worked to its full capacity during the year, with the exception of Belt.

In point of value copper is a long way in the lead of other metals produced in the State. The value of the copper output, according to the assayer's report, was \$40,941,905.14. The value of the gold produced was \$4,819,156.95; of silver, at coinage value, \$21,786,834; of lead, \$909,410.33.

Political.—The political situation this year was much involved. The Republican party, though seemingly united upon one ticket, appears not to have been at peace with itself, one part charging that the other part had been brought under the control of the Standard Oil and Amalgamated Copper trusts. The Democratic party was divided into what were popularly known as the Clark faction and the Daly faction, and had two tickets at the polls. Six parties put up State tickets—the Republican, Democratic, Independent-Democratic, People's, Union-Labor, and Social-Democratic. The Prohibition and Social-Labor parties made nominations for presidential electors, but none for State officers. By fusion the State tickets were reduced to four before the election. The courts were called upon to decide in several cases which of opposing candidates for county offices were entitled to places on the ballot as candidates of their party.

The Republicans held a convention in Helena, May 17, to name delegates to the national convention. Resolutions were adopted approving the national administration, favoring the renomination of President McKinley, calling for legislation against trusts, and condemning the 11 Republicans that voted for W. A. Clark.

The convention for nominating State officers met in Helena, Sept. 5. Following is the ticket: For Governor, David E. Folsom; Lieutenant Governor, A. J. Bennett; Secretary of State, A. N. Yoder; Attorney-General, T. J. Porter; State Treasurer, Frank J. Edwards; State Auditor, C. C. Proctor; Associate Justice, Rudolph von Tobel; Superintendent of Public Instruction, W. E. Harmon.

The first Democratic convention was called to

meet at Butte, June 20. The Clark men apparently were in the majority, but the Daly men were in control; and after some struggles the Clark men withdrew, and two conventions were held. The Daly faction adopted a platform denouncing the action of W. A. Clark, of Butte, in corrupting the late Legislature, in assailing the integrity of the Supreme Court, and attempting to debauch the people of the entire commonwealth, as the colossal crime of the century.

Senator Clark's resignation after the report of the Senate committee, and his appointment by the acting Governor was denounced as "a disgrace to the State, a shame to the American nation, and an insult to the Senate."

The Clark faction adopted a platform calling the Washington investigation of Mr. Clark's election a persecution, denouncing those who instigated it, and approving the State legislators that voted for Mr. Clark.

The Democratic convention for nominating a State ticket met Sept. 19. There were contesting delegations from Butte and other places; the majority report of the Credentials Committee favored the Clark delegation, and that report was adopted by a vote of 253 to 81, whereupon the Daly contingent withdrew. They organized a new party, the Independent-Democratic, and called a convention to meet in Butte Oct. 2.

The nominations were: For Governor, Thomas S. Hogan; Lieutenant Governor, Joseph Marion; Secretary of State, George M. Hays; Treasurer, Alex. Livingston; Auditor, E. G. McLean; Attorney-General, W. R. C. Stewart; Associate Justice, Robert Lee Word; Superintendent of Schools, Prof. P. A. Leamy.

The People's party held a convention in September, and adopted a platform that denounced the Gage act and "imperialism," demanded the initiative and referendum and abolition of the circle at the head of the ballot, and pledged its representatives to vote for an eight-hour law, for a law prohibiting the employment of Japanese and Chinese labor, for abolition of the company store, for inspection of places of employment, to make blacklisting unlawful, to revise the school laws, and to give women the ballot. It favored the election of United States Senators by direct vote, denounced trusts, denounced Gov. Steunenberg, of Idaho, and extended sympathy to the Pennsylvania miners.

The regular Democrats and the People's party united upon the following ticket: For Governor, Joseph K. Toole, Democrat; Lieutenant Governor, Frank Higgins, Democrat; Congressman, Caldwell Edwards, Populist; Secretary of State, George M. Hays, Democrat; Auditor, J. H. Calderhead, Populist; Treasurer, A. H. Barret, Democrat; Attorney-General, James Donovan, Populist; Associate Justice, G. R. Milburn, Democrat; Superintendent of Public Instruction, J. M. Lewis, Populist.

The Union-Labor party, at its convention in September, declined to fuse with the Democratic and People's parties, and nominated J. A. Ferguson for Governor, Otto Schoenfeld for Lieutenant Governor, F. M. Nickerson for Secretary of State, and Robert D. Myles for Treasurer. Later it was decided to fuse, and these candidates resigned. The name of W. W. Welch, the Union-Labor candidate for Superintendent of Public Instruction, was placed on the fusion ticket.

The Social-Democratic party held a convention in Butte, Sept. 18, adopted a platform, and nominated a State ticket. The platform denounced both Democratic and Republican parties as being controlled and led by capitalists. Imperialism

and expansion were declared sham issues. The only real solution for the trust problem was the common ownership by the people of all industries. Independent political action and the trade-union movement were declared to be the chief emancipation factors of the working class. Public ownership of mines, reduction of the hours of labor, inauguration of a system of public works and improvements for employment of the unemployed, national labor legislation, equal civil and political rights for men and women, adoption of the initiative and referendum, and abolition of war and the introduction of international arbitration were demanded.

The ticket was: For Governor, J. F. Fox; Lieutenant Governor, Henry S. Davis; Secretary of State, John M. Horne; State Treasurer, Henry Tople; State Auditor, Joseph G. Hoar; Superintendent of Public Instruction, O. M. Partelow.

The Prohibition State Convention met in April in Bozeman. The platform arraigned the President for permitting canteens in the army and the liquor traffic in the new possessions under military control.

The fusion ticket was successful at the polls. On the vote for presidential electors the result was: Bryan, 37,146; McKinley, 25,373; Woolley, 298; Debs, 708; scattering, 116.

The vote for Governor stood: J. K. Toole, 31,419; D. E. Folsom, 22,691; T. S. Hogan, 9,188; J. F. Fox, 505.

The Legislature will have a large majority of members elected on the fusion ticket. The Republicans will have 32 in both houses out of the total membership of 94. This Legislature will have the duty of electing two United States Senators, one to succeed Senator Carter, and one to take the seat to which W. A. Clark was elected by the last Legislature. The investigation by Congress of the charges of bribery in connection with that election, the resignation of Mr. Clark, his appointment immediately afterward by Lieut. Gov. Spriggs, and the subsequent revocation of that appointment and the appointment of Martin Maginnis by the Governor belong to the history of Congress.

An amendment to the Constitution was carried by a vote of 7,689 to 3,265. It provides that where one or more judges of the Supreme court are by any reason disqualified to sit, the remaining judge may call one or more district judges to sit in the case, for which the members of the Supreme bench are disqualified, and a decision given by the court so constituted shall have the same force and effect as other decisions of the court.

MORAVIANS. The statistical returns of the Northern District of the Moravian Church in America to Dec. 31, 1899, published early in 1900, give it 11,776 communicants, 1,301 noncommunicant members, and 4,780 children, making a total membership of 17,857, and 11,159 members of Sunday schools. The contributions for the year were \$126,110 for church support, \$1,582 for the Retired Ministers' fund, \$1,274 for the Bohemian mission, \$7,333 for foreign missions, \$2,823 for the Alaska mission, \$9,976 for home missions, \$3,805 for the Theological Seminary, \$1,913 for all other Moravian causes, and \$1,305 for other Christian objects. The figures show practically no gain in membership, a fact which was attributed by the Statistical Committee largely to the closing of the home mission work in the Indian Territory, which was rendered necessary because of the complications growing out of the passage of the Curtis bill. There had been, however, an increase in liberality now extending over two years. The gifts for all missionary and benevolent causes in 1898 had ex-

ceeded those of 1897 by \$4,731, and those for 1899 had been \$1,967 larger than those for 1898. Adding to the numbers given to the Northern District those reported on the same date for the Southern District—viz., 3,041 communicants, 297 noncommunicants, 1,754 children, giving a total of 5,092 members and 3,994 members of Sunday schools—there were returned for the whole Moravian Church in the American Province, 14,817 communicants, 1,598 noncommunicants, 6,534 children, making a total of 22,949 members, and 15,153 members of Sunday schools.

The entire membership of the churches of the Unity—or of the Moravian Church—in the home provinces, on the Continent of Europe, in Great Britain, and in America was 38,280. Of these members, 25,000 were communicants.

The general report of the Moravian missions for 1900 showed a net loss of 773 members, which was occasioned wholly by the transference of the entire mission in Greenland to the Danish Lutheran Church. This mission included 1,630 souls, the deduction of which from the whole number was partly made up for and reduced to less than one half by gains in other quarters of the mission field of the Church. The Mission Board of the entire Unity had now 131 stations, with 60 out stations, in 20 different countries. These missions were served by 240 brethren and 213 sisters—together 453 missionaries, or 22 more than in the previous year—and included 95,424 souls. The work of the missions on the Mosquito Coast has been interrupted by adverse action of the Government, and it has been found necessary to close the schools at Bluefields and Magdala.

MOROCCO, an empire in northern Africa. The Emperor is an absolute monarch, ruler in spiritual as well as temporal affairs, deferring only occasionally to the Sharif of Taflet, descendant of the Prophet Mohammed and of the former ruling dynasty. He is advised by his ministers when he wishes advice, but oftener merely indicates to them his decisions. The Sultan Mulai Hassan, who reigned from 1873 till 1894, was succeeded on June 7 of that year by Mulai Abd el Aziz, born Feb. 24, 1878. The Grand Vizier, in the beginning of 1900, was Ahmed ben Mussa; Minister of Foreign Affairs, Abdul Krim ben Sliman; Minister of War, Said ben Mussa; Minister of Finance, Abdesselam el Tasi; Grand Chamberlain, Dris ben Aish.

Morocco has an area of 53,800 square miles, not including the desert and its oases; with the desert, about 219,000 square miles. The population is estimated at 9,256,000, of whom 3,000,000 are Berbers and Tuaregs, 2,200,000 Shellah Berbers, 700,000 Bedouin Arabs, 3,000,000 Mued Arabs, 200,000 negroes, 150,000 Jews, and 6,000 Christians. Fez, the capital, has a population of about 140,000; Morocco, the southern capital, has from 40,000 to 50,000; and Tangier, where the representatives of foreign powers reside and where five sixths of the Christians remain, since foreigners are not welcome in the other cities, has about 30,000. The Moors are Sunnite Mohammedans of the Malekite sect.

The Sultan transfers his court periodically to the city of Morocco, in the south, or sometimes sojourns in other towns. Wherever he goes he is accompanied by his army of 10,000 infantry trained by an Englishman, 600 disciplined cavalry, several field batteries commanded by Frenchmen, and contingents furnished on demand by governors of provinces. Italian artillery and engineer officers have assisted in starting an arms factory at Fez, and Spanish and German officers are attached to the Sultan's staff. There is a militia

of 8,000 cavalry and 10,000 infantry, and tribal levies would add 40,000 irregular cavalry and infantry to the fighting strength of the Sultan, all troops of valor, formidable in the tactics suited to their country. The Sultan derives his revenue from monopolies, from taxes and tithes, and from gifts. His income is estimated at 7,000,000 francs from these sources, besides the customs dues collected at the 8 ports and applied to general administrative purposes, estimated at 12,000,000 francs a year.

The value of the merchandise imports by sea in 1898 was £1,167,447 sterling; exports, £1,161,118. The imports of cotton goods were £531,892 in value; sugar, £269,636; tea, £98,901. Other imports are silk goods, candles, woolen cloth, spirits, flour, earthenware, and glass. The exports of wool were £204,857 in value; goat skins, £181,516; eggs, £78,939; beans, £58,502; slippers, £46,745. Other exports are almonds, cattle, wax, maize, dates, and bird seed. The value of the trade with the principal foreign countries in 1898 was as follows:

COUNTRIES.	Imports.	Exports.
Great Britain	£701,758	£346,882
France	263,681	829,487
Germany.....	101,870	196,951
Spain.....	21,077	179,514

The number of vessels entered at the ports of Tangier, Dar al Baida, Mogador, Mazagan, Arisch, Saffi, Rabat, and Tetuan in 1898 was 2,089, of 997,749 tons.

After the death of Mulai Hassan the responsibilities of government were left by the young Sultan largely to the Grand Vizier, whose two brothers filled the next highest posts. In the early part of 1900 these brothers died, and in May the Vizier himself. No one was left who had experience and authority. The Moors, accustomed to despotic and arbitrary government, bend their necks only to the strong. They were alarmed and exasperated at the encroachments of the French in the Tuat oases, which have always been claimed by Morocco. The Government was momentarily paralyzed at a time when the Sharifs were proclaiming a holy war against the French and collecting the tribesmen of the desert to defend the sacred places of Taflet. A protest against French aggression had already been drawn up, but there was no one to instruct the envoy who was going to Tangier to present it to the ministers of the powers. The powers collectively were causing trouble by pressing for the right of their ministers and for Europeans in general to reside in Fez. The Sultan filled the vacant posts at court on May 13, immediately after the burial of the late Vizier, as follows: Grand Vizier, Sid el Haz Mukhtar; Minister of War, Said Gubbas; Grand Chamberlain, Sil Hassen. Abdul Krim was retained as Minister of Foreign Affairs. The French columns which were operating against the tribes that formerly paid an intermittent allegiance to the Emperor of Morocco, but more commonly set him at defiance, were re-enforced by 1,400 men, dispatched to Igli, the place occupied latest, and to Ain Sefra, where the railroad for the time ended that was pushed forward in the tracks of the conquering expedition. This latter place is in close proximity to Figuig, a territory formally acknowledged under existing treaties between France and Morocco as belonging to Morocco and the rallying point of the Moorish military force that was collected to defend the frontier and to emphasize the claims of Morocco to the districts already occupied by French troops. The

Moors were convinced that the aim of the French was to push westward to the Atlantic at the back of the Atlas range and to occupy all the doubtful territory on the frontier between Algeria and Morocco, the territory that was reserved by the delimitation treaty of 1845 for future agreement. A note was dispatched to the French Government on July 9, formally demanding European arbitration of the dispute arising from the French occupation of the oases of Tuat, Tidikelt, and Gurara and the district of Igli. Hadji Mohammed el Torres, the Sultan's representative at Tangier for foreign affairs, had previously, on June 20, addressed a communication to the powers protesting in the name of the Sultan against the French encroachments upon Tuat and Igli, a region reserved for future settlement if not actually recognized as belonging to Morocco in the French frontier treaty. None of the powers were inclined to take the part of Morocco in the controversy. Great Britain had already given France a free hand in these regions by the African agreement of 1890. The Moorish claim was based upon an article of the treaty of 1845, stating that the ancient boundary that existed between Morocco and Turkey previous to the French conquest of Algeria was retained as the boundary between Morocco and Algeria, and stipulating that no boundary stones should be erected by either party until this ancient boundary was delimited by mutual agreement. The Moorish Government offered to submit documents proving that the Deys of Algiers recognized Tuat as forming part of Morocco, and to prove furthermore that both before and after the conquest of Algeria by the French all the kadis, kaidis, and sheikhs in the disputed country had been and that they still were regularly appointed by the Government of the Sultan. On Aug. 20 the Moorish Government sent another circular to the powers protesting against the further encroachments of the French in the Tuat region and other territories, asking the powers for their assistance. The excitement caused in Fez by the French advance was attended by the killing of the manager of a French business house, Marcos

Essagin, who was an American citizen. The Jewish ghetto was next attacked by the mob, and in consequence the British, supported by other foreign representatives in Tangier, made serious representations to the Moorish Government. Both as a Jew and as a representative of French interests he incurred the hostility of the fanatical Moors by engaging in a controversy with one of their religious chiefs, whose mule he knocked against while riding on horseback through a narrow street. The actions of the crowd became so threatening that he fired his revolver, wounding a native, upon which he was immediately cut down by his assailants. The American Government presented a claim upon the Moorish Government for an indemnity for the murdered man's family. The demand of the representatives of the powers for right of access to the Sultan's court at all times and their attempt to treat directly with the Government prompted Hadji Mohammed el Torres at Tangier to inform them that correspondence with the Moorish Government must be addressed to him. They replied in a collective note that their governments could not accede to such a proposition unless he was fully empowered to settle all questions. After the death of Ahmed ben Mussa the Sultan began to take an active part in the direction of public affairs, although he did not ostracize the family of the masterful and avaricious Vizier who had made many enemies, since he appointed a brother and a cousin of the deceased statesman to posts in the ministry. When the new Government was in running order Spain pressed a demand for the transfer and the delimitation of Santa Cruz de Mar Pequeña, a seaport and district on the Atlantic coast. Morocco ceded this territory to Spain by the treaty of Wad Ras in 1860, but disputed the cession later. The harvest in 1900 was a remarkably good one, and this fact tended to avert disturbances that might have resulted from the French military operations in the disputed Saharan territory coinciding with the death of the man who has been the real ruler of Morocco since the present Sultan came to the throne.

N

NATIONAL ACADEMY OF SCIENCES.

The officers of the Academy in 1900 were: President, Wolcott Gibbs; Vice-President, Asaph Hall; Foreign Secretary, Alexander Agassiz; Home Secretary, Ira Remsen, Johns Hopkins University, Baltimore, Md.; Treasurer, Charles D. Walcott. Two meetings were held in 1900. The first or stated meeting was held in Washington, April 17-19. On that occasion the following papers were read: The Cruise of the United States Fish Commission Steamer Albatross in South Seas, August, 1899, to March, 1900, by Alexander Agassiz; Secondary Enrichment of Sulphides in Ore Deposits, by Samuel F. Emmons; On the Zoögeographical Relationships of Africa, by Theodore Gill; Report of the Watson Trustees on the Award of the Watson Medal to David Gill, by Simon Newcomb; and A Human Bone from the Glacial Deposit at Trenton, N. J., by Frederic W. Putnam. The following papers were read by scientists not members of the Academy: West Indian Madreporarian Polyps, by J. E. Duerden, introduced by William K. Brooks; The Anatomy of *Nautilus pompilius*, by L. E. Griffin, introduced by William K. Brooks; On the Use of Electric Motors, of the Shunt Type, for Solving Linear Differential Equations of any Order with Variable Coefficients, and On the Pre-

diction of the Physical Properties of the Pure Metals, by Reginald A. Fessenden, introduced by Cleveland Abbe; and A Partial Explanation of Some of the Principal Ocean Tides, by Rollin A. Harris (by permission of Henry S. Pritchett), introduced by Cleveland Abbe. The meetings were held in the hall of Columbian University. The public business included the award of the Barnard medal to William Conrad Roentgen for his discovery of the X rays. This medal is given but once in five years, and then to the person who has made the most important contribution to physical science in that period. An important piece of business was the offer of Dr. Agassiz to give \$5,000 to the National Academy as the beginning of a building fund to erect a suitable home in Washington for the use of the Washington Academy of Sciences and local or affiliated societies, on condition that the land needed for such a building be either given by the Government or obtained from other sources; and, furthermore, that at least \$100,000 be raised for that purpose, the National Academy to have such privileges granted them as they might need in the way of use of the hall at the proper time for their meetings, and of suitable smaller rooms to be used for offices. Dr. Agassiz also offered to give \$1,000 to

serve as a beginning of a general fund, provided sufficient money is raised to make that fund \$20,000 as a minimum amount. Committees were appointed to take charge of raising both these funds and to solicit subscriptions for them. The new members elected were: James E. Keeler, director of the Lick Observatory, Mount Hamilton, Cal.; Henry F. Osborn, Da Costa Professor of Biology in Columbia University, New York city; Franz Boas, Professor of Anthropology in Columbia University and Assistant Curator in the American Museum of Natural History, New York city; and Samuel L. Penfield, Professor of Mineralogy in Sheffield Scientific School of Yale University, New Haven, Conn. An announcement was received from Dr. Wolcott Gibbs that his advancing years would compel him to resign the presidency of the Academy. Dr. Gibbs is one of the two surviving original members of the Academy, and is the foremost of American chemists. The following six members were elected to the council: Dr. John S. Billings, Dr. Henry P. Bowditch, Prof. George J. Brush, Prof. Wolcott Gibbs, Mr. Arnold Hague, and Prof. Simon Newcomb.

The scientific session was held in Providence, R. I., Nov. 13 and 14, 1900, when the following papers were read: Exhibition of Certain Novel Apparatus; A Wave Machine; An Expansion Lens; A Recording System of Two Degrees of Freedom; A Tube showing Colored Cloudy Condensation; On Stability of Vibration and on Vanishing Resonance; Demonstration of the Projection of One Grating by Another, and Hysteresis-like Phenomena in Torsional Magnetostriction and their Relation to Viscosity, by Carl Barus; Report on the Meeting of the Committee of the International Association of Academies, by James M. Crafts; Progressive Evolution of Characters in the Young Stages of Cephalopods, and Descriptive Method of Presenting the Phenomena of the Cycle of Evolution among Cephalopods, by Alpheus Hyatt; Note on the Energy of Recent Earthquakes, by Thomas C. Mendenhall; The Synthesis and Reactions of Sodium Acetate Ester, and their Relation to a New Interpretation of Chemical Metathesis, and On the Genesis of Matter, by Arthur Michael; Spectrum of Sodium in a Magnetic Field, and Progress in the Echelon Spectroscope, by Arthur A. Michelson; On the Development of the Pig, and Normal Plates Illustrating the Development of the Rabbit and the Dogfish, by Charles S. Minot; Distribution of Philogeny of Limulus, and Male Preponderance (Androrhopy) in Lepidopterous Insects, by Alpheus S. Packard; Stereographic Projection and Some of its Possibilities from a Graphical Standpoint, by Samuel L. Penfield; Recent Observations of the Planet Eros, and Screens Free from Relative Absorption, by Edward C. Pickering; The Porous Cup Voltmeter, and An Account of the Study of Growing Crystals by Instantaneous Microphotography, by Theodore W. Richards; A Report of the Spectrum Work carried on with the Aid of a Grant from the Bache Fund, and On the Explanation of Inertia and Gravitation by Means of Electrical Phenomena, by Henry A. Rowland; Investigations of Light and Electricity with the Aid of a Battery of Twenty Thousand Cells, by John Trowbridge; Folding and Faulting of Strata in Cordilleran Area, by Charles D. Walcott.

No public business was transacted at this meeting, although several important matters were introduced and submitted to committees to be reported upon at the spring session of the Academy. Biographical memoirs of the following deceased members were assigned for preparation: Frederick A. P. Barnard to Ogden N. Rood; C. H. F. Peters

to Charles A. Schott; Benjamin A. Gould to Seth C. Chandler; Francis A. Walker to John S. Billings; Othniel C. Marsh to Arnold Hague; Elliott Coues to Theodore N. Gill; Fairman Rogers to George F. Barker; and James E. Keeler to Charles S. Hastings.

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,903 in 1870; 452,402 in 1880; 1,058,910 in 1890; and 1,068,539 in 1900. Capital, Lincoln.

Government.—The following were the State officers in 1899: Governor, William A. Poynter; Lieutenant Governor, E. A. Gilbert; Secretary of State, W. F. Porter; Treasurer, J. B. Meserve; Auditor, John F. Cornell; Attorney-General, C. J. Smythe; Adjutant General, P. H. Barry; Superintendent of Education, W. R. Jackson—all Populists except E. A. Gilbert, Silver Republican, and C. J. Smythe, Democrat; Land Commissioner, J. V. Wolfe; Chief Justice of the Supreme Court, T. L. Norval, Republican; Associate Justices, J. J. Sullivan and Silas A. Holcomb, Fusion.

The State officers are elected in November of the even-numbered years, for a term of two years. The Legislature meets in January of the odd-numbered years.

Finances.—The biennial report of the State Treasurer, covering the term from Nov. 30, 1898, to Nov. 30, 1900, presents these items: Total receipts, \$6,038,179.69; total disbursements, \$5,423,161.35; balance on hand Nov. 30, 1900, \$615,018.34. The Treasurer says: "The bonded indebtedness of the State having been entirely paid, there is now in the sinking fund \$56,165.23 which should be transferred to the general fund. No levy is being made from the sinking fund, but some is still due from back taxes. There is \$2,358 in the Penitentiary land fund. This money arises from rent of lands which were set aside for the building of the Penitentiary; small tracts of said lands have not been sold. In my last report we still had \$153,267.35 of State bonds. These have been entirely paid, making a total of \$468,267.35 paid and canceled during my two terms of office. We still have a floating indebtedness, which arises from the fact that we have a large amount of back taxes which have not been collected but against which warrants have been issued. The school fund holds \$1,165,762.12 of this amount; the balance (\$561,747.60) is held by individuals. The fact that the school fund has absorbed so much of this floating indebtedness has virtually put the State upon a cash basis as far as any advantage could be obtained by paying cash for all purchases made by the State for the running of the State institutions, and the loss to the State from paying the interest is reduced to the minimum, as the interest goes back to the State and is distributed to the taxpayers through the temporary school fund. The State has bonds and securities as an investment for its educational funds amounting to \$4,365,544.63. Since my last report we have bought county bonds to the amount of \$268,868.62. We have bought general fund and university fund warrants to the amount of \$1,238,288.26. Making a total investment in four years of \$2,245,356.79."

Education.—The educational fund for the school year ending July 9, 1900, had receipts (including balance) amounting to \$5,073,147.68, and a balance on hand at the close of the year of \$669,925.61. This balance was larger by \$7,178.26 than the balance left over the previous year. The number of teachers employed was 9,463—2,062 men and 7,401 women. The average monthly salary of the men was \$46.26; of the women, \$36.90.

The whole number of children of school age was 377,791; the whole number enrolled, 288,227; the average daily attendance, 181,874. The whole number of schoolhouses was 6,733; the number built within the year was 175. The average school tax was 15 mills. The total value of school property in the State was \$9,591,134.63.

The superintendent says in his report: "Many of our counties have shortened the period of institute from two or three weeks to one week, and instead of making the institute the means of cram-

CHARLES H. DIETRICH,
GOVERNOR OF NEBRASKA.

ming for examination, they have secured the best talent available and have sought to place before the teachers high ideals, to inspire them with a desire for growth, to elevate the professional standard, to quicken and energize the professional spirit, and to improve the organization, the instruction, and the management of schools. A few years ago the Teachers' Reading Circle work was on the decline, largely, perhaps, because of the selection of the line of work; but the methods pursued in forwarding the work seemed not effective. For the past two years there has been a steady and healthful growth. The Pupils' Reading Circle has made a healthful growth in the past two years and is a potent factor in bringing to the pupils a line of wholesome reading that stimulates a taste for the best literature. In many of our schools the Pupils' Reading Circle has formed the foundation of a growing library. Special effort has been made in the last few years to create a sentiment in favor of libraries in our schools. Nebraska is perhaps the first to put out a library programme. We are gratified with the results. In many of our cities and in a number of our counties are to be found pedagogical libraries. Wherever these have been properly managed they have been a powerful agent in the upbuilding of the teachers. The teachers who make use of these county teachers' libraries are not content until the schools they teach are provided with good working libraries. In a number of counties almost every district has a library."

Irrigation.—The report of the State Engineer on the subject of irrigation for the years 1899 and 1900 fills a volume of 232 pages, illustrated with maps and views. The Engineer says: "The wisdom of the enactment of the irrigation law of 1895, erecting a State Board of Irrigation and giving it judicial powers, has been demonstrated by the satisfactory adjudication of nearly 1,000 claims growing out of appropriations attempted prior to the date of its approval. These adjudications have been made with but little expense to the appropriators, and have harmonized the adverse and conflicting interests of individuals and communities throughout the arid sections of the State. In States in which the adjudication of rights to the use of water has been left to the courts, endless litigation has been the invariable result. It has impoverished and discouraged irrigators and investors, and promoted discord between neighbors and jealousy and strife between

communities. During the past two years the board has been appealed to by appropriators on almost every stream in the State from which water was diverted for irrigation, to adjust controversies between appropriators and between irrigators and those using water for domestic purposes. The undersecretaries were instructed to give those desiring water for domestic purposes, including water for stock, the prior right in the distribution of water, and the controversies were amicably adjusted.

"By the enactment of irrigation laws, the State has encouraged the construction of canals and other works for irrigation which represent an investment of probably more than \$5,000,000. An important part of the work of the past year has been the examination and approval of applications for permits to appropriate water. Before this year the uncertainty concerning the validity and extent of claims inaugurated under the old law had made it impossible to act on these applications with safety. The opening of the new year found the old claims largely disposed of."

Fish.—The fund appropriated by the last Legislature for the use of the Fish Commissioners was but \$7,900. The superintendent says in his report: "There have been hatched and planted during the time I have been in charge, in round numbers, by actual count, 250,000 of fish actually raised at the hatcheries. The different varieties of fish distributed consists of the following: Wall-eyed pike, black bass, German carp, rainbow trout, croppies, striped perch, channel catfish, rock bass, besides about 15,000 gold fish for ornamental purposes. I find that my predecessor, according to his books, distributed since his last report 5,942,500. Making a total of 6,192,500 distributed since his last report. Of this number, about 95 per cent. were delivered to applicants, direct from the car, and planted with scarcely any loss and no cost to the applicant and at little cost to the State. I think that this industry should be encouraged, for there is a growing demand for fish even to the gold or ornamental fish, there being a greater demand every year for this latter kind, both by private parties and by teachers in the public schools, which alone will pay the State the amount it costs."

Exhibits of fish and products of the hatcheries, and of the manner of hatching fish were made at the State fair in Lincoln. The main exhibit of live fish was made in 20 aquariums each 8 to 10 feet long, including 1 large circular tank 12 feet across, in the center of the building, holding about 100 barrels, ornamented with all kinds of pond and water lilies, forming a very attractive feature of the exhibit.

Products.—By a report issued in November, it was estimated that the farmers of Nebraska realized more than \$105,000,000 for their corn, wheat, oats, and rye crops. That is \$10 for every man, woman, and child in the State.

Experiments made with the raising of small fruits show that this can be done with large return where a good system of irrigation is in operation.

An experiment was made in the culture of sugar beets by convict labor on 30 acres. The expenses amounted to \$338 and the profits were \$363.71. In the expenses the wages of the convicts were rated at 50 cents a day.

Banks.—There are only 8 savings banks in the State. At the date of the last report, August, 1900, they held deposits amounting to \$674,498.18, an increase of \$45,919.93 since Dec. 9, 1899. The deposits of savings banks are included in the total deposits in State banks as reported by the bank-

ing department. The sum of the deposits in all the banks of the State was \$25,256,035.30.

There were 60 building and loan associations in the State in 1900, with assets amounting to \$3,697,356.06.

Political.—The State convention of the Democratic party was held in Lincoln, March 19. The platform included these declarations:

"We, the Democrats of Nebraska, in convention assembled, do hereby reaffirm and indorse, in whole and in part, in letter and in spirit, the platform adopted by the Democratic National Convention held in Chicago in 1896.

"We favor amendments to the Federal Constitution specially authorizing an income tax and providing for the election of United States Senators by a direct vote of the people.

"We are in favor of the immediate construction and fortification of the Nicaraguan Canal by the United States.

"We pledge ourselves to wage an unceasing warfare against all the trusts—the money trusts, the industrial trust, and the international land-grabbing trust.

"Instead of a system which would chain our nation to the gold standard and compel it to participate in all the disturbances which come to European nations, we demand an American financial system, made by the American people for themselves, to be secured by the immediate restoration of the free and unlimited coinage of gold and silver at the present legal ratio of 16 to 1, without waiting for the aid or consent of any other nation.

"We condemn the Porto Rico tariff bill recently passed by a Republican House of Representatives, as a bold and open violation of the nation's organic law, and a flagrant breach of good faith.

"The Filipinos can not be citizens without endangering our civilization; they can not be subjects without endangering our form of government; and as we are not willing to surrender our civilization or to convert a republic into an empire, we favor an immediate declaration of the nation's purpose to give to the Filipinos, first, a stable form of government; second, independence; and third, protection from outside interference, as it has for nearly a century given protection to the republics of Central America.

"We sympathize with the Boers in their heroic efforts to preserve their national integrity."

At the same time and place the Populists held their State convention. The split in their ranks was continued, and the bolters were excluded from the convention.

The Silver Republicans also held their State convention at the same time and place.

A fusion ticket was arranged for the Democrats and Populists, in July, the following being the nominations for State officers: For Governor, W. A. Poynter, Populist; Lieutenant Governor, E. A. Gilbert, Silver Republican; Attorney-General, W. D. Oldham, Democrat; Secretary of State, C. V. Svoboda, Populist; Treasurer, S. B. Howard, Populist; Auditor, H. Theo. Griess, Populist.

In July the Prohibitionists, in State convention, nominated a full State ticket.

July 20 the bolting Populists—mid-rovers—met at Grand Island. They nominated State officers and put forth a platform, which contained these declarations:

"The hopelessness of real reform through either of the two old parties, which through equality of corruption have both become absolutely inoperative for the public good through the desertion of principles to outside help for greed of office, our party has been temporarily cut in

twain, but we, the Populists of Nebraska, here and now vow our unflinching opposition to any further fusion with either the Democratic or Republican parties. We arraign Goebelized Democracy as the Democratic Mark Hanna, and denounce its wholesale disfranchisement of white and black citizens of the South as government without consent and a direful menace to our free institutions, and tending wholly to imperialistic despotism.

"We demand an irredeemable dollar, good for all debts, public and private, issued direct to the people by the Government, but until such legislation is secured we are in favor of the free and unlimited coinage of both gold and silver at the ratio of 16 to 1.

"We demand State or municipal ownership of waterworks, street railroads, telephones, and electric-light service at cost to the people."

The State Republican Convention was held in May. The significant portions of the platform were these:

"We, the Republicans of Nebraska, are unlike our political adversaries, who in the late convention held high carnival over the imaginary evils threatening our country, and adopted platforms which are a standing protest against its prosperity, grandeur, and glory.

"We point with pride to the remodeling of our tariff laws, which has increased our revenues and not impeded trade; which has opened the doors of mills and factories to the millions of American skilled mechanics, and is returning to them the higher wages that are the just recompense for their toil.

"We indorse the legislation that has strengthened our financial system and firmly established the gold standard, and made the American dollars so safe and secure that they are kept busy chasing one another around the endless circle of business, too good to go into hiding and too patriotic to steal abroad. In answer to the cry for the free and unlimited coinage of silver and the claim that there is not gold enough as a basis upon which to do the business of the country the United States Treasury puts in evidence the \$120,000,000 in gold that has come to it within a year, and the \$413,000,000 in gold now held within its vaults, and the unexampled prosperity and measureless and limitless and countless financial transactions thus sustained without seeming effort.

"While we are unalterably opposed to imperialism and militarism as practiced by European nations, we are willing to accept all the legitimate results of honorable warfare, and to assume the burdens of governing and holding acquired territory.

"We earnestly recommend that Congress devote some of the money now annually expended in large quantities for river and harbor improvements to reclaiming the arid lands of the West."

The following State ticket was nominated: For Governor, Charles H. Dietrich; Lieutenant Governor, E. P. Savage; Secretary of State, George W. Marsh; Treasurer, William Stueffer; Auditor, Charles Weston; Attorney-General, F. N. Prout; Land Commissioner, George D. Follmer; Superintendent, W. K. Fowler.

At the election in November the Republican State ticket received 113,879 votes; the fusion ticket, 113,018. The vote for presidential electors resulted in 121,835 for McKinley and 114,013 for Bryan.

NETHERLANDS, a monarchy in western Europe. The legislative authority is vested in the States General, consisting of a First Chamber,

containing 50 members, elected by the provincial councils for nine years, and a Second Chamber, containing 100 members, elected for four years by the direct votes of all citizens who pay any direct taxes or are legally qualified for any profession or employment or have money in the savings bank, or earn 275 guilders a year, or own boats, or occupy separate dwellings. The reigning sovereign is Queen Willemina, born Aug. 31, 1880, daughter of Willem III by his marriage with Princess Emma of Waldeck. The Queen succeeded to the throne at the death of her father on Nov. 23, 1890, and assumed the royal authority on Sept. 6, 1898, the Queen Dowager having acted as regent during her minority.

The Council of Ministers at the beginning of 1900 was composed as follows: President of the Council and Minister of Foreign Affairs, Dr. W. H. de Beaufort; Minister of the Interior, Dr. H. Goeman Borgesius; Minister of Finance, Dr. N. G. Pierson; Minister of Justice, Dr. P. W. A. Cort van der Linden; Minister of the Colonies, J. T. Cremer; Minister of Marine, Vice-Admiral J. A. Roell, succeeding J. C. Jansen; Minister of War, Lieut.-Gen. K. Eland; Minister of Waterstaat, Commerce, and Industry, C. Lely.

Area and Population.—The area of the Netherlands, or Holland, is 12,648 square miles. The population on Dec. 31, 1898, was estimated at 5,074,632, being 401 to the square mile, divided into 2,513,267 males and 2,561,365 females. The urban population was 34.3 per cent. of the total, the rural population 65.7 per cent. The number of marriages in 1898 was 36,813; of living births, 160,765; of deaths, 85,813; excess of births, 74,952. The net emigration in 1898 was 851—viz., 781 to the United States and 70 to South Africa. Of the emigrants 439 were men, 226 women, and 186 children. The number of foreign and Dutch emigrants who took passage from the ports of Holland was 14,119. The population of the principal towns at the end of 1898 was: Amsterdam, 512,953; Rotterdam, 309,309; The Hague, 199,285; Utrecht, 100,066.

Education has not hitherto been made compulsory in the Netherlands, nor is it everywhere free. By the act of 1889 the Government grants subsidies to private religious schools, besides supporting the secular public schools jointly with the communes, paying part of the salaries of teachers and 25 per cent. of the cost of all new schools. There were 3,091 public elementary schools in 1898, with 15,696 teachers and 405,054 pupils; 1,434 private elementary schools, with 7,146 teachers and 224,361 pupils; 139 public infant schools, with about 825 teachers and 25,543 pupils; 904 private infant schools, with about 2,660 teachers and 86,078 pupils; 123 schools for the working classes, with 1,166 teachers and 16,457 pupils; 73 intermediate schools, with 973 teachers and 9,266 pupils; 29 classical schools, with 428 teachers and 2,370 pupils; and 11 schools of navigation, with 68 teachers and 877 pupils. The 4 state universities had 165 professors and 2,822 students, and the polytechnicum 30 professors and 581 students. There are also agricultural and horticultural schools, a school for the East Indian civil service, several military schools, an academy of art, a royal school of music, and normal schools for teachers. The expenditure of the Government in education in 1898 was 9,895,992 guilders, that of the communes 10,997,092 guilders. The proportion of totally illiterate conscripts in 1898 was 3.6 per cent. A bill introducing compulsory school attendance was presented by the Minister of Education in the spring session of 1900. The Second Chamber by

a single vote defeated the proposal to make continuation beyond the rudiments obligatory, although it agreed by the same narrow majority to impose on the communes the duty of establishing and maintaining continuation schools.

Finances.—The ordinary revenue for 1898 was 138,365,846 guilders, and the extraordinary revenue from loans and other sources was 5,755,139 guilders; total revenue, 144,120,985 guilders. The total expenditure was 150,505,462 guilders, of which 37,747,308 guilders went for defense, 33,459,451 guilders for debt, 19,970,410 guilders for public works, and 59,328,293 guilders for the general expenses of government. The estimate of revenue for 1899 was 140,796,900 guilders, and of expenditure 152,613,959 guilders. For 1900 the budget estimate of revenue was 144,723,185 guilders, of which the land tax gave 12,635,000 guilders; personal tax, 8,600,000 guilders; tax on capital, 7,100,000 guilders; tax on incomes from trades and professions, 5,675,000 guilders; excise duties, 47,440,000 guilders; indirect taxes, 21,065,000 guilders; import duties, 8,917,250 guilders; tax on gold and silver, 300,900 guilders; domains, 1,970,000 guilders; post office, 9,910,000 guilders; telegraphs, 2,036,000 guilders; lottery, 651,000 guilders; shooting and fishing licenses, 130,000 guilders; pilot dues, 2,000,000 guilders; mining dues, 7,705 guilders; state railroads, 4,306,190 guilders; share of the East Indies in the interest and sinking fund of the debt, 3,848,000 guilders; miscellaneous revenues, 8,131,140 guilders. The total expenditure for 1900 was estimated in the budget at 151,260,244 guilders, of which the civil list took 800,000 guilders; States General and Royal Cabinet, 680,992 guilders; Ministry of Foreign Affairs, 855,140 guilders; Ministry of the Interior, 15,474,449 guilders; Ministry of Marine, 15,959,263 guilders; Ministry of Finance, 25,283,592 guilders; Ministry of War, 22,584,783 guilders; Ministry of Public Works, 27,421,266 guilders; Ministry of the Colonies, 1,206,604 guilders; public debt, 35,118,040 guilders; contingent expenses, 50,000 guilders. Of the total revenue of 1898 direct taxation produced 33,014,530 guilders, excise 46,915,485 guilders, indirect taxes 19,581,873 guilders, and customs 8,787,071 guilders; together 24.77 per cent. of the whole, and respectively 6.55, 9.31, 3.89, and 1.74 per cent. The customs duties, framed for revenue only, do not exceed 5 per cent. on most dutiable articles, and on imports used in the industries they are not over 2.5 per cent., if any duties at all are levied. The budget for 1901 shows a deficit of 5,250,000 guilders, 2,000,000 guilders of which are due to increased expenditure on the army and navy and on education, and the remainder to expenditure on extending public works.

The public debt in 1900 amounted to 1,160,246,800 guilders, of which 624,996,600 guilders are 2.5-per-cent. funded debt, 520,250,200 guilders 3-per-cent. loans of 1895, 1898, and 1899, and 15,000,000 guilders uncovered papered money. The 5- and 6-per-cent. debts of expropriated railroads were redeemed in 1899. There is a floating debt requiring about 300,000 florins a year to be paid in interest, and 206,719 florins are paid for annuities, making with the sinking fund of 3,256,000 guilders a total annual debt charge of 35,118,640 guilders, the interest on the funded debt being 31,265,921 guilders. The total value of real property in the Netherlands is estimated at 3,696,000,000 guilders, and personal property at 6,864,000,000 guilders, making the national wealth 10,560,000,000 guilders.

The Army.—Conscription has been partly introduced into the Netherlands, though the main

stock of the army is still formed by voluntary enlistment. The conscripts, about 11,000 in number, must serve a year with the colors, and during the next four years they are called into camp for six weeks annually. There is a militia, called the *schutterij*, of which all Dutchmen must be active members for five years from the age of twenty-five. The regular army on June 1, 1898, numbered 1,943 officers and 25,753 noncommissioned officers and privates. There are 9 regiments of infantry, with the guards, 3 cavalry regiments, 3 regiments of field artillery, 1 corps of horse artillery, 4 regiments of fortress artillery, 1 battalion of sappers and miners, 1 corps of pontooners, and 1 corps of torpedoists.

The Navy.—The obsolete turret ships *Koning der Nederlanden* and *Prinz Hendrik* have been retired, and 13 old monitors, 6 unprotected cruisers, and 30 river gunboats are no longer classed as effective. The new armorclads are small, being intended only for coast defense, and they are supplemented by a formidable torpedo flotilla and by monitors of modern type and protected cruisers for the defense of the Eastern possessions as well as the coast of Holland. The small coast-defense turret ship *Reinier Claeszen*, launched in 1891, of 2,490 tons, carries 1 8-inch and 1 7-inch gun and 4 quick firers, has 10½ inches of side armor, and can steam only 12½ knots. The armored cruiser *Konigen Willemina der Nederlanden*, launched in 1892, of 4,600 tons, with 11½ inches of armor at the water line, is armed with 1 11-inch and 1 8-inch breech-loaders, and 2 6-inch, 4 3-inch, and 11 small quick firers. This vessel is being refitted with the Yarrow water-tube boiler and with new engines. The armored cruisers *Piet Hein*, *Evertsen*, and *Kortenaar*, built in 1894, and designed for coast defense merely, have 10½ inches of armor, a displacement of 3,520 tons, and a battery of 3 8-inch, 2 6-inch, and 12 quick-firing guns, and can steam 16 knots. An improvement on this type is the *Konigen Regenten*, a barbette ship capable of sea maneuvers, launched in 1899, having 10-inch-plates on the sides, an armament of 2 9.4-inch guns, with a quick-firing battery of 4 6-inch, 8 3-inch, and numerous small guns. A sister ship to this one is building. The new protected cruisers of the Dutch navy have been called by naval men the finest examples of their class afloat. The *Holland*, *Friesland*, and *Zeeland*, launched in 1896, of 3,950 tons, armed only with quick-firing guns, 2 6-inch, 6 4.7-inch, 4 3-inch, and 12 smaller ones, have the Yarrow boilers, like all the later Dutch ships, and with engines of 10,500-horse power and over steam 20 knots easily. The *Gelderland*, *Nordbrabant*, and *Utrecht*, launched in 1898, having a displacement of 50 tons more, with the same armament as the others, are intended to make 23 knots an hour. Three monitors of 1,500 and 3 of 1,400 tons are being constructed, the former to have an armament of 2 8-inch breech-loading and 4 3-inch quick-firing guns, the latter 1 8-inch gun and a 4.7-inch quick firer in addition to the others. Thirteen first-class and 4 third-class torpedo boats are being added to the flotilla, which consists already of 25 third-class boats of 30 to 45 tons, and 15 of the second class, of 83 to 90 tons.

Commerce and Production.—Of the total area of Holland 895,136 hectares were reported in 1897 as uncultivated—heath land covered with water, marsh, and land occupied by roads, towns, or buildings. The cultivated area was 2,360,062 hectares, of which 864,137 were under tillage, 61,517 gardens and orchards, 1,185,568 pasture, and 248,840 forest. The area sown to wheat in 1897

was 62,199 hectares; rye, 213,448; barley, 36,320; oats, 134,133; potatoes, 151,212; buckwheat, 31,241; beans, 38,595; peas, 27,262; rape seed, 3,982; flax, 10,433; beet root, 38,508; tobacco, 784; madder, 177. The imports of wheat in 1898 were 136,159,000 guilders in value, and exports 106,720,000 guilders; imports of wheat and rye flour 54,828,000 guilders, and exports 11,060,000 guilders; imports of rye 85,997,000 guilders, and exports 41,125,000 guilders; imports of barley 31,817,000 guilders, and exports 21,415,000 guilders; imports of oats 19,228,000 guilders, and exports 16,522,000 guilders; imports of potatoes 549,000, and exports 877,000 guilders; imports of potato starch 4,810,000 guilders, and exports 15,590,000 guilders; imports of buckwheat 3,385,000 guilders, and exports 863,000 guilders; imports of flax 1,610,000 guilders, and exports 13,947,000 guilders; imports of beets 131,000 guilders, and exports 1,876,000 guilders; imports of bulbs and plants 520,000 guilders, and exports 6,064,000 guilders; imports of vegetables 2,258,000 guilders, and exports 37,277,000 guilders. The value of coal mined in 1898 was 436,208 guilders. There were 545 distilleries, 10 sugar refineries, 31 beet-sugar factories, 45 salt works, 91 vinegar factories, and 494 breweries. The number of steam engines in a total of 3,573 manufactories was 4,280. The number of fishing vessels was 5,385, with crews numbering 18,709. The value of the herring catch was 6,370,532 guilders.

The total value of imports for domestic consumption in 1898 was 1,795,000,000 guilders, and the value of exports of domestic produce and manufacture was 1,516,000,000 guilders. The imports of iron and steel and their manufactures were of the value of 163,800,000 guilders, and exports 105,904,000 guilders; imports of textile materials and manufactures 120,453,000 guilders, and exports 94,134,000 guilders; imports of cereals and flour 328,029,000 guilders, and exports 196,842,000 guilders; imports of coal 51,456,000 guilders, and exports 6,160,000 guilders; imports of rice 53,981,000 guilders, and exports 23,971,000 guilders; imports of mineral oil 11,337,000 guilders; imports of coffee 48,822,000 guilders, and exports 27,124,000 guilders; imports of butter 1,479,000 guilders, and exports 19,948,000 guilders; imports of margarine 21,805,000 guilders, and exports 44,362,000 guilders; imports of sugar 24,107,000 guilders, and exports 55,096,000 guilders; imports of timber 50,355,000 guilders, and exports 39,776,000 guilders; imports of hides and skins 26,684,000 guilders, and exports 29,752,000 guilders; imports of indigo 7,813,000 guilders, and exports 5,877,000 guilders; exports of cheese 13,804,000 guilders; imports of copper 74,270,000 guilders, and exports 75,743,000 guilders; imports of paper 5,172,000 guilders, and exports 34,247,000 guilders; imports of animal fats 23,870,000 guilders, and exports 10,162,000 guilders; imports of saltpeter 25,435,000 guilders, and exports 22,776,000 guilders; imports of zinc 6,542,000 guilders, and exports 4,051,000 guilders; imports of tin 21,834,000 guilders, and exports 16,497,000 guilders; imports of paints 14,085,000 guilders, and exports 12,643,000 guilders; imports of flax 1,610,000 guilders, and exports 13,947,000 guilders; imports of oil seeds 29,407,000 guilders, and exports 12,997,000 guilders; imports of tobacco, 9,804,000 guilders, and exports 5,881,000 guilders; imports of gold and silver 32,657,000 guilders, and exports 2,370,000 guilders. Of the total value of imports in 1898 the sum representing articles of food is 460,119,000 guilders, and of exports 465,633,000 guilders; raw materials were imported of the value of 298,992,000 guilders, and the exports

were 260,589,000 guilders; manufactured articles among the imports amounted to 212,811,000 guilders, and among the exports to 202,545,000 guilders; and of miscellaneous imports the value was 308,060,000 guilders, and of exports 308,152,000 guilders. The values of the trade in 1898 with the principal foreign countries are given in guilders in the following table:

COUNTRIES.	Imports.	Exports.
Prussia.....	313,300,000	787,600,000
Great Britain.....	269,000,000	387,800,000
Belgium.....	209,400,000	160,900,000
Dutch East Indies.....	260,800,000	63,700,000
United States.....	279,300,000	43,500,000
Russia.....	164,100,000	7,500,000
France.....	21,500,000	32,200,000
British India.....	52,600,000
Hamburg.....	26,200,000	25,000,000
Italy.....	8,800,000

Railroads and Telegraphs.—The Government owned 961 miles of railroads in 1898, which had a traffic of 6,199,000 metric tons and carried 10,823,000 passengers, and earned 22,044,000 guilders and paid for expenses 17,509,000 guilders; private companies owned 761 miles, which had a traffic of 3,833,000 metric tons of freight and 15,206,000 passengers, earning 17,376,000 guilders and costing 13,053,000 guilders for expenses. The capital cost of the Government lines was 270,509,000 guilders. The canals have a total length of 2,943 miles, and other navigable waters 3,000 miles. There were 818 miles of tramways in 1897. The length of the Government telegraph lines was 3,671 miles, with 13,017 miles of wire; messages transmitted in 1898, 4,957,691.

Politics and Legislation.—The Netherlands Government sent war ships to South African waters, as many Dutch citizens and Dutch vessels were at Lourenço Marques, and when the troubles broke out in China ships were dispatched thither. The finances showed considerable elasticity in 1900, but the compulsory education bill made new demands on the revenue, and the Minister of Finance had to look about for fresh resources. In the session that began on Sept. 18 several measures were introduced to facilitate the moral and material development of the Dutch East Indies, where the financial conditions were equally favorable, particularly on account of the progress made in the pacification of northern Sumatra, although it was still necessary at times to bring the troops and the fleet into action. New measures of internal interest dealt with labor contracts, the accident insurance bill, which was already before the Chambers in the former session, and the working of coal mines in Limburg by the Government.

The Dutch East Indies.—The Dutch possessions in the East Indies have a total area estimated at 736,400 square miles, and about 34,000,000 population. The territories are divided into the lands under direct government, vassal lands, and confederated lands. The Governor General, at present W. Rooseboom, appointed June 1, 1899, has power to make laws and regulations subject to the constitutional principles laid down in 1854, except in matters specially reserved for the legislative action of the States General. The States General in 1798 assumed the sovereign powers which the Dutch East India Company had exercised for two centuries, and in 1832 Gen. Johannes Graaf van den Bosch introduced the culture system into Java, under which Government officials supervise the labor of the natives, making them produce, in addition to their own food supplies, large quantities of colonial products,

such as coffee, sugar, pepper, and indigo, which the Government sells abroad. The Government plantations of pepper, indigo, tea, tobacco, and sugar cane have been given up as the result of the progress of the natives in intelligence and the desire for liberty and of the growth of liberal ideas in Holland. Forced labor is now required only for the cultivation of coffee, which is sold by the Government, most of it in Europe, but a part in Java. The island of Java, with Maduro, is distinguished from the outposts—Sumatra, Borneo, Riau-Lingga, Banca, Billiton, Celebes, Molucca, Sunda Islands, and Dutch New Guinea—in which, excepting on the west coast of Sumatra and the province of Menado in Celebes, the culture system has never been established.

The area of Java and Maduro is 50,554 square miles, with 26,125,053 inhabitants in 1897. Sumatra has 1,353,315 inhabitants on 31,649 square miles of the west coast, 137,501 on 11,284 square miles in Lampong, 692,317 on 53,497 square miles in Palembang, and the population of the east coast, 35,312 square miles, is estimated at 335,432, and of Benkulen, 9,399 square miles, at 158,767. The Riau-Lingga Archipelago, area 16,301 square miles, has approximately 107,861 inhabitants; Banca, area 4,446 square miles, has 93,600; Billiton, area 1,863 square miles, 41,558; western Borneo, 55,825 square miles, approximately 370,775; southern and eastern Borneo, 156,912 square miles, 809,803 as roughly estimated; Celebes, an estimated population of 1,448,722 on 49,390 square miles in the province of Celebes and 549,138 on 22,080 square miles in Menado; Molucca Islands, area 43,864 square miles, population approximately 399,208; Timor Archipelago, area 17,698 square miles, population approximately 119,239; Bali and Lombok, area 4,065 square miles, population 1,044,757, as estimated; New Guinea to 141° of east longitude, area 151,789 square miles, about 200,000 population. The number of Europeans and persons assimilated to them living in the East Indies at the beginning of 1897 was 35,489 males and 27,826 females, of whom 33,055 males and 27,222 females were of Dutch race, and 25,351 males and 23,648 females were Dutch born in the East Indies. Of the rest 1,192 were Germans, 318 English, 300 French, 292 Belgians, 184 Swiss, and 168 Austrians, Armenians, and others. There are about 460,000 Chinese, 24,000 Arabs, and 27,000 other Asiatics. Europeans and persons assimilated to them are governed according to European law, natives according to their own laws and customs.

The revenue for the financial year 1899 was 133,255,514 guilders, and expenditure 145,050,826 guilders, leaving a deficit of 11,795,312 guilders to add to the deficits of 17,013,300 guilders in 1898, 18,100,542 guilders in 1897, and 10,618,549 guilders in 1896, and others in previous years since the war in Acheen began. Taxation has been increased in proportion as the revenue from sales of products has fallen off. Of the revenue for 1899 taxes formed 42.6 per cent.; revenue from the opium, salt, and other monopolies, 23.3 per cent.; sales of coffee, cinchona, tin, and coal, 18.7 per cent.; miscellaneous receipts, 15.4 per cent. For 1900 the budget estimate of revenue was 141,251,247 guilders, of which 22,750,308 guilders are receipts in the Netherlands and 119,180,700 guilders receipts in the colonies; estimated expenditure, 145,251,247 guilders—28,088,324 guilders in the Netherlands and 117,162,923 guilders in the colonies; leaving an estimated deficit of 3,320,239 guilders. The receipts in the Netherlands were 3,774,515 guilders from sales of Government coffee, 178,200 guilders from cinchona, 14,159,959

guilders from tin, 2,150,000 guilders as the share of the Government in profits of the Billiton Company, 935,000 guilders from railroads, and 1,552,634 guilders from other sources. Receipts in the colonies were 18,815,000 guilders from sales of opium, 17,939,000 guilders from import, export, and excise duties, 20,130,300 guilders of land revenue, 11,770,000 guilders from railroads, 6,411,300 guilders from sales of coffee, 9,269,000 guilders from sales of salt, and 34,846,000 guilders from all other sources. The army and navy expenditure amounts to about a third of the whole, and administrative expenses to about a third.

The strength of the army in the beginning of 1898 was 1,421 officers and 41,157 noncommissioned officers and privates. European and native soldiers are mingled in the same regiments and battalions, though in separate companies, and the cavalry is composed of both, while in the artillery the gunners are Europeans and the riders natives. Soldiers of the army of the Netherlands, with the permission of their officers, can receive their discharges in order to enlist in the colonial army, and the rate of pay is high enough to attract others, both Dutchmen and foreigners, in Europe besides Europeans in the East Indies and half-castes, who stand on an equal footing with Europeans. Among the total number of enlisted men in 1897 were 15,839 Europeans, 52 Africans, 3,934 Amboinese, and 21,332 natives. The number of horses was 1,478. In the native companies half the noncommissioned officers must be Europeans, and all the commissioned officers are who are in active service, commissions being given to the native nobility only as honorary titles. Each infantry battalion is composed of four companies, one or two of them European companies. The naval force is in part provided and maintained by the Netherlands Government. The Indian navy contains 21 ships, manned by 1,450 Europeans and 750 natives; the auxiliary squadron from the Netherlands of 4 ships, manned by 1,000 Europeans and 200 natives.

The soil is mostly Government property in Java, excepting in the western section, where Europeans and Chinese have acquired private estates. The private landowners as well as the Government can require the natives on their land to give one day's labor every week by the old law, but the Government in 1882 commuted the right on most of its lands into a tax of 1 guilder per annum. The laborers are bound, however, by strict labor laws, which are thoroughly enforced by the officials, both European and native. There were 4,899,924 acres under rice in 1897, 4,019,092 acres under corn, arachis, cotton, and various crops, 229,894 acres under sugar cane, 240,308 acres under tobacco, 51,707 acres under indigo; total cultivated area, 9,440,925 acres. During 1897 the Government leased for seventy-five years 845,171 acres of waste lands to 729 European companies and individuals, 31,927 acres to 45 Chinamen, and 3,041 acres to 6 natives. On such lands and on lands owned by Europeans or Chinese or leased from native owners the sugar crop is grown, the Government having given up the culture in 1891. There are 2,066,062 acres now the property of Europeans, 645,417 acres belonging to Chinese owners, and 33,087 acres owned by other Orientals. The quantity of sugar produced in 1897 was 12,206,052 pounds. The yield of coffee was 68,338,400 pounds raised by forced labor on Government land, 12,947,200 pounds raised by natives for themselves, 70,223,600 pounds grown on leased lands, and 4,994,666 pounds grown on private

estates; total, 156,503,866 pounds. The production of cinchona was 325,887 kilogrammes on Government land, 2,910,718 kilogrammes on leased land, and 116,497 kilogrammes on private plantations. The production of tobacco was 17,112,831 kilogrammes on 106 plantations in Sumatra, and 16,354,372 kilogrammes on 87 plantations in Java. Of tea, 4,205,576 kilogrammes were produced on 86 plantations; of indigo, 802,402 kilogrammes on 138 plantations. Tin is mined by the Government in Banca and by companies in Billiton and Riau. The production has increased from 12,200 tons in 1892 to 15,600 tons in 1897 and 17,569 tons in 1898. The output of coal, which is mined in Java, Sumatra, and Borneo, was 28,897 tons in 1897; of mineral oil, 2,429,588 hectolitres. There were 2,643,000 buffaloes and 2,572,000 oxen in Java in the beginning of 1896, and the number of horses was 485,500.

The Government imports were 5,172,145 guilders of merchandise; the private imports, 167,296,526 guilders of merchandise and 9,236,877 guilders of specie; total imports, 181,705,548 guilders. The Government exported 18,305,874 guilders' worth of merchandise in 1897, and private merchants 191,169,334 guilders of merchandise and 939,070 guilders of specie; total exports, 210,414,278. Half the rice exports go to Borneo and China, and the rest to the mother country, whither are shipped nearly 80 per cent. of all other exports, including coffee, tin, tobacco, tea, indigo, sugar, and cinchona.

There were 3,887 steamers, of 1,479,720 tons, and 206 sailing vessels, of 132,039 tons, entered at the Dutch East Indian ports during 1897. The length of the railroads, both Government and private, in the beginning of 1898 was 1,200 miles; receipts in 1897 were 15,237,000 guilders. There were 6,833 miles of telegraph lines, over which 655,190 messages passed in 1897. In that year telephone communication was established between the cities of Batavia, Samarang, and Sourabaya.

Guiana.—Dutch Guiana, or Surinam, is administered by a Governor, who is assisted by an Executive Council of official and private members, all appointed by him, and the Colonial States, partly nominated and partly elective. The area is 46,000 square miles; population, 65,168, nearly half of them living in Paramaribo, the capital. The revenue raised in the colony from import, export, and excise duties, taxes on land and houses, personal taxes, and other sources amounted to 2,174,000 guilders, which was supplemented by a subvention of 177,000 guilders from the Netherlands Government. The total expenditure was 2,351,000 guilders. The militia numbers 26 officers and 356 men, and there is a coast guard of 66 officers and 1,294 men, and a garrison of 22 officers and 320 European troops. The production of sugar was 11,624,974 kilogrammes in 1897; of cacao, 3,424,513 kilogrammes; of bananas, 562,949 bunches; of coffee, 281,876 kilogrammes; of rum, 1,000,741 litres; of molasses, 1,370,110 litres. There were 330 concessions for gold-mining, and gold was exported in 1897 to the amount of 1,178,070 guilders, the previous exports since the mines were first opened in 1876 having been 21,872,450 guilders. Several companies have begun crushing quartz. The total value of imports in 1897 was 5,294,424 guilders; exports, 5,241,671 guilders. During the year 248 vessels, of 107,153 tons, were entered, and 253, of 108,988 tons, cleared.

NEVADA, a Western State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial cen-

sus since admission, was 42,491 in 1870; 62,266 in 1880; 45,761 in 1890; and 42,335 in 1900. Capital, Carson City.

Government.—The following were the State officers in 1900: Governor, Reinhold Sadler; Lieutenant Governor, James R. Judge; Secretary of State, Eugene Howell; Treasurer, D. M. Ryan; Comptroller, Samuel P. Davis; Attorney-General, William D. Jones; Surveyor General, Edward D. Kelley; Superintendent of Instruction, Orvis Ring; Adjutant General, J. R. Judge, *ex officio*; Chief Justice of the Supreme Court, M. S. Bonfield; Associate Justices, W. A. Massey, C. H. Belknap; Clerk, Eugene Howell, *ex officio*. All are of the Silver party except Superintendent Ring, who is a Republican.

State officers are elected in November, once in four years. The next State election will be in 1902. An associate justice of the Supreme Court is elected in the alternate even-numbered years.

The Legislature meets biennially, in January of the odd-numbered years.

Population.—The population of the several counties, by the census of 1900, was as follows: Churchill, 830; Douglas, 1,534; Elko, 5,688; Esmeralda, 1,972; Eureka, 1,954; Humboldt, 4,463; Lander, 1,534; Lincoln, 3,284; Lyon, 2,268; Nye, 1,140; Ormsby, 2,893; Storey, 3,673; Washoe, 9,141; White Pine, 1,961.

Finances.—The condition of the treasury, Nov. 16, was given thus: Coin, \$129,994.52; paid coin vouchers not returned to Comptroller, \$16,381.20. The State fund securities were: Irredeemable State school bonds, \$380,000; Nevada State bonds, \$262,900; United States bonds, \$785,000; total, \$1,574,275.72. In February the bond commissioners redeemed \$82,771.20 worth of bonds. The Nevada war claims against the Government amount to \$462,000. The annual report of the Treasurer showed the finances to be in a satisfactory condition.

Education.—The school population is 9,026. The semiannual apportionment was \$65,886.37.

The appropriation for the Nevada Indian school provides for 200 pupils. This increases the support more than \$8,000 over that of any previous year. In addition, \$3,000 is given for a shop building and \$3,000 for general repairs.

The experiment station at the university comprises 60 acres, with stables, cottage, and tool house. The botanical department has received a collection of 600 species of grasses from Prof. T. L. Scribner. A university extension class is receiving instruction in mining engineering. The studies will include mineralogy, chemistry, mathematics, mechanical and free-hand drawing, and assaying.

The school at the State Orphans' Home had 68 pupils registered for the fall term.

Lands.—There are 520,000 acres of land to which the State has title. In 1899 the land office issued 991 contracts, drawing \$8,059.35 on a principal of \$124,322.43. By failure to meet the interest due, 275,093.38 acres became forfeit to the State in January. The amount of United States land in the State unappropriated is 61,326.740 acres.

Products.—The number of cattle in the State is estimated at 20,000, and of sheep from 4,000,000 to 5,000,000. The wool clip was estimated at 7 pounds a head.

A lost tin mine in Churchill County was recently rediscovered, and samples of ore that were sent for a test to Swansea, Wales, gave returns of nearly 18 per cent. The vein is said to be 4 feet wide.

A writer in the Mining and Scientific Press says that in the heart of the Carson desert, about 2 miles east of Ragtown, there are two strange lakes

whose waters are rich in soda. The lakes occupy probably the shallow craters of extinct volcanoes. "Driving through the soft, volcanic ashes which here cover the ground, we ascend a gentle slope for a little distance, and suddenly find ourselves on the brink of a depression, perhaps 75 feet deep. In the center is a pond of yellowish water, and around the margin are sheds containing piles of white, crystallized soda. This depression is not more than one fourth of a mile across. Continuing a little distance in a northeasterly direction, the larger crater is soon seen. It is fully 1 mile across and more than 100 feet deep. It is occupied by a beautiful sheet of water, set in a rim as perfect and symmetrical as though it had been shaped by hand. The water is shallow and intensely alkaline, although around the margin there are springs which are fit to drink."

The gold product in 1899 was estimated at \$2,742,000; by another estimate, \$2,412,000. The output of silver was estimated at \$1,254,800. The amount of copper, lead, and antimony was greater than in any previous year.

Political.—Besides presidential electors and a member of Congress, there were to be elected in November a justice of the Supreme Court, two regents of the university, and a Legislature.

The State convention of Republicans met in Virginia City, Aug. 30. The platform approved the national administration; protested against any plan to surrender the Philippines; favored a protective tariff and the building of storage reservoirs; condemned trusts; denounced the disfranchisement of negroes; opposed lotteries; demanded repeal of the statute permitting prize fights; denounced the repeal of the purity of elections law; condemned the State administration; and said on the silver question: "We favor the largest use of silver as a money metal in all manners compatible with the best interests of our Government; and we hereby pledge our nominee for Congress, in the event of his election, to exercise his best endeavors to secure the greatest possible use of silver beneficial to the mining States of this Union without endangering the financial safety of our country."

The State nominations were: For Justice of the Supreme Court, Trenmor Coffin; Regents of the University, George Turritin, Mark Averill.

The Democratic and Silver parties held their conventions the same day, Sept. 6, in Virginia City. Committees appointed to confer on a plan of fusion reached the following agreement: Democrats to nominate two presidential electors and the Silver party one elector; both parties to nominate Hon. Francis G. Newlands for Congressman; the Democrats to nominate the short term university regent and the Silver party the long term regent; and the Silver party to nominate a justice of the Supreme Court. This plan was adopted with one change, that the candidate for justice be selected in joint caucus of the two conventions.

The resolutions adopted by both conventions declared allegiance to the national platform; hailed with satisfaction the nominations of Bryan and Stevenson; declared free and unlimited coinage at 16 to 1 to be the only permanent settlement of the silver question; opposed trusts, especially denouncing the national bank scheme of the administration; condemned the raising of the flag in the Philippines and the hauling it down in the Porcupine mining district of Alaska; expressed sympathy for the Boers; condemned the Porto Rican policy; disapproved the proposed constitutional amendment removing the prohibition of lotteries; favored the repeal of the statute permitting prize fights; and pledged legislative candidates to the passage of an eight-hour law, applicable to all

labor in mines, mills, smelters, and other works for reducing or refining ores, and to extend such law to other classes of labor to which it is applicable, after hearing and consulting with the representatives of such classes, and to provide by law for adding to the duties of one of the State officers, without additional salary, the duty of a commissioner of labor. Further, the resolutions favored water storage for arid lands, to be provided by the Government; demanded protection for all classes from unjust railroad discrimination, and a law limiting the expenditure of candidates at elections. A constitutional convention was declared a necessity.

Following is the fusion State ticket: For Member of Congress, Francis G. Newlands; Justice of the Supreme Court, A. L. Fitzgerald; State University Regent, long term, J. N. Evans; State University Regent, short term, W. W. Booher.

The vote for presidential electors was: Bryan, 6,376; McKinley, 3,860. The fusion ticket was successful, Newlands receiving 5,975 to 4,190 for Farrington. The Legislature will stand on joint ballot: Democrats, 19; Republicans, 13; Silver party, 13; Independents, 3.

NEW BRUNSWICK, an eastern province of Canada; area, 28,100 square miles; population in 1891, 321,263. Capital, Fredericton.

Government and Politics.—There was a good deal of fluctuation in the personnel of the Government in 1900, but no change in the large majority possessed by the Liberal ministry in the Assembly. The year opened with the Hon. H. R. Emmerson as Premier, which office he had held since December, 1897, and with Hon. L. J. Tweedie, Hon. A. T. Dunn, Hon. A. S. White, Hon. C. H. Labillois, Hon. L. P. Farris, and Hon. A. D. Richard associated with him. On Jan. 18 Mr. Emmerson exchanged his office of Commissioner of Public Works for the attorney-generalship held by Mr. White, and Mr. H. A. McKeown at the same time became a minister without office. On Feb. 15 the Legislature was opened by Lieut.-Gov. A. R. McClellan, with the usual speech from the throne. It made a spirited reference to the New Brunswick contingent in South Africa which brought the members to their feet, and a spontaneous outburst of "God save the Queen" when it was afterward referred to by a speaker. It outlined the policy of the session as including a grant to the provincial volunteers abroad, a revision and codifying of the statutes, and the encouragement of a desirable class of immigration. The session was short, and was prolific neither of legislation nor of excitement. Another transformation in the ministry took place on Aug. 31, when Mr. Emmerson retired to contest Westmoreland in the coming Dominion elections (in which he was successful), and was replaced by the Hon. L. J. Tweedie, a Conservative until 1890 and since that date a member of the ministry. The new Government was as follows: Hon. L. J. Tweedie, Premier and Provincial Secretary; Hon. William Pugsley, Attorney-General; Hon. C. H. Labillois, Commissioner of Public Works; Hon. L. P. Farris, Commissioner of Agriculture; Hon. A. T. Dunn, Surveyor General; Hon. H. A. McKeown and Hon. G. F. Hill, without portfolio.

On Sept. 2 a Provincial Conservative Convention met at St. John, to prepare for the Dominion elections. Josiah Wood, ex-M. P., was chairman, and resolutions were passed expressing gratitude for the success in South Africa and the prospects of a united British country there; placing on record appreciation and admiration of the conduct of Canadian troops in the war; and expressing renewed confidence in the party leaders, Sir Charles

Tupper and Hon. George E. Foster. The convention announced its strong support of the policy of preferential trade and tariffs within the empire; its adherence to the principle of adequate protection to home industries; its belief that provincial politics should be run upon Dominion party lines; its faith in Mr. J. D. Hazen's leadership in the Assembly, and its disapproval of "the gross extravagance and mismanagement" in the provincial Department of Public Works. It denounced the Laurier Government at Ottawa for its violation of pledges, for its reckless and excessive taxation, for its Yukon corrupt railway contracts, and for its deceit in the matter of the prohibition plebiscite.

Finances.—The receipts for the year ending Oct. 31, 1899, were \$764,239 and the expenses \$749,644. The revenue included Dominion subsidies of \$483,501; timber licenses, fishing leases, hunting licenses, etc., of \$184,984; fees from the Provincial Secretary's office, \$10,292; taxes on incorporated companies, \$25,064; succession duties, \$30,233; and liquor licenses, \$20,743. The expenditures included \$15,909 upon the administration of justice; \$34,831 upon agriculture; \$16,831 upon contingencies; \$202,705 upon education, salaries, etc.; \$20,106 upon legislation; \$42,000 upon lunatic asylum maintenance; and \$197,883 upon public works. In his budget speech, Feb. 23, Mr. Tweedie said: "The interest items charged in the public accounts include those on debentures, \$117,866.85; on bank accounts, \$5,764.11; Independent Order of Foresters, \$900; Equity Court deposits, \$5.62; a total of \$124,436.58. The above amount, however, does not include the interest upon debentures issued for permanent bridges, and which, under the law, is chargeable to the board of works. This amounts to \$9,760. Therefore the total amount of interest paid in 1898 was \$13,196.58. He might state that the balance of outstanding coupons was very much reduced during the year, being only \$4,437.50, as compared with \$8,735 in 1897 and \$6,908.75 in 1898. The substitution of 3-per-cent. debentures accounted for this lessening of the interest burden, but the full extent of decrease of interest consequent upon the reduction of rate upon the \$873,500 of 4-per-cent. debentures called in could not be realized in 1899, since a large amount of the 4-per-cent. debentures called for payment of one half year's interest during that year. In the present year the full saving to the province on the conversion of \$873,500 of 4-per-cent. debentures will amount to \$7,638, which will continue annually hereafter, and if used as a sinking fund would redeem two thirds of the 3-per-cent. sterling loan at the expiration of forty years, or at maturity of the loan. There were now \$200,000 of permanent bridge debentures to be issued; but in the present state of the money market he could not expect to realize as good a price as was realized for the last loan, and he would not offer them. He intended to ask the Legislature to change the act so that if they thought advisable he might be in a position to issue 4-per-cent. short-term bonds, and await a favorable condition of the market to issue the 3-per-cent. bonds. The 4-per-cent. short-term bonds would probably bring a premium. The average rate of interest paid upon the provincial bonded debt is 4.10 per cent. At the end of 1897 the average rate stood at 4.47 per cent. The 3-per-cent. transactions of the province during the past two years have therefore reduced the average rate of interest $\frac{3}{10}$ of 1 per cent. Last year the legislative expenses amounted to \$20,105, or \$221.60 below the estimate."

The gross debt of the province on Oct. 31, 1899,

was \$3,324,986. It has shown a steady increase since 1882, when the amount was \$1,228,413. The total assets, including a Dominion debt allowance of \$529,628, were \$588,688. Mr. Tweedie, in his estimates for 1900, included a grant of \$5,000 to the New Brunswick volunteers in South Africa. Against the favorable view of provincial finances afforded in his speech is the Conservative opinion, which is summarized in the following editorial words of the St. John Sun on Sept. 3, 1900: "The truth is, that the financial position of the province requires great prudence and the most economical management. Within the past ten years many new provincial taxes have been imposed. Heavy burdens have been placed on the municipalities from which they were formerly free. School taxes have been increased because of the reduction of the provincial grants. The interest charge continually increases."

Education.—Excellent progress was made by the province in education, and on June 30, 1899, there were 1,806 public schools, 1,912 teachers, 63,536 pupils, and an average attendance of 37,771. The increase in schools was 9, in teachers 30, and in pupils 4,000. The receipts from Government grant were \$193,730; from municipal grants, \$90,857; from district assessments, \$318,000.

Agriculture.—The province is not a great agricultural center, but its progress is steady though slow. The production of wheat in 1899 was 491,810 bushels, on 27,132 acres. There were 5,120 acres of barley and a product of 114,183 bushels; 179,540 acres of oats and 5,114,691 bushels; 72,173 acres of buckwheat and 1,413,018 bushels; 39,501 acres of potatoes and 4,071,200 bushels; 6,036 acres of turnips and 1,507,917 bushels. The total, in round figures, was 12,700,000 bushels, covering 329,000 acres. There was an estimated product of 500,000 tons of hay. The Dairyman's and Farmer's Association of the province did good work during the year in encouraging agriculture, and at its annual meeting in St. John, Feb. 28, 1900, instructive addresses were delivered. The St. John Exhibition, held in October, 1900, was a great success. The attendance was 62,166, compared with 59,514 in 1899, 47,439 in 1898, and 40,182 in 1897.

Fisheries and Shipping.—The value of the yield of New Brunswick fisheries in 1898 was \$3,849,357, making a total of \$98,000,000 since confederation. The amount included salmon, valued at \$238,998; herring at \$1,070,799; cod at \$311,326; lobsters at \$531,524; smelts at \$351,050; sardines at \$423,742. There were 239 vessels, with a tonnage of 3,155 and 859 men, and 678 boats, with 1,237 men, engaged in the operations. The export of New Brunswick fish in 1899 was \$618,414 in value, against nearly \$5,000,000 in Nova Scotia. The total sea-going tonnage in 1899 was 1,284,225, a slight increase over preceding years.

NEWFOUNDLAND, a North American British colony; area, 42,200 square miles; population, about 210,000. Capital, St. John's.

Legislative Session.—The amount of legislation in 1900 was unusually small. This was owing to the disturbed condition of political parties, and the change of government, which led to a general election. A session of the Legislature was held in February for the single purpose of renewing the *modus vivendi*, or interim agreement between the British and French governments in regard to the treaty shore. This *modus vivendi* has been in existence ten years, having been renewed year after year by the local Government to enable the Imperial Government to negotiate with France for a settlement of the question. No progress has yet been made in that direction. The colonial Government's consent is

necessary to the continuance of this agreement, which is never renewed for more than one year. The people of the colony are becoming more and more restive under this agreement, and more urgent in their demands for a final settlement. The Right Hon. Joseph Chamberlain, Secretary of State for the Colonies, took up the question, and sent out commissioners to inquire into the working of the treaties, and great things were expected from his well-known ability and energy. But the war in South Africa broke out, and the time was found to be inopportune for opening negotiations with France. Accordingly, the Imperial Government asked the colonial Government to renew the *modus vivendi* for another year, ending Dec. 31, 1900. On patriotic grounds the request was at once acceded to without a dissentient voice. It was felt to be a duty owed to the empire, not to embarrass the British Government at such a crisis, or do anything that might involve England in complications with France when the stress of a great war was severely felt. The time expired on Dec. 31. The death of Queen Victoria, the accession of a new sovereign, and the continuance of a guerrilla war in Africa seem to render the continuance of the *modus vivendi* desirable. Accordingly, the Hon. Robert Bond, Premier, was invited to visit London to confer with the Imperial Government. The probability is that a renewal of the agreement for another year will follow. All political parties agree in the duty of such renewal if requested. A special meeting of the Legislature is called to pass it.

When the Legislature met in February, 1900, to renew the *modus vivendi*, Mr. Bond, as leader of the Opposition, moved a vote of "want of confidence" in the existing Government, of which Sir James Winter was Premier. The vote was carried, and the resignation of the Government followed. Mr. Bond was then called upon to form a government, in which he was successful. A short session followed, in which only routine measures were introduced, as Mr. Bond decided on appealing to the country, and a general election was in prospect. The chief acts related to a renewal of the revenue act with but one slight change, and an act to make provision for the raising of certain sums of money by sale of debentures, for purposes provided for in the railway contract of 1898.

The general election, the great event of the year, took place on Nov. 8. Every district was contested, and both parties put forth all their strength. The contest turned almost entirely on the contract formed by the Winter Government in 1898 with Mr. R. G. Reid. The party led by Mr. Bond assailed this contract as being injurious to the interests of the colony, as handing over 4,000,000 acres of land, together with the fee-simple of the railway at the end of fifty years, for a present payment of \$1,000,000, and announced their intention of modifying the contract, if returned to power, and of securing a surrender of some of the franchises thus granted. The Opposition, led by Mr. A. B. Morine, sustained the contract in its full integrity, and held it to be irrevocable, except with the consent of the contractor, and that it was most favorable to the best interests of the country. The issue of the electoral contest was remarkable and unprecedented. The supporters of Mr. Bond carried 32 seats out of a total of 36, and only 4 of the Opposition candidates were returned. A majority of 32 to 4 enables Premier Bond to carry any measure that may be decided on. The popular condemnation of the contract and of those who carried it has thus been strongly indicated. It

remains for Mr. Bond to negotiate with Mr. Reid as to the modifications of the contract that will satisfy public sentiment. As a contractor Mr. Reid sustains a very high character, and it is not anticipated that any difficulty will be experienced in coming to terms. The leading feature of the contract is that the contractor undertakes to maintain and operate the railways for fifty years for the land concessions, amounting to 4,000,000 acres; and by the payment of \$1,000,000 in hand he becomes entitled, at the end of fifty years, to a fee simple of the railway. For a long period to come the operation of the railway in a new country must entail considerable losses, and this contract frees the colony from any responsibility in the matter, and \$1,000,000 in hand is equivalent to nearly \$8,000,000 at the end of fifty years.

Business.—The year 1900 was one of considerable prosperity in the colony. The best proof of this is the condition of the revenue. On the termination of the fiscal year, June 30, 1900, the surplus, after all expenses were met, amounted to \$260,000. It is likely that there will be a still larger surplus on June 30, 1901. As the revenue is derived from duties on imports, this indicates an increase of purchasing power on the part of the population.

The fisheries, which are the staple industry of the people, have been on the whole successful, and the prices of the various products have been well sustained. The value of the imports for the year has been, according to the customs returns, \$7,497,147; of the exports, \$8,627,576. The total revenue amounted to \$2,111,638. The funded public debt is \$17,377,101. This was mainly incurred by the construction of nearly 700 miles of railway. The interest on the debt is more than \$600,000 a year, but the strain is not felt seriously.

The total value of the fishery products was \$7,072,537. The seal fishery was successful, 203,850 seals having been taken, and the oil was valued at \$433,605, and the skins at \$162,330. The quantity of dry codfish exported was 1,300,622 quintals; value, \$5,453,538. The value of herring exported was \$176,965. The export of lobsters was in value \$441,202; the export of salmon, \$94,784.

The export of lumber was in value \$100,208. A great expansion in the lumber industry has begun. Mr. Miller, a Scotch lumberer, who had been operating for many years in Sweden, has leased 800 square miles of forest lands in the interior of Newfoundland, built several miles of railway, and has now 600 men employed in cutting down timber. His export will be very large. He will also manufacture pulp for paper making. The quantity of pulp wood in the island is practically inexhaustible.

Mining.—The mining industries were well sustained during the year. The following is a list of mineral exports: Copper ore, ingots, regulus, value, \$617,013; iron pyrites, \$107,265; iron ores, \$319,087; total, \$1,043,355. The great iron mine in Belle Isle, Conception Bay, is one of the most valuable in the world. A part of it was purchased by the Whitney syndicate for \$1,000,000. The whole is now probably worth \$4,000,000. Ore from it will be shipped next summer at the rate of 3,000 tons daily. It is conveyed to Sydney, Cape Breton, for the use of the great iron works there. As a mining country Newfoundland is rising rapidly. Roofing slate of the finest quality and in immense quantities has lately been discovered.

A valuable report on the minerals of Newfoundland was lately presented to the Minister of Agri-

culture and Mines by G. P. Howley, F. G. S., Director of the Geological Survey. He shows that in the ten years from 1888 to 1898 the value of the ores exported from the colony was \$7,829,148, and that the value of such exports in 1898 was \$608,087. He also shows that the total value of copper ore exported since its discovery was \$10,500,000. Thus the island stands sixth in the list of the copper-producing countries of the world.

Sport.—Since the completion of the railway to Port-au-Basque, and the establishment of a steam ferry thence to Sydney, C. B., the influx of tourists, travelers, and sportsmen has been steadily increasing. Last year 110 licenses for caribou shooting were taken out, chiefly by American sportsmen, the fees for which amounted to \$5,600. The American sporting papers generally speak highly of the facilities for sport. The salmon fishing is reported to be excellent. The rivers are now carefully protected.

For caribou the close season is from Feb. 1 to July 15, and from Oct. 1 to Oct. 20, inclusive. Penalty for violation, \$500, or imprisonment. No person not usually resident in the colony shall kill or take caribou without having first procured a license therefor. No venison is allowed to be exported as an article of commerce. Dogs, pitfalls, snares and traps, or weapons other than firearms, are prohibited. Willow grouse, partridge or ptarmigan, curlew, plover, snipe, or other wild or migratory bird (except wild geese), can not be shot between Jan. 12 and Sept. 15; the penalty is \$100. Wild rabbit or hare may not be killed between March 1 and Sept. 15; otter between April 1 and Oct. 1; foxes between March 15 and Oct. 15; beaver, close time to Oct. 1, 1903. No trout, char, whitefish, landlocked salmon, or grilse, or any fresh-water or migratory fish, can be caught, taken, or killed in any lake, river, or stream in the colony from Sept. 15 to Jan. 15.

Sir Henry McCallum, the present Governor, has received an appointment to the governorship of Natal, in South Africa. He is to be succeeded by Sir Cavendish Boyle.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,976 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; 376,530 in 1890; and 411,588 in 1900. Capital, Concord.

Government.—The following were the State officers during the year: Governor, Frank W. Rollins; Secretary of State, Edward N. Pearson; Treasurer, Solon A. Carter; Adjutant General, Augustus D. Ayling; Insurance Commissioner, John C. Linehan; Labor Commissioner, Lysander H. Carroll; Superintendent of Public Instruction, Channing Folsom; Bank Commissioners, Alpheus W. Baker, John Hatch, George W. Cummings; Railroad Commissioners, Henry M. Putney, Josiah G. Bellows, E. B. S. Sanborn; State Librarian, Arthur H. Chase; Chief Justice of the Supreme Court, Isaac N. Blodgett; Associate Justices, William M. Chase, Robert M. Wallace, Frank N. Parsons, Robert G. Pike, Robert J. Peaslee, John E. Young; Attorney-General, Edwin G. Eastman.

The State elections are held biennially in November of even-numbered years. The Legislature meets in January of odd-numbered years.

Population.—The population of the State in 1900 was 411,588, an increase since 1890 of 35,058, or 9.3 per cent. This rate of increase has been substantially constant for three successive decades. The total land surface of New Hampshire is, ap-

proximately, 9,005 square miles, the average number of persons to the square mile at the censuses of 1890 and 1900 being as follows: 1890, 41.8; 1900, 45.7. Of the 10 counties, all but 2 increased in population during the decade. The greatest gains are shown in Coös County (26.9 per cent.) and in Hillsborough County (20.7 per cent.). Hillsborough shows much the largest numerical increase, having gained 19,393—12,861 representing the increase in the city of Manchester. The 2 counties showing a decrease are Belknap and Carroll. The population by counties is: Belknap, 19,526; Carroll, 16,895; Cheshire, 31,321; Coös, 29,468; Grafton, 40,844; Hillsborough, 112,640; Merrimack, 52,430; Rockingham, 51,118; Strafford, 39,337; Sullivan, 18,009. There are 11 cities in the State, the population of which, in 1890 and 1900, was as here shown:

CITIES.	1890.	1900.
Berlin.....	3,729	8,886
Concord.....	17,004	19,632
Dover.....	12,790	13,207
Franklin.....	4,086	5,846
Keene.....	7,446	9,166
Leonia.....	6,143	8,042
Manchester.....	44,126	56,987
Nashua.....	19,311	23,896
Portsmouth.....	9,827	10,637
Rochester.....	7,396	8,466
Somersworth.....	6,207	7,023

Finances.—The cash in the treasury, June 1, 1899, was \$341,586.88; receipts during the year, \$1,285,684.10; total, \$1,627,270.98. The disbursements during the year to June 1, 1900, were \$1,170,743.66; cash on hand at same date, \$456,527.32; liabilities June 1, 1899, \$2,026,021.38; assets June 1, 1899, \$690,953.33. The net indebtedness June 1, 1899, was \$1,335,068.05. The liabilities June 1, 1900, were \$1,912,792.99; assets, \$793,994.05. The net indebtedness June 1, 1900, was \$1,118,798.94; reduction of debt during the year, \$216,269.11. The revenue was from the following-named sources: State tax, \$425,000; railroad tax, \$148,772.28; insurance tax, \$32,284.90; interest on deposits, \$3,840.77; license fees (fertilizers), \$1,200; telegraph tax, \$3,540.40; telephone tax, \$5,505.99; charter fees, \$450; fees (insurance department), \$12,204.10; Benjamin Thompson estate, income for year ending Jan. 30, 1900, \$22,551.84; fees (Secretary of State), \$4,729.65; fines and forfeitures, \$458.40; Spanish War (the United States in part), \$28,443.15; town liquor agents, \$54.30; escheated estates, \$99.05; fines, National Guard, \$9; sales public property, \$86.36; refund costs of prosecution, insurance department, \$31.80; refund American Express Company, overcharge, \$2.20; total, \$689,264.19.

The ordinary expenses, including salaries and expenses whose payment is authorized by general laws, were \$277,912.90; extraordinary expenses, \$94,896.05; interest, \$100,186.13; total expenses, \$472,995.08. Excess of revenue over expenses, \$216,269.11.

The disbursements by departments were: Executive, \$5,363.90; Secretary, \$6,814.31; Treasurer, \$5,322.80; Adjutant General, \$2,672.75; Public Instruction, \$5,536.76; Insurance, \$6,814.63; Supreme Court, \$31,607.66; Probate Court, \$15,734.25; State Library, \$17,203.92; Statehouse, including special appropriation for vaults, \$12,566.27; Asylum for the Insane, including special appropriation of \$25,000, \$40,072.41; Fish Commissioners, \$9,626.34; Railroad Commissioners, \$8,389.14; Bank Commissioners, \$10,087.40; National Guard, \$30,000; Industrial School, \$15,400; State Prison, \$5,607.51; College of Agriculture and the Mechanic Arts, \$10,769.04; Normal School, \$17,902.12;

Board of Agriculture, \$6,033.53; Board of Equalization, \$887.78; State Board of Health, \$4,250; Labor Bureau, \$2,730.01; Forestry Commission, \$1,190.95; Commissioners of Lunacy, \$16,964.77; and Soldiers' Home, \$10,902.28.

The trust funds are now as follow: Fiske legacy, \$26,378.43; Kimball legacy, \$6,753.49; Teachers' Institute, \$58,668.98; Agricultural College, \$80,000; unclaimed savings-bank deposits, \$1,963.71; Benjamin Thompson trust, \$538,547.38; Benjamin Thompson State trust, \$37,459.07; Hamilton Smith trust, \$10,000; total, \$759,771.06.

The Treasurer says in his report: "The condition of the treasury and the results accomplished during the year show a reduction of the State debt by \$216,269.11, and a cash balance sufficient to meet all probable demands until the revenues for the year become available."

On June 21 the State received from the United States, as the balance of its claim on account of the Spanish War, \$23,709.33, making a total reimbursement of \$52,152.48 on claims amounting to \$53,901.83.

Taxation.—The railroad, telegraph, and telephone taxation for 1900 was as follows: Railroad tax, \$382,855.34, against \$358,878.22 for 1899; telegraph, \$3,094, against \$3,540.40; telephone, \$5,910.90, against \$5,661.64; total, \$391,860.24, against \$368,083.26.

The railroad tax is paid by the corporations to the State Treasurer, and divided as follows: One fourth part to towns through which the roads pass, for right of way and buildings, proportioned to expenditure for the same; the other three fourths to each town in the State, such portion thereof as the number of shares owned in said town bears to the whole number of shares in the corporation; and the rest of the three fourths (nonresident) directly to the State. The telegraph and telephone tax is paid to the State Treasurer and not divided, but held by the State as part of its revenue. The expense of the railroad commission is met by a tax levied on the gross receipts of the railroads. Its amount is \$7,333.97, against \$7,430.19 for 1899.

Corporations.—The annual report of the Secretary of State gives returns (as required by law) from 274 incorporated companies doing business in this State—insurance companies, railroad corporations, banks, and loan and building associations not included—showing an aggregate capital paid in of \$26,105,564.82, and assets aggregating \$31,572,670.98. A large number of corporations, however, fail to comply with the provisions of the law, the penalty for noncompliance being that "the treasurer and directors are individually liable for all the debts and contracts of the corporation then existing, or which shall be contracted, until the return is made." Many successful corporations prefer to take this risk rather than make the details of their business public.

Banks.—There are under the supervision of the bank commissioners 80 savings banks, 12 State banks and trust companies, 10 of which have savings departments, and 18 building and loan associations. Twenty-eight savings banks and 3 trust companies are in liquidation. The commissioners say: "Satisfactory progress has been made during the year in the process of liquidating most of these banks. Many of them have during the year declared dividends to the depositors, and, as shown, there are but few banks that are in liquidation which have not repaid to the depositors up to this time 70 per cent. of the deposits."

The following is a statement of the liabilities and assets of the savings banks and savings departments of the trust companies that are in active

operation as reported at the close of business, June 30, 1900:

Savings banks—Amount due depositors, \$53,896,710.79; guarantee fund, \$2,958,287.58; interest, \$1,262,304.69; premium, \$3,945,768; total, \$62,063,071.06. **Assets**—Loans on mortgage security (local), \$9,846,934.32; loans on mortgage security (western), \$5,350,727.81; loans on personal security (local), \$5,709,437.49; loans on personal security (western), \$747,035.39; loans on collateral security (local), \$5,260,309.21; loans on collateral security (western), \$288,285.93; United States and State bonds, \$936,022; county, city, town, and district bonds, \$7,928,364.74; railroad bonds, \$7,989,170.55; miscellaneous bonds, \$2,998,199.21; bank stock, \$2,022,131.49; railroad stock, \$6,241,928.35; manufacturing and miscellaneous stocks, \$1,283,311.50; miscellaneous investments, \$99,480.62; real estate by foreclosure, \$3,009,249.92; local real estate, bank buildings, etc., \$562,483.63; cash on deposit in authorized banks, \$1,640,924.64; cash on hand, \$149,074.26; total, \$62,063,071.06.

State banks and trust companies—Capital stock, \$560,000; surplus fund, \$71,056.05; undivided profits, \$33,654.10; business deposits, \$989,536.26; miscellaneous indebtedness, \$197,027.83; premiums, \$8,574.50; total, \$1,859,848.74. **Assets**—Loans on real estate, \$255,271.64; loans on personal security, \$517,146.13; loans on collateral security, \$213,501.37; municipal bonds, \$35,847.80; railroad bonds, \$33,446.50; miscellaneous bonds, \$142,930.56; bank stock, \$20,175; railroad stock, \$74,935.50; manufacturing and miscellaneous stocks, \$8,220; miscellaneous investments, \$58,698.17; real estate, \$90,419.78; cash on deposit, \$318,951.89; cash on hand, \$90,304.40; total, \$1,859,848.74.

The commissioners say: "The improvement in the character of the assets of savings banks is in a great measure due to the action of the Legislature of 1895 in restricting and regulating investments. The law has been in force since July 1, 1895, and has demonstrated its value."

Two new banks were opened during the year 1900, viz., the Hillsborough County Savings Bank, of Manchester, and the Citizens' Institution for Savings, of Nashua.

The total assets of the 16 building and loan associations doing business, as returned June 30, 1900, was \$1,830,162.53, divided as follows: Loans on real estate to members, \$1,606,873.90; loans on shares to members, \$36,411.20; loans to nonmembers, \$55,275; miscellaneous bonds and other assets, \$75,965.33; cash on hand, \$55,637.10. No foreign building and loan associations are authorized to do business in this State.

Insurance.—The report of the Insurance Commissioner for 1899, issued March 1, 1900, shows that 11 companies of other countries and 7 companies of other States were licensed since the last annual report. Of the foreign companies, 1 comes from Ireland, 3 come from England, and 4 from Germany—all conducted on the stock plan. The number of companies now doing business in New Hampshire is 117, including 29 mutual and 88 stock companies.

The surplus as regards policy holders (which means the surplus above all liabilities and the amount of the paid-up capital added to it) of all authorized companies, save the State mutuals, was for the year 1899 (93 companies) \$126,364,006.09.

The companies of other States and countries have paid all losses promptly and honorably.

A recapitulation of the business of the 30 New Hampshire companies for 1899 is as follows: Town mutuals (18 companies)—Risks written, \$680,546; premiums and assessments received, \$7,605.66;

losses paid, \$6,093.28; risks in force, \$2,981,930. The Grange, Merrimack County, and Rockingham Farmers' Mutual—Risks written, \$2,931,298; premiums and assessments received, \$36,248.64; losses paid, \$28,714.14; risks in force, \$11,053,756.48. The Grange Company confines its business to its own members. Two cash mutuals—Risks written, \$4,114,560.23; premiums received, \$60,727.54; losses paid, \$42,881.91; risks in force, \$7,270,938.

The business of the 6 New Hampshire stock companies was as follows: Risks written, \$35,933,736.94; premiums received, \$468,926.13; losses paid, \$230,890.46.

The surplus as regards policy holders of the 3 larger stock companies—namely, the Granite State, the Capital, and the New Hampshire—for Dec. 31, 1899, was \$2,573,426.78. The gross assets of the 3 companies on Dec. 31, 1899, were \$4,275,570.35. The business written by them within the State in 1899 was \$34,250,000, and within and without the State they wrote more than \$208,000,000.

The total business of New Hampshire companies within the State for 1899 was: Risks written, \$43,660,141.81; premiums received, \$573,507.97; losses paid, \$308,579.79—a gain of nearly \$2,000,000 in insurance written.

The business of other States and countries (82 companies) was: Risks written, \$60,014,039.25; premiums received, \$794,680.96; losses paid, \$438,749.11.

Total business of all authorized companies within the State was: Risks written, \$103,674,181.06; premiums received, \$1,368,189.93; losses paid, \$747,328.90. The increase among all authorized companies in the amount of insurance written was more than \$12,000,000. The premiums aggregated nearly twice the losses.

Railroads.—The only important change in New Hampshire railroads in 1900 was the lease of the Fitchburg system to the Boston and Maine, which gives the last-named corporation control of all but about 100 miles of the line of track in the State. This 100 miles is divided about equally between the Grand Trunk and the Maine Central. The only new steam road built during the year was the Manchester and Milford, about 18 miles, which was opened Jan. 1, 1901. As all New Hampshire's steam railroads extend into other States, it is impossible to give the amount of their traffic in this State for 1900, but it doubtless compares favorably with that of 1899, which was a very prosperous year. All the steam roads are in better physical condition than ever before, and are well equipped.

The new electric or street roads include one from Manchester to Goffstown, 10 miles; the Portsmouth, through the streets of that city and through Rye and North Hampton to Hampton, and some extensions on the branch of the Exeter, Hampton and Amesbury road.

Bureau of Labor.—The canvass of the State for the year ending June 30 shows creameries reporting, 45; capital invested, buildings and equipments, \$226,840; value of production, \$1,179,055; number of persons employed, 121; wages paid, \$56,694. These figures are distinct from the cream and milk products that find sale in Boston and elsewhere.

The labor statistics for the steam railroads are these: Mileage of all systems, 1,320; number of men employed, 9,898; aggregate wages paid for the year, \$5,559,640. The mileage of street railways, July 1, 1900, was 103½; number of employees, 413; wages paid for the year, \$236,236.

Agriculture.—The agricultural fairs include an exhibition known as the Concord State Fair, 6 county or district fairs, and about 50 town ex-

hibitions. The Granite State Dairymen's Association and the New Hampshire Horticultural Society receive aid from the State, and have promoted the dairy and horticultural interests. Numerous poultry associations are active.

Twenty-five Farmers' Institutes were held in 1900, each meeting consisting of three sessions; a meeting in connection with

CHESTER B. JORDAN,
GOVERNOR OF NEW HAMPSHIRE.

the Granite State Dairymen's Association was held at Lancaster in December, a good-roads meeting at Newport in May, and others.

The statutes forbid the sale of imitation butter colored to resemble pure butter, and forbid such colored product to be served in restaurants, boarding-houses, or hotels without a notification to guests. The Legislature of 1898 made it the duty of the State Board of Agriculture to enforce

this law, and the board immediately authorized an agent to proceed against all violators, and their vigorous action has practically suspended the illegal sale and use of this product in the State.

In 1899 and 1900 the Board of Agriculture inspected 558 stables, and condemned and destroyed 392 tuberculous cattle and 20 glandered horses.

Reports from the selectmen of 136 towns on the "abandoned-farm" question give the following results: Number of farms or parts of farms now occupied as summer homes, 849; total estimated cost of permanent improvements made upon land and buildings purchased for this purpose, \$1,959,550; estimated number of people occupying these places during a part or all of the summer, 12,912.

National Guard.—The reorganization of the National Guard took effect Jan. 23, 1900, and is in conformity to the infantry regiments of the United States army. The strength of the brigade, as appears from the last quarterly returns received, is 126 commissioned officers and 1,290 enlisted men. It now consists of 2 12-company regiments instead of 3 regiments of 8 companies each, as heretofore. The light battery and troop of cavalry remain as before. On Sept. 19 the entire New Hampshire National Guard was mobilized in Portsmouth to take part in the celebration connected with the presentation of testimonial tablets to the United States battle ships *Kearsarge* and *Alabama*, and in honor of the Secretary of the Navy, Admiral Sampson, Gov. Joseph F. Johnston, of Alabama, and staff, and other guests, and paraded with the sailors and marines of the North Atlantic squadron and various local societies.

Education.—The formation of 3 supervisory districts in 1900 is the beginning of the most promising advance New Hampshire has made educationally since the abolishment of the district system. The matter of supervisors was presented to the town school meetings of the State in the spring. Twenty-seven towns approved it, and authorized their school boards to form combinations with other towns; but owing to the scattered locations of these towns, only 9 were able to accomplish the desired combinations, forming

3 districts. Under the new law the State pays half the salary of the supervisors, and these supervisors must hold certificates of an examination by the State Superintendent—a severe one along professional as well as scholastic lines.

The State Library.—During the year ending May 31, 1900, 6,845 bound volumes were added to the library, making the total number 62,059. The number of unbound volumes, exclusive of periodicals, was 31,794, and the number of unbound periodicals was 11,671. The average annual increase of bound volumes in the last four years has been 6,493. The officials have avoided to the greatest extent possible accepting books that appear to be of no use except to fill the shelves. The law books number a little more than 18,000 volumes. The historical department contains nearly 8,000 bound volumes and 2,100 unbound volumes. The medical department contains more than 4,000 bound volumes, 1,500 unbound volumes, and 4,300 unbound periodicals.

State Board of Health.—The board was organized and began work in 1881. Since then there has been established, through its efforts, a local board of health in every town in the State, and mortality from contagious and infectious diseases has been reduced to a very marked extent. The advantages of pure drinking water, and the dangers of a polluted source, especially of surface wells, have been made apparent, and public water supplies from unquestioned sources have been introduced into many towns and villages. Also the ventilation of many buildings has been greatly improved.

New Hampshire has now probably the most accurate system of registration of vital statistics of any State in the Union, and its records have become of great value. The department has on file the records of more than 500,000 persons who are living or have lived in the State, and these are being increased at the rate of 20,000 annually.

The number of deaths in New Hampshire in 1899 was 7,045, a rate of 17.27 for each 1,000 of the population (based upon a total of 407,938 for that year).

Charities and Corrections.—This board was authorized by an act of the Legislature, passed in March, 1895, and consists of five members—3 men and 2 women—appointed by the Governor and Council. The board is chiefly supervisory and advisory, as the dependent children of the State are primarily under the direct care of the county commissioners, or of the overseers of the poor of the towns or cities. But the board has, with great labor and pains, completed a record of all the children within the State now dependent upon the public for support, up to Dec. 1, 1900, covering 443 names; and a supplementary record, including all those children who have passed from public support since their work began, now numbering 76. The 443 children are placed as follows: Still in almshouses, 67; placed in orphans' homes, 238; placed in families, 113; in industrial school, 24; in asylum for the insane, 1. In addition to the above, 39 children are supported outside of the State. The total number of dependent children for the whole State, at public and private charges, is 1,061. This number does not include many who are partially supported at their own homes.

Industrial School.—This institution is at Manchester. The number in the school, Sept. 30, 1900, was 147; whole number committed to the institution since its beginning, 1,932. The institution is a place for reformation, not a prison.

Asylum for the Insane.—The number of patients in the asylum at the close of the year

ending Sept. 30, 1900, was 425. The average daily number for the year was 420.13. An appropriation of \$50,000, made by the Legislature of 1899, for new buildings and improvements, has resulted in two new buildings and important repairs to the old ones. Ever since the opening of the asylum in 1842 it has been self-supporting. Its current receipts have sufficed to meet its expenses, including the cost of ordinary repairs, but the new buildings have been furnished by the State. It has been a semi-private and semi-State institution. Through the action of the Supreme Court and the Legislature, however, it has now become a State institution, owned and operated by the State through a board of trustees appointed by the Governor and Council.

The State Prison.—The whole number of convicts in the prison, Nov. 30, 1900, was 151 males and 2 females. Of this number 132 can read and write. The average number in prison in 1896 was 181; in 1900, 140. This decrease probably results from the increasing tendency of the courts to commit convicts to the county institutions rather than to the State prison. An order abolishing visitors' days and visiting fees has been issued, and is clearly a beneficent regulation, assisting in the preservation of discipline, and restraining idle and vulgar curiosity. It is appreciated by the convicts. The discipline of the institution is rigid, but the results fully justify the maintenance of the present admirable system. The most interesting incident of the year was the return of Mark Shinborn, the notorious bank robber, after an absence of thirty-four years. He was committed (at the age of twenty-four) Feb. 27, 1866, for ten years; escaped Dec. 3, 1866; was re-arrested in 1900, and returned Nov. 8 to serve his unexpired term.

The Soldiers' Home.—Up to Jan. 1, 1899, 369 men were received into the home. In 1899 and 1900 47 others were admitted. The number now in actual attendance is 86. The average cost per capita of maintenance in 1900 was \$221.43. In 1899 a new laundry plant was added to the home, at an expense of \$1,797.47; also an electric-light plant, costing \$900, and other improvements. The library contains 1,400 bound volumes and a large number of periodicals and newspapers. On July 21, 1899, lightning struck the hospital in two places, damaging the interior somewhat, but doing no personal injury.

The Anti-Saloon League.—The funds contributed for the prosecution of the work of the league were \$5,000, and the expense for the year was about \$5,000. "The past year has been one of such great activities and encouraging advancement that the Anti-Saloon League is now favorably known in every city and in nearly every village and town in the State, and numbers its adherents and sympathizers by thousands." The most important department of its work is the Agitation Department, which is promoted by circulation of literature and by public speech and song. In the year ending Nov. 15, 1900, 320 public meetings were held. Much has been accomplished also by the Legislative Department, in influencing the nomination and securing the election of temperance men to the Legislature and as town officers.

Old Home Week.—The idea of Old Home Week was suggested by Gov. Frank W. Rollins. He says, "The loss and decay in some of the agricultural sections of New Hampshire were brought closely home to me, and it was while studying this problem and its remedy that the idea of Old Home Week occurred to me as a possible help in restoring lost people and conditions." In the

spring of 1899 he called a convention at Concord of all interested, which was largely attended. From this association more than 50 local societies were at once organized, and more than 50 towns celebrated the new festival in the following August; in 1900 more than 100 more. It now appears to have become a permanent festival.

Political.—The official vote for presidential electors was: For McKinley, 54,803; for Bryan, 35,489.

The whole number of votes cast in the State was 92,352, in a total population of 411,588—one voter to every $4\frac{1}{2}$ of the population.

The official vote for Governor was: For Chester B. Jordan (Republican), 53,891; for Frederick E. Potter (Democrat), 34,956. The Governor's Council consists of 5 members—all Republicans; the Senate, of 23 Republicans and 1 Democrat; the House of Representatives, of 300 Republicans and 97 Democrats.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; 1,444,933 in 1890; and 1,883,669 in 1900. Capital, Trenton.

Government.—The State officers in 1900 were: Governor, Foster M. Voorhees; Secretary of State, George Wurtz; Treasurer, George B. Swain; Comptroller, William S. Hancock; Attorney-General, Samuel H. Grey; Adjutant General, William S. Stryker; Superintendent of Public Instruction, Charles J. Baxter; Commissioner of Banking and Insurance, William Bettle—all Republicans. Chief Justice of the Supreme Court, William J. Magie (succeeded by David A. Depue); Associate Justices, Gilbert Collins, Jonathan Dixon, Bennet Van Syckel, Charles G. Garrison, William S. Gummere, George C. Ludlow (died in December), John Frank Fort, and A. Q. Garretson; Court of Errors and Appeals: Judges, J. W. Bogart, G. Krueger, Frederick Adams, W. H. Vredenburgh, Charles E. Hendrickson, and Peter V. Voorhees. Chancellor, William J. Magie.

Population.—The population of the State, by counties, in 1900, was: Atlantic, 46,402; Bergen, 78,441; Burlington, 58,241; Camden, 107,643; Cape May, 13,201; Cumberland, 51,103; Essex, 359,053; Gloucester, 31,905; Hudson, 386,048; Hunterdon, 34,507; Mercer, 95,365; Middlesex, 79,762; Monmouth, 82,057; Morris, 65,156; Ocean, 19,747; Passaic, 155,202; Salem, 25,530; Somerset, 32,948; Sussex, 24,134; Union, 99,353; Warren, 37,781; total, 1,883,669.

The population of Jersey City was 206,433; of Newark, 246,070; of Trenton, 73,307; of Paterson, 105,171; of Elizabeth, 52,130; of Camden, 75,935; of Hoboken, 59,364; of Atlantic City, 27,838; of Bayonne, 32,722.

Finances.—The Treasurer's report presents the transactions for the fiscal year ending Oct. 31, 1900.

The receipts of the State fund, including balance from the preceding year, were \$4,876,949.13, and the disbursements were \$2,871,726.97, leaving a balance of \$2,005,222.16, which was larger than the balance of the year before by \$752,069.03.

The receipts of the school fund, including balance, were \$841,585.64, and the disbursements were \$702,145.94, leaving a balance of \$79,439.70, which was larger by \$18,718.82 than the balance of the year before. The State school tax amounted to \$2,333,550.

The receipts and disbursements of the Agricultural College fund were \$4,080.

The local tax on railroad corporations amounted to \$407,173.06.

The disbursements were as follow: Adjutant General's department, \$10,276.37; advertising, \$2,498.13; Agricultural College fund, interest, \$2,400; Agricultural Experiment Station, \$16,849.79; Assembly Committee of Investigation, \$2,941.38; Attorney-General's department, \$13,796.51; blind and feeble-minded, \$79,078.34; Board of Fish and Game Commissioners, \$21,500; Board of Pilot Commissioners, \$1,100; Board of Visitors to Agricultural College of New Jersey, \$139.54; Bradley's New Jersey Citations, \$1,500; Bureau of Statistics, \$9,700.11; collateral inheritance tax, \$9,819.84; commissions, \$249.50; county lunatic asylum, \$187,800.15; Court of Chancery, \$72,178.68; Court of Errors and Appeals, \$10,510.50; Court of Pardons, \$1,740.48; deaf-mutes, \$43,000; Delaware Bay and Maurice River Cove Oyster Commission, \$23,985.68; Department of Banking and Insurance, \$22,161.16; discharged convicts, \$2,000; emergency, \$9,991.65; Executive Department, \$15,208.80; factories and workshops, \$9,967.73; Farnum Preparatory School, \$1,456.86; feeble-minded, \$4,885.89; free school libraries, \$5,290; geological survey, \$12,999.68; Home for Disabled Soldiers, \$20,000; Home for Feeble-minded Women—Vineland, \$7,002.25; industrial education, \$43,192.80; Industrial School for Girls, \$12,174.34; insurance, \$200; law and equity reports, \$7,687.60; Legislature, \$83,753.78; loans to school fund, \$193,000; Manual Training and Industrial School at Bordentown, \$5,000; Monmouth battle monument, \$437.84; National Guard, \$134,994.15; Naval Reserve, \$16,403.61; Newark armory, \$50,000; New Jersey Home for Disabled Soldiers, Sailors, Marines, and their Wives, \$20,496.30; New Jersey State Horticultural Society, \$400; office of clerk in Chancery, \$33,281.24; office of clerk of the Supreme Court, \$23,048.23; office of the Comptroller, \$13,683.99; office of the Secretary of State, \$28,848.42; office of the Treasurer, \$12,885.13; Oyster Commission, \$9,890.62; Oyster Commission (clams), \$1,961.32; Palisades, \$2,500; pensions, \$4,743.72; presentation of sword, \$302.50; preservation of records, \$3,500; printing, \$41,897.64; public roads, \$153,432; Quartermaster General's department, \$9,946.93; Rahway Reformatory, \$260,000; Reform School for Boys, \$32,248.40; refunded taxes on exempted miscellaneous corporations, \$131.81; Riparian Commission, \$12,875.79; riparian lands, \$20,575.52; school census, \$1,500; school fund expenses, \$3,513.68; sinking fund account, \$4,260; sinking fund—legal expenses, \$836.88; soldiers' State pay, \$9; Spanish-American War medals, \$30.75; State Board of Agriculture, \$6,912.24; State Board of Arbitration, \$6,216.50; State Board of Assessors, \$22,562.70; State Board of Children's Guardians, \$2,819.56; State Board of Education, \$3,102.25; State Board of Health, \$15,126.70; State Board of Taxation, \$13,589.84; State Charities Aid Association, \$600; State Dairy Commissioner, \$13,460.29; State Home for Boys, \$29,946.57; State Home for Girls, \$27,561.56; State hospitals, \$923.59; State Hospital at Trenton, \$75,859.72; State Hospital at Morris Plains, \$225,435.09; Statehouse Commission, \$55,000; Statehouse Commission—special, \$500; Statehouse Building Commission, \$46,000; State Library, \$7,599.92; State Museum, \$1,922.20; State Normal School, \$49,999.05; State Prison maintenance, \$93,001.06; State Prison furniture, appliances, and repairs, \$11,880.28; State Prison salaries, \$100,064.59; State Sewerage Commission, \$9,118.48; State traveling libraries, \$2,000; Supreme Court, \$106,738.90; Superintendent of Public Instruction, \$12,943; Teachers' Institute, \$3,000; teachers' libraries, \$400; transportation of

prisoners, \$308.20; Trenton battle monument, \$500; Tuberculosis Commission, \$10,500; village for epileptics, \$46,961.67; Washington Association of New Jersey, \$2,500; Weather Service, \$1,000; total, \$2,871,726.97.

The Comptroller gives the following statement of the State debt: "The last installment of the civil war debt, amounting to \$71,000, falls due Jan. 1, 1902. Certificates of the State issued to the Commissioners of the Agricultural College amount to \$48,000, which sum added to the balance of the war debt makes the entire debt of the State \$119,000. The assets of the State fund consist of 1,887 shares of the stock of the United Railroad and Canal Companies of New Jersey, the market value of which amounts to \$505,716, independent of the assets of the sinking fund, which the State Treasurer reports amount to \$207,526.45."

Under an act to tax intestates' estates, gifts, legacies, and collateral inheritance in certain cases, \$177,074.54 was received from estates, upon assessments made by the surrogates and Register of the Prerogative Court, being an increase over the previous year of \$91,553.86.

State Institutions.—The number of convicts received at the State Prison in the year was 472; the whole number in the prison, Nov. 30, 1900, was 1,091. The average number of patients in the hospital was 31. There were 5 deaths. The total expenditure was \$206,707.43. Extensive repairs and improvements were made, and these cost \$11,880.28. The average number of men employed in the shops during the year was 599, and the amount earned by their labor was \$75,952.04. The average number of prisoners employed was 57 less than in the preceding year, and the decrease in the earnings, compared with preceding year, was \$790.25. This decrease was due to the fact that more of the contractors during the last fiscal year than in the preceding year availed themselves of the privilege accorded in their contracts of suspending work at times.

The State Hospital for the Insane, at Trenton, received in 1900 265 patients; it discharged 160 men and 158 women. Of those discharged, 84 were reported recovered, 30 improved, 104 died, and 91 were removed to other institutions. At the close of the fiscal year, Oct. 31, the whole number in the hospital was 1,117, which was 277 more than the normal capacity of the building. Considerable improvements were made in the buildings.

The State Village for Epileptics, at Skillman, had 25 patients, Oct. 31—17 men and 8 women. Three were discharged (insane), 2 escaped, and 1 died. The managers say in their report: "There are many patients in the hospitals for the insane, kept there to their own detriment and that of the class of persons for whom those institutions are maintained. There are others in the almshouses, and many who are in private families where they are a grievous burden to those who are about them, families in many cases who are unable to support themselves under the most favorable circumstances, and when embarrassed with the care of epileptics are discouraged. A long list of applications is on file, including many earnest appeals from the parents of children. . . . While the disease is not ordinarily directly amenable to medicine, it has been conclusively proved that a regular method of living and open-air occupation, without the imposition of exhausting tasks, diminish to a great degree the number and severity of the seizures, and recovery in an increasing ratio ensues."

The trustees of the State Home for Girls, at Trenton, say in their annual report: "During the

year the number of inmates has been materially reduced, some of them having been paroled under the provisions of the new law and others having been put out under indenture, where they are now in good homes, and still others having been discharged because they had reached the age of twenty-one years. The number of inmates reported for the year ending Oct. 31, 1899, was 138; now, for the year ending Oct. 31, 1900, it is 115. . . . Special efforts have been made to develop in each girl an interest in some definite kind of work, and we believe this has been attended with a good degree of success. The religious interests of the inmates are carefully attended to, an excellent Sabbath school and other religious services being conducted on the Sabbath day. Amusements and entertainments suitable to particular seasons and occasions have also from time to time been given to the inmates of the home. The superintendent says: "A larger number than usual has been sent out from the home. Of these, 8 were indentured, 2 were paroled, 4 escaped who were not returned, 7 became of age in the home, 1 died, and 18 were discharged to friends. Of the 18 who were discharged, we have received reports from 15, showing that they are doing well. Nine of these were over nineteen years of age when discharged."

At the State Home for Boys the number remaining Oct. 31, 1899, was 405; number committed or returned since, 146; total number cared for during the year, 551; number discharged, 158; number remaining Oct. 31, 1900, 378. Of these, 293 were white and 85 colored. The boys are instructed in sloyd, carpentry, masonry, blacksmithing, painting, shoemaking, baking, printing, brush making, steam fitting, and some other occupations. A trade-school building is in process of erection.

At the close of the fiscal year the Home for Feeble-minded Women had 113 under its care; 12 had been admitted in the year and 4 discharged. In the school department are taught weaving of plain and fancy baskets, designing in Venetian bent-iron work, braiding raffia for moccasins, mounting pictures, wood carving, lathe work, advanced modeling, Swedish gymnastics, fancy drills and photography, while in the primary department, reading, arithmetic, spelling, and Nature studies are taught, with writing and drawing, forming original designs from the different triangles, etc. The more advanced class has also United States history and a course in music. In the sewing room prizes are given for the best work. One girl's record for the year consisted of 150 aprons, 36 school dresses, 24 articles of underwear, 6 plain nightgowns, besides her garden work of successfully slipping 1,000 plants. Prizes are given for industry.

The Home for Disabled Soldiers, at Kearny, had 566 inmates at the beginning of the year, admitted 216, and had 542 on Oct. 31, 1900. The number that died was 78; others were discharged or dropped from the rolls. The library of the home has 2,500 volumes. Larger accommodations are needed.

At Vineland there is a Home for Disabled Soldiers, Sailors, or Marines, and their Wives. It was opened Jan. 1, 1900. In the year 25 couples were admitted, and at its close there were 22 men and 24 women on the rolls. The men receive a uniform, consisting of a military blouse, vest, and trousers, black felt hat, and good substantial foot gear, together with the necessary underwear, while the women receive cloth dresses, wraps, hats, shoes, and all other needful articles for indoor and outdoor wear.

The New Jersey Firemen's Home was opened July 10, 1900. At the close of the year it had

received 7 inmates. The receipts from all sources amounted to \$3,934.65, and the disbursements to \$3,306.13.

Libraries.—There was a great increase of interest in library matters during 1900. The State now contains 77 free public libraries. The revival of interest began when Andrew Carnegie gave East Orange \$50,000 to found a free library. The town gave a site worth \$22,500, and the municipality voted to furnish \$5,000 a year for its support. Congressman Charles N. Fowler, of Elizabeth, proposed to expend \$100,000 for a library in that city. Assistant-Postmaster-General William M. Johnson, of Hackensack, gave a \$40,000 library to that town. The Paterson library was the first free public library in the State, and \$20,000 was expended on the building during the year. This is a memorial to Charles Danforth, and the gifts continued by his daughter, Mrs. Mary Ryle, amount to \$90,000. Hoboken has a new building and about 25,000 volumes. The family of Dr. William Sticker have given Orange a \$100,000 library. A new library building is in process of erection in Newark; its cost will be \$400,000, and it will be thoroughly equipped with modern facilities. Jersey City is expending \$265,000 on a new library. Trenton is about to expend \$100,000 in a free library. Burlington has the oldest library in the State, for its charter comes down from the time of George II. Its first patron was Gov. Bloomfield, who gave a building for it in the rear of his house. Meantime the free traveling library is receiving much attention, and rural communities are getting their share. There are 48 of these, 30 of which traveled through 44 townships.

Railroads.—The following are the figures of the State Board of Assessors concerning valuation and tax of railroads in the State: Pennsylvania system—valuation, \$63,388,389; tax for State uses, \$316,941.94; tax for local uses, \$101,654.62; total tax, \$418,596.56. Central of New Jersey system—valuation, \$46,512,690; tax for State uses, \$232,563.45; tax for local uses, \$76,371.27; total tax, \$308,934.72. Philadelphia and Reading system—valuation, \$9,524,329; tax for State uses, \$47,620.65; tax for local uses, \$6,518.54; total tax, \$54,140.19. Erie system—valuation, \$20,180,569; tax for State uses, \$100,902.84; tax for local uses, \$66,378.42; total tax, \$167,281.26. Delaware, Lackawanna and Western system—valuation, \$39,901,229; tax for State uses, \$66,378.42; total tax, \$274,826.86. New York, Susquehanna and Western system—valuation, \$7,511,935; tax for State uses, \$37,559.68; tax for local uses, \$7,762; total tax, \$45,321.68. Lehigh Valley system—valuation, \$19,888,008; tax for State uses, \$99,440.04; tax for local uses, \$30,449.75; total tax, \$133,889.79. Railroads not classified—aggregate assessed valuation, \$16,477,100; tax for State uses, \$82,385.50; tax for local uses, \$43,635.37; total tax, \$126,020.87. Totals—aggregate assessed valuation, \$223,384,249; tax for State uses, \$1,116,921.24; tax for local uses, \$417,090.69; total tax, \$1,534,011.93.

Loan Associations.—There are 360 loan associations in New Jersey. The Insurance Commissioner reports that it is very difficult to get full returns of their business. Of the 360, 326 are locals, 12 are State, and 4 are national associations. Four associations were placed in the hands of receivers as the result of the State officials' investigation. According to the report, "the total membership of the associations is 129,131, and they hold 891,803 shares. This is an increase in membership for the year of 7,916 and of 49,832 in the number of shares held. The gross assets of all the associations is \$51,125,050, and the total net

assets, or present worth of the outstanding shares, is \$47,561,890."

Manufactures.—According to the report of the Bureau of Labor, the number of manufacturing establishments considered is 1,738; of these, 934 are managed by private firms and 804 by corporations. The aggregate number of partners comprising the private firms is 1,636, and the stockholders in corporations, 28,774; the partners average in number 1.8 to each firm and the stockholders 35.7 to each corporation. The capital invested in establishments managed by private firms amounts to \$48,761,189, and by corporations \$206,922,361. Average amount of capital owned by partners is \$28,586, and by the stockholders \$7,191. The total amount of capital invested in the 1,738 manufacturing establishments is \$255,689,550. The cost value of all stock or material used is \$200,901,900; the selling value of the goods manufactured is \$355,465,970. The average number of persons employed (male and female) throughout the year is 185,285; the total amount paid in wages is \$76,161,051.

Political.—The Democratic State Convention was held June 1. The platform denounced "imperialism," expressed sympathy for the Boers, favored election of United States Senators by the people, and on State matters declared for reduction of official salaries, abolishment of the fee system, and the placing of all officials on a salary basis; enactment of laws in the interest of organized labor and for the protection of the wage workers of the State; repeal of all laws that abridge the right of juries to fix the amount of damages in cases where the death of a person is caused by wrongful act; and the release of the administration of State affairs from the control of corporations, and their restoration to the authority of the people.

The Republican platform contained this declaration:

"We believe it is the duty of the President of the United States to use all the forces at his command to suppress insurrection wherever the authority of the Government is opposed; and we deprecate and denounce the conduct of recreant Americans who, by abuse of the right of free speech, give aid and encouragement to insurrection and rebellion among peoples owing allegiance to our flag.

"When peace shall have been restored in our new possessions a Republican administration, following the traditions of the party, will give to their peoples a government under such form as will afford them the largest individual participation that their civilization and intelligence will permit."

The platform of the Prohibitionists contained these paragraphs:

"We declare that the nullification of the anti-canteen enactment by the President of the United States under the hypocritical pretense of following the opinion of his legal adviser, Attorney-General Griggs, in behalf of and at the behest of the liquor dealers' association, demands the stern rebuke of every lover of his country and friend of its soldier.

"We deplore as the crime of the age the devastation caused by the liquor traffic following the flag into our newly acquired territory. We hold it to be a monstrous assumption that beer and bullets are means ordained by the will of God in the work of benevolent assimilation of foreign populations to American institutions or for the extension of Christian civilization.

"We denounce the Republican and Democratic parties as the friends, partners, and tools of the organized liquor traffic.

"We hold that the right of suffrage should not be denied on account of sex."

The only State officers voted for were members of the Legislature. That body, in 1901, has a Republican majority of 13 in the Senate and 30 in the House. The Republican candidates for presidential electors received 221,707 votes; the Democratic, 164,808; the Prohibitionist, 7,183; the Social-Democratic, 4,609. Six Republican Congressmen were elected and 3 Democratic.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; 153,593 in 1890; and 195,310 in 1900. Indians, not taxed, in 1900, 2,937. Capital, Santa Fe.

Government.—The Territorial officers in 1900 were: Governor, Miguel A. Otero; Secretary, George H. Wallace; Treasurer, J. H. Vaughn; Auditor, L. M. Ortiz; Adjutant General, William H. Whiteman; Attorney-General, E. L. Bartlett; Superintendent of Education, Manuel C. de Baca—all Republicans. Supreme Court—Chief Justice, William J. Mills; Associate Justices, John R. McFie, Jonathan W. Crumpacker, F. W. Parker, and C. C. Leland; Clerk, José D. Sena—all Republicans.

Population.—The census of 1900 showed the population by counties to be as follows: Bernalillo, 28,630; San Miguel, 22,053; Santa Fé, 14,658; Rio Arriba, 13,777; Valencia, 13,695; Grant, 12,883; Socorro, 12,195; Taos, 10,889; Mora, 10,304; Donna Ana, 10,187; Colfax, 10,150; Guadalupe, 5,429; Lincoln, 4,953; San Juan, 4,828; Otero, 4,791; Chaves, 4,773; Union, 4,528; Eddy, 3,229; Sierra, 3,158.

Finances.—The Territory's 4-per-cent. bonds command a premium; \$45,000 of outstanding bonds were purchased and retired in 1900. The total assessed valuation of real and personal property was \$38,452,181.30; the total Territorial indebtedness, including the bonded and floating debt of the counties, is \$4,178,123.09.

Education.—A direct tax is levied for the support of the public schools, varying from 1½ to 3 mills, annually. Under the operation of the school laws, the illiteracy of the Territory has decreased rapidly. There are 52,652 children of school age, and the total enrollment is 27,173. The number of schools is 576; of teachers employed, 706, whose average monthly pay is \$39.19. The reports show that male teachers are in excess of female teachers, which is hardly true in any other section of the country. Some of the school districts are as large as counties at the East. They are poor and sparsely settled, and they have no industries to be taxed; but every district has its school, and attendance and interest are increasing. In Santa Fé the schools have been crowded.

The following is the report for 1900 of the Presbyterian mission schools at Los Leutes and Pajarito, Valencia County: "The former has 1 teacher who teaches nine months a year, an enrollment of 48, an average daily attendance of 43; value of property, \$600; expenditures during the year, \$512. The Pajarito school has 1 teacher, a school term of nine months, an enrollment of 27, an average daily attendance of 21, a property valuation of \$800, and annual expenditures amounting to \$512."

The United States Government Industrial Indian School, at Santa Fé, opened in 1890, is a model in every respect. It became a normal school in 1894. Of the 300 pupils, 218 are boys; 67 per cent. are full-blooded Indians, about 58 per cent. being Pueblos. They are comfortably and neatly

clad, well fed, healthy, and happy. The boys are organized as a military battalion, under military regulations. There are 106 acres in the tract, and much of it is under cultivation. The garden products of the pupils received high prizes at the horticultural fair. On the reservation for Apache Indians, at Jicarilla, the Government is expending large sums for buildings and irrigation.

The Military Institute, at Roswell, is the most successful of the Territorial schools, although it opened only in 1898. The school earned \$11,000 in 1900, and constantly turned away applicants for lack of room. The Territory gives it \$12,000 annually.

The Agricultural College, at Mesilla Park, has had an encouraging year. A deficiency of more than \$8,000 was made up, and much work was done.

The University of New Mexico, at Albuquerque, is flourishing. A new laboratory was dedicated at its commencement, and the original research for which New Mexico furnishes special opportunities will be carried on under better auspices. The School of Mines, at Socorro, is of special value, as New Mexico is a mining State. There are liberal legislative endowments for all these schools.

Penitentiary.—The annual report of the clerk of the First Judicial District says: "The criminal business of this district has been decreasing considerably for the past two years, and it may be more especially noticed in the county of Santa Fé, wherein, on July 1, 1898, 72 criminal cases were pending, while on July 1, 1899, there were but 27, and on July 1, 1900, there were but 22. The same amount of proportionate decrease may be also noticed in the other three counties of this district. At the same time, it may also be noticed that an unusual amount of new business on the criminal side of the docket has been instituted within the past fiscal year, but this is accounted for by the numerous indictments for violation of the liquor and Sunday laws. There were 193 of such cases, and after those are subtracted, the real amount of criminal business in this district has diminished considerably. The small number of cases that have been appealed to the Supreme Court of the Territory from this district shows the high integrity of this court."

There have been many improvements in the working of the Penitentiary. A complete, modern brickmaking plant has been added, at a cost of \$12,000, exclusive of power and the cost of the buildings. The annual report says: "About 100 are received, and about the same number liberated, every year. The number whose sentences will expire this year is 74. The prisoners are comfortably clothed, well fed, and humanely treated. Heretofore the annual appropriation for maintaining the Penitentiary has never been less than \$30,900. The last Legislature reduced this sum to \$30,000. Yet out of this appropriation, after promptly paying employees and all running expenses, the following approximate amounts have been paid out in cash for permanent improvements and facilities: Brick machine, \$5,000; drier, \$8,000; iron in kilns, \$1,500; steam pump and water plant, \$1,000; repairs on buildings, \$700; hospital improvements, \$200; mules and wagons, \$1,400. This leaves money on hand sufficient to add the contemplated new 80 horse-power boiler and the 100-foot brick smokestack to the electric light and brick plants, and continue the system of permanent improvements throughout the institution.

"The old method of punishment known as the 'dark cell' and stringing up by the hands has been abolished, and the 'spanking system' has been substituted therefor. This system has

worked so admirably that it has reduced the number of punishments at least 75 per cent. No convict has so far given cause for being punished a second time after having had a trial dose under this system. It seems that it is not so much the physical punishment as the humiliation that has proved effective. The Penitentiary physician is always present when punishments are administered."

The Marine Hospital.—Congress appropriated \$30,000 for the remodeling of this sanitarium at Fort Stanton. This is additional to the usual appropriation. It will accommodate 200 patients.

The New Capitol.—The new building, for which \$60,000 was appropriated, was dedicated in June.

Mines.—The Governor, in his report, says: "The coal and mining industry is flourishing beyond all precedent. During the year many new properties have been opened, which, along with the great activity in the gold and copper districts, has given a fresh impetus to the construction of railways. In at least four districts throughout New Mexico important petroleum deposits have also been discovered within a few months, which are now receiving merited attention from capitalists.

"The production of coal for the fiscal year was 1,187,334 tons—an increase over the previous year of 138,300 tons—the estimated value of which was \$1,837,165, being an increase in valuation of \$236,577 over the fiscal year ending June 30, 1899. The total number of tons of coke made was 42,803.30. The total number of employees in and about the coal mines is 2,015—an increase of 135 over the previous year. Seven new mines were added to the list of producers during the year. The coal trade has been very brisk. At all the mines the operators were unable to fill more than two thirds of the orders received owing to the scarcity of miners.

"Mines of copper and gold are being developed in a remarkable manner. In this respect the year has marked an epoch in the history of the Territory; never before has there been capital so ready to invest in New Mexico enterprises of this character. Many new districts have opened up good 'pay' properties; old mines have resumed operations, and, with new and approved appliances for extracting the values, the mining industry may justly be said to be exceedingly active throughout the Territory."

Banks and Revenue.—The statements of the different banks throughout the Territory show their resources at the close of the fiscal year to be \$7,426,258.19. For the same period the business of the internal revenue office for the District of New Mexico amounted to \$64,781.07—more than double the receipts of any previous year.

Live Stock.—The cattle inspectors report that the increase in the various sections of the Territory will run from 60 to 90 per cent. for the present year. The improvement in the grade in cattle over all previous years is especially noticeable. There were sold and delivered after Jan. 1, 1900, 86,470 head of cattle; one- and two-year-old steers at \$15 to \$20 a head for ones, and \$18 to \$27 for twos. During the year ending June 30, 1900, 214,053 head, mostly steer cattle, were sold and removed from the Territory, amounting to about \$4,000,000, and during the same period there were brought into the Territory to remain 13,095 head, of which 5,391 were from the republic of Mexico. The greater portion of the stock range is on public domain.

No business offers more profitable returns than does sheep raising and wool growing in New Mex-

ico. There has been vast improvement in the flocks in recent years; the wool grown is diversified, scaling all the way from the finest delaine merino to the coarsest carpet, though the latter is becoming less each year. The total clip for New Mexico for the year was more than 18,000,000 pounds. The number of sheep in the Territory is estimated to be more than 4,000,000. The vast production of wool has resulted in the establishment of other industries, such as wool-scouring and wool-pulling plants and tanneries in various parts of the Territory.

Political.—At the annual election the Republican Territorial ticket was successful by 3,710 plurality and a Republican Delegate to Congress was elected.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; 5,997,853 in 1890; and 7,268,012 in 1900. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Theodore Roosevelt, Republican; Lieutenant Governor, Timothy L. Woodruff; Secretary of State, John T. McDonough; Comptroller, William J. Morgan, who died Sept. 5, 1900, and was succeeded by his deputy, Theodore P. Gilman; Treasurer, John P. Jaekel; Attorney-General, John C. Davies; State Engineer and Surveyor, Edward A. Bond; Superintendent of Public Instruction, Charles R. Skinner; Superintendent of Insurance, Louis F. Payn, whose term of office expired on Feb. 11, when he was succeeded by Francis Hendricks; Superintendent of Banking Department, Frederick D. Kilburn; Superintendent of State Prisons, Cornelius V. Collins; Superintendent of Public Works, John N. Partridge; Commissioner of Labor Statistics, John McMackin; Railroad Commissioners, Ashley W. Cole, George W. Dunn, and Frank M. Baker; Chief Judge of the Court of Appeals, Alton B. Parker; Associate Judges, John C. Gray, Denis O'Brien, Celora E. Martin, Edward T. Bartlett, Albert Haight, and Irving G. Vann, together with Judson S. Landon, William E. Werner, and Edgar M. Cullen, who are judges of the Supreme Court, and were designated by the Governor, on Jan. 1, 1900, to sit in the Court of Appeals.

The term of the State officers is two years. They are elected in November of even-numbered years. The Legislature meets every year in January.

Finances.—The Comptroller, William J. Morgan, died on Sept. 5, 1900, and was succeeded by Theodore P. Gilman, Deputy Comptroller, who then continued in office until the close of the year. According to the report issued by Mr. Gilman, the balance in the treasury on Oct. 1, 1899, was \$4,504,814.74; receipts from all sources, \$32,006,883.51; total, \$36,511,698.25. The payments were \$29,221,895.70, leaving a balance in the treasury on Sept. 30, 1900, of \$7,289,802.55, distributed as follows: Canal fund, \$1,190,632.36; school fund, \$440,370.07; general fund, \$5,280,134.63; and trust and miscellaneous funds, \$378,665.49. The State tax rate was 1.96 (the lowest, with one exception, in over forty years), compared with 2.49 in 1899 and 2.08 in 1898. It was distributed as follows: General, including care of insane, 0.68; school, 0.76; canal, maintenance, 0.21; canal, payment of debt, 0.13; canal, extraordinary repairs and new work, 0.18; total tax levy, 1.96 mill. This tax on the estimated valuation of property in the State of \$5,461,302,756 will realize as follows: General

purposes, including care of insane, \$3,713,685.87; free schools, \$4,150,590.09; maintenance and repairs of the canals, \$1,146,873.58; payment of canal debt, \$709,969.36; extraordinary repairs and new work, \$983,034.50; total, \$10,704,153.40. The revenue from indirect sources for the year is estimated at \$13,013,100.06. It was not necessary this year for the State to borrow money to pay expenses of the government.

Valuation.—The State assessors during the year were J. Edgar Leaycraft, George I. Priest, who were appointed on April 3, 1899, and Lester F. Stevens, appointed on Jan. 10, 1900. The report of the commission for 1900 shows an increase in the assessed value of real estate of \$307,744,563, and a decrease in the personal property subject to local taxation of \$12,838,635; also that the total equalized value of real and personal estate has increased over that of last year by \$384,905,928. This increase of \$384,905,928 in the assessed value of property is largely due to advances in valuations made in New York and Richmond Counties, and to growth in all the counties comprising the city of New York. The increase of values found by the local assessors in metropolitan counties decreases the proportion of direct taxation for State purposes to be borne by the other counties. The figures show very nearly seven and one half times as much of direct taxation imposed upon real estate as upon personal property.

Legislative Session.—The session of the Legislature began on Jan. 3, 1900, and continued until April 7, 1900. As elected, the Senate consisted of 27 Republicans and 23 Democrats and the Assembly of 92 Republicans, 56 Democrats, and 1 Independent Democrat, with 1 vacancy caused by death.

Timothy E. Ellsworth was continued as President *pro tem.* of the Senate, and Samuel F. Nixon was again chosen Speaker of the Assembly. Of the bills passed by the Legislature, 775 were approved by the Governor.

Among the more important measures that received the signature of the Governor were the following:

Authorizing the State to cede to the United States Government a part of Hart's island, in the harbor of New York, for a lighthouse and signal station.

Appropriating \$80,000 for the Quarantine Commission for reclaiming land and erecting a building for cabin passengers at Hoffman island.

Providing for an additional justice of the city court of New York city and additional attendants.

Defining the jurisdiction of the commissioners of deeds within the Greater New York and ratifying certain acts performed by them.

Appropriating \$39,000 for expenses incurred in the prosecution of the violators of the election law in the metropolitan election district, the Gardiner investigation, and the Brooklyn Rapid Transit investigation.

Amending the election law to provide that inspectors of election in New York city shall receive \$7.50 for each registration day and revision of registration for special elections; \$7 for Election Day and \$5 for count of votes; poll clerks shall receive the same as inspectors for count of votes, and ballot clerks \$8 each.

To permit the county treasurer of any county and the comptroller of New York city, with the consent of the State Comptroller, to settle transfer tax suits on certain estates.

Authorizing New York city to raise \$10,000 to pay the back salary or per diem compensation of city employees who enlisted in the army or navy during the war with Spain to which they would

have been entitled if they had remained in the employ of the city.

Providing that chattel mortgages shall be filed in Greater New York as follow: In the borough of Brooklyn, in the office of the county clerk of Kings; in Queens, in the office of the county clerk of Queens; in Richmond, in the office of the clerk of Richmond County; and in the borough of Manhattan and the Bronx, in the office of the register of the city of New York.

Giving to New York city authority to construct sewage-disposal plants.

Amending the law providing for the construction of a bridge over the Harlem river from 145th Street, borough of Manhattan, to East 149th Street in the borough of the Bronx, at a cost of \$500,000.

Making it a misdemeanor to violate any of the provisions of the act relating to inspections of steam boilers and licensing of engineers in New York city.

Exempting the New York Society for the Prevention of Vice from taxation.

Removing the limit of appropriation to be made by New York city for the public library in Bryant Park.

Authorizing New York city to expend \$300,000 to improve that portion of Bronx Park set apart for the New York Zoölogical Society when the society shall have raised or expended \$200,000 for similar purposes.

Authorizing the expenditure by New York city of \$350,000 for equipping the buildings occupied by the American Museum of Natural History in Central Park.

Authorizing New York city to expend \$200,000 on the Zoölogical Gardens.

Authorizing New York city to appropriate \$50,000 to aid in the erection of a monument in memory of the prison ship martyrs.

Appropriating \$25,000 for a monument in Brooklyn to the memory of those who died in the British prison ships in New York harbor during the American Revolution.

For the turning over of the Homœopathic Hospital in Brooklyn to the city of New York, and compelling the city to maintain it as a public hospital.

Authorizing the acquisition of adjacent territory to form a Greater Troy.

Incorporating the city of Cortland.

Ceding to the United States Government jurisdiction over certain lands under the waters of Lake Erie at Buffalo.

Amending the liquor tax law by making more stringent the penalties for evasions.

Amending the banking law in relation to the appointment of a corporation as guardian of an infant.

Amending the criminal code so as to provide that upon a trial for murder or manslaughter, if the act complained of is not proved to be the cause of death, the defendant may be convicted of assault in any degree constituted by the act and warranted by the evidence.

Amending the election law by providing for additional ballot boxes at town meetings.

Amending the membership corporations law to provide that the body of a widow may be buried in a burial lot of which her husband died possessed and in which his heirs continue to have right of burial, without consent of any person claiming an interest in such lot.

Providing that the Appellate Division of the Supreme Court may order the reversal of a judgment where it is contrary to the weight of evidence.

Amending the religious corporation law to provide that the trustees of Protestant Episcopal churches shall not make application to court for leave to sell or mortgage any of their real property without consent of the bishop and standing committee of the diocese.

Abolishing coroners' fees for inquests, but providing for fees for the drawing of decisions in a coroner's jury case.

Giving a surrogate the power to determine the sufficiency of the bonds of guardian.

Amending the labor law by requiring hotel and restaurant proprietors to furnish seats for waitresses.

Providing that any agricultural society, club, or exposition which shall permit the use of any gambling outfit on fair grounds shall forfeit the moneys received from the State under the agricultural laws.

Prohibiting persons from transacting business in this State under an assumed name unless they shall file with the county clerk a certificate setting forth the name to be used.

Securing equal rights to colored children in the public schools, and abolishing separate schools.

Appropriating \$50,000 to continue the promotion of sugar-beet culture.

Prohibiting the sale of impure, adulterated, colored, or unwholesome cream.

Relative to experiments, at the experimental stations, in the application of poison and spraying mixtures to fruit trees while in bloom.

Furnishing life-saving apparatus and appliances along the shores or banks of streams in cities, towns, and villages.

Redistricting the State into three sections, to be known as the eastern, western, and middle sections, providing for a new State Board of Examiners of Pharmacy, and regulating the drug trade generally.

Appropriating \$100,000 for the erection of the New York State Building at the Pan-American Exposition.

Abolishing the office of State Superintendent of the Adirondack Land Survey.

Appropriating \$250,000 for continuing the acquisition of land in the Adirondack Park, and for the extension of the Forest Preserve.

Authorizing the State Engineer and Surveyor to continue to co-operate with the Director of the United States Geological Survey in making a topographical survey and map of the State, and appropriating \$20,000 therefor.

Appropriating \$50,000 for the establishment of a State hospital in the Adirondacks for treatment of incipient pulmonary tuberculosis.

Extending to all honorably discharged soldiers and sailors of the United States the provisions of law appropriating public money for burial which have heretofore been applicable to civil war and Mexican War veterans only.

Appropriating \$51,534 for new buildings and improvements to the New York State Woman's Relief Corps Home, at Oxford.

Permitting the establishment of pleasure resorts on reservoir lands and islands owned by the State, with the consent of the State Land Board.

Appropriating \$3,500 for the improvement and care of lands known as the "Stony Point Peninsula."

Appropriating \$15,000 for the acquisition of lands by the State Comptroller to commemorate the battle of Lake George.

Authorizing the New York, Gettysburg, and Chattanooga Battlefield Commission to locate the positions where the Forty-sixth, Fifty-first, and Seventy-ninth Regiments, New York Infantry,

and Battery L, Second New York Light Artillery, fought at the siege of Vicksburg, for the purpose of erecting suitable monuments, and appropriating \$1,000.

Making an additional appropriation of \$5,000 for the equestrian statue of Major-Gen. Henry W. Slocum, to be erected on the Gettysburg battlefield.

Appropriating \$11,000 to erect a bronze group of statuary, representing Reconciliation, on Look-out mountain.

Appropriating \$1,000,000 for improvements at the State hospitals for the insane.

Repealing the section of the penal code which permitted a woman convicted of felony to be sent to a reformatory for women when the sentence was less than one year, and further amending the code by providing that a woman between fifteen and thirty years of age may be sent to a reformatory.

Making it a misdemeanor for any unauthorized person to wear badges of the Military Order of Foreign Wars of the United States or the badge of Spanish War veterans.

Providing \$50 fine for a first offense and \$150 fine for subsequent violations for watering milk furnished to butter and cheese factories conducted on the co-operative plan.

Making it a misdemeanor to stamp collars and cuffs as linen unless they are made of that material.

Making it a misdemeanor to manufacture gun-powder or any other explosive in a dwelling house.

Making it a misdemeanor to sell or give a toy pistol in which blank cartridges are used to any person under sixteen years of age.

Making it unlawful to possess the plumage or skins of wild and song birds for commercial purposes.

Providing that deer shall not be taken at any other time than between daylight and sunset on Long Island, on the first two Wednesdays and the first two Fridays of November.

Providing that on our northern water boundaries, including the Great Lakes and the St. Lawrence River, no nonresident shall take any kind of fish or game within our boundary line unless residents of this State may lawfully take the same kind of fish or game in the waters within the boundaries of the place where such nonresident lives.

Providing that any person who shall omit, neglect, or refuse to obey a subpoena issued by the State Superintendent of Elections or his chief deputy is guilty of a misdemeanor, and one who makes a false statement is guilty of perjury.

Providing that the enrollment of voters at primaries shall be secret, and that the enrollment blanks shall be distributed in envelopes.

Providing that any person who solicits from a candidate for an elective office money or other property as a consideration for a newspaper or other publication supporting any candidate for an elective office is guilty of a misdemeanor.

Providing that the election of committeemen to fill vacancies in nominations shall take place at the primaries and not at a party convention.

Compelling the publication of lists of tax exemptions in the cities by the local assessors. The assessors' statements must show separately such piece or parcel of real estate exempted, the name of the owner, its value, and the reasons for the exemption.

Amending the tax law so as to provide that every foreign banker doing business in the State shall pay an annual tax to the Treasurer of 5 per cent. on the amount of interest earned on money loaned.

Fixing the salary of the members of the State Board of Tax Commissioners at \$5,000 each, au-

thorizing a secretary at \$3,500 and six special agents.

Amending the taxable transfer act relative to the refunding of moneys which the courts have held to have been erroneously assessed by the State.

Appropriating \$49,350 for the expenses of the State Tax Commission in performing duties connected with the franchise tax law.

Providing that when taxes levied on a cemetery lot remain unpaid for five years, the amount, with interest, shall be a lien on the unused portion of the lot.

Incorporating the New York State Medical Association.

Providing that stockholders owning two thirds in amount of a corporation's capital stock may vote to extend its existence.

Permitting the granting of liquor tax certificates to the Pullman Palace Car Company and other foreign corporations.

On April 3 the Legislature met in joint session to elect a Regent of the University to fill the vacancy caused by the death of the Rev. Sylvester Malone, and chose the Rev. Thomas A. Kendricks by a vote of 83 against 53 cast for Bishop Thomas M. A. Burke.

Taxation.—A committee appointed by the Legislature to investigate the tax question, with a view of adopting a plan by which the taxes could be more equitably distributed, resulted in the following recommendations: 1. A State tax of 5 mills upon indebtedness secured by mortgage upon corporate and individual real property. 2. That if the proposed mortgage tax for State purposes is adopted, mortgages ought to be exempted altogether from local taxation, and that the tax should cover all mortgages on real estate within this State, whether made by corporations or by persons, or whether owned by residents or nonresidents, and without exemptions, except in the single case of mortgages made to the Commissioners of United States Deposit Fund. No owner of a mortgage debt ought to be allowed to deduct his indebtedness because the rate is low compared with the rate which the owner of real estate must pay, and which the owner of other personalty is liable to pay. 3. A tax of 1 per cent. upon the stock of national and State banks and trust companies, the value of the share to be ascertained by adding together the capital stock, surplus, and undivided profits of such institutions, and deducting therefrom the assessed value of their real estate, which is to continue to be assessed locally. 4. The 1-per-cent. tax upon the institutions named will realize \$3,000,000, and, taken together with the mortgage tax, will furnish to the State, together with its present revenue, about \$23,000,000, which sum is adequate for the support of the State Government. The shareholders in State and national banks and trust companies should not be taxed for local purposes, nor should any deduction from the value thereof be allowed because of the debts of the individual owner.

Banks.—The superintendent's report for the year ending Sept. 30, 1900, shows that the total resources of the institutions, as given by their reports, are as follow: Banks of deposit and discount, Sept. 4, 1900, \$351,080,252; savings banks, July 1, 1900, \$1,037,869,160; trust companies, July 1, 1900, \$796,483,887; safe deposit companies, July 1, 1900, \$5,297,905; foreign mortgage companies, Jan. 1, 1900, \$5,236,422; building and loan associations, Jan. 1, 1900, \$66,034,789; total, \$2,262,002,415. This is an increase of \$115,018,554 over last year. The number of savings banks was diminished by one during the year.

Census.—The following shows the population of the State by counties, as determined by the national census of 1900, compared with the population for 1890:

COUNTIES.	1890.	1900.	Increase.
Albany	164,555	165,571	1,016
Allegany	48,240	41,501	*1,739
Broome	62,978	69,149	6,176
Cattaraugus	60,866	65,643	4,777
Cayuga	65,302	66,284	982
Chautauqua	75,202	86,314	13,112
Chemung	48,265	54,063	5,798
Chenango	37,776	36,563	*1,213
Clinton	46,437	47,430	993
Columbia	46,172	43,211	*2,961
Cortland	28,657	27,576	*1,081
Delaware	45,496	46,413	917
Dutchess	77,879	81,679	3,799
Eric	322,961	433,686	110,726
Essex	23,062	30,707	*7,645
Franklin	38,110	42,853	4,743
Fulton	37,650	42,842	5,192
Genesee	33,265	34,561	1,296
Greene	31,598	31,478	*120
Hamilton	4,762	4,947	185
Herkimer	45,606	51,049	5,441
Jefferson	68,806	76,748	7,942
Kings	638,547	1,166,532	527,985
Lewis	29,806	27,427	*2,379

* Decrease. † Created in 1896.

Insurance.—The annual report showed 253 fire, marine, life, and casualty companies doing business, with assets of \$1,943,004,411, and liabilities, except capital stock, of \$1,515,309,737, and capital stock of \$105,122,017. These companies reported a surplus of \$353,326,119, and risks in force \$32,925,249,575. There are 55 fraternal beneficiary societies which show receipts of \$33,074,648, and disbursements of about \$31,000,000. Fifty-three nonfraternal associations show receipts of \$11,382,831, payments for claims \$7,956,803, and for expenses \$3,398,026. The work of the department is constantly on the increase, and unusual efforts are necessary in order to protect the rights of the policy holders and members of beneficiary associations.

Excise.—The commissioner's annual report gives the following items for 1900: Amount collected, \$12,622,957; expenses of the department,

\$280,995; number of certificates of all kinds issued during the fiscal year, 31,530; number of certificates in force Sept. 30, 1900, 27,747; ratio of expense collection to gross amount collected, 2.66 per cent. Besides the transactions of the fiscal year, the report gives a review of excise matters for the past five years, and briefly discusses the question of liquor traffic and legislation bearing thereon in the past. It gives results of prohibitory laws in States where the same have been tried, compared with high license; gives extracts from colonial statutes showing that the people of the State are wrestling with the very same questions and difficulties as their ancestors in trying to restrict the trade in the interest of good order and morals. The report also says: "The law has from time to time been amended to meet apparent defects, more particularly in its administrative features, until it is now working smoothly and satisfactorily. No radical change in its main features or general scope has been made, nor are any such changes desirable."

Education.—The superintendent's report for 1900 shows that there was expended in support of the public schools \$33,421,491.37, an increase over the previous year of \$5,368,500.88, about \$4,500,000 of which is shown in New York city alone. There was paid for teachers' salaries \$19,218,898.63, and the average annual salary paid to teachers was \$604.78. There were employed 31,768 teachers, an increase of 1,269. Of the 1,569,653 pupils of school age residing in the State, 1,200,574 attended public schools some part of the year and 163,946 attended private schools. This shows that 88 per cent. of all children of school age in this State attended either a public or a private school some part of the year. The report shows that there were 217 fewer men employed in the teaching force of the State than during the previous year, while there were 1,703 more women. The increase in the value of school property is reported as \$6,614,880. The entire public school property is valued at \$31,768,493. The annual report of the State Board of Regents shows that the total number of schools was 705, of which 104 are incorporated academies, 565 high schools and academy departments. During the year ending July 31, 1900, 24 academic departments were admitted, and 6 academies were chartered. The number of secondary schools has increased 110 per cent. in the past ten years. There were employed in secondary schools 1,369 men and 2,519 women. There were 34,105 boys and 42,260 girls instructed in secondary institutions, a total of 79,365 students, which was an increase of 9,589, or 13.7 per cent. The total property of secondary schools is \$28,412,184, and the expenditures by the schools during the year was \$6,036,374. The total amount apportioned to secondary schools was \$212,667 and 672 schools took examinations, while 511,020 examination papers were written, of which 345,117 were accepted, 29,275 being rejected. The report of the public library division contains returns from 1,035 libraries. Of these 460 free for lending to the public and containing 2,187,125 volumes, circulated last year 8,402,445 volumes. The free libraries lent to the people an average of 23,157 books daily, 1,163 for each 1,000 of the population, 387 for each 100 books in the libraries.

Charities.—These are under the care of a board, whose annual report is prepared from the sworn statements filed by the treasurers or other responsible officers of the charitable institutions, societies, and associations subject to the board's supervision. This board consists of 12 members. During the year the board visited and inspected all the institutions, societies, and associations, more

than 500 in number, within its jurisdiction, pointing out to the authorities of such institutions any evils, defects, or abuses requiring remedy, the result of which has been the improvement of several hundred public and private charitable institutions; and the board reports that for the most part such institutions are in good condition, comparatively free from serious evils, and rendering beneficent public service. An important feature of the work is that which relates to institutions for the care of dependent children. There are 122 such in receipt of public moneys, and their inmates number nearly 30,000. More than 15,000 children were discharged from such institutions during the year.

Prisons.—According to the Governor's message, the number of prisoners confined in various prisons during the year averaged 3,376. The expenditure for their maintenance was \$460,528.02. A larger appropriation for care and maintenance will be required for 1901, as the Eastern New York Reformatory, at Napanoch, will come under the charge of the department. It has been found that approximately 1,600 prisoners have been engaged in productive industries. The others have been employed, but not upon productive industry. The superintendent reports the structures at Sing Sing and Auburn as unsanitary, and in such condition as to prevent the application of a comprehensive scheme of gradation and classification of the prisoners, and the attainment of reformatory results that might be obtained if proper buildings were provided. The Bertillon system of measurement, which has been perfected under the present superintendent, not only renders it much easier to detect and identify a criminal who has previously served a term of imprisonment, but also makes possible the enlargement to a greater degree of the scope of the law which was passed last year, permitting judges to fix indeterminate sentences.

Labor Statistics.—The commissioner's report shows that at the close of 1899 there were 224,363 trade-union members in the State, an increase of 49,300. In Greater New York there were 152,860 union members, against 125,136 in 1898. Regarding labor laws, the report says that New York is well to the front, and probably in advance of other States in regard to the eight-hour work day and the prevailing rate of wages for public employees or employees of contractors on public works. The New York State Free Employment Bureau, at 30 West 29th Street, did an increased business in the year. In the last quarter the number of applicants for work was 1,420, and for help 714. Employment was procured for 598 persons, an increase of 22 per cent. The number of immigrants to the United States in the last quarter of 1899 through the port of New York was 74,892, an increase of 23,012 over the corresponding quarter for 1898.

Public Works.—The report of the State Engineer and Surveyor shows that one of his principal duties was the making of a survey and plans and estimate for a barge canal across the State, for which \$200,000 was appropriated. This survey was completed, and the results will be presented to the Legislature in February, 1901. The topographical survey of the State was continued in co-operation with the United States. The results are published in sheets 12 by 18 inches, showing about 12 miles by 18 miles, so that 240 sheets will cover the State. Of these, 102 are completed and published, 15 sheets are mapped and in the hands of the engravers, 26 are surveyed and in the hands of draughtsmen, and of the remaining 97 three quarters are triangulated and are ready to be surveyed. The State Engineer also had charge of the

survey, design, and construction of good roads under the Higbie-Armstrong law of 1898, under which law \$250,000 has been appropriated, during the three years it has been in force. Twenty-three roads have been built in 12 counties, aggregating 53½ miles. In addition, 131 petitions have been received from 27 counties for an aggregate of 800 miles, of which surveys and estimates have been made or are in progress; for 80 roads in 23 counties, aggregating 406 miles, and showing an average estimated or actual cost of \$7,625 a mile.

Canals.—The Superintendent of Public Works, in his report for 1900, shows that his policy of reconstructing the towing path by grading, graveling, and rolling, was continued during the year, with the result that the towing path from end to end of the Erie and Champlain Canals is in better condition than for many years. The Legislatures of 1899 and 1900 made appropriations authorizing a large number of improvements, such as the construction of bridges and the building of dikes, and the superintendent has succeeded in getting almost all this special work either completed, under way, or under contract to be completed at an early date. The department has under construction extensive bridges of the latest design at Waterford, West Troy, Minden, Utica, Rome, Syracuse, Rochester, Lockport, and other places. Some of these bridges call for an expenditure of more than \$75,000. The superintendent, as a member of the Canal Board, devoted much time to the consideration of claims against the State growing out of the \$9,000,000 canal improvement, and also to the running down of the marauders who have made a business of destroying State property that they might profit by patronage of the forces engaged in making the repairs. He secured the indictment of 15 men, most of whom have been tried and convicted.

The canal season of 1900 closed officially at noon on Dec. 1. The season was not as good as that of 1899, when 3,686,551 tons of freight, with a value of \$92,786,712, were carried. A survey for a canal to cost approximately \$62,000,000 was carried on under an appropriation of \$200,000. A large number of civil engineers, levelers, rodmen, chainmen, borers, and helpers were selected under the civil service rules, and specially prepared instructions for survey parties were prepared and recommended by a board of distinguished engineers, of which George S. Greene, Jr., was chairman.

Fisheries, Forests, and Game.—A. N. Cheney, State fish culturist, acting under the direction of the commission, distributed in the various waters 219,135,198 fish, as follows: Whitefish, fry, 40,175,000; tomcod, fry, 42,000,000; pike perch, fry, 50,525,000; frost fish, fry, 3,495,000; lobsters, fry, 2,400,000; muskellunge, fry, 1,200,000; wall-eyed pike, fry, 300,000. Brook trout, fry, 3,581,000; fingerlings, 152,983; yearlings, 95,225; two and three years old, 400. Brown trout, fry, 1,091,000; fingerlings, 108,253; yearlings, 48,825. Rainbow trout, fry, 120,000; fingerlings, 98,109; yearlings, 40,000. Lake trout, fry, 8,772,500; fingerlings, 201,900; yearlings, 13,355. Red throat trout, fingerlings, 62,750; yearlings, 38,800. Land-locked salmon, fry, 2,400; yellow perch, fry, 4,900; shrimp, fry, 20,000; black bass, small mouth, 300. Shad, Hudson river (from the United States), 10,280,000; hatched at Catskill, 2,870,000; hatched at Long Island, 565,000. Total, 168,262,900. Eggs and fish fry and yearlings were furnished by the United States Fish Commission as follow: Eggs, 420,000; fish fry, 50,428,000; yearlings, 23,498. Total, 50,872,298.

In 1900 the State acquired title by purchase to

105,229.37 acres in the forest preserve, and 1,901.25 acres by reinstatement of canceled tax sales, and lost by cancellation and redemption 736.86 acres, leaving an aggregate holding at the close of the fiscal year of 1,307,067.70 acres. Of this, 1,290,987 acres are in the Adirondack preserve. The average price for the purchases was \$3.04 an acre. To locate and secure the tract of 30,000 acres to be used by the State College of Forestry, \$2,665.54 was expended. In 1900 the game protectors destroyed 2,615 illegal devices for the capture of fish and game, which were valued at \$30,412.35, and the department prosecuted 357 offenders against the fish and game laws, securing 336 convictions. There were also 53 cases of trespass on State lands, which were taken into court and convictions secured.

Railroads.—According to the report of the commissioners for 1900, the steam surface roads earned in the gross \$27,060,056 more than in 1899, and their net earnings were \$10,242,410 more than in 1899. The capital stock increased \$22,144,400 over that of 1899; funded debt increased \$3,584,498.50 over that for 1899. The percentage of dividends to capital stock was 2.52, compared with 2.43 in 1899. The average freight earnings per ton per mile increased 0.013 cent, and the average freight expenses per ton per mile decreased 0.007 cent. The number of accidents on the lines of steam surface railroads was 671 killed and 1,374 injured. The number of passengers carried was 73,846,114, and one passenger was killed for every 9,230,764 carried. The number of passengers carried on all the street surface railroads, including the few remaining horse railroads and the elevated roads in Brooklyn, was 1,801,974,097, an increase of 122,684,693. The number carried in the boroughs of the Bronx and Manhattan, including transfers, was 567,144,099, an increase of 57,829,283. The number carried in Brooklyn, including transfers, and including those that were carried by the elevated railroads, was 323,229,639, an increase of 45,584,744. The total number of passengers carried by the Manhattan Railway was 184,164,110, an increase of 9,839,535. Fifteen passengers were injured and 4 employees killed on the Manhattan Elevated Road, while 148 persons were killed and 650 injured on the street surface roads. The average number of persons employed on all the street surface railroads, including the elevated railroads in Brooklyn, was 28,075; and the aggregate amount of salaries and wages paid them was \$16,968,907.05. The companies owned or operated 5,098 electric and cable box cars, 3,666 electric and cable open cars, 23 air motor box cars, 22 electric mail cars, 626 electric and cable freight, express, and service cars. There were 2,437 other cars in operation.

Insane.—The care of the insane is in the charge of a commission that consisted of Peter M. Wise, president (who was removed by Gov. Roosevelt on Dec. 20 for malfeasance in office), William C. Osborn, and William L. Parkhurst. Their report shows that on Oct. 1, 1900, there were 22,088 inmates in the State hospitals, against 21,435 in 1899. The expenditures for maintenance of the State hospitals for the year was \$3,599,631.56, or at the rate of \$165.38 per capita, against \$178.42 for 1899. This decrease was brought about by reduction in the number of employees, and has not caused any serious impairment in the proper administration of the hospitals. The total expenditure for construction work and repairs during the year was \$662,948.90. The commission reported that they have \$20,000,000 invested in buildings and equipments. The commission returned to their homes in other States and countries 115 non-

resident and alien patients, at a cost of \$4,541.56. The commission has collected \$122,860.49 from the relatives of insane patients liable for their support, and, in addition, has received from private or so-called "bond" cases \$87,333.13.

National Guard.—The Adjutant General reported at the close of the year that all organizations of the National Guard and Naval Militia were well equipped for active service with the exception of the hospital corps of the various commands, and the supplying of this branch of the service with the best obtainable equipment was being rapidly advanced. Gen. Charles F. Roe reported the aggregate strength of the National Guard on Sept. 30, 1900, to be 14,251, divided as follows: Commissioned officers, 855; enlisted men, 13,396. His report says: "A grand total of 10,045 enlisted men and seamen qualified in general and supplementary practice, the same being 83.74 per cent. of the number practicing. The condition of the Guard is much improved since the last report, with the exception of a few organizations. The attention paid to the detailed work, books, and internal discipline is marked. The performance of field service and practice marches by the organizations in camp this year was satisfactory. Capt. J. W. Miller, commanding the Naval Militia, reports that he is able to say that the city of New York has decided to construct an armory on the Brooklyn water front at the foot of 43d Street. The plans for this armory are now being considered by the city authorities, and a portion of the building will be erected during the winter. With some reluctance and after full consideration, and with the approval of the Governor, it was deemed advisable last summer to forego the tour of duty on the vessel provided by the Navy Department for the exercises of the Naval Militias of the various States, and to give our instruction in home waters under our own officers."

Civil Service.—The report of the commissioners for 1899 shows that the number of appointments was 2,652, divided as follows: Exempt class, 124; competitive class, 421; noncompetitive class (attendants, nurses, and similar positions in the State hospitals and institutions), 1,564; after noncompetitive provisional examination, 42; without examination, 501. The number of removals was 304, as follows: Exempt class, 10; competitive class, 48; noncompetitive class, 246. The number of resignations was 1,589, as follows: Exempt class, 59; competitive class, 212; noncompetitive class, 1,318. The number of deaths was 38, divided as follows: Exempt class, 6; competitive class, 24; noncompetitive class, 8. The number of transfers was 40 and the number of promotions 196. The report says: "For the first time since the passage of the civil service law, in 1883, every one of the many cities of the State possesses regularly prescribed rules and a classification of its civil service. On June 16, 1900, the commission extended the rules so as to include places in the civil service of the counties of Erie, New York, Kings, Queens, and Richmond. This action brought under the jurisdiction of the commission about 1,300 employees, making the number of places now subject to the State civil service rules about 9,000."

Historian.—The work of publishing the early records of the State was continued during the year, and in the War of the Revolution Series three volumes of the Public Papers of George Clinton, first Governor of New York, were issued. The first of these contains an introduction by the State Historian, and gives the military papers of Clinton for the years 1775, 1776, and 1777. Vol. II carries the record from June, 1777, to March, 1778, while the final volume ends with papers

dated in September, 1778. On many points of historical interest these papers throw much light, and they add greatly to our knowledge of the participation by the Empire State in the great events of the time of the Revolution. Of corresponding value are the three volumes entitled New York at Gettysburg, by William F. Fox, which constitute the final report of the State's Monument Commission. Illustrations of the monuments are given, and it tells how the New York State monument cost \$60,000. Prior to 1890 \$140,000 had been appropriated for monuments and tablets, together with \$10,000 for sites. In 1890 an appropriation of \$1,525 was made; in 1893-'94, \$77,034; and in 1894 and 1895, \$7,500.

The Palisades.—The commission appointed at the instance of Gov. Roosevelt

BENJAMIN B. ODELL,
GOVERNOR OF NEW YORK.

by the Hon. A. H. Green, president of the Society for the Preservation of Scenic and Historic Places and Objects, to act in behalf of New York State in conjunction with a like commission of New Jersey, appointed by act of Legislature, for the preservation of the Palisades, has accomplished its purpose, and its action is thus reported by Gov. Odell: "I desire to commend to your careful attention the report of the commissioners of the Palisades Interstate Park, and urge your action on their request for financial support in a spirit of liberality commensurate with the importance of the undertaking and the great public interest therein. I am able to say that the \$10,000 appropriated for the purpose of defraying the expenses of the commissioners and perfecting surveys and maps have been used entirely as the nucleus of a fund for acquiring and closing down the most destructive of the quarries. Blasting at these quarries stopped on Christmas eve, in accordance with the provisions of option contracts binding until June 1 next [1901]. The commissioners are securing options on several miles of the Palisades, and have obtained subscriptions amounting to more than \$120,000."

Lake George Battle Park.—In accordance with an act of the Legislature, the State Comptroller, on Sept. 12, completed the purchase of 25 acres at Lake George. This property includes the site of the old battlefield of the French and Indian War, and is to be added to a plot in the same locality, purchased in 1898 for the purpose of establishing a State park on the historic ground. That property covered about 10 acres, and a substantial house, to be used as a museum, stands upon it. The new purchase transferred to the State cost \$12,100, which amount was covered by an appropriation of \$14,000. A monument in memory of the troops who fell on that field will be erected by the Society of Colonial Wars.

Political.—A Republican State convention was held in Saratoga Springs, Sept. 4-5, which was called to order by Benjamin B. Odell, Jr., who nominated Timothy L. Woodruff as temporary chairman, while for permanent chairman Nevada N. Stranahan was chosen later. The platform

called attention to the continued prosperity of the nation, denied that imperialism was an issue, called attention to the lower tax rate, referred to the advantage of the Raines liquor tax law and of the franchise tax law. The condition of the canals and proposed improvements were discussed; the laws enacted for the just protection of the workman were indicated, the methods by which the interests of the farmers had been fostered were mentioned, and civil service reform, the National Guard, and militia received consideration. The administration of President McKinley and the nomination of Gov. Roosevelt were approved. In closing it contended that, covering the whole period of the seven years of its control of the State Government, the Republican party "points to a record during which the charge of maladministration can not be brought successfully against any of its officials. It is a record of progress and good government; of promises kept, not of pledges broken." The following candidates were then nominated and were chosen by acclamation: For Governor, Benjamin B. Odell, Jr., of Orange; Lieutenant Governor, Timothy L. Woodruff, of Kings; Secretary of State, John T. McDonough, of Albany; Comptroller, William J. Morgan, of Erie; Treasurer, John P. Jaeckel, of Cayuga; Attorney-General, John C. Davies, of Oneida; State Engineer and Surveyor, E. A. Bond, of Jefferson.

A Democratic State convention was held in Saratoga Springs, Sept. 11, 12, for selecting candidates for State officers. The meeting was called to order by Frank Campbell, who presented the name of Patrick H. McCarren as temporary chairman. Later George Raines was named as permanent chairman. The platform ratified the nomination for the presidency of William J. Bryan, condemned the ice trust, opposed the increase of State commissions, favored the taxing of probate franchises, denounced the Raines law, condemned the Republican canal policy, urged repeal of the election law for New York city, favored a practical civil service law with preference for veterans, and closed with an appeal to the patriotism and intelligence of the voting population to support, in State and nation, the party whose cardinal principles have ever been "equal and exact justice to all, special privileges to none; peace, commerce, and honest friendship with all nations, entangling alliances with none; home rule, individual liberty, common sense civil service, honest pay for honest toil, and the lowest possible taxation consistent with efficient administration." The nominations for Governor were: John B. Stanchfield, of Chemung, Bird S. Coler, and William F. Mackey, and a ballot showed the following vote: Stanchfield, 294; Coler, 154; and Mackey, 1. The remaining nominations were made by acclamation: Lieutenant Governor, William F. Mackey, of Erie; Secretary of State, John T. Norton, of Rensselaer; Comptroller, Edwin S. Atwater, of Dutchess; Treasurer, John B. Judson, of Fulton; Attorney-General, Thomas F. Conway, of Clinton; Engineer and Surveyor, Russell R. Stuart, of Onondaga.

The election, Nov. 6, resulted in the success of the ticket containing the Republican presidential electors by a vote of 821,992 against 678,386 for the Democratic ticket. On the State ticket, Odell received 804,859 votes against 693,733 votes for Stanchfield. The entire State Republican ticket was elected as nominated except the Comptroller, John J. Morgan, who died on Sept. 5, 1900, and to fill whose place Erastus C. Knight was chosen by the Republican State Committee. Thirty-four Representatives to Congress were elected, and of these 21 were Republican. Of the 13 Democrats chosen, 11 were from New York city, 1 was from

Buffalo, and 1 from Westchester County. A new Legislature was chosen, including in the Senate 35 Republicans and 15 Democrats, and in the Assembly 105 Republicans and 45 Democrats.

NEW YORK CITY. Government.—The city officers during the year were: Mayor, Robert A. Van Wyck; President of the Council, Randolph Guggenheimer; Borough Presidents—Manhattan, James J. Coogan; Brooklyn, Edward M. Grout; Bronx, Louis F. Haffen; Queens, Frederick Bowley; and Richmond, George Cromwell, all of whom are Tammany Democrats and took office on Jan. 1, 1898, except Mr. Coogan, who took office on Jan. 5, 1899. Also there are the following county officers: County Clerk, William Sohmer; Sheriff, William F. Grell; and Register, Isaac Fromme, all of whom are Tammany Democrats and took office on Jan. 1, 1898, except the sheriff, who took office on Jan. 1, 1900.

Finances.—The condition of the debts of the city of New York, including the boroughs of Manhattan, the Bronx, Brooklyn, Queens, and Richmond, on Jan. 1, 1901, is shown in the following statement:

A. FUNDED DEBT OF THE CITY OF NEW YORK AS NOW CONSTITUTED, ISSUED SUBSEQUENT TO JAN. 1, 1898.

1. Payable from the sinking fund of the city of New York under the provisions of section 206 of chapter 378 of the Laws of 1897....	\$69,521,851 85	
2. Payable from the water sinking fund of the city of New York under the provisions of section 10, Article VIII, of the Constitution of the State of New York, and section 206 of chapter 378 of the Laws of 1897.....	10,849,343 00	
3. Payable from taxation...	5,388,335 94	
4. Payable from assessments	1,997,124 08	
5. Payable from the rapid transit sinking fund under the provisions of chapter 4 of the Laws of 1891 as amended.....	1,000,000 00	
		\$88,256,654 87

B. FUNDED DEBT OF THE CITY OF NEW YORK AS CONSTITUTED PRIOR TO JAN. 1, 1898.

Boroughs of Manhattan and the Bronx, City of New York.

1. Payable from the sinking fund for the redemption of the city debt (first lien) under ordinances of the Common Council.....	\$509,200 00	
2. Payable from the sinking fund for the redemption of the city debt (second lien) under the provisions of section 213 of chapter 378 of the Laws of 1897.....	9,700,000 00	
3. Payable from the sinking fund for the redemption of the city debt under the provisions of section 229 of chapter 378 of the Laws of 1897.....	107,273,142 23	
4. Payable from the sinking fund for the redemption of the city debt under the provisions of section 1 of chapter 79 of the Laws of 1889..	9,823,100 00	
5. Payable from the sinking fund for the redemption of the city debt No. 2 under the provisions of the constitutional amendment adopted Nov. 4, 1894, and of section 10, Article VIII, of the Constitution of the State of New York.....	41,977,000 00	
6. Payable from taxation...	21,811,250 00	
7. Payable from assessments	8,602,536 21	

New York County.

8. Payable from taxation...	9,379,200 00	209,075,428 44
-----------------------------	--------------	-----------------------

C. FUNDED DEBTS OF CORPORATIONS IN THE BOROUGH OF BROOKLYN, INCLUDING KINGS COUNTY, ISSUED PRIOR TO JAN. 1, 1898.

City of Brooklyn, including Annexed Towns.

1. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 488 of the Laws of 1860 and amendments thereof.....	\$8,697,000 00
2. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 572 of the Laws of 1860 and chapter 443 of the Laws of 1881.....	2,350,000 00
3. Payable from the sinking fund of the city of Brooklyn under the provisions of chapter 648 of the Laws of 1895.....	7,065,567 41
4. Payable from the water sinking fund of the city of Brooklyn under the provisions of chapter 396 of the Laws of 1859, and acts amendatory thereof and supplementary thereto....	14,095,749 76
5. Payable from taxation...	24,517,884 93
6. Payable from assessments	6,397,573 00

Kings County.

7. Payable from taxation...	13,767,392 83	76,890,666 93
-----------------------------	---------------	----------------------

D. FUNDED DEBTS OF CORPORATIONS IN THE BOROUGH OF QUEENS, ISSUED PRIOR TO JAN. 1, 1898.

Corporations other than Queens County.

1. Payable from the sinking fund of Long Island City for the redemption of revenue bonds under the provisions of chapter 783 of the Laws of 1895.....	\$660,000 00
2. Payable from the sinking fund of Long Island City for the redemption of fire bonds under the provisions of chapter 123 of the Laws of 1894.....	35,000 00
Payable from the sinking fund of Long Island City for the redemption of water bonds under the provisions of chapter 759, Laws of 1895.....	19,000 00
3. Payable from water revenue.....	705,000 00
4. Payable from taxation...	6,890,218 68
5. Payable from assessments	1,276,737 80

Queens County, amount to be borne by the City of New York.

6. Payable from taxation....	3,772,346 39	12,858,450 87
------------------------------	--------------	----------------------

E. FUNDED DEBTS OF CORPORATIONS IN THE BOROUGH OF RICHMOND, INCLUDING RICHMOND COUNTY, ISSUED PRIOR TO JAN. 1, 1898.

Corporations other than Richmond County.

1. Payable from taxation...	\$1,200,698 28
<i>Richmond County.</i>	
2. Payable from taxation...	1,624,000 00
	2,824,698 28
Total funded debt.....	\$390,905,899 39

TEMPORARY DEBT.

Issued in anticipation of taxes of 1900.....	\$2,107,600 00	2,107,600 00
Total bonded debt.....		\$392,013,499 39

SUMMARY.

Total gross funded debt.....	369,906,899 89
Less amount held by the commissioners of the sinking fund on account of sinking fund No. 1.....	\$61,843,736 88
Less amount held by the commissioners of the sinking fund on account of sinking fund No. 2.....	20,426,828 42
Less amount held by the commissioners of the sinking fund on account of sinking fund of the city of New York.....	1,071,027 90
Less amount held by the commissioners of the sinking fund on account of the water sinking fund of the city of New York.....	802,874 04
Less amount held by the commissioners of the sinking fund on account of the sinking fund of the city of Brooklyn.....	7,640,886 41
Less amount held by the commissioners of the sinking fund on account of the sinking fund of Long Island City for the redemption of revenue bonds.....	380,000 00
Less amount held by the commissioners of the sinking fund on account of the water sinking fund of the city of Brooklyn. Not separated last year from the sinking fund of the city of Brooklyn.....	674,275 86
	112,388,129 01
Net funded debt.....	\$277,617,770 88
Revenue bonds.....	2,107,600 00
Net bonded debt.....	\$279,725,370 88

In the year bonds and corporate stock of the city were issued as follows: For public buildings, \$9,724,309.68; for public parks, \$3,315,196.98; for bridges, \$5,317,000; for repavement and improvement of roads, drives, etc., \$3,010,200; for water supply, \$3,450,000; for docks, \$3,874,705.46; for soldiers' and sailors' memorial arch, \$202,000; for street cleaning, \$50,000; for rapid transit railroad, \$1,000,000; for Police Department, \$136,389.71; for opening and widening streets, \$2,598,211.10; for refunding matured loans, \$700,000; for local improvements, \$17,185.35; for street improvements, \$350,000; special revenue bonds, \$5,388,335.94; a total of \$39,133,534.22. The tax rate adopted by the Municipal Assembly on Aug. 15 was, for Manhattan and Bronx, \$2.24 for each \$100 of assessment. The rate for 1899 was \$2.48. For Brooklyn the rate was \$2.32; Queens, \$2.34; and Richmond, \$2.22.

Board of Estimate and Apportionment.—This body consists of the Mayor, the President and Secretary of the Department of Taxes and Assessment, the Comptroller, the President of the Council, and the Corporation Counsel. This board allowed the following named amounts for 1901: The Mayoralty and Bureau of Licenses, \$63,755; Municipal Assembly, \$200,052; Department of Finance, \$842,305; Law Department, \$399,758; Board of Public Improvements, \$289,500; Department of Highways, \$2,178,144.67; Department of Sewers, \$801,350.67; Department of Bridges, \$431,728.25; Department of Public Buildings, Lighting, and Supplies, \$3,904,809; Department of Water Supply, \$1,525,219.17; Department of Parks, \$1,863,288.45; Department of Public Charities, \$1,895,491.01; Department of Correction, \$758,775; Department of Health, \$1,053,990; Police Department, \$11,938,343.42; Department of Street Cleaning, \$5,001,922.27; Fire Department, \$4,864,485; Department of Buildings, \$546,525; Department of Taxes and Assessments, \$334,450; Board of Assessors, \$42,-

700; Department of Education, \$18,512,817.69; College of the City of New York, \$220,000; Normal College, \$195,000; coroners, \$165,150; Commissioners of Accounts, \$156,000; Board of City Record, \$563,200; libraries, \$299,663.30; local city courts, \$985,250; charitable institutions, \$2,786,011.06; borough officers, \$51,300; miscellaneous, \$987,978.56; fund for street and park openings, \$1,184,553.06; interest on the city debt, \$12,100,206.05; redemption of the city debt, \$10,332,173.18; county expenses (including State taxes)—New York County, \$7,658,704.84; Kings County, \$2,437,945.45; Queens County, \$363,861.71; Richmond County, \$160,056.62; total, \$98,096,413.43.

The total budgets for all boroughs of New York city for 1900 aggregated \$90,778,972.48. The budget for 1901 therefore shows an increase of \$7,317,440.95.

Taxes and Assessments.—These are in the charge of a department, of which Thomas L. Feitner is president. The other members are Edward C. Sheehy, Arthur C. Salmon, Thomas J. Patterson, and Ferdinand Levy (salaries, \$7,000 each). Office, 280 Broadway. They report the total valuations of real and personal property as assessed for taxation in 1900 to be \$3,654,122,193, as against \$3,478,352,029 for 1899. They were distributed as follows: Real estate—Manhattan, \$2,231,502,855; the Bronx, \$138,494,849; Brooklyn, \$551,308,500; Queens, \$104,427,772; Richmond, \$42,723,924; total, \$3,168,547,700. Personal property—Manhattan, \$421,860,527; the Bronx, \$8,013,641; Brooklyn, \$43,937,440; Queens, \$55,498,681; Richmond, \$6,246,204; total, \$535,556,493. The report shows the assessed valuation put on franchises under the special law for 1900 was as follows: Manhattan, \$166,763,669; Bronx borough, \$7,272,249; Brooklyn, \$39,250,552; Queens, \$4,030,817; Richmond, \$2,356,064; total, \$219,679,351. The assessed valuations of corporations were greatly reduced in 1900. In 1899 the corporations in Manhattan paid taxes on \$53,530,050, and on account of the passage of the franchise tax law assessments for \$10,994,400 only were levied for 1900, which is a loss of \$45,535,650.

Charter Revision.—In accordance with the law passed by the Legislature, Gov. Roosevelt appointed on April 25, as the New York City Charter Revision Commission, the following gentlemen: George L. Rives, Charles C. Beaman, Franklin Bartlett, Henry W. Taft, John D. Crimmins, Frank J. Goodnow, Edgar J. Levey, Alexander T. Mason, Charles A. Schieren, James McKean, Isaac M. Kapper, William C. De Witt, James L. Wells, George W. Davison, and George Cromwell. On organization, George L. Rives was chosen chairman of the commission, and the work was divided among five subcommittees, who prepared their reports, which were then considered by the commission as a whole. The report was submitted to the Governor on Dec. 1. It recommended that permanent power of removal be lodged in the Mayor; greater increased powers with the borough presidents, including almost complete control of local matters, and the charge of the Sewer and Highway departments, which as now constituted are to be abolished; the abolition of the Council and the doubling in size of the Board of Aldermen; a single-headed police commission; a bipartisan election board of four commissioners; abolition of the Board of Public Improvements; practical rebuilding of the school system; a single-headed charities commission; transfer of control of the emergency hospitals of Manhattan and the Bronx to a board of unpaid trustees; and radical changes in other departments. On Jan. 21, 1901, the report of the commission was sent to the Legislature

with a message from Gov. Odell, in which he said: "The report gives evidence of careful study, and the recommendations are in the main calculated to bring about an improvement in the administration of the affairs of the greater municipality."

Judiciary.—The vacancy in the Supreme Court caused by the death of Frederick Smyth was filled on Sept. 1 by the appointment of James A. Blanchard, and that caused by the death of Henry R. Beekman was filled on Dec. 22 by the appointment of J. Proctor Clarke. District-Attorney Gardiner continued to be the subject of much criticism during the year. The City Club submitted to the Governor 80 charges with 2,000 specifications. These were referred to Ansley Wilcox, who was appointed to report on the charges and take necessary testimony. His report, after passing through the hands of Attorney-General Davies, was considered by the Governor, and the charges were dismissed on the ground that they failed "to show any specific act of malfeasance or malfeasance grave enough to warrant the extreme step of removing from office an elective officer." Subsequent to the election, on Nov. 6, charges were again preferred against Mr. Gardiner by Deputy Attorney-General H. H. Hammond, and on Dec. 22 he was removed from office. In announcing the removal, Gov. Roosevelt said: "The charge vitally affecting the conduct of the District Attorney is that which relates to his attitude at and about election, toward the indictment of Chief of Police Devery, after the latter had issued a scandalously improper and seditious order to the police force under him. Where the conduct of the District Attorney of the County of New York affects elections, this conduct becomes a matter not merely of county, but of State and national concern. Fraud or violence at the polls in New York County in a national election may concern not merely the county itself, not merely the other counties of the State, but also the other States of the Union. It is a mere truism to assert that honest elections, free from both fraud and violence, stand at the very basis of our form of republican self-government. When the chief of police of the city of New York issued a public order to his subordinates in which he incited them to criminal violation of the law—an order which was certain to cow and terrorize some men and to encourage the entire disorderly and lawless element—the situation became so grave as to call for the interference of the chief executive of the State. Accordingly, the chief executive notified the Mayor, the sheriff, and the District Attorney that in view of the issuance of this order they would be held to a strict accountability for their acts in preserving or failing to preserve the public peace. Alone, among the other city officials charged with the solemn duty of enforcing the laws, the District Attorney, on whom rested the heaviest responsibility of the enforcement of the law, gave by public utterance aid and comfort to the chief of police." Eugene A. Philbin, a Democrat, was at once appointed to succeed Mr. Gardiner, and he has since largely reorganized the office.

Legal.—The city Law Department is in charge of the Corporation Counsel. The incumbent during the year was John Whalen. His report for 1900 shows that the city is defendant in 3,719 actions brought to force it to pay the prevailing rate of wages, and there are now pending in all 11,145 cases. There are 1,166 actions the city has to defend on account of injuries to persons and property. There were 4,150 suits begun against the city in reference to contracts. The total number of actions and proceedings begun

against the city in 1900 numbered 5,961. During the year 2,005 actions were terminated. In the condemnation proceedings to acquire title to lands in Westchester and Putnam Counties \$6,394,994 was demanded for lands taken, and the total awards were \$2,214,900, which represents a saving of \$4,180,093. There are now pending 3,722 suits against the city to recover under the prevailing rate of wages acts. These actions seek to recover amounts ranging from \$25 to \$20,000. The claims against the city in negligence actions amount to \$476,311, and the aggregate sum recovered in 16 of the 47 suits amounted to \$19,700, or 4 per cent. of the claims. The amount involved in the litigation carried on by the Corporation Counsel's office amounted to \$116,469,887.

Parks.—This department is under the charge of three commissioners, one having jurisdiction in Manhattan and Richmond, one in Brooklyn and Queens, and one in Bronx. During 1899 the commissioners were: George C. Clausen, Manhattan and Richmond; George V. Brower, Brooklyn and Queens; and August Moebus, Bronx. The office is in the Arsenal, Fifth Avenue and 65th Street. On March 30 the Park Commissioners decided that thereafter all statuary to be accepted must harmonize with the scenery of the parks, and they adopted a new set of rules governing the placing of statuary and memorials. The most sweeping rule provides that no statue, bust, memorial, or memorial building of any description shall be erected in any New York park where the scenery is of a predominating character. Statues can only be placed as adjuncts to buildings, bridges, or viaducts when they are required to heighten and beautify the effect of the scenery. Only statues of great artistic beauty and appropriate in size may be placed in any of the small parks or at the intersection of two or more avenues. These statues must be of great national or universal interest to be accepted. On June 1 Hamilton Fish Park was opened to the public with suitable ceremonies. This little park of 3½ acres is between Houston, Pitt, Stanton, and Sheriff Streets, and cost about \$2,000,000. It came into existence in consequence of the small parks act of April, 1895, and is intended as a breathing space and playground for those who live in the vicinity. The park was transformed from a mass of tenements. It contains a handsome structure to be used as a gymnasium and bathing house, a large playground, and two fountains.

Zoological Park.—This is under the care of the New York Zoological Society, of which Levi P. Morton is president, with William T. Hornaday as director. It is in the Bronx, and covers an area of 261 acres. The report of the Executive Committee shows that the present membership of the society numbered 945, an increase of 271 in 1900. The report also shows that the Park Improvement fund, on Jan. 1, 1901, amounted to \$214,499.88. There is still a balance of \$35,500.12, which must be subscribed by Aug. 1 in order to complete the fund of \$250,000 which the society is obliged to raise under the original agreement with the city. The total attendance of the year was 525,928, the largest daily attendance being on Decoration Day—20,134. The director announced that during the year he obtained a skin of what proved to be an entirely new species of mountain sheep, which is so strikingly differentiated as to render its title to independent specific rank beyond question. He named it *Ovis fannini* in honor of Curator Fannin of the Provincial Museum of British Columbia. Its head, neck, breast, abdomen, and inside of fore legs are snow white. The other portions of the body are a

brownish gray, giving the animal the appearance of being covered with a gray blanket.

Botanical Garden.—This is under the charge of a Board of Managers, of which D. O. Mills is president, with Nathaniel L. Britton as director. The report for 1900 shows that 160 annual members have qualified, making the total annual members 837. Seventeen life members have qualified, increasing the total to 85. The plants that have been growing for several years in the greenhouses of Columbia University have been transferred and placed in the 8 completed houses of the main conservatories. This collection contains about 1,800 specimens, and has been brought together with the expenditure of \$110. The number of individual species in this collection is 8,833. In the year 48,895 herbarium specimens were acquired by gift, exchange, and purchase. About 67,650 sheets, containing fully 112,050 specimens, were mounted and distributed in the herbarium cases. The director has accepted from Columbia University, acting for Barnard College, the herbarium formed by the late Dr. Thomas Morong. It is estimated to contain not less than 18,000 specimens. The report also shows that the botanical library now contains 2,832 volumes.

Fire.—This department is managed by a single commissioner. The incumbent during the year was John J. Scannell. The chief of the department was Edward F. Croker. The headquarters are at 157 East 67th Street. For the boroughs of Brooklyn and Queens there is a deputy commissioner. During 1900 the fire-fighting force in the boroughs of Manhattan, the Bronx, Brooklyn, and Queens consisted of 2,431 officers and men, apportioned among 135 engine companies, 40 hook-and-ladder companies, 6 fire boats, and 4 water towers. A volunteer force, consisting of 2,000 men in the borough of Queens, and an equal number in the borough of Richmond, increased the total force to 4,000 men. During the year there were 8,405 fires. In the Bureau of Combustibles there was collected in all the boroughs for licenses, permits, and penalties \$89,136 during the year. In the bureau of the fire marshal, 44 arson cases were tried, resulting in 7 convictions and 29 dismissals, with 8 cases still pending.

Police.—This department is managed by a board of four commissioners, appointed by the Mayor for a term of six years. The board during the year consisted of Bernard J. York, president; John B. Sexton, Jacob Hess, and Henry E. Abell. The chief of police is William S. Devery, and the central office is at 300 Mulberry Street. The force on Dec. 31 consisted of a chief, 4 deputy chiefs, 10 inspectors, 85 captains, 308 sergeants, 92 detective sergeants, 386 roundsmen, 6,261 patrolmen, 176 doormen, 22 surgeons, 57 matrons, a superintendent of telegraphs, 2 assistant superintendents of telegraphs, 14 telegraph operators, 72 linemen, a battery man, and a messenger. The number of arrests made in Manhattan and Bronx during the year was 93,137. Of these 20,058 were women and 73,079 men. The arrests included 8 for arson; attempted suicide, 243 men and 210 women; burglary, 1,041, including 12 women; disorderly conduct, 17,285 men and 9,142 women; intoxication, 12,585 men and 4,727 women; grand larceny, 2,142 men and 498 women; petty larceny, 3,574 men and 557 women; murder, 5 men, 1 woman; homicide, 235 men and 14 women; robbery, 386 men and 16 women; vagrancy, 3,596 men and 705 women; excise violation, 1,198 men and 19 women; violation of corporation ordinances, 4,644 men and 52 women. The detective bureau made 1,115 arrests, and recovered property valued at \$126,000.59. The bureau secured 109

convictions of criminals. The number of lost children received at headquarters was 2,036 boys and 1,121 girls. The number of foundlings picked up was 91 boys and 7 girls, of which there were 5 each colored boy and girl babies.

Health.—The collection of vital statistics is under the care of a board, consisting of three commissioners, one of whom must have been for five years a practicing physician, the health officers of the port, and the president of the Police Board. The officials for 1900 were: Michael C. Murphy, president (salary, \$7,500); Dr. William T. Jenkins, Dr. John B. Cosby, Health Officer Dr. Alvah H. Doty, and President Bernard J. York of the Police Board. The secretary of the board is Emmons Clark, and the office is on the corner of Sixth Avenue and 55th Street. The vital statistics were as follow: The number of deaths in 1900 was 70,872, against 66,343 in 1899. There were 25,836 deaths of children under five years, 16,579 under one year, 9,652 sixty-five years and over, 16,851 deaths in institutions, and 39,024 deaths in tenements. There were 81,721 births and 32,330 marriages reported. The number of deaths from pneumonia was 10,482, against 8,531 for 1899—more than from any other disease. There were 761 suicides, against 628 for 1899, and 139 homicides, against 137 for 1899. The death rates for the 5 boroughs are as follow: Manhattan, 20.99; Bronx, 21.51; Brooklyn, 20.09; Queens, 17.95; and Richmond, 20.52. The rate for the 5 boroughs together is 20.57. The statistics give the estimated population of the city for 1899 as 3,444,675, and for 1900, 3,536,517.

Education.—The board having control of this subject consists of 20 commissioners, who are appointed by the Mayor, and receive no salary. The president of the board at the beginning of the year was Joseph J. Little, who continued in office until May 19, when, having resigned owing to failing health, he was succeeded by Miles M. O'Brien. The borough superintendent is John Jasper, and the headquarters are at the corner of Park Avenue and 59th Street. The report of the borough superintendent on Sept. 10, the opening day of the schools, showed that the register of pupils was 248,719; attendance of pupils, 221,247; half-day and part-time classes, 318; children refused admission, 2,395; vacant sittings, 19,010; regular teachers, including principals, present, 5,397; regular teachers, including principals, absent, 238. The following new schools were opened on Sept. 10: No. 174, at Attorney and Rivington Streets, with 24 classrooms and accommodations for 1,080 pupils, and No. 173, at Beaumont Avenue and 173d Street, with 30 classrooms and accommodations for 1,350 pupils. In addition the following extensions and annexes were opened: School No. 98, Williams Bridge, 8 classrooms, accommodating 360 pupils; School No. 46, St. Nicholas Avenue and 146th Street, 15 classrooms, accommodating 675 pupils; School No. 5, 141st Street, near Edgewood Avenue, 8 classrooms, accommodating 360 pupils; School No. 90, annex, in Tinton Avenue, 15 classrooms, accommodating 675 pupils; Girls' High School annex, Elm and Grand Streets, accommodating 350 pupils. Ten new schoolhouses were ready for occupancy and completed before Dec. 1. These, with the new schools and extensions opened on Sept. 10, accommodated 23,000 children. The total registration of pupils in the boroughs of Manhattan and the Bronx last year was 241,623.

The free public lecture courses given at public schools at night successfully closed their tenth season, and Dr. Henry M. Leipziger, superintendent of lectures, reported that in 1890 lectures

were given in 6 places—186 lectures to a total attendance of about 75,000. In 1899-1900 lectures were provided in 48 places; 1,850 lectures were given, and the attendance was about 538,000. The formal presentation of the new hall of the Board of Education, Park Avenue and 59th Street, to the city took place on Feb. 25.

Rapid Transit.—This is cared for by a commission consisting of Alexander E. Orr (president), Woodbury Langdon, Morris K. Jesup, George L. Rives, John H. Starin, and Charles S. Smith, together with the Mayor and Comptroller *ex-officio*. Office, 32 Nassau Street. Sealed bids for the building of a system of underground rapid transit were opened on Jan. 15, and on Feb. 25 the Board of Rapid Transit Railroad Commissioners awarded a contract to John B. McDonald for its construction, the route to extend from City Hall in Manhattan, through that borough, and into the borough of the Bronx. The board having fixed the cost of the proposed work at \$36,500,000, made requisition upon the Board of Estimate and Apportionment for that money, and on March 1, 1900, the Board of Estimate and Apportionment authorized the issue of corporate stock of New York to that amount. The construction company divided the 4 sections in the engineer's division of the road into 15 sections for convenience and expediency in calculating quantities, as follows: First, Post Office to center of Chambers Street; second, Chambers Street to Great Jones Street; third, Great Jones to 33d Street; fourth, 33d to 41st Street; fifth, 41st to 60th Street; sixth, 60th to 104th Street; seventh, portal of tunnel at 103d Street and Broadway to 110th Street and Lenox Avenue; eighth, 110th to 135th Street, Lenox Avenue; ninth, 135th Street to Brook Avenue, across the Harlem; tenth, East Side viaduct, three miles long, beginning at Brook Avenue; eleventh, 104th to 125th Street, Broadway; twelfth, 125th Street to 133d Street, being the Manhattan Valley viaduct; thirteenth, 133d to 182d Street; fourteenth, 182d Street to Hillside Avenue; fifteenth, West Side viaduct; each of which sections was let to a subcontractor. On March 24 the formal breaking of the ground for the rapid transit tunnel took place in City Hall Park.

On April 20 the commissioners authorized the construction along Elm Street, between the lower side of Worth Street and the north side of Astor Place, of galleries for the accommodation of the pipes, wires, sewers, and other subsurface structures. Subsequently this work was abandoned in consequence of a resolution passed on Nov. 27, but it was said that this was only preliminary to taking up a more comprehensive plan of building galleries along the whole line of railway. This will require legislation in Albany to amend the law governing the construction.

Meanwhile the work of the Construction Company was promptly begun in various parts of the city, and has steadily progressed.

Street Railways.—The order to remove the elevated tracks in Battery Park served on the Manhattan Railway by the Park Commissioners resulted in the presentation of the choice of two proposed routes to the railway officials by the commissioners. These the railway decided not to accept, and on June 20 served President Clausen with a preliminary injunction restraining the Park Commissioners from removing or interfering with the structure of the Manhattan Railway Company at Battery Park. The State Board of Railroad Commissioners granted on Aug. 6 the application of the Metropolitan Street Railway for permission to increase its capital stock from

\$45,000,000 to \$52,000,000. The proceeds of the sale of the new stock will be used in changing cable lines to underground electric trolley system in Columbus Avenue, Broadway, and Lexington Avenue, and in changing the horse road on 34th Street to electric storage battery system. The expenditures for construction and equipment work will be about \$3,000,000, and the company proposes to utilize the remaining \$4,000,000 for the payment of its floating debt, contracted in the purchase of stock in other street surface railroad corporations. A through train service over the Brooklyn Bridge and the Fifth Avenue line of the Brooklyn Elevated Railroad was begun on Dec. 19 by the Brooklyn Rapid Transit Company. The trains run between Park Row and Bath Beach.

Bridges.—In 1900 bonds amounting to \$4,000,000 were issued for carrying on the construction of the new East River Bridge. The construction has so far progressed that the anchorages of the bridge have been completed so far as can be done before the completion of the cables. The steel towers have been erected, and cable saddles have been placed thereon ready for cable making to begin. The spans connecting the steel towers and the anchorages are well advanced. Preparations were made to begin the erection of temporary foot bridges, which are to serve as false works for the support of the main cables during erection.

During the year corporate stock amounting to \$1,000,000 was issued for the construction of an additional bridge, known as Bridge No. 3, between the boroughs of Manhattan and Brooklyn. The plans for the proposed bridge have been approved by the War Department of the United States, and the contract for soundings and borings was awarded and the preliminary work completed.

Monuments.—The beautiful Naval Arch that was erected in honor of the home-coming of Admiral Dewey was removed in the early winter. A fund of \$200,000 had been collected for its construction in stone, but as the public seemed indifferent to its preservation the plan was abandoned. A request from the South Carolina and West Indian Exhibition asking permission to remove the arch and transfer it to Charleston was submitted to the Municipal Council.

On April 19 a bronze group of Washington and Lafayette, by Bartholdi, presented by Charles Broadway Rouss, was unveiled in West 114th Street, at the junction of Morningside and Manhattan Avenues. The presentation speech was made by Gen. Horatio C. King, and the statues were accepted on behalf of the city by Mr. Randolph Guggenheimer. Mr. Edmond Bruwaert, French consul in New York, who represented the French ambassador to the United States, made a short address.

A memorial tablet in honor of the officers, soldiers, and sailors of the War of Independence was placed by the New York State Society of the Daughters of the Revolution at the Reformed Collegiate Church, corner of Fifth Avenue and 29th Street, on April 24. The presentation address was made by Mrs. C. F. Roe, the regent of the society, and the tablet was accepted by Rev. Dr. Coe, representing the church.

The corner stone of the Soldiers' and Sailors' Monument, at Riverside Drive and 89th Street, was laid on Dec. 15. Bishop Farley opened the ceremonies with a prayer, and Col. Albert D. Shaw, commander in chief of the Grand Army of the Republic, delivered an address. Gov. Roosevelt then laid the corner stone, on which was the sim-

ple inscription: "Erected by the citizens of New York, MCM." A flag presented by the James Monroe Woman's Relief Corps was unfurled, and Wilson's Battery fired a salute of 19 guns.

Mayor Van Wyck and the Ice Trust.—On May 1 the American Ice Company notified its customers that the price of ice for the season would be 60 cents for 100 pounds, and that no small pieces would be sold. The daily newspapers at once criticised this course, and showed that great suffering would ensue among the poorer classes. This led to considerable agitation, which resulted in showing that the American Ice Company had secured extensive dock privileges, and possessed a complete monopoly of the ice market in the city. Further investigation developed the fact that among the stockholders were a number of Tammany politicians, including Mayor Van Wyck. On June 4 a formal request in the form of an affidavit for the removal from office of Mayor Van Wyck was presented to Gov. Roosevelt on behalf of W. R. Hearst, one of the stockholders of the American Ice Company. The Governor referred the charges to the Attorney-General, who investigated the matter and reported back his opinion, in consequence of which, on Nov. 23, Gov. Roosevelt gave the following decision: "I concur in the Attorney-General's opinion. My judgment is that the so-called Ice Trust is not a corporation in which the Mayor of New York should have stock, but no proof has been offered of any willful violation of law on the part of the Mayor such as would justify the drastic measure of removing him from office." Meanwhile the price of ice had been lowered to 30 cents for 100 pounds, and the agitation resulted in saving to the community an amount estimated to be not less than \$6,000,000. On May 28, 1900, the Attorney-General instituted proceedings to annul the certificate of the ice company. The corporation, through its counsel, fought the action at every stage on technicalities, not on the merits of the case. The first decision was in favor of the State, and an appeal was taken, which was decided on Nov. 20 in favor of the ice company.

Attack on the Police.—An appeal to Police-Captain Herlihy, of the Twelfth Precinct, for "the protection of the young, the innocent, and the defenseless against the leprous harpies who are hired as runners and touters for the lowest and most infamous dens of vice," by Canon Paddock, of the Pro-cathedral in Stanton Street, having been received "not only with contempt and derision, but with coarsest insult and obloquy." Bishop Potter, in accordance with instructions laid upon him by the Convention of the Episcopal Church of the Diocese of New York, on Nov. 15, addressed Mayor Van Wyck, protesting "against a condition of things in which vice is not only tolerated but shielded and encouraged by those whose sworn duty it is to repress and discourage it, and, in the name of unsullied youth and innocence, of young girls and their mothers who, though living under conditions often of privation and hard struggle for a livelihood, have in them every instinct of virtue and purity that are the ornaments of any so-called gentlewomen in the land. I know those of whom I speak; their homes and their lives, their toil, and their aspirations. Their sensibility to insult or outrage is as keen as theirs who are in your household or mine, and before God and in the face of the citizens of New York I protest, as my people have charged me to do, against the habitual insult, the persistent menace, the unalterably defiling contacts to which day by day, because of the base

complicity of the police of New York with the lowest forms of vice and crime, they are subjected. And, in the name of these little ones, these weak and defenseless ones, Christian and Hebrew alike, of many races and tongues, but of homes in which God is feared and his law revered, and virtue and decency honored and exemplified, I call upon you, sir, to save these people, who are in a very real way committed to your charge, from a living hell, defiling, deadly, damning, to which the criminal supineness of the constituted authorities, set for the defense of decency and good order, threatens to doom them." This letter was acknowledged by the Mayor, who said that he had sent copies of the bishop's letter to the Police Commissioners and to the District Attorney of New York County, "with the request that they assist and co-operate with you and with the Police Department. I wish here to assure you that I will exert every power which the law has given me to right the wrongs and do away with the conditions of which you complain, and to secure a hearty and efficient co-operation by the Police Department with all who are working to do away with public violations of law and decency." On the same day that Bishop Potter's communication was sent to Mayor Van Wyck, Richard Croker called a meeting of Tammany Hall Executive Committee, at which an Anti-Vice Committee was appointed consisting of Lewis Nixon (chairman), Michael C. Murphy, John W. Keller, George C. Clausen, and M. Warley Platzeck, to examine into vice as found on the East Side, and to devise means for its eradication. Subsequently public addresses were made by Bishop Potter, calling attention to the iniquitous condition of affairs, and later Captain Herlihy was brought to trial for his behavior. At the close of the year an improved condition of morals prevailed in the objectionable districts.

Close of the Old Century.—On Dec. 18 the Municipal Assembly appropriated \$5,000 for a celebration to welcome the new century, and accordingly on the night of Dec. 31 City Hall was decorated with flags and electric lights, with the inscription over the main entrance of "1900—Welcome—1901. 20th Century." An elaborate exhibition of fireworks was given, and at 10.45 P. M. the official ceremonies were held, consisting of the following programme: Overture by Sousa's Band; address by Randolph Guggenheimer, President of the Council; song, *Der Tag des Herrn*, by the United German Singing Societies; overture by the band; song, *America*, by the People's Choral Union; overture; song, *The Star-spangled Banner*, by the People's Choral Union; overture; song, *Ring Out, Wild Bells*, by the People's Choral Union; overture; song, *Hallelujah Chorus*, by the People's Choral Union; overture; song, *Sea, Mountain, and Prairie*, by the People's Choral Union; overture; song, *Hymn of Thanks*, by the People's Choral Union; overture; song, *Aus der Heimath*, by the United German Singing Societies; and overture.

Post Office.—The charge of the mail is under the care of the National Government, and the Postmaster is Cornelius Van Cott. The Post Office building is at the junction of Broadway and Park Row. Besides the general post office, there are 32 branch offices, and of these Branch O, on the corner of Fifth Avenue and 17th Street, was opened on Oct. 29 with an increased force. According to the report of the Postmaster for the year ending June 30, 1900, the grand total of mail matter handled for the year was 684,768,464 pieces, as compared with 645,878,017 pieces for 1899, a gain of 38,890,447 pieces. The total in-

cluded 254,021,387 letters, 39,046,576 postals, and 391,700,501 pieces of other matter, an increase of 23,886,204 letters, 3,858,094 postals, and 11,146,149 pieces of other matter. In the local department there were handled 177,821,160 letters, 27,357,102 postals, and 217,471,772 pieces of other matter. There were received by mail 39,830,283 letters, 9,957,571 postals, and 103,613,684 pieces of other matter. In the foreign department there were handled 36,369,944 letters, 1,731,903 postals, and 70,615,045 pieces of other matter.

Immigration.—The reception of immigrants in New York is under national supervision. The commissioner, who is appointed by the President, is Thomas Fitchie. Ellis Island, in New York Bay, is the landing place for the immigrants. The report for the year ending June 30 shows that the total number of aliens arriving during the year was 341,712, of which 228,414 were males and 113,298 were females. By races and people the immigration was: Armenian and Syrian, 3,600; Bohemian, 2,329; Croatsians and Dalmatians, 9,521; Dutch and Flemish, 1,516; English, Scotch, and Welsh, 5,917; Finnish, 6,783; French, 1,956; Germans, 23,382; Greek, 3,734; Hebrews, 44,520; Irish, 25,200; northern Italy, 16,690; southern Italy, 82,329; Lithuanians, 9,170; Magyars, 11,353; Polish, 36,835; Portuguese, 3,779; Rutenians, 2,653; Scandinavians, 22,847; Slovaks, 25,392; Spanish, 309; all others, 897. In addition to the foregoing, there were 99,760 American citizens who came within the scope of the inspection, by reason of the fact that they shipped in a manner to secure tickets at immigration rates and to save the usual expenses. Nearly one fourth of this number shipped as steerage passengers.

Customhouse.—The passage of goods out of the United States and the entry of foreign wares are under the Federal supervision. The Customhouse is on Wall Street, between William and Hanover Streets, and the collector is George R. Bidwell. In 1900 the imports of merchandise were valued at \$524,647,898. The amount of duties collected on merchandise, miscellaneous receipts not included, was \$151,376,607.38. Imports of gold and silver amounted to \$29,039,783. Domestic exports of merchandise were valued at \$525,807,605. Domestic exports of gold and silver amounted to \$99,311,005. The foreign exports of merchandise were valued at \$11,786,781. The amount of merchandise in transit trade amounted to \$42,823,383. The transit trade of gold and silver amounted to \$4,063,955. The imports of merchandise from Porto Rico from May, 1900, to Jan. 1, 1901, were valued at \$3,222,942, yielding duties of \$186,986.58.

Political.—The candidates for justices of the Supreme Court in the First Judicial District were Edward Patterson (Democrat and Republican), Philip H. Dugro (Democrat), and James A. Blanchard (Republican); and for judge of the City Court Francis B. Delehanty (Democrat) and Robert C. Morris (Republican) were nominated. These were the only local officials to be voted for, and the election resulted in the success of the Democratic candidates. Congressmen for the first 16 districts of New York were voted for, and the election resulted in the choice of the Democratic candidates, except in the First (Queens, Nassau, and Suffolk Counties), Third (Brooklyn), Fourth (Brooklyn), and Fourteenth (New York city), where the Republican candidates were successful. Twenty-two State Senators were chosen, and of these 14 were Democrats and 8 Republicans. Of the 35 members of the Assembly from New York County there were chosen 26 Democrats and 9 Republicans; from the annexed dis-

trict, 2 Republicans; from Kings County, 10 Democrats and 11 Republicans; from Queens County, 1 Democrat and 2 Republicans; and from Richmond County 1 Democrat; making a total representation of 38 Democrats and 23 Republicans from New York city. An interesting feature of the campaign was the great sound-money parade held on Nov. 3, when for seven hours "the flower of the business and professional interests of New York," to the number of 85,000, marched in a steady downpour of rain through streets slippery with mud, in acknowledgment of their belief in the gold standard.

NICARAGUA, a republic in Central America. By the Constitution as revised on July 11, 1894, the legislative power is vested in a Senate of 24 members elected for four years by the provinces, and a House of Representatives elected by universal male suffrage for the same time, 2 members of each house for each province. The Congress meets without convocation for ninety days every year. The President is elected directly by the people for four years. Gen. Santos J. Zelaya was elected President of the Republic for the term ending Jan. 30, 1902. The Cabinet appointed on Dec. 3, 1898, was composed as follows: Secretary of the Interior, Justice, Police, and Ecclesiastical Affairs, Gen. Fernando Abaunza; Secretary of War and Marine, José Dolores Estrada; Secretary of Foreign Affairs and Public Instruction, Dr. Joaquin Sansón; Secretary of Finance and Public Credit, Col. Felix Pedro Zelaya; Secretary of Public Works, Dr. Leopoldo Ramirez Mairena.

Area and Population.—The republic has an area of 49,200 square miles, with a population of 420,000, including 40,000 uncivilized Indians. Indians, negroes, and mixed races form the bulk of the population. The descendants of the Spanish settlers of pure blood are few, but recent settlers from the United States and Europe have augmented the white element. Managua, one capital, has about 20,000 inhabitants; Leon, the other, has 34,000. The system of public education is very imperfect. Although there are 1,020 elementary schools officially reported and 2 higher schools for boys and 1 for girls, only a small percentage of the children of school age receive a fair elementary education.

Finances.—The tax on commerce in 1897 yielded \$2,645,249; liquor tax, \$620,090; export duty on coffee, \$187,529; tax on slaughtering animals, \$132,742; direct tax, \$134,248; national railroad and steamboats, \$693,391; telegraphs and telephones, \$47,559; post office, \$33,726; other resources, \$223,527; total revenue, \$4,688,061. The expenditure on the departments of Government was \$2,667,012, of which \$850,013 went for internal development, \$429,303 for war, \$446,719 for finance, and \$132,804 for public instruction; besides \$899,441 for supplementary appropriations and \$176,124 for special war expenditure. The total expenditures were \$3,852,750. For 1898 the expenditures authorized by Congress were \$5,097,588, of which \$663,008 were for war, \$1,099,888 for internal development, and \$1,735,816 for military and naval purposes.

Nicaragua raised a sterling debt in 1886, issuing bonds for £285,000 at 6 per cent. In 1894 default was made in the payment of interest, and in 1894, by arrangement with the English creditors, the rate was reduced to 4 per cent., and coupons in arrears were made redeemable at half their face value. On July 1, 1899, the amount of principal outstanding was £276,500 and of coupons unpaid £9,530. There is an internal debt amounting in 1898 to \$7,500,000. The national wealth is estimated at \$33,972,600 for rural and \$8,590,429 for urban property.

Commerce and Production.—Rearing cattle and raising coffee and cacao are the chief industries of the country. Bananas have been planted extensively in recent years. Americans and Germans are the largest coffee planters. Sugar cane was formerly grown more than it is now, the plantations having been injured through political disturbances. Tobacco is raised in some districts. Plantations of rubber trees have been made with Government aid, and good profits are expected. The export of rubber from the forests has been interdicted, except from those of the Mosquito Territory. The mines, most of the ore containing both gold and silver, some of it silver and copper, are owned by American companies. There were 16,242 ounces of bar gold shipped abroad in 1898, the quantity having doubled in three years. The shipments of coffee were about 120,000 bags; of rubber, 6,907 hundredweight; of hides, 8,211 hundredweight; of cattle, 10,003 head; of silver dollars, 271,591. The trade in 1898 was divided among different countries, as follows, values being given in pounds sterling from British consular reports:

COUNTRIES.	Imports.	Exports.
Great Britain	£288,960	£196,000
United States.....	181,900	172,000
Germany.....	102,000	175,000
France.....	46,000	22,500
Rest of Europe.....	40,000	28,710
Central America.....	6,400	43,000
Other countries.....	7,990	500
Total	£573,240	£636,710

Railroads, Posts, and Telegraphs.—A railroad, 58 miles long, connects the port of Corinto with Momotombo and another runs from Managua to Granada, 33 miles. The cost of these lines was \$2,700,000. Another railroad has been built by the Government from Masaga to Jinotepe, affording transportation for coffee to Corinto. The post offices in 1896 sent out 1,376,366 pieces of mail matter and delivered 1,242,876. There are 1,245 miles of telegraph wire.

The Nicaragua Canal.—The Maritime Canal Company, a Nicaraguan corporation created for the purpose of constructing a canal across the isthmus of Nicaragua by an American company with headquarters in New York, began the work under a concession from the Government of Nicaragua in April, 1887, which provided that the canal should be completed within ten years from Oct. 9, 1889. The parent company was organized with the view of obtaining a subsidy from the United States Government or having that Government as a partner in the enterprise, or transferring to it the concession and the partly constructed canal. The United States Congress took action at various times, but none that was decisive, and successive technical commissions have examined the route and reported to the Government. The engineering questions connected with the project were not solved to the general satisfaction of Congress and the American public, and beyond these there was the political question of the rights of the United States over the canal even if the Government should decide to construct it. An inter-oceanic canal was desired not alone for the facilitation of American commerce and for intercommunication between the Atlantic and the Pacific States in time of peace, but for the passage of naval vessels between the two oceans in time of war; or at least the military security demanded that it should not by any possibility be made use of by an enemy for the transit of naval forces or troops. The Clayton-Bulwer treaty stood in the way of the military control of the canal by the

United States, as it provides that neither the United States nor Great Britain shall acquire territorial rights in Central America, and that both powers shall exercise joint control over any canal that may be built there to join the two oceans. The modification proposed in the treaty by Secretary Hay, by which the United States shall have exclusive control, but shall not be permitted to fortify the canal, and shall leave it open to the ships of all nations in peace or war, was not acceptable to the Senate. Meanwhile the Nicaraguan Government, on the expiration of the term of the concession granted to the Maritime Canal Company, took possession of the property of the company and removed cars, rails, and other property from Greytown into the interior, the Nicaraguan Congress having approved the decision of the Minister of Public Works that the concession was void owing to nonfulfillment of its conditions.

NINETEENTH CENTURY, IMPORTANT EVENTS OF THE. The century just closed is universally recognized as the most wonderful, in many respects, since the dawn of history. Before that century immense territories that are now under cultivation and contain cities and villages in communication with the whole civilized world were unexplored wilderness; the ports of China and Japan were closed to foreigners; there was not in the whole world a railroad, a steamboat, an electric telegraph, a sewing machine, a reaping machine, a telephone, a photograph, an electric light, a power printing press, spectrum analysis, utilized India rubber, or a known anæsthetic. The lives of some of the greatest men in various departments of activity were entirely within the nineteenth century—Dickens, Thackeray, and Mrs. Stowe among novelists; Tennyson and the Brownings among poets; Green and Parkman among historians; Goodyear, Howe, and Mergenthaler among inventors; Darwin and Henry among scientists; Gladstone, Bismarck, Cavour, and Lincoln among statesmen; and Gordon and Grant among soldiers. Two of the very greatest—Lincoln and Darwin—were born on the same day, Feb. 12, 1809—a year that is notable for the famous men that it brought into the world. Elaborate chapters have been written for various journals and magazines, each tracing the century's development of some one science, industry, or literature. A complete history of the century would fill a book much larger than this volume. The following notes are intended only to indicate briefly such events as were in one way or another significant, and to refresh the reader's memory as he reviews his reading or his experience.

1801.

- Jan. 1, the first asteroid (Ceres) was discovered by Piazzi.
- Jan. 1, the union of Great Britain and Ireland was effected.
- March 12, a British expedition defeated the French at Alexandria.
- March 24, Paul, Emperor of Russia, was assassinated.
- April 2, Nelson destroyed the Danish fleet before Copenhagen.
- May 16, William Henry Seward was born.
- July 5, David G. Farragut was born.
- Aug. 8, the war between the United States and the pirates of Tripoli was begun.
- Sept. 10, the compound blowpipe was invented by Prof. Robert Hare, of Philadelphia.
- Oct. 19, Philadelphia was first supplied with aqueduct water.
- Nov. 2, the independence of Hayti was proclaimed by Toussaint l'Ouverture.

1802.

- Jan. 8, Bonaparte was made President of the Italian Republic.
 Feb. 26, Victor Hugo was born.
 March 7, Sir Edwin Landseer was born.
 March 16, the United States Military Academy at West Point was founded.
 March 27, the peace of Amiens, between Great Britain, France, Spain, and the Batavian Republic, was proclaimed.
 April 27, Louis Kossuth was born.
 May 10, George Romney, artist, died.
 Aug. 2, Bonaparte was proclaimed consul for life.
 Nov. 18, sheet copper was first manufactured in Boston.
 Nov. 18, subjection of Switzerland; Piedmont, Parma, and Elba were annexed to France.

1803.

- Feb. 19, Ohio was admitted as a State.
 April 30, France sold Louisiana to the United States.
 May 12, Baron Liebig was born.
 May 25, Ralph Waldo Emerson was born.
 June 15, the percussion lock for guns and the Congreve rocket were invented.
 Sept. 18, Malthus's Essay on Population was published.
 Sept. 19, Robert Emmet was executed.
 Dec. 11, Hector Berlioz was born.
 Dec. 20, the United States took possession of Louisiana.

1804.

- Feb. 12, Immanuel Kant died.
 Feb. 15, New Jersey passed an act giving freedom to all persons born in the State after July 4 of that year.
 Feb. 24, the British and Foreign Bible Society was formed.
 May 18, Napoleon Bonaparte assumed the title of Emperor.
 July 4, Nathaniel Hawthorne was born.
 July 12, Alexander Hamilton died from a wound received the day previous in his duel with Burr.
 Sept. 25, the twelfth amendment to the United States Constitution was adopted.
 Nov. 23, Franklin Pierce was born.

1805.

- April 2, Hans Christian Andersen was born.
 May 9, Friedrich von Schiller died.
 May 26, Napoleon was crowned King of Italy at Milan.
 May 26, Mungo Park made a second expedition to Africa and was killed at Boossa.
 June 22, Joseph Mazzini was born.
 Oct. 21, the battle of Trafalgar was fought.
 Nov. 15, Meriwether Lewis and William Clark reached the mouth of Columbia river.
 Dec. 2, Napoleon won his victory at Austerlitz.

1806.

- Jan. 8, the Cape of Good Hope was captured from the Dutch by the British.
 Jan. 23, William Pitt died.
 March 6, Elizabeth Barrett Browning was born.
 April 1, Prussia took possession of Hanover.
 June 10, resolutions were carried in the British Parliament for the abolition of the slave trade.
 July 12, Holland was created a kingdom.
 Aug. 28, coal was first mined in the United States.
 Sept. 8, Lewis and Clark returned from their exploring expedition across America to the Pacific.
 Sept. 13, Charles James Fox died.
 Oct. 14, the battle of Jena was fought.

1807.

- Jan. 19, Robert Edward Lee was born.
 Feb. 27, Henry Wadsworth Longfellow was born.
 May 22, the trial of Aaron Burr for conspiracy against the United States was begun.
 May 28, Louis Agassiz was born.
 June 21, occurred the conflict between the English ship Leopard and the American frigate Chesapeake.
 July 4, Giuseppe Garibaldi was born.
 Aug. 11, Fulton's steamboat, the Clermont, made its first trip going from New York to Albany.
 Sept. 5, Copenhagen was bombarded and the Danish fleet captured by the British.
 Nov. 18, gas lamps were introduced and used in the streets of London.
 Dec. 17, John Greenleaf Whittier was born.
 Dec. 21, the embargo act was passed. It forbade any vessel to sail from the United States to a foreign port.

1808.

- Jan. 1, Congress by unanimous vote prohibited the importation of slaves.
 Jan. 13, Salmon Portland Chase was born.
 March 24, Maria Felicia Malibran was born.
 May 6, the steamboat Phenix, built by John Stevens, made her first ocean trip from Hoboken to Philadelphia.
 June 3, Jefferson Davis was born.
 Aug. 17, Arthur Wellesley defeated the French at Roliça.
 Sept. 8, the Russian fleet in the Tagus surrendered to the British.
 Oct. 16, Selim III, Sultan of Turkey, was murdered.
 Nov. 6, Finland was conquered by Russia from Sweden.

 April 1, the allied English and American troops fought Mataafa's army in the Samoan Islands.
 May 18, the Universal Peace Conference assembled at The Hague.
 Sept. 10, the Transvaal Government demanded as an ultimatum the withdrawal of British troops from their threatening position on the border. This was virtually the beginning of the South African War.
 Sept. 11, the Orange Free State burghers invaded Natal.
 Oct. 16, the Dismal Swamp Canal was opened.

1900.

Jan. 16, the United States Senate ratified the Samoan treaty.
 Jan. 20, John Ruskin died.
 Feb. 27, the Boers under Gen. Cronje surrendered to Lord Roberts.
 Feb. 28, the siege of Ladysmith was raised.
 March 13, British troops entered Bloemfontein, the capital of the Orange Free State.
 March 14, President McKinley signed the gold standard bill.
 March 27, Gen. Joubert died.
 April 14, a world's fair was opened in Paris.
 April 26, Hull and a portion of Ottawa, Canada, were burned and 12,000 persons were rendered homeless. The loss was estimated at \$15,000,000.
 June 5, British troops entered Pretoria, the capital of the South African Republic.
 June 17, the allies captured the Taku forts in China.
 June 19, the Chinese began their attacks on the legations in Peking.
 June 30, a fire on the wharves of Hoboken, N. J., destroyed several hundred lives and shipping and other property to the amount of about \$10,000,000.
 July 14, the allies captured Tientsin, China.
 July 30, King Humbert of Italy was assassinated.
 Sept. 1, Lord Roberts proclaimed the annexation of the Transvaal Republic to the British Empire.
 Sept. 6, the Duke of Abruzzi's polar expedition re-

ported that it had visited the highest northern latitude ever reached—86° 33'.

Sept. 8, Galveston, Texas, was struck by a tornado, which destroyed about 7,000 lives and about \$30,000,000 worth of property.

Oct. 22, John Sherman died.

Nov. 5, a convention to frame a constitution for Cuba began its sessions in Havana.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 393,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,039 in 1850; 992,622 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; 1,617,947 in 1890; and 1,893,810 in 1900. Capital, Raleigh.

Government.—The following were the State officers during the year: Governor, Daniel L. Russell, Republican; Lieutenant Governor, C. A. Reynolds, Republican; Secretary of State, Cyrus Thompson, Populist; Treasurer, W. H. Worth, Populist; Auditor, H. W. Ayer, Populist; Attorney-General, Z. V. Walser, Republican; Adjutant General, B. S. Royster, Democrat; Superintendent of Instruction, C. H. Mebane, Populist; Commissioner of Agriculture, John R. Smith, Republican; Insurance Commissioner, James R. Young, Democrat; Labor Commissioner, J. V. Hamrick, Populist; Railroad Commissioners, R. B. Royster, L. C. Caldwell, J. H. Pearson, and D. H. Abbott; Chief Justice of the Supreme Court, William T. Faircloth, Republican; Associate Justices, R. M. Douglas, Republican; Walter Clark, Democrat; D. M. Furches, Republican; W. A. Montgomery, Democrat; Clerk, Thomas S. Kenan, Democrat.

Population.—The population by counties, according to the census of 1900, is as follows: Alamance, 25,665; Alexander, 10,960; Alleghany, 7,759; Anson, 21,570; Ashe, 19,581; Beaufort, 26,404; Bertie, 20,538; Bladen, 17,677; Brunswick, 12,657; Buncombe, 44,288; Burke, 15,699; Cabarrus, 22,456; Caldwell, 15,694; Camden, 5,474; Carteret, 11,811; Caswell, 15,028; Catawba, 22,133; Chatham, 23,912; Cherokee, 11,860; Chowan, 10,258; Clay, 4,532; Cleveland, 25,078; Columbus, 21,274; Craven, 24,160; Cumberland, 29,249; Currituck, 6,529; Dare, 4,757; Davidson, 23,403; Davie, 12,115; Duplin, 22,405; Durham, 26,233; Edgecombe, 26,591; Forsyth, 35,261; Franklin, 25,116; Gaston, 27,903; Gates, 10,413; Graham, 4,343; Granville, 23,263; Greene, 12,038; Guilford, 39,074; Halifax, 30,793; Harnett, 15,988; Haywood, 16,222; Henderson, 14,104; Hertford, 14,204; Hyde, 9,278; Iredell, 29,064; Jackson, 11,853; Johnston, 32,250; Jones, 8,226; Lenoir, 18,639; Lincoln, 15,498; McDowell, 12,567; Macon, 12,104; Madison, 20,644; Martin, 15,383; Mecklenburg, 55,268; Mitchell, 15,221; Montgomery, 14,197; Moore, 23,622; Nash, 25,478; New Hanover, 25,785; Northampton, 21,150; Onslow, 11,940; Orange, 14,690; Pamlico, 8,045; Pasquotank, 13,660; Pender, 13,381; Perquimans, 10,091; Person, 16,685; Pitt, 30,889; Polk, 7,004; Randolph, 28,232; Richmond, 28,408; Robeson, 40,371; Rockingham, 33,163; Rowan, 31,066; Rutherford, 25,101; Sampson, 26,380; Stanly, 15,220; Stokes, 19,866; Surry, 25,515; Swain, 8,401; Transylvania, 6,620; Tyrrell, 4,980; Union, 27,156; Vance, 16,684; Wake, 54,626; Warren, 19,151; Washington, 10,608; Watauga, 13,417; Wayne, 31,356; Wilkes, 26,872; Wilson, 23,596; Yadkin, 11,464.

Finances.—On Nov. 30, 1900, the balance in the treasury was \$124,362.72; of this amount, \$23,219.50 was of the educational fund, while the remainder belonged to the general fund. This does not include amounts against which there were

outstanding warrants. The actual cash balance in the treasury was \$124,559.19.

The receipts of the public fund for the fiscal year ending Nov. 30 were \$1,618,103.91, which is an increase of \$72,386.22 over the year 1899. The disbursements for the same year were \$1,647,824.99, an increase of expenditures over 1899 of \$51,618.92.

The Auditor's report shows a decrease in the assessed value of railroad property, compared with 1899, as well as a decrease in the steamboat and canal property. There is an increase in the value of telegraph and telephone property.

In regard to pensions, the report says the number of pensioners dropped from the pension roll for various causes during the year was 385. The total number of pensioners was 6,129, and the total amount expended for pensions was \$119,070. The total amount expended for pensions since 1876 is \$1,336,546.76.

The present interest-bearing debt of the State amounts to \$6,287,350. The noninterest-bearing debt amounts to \$240,420.

Insurance.—An insurance department was established in 1899. The organizations licensed to do business in the State under the new law included 29 life companies, 87 fire and marine companies, 13 fidelity and casualty companies, and 22 fraternal orders. In the fiscal year ending April 1, 1900, the commissioner collected for taxes on gross receipts \$57,147.87; for licenses, \$26,533.34; for fees, \$6,364; for licenses of subagents, \$2,820; total, \$92,865.21.

Railroads.—A long railroad tax suit was ended in January, 1901. In its annual report, the Corporation Commission gives the following account of the condition of the railroads of the State: "The gross earnings of all the railroads from operation in North Carolina were \$14,919,832, against \$12,995,725 for 1899, while the operating expenses were \$9,336,681, against \$8,186,500 for 1899; so that the income from operation was \$5,582,950, against \$4,809,235 for 1899. Sixty-three miles were added to the railroad mileage of North Carolina during the year. Not a railroad in the State is in the hands of a receiver. The Wilmington and Weldon Railroad Company, the Norfolk and Carolina Railroad Company, the Atlantic Coast Line Railroad Company of South Carolina, the Atlantic Coast Line Railroad Company of Virginia, and the Southeastern Railroad Company were consolidated April 23, 1900, and have since been operated as the Atlantic Coast Line Railroad Company. This new corporation owns 1,711.24 miles of railroad."

Banks.—Twenty-six new banks were organized in 1900, so that there are 92 State banks in operation in the State, as follow: Fifty-six under charters with general banking houses, 10 savings banks, and 26 private banks. These banks have a capital of \$2,686,383.47, against a capital for 1899 of \$2,307,397.80, making an increase of \$379,085.67. They have deposits amounting to \$8,674,655.50, against \$6,511,640.71 for 1899, an increase of \$2,163,014.79. The total resources of the State banks, as shown by their last report, were \$14,617,959.64.

Education.—According to the census of 1870, the number of illiterate white men in North Carolina was 33,111; in 1880, 44,420; in 1890, 49,570; and at the last date it was shown that there were 13,000 white men who could read but could not write. The North Carolina College of Agriculture and Mechanic Arts had in 1900 an enrollment of 302 students. They earned by working odd hours during the session \$2,300. There are full courses and short courses. It offers practical and technical education in agriculture, stock raising,

horticulture, mechanical engineering, civil engineering, electrical engineering, textile industry, chemistry, and architecture. It also offers practical training in carpentry, wood turning, blacksmithing, machinery work, mill work, boiler tending, engine tending, and dynamo tending. Instruction is given in English, mathematics, history, civics, political economy, physics, chemistry, botany, zoölogy, physiology, physical geography, geology, and mineralogy. In his annual report President Winston described the pressing need felt for rooms and equipment of all kinds.

The Educational Committee of the North Carolina Teachers' Assembly report that the public schools are in a chaotic state, and that there is complete lack of co-operation. They outline a plan for improvement. By a decision of the Supreme Court, the fines collected by towns and cities upon prosecutions for violation of the criminal laws of the State must all go into the common-school fund, and not into the treasuries of the towns and cities. The Legislature was asked to appropriate \$300,000 to secure four months' schooling during the year in each county, which never has been done.

The Agricultural and Mechanical College for the colored race, which was established by the State in 1891 in Greensboro, has been greatly crippled during the past two years because \$10,000 has been cut off from the regular appropriation by the Legislature. The course of study and manual work includes wood turning, carpentering, forging, barn and dairy work, and greenhouse work, including grafting, potting, and making cuttings. The department of domestic science includes the chemistry of cooking, cutting and fitting as well as general sewing, milk testing, and butter making. It is the high school for colored boys and girls over fourteen years of age, and is principally fed from the public schools. There is a tuition fee of \$1 a month, while a certain number of students from each county are admitted free.

State Institutions.—The Confederate Soldiers' Home has had a fine hospital building added, with modern equipment. It has 56 inmates.

The Central Hospital for the Insane, at Raleigh, receives \$50,000 a year from the State. It has 500 patients. The building of two new wards allows of the separation of the women from the men. The Executive Committee complains that the dangerous insane are not properly cared for, and can not be under present conditions.

The Penitentiary is self-supporting, and at the last report had \$101,668 in available cash assets. In his report the manager says: "We have contracts for labor on railroads, in shirt factory and on other works, that bring into our treasury \$4,000 to \$4,500 of earnings per month. We certainly will have an income from the brickyard of \$25,000; these items together with other available moneys for labor, etc., the supplies on hand, as shown by the inventories, should be amply sufficient to run the institution during this year without any embarrassment to the management."

The report of Dr. J. F. Miller, superintendent of the State Hospital, at Goldsboro, shows that in the biennial period of 1899-1900 651 patients were treated, with a general average of 454. The percentage of cures was a little over 49, and the percentage of deaths a little over 6; and there were remaining in the hospital, Nov. 30, 439 patients.

A special committee appointed to investigate the State prisons reported extravagance and incompetency.

Industries.—There has been a great revival or establishment in certain industries. Many new cotton mills were built in 1900, some of them of

great capacity. The increase in cotton acreage in the South is placed at 8.7 per cent.; number of acres, 25,558,000, an increase over 1899 of 2,036,000. Ten per cent. of the increase is in North Carolina. Small fruits are beginning to be largely cultivated. Strawberry raising employs 700 Northern persons, who have invested in land and who ship the fruit north. All fruits grow well in the middle of the State, and cultivation on large plantations is increasing. The soil and climate are especially adapted to apple raising. Northern capital is about to establish a great sheep ranch in the mountain region in Burke County.

Political.—The Democratic convention assembled in Raleigh, April 11. The platform approved the national platform of 1896, and further declared: "We denounce the tariff legislation of the Republican party which has increased the burdens

CHARLES B. AYCOCK,
GOVERNOR OF NORTH CAROLINA.

of taxation upon our consumers and increased the powers of the trusts and monopolies to rob the people.

"We denounce the Republican party for its passage of the recent legislation by which the gold standard has been fixed upon our people.

"We are in favor of peaceful commercial expansion, but denounce imperialism and militarism.

"We admire the heroism and ability with which the Hon. William Jennings Bryan has defended the principles of the Democratic party, and hereby instruct the delegation from this State to the next national Democratic convention to vote for his renomination.

"We denounce the administration of the Republican party in North Carolina by which negroes were placed in high and responsible official positions which ought to have been filled by white people.

"We condemn free passes.

"We favor the election of United States Senators by the people.

"We instruct the State Executive Committee to make provision for the holding of a primary on the first Tuesday of next November for the selection of a United States Senator by the Democratic voters of the State, at which every elector who has voted the Democratic ticket in the State election shall be entitled to cast one vote for one man for United States Senate, and the candidates who receive the majority of the votes so cast in the whole State shall receive the support of the Democratic members of the Legislature."

The platform adopted by the Republican convention, May 2, contained these declarations:

"In spite of the official records, which show that there has been no negro domination, and no possibility of negro domination in the State or in any of its counties, during the past quarter of a century, the Democratic leaders have determined to wage the coming campaign upon the race issue alone, and they go before the people with a scheme of disfranchisement which is the most impudent assault upon the Constitution of the United States

and the most shocking act of party perfidy ever attempted by men who recognize the obligation of an oath or the sanctity of a public pledge. We denounce with indignation and abhorrence the Democratic proposition that the right to vote should be made dependent upon heredity, and thus build up an aristocracy of birth upon the ruins of free government.

"The administration of the affairs of the State and of the several counties during four years of Republican ascendancy has been scrupulously clean, faithful, and economical. During this period the credit of the State, as shown by the market value of its bonds, has reached the highest point known in our history, and we challenge a comparison of this record with that of the Democracy during any like period.

"We are opposed to combinations of capital whenever they become destructive of rights of individual citizens, and such combinations should be suppressed by adequate statutes enacted by the Legislatures of the several States, or by Congress if the resulting evils are beyond the power and jurisdiction of the States.

"The Republican party has always fostered popular education; that party engrafted in the organic law of the State the mandatory requirements providing public schools for both whites and blacks, but that party will never brand ignorance as a crime whose penalty is disfranchisement, so long as the cause of that ignorance is the neglect of the State."

The following State officers (all Democrats) were elected: Governor, C. B. Aycock; Lieutenant Governor, W. D. Turner; Secretary of State, J. B. Grimes; Treasurer, B. R. Lacey; Auditor, B. F. Dixon; Attorney-General, R. D. Gilmer; Superintendent of Education, T. F. Toon; Commissioner of Agriculture, S. L. Patterson; Commissioner of Insurance, James R. Young; Adjutant General, B. S. Royster.

The important issue in the election was the following amendment to the State Constitution, which was submitted to the people:

"SECTION 1. Every male person born in the United States, and every male person who has been naturalized, twenty-one years of age, and possessing the qualifications set out in this article, shall be entitled to vote at any election by the people in the State, except as herein otherwise provided.

"SEC. 2. He shall have resided in the State of North Carolina for two years, in the county six months, and in the precinct, ward, or other election district in which he offers to vote four months next preceding the election: Provided, that removal from one precinct, ward, or other election district to another in the same county shall not operate to deprive any person of the right to vote in the precinct, ward, or other election district from which he has removed until four months after such removal. No person who has been convicted, or who has confessed his guilt in open court upon indictment, of any crime, the punishment of which now is, or may hereafter be, imprisonment in the State's Prison, shall be permitted to vote unless the said person shall be restored to citizenship in the manner prescribed by law.

"SEC. 3. Every person offering to vote shall be at the time a legally registered voter as herein prescribed and in the manner hereafter provided by law, and the General Assembly of North Carolina shall enact general registration laws to carry into effect the provisions of this article.

"SEC. 4. Every person presenting himself for registration shall be able to read and write any section

of the Constitution in the English language; and, before he shall be entitled to vote, he shall have paid on or before the first day of May, of the year in which he proposes to vote, his poll tax for the previous year as prescribed by Article V, section 1, of the Constitution. But no male person who was on Jan. 1, 1867, or at any time prior thereto, entitled to vote under the laws of any State in the United States wherein he then resided, and no lineal descendant of any such person, shall be denied the right to register and vote at any election in this State by reason of his failure to possess the educational qualification herein prescribed: Provided, he shall have registered in accordance with the terms of this section prior to Dec. 1, 1908.

"The General Assembly shall provide for the registration of all persons entitled to vote without the educational qualifications herein prescribed, and shall, on or before Nov. 1, 1908, provide for the making of a permanent record of such registration, and all persons so registered shall forever thereafter have the right to vote in all elections by the people in this State, unless disqualified under section 2 of this article: Provided, such person shall have paid his poll tax as above required.

"SEC. 5. That this amendment to the Constitution is presented and adopted as one indivisible plan for the regulation of the suffrage, with the intent and purpose to so connect the different parts, and to make them so dependent upon each other, that the whole shall stand or fall together."

The amendment was adopted by a large majority. It is to go into effect July 1, 1900.

At the presidential election in November the State Democratic electoral ticket received 157,736 votes and the Republican 132,997. The Democratic majority was thus about 5,000 greater than in 1896.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles. The population in 1890 was 182,719; in 1900 it was 319,146. Capital, Bismarck.

Government.—The following were the State officers in 1900: Governor, Frederick B. Fancher; Lieutenant Governor, J. M. Devine; Secretary of State, Fred Falley; Treasurer, D. W. Driscoll; Auditor, A. N. Carlblom; Attorney-General, John F. Cowan; Superintendent of Education, J. G. Halland; Adjutant General, Elliott S. Miller; Commissioner of Insurance, George W. Harrison; Commissioner of Agriculture, H. U. Thomas; State Examiner, H. A. Langlie; Railroad Commissioners, Luke L. Walton, John Simons, Henry Erickson; Land Commissioner, D. J. Laxdal; Superintendent of Irrigation and Forestry, W. W. Barrett; Oil Inspector, P. B. Wickham; Game Warden, G. E. Bowers; Chief Justice of the Supreme Court, J. M. Bartholomew; Associate Justices, Alfred Wallin, N. C. Young; Clerk, R. D. Hoskins—all Republicans.

The State officers are elected for two years in November of the even-numbered years. The Legislature meets biennially in January of the odd-numbered years.

Population.—The increase of population in the State during the decade was 74.6 per cent. Some counties—like Williams, Wells, and others in which the settlement has been unusually rapid—show increases of several hundred per cent. All the counties show increases, but the greatest percentage is in the central and western parts of the State.

The cities having more than 2,000 inhabitants are:

CITIES.	1890.	1900.
Fargo.....	5,064	9,589
Grand Forks.....	4,979	7,652
Bismarck.....	2,181	3,319
Jamestown.....	2,296	2,853
Valley City.....	1,089	2,346
Grafton.....	1,594	2,373
Wahpeton.....	1,510	2,222
Dickinson.....	897	2,076

Dickinson's remarkable growth, 131 per cent., is due to the development of the western part of the State. Valley City, with 124 per cent. increase, has been aided by the "Soo" Railroad.

Finances.—The semi-annual statement of the Treasurer, published in August, shows the receipts and disbursements of his office for the six months ending July 1. The statement shows a total balance in the various funds, Jan. 1, of \$209,898.70, of which \$59,060.19 was in the general funds. The receipts from all sources in the six-months period was \$703,147.94, and the disbursements \$736,610.73, leaving a balance on hand July 1, 1900, of \$167,426. Of this amount \$40,289.36 was in the general fund. The miscellaneous receipts from various sources of revenue, including fees of State officers and similar sources, was \$138,850.76. The total receipts to the general fund from taxes, paid in by the counties, was \$341,008.98.

The tuition fund, distributed for the benefit of the schools of the State, received \$4,395.40 from fines through the State. From the interest and income fund, turned into the State tuition fund from interest paid on State school funds, land contracts, etc., the total receipts are \$98,646.84. The interest on bonds held by the permanent school funds of the State aggregates \$21,069.71, and the interest on mortgages \$4,456.95. The total receipts from installments on farm loans made on agricultural lands throughout the State from the permanent school fund were \$8,417, and the redemption of bonds aggregated about \$6,000. The sale of Government lands, of which by a recent law the State receives 5 per cent., brought in \$3,219.80.

Among the items of disbursement were \$100 for the conviction of horse thieves, \$17,076 from the wolf bounty fund in the redemption of certificates, and \$18,000 interest on the public debt.

The statement of balances shows \$40,289 in the general fund, \$58,302 in the bond interest fund, \$11,000 in the school fund, \$14,000 in the tuition fund, \$1,600 in the wolf bounty fund, \$15,000 in the establishment fund for the twine and cordage plant, and \$16,000 in the operating fund for the same institution.

There was a total of \$39,033 in suspended banks, Dec. 31, 1899, and of this \$2,953.70 was collected in dividends during the six months. Of the balance shown in the general fund, the amount in suspended banks is included.

Valuations.—The total valuation of the State this year, as fixed by the Board of Equalization, was about \$4,000,000 more than in 1899. The amount was \$117,789,615, of which the sum of \$73,304,983 is real property, \$17,367,525 is railroad property, and \$27,117,107 is personal property.

The largest single item of personal valuation is that of horses over three years old. There are 204,240 returned by the assessors, and the average value is a little over \$30, making the total value \$6,735,244. The total assessed valuation of all classes of horses in the State is about \$7,500,000, and of cattle about \$5,000,000.

There are 114,000 head of cattle one year old returned this year, against 93,000 last year; of two-year-old cattle, 88,000 this year, against 64-

000 last year; last year there were 136,000 cows returned, and this year 157,000.

The number of sheep returned last year was 265,000, and this year 306,000.

The railroads were valued at the same rate as in 1899, an average of \$4,500 a mile. A small increase of mileage added a little to the total.

The tax rate was made the same, 3.8 mills for general State purposes, 0.5 mill for bond interest, and 0.2 mill for wolf bounty. The amounts ordered raised by the State board are: For general purposes, \$447,600; for interest on the State debt, \$58,894; and for wolf bounty, \$22,507.

Education.—The school population this year was 92,347, an increase of 8,038 over that of 1899. The largest increase is in those counties in which there was the greatest amount of immigration from other States. About 400 new schoolhouses have been built. Formerly a tax of 2 mills was levied on all property in the State for school purposes, and the amount was apportioned according to the number of children. By the present law the tax in each county is apportioned in the county. From the State are received only fines and the income of the permanent school fund. This fund now amounts to about \$920,000.

The normal schools have each an attendance of about 200.

The Agricultural College has about 290 students, nearly 100 of whom were taking a farm course of three months.

The State High School Board has prepared a uniform course of study for the high schools, and the superintendent one for the common schools; so that pupils may pass upon certificate from any grammar school to any high school, and from a high school to the university.

The university opened with an attendance 50 per cent. larger this autumn than at the same time in 1899.

The enrollment at the Indian schools in the State was 1,152, and the average attendance 1,223. A new building is to be erected for the Grand River school.

Charities and Corrections.—The Asylum for the Insane had 344 patients in June. A new ward building and a laundry were built with the \$50,000 from the bond issue authorized by the Legislature, and another ward building is needed. Ten years ago it cost the State \$305.15 for every patient in the hospital. For the biennial period just closed the cost of maintenance was \$154.39, and this amount is \$20 less than in the preceding biennial period. The patients are now maintained at the institution at an average cost of \$11.87 a month.

The report of the School for the Deaf, at Devil's Lake, shows an expenditure during the biennial period of \$19,870 for improvements, bringing the value of the property of the institution up to \$42,370. The attendance during the past year was 59, of whom 27 were boys and 32 girls.

The State has no institution for the blind, but sends 9 pupils this year to the South Dakota School for the Blind.

During the first year of the State Manual Training School 160 students were enrolled, and 50 others were denied admission, the equipment being insufficient.

The biennial report of the Penitentiary shows that there were 122 convicts at the end of the year. The twine plant was finished and put into operation in March. There are three buildings, fitted with machinery sufficient for turning out 10,000 pounds of binding twine a day. A complete electric plant and a new inclosing wall are among the other improvements.

Military.—The State militia in 1899 consisted of: General staff, 9; cavalry, officers 7, enlisted men 44; light battery, officers 3, enlisted men 53; infantry, officers 40, enlisted men 517; total, 673.

A monument to the memory of the soldiers of Company C of the North Dakota Volunteers who fell in the Philippines was dedicated at Grafton in October. It was built by citizens of Grafton and Walsh Counties.

The new military post at Bismarck is to be called "Fort Abraham Lincoln."

Banks.—Under the new law permitting banks to organize with less than \$50,000 capital, 8 have been added to the national banks of the State. There were 27 in October, and the abstract of their condition, compared with that of the 24 in June, shows that the total resources increased from \$7,723,984 to \$8,046,884; loans and discounts increased from \$5,330,032 to \$5,415,750, and cash reserve decreased from \$376,769 to \$375,814, of which gold holdings fell from \$150,477 to \$146,200; individual deposits increased from \$4,817,994 to \$5,015,981 and the average reserve held advanced from 17.30 to 20.01 per cent.

The resources of the 119 State banks of North Dakota at the close of business Feb. 13 were \$8,590,050.21. Of this, \$5,472,809.71 were in loans and discounts. Due from other banks, \$1,559,956.62, with total cash on hand of \$770,317. The total capital stock was \$1,378,500. Deposits subject to check and certificates of deposit amounted to \$6,486,713.85. Of surplus and undivided profits there were \$521,392.

Railroads.—The first spike in the Bismarck, Washburn and Great Falls Railway was driven May 17. This road will give transportation facilities to the residents on 300,000 acres of farming lands in the fertile region north of Bismarck. Washburn is 45 miles north by west of Bismarck. The track was carried into Wilton in July. This is a new town in the lignite district, 24 miles north of Bismarck.

All the roads in the State reduced their passage rates to 3 cents a mile in April. It is found that about half the 520,000 trees planted along the Northern Pacific in the spring were killed by the dry summer, and it is promised that they shall be replaced the coming spring.

Orders have been issued to Great Northern express agents to refuse all C. O. D. shipments of liquor. Suits had been brought against several agents for violation of the law by the practice of receiving such consignments.

Insurance.—The report of the Insurance Commissioner for 1899 shows that the fire, life, accident, and other companies collected \$1,302,785.50 in premiums alone, on which the State receives \$32,569.63 in taxes, the State law providing for a tax of 2 per cent. on gross premiums.

Seven new companies have entered the State, and several that withdrew after the great fire at Fargo have returned. The mutual hail and fire companies suffered severely from the hailstorms of the summer, their losses amounting to \$105,749. Two of them went into the hands of receivers. The volunteer firemen receive a part of the insurance tax.

Public Lands.—The land office at Devil's Lake for the last year did the greatest business of any office in the United States. The receipts for the office for the year were about \$175,000. This business is due largely to the immigration business done by the Great Northern and the many settlers who have taken up land along the line in the Devil's Lake district. The Minot and Bismarck offices also showed large receipts.

The total amount of net revenue from the land

offices in North Dakota for the past fiscal year was \$314,661.91.

Products.—The coal mining industry is attracting much attention, and promises important results to the State. Wilton, a new town to which a railroad was built from Bismarck this year, is the new center of activity. Tests have been made of the lignite coal mined there, and it is found to be economical and otherwise satisfactory. A test conducted at a woolen mill showed a saving of about 20 per cent. over the cost of wood. It is found to be agreeable for household use also, burning without clinkers and giving out smoke more like that from wood than like ordinary coal smoke. A test showed the lignite to have a value of 63 per cent. of bituminous coal. Taking into account the cost of the two when delivered, a saving of 81 cents a ton was figured for the lignite. New electric machinery has been put in, which is expected to raise the output to about 350 tons a day. The coal product of the State in 1899 was 98,809 tons, valued at \$117,500. Some of the reservation Indians are finding employment in the lignite fields.

Prof. Babcock, of the State University, who is making a geological survey of the State, says the clays are valuable, and are being developed. In the northern part of the State a good quality of Portland cement is being made, and in the western part excellent clay for pottery, fire brick, and building brick is worked.

The acreage of wheat, as shown by the assessors' returns in September, was 3,846,406, and that of flax 1,203,767. The yield was, however, small in proportion. The wheat crop was estimated to be from 15,000,000 to 20,000,000 bushels.

The creamery industry is growing in the western part of the State.

The Commissioner of Forestry recommends the experiment of raising fish in artesian waters, which he has found successful. There are nearly 700 flowing artesian wells in the State.

Many filings have been made for land under the provisions of the reservoir law, under which law any one can reserve and have the use of 160 acres of land in one section for fifty years, providing he builds a reservoir that will contain 1,500,000 gallons of water; such reservoir must be on the same section with the land reserved. It is not probable that all or many of those so filing will build reservoirs. But filing upon the land keeps other settlers off, and stockmen, by the payment of the filing fees, may have the use of the land until the entries are canceled, and in the meantime secure the use of the land.

Political.—State officers were elected in November. The Republicans held conventions May 16 and July 11; the Democrats, June 6 and July 20; the People's party, April 6, June 26, and July 20. A part of the People's party united with the Democrats; the "middle of the road" section put out a ticket. There were also a Prohibitionist ticket and a Social-Democratic.

The Republicans urged Congress to take steps to suppress the evil of trusts, and favored the retention by the United States of every foot of territory now under the flag. They approved the enactment into law of the currency bill and the entire policy of the Administration. The party was pledged to sustain the prohibitory law.

Gov. F. B. Fancher was renominated, and Frank White was made the candidate for Lieutenant Governor. Gov. Fancher withdrew from the ticket on account of failing health, Sept. 25, and the State Committee named Frank White for the first place and David Bartlett for the second, so that the ticket finally stood: For Judge of the Supreme

Court, D. E. Morgan; Governor, Frank White; Lieutenant Governor, David Bartlett; Treasurer, D. H. McMillan; Attorney-General, O. D. Comstock; Auditor, A. N. Carlblom; Superintendent of Public Instruction, J. M. Devine; Secretary of State, E. F. Porter; Commissioner of Insurance, Ferd. Leutz; Commissioner of Agriculture and Labor, R. J. Turner; Railroad Commissioners, J. F. Shea, C. J. Lord, J. J. Youngblood.

The Democrats declared allegiance to the platform of 1896, advocated the election of United States Senators by popular vote, denounced imperialism, and instructed delegates to Kansas City for William J. Bryan. They favored abolition of customs duties between the United States and Porto Rico, and declared for an income tax. The fusion ticket was:

For Governor, Max A. Wipperman; Lieutenant Governor, F. W. McLean; Secretary of State, J. F. Williams; Auditor, Samuel

K. McGinnis; Treasurer, J. P. Birder; Superintendent of Public Instruction, Mrs. Laura J. Eisenhuth; Insurance Commissioner, W. W. Campbell; Attorney-General, John Carmody; Commissioner of Agriculture, Samuel Torgeson; Railroad Commissioners, James Morrison, L. L. Lewis, L. Stavnheim. Mr. Williams and Mr. Stavnheim withdrew, and their places were filled by J. J. Stampen and Julius Wirkus.

The nominations of the People's party were: For Governor, O. G. Major; Lieutenant Governor, James T. Westlake; Secretary of State, Frank Wrightson; Auditor, Robert Grant; Treasurer, W. W. Cummings; Attorney-General, H. F. Jones; Commissioner of Agriculture and Labor, James Glassford; Commissioners of Railroads, James McIntosh, John Miller, W. J. Forest.

The Prohibition candidates were: For Governor, Delevan Carlton; Lieutenant Governor, W. C. Greene; Treasurer, B. H. Tibbits; Auditor, D. F. Humphreys; Secretary of State, George M. Naylor; Commissioner of Agriculture, M. F. Vandebogart.

The Social-Democratic ticket, which was filed by petition in August, was as follows: For Governor, George W. Poague; Lieutenant Governor, Royal F. King; Secretary of State, A. Bassett; State Auditor, R. C. Massey; State Treasurer, L. F. Dow; Attorney-General, A. Le Sueur; Superintendent, G. W. Attlebury; Commissioner of Insurance, R. W. Simpkins; Railroad Commissioners, William Lamb, F. J. F. Tucker, James Nelson; Commissioner of Agriculture, S. E. Haight.

The Republican ticket was successful at the polls. For presidential electors the vote stood: McKinley, 35,891; Bryan, 20,519; Woolley, 731; Debs, 518; Barker, 110. For Governor: White, 34,052; Wipperman, 22,275; Carlton, 560; Poague, 425; Major, 213.

FRANK WHITE,
GOVERNOR OF NORTH DAKOTA.

The Legislature will be composed of 82 Republicans and 11 fusionists.

Two constitutional amendments were voted upon, and were carried by large majorities. The first was for the creation of a board of pardons, to consist of the Governor, the Chief Justice of the Supreme Court, and the Attorney-General. The vote was 33,260 for and 8,153 against. The second was to permit taxation of telegraph, telephone, express, and dining-car companies. This was carried by a vote of 32,674 for to 6,947 against.

NORTHWEST TERRITORIES OF CANADA. Politics and Government.—Mr. F. W. G. Haultain remained at the head of affairs during 1900, as he had since 1887. In the Government he was Attorney-General and Treasurer, with Mr. J. H. Ross as Commissioner of Agriculture and Public Works. The immense area of the territories, with their million square miles, is indicated by the existence of three nonresident members of the Government—Hillyard Mitchell, C. A. Magrath, of Lethbridge, and G. H. V. Bulyea, of Qu'Appelle. The Legislative Assembly met on March 29, 1900. The speech from the throne, which was read by Lieut.-Gov. A. E. Forget, contained these passages:

"The spontaneous expressions of loyalty with which all parts of the empire have given practical evidence of their devotion to the Queen and imperial interests will mark the past year as a memorable one in the history of the nation. Owing to the nonestablishment of the militia system, the territories were deprived of the privilege of being represented in the first Canadian contingent; but in the second contingent, and in that corps raised and equipped through the splendid generosity and patriotism of Lord Strathcona and Mount Royal, the territories have now the honor of having given not only a large number of men in the aggregate, but, in proportion to their population, a larger number than any other portion of the Dominion, to the Canadian contribution to the cause of the empire. In this connection you will be asked to concur in a grant made to the Northwest members of the second contingent, and your assent will be asked to a measure legalizing grants made by municipal corporations to various patriotic funds.

"The unprecedented rainfall and disastrous floods of the past year brought about a state of affairs which the revenue, already proved to be inadequate under ordinary conditions, was altogether unable to cope with. This state of affairs tended not so much to create as to aggravate and call more pointed attention to the great disproportion existing between the means at command and the ever-growing necessities of the rapidly increasing population of the territories. It is gratifying for me to be able to inform you that the Federal Government has proposed to Parliament, now in session, a moderate increase to your annual grant and a large special vote for the purpose of restoring public works destroyed by the floods. In spite of this very substantial increase to the revenue, my Government can only look upon it as affording a temporary and partial amelioration of otherwise impossible financial conditions, and will ask you to take action leading to the earliest practicable solution of territorial financial and administrative problems."

An interesting discussion took place on April 30, upon a motion that: "In the opinion of this house, it is detrimental to the best interests of the Northwest Territories, as long as our present status as territories exists, for members of the executive of this Government to take any active part in Federal politics." This was a direct attack

upon Mr. Haultain's well-known Conservative proclivities and his appearance upon Sir Charles Tupper's platform. It was voted down by 21 to 6. On May 2 the local demands for a full provincial position and better financial terms found expression in the following resolution, moved by Mr. Haultain and unanimously carried:

"That an humble address to his Excellency the Governor General be adopted by this house, praying him that he will be pleased to cause the fullest inquiry to be made into the position of the territories, financial and otherwise, and to cause such action to be taken as will provide for their present and immediate welfare and good government, as well as the due fulfillment of the duties and obligations of government and legislation assumed, with respect to these territories, by the Parliament of Canada; and that

"Whereas, By the British North America act, 1871, it was (among other things) enacted that the Parliament of Canada may from time to time establish new provinces in any territories forming for the time being part of the Dominion of Canada, but not included in any province thereof, and may, at the time of such establishment, make provision for the constitution and administration of . . . such provinces, his Excellency be also prayed to order inquiries to be made and accounts taken with a view to the settlement of the terms and conditions upon which the territories or any part thereof shall be established as a province, and that before any such province is established opportunity should be given to the people of the territories, through their accredited representatives, of considering and discussing such terms and conditions."

On May 4, a resolution was passed pointing out the rich productiveness of a large area of country north of the Qu'Appelle valley, in the district of Assiniboia, the difficulties of the settlers in obtaining transportation, the necessity of a railway, and the desirability of Dominion aid in its construction.

The Assembly adjourned on the same day, after the Lieutenant Governor had assented to the following ordinances, among others:

- Respecting the public lands of the territories.
- To amend chapter xxii of the ordinances of 1899, intituled "an ordinance respecting noxious weeds."
- Respecting the medical profession.
- Respecting hail insurance.
- Respecting assignments for the general benefit of creditors.
- Respecting the sale of intoxicating liquors.
- Respecting mortgages and sales of personal property.
- Respecting the incorporation of joint-stock companies.
- Respecting dentistry.
- Respecting mining companies.
- To secure compensation to workmen.
- Respecting foreign corporations.
- Respecting confirmation of sales of land for taxes.

An important incident of the session was a request from the Legislature to the Dominion Government, as a natural outcome of the military spirit of the moment, that the Federal militia system be extended to the Territories.

Finances.—The needs of the Government during the year were greater than the revenue, and resulted in an appeal to the Dominion, as given above, for further financial assistance. On May 1 the following sums were voted by the Assembly for the current year: Civil government, \$10,890; Attorney-General's department, \$3,579; Treasury Department, \$4,540; public works, \$7,980; agri-

culture, \$23,485; education, \$185,615; departmental expenses, \$8,235; legislation, \$23,205; administration of justice, \$9,700; maintenance of public works, \$7,975; repairs to public works, \$16,000; inspection of public works, \$7,500; construction of bridges, \$61,075; aid to local and municipal improvements, \$12,000; construction of roads, \$41,000; miscellaneous public works, \$38,000; hospitals, charities, and public health, \$9,350; sundry expenditures, \$2,404; total, \$482,483. In 1899 the expenditure had been \$357,025.

Calgary Exhibition and Agriculture.—One of the most important institutions in the territories is the annual exhibition at Calgary. It was opened on Sept. 12, 1900, by Lieut.-Gov. A. E. Forget, in the presence of a large audience representative of Alberta and the entire West. The speech of the Lieutenant Governor described two important branches of development in this part of the territories, and the following extracts are therefore given:

"You have around you, first of all, a vast and fertile region for ranching, suitable alike for cattle and horses, as well as in certain localities admirably adapted for the raising of sheep. The ever-increasing commerce in Alberta stock shows that these advantages have been recognized. You have as well in northern Alberta a splendid dairy country. The official report of the Northwest Government declares that it would be hard to find anywhere in the world a better dairy country than the foothills of the Rocky mountains and the Saskatchewan valley. It is not surprising to learn, therefore, that the settlers in these districts are rapidly turning their attention to an industry in which the whole of Canada is taking a foremost place in the markets of the world. As to the capabilities for grain growing, that is a prominent feature of a great portion of your district. There is the significant fact that central Alberta produces more wheat per acre than is produced in any part of the territories, and the other parts of Alberta far exceed the growth per acre that is found in any of the other provisional districts. Almost as pleasing a state of things applies to the yield of oats and barley, West Assiniboia alone being slightly ahead in these cereals.

"Another direction in which you are utilizing the resources of Nature is in regard to irrigation. It has been recognized that the future of the region adjacent to the Rocky mountains, from Calgary to the international boundary, is dependent to a large extent on irrigation. The difficulties of such a situation have been grappled with a vigor and energy that call for admiration. Wise legislation has been enacted, scientific astuteness has been exercised, skillful operations are at work."

In these territories there are about 350,000,000 acres, of which a large portion is available for farming, but only about 7,000,000 acres are as yet in the hands of farmers. One million acres are utilized for ranching. The agricultural progress has been steady, if slow. In 1898, 9,032,297 bushels of wheat, oats, and barley were produced. In 1899, 11,939,120 bushels of these cereals were raised. A few years ago there were no creameries or cheese factories in the territories. In 1898 there were 19 of the former and 13 of the latter. At the close of 1898 177 irrigation ditches and canals were in operation.

Education.—The educational system of the territories is under the control of a Council of Public Instruction, which includes the Executive Council and four appointed members without a vote. No school district can cover more than 25 square miles or contain fewer than 4 resident heads of families with a school population of 12.

No religious instruction is allowed in any public school before three o'clock, and then only subject to the wishes of the trustees and the parents. In 1899 there were 16,825 pupils in the public schools and 1,976 in the Roman Catholic schools. The average attendance, however, was only 8,331 in the one case and 1,084 in the latter.

NOVA SCOTIA, a maritime province of the Dominion of Canada; area, 20,907 square miles; population in 1891, 450,396. Capital, Halifax.

Government and Politics.—On Feb. 8, 1900, the third session of the thirty-second Parliament was opened by Lieut.-Gov. Sir Malachy Bowes Daly with a speech from the throne, in which he said:

"You have assembled to discharge your legislative duties at a time when unhappily our empire is engaged in a war which has already brought sorrow to thousands of British homes. While all must deeply regret the necessity for the conflict in South Africa, some consolation may be found in the splendid manifestation of loyalty which it has called forth not only in the motherland, but also throughout the colonies. Canada has promptly availed herself of the opportunity to testify her devotion to the interests of the empire by contributing two contingents of Canadian soldiers for service in South Africa. The organization and dispatching of these forces is a matter coming within the authority of the Government and Parliament of Canada, and I feel assured that whatever may be necessary to provide for our soldiers will be cheerfully voted by the representatives of our people in the federal sphere. But while we as a province are not called upon to contribute to this part of the outlay, there is an opportunity for the manifestation of our interest and sympathy by contributions to the patriotic fund that is being raised for the benefit of the wives and families of the men who have gone to Africa.

"I am happy to be able to assure you that the various branches of industry in which our people are engaged have been vigorously prosecuted during the year with the most satisfactory results, and that the province has enjoyed a degree of prosperity unexampled in its history. The output of our coal mines was much larger than in any preceding year.

"I rejoice to be able to record the progress that has been made during the year in the movement for the establishing of the great industry in the manufacture of iron and steel at Sydney. The large amount of capital subscribed for the purpose, and the extensive works already under construction, give assurance that the great enterprise will be carried to an early completion.

"I am glad to be able to inform you that very substantial progress has been made during the past year in several of the new railway enterprises of the province. In the case of the Inverness and Richmond Railway, to connect the Strait of Canso with the Broad Cove coal fields, my Government deemed the advantage of the line in relation to the development of our mineral resources to be so great as to justify the giving of an assurance to the company of something more than the ordinary subsidy, subject, however, to conditions which make the transaction one of undoubted provincial benefit. The company began work early last summer, and the railway is practically completed between the Strait of Canso and Port Hood. The work of constructing the Nova Scotia Midland Railway, which will give railway facilities to the country between Windsor and Truro, has been vigorously prosecuted, and is near completion. In the western part of our prov-

ince the Coast Railway has been opened as far as Barrington Passage, and negotiations are in progress for the renewal of the company's contract for the completion of the line from Yarmouth to Lockport. The Nova Scotia Southern Railway Company has performed a large amount of work on its lines.

"The promotion of interest in agricultural progress in this province has always been among the leading aims of my Government. The results of recent provincial exhibitions have shown the necessity for securing improved breeds of stock and extending this improvement to all parts of the province. You will be asked to make provision to enable the Government to take such steps in the way of importation of the best breeds of horses, cattle, and sheep as will tend to encourage the production of purer and better breeds of stock in all parts of the province. At the last session of the Legislature provision was made for the establishment of an agricultural and horticultural school. Before any active steps had been taken by my Government to carry the act into effect a project was submitted for the establishment of an interprovincial institution which would embrace not only agriculture and horticulture, but also mining and manual training. Such an institution, if it could be successfully established, would be an advantage to all the maritime provinces.

"My Government, as you are aware, has for some years past taken charge of the construction of the great bridges of the province, and most of these have been built of permanent material. As a complement to this undertaking it would seem desirable that many of the smaller bridges, especially on the chief thoroughfares of the province, should likewise be constructed of more durable material.

"The commissioners appointed to revise and consolidate the statutes have completed their labors, and the result will be submitted to you.

"Scientific investigation within the past few years has disclosed the serious consequences of the spread of tubercular diseases and the necessity of special endeavors not only to prevent the spread of the disease, but also to provide for its cure at the earlier stages. Sanitaria have been established in many parts of Europe and America especially devoted to the treatment of this form of disease. You will be asked to consider a measure designed to enable my Government to furnish adequate aid to the establishment of such institutions in this province."

The events of the session were largely nonpartisan, and as a consequence considerable useful legislation was put upon the statute books. Mr. G. H. Murray was still at the head of the Government, assisted by Messrs. J. W. Longley and C. E. Church at the head of departments, and by Messrs. Thomas Johnson, A. H. Comeau, A. McGillivray, T. R. Black, W. T. Pipes, and D. McPherson as ministers without portfolio. The revision of the statutes was matter of much discussion and the subject of a long speech by Attorney-General Longley. The South African War was a popular topic, and on March 1 a resolution of congratulation on the relief of Ladysmith was unanimously passed and sent to the Queen. An employer's liability for injuries act, introduced by the Premier on March 2, and passed, was largely a counterpart of the British act of 1880.

A measure was also passed providing for the borrowing and expenditure of \$300,000 for the construction of small bridges throughout the province, as was a bill preventing coal companies from assessing their employees for medical attendance which they can not control.

Among the numerous other acts passed were the following:

Respecting the revised statutes.

To amend chapter i of the acts of 1895, entitled An Act to amend and consolidate the acts relating to public instruction.

To establish a sanitarium, and to aid in the treatment and care of persons suffering from tubercular disease of the lungs.

To provide for the establishment of an agricultural and technical school for the maritime provinces.

For the encouragement of mining.

For the encouragement of manufacturing and shipbuilding.

To amend chapter ix of the acts of 1899, entitled An Act to provide for an agricultural college, and for the further encouragement of creameries.

For the improvement and better maintenance of certain roads.

To amend the Nova Scotia franchise act, 1889.

To amend chapter ii of the acts of 1895, entitled An Act respecting the sale of intoxicating liquors and the acts in amendment thereof.

To amend chapter ii of the acts of 1898, entitled An Act to consolidate and amend the acts relating to the property of married women.

To amend chapter xxv of the acts of 1898, entitled An Act of 1896, and to amend the Nova Scotia game act of 1896.

Respecting the maintenance of illegitimate children.

To amend chapter ii of the acts of 1895, entitled the liquor license act, 1895.

In September the Hon. A. G. Jones, an old-time Dominion Liberal leader, became Lieutenant Governor in succession to Sir M. B. Daly.

Finances.—The receipts for the province for the year ending Sept. 30, 1899, included \$17,636 from Crown lands, \$319,150 from mines, \$55,716 from public charities, \$432,806 from the Dominion annual subsidy, \$31,182 from succession duties. The total receipts were \$876,928. The expenditure amounted to \$852,379, and included \$24,310 upon agriculture, \$123,688 upon debenture interest, \$248,758 upon education, \$50,169 upon legislative expenses, \$115,643 upon public charities, \$83,980 upon road grants to municipalities, and the remainder upon various smaller demands. The special feature of the year's revenue, according to Mr. Murray's financial statement of Feb. 19, was the large receipt from mining royalties. The liabilities of the province were given by him as \$3,028,986 of provincial debentures, \$550,666 of special loans, and \$275,379 borrowed from banks in Halifax; a total of \$3,855,032. Against this were assets estimated at \$1,341,272. A loan of £164,000 placed on the London market at 3 per cent. had realized a minimum of 95, and had been regarded as high evidence of advancing public credit. The estimated revenue for 1900 included the annual Dominion subsidies and allowance of \$432,000, a royalty from mines of \$390,000, a revenue from Crown lands of \$28,000, from the Hospital for Insane of \$47,000, and from succession duties of \$25,000. The estimated expenditure included \$251,500 upon education, \$126,600 upon public charities, \$111,881 upon roads and bridges, and \$148,052 upon debenture interest.

Education.—The annual report of Dr. A. H. MacKay, Superintendent of Education, for 1899, gave the following particulars: The number of schools increased from 2,385 to 2,390. The sections without schools were 146, against 124 last year, which was the best on record. The increase of sections without school was confined mainly to

the counties of Inverness and Cape Breton, and was due, probably, to the cessation of the granting of "permissive" licenses. That this most desirable change had been effected without any more serious consequences was very satisfactory, especially when it is known that in 1897 and 1896 the sections without schools were respectively 153 and 171, although "permissive" licenses were then being granted. To the same cause the decrease in the annual enrollment from 101,203 to 100,617 may be due. The number of teachers employed in these 2,390 schools diminished from 2,510 to 2,494, compared with the previous year, which means that the schools were improving with respect to the number of changes in the teaching staff made within the school year. The amount of money raised by assessment on the school sections was less than in the previous year by about \$25,000. More than \$16,000 less was required for building and repairs. This economy did not affect injuriously the salaries of the teachers, for which more than \$15,000 more was voted than last year.

The statistics of the public schools for the term ending July 31, 1899, show 2,390 schools, 100,617 pupils, and an average attendance of 55,919. In the county academies there were 1,795 pupils and 53 teachers. The total expenditure included \$246,462 from the Government, \$120,082 from the municipalities, and \$447,906 from other sources—a total of \$814,450.

Revision of the Statutes.—This most important matter had been for some years in the hands of a joint committee of the Legislative Council and House of Assembly, composed of Messrs. J. W. Longley, W. T. Pipes, E. M. MacDonald, W. H. Owen, W. B. Wallace, J. N. Armstrong, J. H. Sinclair, C. S. Wilcox, D. Finlayson, and H. H. Wickwire. It reported in the session of 1900, and advised slight changes in the work of the preceding royal commission.

Railways.—During the year work was advanced upon important local lines, notably the Midland Railway, the Coast Line, the Inverness and Richmond Railway, and the Nova Scotia Southern Railway. The passengers on the provincial railways during 1899 numbered 103,861; the value of the freight carried was \$338,406, and of the mails and sundries \$90,257. The chief railway event, however, was the letting of the contract for, and partial construction of, the Inverness and Richmond Railway, connecting the coal mines of the mainland with the great steel interests of Cape Breton Island. The contract provided for the construction and equipment of 60 miles of railway from a junction with the Intercolonial Railway at Port Hawkesbury to Broad Cove, and to put them into operation on or before June 15, 1901, open and *bona fide* work a coal mine or coal mines at Broad Cove, and equip the same with approved plant and machinery sufficient for the production of 250,000 tons of coal per annum, time to be material and the essence of the contract. The contract was executed on May 23, 1899; location surveys were made, submitted, and approved, and actual construction began in June following. The progress was very satisfactory.

Mines and Minerals.—The production of gold in Nova Scotia during the year ending Sept. 30, 1899, was 27,772 ounces; of coal, 2,642,333 tons; of coke, 55,484 tons; of gypsum, 140,000 tons; of grindstones, 50,000 tons. The chief increase was in coal—360,929 tons more than in 1898. The central subject of congratulation was the very great impetus given to mining and industrial development in Cape Breton in 1899 and 1900. It arose out of the formation of the Dominion Coal Company in 1893 by Mr. H. M. Whitney, of Boston,

and the obtaining by him of a ninety-nine-year lease of most of the mines in the Sydney (Cape Breton) coal field. In March, 1899, Mr. Whitney organized the Dominion Iron and Steel Company, with large capital and special privileges granted by the provincial and Dominion governments. With every facility for shipping and easy access to raw materials and available markets, with immense mineral wealth only awaiting development, with one of the finest harbors in the world at Sydney, these concerns have already expended much money and produced a condition of great prosperity in Cape Breton. The total value of mineral production in the province in 1899 was \$3,517,030.

Fisheries.—The value of the yield in 1898 was \$7,226,035, distributed mainly among cod (\$1,896,614), lobsters (\$2,673,624), and haddock (\$532,648). The bounties paid by the Dominion Government to fishermen in the province amounted to \$103,730; and the number of vessels engaged was 508, with a tonnage of 20,868, and 4,840 men. The smaller boats numbered 7,872, with 12,438 men. A slight decrease on the preceding year was visible in these figures.

In the session of 1900, on March 22, a select committee of the house—composed of Messrs. George Mitchell, J. G. Sperry, M. J. Doucet, C. P. Chisholm, E. M. Farrell, Simon Joyce, H. S. Leblanc, A. M. Gidney, T. Robertson, and Mr. Law—reported upon matters relating to an inquiry into the condition of the fishermen of Nova Scotia, as follows:

"That they have held several meetings, and have carefully considered the subject of providing cold-storage facilities for the preservation of fresh bait for the use of the fishermen, toward which the Federal Government made an appropriation last session of \$25,000 to supplement amounts to be raised by associations of fishermen in various localities for the purpose of building and equipping cold-storage houses.

"That they have been informed that associations have been formed throughout the fishing centers of the province as well as in Prince Edward Island and the Magdalen Islands, and that a few cold-storage buildings are in course of construction.

"That your committee desire to impress upon the Federal Government their sense of the great importance of the enterprise, conferring, as it will, immense benefits on the fishermen by preserving fresh bait and encouraging the trade in fresh bait, which latter should attain to much greater proportions than it has hitherto done, and they would express the hope that the Government will continue to deal with it in the most liberal manner possible."

Agriculture.—This industry never has been extensive in Nova Scotia, but latterly, as ship-building declined in importance, it has come more to the front. These subjects were debated in the Legislature, and on March 28, 1900, the Hon. T. R. Black presented a report from the Committee on Agriculture from which a few extracts may be taken as descriptive of the general situation:

"The agricultural industry of the province is assuming a much more encouraging aspect from year to year. We find our farmers generally displaying a much more intelligent and hopeful interest in their calling than in former times. There is a feeling abroad that farming pays when the industry is conducted with intelligence and spirit, and there can be no doubt that vast improvements are being made in agricultural methods, with correspondingly beneficial results.

"In view of the large increase in the mining

and manufacturing industries of the province, giving employment to many thousands of people engaged in these pursuits, and thus creating an active and steady home market and good prices for the products of the farm, our farmers have much to stimulate and encourage them in their work. Your committee are of the opinion that the annual provincial exhibitions at Halifax have had a marked effect in the improvement of the live stock of the province.

"Your committee beg to commend the action of the Government and congratulate the country upon the very liberal grant submitted in the estimates for the importation of standard-breed stock.

"Among the factors which have brought about the present hopeful agricultural outlook in the province must be noticed the Nova Scotia Farmers' Association. This fine organization by its annual meetings is the means of diffusing a vast amount of information of the utmost value to the tillers of the soil. The Fruit Growers' Association is a kindred organization, whose services to the horticultural interests of the province can not be over-estimated."

Fruit Growing.—The province is famous for its apples, and Annapolis valley is the center of one of the finest fruit-growing regions in the world. Late in January, 1900, and in connection with the general position of this industry, President J. W. Bigelow, of the Nova Scotia Fruit Growers' Association, said, in his annual address:

"The past two years have been most profitable to the Nova Scotia fruit grower from the fact that we have had fair crops of superior apples and obtained the highest prices in the history of the trade, owing to a scarcity in the world's apple crop. This year our apple crop will exceed 400,000 barrels, and as most of these have been sold at \$2 to \$3 a barrel, the net proceeds may be fairly estimated at over \$1,000,000. Some estimate may be formed of the immense profit of this business this year from the fact that several growers have accepted or refused from \$3,000 to \$5,000 for this year's crop of apples, and many orchards have paid this year 25 per cent. on a valuation of \$1,000 an acre. This is owing to the fact that Nova Scotia was the only apple-producing country that had 90 per cent. of an average crop. Our plum crop has this year yielded about 60,000 baskets (10 pounds), with average sales of 30 cents a basket. Our cranberry crop reached over 1,000 barrels. Pears and small fruit were a fair crop, and sold at remunerative prices. Strawberries, about 300,000 baskets. Our fruit trees this year have been unusually free from insect pests and fungous diseases, and the dreaded San José scale is so far not known to exist in Nova Scotia."

NURSES, TRAINED. The need for trained nurses appears to have agitated many countries at about the same time, and everywhere the movement to provide them grew out of a desire to improve upon and organize under more definite training the work attempted for ages by sisters of professed religious orders in the hospitals and on the battlefields of Europe. If England appears to get most credit for pushing the system, it is because England more than any other country stood in need of it, having had no generally recognized sisterhoods until of late years.

To Kaiserswerth, a little village on the Rhine, is traced the germ of the nursing system which now prevails throughout America, the British Islands and their dependencies. The Deaconesses' Institute, at Kaiserswerth, was founded by Pastor Fliedner and his wife in 1836. It grew out of an asylum school and penitentiary beside a hospital, but from the skill of its founders its sys-

tem was soon heard from, and it still enjoys a world-wide fame. To this institute went Florence Nightingale for training in 1851. The following year she undertook the task of superintendent for invalid ladies in Harley Street, London, and soon afterward published her *Notes on Hospitals*, which attracted wide attention and aroused interest in Government circles. In 1854 the Crimean War broke out, and Miss Nightingale and her staff of trained nurses went to the front, and her fame soon spread over the world.

But before that several efforts had been made by private individuals to train nurses in England. In 1840 Mrs. Fry and Lady Inglis founded the first nursing institute in London, under the patronage of Queen Adelaide and at the suggestion of Dr. Gouch and Robert Southey. This institution still exists in Devonshire Square. Up to this period nurses had had the reputation of being the most unreliable class of working women known. An English physician of this period wrote: "We always engage them without a character, as no respectable person would undertake so disagreeable an office." Burdett, in his *History of Hospitals and Nursing*, says: "Every vice was rampant among them, and their aid to the dying was to remove pillows and bedclothes, and so hasten the end."

In 1847 Sir Edward Parry sent out a call for nurses for the Harbor Naval Hospital, London. They were to be trained without expense to themselves at Dalston, and finished, if possible, at the institute at Kaiserswerth. Not one volunteer responded to this appeal. Florence Nightingale had not yet become a heroine and made nursing fashionable. Next the Bishop of London founded a collegiate institute for the training of nurses, but the training proved inadequate. Mrs. Sellers also founded, the same year, the first Anglican sisterhood of the Holy Trinity, at Davenport, whose inmates had to undergo two years' training as nurses, and this school grew. It still required the name of religion and consecrated devotion to make nursing respectable in the popular mind. Several other nurses' schools followed this, among them that of St. John the Baptist and St. Margaret's.

In 1856 the sum of £40,000 was subscribed for Miss Nightingale by a grateful public, and she at once expressed her desire to found with this a training school for nurses. In 1860 the Nightingale Fund School was opened in connection with St. Thomas's Hospital, London, and it has long enjoyed the reputation of being the best in the world. At most hospitals the longest term for training nurses is two years; at St. Thomas's it is three years. It was really founded for gentlemen to qualify for head places in hospitals or for district nursing under an organized system. The rule in nearly all training schools is, that the services rendered by the probationer or pupil pays for the tuition, besides which the hospital makes a small periodical allowance for the expenses of costumes, text-books, etc. At St. Thomas's the pupil pays £30 for tuition, and must agree to take service for two years after leaving the school. There are occasional vacancies for the accommodation of those who can not afford to pay. The home adjoins the hospital quarters, and one of the terms of training is that the nurses need not leave Great Britain unless at their own request. St. Thomas's, however, has sent abroad some famous nurses who wished to go.

Schools for training have since multiplied in London, and no great hospital, public or private, is without one. There are good training schools in other English cities, and also in Scotland and Ireland. That of the Royal Infirmary, at

Edinburgh, has a world-wide reputation, and so has the Adelaide Hospital, Dublin. Cork, also, has excellent training schools. Indeed, Ireland was better off for nurses than England in former days, for she always kept the Sisters of Mercy, and some of these in late years have come under modern training. All over the United Kingdom district nursing of the sick poor is now carried on under certain associations and supported by voluntary contributions; most villages even have their parish nurse, and in England these are under the auspices of the Queen Victoria Jubilee Institute for nurses.

As to rules, the schools are about the same as those in America, which were modeled after them. The supreme authority is usually centered in a matron or superintendent, who herself must have gone through all the curriculum of trained nursing. In large London hospitals, under her are assistant matrons, or head nurses, and "home sisters," who attend to affairs in the house in which they live. Over each ward of 20 to 30 beds is a sister, who is directly responsible to the household and visiting physicians for all the patients of her ward; under this woman is generally a responsible staff nurse to every 10 or 15 beds, and under her as many pupil nurses as the necessities of the ward demand. The routine order is, if the inferior nurse notes any change in the sick she must report to the nurse above her, the latter to the head nurse, the head nurse to the house doctor, the latter in turn to his superior, the visiting surgeon. Much red tape is connected with trained nursing. There are also rules innumerable about provisions, storeroom supplies, medical supplies, bedding, cleanliness of wards, closets, kitchens, etc., for all of which the superintendent must be responsible to the house committee.

Nursing in America, although it has not undergone the vicissitudes that attended it in Europe—especially on the Continent—has yet had a somewhat checkered history. In early days the best nursing here, as elsewhere, was done by Sisters of Charity, who did the best they could both in hospital and district nursing in such cities and towns as would let them in. They had little or no chance in New England, and hardly any in New York; and to allay the Puritan spirit of opposition against them in Philadelphia the Society of Friends founded a nursing school in 1838. It does not appear, however, that the nursing was carried out on more scientific plans than that done by the sisters. It is said that as early as 1770 Dr. Seaman used to lecture to a class of 24 nurses in New York city in what was then the nucleus of the present Bellevue Hospital. But the practice appears to have died with him. It was through the exertions of a committee of ladies of the State Charities Aid Association that permission was obtained of the medical board to start the Bellevue School. They secured a house opposite the hospital, on East Twenty-sixth Street, as a home for nurses, and, receiving assurance that the necessary changes would be completed on May 1, 1873, they agreed to begin work in the wards on that date. It was not easy to secure a competent superintendent, but at last they induced Miss Helen Bowden, of the University College Hospital of London, to fill the post. This lady was known in England as Sister Helen. She possessed a thorough training and wide experience in all matters pertaining to hospital nursing, and had also a reputation for energy and executive ability. She had for assistant one as energetic as herself—Miss Van Rensselaer, of New York. Together they guided the infant school during its first and most trying years. To quote from the records: "The standard of qualifi-

cations was placed high, and, although there was not the large number of applicants for admission looked for by the managers, the standard was not lowered. Only 4 appeared for the place of head nurse, and Sister Helen accepted 3 of them. Only 29 sought admission to the school in the first seven months, and 10 of these were rejected. The Board of Managers, of which Mrs. William H. Osborne was chairman and Mrs. A. P. Woodward secretary, received in this year donations to the school from many citizens of New York to the amount of more than \$22,000, and many of the necessaries for furnishing the house besides."

To quote again from the records, those employed before the opening of the school were to the "last degree incompetent. They were ignorant, indifferent, dishonest. They were eye servants. Sairy Gamp and her 'pardner,' Mrs. Prig, were ubiquitous. They 'drank fair' and only attended to their patients when 'so disposed.' Nurses and general helpers about the hospital were heirlooms from primitive times. . . . Most of them had just served enforced time at the island, and worked without pay for the sake of the board and lodging and the dishonest perquisites they obtained."

In the second year 4 more wards were placed in charge of Sister Helen, making 9 in all—3 female medical and 3 male medical and 3 female surgical wards. Already trained nursing was growing in popular favor. There were this year 118 applicants, of whom but 29 were accepted, and only 20 of these were kept longer than the probation month. The first class, graduated in 1875, included 6 nurses. The best one of these went to superintend the training school then established at Boston.

This same year another training school was established on Blackwell's Island, and it is still in vigorous life, having completed its twenty-fifth year, with about 60 regular nurses, who have a connection with the City, Maternity, Gouverneur, Fordham, and Harlem Hospitals. The City Hospital male training school is also on Blackwell's Island.

The aim of the mother school at Bellevue will explain the aim of all the others that followed it, viz., first, to improve the condition of the hospital sick; second, to utilize the hospital as a clinical school for instruction in the art of nursing the sick among rich and poor alike. These objects have been achieved. All authorities now admit that neither the practice of antisepsis nor the application of modern sanitary law could be made practical without the co-operation of intelligent nurses. The fact that in 1893 there were 1,860 applications for entrance into the training school at Bellevue will suffice to show how nursing has grown in favor among women. Out of these, 39 were accepted on probation. The probatory period covers one month. If found acceptable at the end of that time, the applicant enters as pupil and pledges herself to remain two years. The standard number of nurses at Bellevue is 64. The best of the class each year, after passing through examination, are selected for the place of head nurse, one of the responsibilities of which is the training of pupil nurses. The training covers the care of men, women, and children in medical, surgical, gynecological, and obstetrical cases, through all the vast range of diseases admitted to Bellevue. The curriculum includes, besides instruction by the medical and surgical staff, didactic teaching by a corps of lecturers and by the assistant superintendent in anatomy, physiology, materia medica, and practical nursing. There are also lessons in cooking by the cooking school. Special training is given in care of the insane.

An outline of the training at Bellevue applies also to that of other institutions, most of which have been organized under its direction. Even the matron of the Lying-in Hospital in London, England, is an alumna of Bellevue, and was selected from many applicants. Several heads of training schools in Canada are from Bellevue. Some have gone to China, Turkey, and Japan. The St. Paul Hospital Training School, at Rome, Italy, founded for the purpose of meeting the needs of American and English travelers, was put under the charge of a Bellevue graduate. In the early days, nurses from Canada and elsewhere outside the United States were taken to be trained, but in later years this has been stopped; since but a limited number can be accepted, the privilege is confined to Americans. Nurses are still supplied to other countries, but pupils are not accepted from them.

On Christmas, 1887, Mr. D. O. Mills presented a sum of money for the founding of a school for male trained nurses. This was completed in 1888, and placed under the supervision of the female training school, Mrs. E. S. Willard, of the class of 1887, being placed in full control. From this place male nurses are supplied.

The mother of the training school, Sister Helen, did not remain with it long, though long enough to see it on a good working basis. Failing health forced her to return to England in 1876. Miss Van Rensselaer was also obliged to leave. They were succeeded by Miss E. P. Perkins, under whose care the school remained twelve years. When, in 1888, she also retired, she was succeeded by her assistant for four years, Miss Agnes S. Brennan, who still fills the post of superintendent, the third in its twenty-eight years of existence. Since the rapid multiplication of training schools here and in Europe the drain from Bellevue has naturally grown less. The Spanish-American War again gave a new impetus to the demand from military and naval hospitals. Five or six Bellevue graduate nurses are at work in Manila, and several from other training schools also, and a new field has been opened in Porto Rico and Cuba. Miss O'Donnell, of New York, has established the first training school in Cuba in the Government hospital of Our Lady of Mercies, Havana. Her pupils are Spanish nuns and some Cuban young women. Another New York nurse has gone out to Africa in charge of nurses attached to a Canadian regiment, and still another in charge of those on the hospital ship Maine. During the past year 13 graduates of Bellevue have married. The calls for private nursing during the same year were 698; while there were 30 applications for superintendents or head nurses in hospitals, only 16 of which the school could fill. Forty-five entered for the class of 1900; 13 left after the month of probation and 5 were dropped during the year, leaving only 27 to graduate. These figures indicate that not all women who feel the ambition to become nurses are qualified by nature to do so. A dishonest certificate of health is sure to reveal itself. One of the axioms of a hospital training school is, that no one with a tendency to "consumption, rheumatism, nervousness, or flat foot" should attempt to enter. The desirable age is between twenty-three and thirty-three. Besides the regular two years' training course, many who wish to keep in touch with advanced surgery and medicine take a post-graduate course of another year.

Several hospitals whose training schools have come into existence within the past ten years make their regular course three years. This is the rule with certain hospitals in England, Germany, and other countries of Europe, and with some of

those in Boston, Philadelphia, and other cities. This is the rule with St. Luke's and the Presbyterian, in New York. A model of the wards in the Presbyterian Hospital was sent to the recent exposition at Paris, and received a prize. Fine training schools are attached to both these hospitals, which supply nurses to private patients. In hospitals comparatively private like these the nurses have access to other hospitals also for special study, such as the Maternity, the Foundling—in charge of a trained sisterhood—the scarlet fever, and the diphtheria hospitals. Yet there is no lack of opportunity for study within such an institution itself. In 1900, 3,322 patients were admitted to beds in the wards of the Presbyterian Hospital, 4,349 were treated in the emergency ward, 17,207 were admitted to the dispensary, and the ambulance answered 2,446 calls. The record of other semiprivate hospitals in Boston, Philadelphia, Chicago, San Francisco, and all large American cities could equal these.

In all hospitals nurses, after their month of probation, if admitted, wear the hospital uniform—cotton gown, white cap and apron. In addition to board and lodging and laundry—24 pieces a week—each nurse receives \$10 a month for dress and expenses incident to her studies, the education received being an equivalent for her services. The hours of duty are, as a rule, from 7 A. M. to 7.30 P. M. for day nurses, and for the night staff from 7.30 P. M. to 7 A. M. From an hour to two hours daily are given for rest, one afternoon each week is granted, and either half the day Sunday or every second Sunday. These hours, however, are liable to vary with the requirements of work, and nurses may be called for day or night duty in the care of private patients. From two to three weeks' vacation is allowed each year.

Homœopathic hospitals in all large cities have now their own corps of nurses and training schools. This is no more than a matter of *esprit de corps*, for the training is practically the same in old as new schools of medicine. The homœopathic hospital on Blackwell's Island is worthy of special mention, because, although a charity hospital, it is one of the most attractive in appearance in the land. Many dainty devices are resorted to in order to do away with the regulation hospital air and give it a look of home. Its utilitarian appointments also are noticeably good. Woman nurses attend to the men as well as to the women. Its training school is flourishing, and its superintendent, Miss Mahoney, is a skilled pharmacist as well as a trained nurse.

The really systematic nursing of paupers began in 1884, when the State Charities Aid Association laid down rules that no feeble, disabled, or intemperate person should be allowed to attend on the sick, and that one good paid nurse, at least, should be in every poorhouse. Most other cities have similar rules. Although every State and every city of any size has now its training school, the most numerous and notable of these, after New York, are perhaps in Boston, Philadelphia, Chicago, and St. Louis, and a very fine training school is attached to the State general hospital at Portland, Me. Several hospitals continue to prefer that their nurses belong to sisterhoods. St. Luke's, New York, for instance, had from its foundation, in 1850, some trained sisters, but lay pupils are now admitted to its training school. A similar order of Protestant sisters is in Syracuse, who also do parish and district work. The order of St. Margaret—a branch from the English—in Boston, are noted nurses, and a high price is paid by private patients to enter their hospital.

In England the training schools are largely un-

der Government patronage, and also receive no little yearly income from a system that might be called a subletting of their nurses to private patients and other institutions. In America the nurses are entirely detached from the training institutions and receive direct from their patients the money they earn, which ranges from \$20 to \$30 a week. It was soon felt, however, that something to take the place of the nursing institution in England was needed in America, and the nurses' registry or directory was instituted, first in Boston in 1879, next at Philadelphia, and now all cities, even those of Canada, have a similar system. It requires a statement to be left with the registry of name, age, address, qualifications, kinds of nursing, rates of charge, and both family and medical references. If eligible, the nurse is registered and pays a fee of \$5. The person needing the nurse pays \$1 on application. Detailed inquiries from both families and doctors are kept, and thus the nurse's character and skill are followed throughout.

To correspond also with the system of district nursing throughout England, "nurses' settlements" have of late years been established in American cities. They are generally located in the most densely populated districts, and among the poor, and do a work in their line similar to that done by the college settlements in another.

The nursing throughout Canada is still most largely in the hands of the Sisters of Charity, but in the English-speaking cities the American system has prevailed since 1881, when a band of 16 nurses with superintendent went from Bellevue Training School to Toronto. Others have branched off from these to Montreal, Ottawa, and other places. Nursing in Australia is also mainly in the hands of Sisters of Charity, but a band of trained women under charge of some ladies from Edinburgh have founded a fine training school in Melbourne. Prince Alfred Hospital, at Sydney, is also a noted training center. There is another training institution at Adelaide, and one at Launceston, Tasmania.

Training schools almost if not quite equal to those of England have also gained a footing in India. Lady Canning founded a notable system at Bombay, under the charge of the Protestant Sisters of St. John Baptist. The institution at Oodypore, known as the Lady Dufferin Fund, founded while Lord Dufferin ruled India, is a training school and association for supplying medical aid to women. In 1886 a training school was attached to the hospital at Poona for training native women of all castes for nurses. In 1888 the first detachment of Indian sisters went to Rawalpindi and Bangalore to nurse some of the troops that were suffering with enteric fever. Malta, Goya, South Africa, and other places where once only ayahs or Kaffir boys could be had for nurses are now becoming acquainted with the modern system of nursing the sick.

Of all countries in the world, the history of nursing is perhaps most interesting in France. It has had for the purpose the oldest and most noted institutions. In no country was so much benevolence toward the sick shown in times before enthusiasm had learned to link itself with science. As early as the eleventh century a nursing sisterhood, the Hospitaliers Hôtel Dieu, were famous, and they extended their work into other countries. The order of Fille de Marthe was established in 1443. About the middle of the sixteenth century the Prince of Sedan founded the Demoiselles de Charité, a regularly organized sisterhood, but exempt from vows, to work among rich and poor alike. In the seventeenth century Frances de

Bloiset founded the Fille Ste. Geneviève, especially for sick nursing. In 1630 the Hospitaliers de Loche were introduced into 13 hospitals. There were numerous others; even an inspired shepherdess founded a nursing order. But the most famous and lasting of all, and that which corresponded most nearly to the modern work of deaconesses or sisters of Germany and England, was founded in 1633, the great order of Vincent de Paul, which still dominates most of the nursing world. The women of this order, unlike others, were not bound to perpetual vows. They were free to renew them or leave the order each year, though the freedom was scarcely ever taken advantage of. The words of its founder have often been quoted: "Your convent must be the hospital; your cell, the ward; your chapel, the parish church; your cloister, the streets of the city; your girdle, the fear of God; your veil, holy modesty." This order soon pervaded the world. It suffered persecutions during changes of government, and it was often suppressed during revolutions. It was insulted in many ways. The doctors often complained that it gave too much attention to the patients' souls to the neglect of minute instructions with regard to the body. But men on battlefields always glorified these women, who knew no fear, and penetrated the thickest of the fray, heedless of their lives.

The doctors of France wanted women wholly in their own service, and they finally got them. The sisters were suppressed, and in 1877 the Municipal Council of Paris appointed Dr. Brownell director of a school for training nurses, male and female. The theoretic course included hospital administration, anatomy, minor surgery, physiology, dressings, hygiene, pharmacy, and monthly nursing. Lectures were held twice a week in the evenings, practical lessons were given daily, and diplomas were awarded to successful pupils at the end of each year. Many experiments had to be tried in rudimentary education before nurses were found who were fit to receive these instructions. At first it was difficult to find women at all, and when they came they were mostly domestic servants out of place, dismissed shopgirls, and the like. They were paid from 15 to 20 francs a week, with food, lodging, and uniform, yet they proved most unsatisfactory.

They evaded rules, they demanded tips from patients, they drank the patients' wine, and even the harder spirits in which the doctors preserved specimens. The same trouble was found in England and America.

The replacing of nuns by trained nurses took place in hospitals in about the following order: Salpêtrière and Bicêtre, 1877; Laennec, 1878; La Pitié, 1880; La Rochefoucauld, Des Ménages, and St. Antoine, 1881; Lourcine and Tenon, 1882; the Incurables and Cochin, 1885; the Necker, Enfants Assistés, and Enfants Malades, 1886; the Trousseau, Lariboisière, and Beaujon, 1887; and La Charité, 1888. Despite all this, the decree that banished the sisters from Parisian hospitals was repealed in 1889, and they were free to return and undertake nursing wheresoever their services were wanted. A sister in full religious dress is again at the head of some of the hospitals, while under her are many lay trained nurses. The latter have become improved as a class by the instruction received from the Assistance Publique, which included a first course in general education, reading, and arithmetic, to be supplemented by practical instruction in the art of nursing, and a third course of rotation or serving in every department of the hospital. The hospitals of Paris and all the European Continent have only of late taken

up the system of rigorous cleanliness known to those of America and England. In Paris and other French cities, too, many institutions have in late years been established which are in no wise religious, and where trained nurses can be obtained by private patients. There are also two noted societies for supplying nurses and delicacies to wounded soldiers in time of war; these are Les Dames de France, of which the widow of the late Marshal MacMahon is president, and Les Femmes de France, whose president is Madame Koehlin Schwartz. There are also Red Cross nurses.

Spain is still in the hands of nuns and Sisters of Charity nurses, who since the suppression of their orders (1835), and confiscations of their property later by Isabella II, are too crippled in resources to take any initiative themselves, and the Government does nothing. Only those who can pay for it receive good nursing. It has been said that no reforms in the interest of the sick poor have taken place in Spain since St. Theresa worked wonders there in the middle of the sixteenth century. Interested persons some years ago settled an English nurse in a cottage hospital at Cadiz for the use of English people and others taken sick there. It still flourishes. Portugal is no better off, and for a similar cause, and in either country kindness is said to be more common than trained nursing. The nuns and monks do what they can, but are reduced to want themselves.

Down almost into modern days Germany held to the traditions of nursing founded by the great orders of chivalry, by the Knights of St. John and of Malta, and Sisters of Charity as hospital nurses became the rule there as in France. The Lutheran parson Fliedner, at Kaiserswerth, already mentioned, made the first break, and he, in choosing a name for his modern nurses, went back to that used by Christians before convents were founded—he called them deaconesses. Their fame spread; they were called to hospitals in Berlin, Frankfurt, Kreuznach, London, France, even to Constantinople, India, and Japan. Up to 1883 it was estimated that 627 nurses had been trained at Kaiserswerth, and they were placed at about 200 stations. Since training has multiplied at all home stations, the draw from Kaiserswerth is less. Indeed, since the fame of his pupil, Miss Nightingale, filled the world that of Pastor Fliedner has been rather obscured.

Empress Friedrich, daughter of Queen Victoria, founded a noted training place, the Victoria Home and Fatherland Ladies' Society, at Magdeburg. Empress Augusta founded another at Schönebeck. Others sprang up at Dresden, Leipsic, Breslau, Carlsruhe, and elsewhere in the kingdom. The Red Cross has there, as elsewhere, done an immense work in training. Besides, many of the long-established brotherhoods and sisterhoods of the Roman Catholic Church began also to train. There are said to be more than 6,000 nurses in Prussia alone.

Yet throughout Germany in general, even in Prussia, the Catholic societies, having longest concerned themselves with nursing, are still mostly in possession of the field. They are almost wholly so in Austria and outlying German provinces; and as Government does little or nothing to perfect the system, old methods prevail. Vienna, one of the world's foremost cities in surgery, is accounted one of the most backward in nursing. The Rudolphnerhaus is reputed one of its best served hospitals, having 18 or 20 Red Cross sisters, assisted by 6 probationers. Red Cross sisters in these countries are drawn from all ranks in life, but an effort is made to secure the most intelligent and

refined. They pass through the regular probationary period and curriculum as other nurses. As a rule, they receive the first year board and lodging, and what would correspond to about \$3 or \$4 a month; the second year about \$10; and the fourth year about \$14. Pay for nurses on the Continent varies too much to be specified accurately, but everywhere it is small compared with what they receive in England and the United States. A strong reason, no doubt, for holding to the old order of nursing is that men or women of religious orders, being supported by their orders, work gratis and from a sense of duty only.

The Rudolph Stiftung, in Vienna, was found, when examined a short time ago, to have 70 Sisters of the Sacred Heart in charge of the wards, answerable less to the doctors than to the head of their order. The Allgemeines Krankenhaus, with 2,000 beds, had only 250 nurses, without a matron or any system of training; they were not sisters of any sort, but women rather of the "Sairy Gamp" order, in common stuff gowns and blouses, with no caps or aprons.

The hospitals at Buda-Pesth are served by Brothers of Mercy, who also carry on a varied and complex system of district nursing without regard to creed. They are said to have had no scientific training, but plenty of experience, and to be devoted and reliable. These examples may serve to indicate the nursing system throughout Austria and adjacent German provinces.

Belgium is also in the hands of the religious nursing orders, but better managed. There is more training, and the modern system is growing.

Holland, which never had much to do with religious orders, has not, up to a recent period, had any established system of nursing its sick, and seemed somewhat indifferent to adopting any. The enterprise was first attempted about thirty-five years ago by three ladies, one of whom gave a house of hers at The Hague to the experiment. The venture met with unexpected success; the demand for private nurses soon overran the supply, and larger facilities for training were established. As early as 1888 there were 337 people in the Home of the Deaconesses. Next, the Children's Hospital, at Rotterdam, established a training school. Although Holland still needs concentration of force and purpose in her training, she bids fair to catch up with some of her neighbors.

Sweden, Norway, and Denmark all have adopted the modern system of trained nursing. It is not unlike that of England or America, except that it is on a smaller and more primitive plan, and nominally more to meet the exigencies of war. The best training schools are under the auspices of the Red Cross sisterhood. The Komtine Hospital, in Denmark, has a training school of note. The chief nurse—*plejemoder*—has to live in the hospital and oversee all the sick nursing. The nurses assist the surgeons and prepare all the work for their hands—antiseptic dressings, sublimate, iodoform, gauze, etc. There are two classes of nurses. One is taken only from the upper or educated classes, and called *damer* or ladies; the others only attend to patients under direction of these. The former are trained, not to serve, but to head institutions.

For Sweden and Norway the Diakomiss Institute at Stockholm is in high repute as a place of training. At first all the nurses in hospitals throughout these countries used to be on an equal footing; of late all have head nurses and a superintendent. A system was also established at Copenhagen, and followed elsewhere, by which the Red Cross sisterhood could instruct the people who came to them for useful information in time of sickness.

Every country is now endeavoring to adapt its nursing system to the conditions of its people.

Russia has been trying to adapt methods to fit her needs ever since the Crimean War, where she had her eyes opened to the value of nursing. The nurses of all her military hospitals, and most of those of the large cities and towns, are obtained from the Red Cross training schools. The society is paid for the nurses it furnishes, and then pays the nurses a nominal sum, varying, but always small. The Red Cross differs in different countries, adapting its rules to its environment. In Russia it is semireligious, but its members can leave if they please. Some hospitals have a very small force, no more than 6, with gratuitous helpers under them. The Military Clinical Hospital, in St. Petersburg, has a nursing force of 67 men, with 15 superintendent sisters over them. Okoncon Hospital has 100 nurses and 25 Red Cross sisters. Children's hospitals all have woman nurses. In time of war Russia has a sisterhood unlike that of any other country. Women of the very highest social class train for the purpose, and in need volunteer, enlisting for the whole war without pay. When war is over they vanish as if they had never been. The tendency is to replace all male nurses by female. Even voluntary male nurses have not only been found wanting in capacity, but also in perseverance and honesty.

Italy, which in early times boasted one of the world's most famous institutions, along with many others, the Nursing Order of the Holy Ghost, founded by Pope Innocent III, has found herself within recent years without any nurses at all. After united Italy's suppression and confiscation of convents and monasteries, when even the irrepressible Sisters of Charity had to fly, there were none to fill their place in all Italy, for 2,256 religious bodies had been suppressed. After a while, as the clamor of the people for their aid became known, the Sisters of Charity began to creep back again, and although the law was still in force, the Government may be said to have winked at their coming. Many of these women have since qualified as nurses, and are now doing good work in Italy. To escape the law they suppress their religious name, and are known simply as superintendents. The large hospital of Maggiore, in Milan, furnishes an example of how they work. Each ward of 50 or 60 beds has a superintendent sister, and under her are 4 lay sisters. Yet with this small force their hospital is reported to be very well kept. All helpers in the hospital are under their superintendence. Almost anywhere in Italy can now be found nurses trained on the English or American plan. They can be procured from the training institution at San Remo, presided over by a Bellevue nurse.

Everybody has heard about the rise of the Red Cross Society, which had its inception in the brain of a Swiss gentleman, M. Henri Dunant, who while riding leisurely in his carriage was attracted by the thundering of the guns at the battle of Solferino, obtained admission to the field, and there witnessed suffering so horrible and needless that it inspired him to write his book, *Souvenir de Solferino*, which created a sensation, and was translated into most of the languages of Europe. At the next yearly conference of the Society of Public Utility, held in Geneva in October, 1863, he presented his idea to the great war-making powers of providing a way by which civilians could reach and care for wounded men from the outside. Next year delegates from every Government in the world came to discuss the proposition of M. Dunant, and after due season the treaty of the Red Cross was entered into.

Meanwhile, the United States was passing through her great civil war. She had no trained nurses, but her Sanitary Commission arose spontaneously, and did a work that astonished the world, and then dropped out of sight. Miss Clara Barton has told the world of her endeavors to get the Red Cross treaty's invitation to the United States to join it noticed, and Secretary Seward's persistent ignoring of the matter, on the ground, as it afterward appeared, that the United States, being at peace with the nations, did not need to join the treaty. Nor, despite all that individual Americans could do, and although 32 nations were in the treaty, could any response from our Government be obtained until Miss Barton laid the whole matter before Secretary Blaine, and he in turn placed it before President Arthur, who promptly signed the treaty. The United States is the only country that this treaty permits to extend its ministrations into other fields than those of war. This is also the only country where the Red Cross Society takes for its uses nurses already trained, and trained none of its own until the past year, when a Red Cross training school was founded in New York.

An account of nursing seems hardly complete without mentioning two women, both of them of France, both equally heroic, and representing respectively the older and newer orders of nursing.

Mme. Coralie Cohen, widow of a physician, was first heard of after the breaking out of the Franco-German War. She was one of the first trained nurses to respond, and throughout the campaign proved herself a marvel of devotion and courage, going through the German ranks and nursing their wounded as carefully as she nursed the men of her own beloved France. Yet she found opportunity to proclaim her patriotism. She had established an ambulance at Vendôme after the capitulation of Metz, and was nursing 800 wounded, when German officers hoisted their flag over the ambulance. She at once refused to work except under her own flag, and announced that if the German flag was not removed she and her staff would depart. The Germans, admiring her pluck and determination, replaced the French flag. The war over, she traveled into Germany, seeking out her countrymen in hospitals and prisons there. The Empress Augusta so admired her philanthropy and courage that she presented Mme. Cohen with the Red Cross of the German order, and in 1889 the French Government presented her with the ribbon of the Legion of Honor.

In the autumn of the same year a Sister of Charity was also presented with the Cross of the Legion of Honor, and in presenting it the general in command made this speech: "Sister Maria Theresa, you were only twenty years of age when you first gave your services to the wounded at Balaklava, and you were wounded in the execution of your duty. You were again wounded at Magenta. You bravely nursed the wounded through all our wars in Syria, China, and Mexico. You were carried off the field at Würth, and before you recovered from your injuries you were again performing your duties. When a grenade fell into your ambulance, you without hesitation took it in your hands and carried it a hundred yards from the ambulance, where it exploded, wounding you severely. No soldier ever performed his duty more heroically than you have done, or lived more successfully for his comrades or his country. I have the honor to present you, in the name of France and of the French army, with the cross which is only conferred upon those who have shown remarkable bravery in action. Soldiers, present arms!"

O

OBITUARIES, AMERICAN. Alden, Alonso, soldier, born in Wadham's Mills, N. Y., July 18, 1834; died in Troy, N. Y., Jan. 16, 1900. He was a lineal descendant of the Puritan John Alden. He received his early education at Keeseville Academy and Sand Lake Collegiate Institute. He was graduated at Williams College in 1859, and two years later was admitted to the New York bar. He enlisted as a private in the 30th New York Volunteers, and on May 14, 1861, was commissioned second lieutenant. In the spring and summer of 1862 his regiment participated in the first occupation of Falmouth and Fredericksburg. In 1862 Lieut. Alden was invalidated home. During his convalescence the 169th New York Regiment was formed in Troy, and he was commissioned major in that regiment, and saw with it the greater part of his military service. He was in engagements at Edenton Road and Suffolk, Va., and at the siege of Charleston. Feb. 13, 1864, he was commissioned lieutenant colonel. He was shot in the head while leading his men in a brilliant charge at Cold Harbor. Returning to his command, he took part in the construction and defense of the Dutch Gap Canal. In June, 1864, he had been commissioned colonel. He won special distinction in the attacks on Fort Fisher, and after the capture of that fort he was placed in command, and on the morning of Jan. 16, 1865, was severely wounded by the explosion. Gen. A. H. Terry, in command of the expedition, made a special report to President Lincoln, recommending his promotion, and he was brevetted brigadier general. He was mustered out of the service July 16, 1865. He was unable to return to the practice of his profession on account of his wounds, from which he suffered till the time of his death. He was for a time in the customhouse in New York city, and from 1866 till 1874 was postmaster of Troy.

Allen, John F., inventor, born in England in 1829; died in New York city, Oct. 4, 1900. He came to this country when twelve years of age, and learned the trade of an engineer, but devoted his life to the invention of engines and mechanical appliances. He invented the Allen high-speed engine, also the Allen valve and the Allen air compressor. When he died he had nearly completed a new engine to be used in a motor vehicle.

Angell, George Ransom, merchant, born in Rochester, N. Y., Nov. 27, 1837; died in Detroit, Mich., April 18, 1900. He received a common-school education, and learned the machinist's trade in his father's shop, afterward becoming a partner. At a time of financial depression he left the business and became a newspaper reporter. Finally, in the early sixties, he entered upon a business career in Detroit, where he spent the remainder of his life. He bought and conducted an extensive art store, was at one time president of the National Photographic Merchants' Board of Trade, was for six years president of the Young Men's Christian Association of Detroit, for two years president of the Board of Education, and at the time of his death was president of the Michigan Bankers' Association, president of the City Savings Bank, and a director in several other financial institutions. He was also active in the affairs of the Congregational Church. Mr. Angell was well read in history and general literature, and was a fluent public speaker.

Archer, Belle (Mrs. Herbert Archer), actress, born in Easton, Pa., in 1870; died in Warren, Pa.,

Sept. 19, 1900. She made her first appearance as a child singer in a juvenile Pinafore company at Ford's Theater, Baltimore, as Josephine, in 1880, under the name of Belle Makensie. Her family name was Mingle. She remained at Ford's Theater several years, and while there married Herbert Archer, a member of the company. She came to New York, where she became a member of the company of the Madison Square Theater in 1886, and played leading rôles in the repertory of that theater with touring companies. She was the leading lady of E. H. Sothorn's company in his first starring tour, and also played the leading rôles with Alexander Salvini when he first ventured out as a star in 1892-'93. In 1895 she was engaged at Daly's Theater, New York, and for four years before her death was a member of McKee & Hoyt's company, playing *A Contented Woman*, in which she appeared for the last time on the stage at Niagara Falls, Sept. 14, 1900.

Armstrong, Andrew Campbell, publisher, born in Canada, Aug. 16, 1829; died in Stamford, Conn., Oct. 8, 1900. He was one of the oldest publishers in New York city, and in 1870, with Charles Scribner, Dr. Josiah G. Holland, and Roswell Smith, founded Scribner's Monthly, now the Century Magazine. He was associated with James A. Sparks, publisher of the Churchman, when the firm of Baker & Scribner was organized, in 1846, and he shortly afterward transferred his services to that firm, which upon the death of Charles Scribner, in 1871, was reorganized as Scribner, Armstrong & Co. In 1878 he retired from that firm to become the head of the publishing house of A. C. Armstrong & Son, which still continues in business. Mr. Armstrong was a director of the Bible Society, a member of the Chamber of Commerce, a director of the Merchants' Clerks' Savings Bank, and a director of the Home Insurance Company.

Atwater, Ernest R., missionary of the American Board, born in Oberlin, Ohio, Aug. 20, 1865; Mrs. **Elizabeth (Graham) Atwater**, born in England; and four children; all killed near Fen-Cho-Fu, Shensi province, China, Aug. 15, 1900. Mr. Atwater was graduated at Oberlin College in 1887, and at the Theological Seminary in 1892.

Averell, William Woods, soldier, born in Cameron, Steuben County, New York, Nov. 5, 1832; died in Bath, N. Y., Feb. 3, 1900. His grandfather was a captain in the Revolutionary army under Gen. Sullivan. He was graduated at West Point in 1855, and after two years at the school for practice at Carlisle, Pa., was sent to the frontier, where he earned a reputation for bravery as an Indian fighter in campaigns against the Crows and Navajoes. In an attack on the latter, in 1859, he was severely wounded, and he remained on sick leave until the outbreak of the civil war. May 14, 1861, he was promoted to a first lieutenantancy in the mounted riflemen and put on staff duty with the Army of the Potomac, and he was in the battle of Bull Run and other actions. Aug. 23, 1861, he was appointed colonel of the 3d Pennsylvania Cavalry, and placed in command of the cavalry defenses of Washington. In March, 1863, he made the first of several successful raids, the nature of which is indicated somewhat by one of his dispatches to the department: "Dec. 21—My column has marched, climbed, slid, and swum 340 miles since Dec. 8." Later in the year he made a raid near White Sulphur Springs, and was de-

feated after two days of hard fighting; but on Nov. 5 he made another raid, cleared Green Brier County of Confederates, and captured three guns and a number of prisoners. In the following month he made a descent on southwestern Virginia and cut the Virginia and Tennessee Railroad at Salem, which was the line of supplies of the Confederate army under Longstreet, besides destroying a large quantity of clothing, military equipments, and provisions. The strongest effort was now made to capture him, but, obtaining through a prisoner a knowledge of the enemy's plans, he succeeded in getting through the Confederate lines, reaching the National lines with 200 prisoners and

150 horses. In February, 1864, Averell was placed in command of the 2d Cavalry Division, and he fought continuously all that spring and summer. He was wounded in a skirmish at Wytheville, but this interfered with his active duty only a few days. In July and August he was fighting in the Shenandoah valley, at Winchester, and Martinsburg, and he closed that year's campaign at Mount Jackson, in September. March 13, 1865, he was made brevet major general for gallant action at Moorfields, Va., and, the war ending, he resigned. In 1866 Gen. Averell was appointed United States consul general at Montreal, which post he held three years. Aug. 17, 1888, he was reinstated in the regular army with the rank of captain, and Aug. 31 of the same year was retired. In his latter years he was interested in manufacturing. He was the inventor of a system of conduits for electrical wires, and in June, 1898, after litigation pending for seventeen years, the Supreme Court awarded him nearly \$700,000 as a result of a suit he had instituted against Amzi L. Barber for his share of the profits of the Barber Asphalt Paving Company.

Bagnall, Benjamin, missionary. China Inland Mission; Mrs. Bagnall; one child; all killed in Paoting-Fu, Chi-Li province, China, July 1, 1900.

Bally, Silas M., soldier, born in Brownsville, Pa., in 1836; died in Uniontown, Pa., May 5, 1900. At the beginning of the civil war he organized a company of the 8th Pennsylvania Reserve Corps, the first company to be mustered into service from Greene County, and in May, 1862, he was elected major of the regiment. He took part in the battles of Mechanicsville and Gaines's Mill, and in the latter he was seriously wounded in the head. He rejoined his regiment in Maryland just before the battle of Antietam, Sept. 17, 1862. At Fredericksburg, Dec. 13, he gallantly led the regiment, and was again wounded. He was at once promoted to be colonel, his commission dating from the battle of South Mountain, Sept. 14, 1862. He served also with Grant in the Wilderness. On May 13, 1865, he was brevetted brigadier general of volunteers for gallant and meritorious service during the war. Gen. Bally was a delegate to the National Republican Convention in 1880, and was one of the 306 who supported Gen. Grant. In 1881 he was elected Treasurer of Pennsylvania as a Republican.

destroying a large quantity of clothing, military equipments, and provisions. The strongest effort was now made to capture him, but, obtaining through a prisoner a knowledge of the enemy's plans, he succeeded in getting through the Confederate lines, reaching the National lines with 200 prisoners and

Ball, Ebenezer Burgess, born in Loudon County, Virginia, in 1817; died in Washington, D. C., April 12, 1900. In 1843 he became a clerk in a dry-goods store in Washington. Tiring of this life, he journeyed westward, settling first on the banks of Osage river in Missouri, and finally in Oregon, on the site of the present town of Jackson. Here he remained several years, taking part in the Rogue river war, acting as Government agent on the Selentry Reservation, and amassing a considerable fortune as a post trader. At the beginning of the civil war he enlisted, and he served till its close. In the meantime he had lost all his savings, and until, through the kindness of Gen. Black, sometime Commissioner of Pensions, he was enabled to establish the little tobacco shop in the Pension Office he had a hard fight with Fate, all his efforts to obtain a place under the Government meeting with failure. Till the time of his death he was a familiar figure to frequenters of the Pension Office. Col. Ball was related to Washington on both sides of his family, and bore a striking resemblance to the first President of the United States. He always dressed in the uniform of a Continental general.

Banta, William Sickles, lawyer, born in Passack, N. J., Dec. 12, 1824; died in Hackensack, N. J., May 7, 1900. He studied under Rev. J. D. Mabon, and was graduated at Rutgers College in 1844. He was admitted to the bar in 1847, and for ten years after 1860 he was public prosecutor of Bergen County, being the first Republican ever appointed to that office. In 1872 he was appointed judge of the Court of Common Pleas, to fill the unexpired term of Judge Ashbel Green, and he served for many years in this office. Judge Banta was, in 1860, county superintendent of public schools, and he held many local public offices. He was very wealthy, and was well known for his practical philanthropy.

Barbour, John Humphrey, clergyman, born in Torrington, Conn., May 29, 1854; died in Middletown, Conn., April 29, 1900. He was graduated at Trinity College in 1873. In 1876 he was ordained deacon in the Protestant Episcopal Church, in 1878 was admitted to the priesthood, and from 1876 to 1889 was minister of Grace Chapel, in Hartford. He also served as librarian of Trinity College from 1882 to 1889. In 1889 he accepted the chair of New Testament Literature and Interpretation in Berkeley Divinity School, Middletown, Conn., which he held until the time of his death. He was the author of *Beginnings of the Historic Episcopate*, and other religious works.

Barnard, Henry, educator, born in Hartford, Conn., Jan. 24, 1811; died there, July 5, 1900. He was graduated at Yale in 1830, studied law, and was admitted to the bar in 1835. He then spent fifteen months in study and travel in Europe, the greater part of the time in visiting educational and reformatory institutions. On his return he was elected to the Legislature, and in 1837 was chosen to organize the common-school system of the State. His first service was as secretary of the State Board of Education, from 1838 till 1842. He introduced schoolhouses of improved construction, high schools, teachers' institutes, normal academies, and entirely new methods of instruction. From 1843 till 1849 he was school commissioner of Rhode Island, doing the same service for the schools of that State that he had done for those of Connecticut. In 1850 he returned to his native State, and for four years he was State Superintendent of Schools. From 1857 till 1859 he was President of the University of Wisconsin, and in 1865 and 1866 president of St. John's College, Annapolis, Md. The National

Bureau of Education was established in 1867, and Dr. Barnard became the first United States Commissioner of Education. He organized the bureau and issued four valuable reports. In the first of these he advocated nearly every educational reform that has since been introduced in the United States. He resigned in 1870, and devoted the remainder of his life to the writing and publication of educational works. On his eighty-seventh birthday (Jan. 24, 1898), the public schools of Hartford were closed, and a distinguished audience gathered in the Capitol to do him honor as "the father of education"—a title that he shares with Horace Mann, his great contemporary and coworker. While secretary of the school board he established the Connecticut Common-School Journal, and in Rhode Island he issued the Rhode Island School Journal. In 1855 he began the publication of the American Journal of Education. His writings covered the whole range of educational activities, both theoretical and practical. Some of the more important titles are: School Architecture (1839; 10th ed., 1886); National Education (1840); Practical Illustrations of School Architecture; Report on Public Schools in Rhode Island (1845 and 1848); Documentary History of Public Schools in Providence; Education and Employment of Children in Factories; Normal Schools and Teachers' Institutes (1850); National Education in Europe (1854); Normal Schools in the United States and Europe; History of Education in Connecticut from 1838 to 1854; Educational Biography (1857); Papers for Teachers; Military Schools; Technical and Scientific Education; American Pedagogy; Discourses on the Life and Character of T. H. Gallaudet; Tribute to Dr. Gallaudet, with a History of the American Asylum; Hints and Methods for the Use of Teachers; American Teachers; Elementary and Secondary Instruction in Switzerland, France, Belgium, etc.; English Pedagogy; French Teachers, Schools, and Pedagogy; German Teachers and Educational Reformers; Life of Ezekiel Cheever, and Notes on the Free Schools of New England; American Journal of Education (ed. 1856-'86); Kindergarten and Child Culture Papers; Object Teaching, and Oral Lessons on Social Science and Common Things (1861); Pestalozzi and Pestalozzianism (1861); Primary Schools and Elementary Instruction; School Codes; Science and Art; Superior Instruction in Different Countries. A collected edition of his works was published in 1886, under the title The American Library of Schools and Education. It is in 52 volumes and contains more than 800 treatises, each being also published separately.

Bartol, Cyrus Augustus, clergyman, born in Freeport, Me., April 30, 1813; died in Boston, Mass., Dec. 16, 1900. He was graduated at Bowdoin College in 1832, and at Harvard Divinity School in 1835, and became the colleague of the Rev. Charles Lowell at the West (Unitarian) Church, Boston, in 1837. After the death of the senior pastor, in 1861, he continued in charge of the parish until the dissolution of the society in 1888. In the earlier portion of his ministry he might have been classed with the Channing Unitarians, as the more conservative members of the body were styled; but as time went on he became known as an extremely radical thinker. He was always a fearless speaker, and at all times an enthusiastic advocate of philanthropic and other reforms. His tender nature and intense spirituality endeared him to all who came within the sphere of his influence. He published Discourses on the Christian Spirit and Life (1850); Discourses on the Christian Body and Form; Pic-

tures of Europe (1855); History of the West Church and its Ministers (1858); Church and Congregation (1858); The Word of the Spirit to the Church (1860); The Unspotted Life (1864); Radical Problems (1872); The Rising Faith (1874); Principles and Portraits (1880); Spiritual Specifics (1884).

Beard, William Holbrook, painter, born in Painesville, Ohio, April 13, 1825; died in New York city, Feb. 20, 1900. He began sketching when a very little boy, but his early instruction, beyond such as he could impart to himself, seems to have consisted only of a few lessons from his elder brother, James Henry Beard. He began his professional career as a traveling portrait painter in 1846, and after four years settled in Buffalo, where he remained until his departure for Europe in 1857. He took with him several important commissions, and spent three years painting

and sketching in Düsseldorf, and in Italy, Switzerland, and France. He returned in 1860, and after a short time in Buffalo made his permanent home in New York city. He was elected to the National Academy in 1862. His father was a judge of the Supreme Court of Connecticut. In the last years of his life Mr. Beard devoted himself almost exclusively to the humorous painting of animals, in which he was eminently successful. He published collections of his sketches under the title *Humor in Animals*, and a text-book entitled *Action in Art*. Among his best-known pictures are: Kittens and Guinea Pigs; Bears on a Bender; Court of Justice; The Astronomers; The Watchers; Bears' Dance; Raining Cats and Dogs; Naughty Cubs; Death and Chivalry; The Barroom Politicians; Pets on a Spree; Old Time Club Life; Hark; The Wreckers; The Approach of Spring; Oh, My!; Horse Market in Brittany; Worn Out; The Eagle; Lo! the Poor Indian; The Dancing Lesson; Who! who-o!; How d'do, Wabbit?; Ain't you Ashamed of Yourself?; Eavesdropper; Who's Afraid?; Darwin Expounding his Theories; Bulls and Bears in Wall Street; The Fallen Landmark; and Cattle on a Thousand Hills. His *March of Silenus*, belonging to the Buffalo Fine Art Gallery, and *Lo! the Poor Indian* were at the Centennial Exhibition of 1876. To the Paris Exposition of 1878 Mr. Beard sent *The Wreckers*.

Beecher, Charles, clergyman, born in Litchfield, Conn., Oct. 7, 1815; died in Georgetown, Mass., April 21, 1900. He was the last surviving son of the Rev. Lyman Beecher. He studied at the Boston Latin School and Lawrence Academy, Groton, Mass., and was graduated at Bowdoin in 1834. After a theological course at Lane Seminary, of which his father was the head, he became pastor of the Second Presbyterian Church in Fort Wayne, Ind., in 1844. Owing to some differences of belief between himself and members of the church, he left, in 1851, and became pastor of a Congregational church in Newark, N. J., from which he went to the First Congregational Church in Georgetown, Mass. From 1870 till 1877 he resided in Florida, and was for two years State Superintendent of Public Instruction. He was

afterward pastor of a church in Wysox, Pa. During his later years he did not preach. He was a gifted musician, and had charge of the music in the compiling of the Plymouth Collection of Hymns and Tunes. He also edited the Autobiography and Correspondence of Lyman Beecher, and was the author of Redeemer and Redeemed; Eden Tableau; The Incarnation, or Pictures of the Virgin and her Son; David and his Throne; Spiritual Manifestations; and Patmos.

Beecher, Thomas Kinnicut, clergyman, born in Litchfield, Conn., Feb. 10, 1824; died in Elmira, N. Y., March 14, 1900. He was the sixth son of the Rev. Lyman Beecher. He was graduated at

Illinois College, of which his brother Edward was president, in 1843. He was first principal of the Northeast Grammar School in Philadelphia, and then of the Hartford (Conn.) High School. In 1852 he removed to Williamsburg (now a part of New York city) and organized and assumed charge of the New England Congregational Church. In 1854 he settled in Elmira, where he

became pastor of the Independent Church (now called Park Church), and remained there till the time of his death. In 1863 he was chosen chaplain of the 141st New York Volunteers, and he served with the Army of the Potomac four months. In 1864-'65 he visited South America, and in 1873 revisited England. He was at different times nominated by Democrats, Republicans, Greenbackers, and Prohibitionists, and had been a candidate for nearly every office within the gift of the American people save those of Governor and President. He was fond of mechanics, and for years took care of the Elmira town clock, correcting its time and making the observations himself without cost to the city. When on his way to New York city he would run the locomotive. He was a lover of books and art, a keen critic, and for many years wrote a column of miscellany on current questions, first for the Elmira Advertiser and then for the Gazette. His only published volume is *Our Seven Churches* (New York, 1870), a liberal estimate of the Roman Catholic, Presbyterian, Protestant Episcopal, Methodist Episcopal, Baptist, Congregational, and Liberal Christian denominations, many parts of which have been printed separately as tracts and widely circulated. Thomas Beecher never became a national figure, as did his brother, but, like him, was a man of independent and aggressive character, advanced views, and courage in the expression of his convictions. In a city where he was not known and loved as he was in Elmira he would infallibly have been regarded as a crank, and his personal appearance and habits often caused his fellow-clergymen anxiety. Although in receipt of a comfortable salary, he was always impoverished and shabby. All his money beyond what was required for the bare necessities of his household went to charity. His big, sturdy figure, clad in an old and rusty coat, and his handsome face and flowing white hair surmounted by a velvet cap in sad disrepair, were familiar sights as he drove about with his wife

(a granddaughter of Noah Webster) in their old-fashioned buggy, distributing potatoes, coal, or other necessities to poor families. The working-men with whom he was fond of associating called him Father Tom; but he even resented the respect and affection of the nickname, never calling himself minister or preacher, but merely teacher. Park Church occupies an edifice valued at \$150,000, and has a membership of 700, with 1,000 Sunday-school children. He made it into an institutional church, the first of its kind, it is said, in the country. He put in a stage for theatrical productions, bowling alleys, gymnasiums, and parlors. It was a great innovation, and caused considerable talk, but it gave him opportunities to exemplify his ideas of practical Christianity. It took years to build, because the pastor would not permit a brick or a stone to go into the structure until it was paid for. The Sunday school he made a remarkable institution. Every lesson was written by Mr. Beecher himself. The school was graded as rigidly as any ward day school, and the children had to learn their lessons as thoroughly as in a secular school or leave. In the details the pastor was assisted by Mrs. Beecher, but the ideas were his own. As a result of his personality and his system the school has had a phenomenal growth. On the first Sunday of each month Mr. Beecher used to deliver a special sermon to the children, and attendance at this service was made a requirement for promotion. The Beecher home was a refuge for the poor and for those in trouble. This appreciation of his church and its work was written in 1888: "However other churches may differ in doctrine, methods, and manner from Park Church, probably those churches are few that could not profitably take lessons from her in the care bestowed upon the stranger, on the young man and woman away from home, on the sick, on the poor and desolate. In wise aid and tender helpfulness Park Church is eminent, and her charity is not limited to bestowals upon the usual objects of benevolence. She knows the greater charity that is charitable to peers, which when all is done I have thought outranks the rest. It is comparatively easy to be kind to the suppliant, but to the erect worker, who neither asks nor accepts alms, but looks us in the face with a reasonable assurance and feels able to do full as well as we do, charity is sometimes denied. We too often grow jealous of these and suspicious. When this is true of churches, the cause of Christ bends under useless burdens. These burdens are not so heavy as once they were. That they are not heavier in Elmira is largely accounted for by the generous life and heart of Mr. Beecher and the good fellowship of his church."

Beekman, Henry Rutgers, lawyer, born in New York city, Dec. 8, 1845; died there, Dec. 17, 1900. He was graduated at Columbia College in 1865, and at the Law School in 1867, and became a member of the law firm of Beekman & Ogden. He was a school trustee in 1884, and in the latter part of same year he was appointed park commissioner, to fill a vacancy. In 1886 he was reappointed for five years, and was elected president of the Department of Parks. The same year he was elected president of the Board of Aldermen, and resigned his office of park commissioner. At the expiration of his term of office, one year later, he was appointed counsel for the corporation, which office he held until Mayor Grant appointed his successor. While he was corporation counsel he was active in the promotion of rapid transit, and when, in 1894, the subject was taken up by the Chamber of Commerce, he drew the bill that became law. Under the commission created by

that bill he was appointed as one of the counsel, and he served in that capacity until his election to the bench. In 1889 Gov. Hill named him as one of the commissioners for the promotion of uniformity of legislation in the United States with respect to marriage, divorce, and other subjects. In November, 1894, Mr. Beekman was elected judge of the Superior Court of the city of New York on the union ticket headed by William L. Strong, and upon the consolidation of the courts under the new Constitution, Jan. 1, 1896, he became a justice of the Supreme Court in the First District.

Behrends, Adolphus Julius Frederick, clergyman, born in Nymwegen, Holland, Dec. 13, 1839; died in Brooklyn, N. Y., May 22, 1900. He came to this country with his father, a Lutheran clergyman, in 1845. He was graduated at Dennison University, Granville, Ohio, in 1862, and at Rochester Theological Seminary in 1865. He was called to the Baptist Church in Yonkers, N. Y., where he was ordained on July 27, 1865. His ministry there was remarkably successful, and in 1873 he was called to the First Baptist Church of Cleveland, Ohio. In the same year the degree of doctor of divinity was conferred on him by Richmond College, Richmond, Va., he being the first Northern man to receive the honor from that institution. He remained pastor of the Cleveland church till Feb. 1, 1876, when, on account of a change in his doctrinal views, he left the Baptist denomination and accepted the pastorate of the Union Congregational Church of Providence, R. I., where he remained till 1883. Dr. Behrends was installed pastor of the Central Congregational Church of Brooklyn, March 1, 1883. In 1886 he was chosen as the Ely lecturer in Hartford Theological Seminary, and his lectures were published under the title of *Socialism and Christianity*. He was the Lyman Beecher lecturer at Yale Divinity School in 1890, and the degree of doctor of sacred theology was conferred upon him by that university the same year. His lectures at Yale on *The Philosophy of Preaching* were published, and he also published *The World for Christ* and many pamphlets, and was a frequent contributor to periodicals. He was chaplain at large, with the rank of captain, in the National Guard of the State, and was the successor of the Rev. Dr. Talmage as chaplain of the 13th New York Regiment. Dr. Behrends was a fearless and forceful speaker, and his tolerance and liberality in matters of Christian belief made his church conspicuous in the denomination. During the trolley strike in 1895 he made a strong address from the pulpit, advocating stern military measures to suppress violence. He was a prominent figure in the Ecumenical Conference on Foreign Missions in New York city in 1900, and on May 6 made a notable address before that body—an impassioned plea for the unity of Christendom and the abolition of creeds—which excited universal interest and comment.

Benjamin, William H., soldier, born in Wilton, Conn., Oct. 18, 1825; died in Rochester, N. Y., Jan. 5, 1900. He moved with his parents to Rochester, N. Y., when a boy, and was educated in the public schools. At the beginning of the civil war he assisted in organizing the 8th New York Cavalry, and went to the front with the rank of major. He was wounded in the battle of Cold Harbor. He was made lieutenant colonel for gallant conduct at Gettysburg, and in the autumn of 1863 took command of the regiment. At the close of the war he was brevetted brigadier general. Afterward he engaged in business. In 1895 he was Deputy Collector of Customs.

Biddle, Horace P., jurist, born in Fairfield County, Ohio, March 24, 1811; died in Logans-

port, Ind., May 16, 1900. He received only a common-school education, but studied by himself Latin, German, French, Italian, and Spanish. He was admitted to the bar in 1839, and in 1840 began practice in Logansport, Ind. He was elected judge of the Eighth Circuit Court in 1846, and was a member of the convention that framed the present Constitution of Indiana in 1850. He was defeated for Congress in 1852, and in 1857 was elected judge of the Supreme Court, but was not commissioned. He was re-elected by a majority of 33,000 in 1874, and served six years. He was a circuit judge nineteen years. Judge Biddle retired from active life in January, 1881. He published *A Few Poems* (1858), *The Musical Scale* (1860), *Biddle's Poems*, *American Boyhood*, *Elements of Knowledge*, *Prose Miscellany*, *Glances at the World*, and *Last Poems*.

Bidwell, Dollie (Mrs. Charles Bidwell, afterward Mrs. Lovering Kissam), actress, born in Seabrook, N. H., April 13, 1843; died in New York city, Jan. 25, 1900. She made her first appearance in Boston at the National Theater as Jeanette in the *Idiot Witness* in the autumn of 1860. She then was engaged by Joseph Procter to support him in his starring tours, and became very popular throughout New England, where she ultimately became herself a star. For many years she played a drama that was written for her, called *The Pretty Panther*. On her marriage to Mr. Kissam, in 1880, she retired from the stage.

Bidwell, John, born in Chautauqua County, New York, Aug. 5, 1819; died in Chico, Cal., April 4, 1900. In 1831 his parents settled in Ashtabula County, Ohio. He attended the Kingsville Academy, and taught school in Ohio and Missouri till 1841, when he crossed the Rocky mountains with the first overland party to California. He enlisted in defense of California against the native chiefs Castro and Alvarado in the revolt of 1844 and 1845, and acted as aide-camp to Sutter till the war ended by the expulsion of the Mexican Governor, Micheltorena. One of Gen. Frémont's first acts after the war was to appoint young Bidwell, who had risen to the rank of major, magistrate of San Luis Rey District. In 1849 he was chosen a member of the Constitutional Convention, and the same year he was elected to the Senate of the first Legislature. In 1850 he was appointed by Gov. Burnett one of the commissioners to convey to Washington the block of gold-bearing quartz, California's contribution to the Washington monument. In 1860 he was a delegate to the Democratic Convention in Charleston, S. C. In the civil war he commanded, in 1863, the 5th Brigade, California Volunteers. In 1864 he was a delegate to the Baltimore convention that renominated President Lincoln. In the same year he was elected to Congress. In 1875 he was a candidate for Governor of California on the nonpartisan, antimonopoly ticket, but was defeated. In 1890 he was the Prohibition candidate for Governor, and two years later was nominated, at Cincinnati, by the National Prohibition party, for the presidency. Gen. Bidwell was a sincere Prohibitionist, and on espousing the cause of the party destroyed \$500,000 worth of wine, rooted out of his vineyard all his wine-growing vines, and turned his winery into a school for Indian children. His property, about 30,000 acres of the richest soil in the Sacramento valley, is one of the finest fruit-growing ranches in the world.

Bingham, John Armor, diplomatist, born in Mercer, Pa., Jan. 21, 1815; died in Cadiz, Ohio, March 19, 1900. He was educated at Franklin College, New Athens, Ohio, and went to Cadiz in

1840, immediately after his admission to the bar. In 1854 he was elected to Congress from the 21st (later the 16th) Ohio District. He was returned to Congress until 1863, and won fame as an orator. He was the friend and adviser of President Lincoln, who in 1864 appointed him Judge-Advocate General, and later in the same year solicitor of the United States Court of Claims. The day after the President's assassination he was called from his home in Cadiz by a message from Secretary Stanton, and within twenty-four hours after his arrival in Washington he had opened an office and formulated plans that resulted in the arrest, trial, and conviction of the conspirators. He was appointed Special Judge Advocate by President Johnson, and a member of the military commission, and the work of examining and cross-examining the witnesses fell largely to him. He also made the principal argument for the prosecution, requiring nine hours for its delivery. Mr. Bingham was a member of the committee to which was intrusted the important duty of drawing up the articles of impeachment against President Johnson; and he acted as chairman in the impeachment proceedings before the Senate. He began the closing argument on Monday, May 4, 1868, and for three days occupied the attention of the Senate and a vast audience. He was in Congress for eight years after 1865, and he held the Japanese mission from 1873 till 1885. Mr. Bingham, as chairman of the House committee to which it was referred, was largely responsible for the wording of the fourteenth amendment to the Constitution. He left office as poor as when he entered it, and in 1898, by special act of Congress, he was granted a Government pension.

Bird, Rowena, missionary, American Board of Foreign Missions, born in Sandoval, Ill., July 31, 1865; killed in Taku, Shensi province, China, July 31, 1900. She studied at Oberlin College; sailed for China in September, 1890, and since that time had been stationed in Taku.

Blanchard, George Roberts, railway expert, born in Rochester, N. Y., June 15, 1841; died in New York city, Oct. 8, 1900. He entered the offices of the old Cincinnati and Chicago Railroad in 1858, and in 1860 began a four years' service as clerk, chief freight clerk, and general freight agent with the Ohio and Mississippi Railroad Company. From May, 1864, till October, 1867, he was general freight agent of the Central Ohio Railroad, and from that time till October, 1872, filled the corresponding office with the Baltimore and Ohio Railroad Company. Two years later he left the Baltimore and Ohio to serve in the same capacity with the Erie Railway Company, and in July, 1874, was appointed vice-president of that company, discharging the duties of that office until October, 1884. In February, 1886, he was chosen a commissioner of the Central Traffic Association, with headquarters in Chicago, and in the following spring was made its chairman. He severed his connection with the Central Traffic Association at the close of 1895 to become commissioner of the Joint Traffic Association, holding that office till the dissolution of the association, in November, 1898. After that time Mr. Blanchard devoted himself to work as a railway expert, and was considered one of the foremost authorities in the country. His fatal illness was brought on by overwork while preparing, in the interest of several railroads, an argument against the Cullom bill enlarging the powers of the Interstate Railroad Commission and against the bill introduced in Congress providing for a reduction of the compensation to railroads for

the carrying of the mails. He was a director of the United States Express Company, the Standard Coupler Company, and the Safety Car Heating and Lighting Company, and was president of the American Mutoscope and Biograph Company. He wrote much in both prose and poetry, and composed many pieces of music. His house contained many examples of the best work of modern artists in painting and sculpture.

Bliss, Zenas Randall, soldier, born in Johnston, R. I., April 17, 1835; died in Washington, D. C., Jan. 2, 1900. He was graduated at West Point in 1854, and joined his regiment, the 1st Infantry, at Fort Duncan, Texas, as brevet second lieutenant July 1 of that year. On March 3, 1855, he was promoted to be second lieutenant of the 8th Infantry, and he served on the Texas frontier till 1861, most of the time in command of a detachment of mounted infantry scouting against hostile Indians. He was promoted to be first lieutenant Oct. 17, 1860, and to the captaincy May 14, 1861. In March, 1861, while in command of Fort Quitman, Texas, garrisoned by a company of the 8th Infantry, he received orders to join the command under Capt. Reeve, 8th Infantry, then under instruction to march with 6 companies of the regiment to San Antonio, Texas, with a view of transferring the command to the North. After a march of 600 miles Reeve was met at Adams Hill, near San Antonio, by the Confederate Gen. Earl Van Dorn with more than 2,000 men, and after a reconnaissance surrendered, May 9, 1861. Capt. Bliss was held as a prisoner of war in San Antonio till February, 1862, when he was transferred to Richmond, Va., and on April 5 was exchanged. May 26, 1862, he was appointed colonel of the 10th Rhode Island Volunteers, and on Aug. 17 was transferred to the colonelcy of the 7th Rhode Island Volunteers, and he held that commission until mustered out of the volunteer service, June 9, 1865. He took part in many important battles, and was recommended several times for promotion to brigadier general on account of his gallantry and his skillful handling of troops under fire; but the honor was deferred. He commanded the 1st Brigade, 2d Division, 9th Army Corps, in the battle of the Wilderness, and was brevetted lieutenant colonel, May 7, 1864, for gallant and meritorious services. After the war he commanded at the Schuylkill Arsenal; at Fort Porter, N. Y.; and in the district of Chester, S. C., where he acted as assistant commissioner of the Freedmen's Bureau, provost marshal, and provost judge, and also transacted all the civil business of the district. He commanded with distinction in Texas in 1871-'72, during the Mexican revolution, and was credited with preventing war between that country and the United States. He was made major of the 39th Infantry, Aug. 6, 1867; transferred to the 25th Infantry, March 15, 1869; made lieutenant colonel, 19th Infantry, March 4, 1879; and colonel, 24th Infantry, April 20, 1886. April 25, 1895, he was appointed brigadier general, and on May 14, 1897, major general. Gen. Bliss was retired, at his own request, May 22, 1897.

Bolter, Andrew, entomologist, born in Sigmaringen, Prussia, in 1820; died in Chicago, March 18, 1900. He left Germany on account of his supposed connection with the revolution of 1848, and resided in Chicago forty-five years. Although regarded as a high authority, Mr. Bolter contributed no books to scientific literature. He frequently, however, in response to requests for information from instructors and students of insect life, wrote long letters on various phases

of the subject, and his reputation for practical knowledge was widespread. He was a member of the Academy of Science in Chicago, and of the New York Entomological Society. From boyhood Mr. Bolter's chief pursuit outside of business hours was the collection of insects. His collection of beetles, butterflies, and other insects is said to be the finest on the continent, and one of the most complete private collections in the world.

Bowen, Anna Maud, educator, born in Chicago, Ill., in 1872; died there, Jan. 28, 1900. She entered Chicago University in 1891. As a freshman, in the philosophical course, she accomplished twice the amount of work required, and she was graduated in 1894, with the degree of bachelor of philosophy. In 1895 she was made a fellow of philosophy at Cornell, and in two years received the degree of Ph. D. After a course at Leipsic she was made dean of the seminary at Martin's Ferry, Ohio, and then became an editorial writer on the Nation, which place she held until her appointment, in June, 1899, as dean of Woman's Hall, Northwestern University. She was the youngest woman ever appointed to that post.

Bowman, William Spenser, theologian, born in Virginia, Aug. 3, 1830; died at Mount Pleasant, N. C., March 26, 1900. His parents were descendants of Germans who settled in the valley of Virginia prior to the Revolutionary War. He was educated in the common schools of his native country, studied languages and theology under private tutors, and was ordained to the office of the ministry by the synod of Virginia in 1856. He served parishes in Virginia, South Carolina, and Georgia, having a congregation in Savannah during the last nine years of his life. He received the degree of doctor of divinity from Newberry College in 1870, and was president of the board of the same institution for many years. Besides this, he held many posts of honor and trust in the Southern Church, and received recognition as a literary and scientific scholar.

Boyd, Belle (Mrs. Nathaniel High), actress and dramatist, born in Martinsburg, W. Va., in May, 1843; died in Kilbourne, Wis., June 11, 1900. During the war she was a Confederate spy, and was commissioned captain. She was captured in 1864, and sentenced to be shot, but managed to escape on her promise to go to England. There she married Lieut. Hardinge, a Federal officer who had aided her to escape the death penalty, and after his death, in 1869, she married John Hammond, a former officer of the British army. She made her first appearance at the Theater Royal, Manchester, England, in the autumn of 1866, as Pauline, in *The Lady of Lyons*, under the tutelage of Walter Montgomery and Avonia Jones. After a few weeks of popular success with the Manchester company she came to St. Louis, Mo., where she played her second engagement, and immediately afterward began a successful starring tour of the Southern States. In 1868 she became a member of the Miles & Bates stock company in Cincinnati, under the name Nina Benjamin. In the same year she was engaged as a leading member of the company, playing in Galveston and Houston, Texas, and in 1869 was in a similar place in the St. Charles's Theater, New Orleans. On Feb. 22, 1876, she began at Toledo, Ohio, a highly successful dramatization of her own adventurous career as a Confederate spy, which she played throughout the country for fifteen years. She married in 1885 Nathaniel High, of Toledo. Boucicault's *Belle Lamar* is supposed to be a rearrangement of her play *Belle Boyd*.

Braden, John, educator, born Aug. 18, 1828; died in Nashville, Tenn., June 10, 1900. Dr. Braden was one of the founders of Central Tennessee University, one of the largest institutions in the South for the education of colored youth, and had been its president since 1869. He was graduated at Ohio Wesleyan University in 1853, and taught for a year in Xenia Female Seminary. In 1854 he was admitted to the Cincinnati Conference of the Methodist Episcopal Church, and he filled Methodist pulpits and preached in Methodist schools until 1868, when he was appointed principal of the city schools of Nashville. One year later he became president of Central University. Iowa University conferred on him the degree of D. D. in 1873.

Brown, John Wesley, clergyman, born in Baltimore, Md., July 7, 1837; died in New York city, Nov. 10, 1900. He was graduated at Dickinson College in 1855, as a civil engineer, and was for two years in the Government service. He then returned to Dickinson Seminary, and in 1858 entered the Methodist ministry, but in 1866 entered the Protestant Episcopal Church. His first charge was in Middleton, Del. He was rector of Trinity Church, Philadelphia; Christ Church, Detroit; Trinity Church, Cleveland; and for five years of St. Paul's Church, Buffalo. On June 1 he succeeded the Rev. Dr. William F. Morgan in the rectorship of St. Thomas's Church, New York city. While in Buffalo he was president of the Society for Prevention of Cruelty to Animals, and was chaplain of the 65th New York Regiment. He was widely interested in the organizations and charities of his denomination.

Brown, Moses True, elocutionist, born in Deerfield, N. H., March 4, 1827; died in Sandusky, Ohio, Sept. 11, 1900. He was educated at the high school, Manchester, N. H. He taught school in his early manhood, and was for six years superintendent of the public schools of Toledo, Ohio. He was for two years critic and literary adviser for the firm of Van Antwerp Bragg & Co., of Cincinnati, Ohio, and then resigned his place with that house to become a teacher of elocution in the schools and colleges of the country. He met with great success, and was known as one of the foremost interpreters of Dickens. He finally settled in Boston, and soon afterward became Professor of Oratory in Tufts College, where he remained more than twenty years. During this time he taught in the Boston School of Oratory, and in 1886 became its president. He resigned in 1894 and removed to Sandusky, Ohio, and devoted his time to lecturing. In 1899 he was elected to the chair of the Philosophy of Expression in Ohio Wesleyan University. He was the author of *The Synthetic Philosophy of Expression*.

Browne, William Henry, lawyer, born in New York city, June 24, 1828; died in Charlestown, W. Va., Sept. 15, 1900. During the Mexican War he enlisted, was made second lieutenant, engaged in all the battles from Vera Cruz to the taking of the city of Mexico, and was promoted first lieutenant and brevetted captain. After the war he returned to New York city, where he became identified with the City Troop, the Fusileers, and the regiment now known as the 7th. When the Republican party was formed he was active in organizing party clubs, and was chairman of the meeting that nominated John C. Frémont for the presidency. At the outbreak of the civil war he raised at his own expense 14 companies, which were marched to Albany to fill up regiments forming there. He was commissioned lieutenant colonel of the 31st Regiment, New York Volunteers, and later was promoted colonel of the 36th New

York. He led a mixed brigade at the second battle of Fredericksburg, and was severely wounded at Salem Church. He was appointed a colonel in the invalid corps and assigned to command the 2d Brigade, Veteran Reserve Corps. Later he was made brigadier general by brevet. He was stationed in Baltimore as Gen. Frye's aid in charge of Maryland and Delaware. After the war he settled in Washington, and built up a practice as a consulting lawyer in trade-mark cases. He was the compiler of Browne on Trade-marks.

Bruce, Catherine Wolfe, philanthropist, born in New York city, Jan. 22, 1816; died there, March 13, 1900. She was a daughter of George Bruce, the type founder, in whose honor she built, established, and endowed the George Bruce Free Library, a branch of the New York Free Circulating Library. In 1888 she gave \$50,000 to Harvard College observatory for the purchase of a photographic telescope, and later gave other sums for astronomical work. The Bruce memorial telescope, which was at first placed in Harvard College, was taken to Arequipa, Peru, in 1895, and set up in Harvard observatory there. In 1897 she gave a fund to the Astronomical Society of the Pacific for the award of a gold medal once a year for distinguished service in astronomy. She wrote and published a translation of the *Dies Iræ* (1890).

Burke, Joseph W., soldier, born in Ireland in 1830; died in Jacksonville, Ala., Nov. 7, 1900. In early manhood he settled in Dayton, Ohio. He raised a regiment for the National service, and fought through the civil war. He was with Sherman in his march to the sea, and for his bravery in the battles of that campaign was brevetted major general. After the war he settled in Jacksonville, Ala., and was interested in the development of the commercial and mineral resources of the State. He was collector of the port of Mobile under the administrations of Presidents Harrison and McKinley.

Burr, Alfred Edmund, journalist, born in Hartford, Conn., March 27, 1815; died there, Jan. 8, 1900. After obtaining a common-school education he became connected with the Connecticut Courant, and learned every department of newspaper work, from typesetting to editorial work. In January, 1839, he purchased a half interest in the Hartford Times, a Democratic paper, and in 1841 became its editor and sole proprietor. In 1853, and again in 1866, Mr. Burr was elected to the Legislature. In 1854 he took strong ground against the repeal of the Missouri compromise, standing almost alone in his party in the opposition. In 1860 he supported Breckenridge and Lane. For more than twenty-five years he headed the Connecticut delegations to the Democratic national conventions. He was president of the commission that built the State Capitol in Hartford; one of the original members of the State Board of Health, which was established in 1878; president of the State Board of Pardons, constituted in 1883; and a member of the permanent State Commission on Art and Sculpture. He was the oldest newspaper editor in New England.

Camp, Henry, evangelist, born in Youngstown, Ohio, in 1835; died in New York city, Jan. 4, 1900. At the beginning of the civil war he entered the National army as a private, and by gallant service rose to the rank of major. After the war he became interested in evangelical work in the West. He was chief evangelist in the Tabernacle in Detroit for about four years. For some months previous to his death he had preached every night in the Mariner's Temple, New York city.

Carlin, James W., naval officer, born in 1848; died on the Pacific Ocean, Dec. 30, 1899. He was

graduated at the Naval Academy, April 10, 1869; promoted master, July 12, 1870; lieutenant, Feb. 12, 1874; lieutenant commander, May 10, 1895; and commander, March 25, 1898. In 1889 he was executive officer of the *Vandalia* in the memorable hurricane of that year at Apia, Samoa, and after the death of Capt. Schoonmaker was in command of the ship. From March, 1898, he had charge of a supply ship, and made trips between Australia and the Philippines. At the time of his death he was on his way to the naval hospital at Yokohama to be treated for peritonitis.

Carman, Elbert S., journalist, born in Hempstead, Long Island, in 1836; died in New York city, Feb. 28, 1900. He was graduated at Brown University in 1858, and engaged in business in New York city. He contributed articles on out-of-door life to *Turf, Field, and Farm* and *Moore's Rural New Yorker*. He became associate editor of the latter paper, and in 1876 bought it and changed its name to *Rural New Yorker*. In connection with the paper he established the *Rural Grounds* at River Edge, N. J., which were devoted to the work of testing new plants, vines, and seeds and to the originating of new varieties. He published *Setter and Pointer* (1872).

Carpenter, Francis Bicknell, portrait painter, born in Homer, N. Y., Aug. 6, 1830; died in New York city, May 23, 1900. He was mostly self-taught, receiving his only instruction in art during six months in 1844 in the studio of Sanford Thayer in Syracuse. He came to New York city in 1851, and one year later was elected an associate of the National Academy. Among those who sat to him for portraits were Presidents Fillmore, Pierce, and Lincoln, William Henry Seward, Charles Sumner, George William Curtis, James Russell Lowell, Henry Ward Beecher, Horace Greeley, Schuyler Colfax, and John C. Frémont. His portrait of President Fillmore is in the City Hall, New York city, and that of President Lincoln in the Capitol in Albany. In 1864 he painted a large historical picture representing President Lincoln signing the Emancipation Proclamation. It was exhibited in the principal Northern cities in 1865, and afterward purchased by Mrs. Elizabeth Thompson for \$25,000 and presented by her to the nation. It hangs in the staircase of the House of Representatives in Washington. Another picture, *International Arbitration*, was bought by Mrs. Carson, and presented to Queen Victoria in 1892. Mr. Carpenter published in 1866 *Six Months in the White House with Abraham Lincoln*.

Chamberlain, Mellen, lawyer and librarian, born in Pembroke, N. H., June 4, 1821; died in Chelsea, Mass., June 25, 1900. He was graduated at Dartmouth College in 1844. After teaching several years at Brattleboro, Vt., he entered Dane Law School, Cambridge, was admitted to the bar in 1849, and practiced many years in Boston, having his residence in Chelsea. In the latter city he held sundry municipal offices. In 1858 and 1859 he was a member of the Legislature, and in 1863 and 1864 he was a member of the State Senate. He was appointed a justice of the municipal court of Boston in July, 1866, and served till 1878. During part of this time he was its chief justice. In August, 1878, he was elected librarian in chief of the Boston Public Library, and he served till October, 1890, when he retired on account of impaired health. He received the degree of LL. D. from Dartmouth College in 1885. He was the author of many pamphlets on historical and literary subjects. Some of his published works are *John Adams, the Statesman of the American Revolution* (Boston, 1884); *The*

Authentication of the Declaration of Independence (Cambridge, 1885); and John Adams, the Statesman, with Other Essays and Addresses, Historical and Literary (Boston, 1898).

Chittenden, Lucius Eugene, lawyer, born in Williston, Vt., May 24, 1824; died in Burlington, Vt., July 22, 1900. He was educated in the common schools, studied law, and was admitted to the bar at St. Albans in September, 1844. He removed to Burlington, where he practiced law for several years. He was prominent in the anti-slavery and free-soil movements, and became a Republican with the birth of that party. From 1856 till 1860 he was State Senator. In February, 1861, he was a delegate to the Peace Conference in Washington. The same year he was made register of the Treasury, and he served four years. At the close of the civil war he went to New York city, where he practiced law till 1897. In July, 1896, he was appointed assistant cashier in the New York office of the State Excise Department. He had a valuable library, rich in volumes relating to the early history of printing and engraving. His published works include Report of the Debates and Proceedings in the Secret Sessions of the Conference Conventions, February, 1861 (New York, 1864); The Capture of Ticonderoga (Rutland, 1872); Recollections of President Lincoln and his Administration (New York, 1891); Personal Reminiscences, 1840-1890 (1893); An Unknown Heroine (1893); and Abraham Lincoln's Speeches (1895).

Church, Frederick Edwin, landscape painter, born in Hartford, Conn., May 4, 1826; died in New York city, April 7, 1900. He became the pupil of Thomas Cole, in Catskill, N. Y., lived and worked in Catskill for several years, and then established his studio in New York city. His work attracted wide attention, and in 1849 he was made a full member of the National Academy. In 1853, and again in 1857, he traveled in South America, gathering the material for his great picture of tropical and mountain scenery, entitled The Heart of the Andes, which was first exhibited in 1859, and created a sensation. It was bought by William T. Blodgett for \$10,000, the highest price that had then been received for a picture by an American artist. A few years later he joined an expedition to Labrador, and from sketches made on this trip painted his Icebergs, which was exhibited in London in 1863. In 1866 he went to Jamaica, West Indies, and in 1868 made his first visit to Europe, going to Palestine and Greece, and painting The Parthenon, Jerusalem, and other important pictures. His best known picture is the Great Falls at Niagara (1857), which was originally purchased by John Taylor Johnston, and at the sale of the Johnston collection, in 1876, was bought by the Corcoran Art Gallery, in Washington, for \$25,000. This picture was exhibited throughout Europe and the United States, and was awarded a medal of the second class at the exposition in Paris in 1867. His other important pictures are The Andes of Ecuador (1855); Cotopaxi (1862); Chimborazo (1864); St. Thomas in the Vale, Jamaica; Niagara, from the American Side (1866); Damascus (1869); Rainy Season in the Tropics; Jerusalem (1870); The Parthenon (1871); El Khasna Petra (1872); Tropical Moonlight (1874); Ægean Sea; Valley of Santa Ysabel (1875); El Ayn; Twilight in the Wilderness (1876); Morning in the Tropics (1877); The Monastery (1878); Valley of Santa Marta (1879); and A South American Landscape. The last is owned by the National Academy; Cotopaxi is in the Lenox Library, New York city. Mr. Church

was an early admirer of Turner and his work, then being brought into prominence through the writings of John Ruskin, and this influence is traceable in many of the details of his paintings.

Churchill, John Wesley, clergyman, born in Fairlee, Vt., May 26, 1839; died in Andover, Mass., April 13, 1900. He was educated at Phillips Academy, Andover, and at Harvard, being graduated in 1865. In 1868 he completed his theological education at Andover Seminary. He received his official appointment to the professorship of Pulpit Delivery in Andover Seminary on the day of his graduation, which chair he held till his appointment as Professor of Sacred Rhetoric in the same institution in 1896. He was the regular instructor in elocution in Phillips Andover Academy and Abbott Seminary from 1867 till the time of his death, and had given instruction for years in Brown University, Amherst, Dartmouth, Smith, Wellesley, and Mount Holyoke Colleges; and in Harvard Divinity School during the last ten years of his life. Prof. Churchill attained wide fame as a college preacher, and his services were sought for by institutions in all parts of the country. He was also one of the editors of the Andover Review.

Clapp, Dwight H., missionary, American Board, born in Middlefield, Ohio, Nov. 1, 1841; **Mary Jane (Bowland) Clapp**, born in Clarksfield, Ohio, Feb. 18, 1845; both killed in Taku, Shensi province, China, July 31, 1900. Mr. Clapp was graduated at Oberlin in 1879, and at the Theological Seminary in 1884. Mrs. Clapp was graduated at Lake Erie Seminary, Painesville, Ohio. They sailed for China Sept. 2, 1884, and they visited this country on a furlough in 1894.

Clark, Jonas Gilman, philanthropist, born in Hubbardston, Mass., Feb. 1, 1815; died in Worcester, Mass., May 23, 1900. He worked on his father's farm and as an apprentice to the carriage maker's trade, and later he engaged in the manufacture of tinware, and established stores in Lowell and Milford. In 1853 he found it necessary to go to San Francisco to look after his business, and took up, in addition to his hardware business, the shipping of furniture. He made money rapidly, and invested freely in real estate. In 1880 he removed to Worcester. In 1887 he endowed the university at Worcester which bears his name with \$2,000,000. The work of the university has been developed gradually and without ostentation, but its reputation attracts to it yearly many graduates from other universities and colleges. Another institution that owes its existence to his generosity is a fine public building and library in Hubbardston, with property to endow it.

Clark, Lewis Whitehouse, jurist, born in Barnstead, N. H., Aug. 19, 1828; died in Manchester, N. H., May 28, 1900. He was graduated at Dartmouth College in 1850, and was principal of the Pittsfield Academy from August, 1850, till December, 1852. He was admitted to the bar in September, 1852, and began practice in Pittsfield, and later removed to Manchester. He was a member of the Legislature in 1855. He was appointed Attorney-General of the State May 24, 1872, which office he held till August, 1876. May 24, 1898, he was appointed Chief Justice of the Supreme Court, to fill a vacancy. At the time of his death he was United States Commissioner in Bankruptcy. He received the degree of LL. D. from Dartmouth College in 1888.

Clayton, Thomas J., jurist, born in Delaware County, Pennsylvania, in 1826; died in Chester, Pa., Jan. 30, 1900. He was admitted to practice at the bar in 1851. In 1874 he was elected presi-

dent judge of the courts of Delaware County, after a bitter campaign, and he was twice re-elected (in 1884 and 1894), holding the office at the time of his death.

Cobb, Silas B., merchant, born in Montpelier, Vt., Jan. 23, 1812; died in Chicago, Ill., April 5, 1900. In 1833 he settled at Fort Dearborn (now Chicago), having worked his way on the Erie Canal to Buffalo, and thence on a schooner. He began work as a carpenter; with his earnings he bought trinkets and traded with the Indians. Later he opened a harness shop and built up a good business, which he sold in 1848. In 1848-'52 he carried on a general leather, boot, and shoe trade. After 1852 he devoted his attention to real estate and local enterprises. In 1855 he became a director in the Chicago Gas Light and Coke Company, and later an officer. He was president of Chicago City Railway, and was largely instrumental in the establishment of the cable railway system in Chicago. He was connected with the Chicago and Galena (now the Chicago and Northwestern) Railroad and the Beloit and Madison Railroad. Cobb Lecture Hall, in connection with the University of Chicago, was erected from a fund of \$150,000 given by him.

Codman, John, sailor, author, born in Dorchester, Mass., Oct. 16, 1814; died in Boston, Mass., April 6, 1900. He entered Amherst College, and was a classmate and life-long friend of Henry Ward Beecher, but left in his junior year, 1833. In 1834 he made his first voyage as ship's clerk aboard an East Indiaman. He passed through all grades from apprentice to master, receiving his first command in 1841. He afterward made many voyages to all parts of the world, and commanded many vessels. He commanded the Indiaman on which Adoniram Judson and his second wife were returning to the United States in 1845 because of Mrs. Judson's health, and detained his ship some time at St. Helena that she might die on land instead of at sea. During the Crimean War he was in command of the transport William Penn, carrying troops from Constantinople to the Crimea. During the civil war he commanded the steamer Quaker City, which was engaged in carrying stores to Port Royal. He left the sea in 1864. In later years he was chiefly known through his advocacy of free trade and free ships. He contributed many articles on these subjects to papers and magazines, wrote on the Mormon question, and was the author of several books of travel. His best known books are *Sailors' Life and Sailors' Yarns*; *An American Transport in the Crimean War*; *Winter Sketches in the Saddle*; *Ten Months in Brazil*; *The Round Trip*; *Free Ships*; *Restoration of the American Carrying Trade*; and *The Mormon Country*.

Conklin, Jennie Maria Drinkwater, author, born in Portland, Me., April 14, 1841; died in New Vernon, N. J., April 28, 1900. She was educated at the public schools of her native place, and at Greenleaf's Institute, Brooklyn. March 17, 1880, she married the Rev. Nathaniel Conklin, for many years pastor of the Presbyterian Church of New Vernon. She was the originator of the "Shut-In" Society, a bureau of correspondence for invalids, which has a large membership and publishes *The Open Window*. As a writer of books for girls and for the religious press Mrs. Conklin was most widely known. She published the following books: *Marion's Little Sister*; *Penny Saved and Penny Earned*; *Only Ned* (New York, 1872); *Not Bread Alone* (1873); *Fred and Jeanie* (1875); *Tessa Wadsworth's Discipline* (1879); *Rue's Helps* (1880); *Electa* (1881); *Bek's First Corner* (1883); *Fifteen* (1883); *Keenie's To-*

morrow (Boston, 1883); *Miss Prudence* (New York, 1883); *Wildwood* (Philadelphia, 1884); *David Strong's Errand* (1884); *Story of Hannah* (New York, 1885); *Fairfax Girls* (Philadelphia, 1886); *That Quisset House* (New York, 1886); *Uncle Seth's Will* (Philadelphia, 1886); *Isobel's Between Times* (New York, 1887); *Rizpah's Heritage* (1887); *From Flax to Linen* (1888); *Fourfold* (1889); *Marigold* (1889); *Other Folk* (1890); *Second Best* (Boston, 1891); *Dorothy's Islands* (1892); *My Lady* (1892); *Looking Seaward* (1893); *Growing Up* (1894); *Three Women* (1894); *Three and Twenty* (1895); *Dolly French's Household* (Philadelphia, 1896); *Paul French's Way* (Boston, 1896); and, with Ella Drinkwater, *Set Free* (1891).

Conrad, Victor Lafayette, journalist, born in Pine Grove, Pa., Oct. 7, 1824; died in Philadelphia, Jan. 7, 1900. He was graduated at Gettysburg in 1851, was licensed to preach by the East Pennsylvania Synod in the same year, and subsequently was ordained. In 1852 he assumed editorial charge of the Evangelical Lutheran at Springfield, Ohio. In 1856 he became principal of a public school at Pittsburg, Pa.; in 1857 he took charge of Cooper Seminary for young ladies at Dayton, Ohio; from 1867 to 1870 he was Professor of Natural Sciences in Pennsylvania College, Gettysburg, Pa.; and in 1870 he removed to Philadelphia to assume the duties of associate editor, with his brother, Frederick W. Conrad, of the Lutheran Observer, which he held to the end of his life. The degree of D. D. was conferred on him by Wittenberg College, Springfield, Ohio. He was a ready writer and an able editor.

Cook, Clarence (Chatham), author and critic, born in Dorchester, Mass., Sept. 8, 1828; died in Fishkill Landing, N. Y., June 2, 1900. He was graduated at Harvard in 1849; studied architecture, and for a time was a teacher. He first drew public attention by the publication in the New York Tribune, in 1863, of a series of criticisms on American art. He was the Paris correspondent of that paper from 1869 till the breaking out of the Franco-Prussian War, when, after a short period of travel in Italy, he returned home. He renewed his connection with the Tribune, and soon created excitement in art circles through his vigorous attack on the genuineness of the Cypriote statues in the Cesnola collection in the Metropolitan Museum of Art, characterizing them as "a fortuitous connection of unrelated parts." The controversy led to legal proceedings, and was the cause of a great deal of bitter feeling. He published a monograph on the Central Park of New York (1868); *The House Beautiful* (1878); supplied the text to accompany a heliotype reproduction of Dürer's *Life of the Virgin* (1874); edited and furnished notes to a translation of the seventh edition of William Lübke's *History of Art* (1878); and for a time he was editor of *The Studio*.

Courtney, Edna (Mrs. James H. Caldwell), actress, born in Washington, D. C., Feb. 26, 1866; died in New York city, March 16, 1900. She made her first appearance at Trenton, N. J., June 1, 1882, in *The Passing Regiment*, as a member of Augustin Daly's company. In the following season she played in various traveling companies the parts of Pauline in *The Lady of Lyons*, Grace Roseberry in *The New Magdalen*, Dolly Dutton and Clara in *Hazel Kirke*, Nora in *Esmeralda*, Edith in *Young Mrs. Winthrop*, Daphne in *The White Slave*, and *Nakehira* in *Around the World in Eighty Days*. The season of 1883-'84 she played with success the part of Olive Skinner in H. C. Miner's *Silver King* company. In May,

1884, she played Minnie in William Mestayer's production of *Madame Piper* at Wallack's Theater, New York. In August of the same year she played a leading part in a grand production of *The Seven Ravens* at Niblo's Garden. During 1887-'88 she was leading woman in Crossen's *Banker's Daughter* company. Her last appearance was at the Windsor Theater, New York, in a drama called *Rookwood*, in 1889.

Cowell, Anna (Mrs. Anna Cruise Cowell Hobkirk), actress, born in Belfast, Ireland, April 3, 1824; died near Philadelphia, Pa., Nov. 12, 1900. She was a niece of the Irish composer Balfe, and made her *début* as a singer, at the age of thirteen, in Glasgow, Scotland. She married in April, 1846, William Cowell, with whom she came to America immediately afterward, and made her first appearance as *Rosalind* in *As You Like It* at the National Theater, New York, in June of that year. Her success was instant, and she was engaged soon afterward as the leading woman of the Adelphi Theater, Boston. She remained at that house two seasons, and then went to the National Theater of the same city, where she played until the place was burned, in 1852. She was then known to the public as Anna Cruise, and was a petted favorite with the people of Boston. She was engaged for the Federal Street Theater, and continued her career in Boston until that house was destroyed by fire, when she became the leading actress of the Arch Street Theater, Philadelphia, where she played all the Shakespearean heroines with Edwin Forrest and other tragedians. She returned to Boston in 1854-'55 as leading woman of the Boston Museum, and at the end of the season became a star in a play called *The Governor's Wife*. In 1864 she became the leading actress of *McVickar's Theater*, Chicago, where she remained for many years. After Mr. Cowell's death, in 1868, she remained a widow for several years, but finally married Mr. Hobkirk, a banker, and retired from the stage.

Cox, Jacob Dolson, lawyer and soldier, born in Montreal, Canada, Oct. 27, 1828; died in Magnolia, Mass., Aug. 4, 1900. He spent his childhood and youth in New York city, which was the home of his parents. When about twenty years of age he removed to Ohio. He was graduated at Oberlin College in 1851, and in 1852 began to practice law in Warren. In 1859 he was elected as a Republican to the State Senate, of which body he was a member at the outbreak of the civil war. He was commissioned a brigadier general of volunteers, and saw much service during the war. He was ordered with his brigade to West Virginia, and placed in command of the district of Kanawha. Here, under command of Gen. Rosecrans, his brigade did effective service. Subsequently he was assigned to the 9th Corps, and participated in the battles of South Mountain and Antietam, commanding the corps after the fall of Gen. Reno. For his services in this campaign he was made major general. In the Atlanta campaign he commanded a division of the 23d Army Corps, and later the entire corps. He took part in the battles of Franklin and Nashville, and afterward was ordered to the coast to open communication with Gen. Sherman in his march to the sea. In this effort he defeated Gen. Bragg, with great loss to the Confederate forces, at Kinston, N. C. After the war he superintended the mustering out of the troops in Ohio, and while so engaged he was elected Governor of the State, in 1865, by the Republican party. He opposed the party policy on the question of negro suffrage, and favored forcible colonization; he

also supported President Johnson, and as a result was not renominated. President Johnson offered him the post of Commissioner of Internal Revenue, but he declined it. He presided at the national convention that nominated Gen. Grant in 1868, and was Secretary of the Interior in 1869-'70, when he resigned to resume the practice of law in Cincinnati. In 1873 he became president of the Wabash Railroad, and made his home in Toledo till 1876, when he was elected to Congress. He was dean of the Cincinnati Law School from 1881 till 1897, and was for a time president of Cincinnati University. The degree of LL. D. was conferred on him by the University of North Carolina and by Davison University. He published *Atlanta* (New York, 1882); *The March to the Sea: Frankfort and Nashville* (1882); *The Second Battle of Bull Run, as Connected with the Fitz John Porter Case* (Cincinnati, 1882); *The Battle of Franklin, Tennessee, November 30, 1864* (New York, 1897); and *Military Reminiscences of the Civil War* (2 vols., New York, 1900).

Coyne, Gardiner (Henry Andrew Gardiner), actor, born in Dublin, Ireland, in October, 1839; died there April 7, 1900. He was a cousin of John Drew the elder, and came to the United States when a boy. His first appearance was at the Museum, Troy, N. Y., in 1850, and for three years he was a member of the stock company of that house. In the spring of 1854 he became a member of the Arch Street Theater company, Philadelphia, then under his cousin's management. His first part was *Herbert Carol* in *The Wandering Minstrel* (Feb. 28, 1854), and his success was such that after a short engagement he went before the public as a star, jointly with his sister *Mary Anne Gardiner*. They were the original *Irish Boy* and *Yankee Girl*. In 1862 he retired with a competence and returned to Dublin, where he remained until his death.

Crane, Stephen, author and journalist, born in Newark, N. J., Nov. 1, 1871; died at Badenweiler, Germany, June 5, 1900. He was the son of a Methodist clergyman, and after studying at Lafayette College and Syracuse University engaged in newspaper work at the age of sixteen.

He first attracted attention by *The Black Riders*, and *Other Lines*, a volume of eccentric verse, issued in 1895, and followed this the next year with *The Red Badge of Courage*, a story that met with great success, and made him one of the most popular of the younger American writers. In 1895 he made a journalistic tour of Mexico, and he was a special correspondent of the *New York Journal* during the Greco-Turkish War of 1896-'97. On his way to Cuba in 1897 he was shipwrecked, but was rescued after a perilous voyage in an open boat. In 1898 he went to Cuba as a special correspondent of the *New York World*, to observe the Spanish-American War, and after that he made his home principally in England. His literary work displays much willfulness in the matter of form, as well as occasional carelessness in composition, but he possessed real talent, and had appar-

ently outgrown some of his early faults of style. He is best known by *The Red Badge of Courage*, but in the *Whilomville Stories*, published after his death, he is seen to much better advantage. In these stories of child life the interpretation of the child's attitude toward his surroundings is most faithfully as well as sympathetically depicted. Other works of his not already mentioned are: *Maggie: A Girl of the Slums* (1896); *George's Mother* (1896); *The Little Regiment, and Other Episodes of the American Civil War* (1896); *The Third Violet* (1897); *War is Kind*, a book of verse (1898); *The Open Boat* (1898); *The Eternal Patience* (1898); *Wounds in the Rain*, war stories (1900); *Great Battles of the World* (1901).

Cravath, Erastus Milo, clergyman, born in Hanover, N. Y., July 1, 1833; died in St. Charles, Minn., Sept. 4, 1900. He was graduated at Oberlin College in 1857, and at its department of theology in 1860, and settled at Berlin Heights, Ohio, as pastor of the Congregational Church. In June, 1863, he was appointed chaplain of the 101st Ohio Volunteer Infantry, and he served in the Atlanta campaign and in the battles of Franklin and Nashville. He was mustered out of the service in June, 1865. Shortly after the war Mr. Cravath received the appointment of field agent for the American Missionary Association, and was sent to open schools in the central South, accompanied by the Rev. E. P. Smith, secretary of the American Missionary Association in Cincinnati, and reached Nashville, Oct. 3, 1865. At that time Gen. Clinton B. Fisk was stationed in Nashville as Commissioner of the Freedmen's Bureau for Tennessee and Kentucky, and had with him Prof. John Ogden as his superintendent of education. Cravath, Smith, and Ogden purchased, on their own responsibility, a block of land on which stood a large hospital erected by the Government for war purposes. Gen. Fisk was heartily in sympathy with the movement, and secured the transfer of the hospital from the War Department to the Freedmen's Bureau for educational purposes, and the new enterprise, opened Jan. 9, 1866, was named Fisk School. Prof. Ogden became its principal, and Mr. Cravath assumed the general business responsibility. The American Missionary Association and the Western Freedmen's Aid Commission bought the land of Ogden, Smith, and Cravath, and united in sending a corps of 20 teachers for the 1,000 children that were gathered into the school. In July, 1866, Secretary Smith was called to New York, and Mr. Cravath was appointed to the secretaryship in Cincinnati, and had charge of the collecting of funds in Ohio, Indiana, and eastern Michigan, and of school and church work in Kentucky, Tennessee, and northern Georgia and Alabama. In September, 1870, he became field secretary of the American Missionary Association, in New York city, and had charge of the whole work of the association in the South. In July, 1875, he resigned the secretaryship on being elected first president of Fisk University. For three years he managed the tour of the original Jubilee Singers through Europe to raise funds for enlarging the university. He returned in the summer of 1878, and from that time till his death devoted himself entirely to the university.

Cropsey, Jasper Francis, landscape painter, born in Rossville, Staten Island, N. Y., Feb. 18, 1823; died in Hastings-on-Hudson, N. Y., June 22, 1900. He studied architecture five years, and after abandoning that profession was for a time a pupil of Edward Maury, the landscape painter. From 1847 till 1855 he studied in Italy and traveled in Europe. After two years' residence in

the United States he went to London, where he remained seven years, sending many of his pictures to the Royal Academy and to the International Exhibition of 1862. He returned finally to New York city in 1863, and in 1885 removed his studio to Hastings-on-Hudson. Mr. Cropsey was made a member of the National Academy in 1851, and he was one of the original members of the American Water Color Society. He designed the stations for the Sixth Avenue system of the Manhattan Elevated Railway. As an American artist he is classed with the "old" or "Hudson River school" of painters. His best known pictures are: *Jedburgh Abbey*; *Pontine Marshes* (1847); *Backwoods of America* (1857); *Richmond Hill—Midsummer* (1862); *Greenwood Lake* (1870); *Lake Nemi, in Italy* (1879); *Old Church at Arreton, Isle of Wight* (1880); *Warwick Castle; Ramapo Valley* (1881); *Autumn on the Hudson* (1882); *Wawayanda Valley* (1883); *Springtime in England* (1884); *October in Ramapo Valley* (1885); *Autumn on Lake George*; *Anne Hathaway's Cottage*; and *A Showery Day*.

Culberson, David Browning, lawyer, born in Troup County, Georgia, Sept. 29, 1830; died in Jefferson, Texas, May 7, 1900. He was educated at Brownwood, La Grange, Ga., and studied law. In 1856 he removed to Texas, and in 1861 settled in Jefferson. He was elected to the State Legislature in 1859, serving till the civil war broke out. He entered the Confederate army as a private, and was promoted to the rank of colonel of the 18th Texas Infantry. In 1864 he was made Adjutant General of the State of Texas, with the rank of colonel, and in the same year was elected to the Legislature. At the expiration of his term he resumed his law practice in Jefferson. In 1873 he was elected State Senator. He resigned in the following year, and was elected to Congress and re-elected continuously till 1896. He was for many years a member of the Judiciary Committee, and for a long time its chairman. He was tendered a place on the Interstate Commerce Commission by President Harrison, but declined it.

Cushing, Frank Hamilton, ethnologist, born in Northeast, Pa., July 22, 1857; died in Washington, D. C., April 10, 1900. He spent his boyhood on a farm in Barre, N. Y., and there became interested in the collection of Indian relics. When he was eighteen years of age his work was brought to the attention of the late Prof. Baird, secretary of the Smithsonian Institution, who in 1875 called young Cushing to Washington to be an assistant in that institution. He had charge of the Smithsonian ethnological exhibit at the Centennial Exposition of 1876, and in 1879 he was sent with an expedition to investigate the pueblos of New Mexico. At his own request he was left at the Pueblo of Zuffi. He was adopted into the Zuffi tribe, learned their language, and was initiated into a secret order of medicine men, known as the Priesthood of the Bow. His researches gave him a more intimate knowledge of the life and customs of the Indians than had been gained by any one up to that time. In 1884 he returned to Washington and began the elaboration of his notes, but was interrupted by his appointment, two years later, to the directorship of the Hemenway Southwestern Archaeological Expedition. Excavations were made in southern Arizona and New Mexico, covering a period of two and a half years, with the most gratifying results. The greater part of the collection made by this expedition is in the Peabody Museum, Cambridge, Mass. Mr. Cushing then returned to Washington to supervise the

publication of a memoir on the Zuffi myths, printed by the Bureau of Ethnology. He directed the expedition fitted out by Mrs. Phoebe A. Hearst and Dr. William Pepper, sent in 1896, under the auspices of the National Museum Bureau of Ethnology and the University of Pennsylvania, to investigate the remains of the prehistoric peoples of the key islands of the Florida coast, which resulted in the collection of many remarkable objects, and in the publication of a preliminary report of Mr. Cushing's researches. The complete account was still in manuscript at the time of his death.

Da Costa, Jacob Mendez, physician, born in the island of St. Thomas, West Indies, Feb. 7, 1833; died in Villa Nova, Pa., Sept. 11, 1900. He was graduated at Jefferson Medical College, Philadelphia, in 1852. He passed two years in the schools and hospitals of Paris and Vienna, after which he returned to Philadelphia, in 1854, and began the practice of medicine, making a specialty of heart and lung diseases. In 1864 he was appointed lecturer on clinical medicine in Jefferson College, and in 1872 was made Professor of the Theory and Practice of Medicine. He contributed to medical periodicals and published the following books: *Epithelial Tumors and Cancers of the Skin* (Philadelphia, 1852); *An Inquiry into the Pathological Anatomy of Acute Pneumonia* (1855); *The Physicians of the Last Century* (1857); *On Serous Apoplexy* (1859); *Medical Diagnosis, with Special Reference to Practical Medicine* (1864); *Inhalations in the Treatment of Diseases of the Respiratory Passages* (1867); *On Strain and Overaction of the Heart* (Washington, 1874); and *Harvey and his Discovery* (Philadelphia, 1878).

Dame, Harriet Patience, army nurse, born in Barnstead, N. H., July 5, 1815; died in Concord, N. H., April 24, 1900. With her parents she removed to Concord in 1843, and, with the exception of a short time spent in the West, resided there till the outbreak of the civil war.

She opened her house in that city as a hospital for the sick volunteers who came from all parts of the State. When the 2d New Hampshire Regiment was ordered to Portsmouth to be mustered into service she insisted on going with it, so that she might continue the work she had begun, and when the regiment finally went South she accompanied it, despite the protests of Gov. Berry. She was under fire at Fair Oaks, and at the second battle of Bull Run she was taken prisoner by the Confederates, but was passed through the lines on account of her services to the men of both armies. Aug. 15, 1862, she was placed in charge of all supplies for sick soldiers sent from New Hampshire. She was at the battle of Gettysburg, and the week following she organized the New Hampshire Soldiers' Relief Association; later she was sent to Charleston to investigate the sanitary condition of the New Hampshire troops stationed there. In the spring of 1864 she took the field with the Army of the James, and had charge of the field hospital at Broadway Landing on the Appo-

mattox. After the war she returned to Washington, and in 1867 was appointed to a clerkship in the Treasury Department, which she held till 1895. She was president from its organization of the Army Nurses' Association, and was also a member of the Woman's Relief Corps.

Davidson, Thomas, philosopher, born in Aberdeen, Scotland, Oct. 25, 1840; died in Montreal, Canada, Sept. 14, 1900. He was graduated at the University of Aberdeen in 1860, as first graduate and Greek prizeman, and till 1863 he was rector of the Grammar (Latin) School of Old Aberdeen. He spent the following three years teaching in various schools in England and Scotland, and during his vacations studied and traveled extensively on the Continent. In 1866 he removed to Canada to accept a professorship in the London Collegiate Institute, and in 1867 came to the United States, spending some months in Boston, and finally settling in St. Louis as classical master of the St. Louis High School. He was afterward principal of one of the branch high schools in that city. In 1875 he removed to Cambridge, Mass., and thereafter made that city his home while in the United States. He traveled and studied extensively in Europe. His interest in Thomas Aquinas led to an invitation from the Pope to settle in Italy and to assist his professors in the preparation of a new edition of that philosopher. He was interested in many philanthropic and educational movements, and was the founder of the Glenmore School for Culture Sciences at Keene, in the Adirondacks. Prof. Davidson was the author of many pamphlets and magazine articles, and was widely known as a lecturer on history, philosophy, and archaeology. He also published *The Fragments of Parmenides* (1869); *The Origin of Language, from the German of W. H. J. Bleek* (1869); *A Short Account of the Niobe Group* (1874); *The Philosophical System of Antonio Rosmini-Serbati, translated, with a sketch of the author's life, bibliography, introduction, and notes* (1882); this work first introduced Rosmini to English readers, and he also translated Rosmini's *Psychology and his Anthropology*; *The Parthenon Frieze, and Other Essays* (1882); *Giordano Bruno, and the Relation of his Philosophy to Free Thought* (1886); *The Place of Art in Education* (1886); *Handbook to Dante* (1887); *Aristotle, and Ancient and Modern Educational Ideals*; *Prolegomena to Tennyson's In Memoriam*; and *The Education of the Greek People, and its Influence on Civilization*.

Davis, Charles Lindley, actor, born in Baltimore, Md., Oct. 1, 1852; died near Pittsburg, Pa., March 1, 1900. He came of a family of actors, and first appeared in public as a baby in short clothes. In his boyhood he was a business manager of theaters, beginning with the Baltimore Museum in 1869. He managed successively the Odeon, Baltimore; the Theater Comique, Providence, R. I.; the Capital Theater, Hartford, Conn.; and the Metropolitan Theater, New York city. In all these he appeared from time to time as a singing comedian. In 1880 he wrote and produced a comedy of New England rural life, entitled *Alvin Joslin*. He became at once a great favorite with the humbler audiences in the portrayal of the farmer Alvin Joslin, and was oftener referred to by the name of that character than by his own. During the rest of his life he played nothing else, except for a brief period, when he produced another play from his own pen, called *One of the Old Stock*. He made a handsome fortune, and in 1891 built the Alvin Theater in Pittsburg, which has ever since retained its rank as one of the finest houses of the drama in the world. He

retired from the stage in 1882. His last appearance was at his own house in Pittsburg, as Alvin Joslin, in June, 1882.

Davis, Cushman Kellogg, lawyer, born in Henderson, N. Y., June 16, 1838; died in St. Paul, Minn., Nov. 27, 1900. He removed with his parents to Waukesha, Wis., and studied at Carroll College, in that town. He was graduated at the University of Michigan in 1857, studied law, was admitted to the bar in 1859, and began to practice in Waukesha. At the outbreak of the civil war he assisted in raising a company for the 28th Wisconsin Volunteers, with which as lieutenant he joined the Army of the Tennessee. Later he served as assistant adjutant general on the staff of Gen. Gorman. He was compelled to leave the army in 1864 by an attack of typhoid fever. In 1865 he went to Minnesota and resumed the practice of law in St. Paul. He was elected to the Legislature in 1867. In 1868 he was appointed United States District Attorney for Minnesota, serving till 1873. In that year he was elected Governor of the State on the Republican ticket. He was an unsuccessful candidate for United States Senator in 1875, and again in 1881, but on Jan. 18, 1887, was elected to the office; and he was re-elected in 1893 and 1899. As chairman of the Committee on Pensions he was the author, in 1890, of the pension act that ended the demand for excessive pension legislation; as chairman of the Committee on Foreign Relations he reported to the Senate, April 13, 1898, the resolutions which were a practical declaration of war against Spain. In August, 1898, he was appointed a member of the Spanish-American Peace Commission. He received the degree of LL. D. from Michigan University in 1886. He was a deep student of French and English literature, and possessed a library rich in Napoleoniana and Shakespeariana. He published *The Law in Shakespeare* (St. Paul, 1884). See portrait in *Annual Cyclopædia* for 1898, page 772.

Davis, Francis W., a missionary of the American Board, born in Sparta, Wis., Sept. 8, 1857; killed in Taku, Shenshi province, China, July 31, 1900. He was graduated at Oberlin College in 1889, and went to China the same year.

Detweiler, Isaac C., physician, born in Maxatawny, Pa., in 1830; died in Reading, Aug. 29, 1900. His ancestors were among the pioneer settlers of Pennsylvania. He made a fortune in early life as a builder, and the income from his wealth as well as that from his medical practice he devoted to charity and the Church. During the Spanish-American War he contributed large sums of money for the purchase of literature for the American troops.

Dewey, Justin, jurist, born in Alford, Mass., June 12, 1836; died in Springfield, Mass., March 16, 1900. He received his early education in the public schools, and was graduated at Williams College in 1858. He read law, and in 1860 was admitted to the bar. He was elected to the Massachusetts House of Representatives in 1862, and again in 1877; and in 1879 he was sent to the State Senate and served on the Committee on Probate and Chancery. He was appointed judge of the Superior Court of Massachusetts by Gov. Robinson in 1886, and served with distinction till the time of his death.

Dickinson, Charles Wesley, inventor, born in Springfield, N. J., Nov. 23, 1823; died in Belleville, N. J., July 2, 1900. He was apprenticed to the machinist trade, and early displayed inventive talent. Later he became a watch-case maker, and turned his attention to fine machinery. He perfected a bank-note engraving lathe, and in 1862 the first of his machines was used by the

United States Government. He ran the lathe at Washington for a year and a half, after which he returned to Belleville, where he manufactured his lathe for the United States and many foreign governments. Some of his other inventions were the cycloid attachment to the steel-plate ruling machine, a pantagraph tracer, consecutive numbering machines for coupon or railroad ticket numbering, and improved typesetting and type-distributing machines.

Dickinson, Mahlon H., philanthropist, born in Philadelphia, Pa., Aug. 19, 1814; died there, March 23, 1900. He was educated in the schools of the Society of Friends, on leaving which he was apprenticed to the trade of bricklaying. Later he became a builder, and in 1860 retired with a competence. In 1858 he was elected to the City Council of Philadelphia, and in 1859 was chosen a member of the Board of Guardians of the Poor. He was for a time a member of the Republican State Central Committee, and in 1871 was chairman of that body. He was defeated as a candidate for Congress in 1870. He was highway commissioner for many years, and from Nov. 15, 1871, till his death was a member of the Public Building Commission. His most important work was that done as a visitor to the insane asylums and penal institutions of the State. He studied the manner of treating inmates and made reports to the Legislature, the result of which was the enactment of more humane laws for the government of these institutions.

Dorion, Thomas Alfred, clergyman, born in St. Andrews, New Brunswick, March 8, 1849; died in Manchester, N. H., March 30, 1900. He was educated in the academy and college of Pointe aux Trembles, Quebec, and he founded and edited a newspaper in St. Andrews. In 1877 he was licensed as a local preacher in the Methodist Church of Canada, and after four years of theological studies he was ordained. He held charges in Longueuil, Danville, and Sherbrooke, Canada, and in Ware, Mass. From the latter place he went to Manchester, N. H., in 1889, where he founded the French Methodist Episcopal Church, of which he was pastor till the time of his death. He was engaged widely in mission work among the French of Canada and the United States. He founded the only French Sunday-school paper published in America, and was the author of many tracts, books, and pamphlets. The more important titles are *History of the Popes; Romanism and the Gospel; The Beast: A Study in the Apocalypse; and Translations of the Methodist Catechism and Methodist Discipline*.

Dun, Robert Graham, head of a mercantile agency, born in Chillicothe, Ohio, Aug. 7, 1826; died in New York city, Nov. 10, 1900. He was educated at a local academy, and at the age of sixteen was employed in a country store at a salary of \$2 a week. By means of his application and energy he soon became a partner. He went to New York city in 1850, and found employment in the mercantile agency of Tappan & Douglass. There he was steadily advanced, and in 1854, on the retirement of Mr. Tappan, he became a partner of Mr. Douglass, under the firm name of B. Douglass & Co. In 1859 he purchased Mr. Douglass's interest, and since then he had been sole proprietor of the agency, which has come to be an indispensable part of the business world. When he took charge of it only 17 branch offices had been established; this number was increased year by year, till in 1900 there were 150 offices, thoroughly and regularly equipped in as many cities in Europe, Australia, the United States, Cuba, and Mexico. Its rating book is an inval-

able part of the equipment of every branch of business conducting credit accounts, and its system of reporting credits is one of the most interesting mechanisms of trade. During the past ten years Mr. Dun had not been actively connected with the agency, except in the way of giving advice and in correspondence. He was a constant buyer of paintings, and the walls of his home were covered with pictures. Notable among his collection were *The Marsh*, by Daubigny; *The Admiration of Cupid*, by Bouguereau; and *Pasture bordered by Trees*, by Rousseau.

Dunbar, Charles Franklin, educator, born in Abingdon, Mass., July 28, 1830; died in Cambridge, Mass., Jan. 29, 1900. He was graduated at Harvard in 1851. After leaving college he engaged in business in New Orleans, and afterward in New York and Boston. He was compelled by failing health to retire from active employment, and became a farmer at Lexington, Mass. When he had recovered his health he studied at the Harvard Law School, and in 1858 was admitted to the bar. For several years he had been a regular contributor to the *Boston Daily Advertiser*, and in 1859 he became part owner and editor of that paper in connection with Charles Hale. From 1864 to 1869 he was its sole editor. In the latter year he sold his interest in the paper, and for two years he traveled abroad, returning to Cambridge in 1871, where he was appointed Professor of Political Economy in Harvard University. He held this professorship till the time of his death, serving as dean of the faculty from 1876 till 1882, and on the reorganization of that body as the first dean of the faculty of arts and sciences from 1890 till 1895. He wrote many articles in the discussion of public questions, and was president of the American Economic Association in 1893, and the first editor of the *Quarterly Journal of Economics* from 1886 to 1896. His published works are *The Theory and Practice of Banking and Currency*, *Finance*, and *Banking*.

Dutton, Everell Fletcher, soldier, born in Sullivan County, New Hampshire, Jan. 4, 1838; died in Sycamore, Ill., June 8, 1900. His parents settled in Sycamore in 1846, and for eleven years he assisted in his father's store. He studied in Mount Morris, Ill., and in Beloit, Wis., worked on a farm in Kansas for a year, and then returned to Sycamore and served as a deputy clerk till April, 1861. At the outbreak of the civil war he enlisted as first lieutenant in the 13th Illinois Regiment. He was promoted captain, then major, and later to lieutenant colonel, 105th Illinois Volunteers. He was made brigadier general by brevet for gallantry and meritorious service in the campaign in Georgia and the Carolinas, and for distinguished service at the battle of Smith's Farm, North Carolina. He was mustered out June 7, 1865, returned to Sycamore, and in 1868 was elected clerk of the circuit court of De Kalb County, serving eight years. In 1877-'78 he was clerk of the Illinois House of Representatives. In 1878 he was elected clerk of the Supreme Court of the Northern Grand Division of Illinois, which place he held till 1884. In 1883 he became associated with the Sycamore National Bank, and in a short time became its president, which office he held at his death.

Eddy, William Woodbridge, missionary, born in Penn Yan, N. Y., Dec. 18, 1825; died in Beyroot, Syria, Jan. 29, 1900. He was graduated at Williams College in 1845, and taught school in Jacksonville, Ill., two years. He was graduated at Union Theological Seminary in 1850, and in November, 1851, was sent as a missionary to Syria

by the American Board. He spent his earlier years in that country in Aleppo, and later labored at Sidon. In 1873 he settled in Beyroot and became an instructor in the theological seminary in that place. From 1892 he taught in the Suk-el-Ghurb school for boys. He had just finished a complete commentary on the New Testament in Arabic.

Egbert, Henry, artist, born in 1826; died in Brooklyn, N. Y., March 12, 1900. He learned the printing trade, and at the age of eighteen he compiled a set of drawing books, which had a great sale. He was the author of several character sketches—*Moze*, *Lize*, *Apple Mary*, and the *Limekiln Man*—which attracted attention, and were afterward elaborated by Thomas Worth. During the *régime* of "Boss" Tweed he was the cartoonist for the newspaper known as *The Day's Doings*. He printed in this a cartoon entitled *The Three Disgraces*, which represented Oakey Hall and Peter B. Sweeney supporting "Boss" Tweed. Oakey Hall, who was then mayor of the city, was so enraged that he issued a manifesto and suppressed the paper.

Egleston, Thomas, mineralogist, born in New York city, Dec. 9, 1832; died there, Jan. 15, 1900. He was graduated at Yale in 1854, and was assistant to Prof. Silliman till March, 1855. The next two years he spent in European travel, and then entered the School of Mines in Paris, where he was graduated in 1860. He returned to the United States in 1861, and soon afterward he was appointed curator of the mineralogical collections of the Smithsonian Institution. In 1863 he prepared the plans that were used in establishing a school of mines as a department of Columbia College, and in January, 1864, was chosen Professor of Mineralogy and Metallurgy. He held this chair till 1897, when he resigned on account of failing health, and was made professor emeritus. Prof. Egleston was one of the founders of the American Institute of Mining Engineers, and he was its president in 1896. He was also one of the founders of the American Meteorological Society, and of the Societies of Mechanical Engineers and Electrical Engineers. He was associated with the agricultural and geological survey of the Union Pacific Railroad in 1866, a United States commissioner to examine the fortifications of the Atlantic coast in 1868, and one of the jurors of the International Exposition at Vienna in 1873. He was at the head of several religious and charitable organizations, and rendered New York city a notable service by his efforts for saving Washington Square when it was threatened with obliteration during the Tweed *régime*. Prof. Egleston published *The Metallurgy of Gold and Silver in the United States* (2 vols.); *A Catalogue of Minerals and their Synonyms*; *Life of Major-Gen. Paterson, of the Revolutionary Army*; and many pamphlets.

Eldridge, George, hydrographer, born in Chatham, Mass., Nov. 27, 1821; died there, Aug. 23, 1900. As a youth he was engaged in fishing. Later he began surveying the shoals near his home, to prepare a chart that would assist in navigating that part of the coast with more safety. He completed valuable charts of the coast from Chesapeake Bay to Belle Isle, and was regarded as an authority on coast navigation; wrote articles on the remarkable tides in the Bay of Fundy; and was the author of a tide book.

Elliot, George H., soldier, born in Massachusetts; died in Marmion, Va., March 23, 1900. He was graduated at West Point, July 1, 1855, and commissioned second lieutenant, 1st Artillery; was transferred to the engineer corps, Jan. 26, 1857,

and was promoted first lieutenant, Aug. 3, 1861; captain, March 3, 1863; major, March 7, 1867; lieutenant colonel, Aug. 8, 1882; colonel, May 18, 1893; and was retired, March 31, 1895.

Elwell, John J., lawyer, born in Warren, Ohio, June 22, 1820; died in Cleveland, Ohio, March 13, 1900. He was graduated at Cleveland Medical College, but afterward studied law and was admitted to the bar. He was elected to the Ohio House of Representatives in 1853. He enlisted in the volunteer army in August, 1861, and served till the close of the civil war. He was four times brevetted for meritorious service, and closed his military career as brevet brigadier general. He was badly injured just before the close of the war and partially disabled. He was an eminent authority on medical jurisprudence, and was the author of *Medico-legal Treatise on Malpractice, Medical Evidence and Insanity* (New York).

Emerson, Joseph, educator, born in Norwalk, Conn., May 28, 1821; died in Beloit, Wis., Aug. 4, 1900. He was graduated at Yale in 1841, and was for a time a tutor there. In 1846 he and his classmate Jackson J. Bushnell were called to Beloit College. For more than a year they constituted the faculty, there being only three students in the college, and no college buildings till 1847. Prof. Emerson held the chair of Greek till the time of his death.

Endicott, William Crowninshield, lawyer, born in Salem, Mass., Nov. 19, 1826; died in Boston, May 6, 1900. He was a direct descendant of John Endicott, first Governor of Massachusetts. He was graduated at Harvard College in 1847, and was admitted to the bar in 1850. He was elected to the Salem Common Council in 1852, and in 1857 became city solicitor. In 1870 he was defeated as a Democratic candidate for Congress, and in 1871 and 1873 was defeated for Attorney-General. In 1873 he was appointed by the Republican Governor, William B. Washburn, a justice of the Supreme Court of Massachusetts, and this office he held till 1883, resigning on account of failing health. In 1884 he was the Democratic candidate for Governor. In 1885 he was appointed Secretary of War, and he served through the term. One of the notable events of his term was his appointment of what came to be known as the Endicott Board on Fortifications, whose elaborate plans have been to a great extent carried out in the defenses of the cities on the Atlantic seaboard. Judge Endicott had a high reputation as a speaker, one of his notable efforts being his oration, in 1878, on the two hundred and fiftieth anniversary of the landing of his ancestor on New England soil.

Everett, Charles Carroll, clergyman, born in Brunswick, Me., June 19, 1829; died in Cambridge, Mass., Oct. 17, 1900. He was graduated at Bowdoin College, and subsequently studied at the University of Berlin. He was librarian at Bowdoin from 1853 to 1857, and was Professor of Modern Languages there in 1855-'57. The next two years he studied at the Harvard Divinity School, and in 1859 he was ordained pastor of the Independent Congregational Church, at Bangor, Me., but he resigned in 1860 to become Bussey Professor of Theology at Harvard University. He was dean of the Divinity School from 1878 until his death. His courses in philosophy at the university were as stimulating as they were highly valued. His latest piece of literary work was a thoughtful paper on James Martineau, in the *Atlantic Monthly* for September, 1900. His published books comprise *The Science of Thought* (1869); *Religions before Christianity* (1883); *Fichte's Science of Knowledge: A Critical Exposition* (1884); *Poetry,*

Comedy, and Duty (1888); *Ethics for Young People* (1891); and *The Gospel of Paul* (1893).

Everett, Erastus, educator, born in Princeton, Mass., Aug. 3, 1813; died in Brooklyn, N. Y., May 7, 1900. He was graduated at Dartmouth College in 1836, and removed to Baton Rouge, La., and subsequently became president of the College of New Orleans. In 1854 he settled in Brooklyn. For several years he was a professor in Rutgers Female College and a lecturer in many educational institutions in New York and New Jersey. He published *A System of English Versification* (New York, 1848).

Fairfax, John Contée, eleventh Lord Fairfax and Baron of Cameron, in the peerage of Scotland, born in Vacluse, Va., Sept 13, 1830; died in Northampton, Md., Sept. 28, 1900. He was graduated at Princeton College and at the medical department of the University of Pennsylvania. He was an active practitioner as a physician in his younger days, but in later years lived the life of a gentleman farmer. His right to his title came to him in 1869 on the death of his brother Charles. Although he never assumed his title, it was officially recognized by the court of Great Britain.

Fancher, Enoch L., lawyer, born in Dutchess County, New York, in 1816; died in New York city, Feb. 9, 1900. He was graduated at Wesleyan University and studied law. He was appointed a justice of the Supreme Court in 1872 to fill a vacancy; on the expiration of his term in 1873 he was nominated on the Republican ticket for the succeeding term, but was defeated. In 1874 he was appointed arbitrator of the Chamber of Commerce, the appointment being made under a special act of the Legislature, giving judicial authority to an arbitrator to settle disputes arising among members of the chamber. He was at various times president of the American Bible Society, president of the New York Institute for the instruction of the Deaf and Dumb, and manager of the Missionary Society of the Methodist Church. He published *The American Republic and its Constitutional Government*.

Fox, Junius B., educator, born in Lincolnton, N. C., June 7, 1860; died in Staunton, Va., March 27, 1900. He was graduated at Pennsylvania College, Gettysburg, in 1880; was Professor of Mathematics and Natural Sciences at King's Mountain High School, North Carolina, in 1880-'82; occupied the same chair in Macon School, Charlotte, N. C., in 1882-'84; was pastor at King's Mountain, N. C., in 1881-'82, in Greene County, Tennessee, in 1884-'86; and again Professor of Mathematics and Natural Sciences in Newberry College, South Carolina, from 1886 until a few years ago, when he removed to Virginia. He published *Biography of Rev. A. J. Fox, M. D.* (Philadelphia, 1885); *Experimental Sciences* (1887); *Modern Spiritualism* (1889); *Historical Sketches of the Pastors of the Newberry Lutheran Congregations* (1888); and numerous newspaper and magazine articles.

Frankan, Joseph Griswold, actor, born in New Haven, Conn., in 1854; died in New York city, April 11, 1900. His first appearance was in New York city as a member of the dramatic company supporting Frederic Paulding in the part of Torrelli in *The Fool's Revenge*, at the Lyceum Theater, Feb. 17, 1879. He was engaged by the managers of the Madison Square Theater for the stock company there instituted, and was one of the original cast of *Hazel Kirke*, in which he was the *Met. Miggins*, Feb. 4, 1880. He played this part several seasons. In January, 1884, he was the original of the part of Bartholomew Jones in *Confusion* at the Fifth Avenue Theater. He

was the original Hiram Sloane in *May Blossom* at the Madison Square Theater, April 12, 1884, and retained the part for the long run of the play. In April, 1885, he went to the Lyceum Theater and was the first player of Noel in *Datolar*. In the spring of 1886 he became a member of the company supporting Richard Mansfield, playing with that actor for several seasons in the United States, Canada, and England. He retired from the stage in 1897 and became private secretary to his brother-in-law, Jacob Hess, commissioner of police of the city of New York.

Fritschel, Sigmund, educator, born in Nuremberg, Bavaria, Dec. 2, 1833; died in Dubuque, Iowa, April 26, 1900. He was educated in his native city, and became connected with the Lutheran theological seminary of the Iowa Synod. For several years he served as a missionary in Iowa, Wisconsin, and Michigan, and in 1858 returned to the theological seminary, which had meanwhile been re-established as Wartburg Seminary at St. Sebald, Iowa, and his brother Gottlob had become one of the professors in 1857. He remained in connection with the seminary during the rest of his life, and for many years was its president. In 1860 his synod sent him to Europe to solicit help for its work among the Germans in America. This journey took him as far as St. Petersburg and Moscow. In 1866 he was again sent to Europe to obtain the opinions of Lutheran theologians on the synod's doctrinal position with reference to the predestinarian controversy with the Missouri Synod, and to represent the synod of Iowa at the second anniversary of the Society of Home Missions at Neuendettelsau. In 1870 he was sent to Germany a third time, to secure young men for the seminary and for the rapidly increasing work of missions. In the doctrinal controversies of the Iowa and Missouri synods he took a prominent part, and wrote many of the reports and essays in defense of the position of Iowa. In connection with his brother he edited the *Kirchliche Zeitschrift*, established in 1876, and he also wrote numerous theological articles for periodicals. In 1879 Muhlenberg College conferred on him the degree of doctor of divinity. He and his brother Gottlob (died July 13, 1889; see *Annual Cyclopædia* for 1889, page 630) were for many years the two most influential theologians, educators, and literary workers in the German Iowa Synod. Their books were published in this country and republished in Germany.

Fullerton, William, lawyer, born in Minisink, N. Y., May 1, 1817; died in Newburg, N. Y., March 15, 1900. He was graduated at Union College in 1838, and in 1841 was admitted to the bar. Soon afterward he became district attorney of Orange County. His reputation won for him in 1852 an invitation by Charles O'Connor to remove to New York city and enter into partnership with him. This partnership was dissolved in 1860, and Mr. Fullerton formed the firm of Fullerton, Raymond & Knox, which after several changes became in 1873 Fullerton, Knox & Crosby. Mr. Fullerton was appointed to the Supreme Court bench in 1868, and became *ex officio* a member of the Court of Appeals, in which he sat till the expiration of his term. He was one of the counsel for the defense in the many indictments and civil proceedings against William M. Tweed. The most noted incident in his career was his cross-examination of Henry Ward Beecher in the famous Tilton-Beecher case.

Fulton, Albert Kimberly, dramatist, born in Baltimore, Md., in 1836; died there, Jan. 31, 1900. He was a son of Charles Fulton, editor of the

Baltimore American, and served during the civil war as an engineer in the United States navy. For three years he served on board the Hartford, Admiral Farragut's flagship. At the close of the war he became a member of the editorial staff of the American. He was the author of a libretto of Jack Sheppard, a musical comedy, and a comedy which was very successfully acted by Miss Lotta, called *Mademoiselle Nitouche*.

Galloupe, Dwight, clergyman, born in Stamford, N. Y., in 1871; died in Newark, N. J., July 11, 1900. He was graduated at Alfred University, and studied for two years at the Albany Medical College; he also studied theology at Hobart College and at Harvard University. His first charge was at Angelica, N. Y. Then for two years he was an assistant in the cathedral in Portland, Me. He was appointed rector of St. Paul's Episcopal Church, Newark, N. J., in 1896. He was known as an orator of rare ability. In 1898 he offered his services to the President, and on May 8 was ordered to join the 9th Infantry at Tampa, Fla., as its chaplain. He endeared himself to the men by enduring their hardships, and while assisting the wounded on the firing line in the battle of Santiago he was wounded by a piece of shell, and, although he returned to his duties, he never fully recovered.

Garrison, Lloyd McKim, author, born in Orange, N. J., May 4, 1867; died at Lenox, Mass., Oct. 4, 1900. He was a grandson of William Lloyd Garrison. He was graduated at Harvard in both the academic and the law departments, and was admitted to the New York bar in 1892. He published *Ballads of Harvard and Other Verse* (1891) and *History of the Hasty-Pudding Club* (1897).

Gear, John Henry, merchant, born in Ithaca, N. Y., April 7, 1825; died in Washington, D. C., July 14, 1900. At the age of ten he removed with his parents to Galena, Ill.; two years later to Fort Snelling, Minn.; and in 1843 to Burlington, where he became a clerk in a grocery. In 1849 he was made a partner, and in 1854 became sole owner of the business. In 1852 he was elected alderman, and in 1863 mayor of Burlington. In 1872 he was elected to the Legislature, serving three terms, in the latter two of which he was Speaker of the House. From 1878 till 1881 he was Governor of Iowa. He was elected to Congress in 1886, was twice re-elected, and was defeated on his fourth nomination. He was a member of the Ways and Means Committee that framed the McKinley tariff law. Nov. 19, 1892, he was appointed Assistant Secretary of the Treasury by President Harrison, and in 1894 was elected United States Senator from Iowa; his term would have expired in 1901, and he had been re-elected. At the time of his death he was chairman of the Committee on Pacific Railroads, and a member of the Committees on Agriculture and Forestry, Education and Labor, Interstate Commerce, Post Offices and Post Roads, and Improvements of the Mississippi River.

Gerry, Charles F., author, born in Sudbury, Mass., June 3, 1823; died there, Sept. 4, 1900. He was graduated at Wesleyan University, Middletown, Conn., in 1851, and became a teacher in the Boston Mercantile Academy, and later in the Fort Hill School, Boston. In 1877 and 1880 he was a member of the Legislature. He also served in the State Senate in 1882-'83. He was a frequent contributor to periodical literature, and published *Meadow Melodies* (Boston, 1887).

Gibson, Charles Hopper, lawyer, born in Queen Anne County, Maryland, Jan. 19, 1842; died in Washington, D. C., March 31, 1900. He was

graduated at Washington College, Chestertown, Md.; was admitted to the bar in 1864, and began practice in Easton. In 1869 he was appointed commissioner in chancery, and in 1870 was made auditor of the county. This latter office he vacated the same year to become State's attorney for Talbot County, to which office he was elected for a full term of four years in 1871 and again in 1875. He was elected to Congress in 1885, and served three terms. Nov. 19, 1891, he was appointed United States Senator to fill the vacancy caused by the death of Senator Wilson, and Jan. 21, 1892, was elected for the unexpired term. He served till March 3, 1897, and then returned to the practice of law.

Gilbert, Mahlon Norris, clergyman, born in Laurens, N. Y., March 23, 1843; died in St. Paul, Minn., March 2, 1900. He was educated at Fairfield Seminary and Hobart College, and after preparing for the Episcopal ministry at Seabury Divinity School, in Faribault, Minn., took orders in 1875. From 1875 to 1881 he was rector of St. Peter's Church, Helena, Mont., and in 1881-'86 rector of Christ Church, Minneapolis, Minn. In October of the last-named year he was consecrated Assistant Bishop of Minnesota, receiving at a later date the title of bishop coadjutor.

Gilder, William Henry, explorer, born in Philadelphia, Pa., Aug. 16, 1838; died in Morristown, N. J., Feb. 5, 1900. At the outbreak of the civil war he enlisted as a private in the 5th New York Volunteers (Duryee's Zouaves). He was transferred as a lieutenant to the 40th New York Regiment, of which his father was chaplain. He served until the close of the war with the Army of the Potomac, and was wounded at Fredericksburg and at Gettysburg. He was commissioned captain in 1864, and brevetted major in 1866. After the war he engaged in artistic and journalistic work. From 1871 till 1877 he was managing editor of the Newark Register. From 1878 till 1880 he served as second in command of the Franklin search expedition, conducted by Lieut. Schwatka, which made a sledge journey in King William's Land lasting twelve months. He acted on this expedition as a correspondent of the New York Herald. In 1881 he accompanied the De Long expedition under Capt. Berry, in the Rodgers, and when that vessel was burned on the western shore of Bering Strait he was assigned to take the news to the nearest telegraph station, which involved a winter journey of nearly 2,000 miles across Siberia. Having accomplished this task, he joined in the search on the Lena delta for the survivors of the Jeannette. In 1882 he was commissioned by the Herald to go on a French war vessel to observe the war in Annam. In 1886 he set out to reach the far north alone and on foot, but was driven back after reaching Point Barrow. He wrote during his later life for various magazines and newspapers. He recorded his arctic experiences in two published volumes—Schwatka's Search (New York, 1881) and Ice Pack and Tundra (1883).

Glenny, William, soldier, born in Virgil, N. Y., May 31, 1831; died in New York city, Jan. 6, 1900. When a young man he lived for several years in Kansas. Later he returned to his native State, and at the outbreak of the civil war recruited a company at Elmira for the 64th New York Regiment. He was promoted to the colonelcy, and at the close of the war was brevetted brigadier general. At the battle of Fair Oaks he was severely wounded. He was postmaster of Ithaca during President Grant's administration. For twenty-four years previous to his death he was a clerk in the post office in New York city.

Goebel, William, lawyer, born in Sullivan County, Pennsylvania, in 1856; died in Frankfort, Ky., Feb. 3, 1900. With his parents he removed to Covington, Ky., and from that place he went to Cincinnati to learn the jewelry trade. Before completing his apprenticeship he returned to Covington, and entered a law office in 1873. He began practice with the firm with whom he studied, and later became the law partner of ex-Governor John W. Stevenson, and still later of John G. Carlisle. In 1887 he was elected State Senator for Kenton County, and by successive re-elections he continued to represent it in the Legislature till his death. In 1897 he secured the passage of what is known as the Goebel election law, the aim of which was to put the control of State election returns into the hands of election commissioners, who were the appointees of the Legislature, by which control the Democrats hoped to secure the State government. The election commissioners appoint in each county local canvassing boards, who declare the results, which the State Board approves. With this machinery in Democratic hands, Mr. Goebel believed that nothing could defeat the candidates of his party, and he set out to secure the nomination for Governor. He succeeded in obtaining this nomination in June, 1899, after an exciting convention. The result of the campaign that followed was officially declared as follows: Taylor (Republican), 193,714; Goebel (Democrat), 191,331; Brown (Anti-Goebel Democrat), 14,050. Taylor was inaugurated Governor Jan. 12, 1900. Goebel began a contest before a committee of the Legislature, which was Democratic. The committee was to hear arguments before reporting to the Legislature, when Goebel was shot on Tuesday, Jan. 30, by some person unknown, as he was walking to the Capitol. Gov. Taylor, on account of the excitement at the Capitol, adjourned the Legislature to meet in London, Laurel County. The Democratic members tried to hold a meeting, but were shut out of all the public buildings, and finally the members signed a certificate declaring, on the report of the committee, that Mr. Goebel was the duly elected Governor, and he took the oath of office Jan. 31, on his dying bed. The candidate for Lieutenant Governor with him was also sworn in.

Gotwald, Luther A., theologian, born in York Springs, Pa., Jan. 31, 1833; died in Springfield, Ohio, Sept. 15, 1900. He was educated at Wittenberg College, Springfield, Ohio, and at Pennsylvania College, Gettysburg, Pa. He was ordained to the office of the ministry in the Lutheran Church in 1859, and held the following pastorates: At Shippensburg, Pa., 1859-'63; at Lebanon, Pa., 1863-'65; at Dayton, Ohio, 1865-'69; at Chambersburg, Pa., 1869-'74; at York, Pa., 1874-'86; and at Springfield, Ohio, 1886-'88. He was Professor of Practical Theology in Wittenberg Seminary from 1888 till 1895, when he was disabled by paralysis. He published pamphlets on doctrinal and practical subjects, and was a frequent contributor to the periodicals of the Church.

Gould, Annie A., missionary of the American Board, born in Bethel, Me., Nov. 8, 1867; killed in Paoting-Fu, Chi-Li province, China, July 1, 1900. She was graduated, the valedictorian of her class, at Mount Holyoke College in 1892. She joined the North China Mission, in Paoting-Fu, in 1893.

Gould, Ezra Palmer, clergyman, born in Boston, Mass., Feb. 27, 1841; died at White Lake, N. Y., Aug. 22, 1900. He was educated in the Latin Schools of Roxbury and Boston, and served in a Massachusetts regiment during the civil war. At its close he was mustered out with the rank of captain. He then entered the Baptist Theo-

logical Institution, at Newton, Mass., and after his graduation, in 1868, became Professor of New Testament Interpretation there, resigning in 1882. After holding the pastorate of a Baptist church in Burlington, Vt., in 1884-'88, he studied for orders in the Episcopal Church, and was ordained in 1891. He was New Testament Professor at the Episcopal Divinity School in Philadelphia until 1898, when he resigned to become assistant minister at St. George's Church, New York city, which post he held at the time of his death. He was the author of Notes on the Lessons of 1885 (Boston, 1885); Commentaries on the Epistles to the Corinthians (Philadelphia, 1887); The Gospel of Mark (New York, 1896); and The Theology of the New Testament (1900).

Green, Henry, jurist, born in Warren County, New Jersey, Aug. 29, 1828; died in Atlantic City, Aug. 16, 1900. He was graduated at Lafayette College in 1846, was admitted to the bar in 1849, and began practice in Easton. In 1879 he was appointed a justice of the Supreme Court of Pennsylvania, to fill a vacancy, and in 1880 was elected for a full term of twenty-one years. He was the first justice of the Supreme Court of Pennsylvania who went directly from the bar to the bench. He was a member of the constitutional convention of 1873.

Green, William Henry, clergyman, born in Groveville, N. J., Jan. 27, 1825; died in Princeton, N. J., Feb. 10, 1900. He was graduated at Lafayette College in 1840, and for two years was a tutor there. He was graduated at Princeton Theological Seminary in 1846, and he was immediately appointed instructor in Hebrew, and during the following three years was stated supply in the Second Presbyterian Church of Princeton. He was ordained May 24, 1848. He was pastor of the Central Presbyterian Church of Philadelphia in 1849-'51, when he was chosen Professor of Biblical and Oriental Literature in Princeton Seminary. Since 1850 this chair has been designated as that of Oriental and Old Testament Literature. Dr. Green was moderator of the Presbyterian General Assembly in 1891. He was chairman of the Old Testament Committee of the Anglo-American Bible Revision Committee. By virtue of his place as senior professor, he was the official head of Princeton Theological Seminary, and in 1868 was offered the presidency of Princeton College, but declined it. He was a voluminous writer. His best known books are A Grammar of the Hebrew Language (1861, and many later editions); A Hebrew Chrestomathy (1863); The Pentateuch Vindicated from the Aspersions of Bishop Colenso (1863); The Argument of the Book of Job Unfolded (1874); Moses and the Prophets (1883); Hebrew Feasts (1885); The Unity of the Book of Genesis (1895); The Higher Criticism of the Pentateuch (1895); and a General Introduction to the Old Testament.

Grose, William, lawyer, born in Ohio in 1812; died in Newcastle, Ind., Aug. 3, 1900. When three years of age he was taken to the Territory of Indiana. By working in a brickyard he earned money enough to study law. He was originally a Democrat, but in 1854 entered the Republican party. He became colonel of the 36th Indiana Regiment in 1861, and served till the close of the war. He was commissioned brigadier general in 1864, and brevetted major general in 1865. After the war he was assigned to duty as president of a court-martial to try military offenders, and served till December, 1865. In 1866 he was appointed collector of internal revenue for the Fifth District, and he held the office eight years. In 1877 he was a member of the Legislature, and from

1879 till 1883 a State Senator. In 1878 he was defeated as a candidate for Congress.

Grosvenor, William Mason, editor, born in Ashfield, Mass., April 24, 1835; died in Englewood, N. J., July 20, 1900. He entered Yale College in 1855, but left to become editor of the New Haven Palladium. At the outbreak of the civil war he enlisted in the 13th Connecticut Regiment, and soon became adjutant. In December, 1862, he was promoted captain. He was shot through the arm at Port Hudson, June 14, 1863, but soon rejoined his regiment. Oct. 29, 1863, he became colonel of the 2d Regiment, Louisiana Native Guards (colored), which he commanded till the close of the war. He returned to New Haven, and was for a time one of the editors of the Journal and Courier. In 1866 he took editorial charge of the St. Louis Democrat, resigned in 1870, again became its editor in 1872, and finally left it in 1875. In October, 1875, he began editorial work on the New York Tribune, which he continued till his death. He wrote on financial and economic topics mainly. In 1885 he began to write weekly articles for Dun's Mercantile Agency, and in 1893 he began to edit the weekly Review. His published books include Does Protection Protect? (New York, 1870); American Securities (1885); and Trades Unions Investigated in the Light of Common Sense (1885).

Hale, Charles Reuben, clergyman, born in Lewistown, Pa., March 14, 1837; died in Cairo, Ill., Dec. 25, 1900. After graduating at the University of Pennsylvania in 1858, he studied for the Episcopal ministry and was ordained deacon in 1860 and priest in 1861. He was successively assistant minister of All Saints parish, Lower Dublin, Pa., 1861-'63; chaplain in the United States navy, 1863-'70; rector of St. John's, Auburn, N. Y., 1870-'75; rector of St. Mary the Virgin, Baltimore County, Maryland, 1875-'77; assistant minister of St. Paul's, Baltimore, Md., 1877-'86; and dean of Grace Cathedral, Davenport, Iowa, 1886-'92. In the last-named year he was consecrated bishop coadjutor of the diocese of Springfield, with the title of Bishop of Cairo. He was one of the most learned men in his Church, and was an authority on matters pertaining to the ancient liturgies and similar subjects. He published Sermons (1874); The Mozarabic Liturgy (1876); The Universal Episcopate (1882); and Speeches and Addresses (1885).

Hale, Lucretia Peabody, author, born in Boston, Mass., Sept. 2, 1820; died there, June 12, 1900. She was a daughter of Nathan Hale, and the oldest surviving sister of Edward Everett Hale. She was educated at the schools of Elizabeth P. Peabody and George B. Emerson. With the exception of a residence of ten years in Brookline, her entire life was passed in Boston. She served on the Board of School Commissioners, and to her the city is indebted in a great measure for the movement in regard to vacation schools and the teaching of sewing and morals in the public schools. She was also deeply interested in the charitable associations of her city. She contributed many short stories to periodicals, and published the following books: Seven Stormy Sundays (Boston, 1858); The Lord's Supper and its Observance (1865); Service of Sorrow (1866); Struggle for Life (1868); Art Needlework (1878); More Sketches in Decorative Embroidery (1879); Peterkin Papers (1880); Art of Knitting (1882); Last of the Peterkins (1886); Fagots for the Fireside (1886); Stories for Children (1892). She edited Plain Needlework (1878) and Point Lace (1879). In collaboration with Mrs. Bernard Whitman she wrote Sunday-school Stories for

Little Children; with Edwin Lasseter Bynner, *The Uncloseted Skeleton* (1888); with her brother, Edward Everett Hale, *The New Harry and Lucy* (1892); and with Harriet Beecher Stowe and others, *Six of One by Half a Dozen of the Other*.

Hall, Thomas Winthrop, author, born in Ogdensburg, N. Y., Nov. 13, 1862; died in Hannibal, Mo., Aug. 21, 1900. He was graduated at West Point, June 4, 1887, and was assigned as second additional lieutenant to the 4th Cavalry. He served at Fort Huachuca and San Carlos Agency, Arizona, for a time, and was promoted full second lieutenant of the 10th Cavalry, Oct. 5, 1887; he resigned from the service, Jan. 1, 1889. During the Spanish-American War he was quartermaster of the "Rough Riders," and served with them till Aug. 1, 1898, when he resigned and came home ill with a fever. Under his pen name, Tom Hall, he was well known as a writer of short, bright sketches, poems, and stories; his published works include *When Hearts are Trumps* (Chicago, 1894); *When Love Laughs* (New York, 1897); *Experimental Wooing* (1898); *Little Lady, Some Other People, and Myself* (1898); *When Cupid Calls* (1898); *Fun and Fighting of the Rough Riders* (1899); *Tales* (1899); and *When Love is Lord* (1899).

Hamilton, Louise, actress, born in Havana, Cuba, Nov. 23, 1875; died in London, England, March 3, 1900. She was a daughter of a theatrical family who at the time of her birth were engaged with the Tamberlik Opera Company, then making a tour of the West Indies, and the child made her *début* at the age of three months as the baby Arline in *The Bohemian Girl*. She was for several years a player of children's parts in the Mapleson Opera Company. Her first appearance in drama was in the company of Mr. and Mrs. McKee Rankin when they were playing *The Danites*. In the autumn of 1890 she began a successful four years' tour of the United States as a star in the dual rôle of *Little Nell* and the *Marchioness* in *Old Curiosity Shop*. Her last appearance was at *The Pavilion*, London, in February, 1900.

Hamlin, Cyrus, educator, born in Waterford, Me., Jan. 5, 1811; died in Portland, Me., Aug. 8, 1900. He was graduated at Bowdoin College in 1834, and at Bangor Theological Seminary in 1837. He was a missionary of the American Board in Turkey from 1837 till 1860, when he became president of Robert College, Constantinople, which he had organized after a seven years' contest with the Turkish authorities. In order to give employment to indigent Armenians, he had introduced the making of bread with hop yeast in Constantinople. During the Crimean War this bread was in great demand, and at its close he had cleared \$25,000, which he applied to the building of churches and schoolhouses. He resigned the presidency of Robert College in 1876, and in 1877 became Professor of Dogmatic Theology in Bangor Theological Seminary. He was President of Middlebury College, Vermont, from 1880 till 1885. In the latter year he retired to Lexington, Mass., where, though superannuated, he remained an agent of the American Board. While at Bowdoin, in 1832, he made the first steam engine built in Maine. He had made a brass screw for Prof. Smith's theodolite, and he asked the professor if he thought he could sell an engine, if he could make one, for as much as he could earn by teaching in the vacation, and the professor encouraged him. Hamlin never had seen an engine, but went to work in a Portland clock-making establishment. In ten weeks he had com-

pleted the engine, and he sold it to Bowdoin College for \$175. He could have earned \$40 by teaching. It was said of Dr. Hamlin that he had 16 professions, every one of which was subordinate to the one great missionary and educational purpose of founding Robert College in Constantinople. He published, in the Armenian dialect, *Upham's Mental Philosophy*; *Arithmetic for Armenians*; and a Turkish translation and critique on the writings of Archbishop Matteos. In English, *Papists and Protestants*; *Cholera and its Treatment*; *Among the Turks*; and *My Life and Times*.

Hammond, William Alexander, surgeon, born in Annapolis, Md., Aug. 28, 1828; died in Washington, D. C., Jan. 5, 1900. He was graduated at the medical department of the University

of New York in 1848, after which he attended a course of clinics in the Pennsylvania Hospital in Philadelphia. July 3, 1849, he entered the army of the United States as assistant surgeon general with the rank of lieutenant, which rank was raised to captain, June 29, 1854. He did duty at various forts and military posts, and acted as medical director of the Sioux

expedition and as surgeon to the troops engaged in laying out a road through the Rocky mountains. Oct. 31, 1860, he resigned from the army to become Professor of Anatomy and Physiology in the University of Maryland. At the beginning of the civil war he resigned his chair and re-entered the army. He was appointed assistant surgeon May 28, 1861, and promoted April 25, 1862, to surgeon general with the rank of brigadier general. He instituted many reforms, but became involved in a controversy, was tried by court-martial, and was dismissed from the service Aug. 18, 1864. In 1868 he was appointed Professor of Diseases of the Mind and the Nervous System in the College of Physicians and Surgeons in New York City; subsequently he filled similar chairs in Bellevue Hospital Medical College and in the University of the City of New York. In 1882 he was one of the founders of the New York Post-Graduate Medical School, in which he held the professorship of Diseases of the Mind for years. In the meantime the President and the Secretary of War had been authorized to review the proceedings of the court-martial that had removed him from the army, and on Aug. 27, 1879, he was, after fifteen years of suspension, restored to his former place on the rolls of the army as surgeon general and brigadier general on the retired list. In February, 1888, he abandoned his practice in New York and removed to Washington. He wrote many books on nervous complaints and other medical topics, as well as some novels. His published works are *Physiological Memoirs* (Philadelphia, 1863); *Treatise on Hygiene* (1863); *Lectures on Venereal Diseases* (1864); *A Chapter on Sleep* (1865); *Insanity in its Medico-Legal Relations* (New York, 1866); *Robert Severne: His Friends and his Enemies* (Philadelphia, 1866); *Medico-Legal Study of the Case of Daniel McFarland* (New York, 1867); *Sleep and its Derangements* (Philadelphia, 1869); *Physics and Physiology of Spiritualism* (New York, 1870); *Clinical Lectures on Diseases of the Nervous System* (1871); *Treatise on Diseases of the Nervous System* (1871); *Insanity in its Re-*

lation to Crime (1873); Spiritualism and Allied Causes and Conditions of Nervous Derangement (1876); Cerebral Hyperæmia (1878); Fasting Girls (1879); Neurological Contributions of Studies and Case Records (1879); On Certain Conditions of Nervous Derangement: Somnambulism, Hypnotism, Hysteria, Hysteroid Affections (1881); Dr. Grattan (1884); Lal (1884); A Strong-minded Woman (1885); Mr. Oldmixon (1885); On the Susquehanna (1887); Sexual Impotence in the Male (1886); Sexual Impotence in Male and Female (Detroit, 1887); Spinal Irritation (1888); The Son of Perdition (Chicago, 1898); and with Clara Lanza, Tales of Eccentric Life (New York, 1886).

Harmer, Alfred Crout, merchant, born in Germantown, Pa., Aug. 25, 1825; died there, March 6, 1900. He was educated in the public schools and at the Germantown Academy. He began business as a shoe manufacturer, and later became a wholesale dealer. He was afterward identified with railroad enterprises and mining and land operations. He was elected to the city council of Philadelphia in 1856, and served till 1860, when he was elected recorder of deeds, which office he held three years. He was a delegate to the Republican National Convention that nominated General Grant for President. He was elected to Congress in 1870, and re-elected in 1872 and 1876. He was "father of the House" after the death of Representative O'Neill.

Harnden, Henry, soldier, born in Massachusetts in 1823; died in Madison, Wis., March 17, 1900. He followed the sea several years, and later took part in the Mexican War. He served in the civil war, and on May 6, 1865, was ordered by Gen. Wilson, in command of the 1st Division, Cavalry Corps, of the Army of the Cumberland, to take 150 men and pursue Jefferson Davis and his party, who several days previously had been at Macon, Ga. After a chase of four days he overtook Davis and a number of Confederate officers. During the capture there was by mistake a collision between Harnden's men and a small detachment from the 4th Michigan, which caused the death of two men; each party took the other for Confederates. A congressional investigation exonerated Harnden. At the time of his death he was commander of the Wisconsin department of the Grand Army of the Republic.

Haskell, Thomas Hawes, lawyer, born in New Gloucester, Me., May 18, 1842; died in Portland, Me., Sept. 24, 1900. He was graduated at the Norway Liberal Institute in 1862. In 1862-'63 he served in the National army. He was admitted to the Maine bar in February, 1865, and began practice in Portland in 1866. He was elected in 1884 Associate Justice of the Supreme Judicial Court of Maine. His term would have expired in 1905. Judge Haskell was known as one of the greatest case lawyers in New England. He published Haskell's Reports (2 vols.) and The New Gloucester Centennial (1874).

Hastings, Silas Wright, soldier, born in Franklin County, New York, April 30, 1846; died in Washington, D. C., June 3, 1900. He enlisted in the volunteer army in 1862, and at the close of the war was colonel of the 142d New York Regiment, and had been brevetted brigadier general. He was badly wounded in one of the battles in which he was engaged. After the war he returned to Franklin County, and later he spent some years in California. In 1889 he went to New York city, and became general agent of the Consolidated Coal Company.

Hazen, Henry Allen, meteorologist, born in Serur, India, Jan. 12, 1849; died in Washington,

D. C., Jan. 23, 1900. He was graduated at Dartmouth College in 1871, and was instructor in drawing in Sheffield Scientific School of Yale University till 1875, becoming Assistant Professor in Meteorology, which chair he held till 1879. May 1, 1881, he went to Washington as computer in the United States Signal Service. In October, 1887, he became one of the regular officers in this department, and made forecasts for the whole country. July 1, 1891, he was made Professor of Meteorology of the Weather Bureau. He devised a system for reducing barometric observations to sea level, a sling psychrometer, and a thermometer shelter. He published Meteorological Tables (1888) and The Tornado (1890).

Healy, James Augustin, clergyman, born in Macon, Ga., Aug. 6, 1830; died in Portland, Me., Aug. 5, 1900. He studied civil engineering, and began its practice, but later turned to the Church, and in 1849 was graduated at Holy Cross College, at Worcester, Mass., at the head of his class. He continued his theological studies at the Grand Seminary, in Montreal, and at St. Sulpice, at Paris. June 10, 1854, he was ordained a priest in the Catholic cathedral of Notre Dame. He returned to the United States, and for a time acted as secretary of Bishop Fitzpatrick in Boston; later he became first chancellor of the diocese of Boston, serving as rector of the cathedral twelve years. In 1866 he became rector of St. James's Church, which place he held nine years. Feb. 12, 1875, he was elected bishop of the diocese of Maine, and he was consecrated June 2, 1875.

Hendrie, John W., philanthropist, born in Sound Beach, Conn., Nov. 18, 1821; died there, Nov. 25, 1900. He was graduated at Yale University in 1851, and in 1854 he went to San Francisco, where he became a merchant and a dealer in real estate. After amassing a fortune in California, he returned to his native town. His principal gifts were \$15,000 to the Mercantile Library in San Francisco and \$10,000 to the Academy of Arts and Sciences of the same city, in 1897; in the same year a gift of \$50,000 to Yale Law School was announced, and later contributions made his gifts to that university double that amount. He also made various liberal gifts to local churches and benevolent institutions.

Hennessy, John, clergyman, born in Limerick County, Ireland, Aug. 20, 1825; died in Dubuque, Iowa, March 4, 1900. In 1847 he removed to Carondelet, Mo., where he studied theology. Nov. 1, 1850, he was ordained a priest, and his first mission was at New Madrid, Mo., where he entered upon his duties, Jan. 20, 1851. A few months later he became pastor of St. Peter's Church, Gravois, Mo., where he remained till 1854. He was then called to the duty of preparing priests for missionary work, being installed in the Carondelet Seminary as vice-president and Professor of Dogmatic Theology and Ecclesiastical History. In 1857 he became president of the seminary. In 1858 he was sent to Rome as representative of Archbishop Kenrick. After his return he officiated a year at the St. Louis Cathedral. Jan. 12, 1860, he became pastor of St. Joseph's Church, at St. Joseph, Mo., remaining there six years. April 24, 1866, he was elected Bishop of Dubuque, Iowa, and Sept. 30, 1866, was consecrated. The diocese of Dubuque was created an archdiocese in 1893, and Sept. 17, 1893, Bishop Hennessy was made archbishop. In 1873 he was instrumental in founding the New Melleray Abbey, and in the same year he founded St. Joseph's College, Dubuque.

Henry, William Wirt, lawyer, born in Red Hill, Charlotte County, Va., Feb. 14, 1831; died in Richmond, Va., Dec. 5, 1900. He was

graduated at the University of Virginia in 1850, and in 1853 was admitted to the bar. Afterward he was district attorney for Charlotte County. In the civil war he served in the Confederate army. He settled in Richmond in 1873. He served four terms in the Virginia Legislature, and was president of the Virginia Historical Society. He filled the same office in the American Historical Association in 1891, and was a trustee of the Peabody Educational fund. In 1876 he delivered the oration at the Philadelphia Centennial; and at the centennial of the laying of the corner stone of the Capitol at Washington, in 1893, he was the orator of the day. In 1898 he was a delegate to the Congress of History at The Hague. He devoted much time and labor to historical researches, and published *The Life, Correspondence, and Speeches of Patrick Henry* (his paternal grandfather); *Patrick Henry, the Earliest Advocate of American Independence*; *The Rescue of Captain Smith by Pocahontas*; *The Truth Concerning George Rogers Clark*; *A Defense of Captain John Smith's Narrative*; *Sir Walter Raleigh*; and many historical papers and addresses.

Heywood, Joseph Converse, author, born in Cumberland County, Maine, in 1834; died in Rome, Italy, Dec. 19, 1900. He was graduated at Harvard University in 1855, and at the law school three years later. After practicing law in New York city ten years, he devoted himself for a time to dramatic criticism and general literary work, but in 1878 settled in Rome, which continued to be his home henceforth, the famous Torlonia palace there having come into his possession. His writings comprise *Salome, the Daughter of Herodias* (1862), reissued in 1867 as *Herodias*, together with two other dramatic poems, *Antonius and Salome*; *How Will it End? A Romance* (1872); *How they Strike One, these Authors* (1877); *Sforza: A Tragedy in Verse* (1885); *Lady Merton: A Tale of the Eternal City* (1891); and *Il Nano Italiano: A Libretto* (1892).

Hill, Nathaniel Peter, metallurgist, born near Montgomery, N. Y., Feb. 18, 1832; died in Denver, Col., May 22, 1900. From the age of sixteen he superintended his father's farm for five years. In 1853 he entered Brown University as a student of applied chemistry suitable for agriculture, and he was graduated there in 1856. He remained at Brown as instructor in chemistry, and in 1859 was made professor, which chair he occupied till 1864. In that year he was sent by Boston capitalists to investigate the mineral characteristics of Gilpin County, Colorado; he became interested in the processes of extracting gold and silver from the unworkable ores, and after several trips abroad he organized the Boston and Colorado Smelting Company, and was made its general manager. With an associate (a Mr. Pierce, from Wales), he invented a process of extracting gold and silver from matte which was really the foundation of the great mining industries of Colorado, as previous to this invention all matte had been sent to England. The headquarters of the company were at Black Hawk, Col. In 1871 he was elected mayor of Black Hawk, and in 1872-'73 was member of the Territorial Council. In 1879 he was elected United States Senator. He was an advocate of the free coinage of silver, and spoke frequently on the subject. In 1891 he was one of the three members of the International Monetary Commission, and also served for a time as regent of the Smithsonian Institution. In business life he had been president of the United Oil Company, Colorado Smelting and Mining Company, and Demargo Land Company, and proprietor of the Denver Republican.

Hinckley, Francis Edward, civil engineer, born in Elmira, N. Y., March 14, 1834; died in West New Brighton, N. Y., Sept. 6, 1900. He was graduated at Knox College, and went to Chicago in 1870, where he was engaged in bridge building and railroad undertakings from 1875 till 1890. Later he became president of the Chicago, Pekin and Southwestern Railroad, and acquired large interests in other railroads. He was connected with the Niagara Power and Development Company, and a projector of a large steel company in Canada. He was an incorporator of Chicago University, and a generous contributor to it.

Hinsdale, Burke Aaron, educator, born in Wadsworth, Ohio, March 31, 1837; died in Atlanta, Ga., Nov. 29, 1900. At the age of sixteen he entered Hiram College, where he met James A. Garfield, who was five and a half years his senior, and they became fast friends. Prof. Hinsdale began teaching in the public schools; later he was principal in an academy, and in 1870 he was made president of Hiram College. His presidency of this institution covered a period of twelve years. During this time he published his first books: *The Genuineness and Authenticity of the Gospels* (1872); *The Jewish-Christian Church* (1878); *Ecclesiastical Tradition* (1879). Some of his other papers written at this time were afterward gathered into a volume entitled *Schools and Studies*. From 1882 till 1886 he was superintendent of the Cleveland public schools, and in 1888 he was appointed to the chair of the Science and Art of Teaching in the University of Michigan. His other books are *President Garfield and Education*; *The Old Northwest*; *The American Government*; *How to Study and Teach History*; *Teaching the Language Arts*; *Jesus as a Teacher*; and *Studies in Education*. He edited *The Works of James A. Garfield* (2 vols.).

Hitchcock, Hiram, hotel keeper, born in Claremont, N. H., Aug. 27, 1832; died in New York city, Dec. 30, 1900. He prepared for Dartmouth College at the Black River Academy, Ludlow, Vt., but instead of entering college became an instructor. In 1853, on account of failing health, he went to New Orleans, where he entered the office of the St. Charles Hotel. In 1859, with Paran Stevens and Alfred B. Darling, he opened the Fifth Avenue Hotel, New York. In 1866 he retired from business and traveled extensively in Egypt, Syria, Cyprus, Greece, and Italy. In 1871 he returned to Hanover, N. H., and in the following year announced to the world the famous discoveries of Gen. di Cesnola in Cyprus. He was connected with many learned and scientific bodies, and always took a deep interest in the explorations in Egypt, Palestine, and South America, and in the American School in Athens. In 1877 he represented Hanover in the New Hampshire Legislature. In 1879 he resumed his connection with the Fifth Avenue Hotel. He was trustee and director in many educational and financial institutions, and was president of the company that built the Madison Square Garden in New York. He was president of the Nicaragua Canal Association that obtained the concessions from Nicaragua and Costa Rica, and on the organization of the Maritime Canal Company, in May, 1889, he was elected its president.

Hoadly, Charles Jeremy, librarian, born in Hartford, Conn., Aug. 1, 1828; died there, Oct. 21, 1900. He was graduated at Trinity College in 1851, and was admitted to the bar in 1855, but never practiced law. In 1854 he was appointed librarian of Trinity College, and in April, 1855, was made State Librarian of Connecticut, which office he held until his death. He was the editor

of 16 volumes of the Connecticut colonial records and of Goodwin's Genealogical Notes. In 1889 he was made a doctor of laws by Trinity College.

Hodge, Cortlandt van Rensselaer, missionary of the Presbyterian Board, born in Burlington, N. J., July 1, 1872; **Elsie Campbell (Sinclair) Hodge**, born in Cedar Rapids, Iowa, Dec. 15, 1874; both killed in Paoting-Fu, Chi-Li province, China, June 30, 1900. Dr. Hodge was graduated at Princeton in 1893, and at the University of Pennsylvania, medical department, in 1897. Mrs. Hodge was graduated at Bryn Mawr College in 1897. They sailed for China in March, 1899.

Hoffman, James H., philanthropist, born in Sieligenstadt, Bavaria, Nov. 5, 1833; died in New York city, July 8, 1900. He came to America in 1855, having been previously employed by the Rothschilds in Frankfort-on-the-Main, engaged in the manufacture of paper collars, and was the organizer of the Standard Collar Company. He was connected with various manufacturing interests, and was interested in educational and philanthropic organizations. He was a director of the Baron de Hirsch fund, and treasurer and a director of the Borough Homes Company. For fourteen years he served as treasurer of the United Hebrew Charities, resigning a few years ago. The Hebrew Benevolent and Orphan Asylum Society found in him an interested helper. Mr. Hoffman was a trustee of Temple Emanu-El, and twelve years ago he founded the Hebrew Technical Institute, of which he was president at the time of his death.

Hoffman, Wickham, lawyer, born in New York city in 1821; died in Atlantic City, N. J., May 21, 1900. He was graduated at Harvard College in 1842, and practiced law till the outbreak of the civil war. He was appointed aide-camp to Gov. Morgan, and was sent to inspect the New York troops at Fort Monroe. In March, 1862, he entered the volunteer service as assistant adjutant general, and served on the staff of Gen. Williams. He was at the capture of New Orleans, and took part in expeditions to Vicksburg and Baton Rouge. For a time he served on the staff of Gen. Sherman. In 1863 he took part in the expedition to Texas and in the Red river campaign. In 1864 he was appointed assistant adjutant general of eastern Virginia and North Carolina, and in March, 1865, was assigned to duty in New Orleans. In 1865 he was appointed adjutant general and chief of staff to Gen. Canby. In 1866 he resigned, and was appointed assistant secretary of legation at Paris. In 1867 he was made secretary of legation, and he filled the office nine years. He was transferred to London in 1875, and in 1877 to St. Petersburg, where for six years he acted as *chargé d'affaires*. In 1882 he was appointed minister resident and consul general to Denmark; he served till 1884, when he retired to private life. He was the author of *Camp, Court, and Siege* (London, 1877), and *Leisure Hours in America* (1883).

Hovey, Richard, poet, born in Normal, Ill., May 4, 1864; died in New York city, Feb. 24, 1900. After graduation at Dartmouth College he studied at the General Theological Seminary in New York, but abandoned his intention of entering the Episcopal ministry after serving for a short while as a lay assistant. During the remainder of his career he was by turns actor, journalist, and lecturer on English literature. He was a student of the later French and Belgian poets, and published an English translation of Maeterlinck. His verse, much of which is in dramatic form, exhibits unusual promise, each successive effort being a gain upon that which had preceded it. "That his aim was high," writes Mr. Stedman, "is shown even by his failures; and in his death there is no doubt

that America has lost one of her best equipped lyrical and dramatic singers." His works comprise *The Laurel: An Ode* (Washington, 1889); *Launcelot and Guenevere: A Poem in Dramas* (New York, 1891); *Seaward: An Elegy upon the Death of Thomas William Parsons* (1893); *Songs from Vagabondia*, with Bliss Carman (1893); *More Songs from Vagabondia*, with Bliss Carman (1896); *Along the Trail* (1898); *The Quest of Merlin*; *The Marriage of Guenevere*; *The Birth of Galahad*, a trilogy, the first two parts of which had appeared in 1891 as *Launcelot and Guenevere* and were now reprinted with some revision and amplifications (1898). *Taliesin: A Masque*, perhaps his most finished effort (1900), and *Last Songs from Vagabondia*, with Bliss Carman (1900), were issued posthumously.

Howard, Samuel, naval officer, born near Dublin, Ireland, in 1828; died in Washington, D. C., Jan. 14, 1900. His parents came to the United States when he was a boy, and settled in Newport, R. I. At the age of sixteen he ran away to sea, and his life for over half a century was spent upon the water. His first voyage was to the Mediterranean, and for several years he was captain of a merchant vessel sailing between New England and points in Cuba and the West Indies. At the outbreak of the civil war he was commissioned a lieutenant in the volunteer navy and placed in command of the gunboat *Neosho*, doing patrol duty on the lower Mississippi. Later he was transferred to the *Amanda* as acting master, to patrol the Atlantic coast south of Norfolk. He reached that port just at the time the *Monitor* came down to battle with the *Merrimac*. The pilot of the *Monitor* having refused to pilot her through Hampton Roads, Lieut. Howard volunteered to undertake the task. He ran the *Monitor*, commanded by Capt. Worden, right up alongside the *Minnesota* in the nick of time, and in the fight with the *Merrimac* which followed Howard was the only man in the conning tower with Capt. Worden, and to him in a great measure was due the successful outcome of the engagement. At the close of the war he resigned from the navy and received a commission as third lieutenant in the revenue marine service. He was stationed for various periods at New Orleans, Savannah, Baltimore, Cedar Keys, and Mobile. He rose to the grade of second lieutenant, but in an examination held in 1891 he was proved physically unfit for promotion, and was placed at the foot of the second-lieutenant grade, out of the line of promotion.

Hoyt, Charles Hale, American dramatist, born in Concord, N. H., July 26, 1860; died in Charlestown, N. H., Nov. 20, 1900. He was graduated at the Boston Latin School, and studied law. He was an appointee to West Point Military Academy, but failed to pass the physical examination. In 1875 he tried stock raising in Colorado, but returned to the East and engaged in journalism on the *St. Albans (Vt.) Advertiser*. He then became a writer for the *Boston Post*, of which he was musical and dramatic critic. While in this place he turned his attention to play writing. His first effort was a sketch called *Gifford's Luck*, which was produced with success at the Howard Athenæum, Boston, in 1882. His next work was a melodrama, *Cezalia*, which also was well received. He then wrote *A Bunch of Keys*, at the suggestion of Willie Edouin and Alice Atherton, and it was first presented by these two comedians at Providence, R. I., but was coldly received. The late Charles W. Thomas, who was an intimate friend of Mr. Hoyt's, liked it, and assisted him to improve it. These two thereafter entered into collaboration, and continued as partners until Mr.

Thomas's death, in 1893. The Bunch of Keys, which had been sold for \$500 to Mr. Edouin and Mr. Frank Sanger, was first played in New York city at the San Francisco Minstrels' Opera House, March 26, 1883, and by its instantaneous success made the fortunes of its owners, the reputation of its inventors, and a new style of American comedy. A Rag Baby was produced in 1884. A Parlor Match, which made Evans and Hoey famous and rich, was first produced at Tony Pastor's Theater, New York, Sept. 22, 1884. Hoyt and Thomas received \$3,000 for this play. A Case of Wine was produced by the late Charles B. Bishop at Austin, Texas, Nov. 10, 1884. A Tin Soldier at the Standard Theater, New York, May 3, 1886, and an opera, called The Maid and the Moonshiner, on Aug. 16, 1886, at the same house. The last was a failure, which Hoyt attributed to the fact that its title did not begin with the article "A," and thereafter all his titles began with that useful part of speech. A Hole in the Ground was first presented at the Fourteenth Street Theater, New York city, Sept. 12, 1887. In the winter of 1887-'88 a serious play, called A Midnight Bell, in which Maude Adams played the heroine, was produced, but the craze for farce which Hoyt and Thomas had created prevented any success of this really well-deserving piece. A Brass Monkey was the next farce, produced May 22, 1888. Then came A Texas Steer, first played April 28, 1890. This play was written for Mr. Hoyt's first wife, Miss Flora Walsh. Sept. 18, 1890, was first produced A Trip to Chinatown, with which the dramatists reached high-water mark. It is said that this farce made for them \$500,000 in five years, and it holds the record for the longest continuous run of any dramatic production in America. In 1893 Miss Walsh died, and in 1894 Mr. Hoyt married Miss Caroline Miskel, who had been playing in A Temperance Town, first produced March 14, 1892. A Milk-White Flag was produced Dec. 23, 1893. After Mr. Thomas's death in this year Mr. Hoyt entered into partnership with Mr. Frank McKee and leased the Madison Square Theater, New York, the name of which was changed to Hoyt's Theater. Hoyt's later works and the dates of their production were: A Black Sheep, Sept. 10, 1894; A Contented Woman, Sept. 2, 1895; A Runaway Colt, Nov. 12, 1895; A Stranger in New York, Feb. 15, 1897; A Day and a Night, April 18, 1898; and A Dog in the Manger, Jan. 30, 1899. The current of public esteem set gradually away from this kind of clever nonsense, and the last-named plays were failures. Mr. Hoyt was twice elected to the Legislature of his native State.

Hubbard, Oliver Payson, physician, born in Pomfret, Conn., March 31, 1809; died in New York city, March 9, 1900. He was graduated at Yale College in 1828. From 1831 till 1836 he was assistant to the elder Prof. Benjamin Silliman in the chemical laboratory of Yale College, and he aided Charles Goodyear in all the early experiments that led to his discovery of the process of vulcanizing India rubber. In 1836 he was appointed Professor of Chemistry, Pharmacy, Mineralogy, and Geology in Dartmouth College, and he filled that chair thirty years. After resigning his professorship he continued his lectures in Dartmouth Medical School till 1883, when he was made professor emeritus. In 1853 he built the Shattuck Observatory. From 1867 till 1895 he was overseer of the Thayer School of Engineering. Prof. Hubbard was a founder of the Association of American Geologists and Naturalists in 1841; also a founder of the American Association for the Advancement of Science in 1848, and its secretary and a vice-

president from 1885 till 1892. After 1874 he resided in New York city. He was a contributor to scientific periodicals, and was the author of the History of the New Hampshire Medical Institution; History of the Chandler School, Dartmouth College (1881); Account of Seven Nineveh Slabs; Biographical Sketches of the Class of 1828, Yale (1898); and College Memorabilia.

Humphreys, Frederick, physician, born in Marcellus, N. Y., March 11, 1816; died at Monmouth Beach, N. J., July 8, 1900. He was educated in the public schools and at Auburn Academy. He served as clerk in a store in Auburn two years, and in 1832 went South for three years. He taught a school three years in Chillicothe, Ohio, and later studied for the ministry in the Methodist Church. He was an itinerant minister five years in New York and Ohio. In 1844 he settled in Utica. In 1846 he began to investigate homœopathy, and he spent the winters of 1848, 1849, and 1850 at the Homœopathic Medical College in Philadelphia, where, in 1853, he became Professor of Homœopathic Institutes and Practice of Medicine, serving four years. For some years he had been maturing a plan for the preparation of homœopathic medicines for popular use, and in 1856 he announced the invention of a number of combinations, which he termed his "homœopathic specifics." In that year he settled in New York city and began to advertise his specifics. He was a constant contributor to Our Animal Friends, and published Proving of the Apis Melliflua, or Poison of the Honey Bee (1852).

Huntington, Collis Potter, railroad builder, born in Harwinton, Conn., Oct. 22, 1821; died at Pine Knot Camp, near Lake Raquette, N. Y., Aug. 13, 1900. He was educated in a local school, and worked on his father's farm till he was fourteen years old. He then set out for himself, and for several years peddled clocks in the small Connecticut towns. In 1837 he went to New York city, and, having procured credit for \$3,000 worth of clocks, went to sell them through the South and West. In 1842 he settled in Oneonta, N. Y., having entered into partnership with his elder brother, and the firm carried on a general merchandise business. In October, 1848, the brothers made a shipment of goods to California, which Collis followed in March, 1849. With others, he was detained on the isthmus, and he improved the time by buying a stock of goods and peddling them back and forth across the isthmus. When he arrived in California he began business in a tent in Sacramento, dealing in the various articles required in mining life. Later he opened a large hardware store in the city, having become associated in business with Mark Hopkins. In 1860 he matured a scheme for a transcontinental railroad, Leland Stanford, Charles Crocker, and Mr. Hopkins having united with him in paying the expenses of a survey across the Sierra Nevada mountains. Five men organized the Central Pacific Railroad Company, of which Mr. Huntington

was vice-president. After Congress had agreed to aid the enterprise by an issue of bonds, he and his associates carried on the construction of the railroad out of their private means till the bonds became available by the completion of a stipulated mileage. The Central Pacific was finished in 1869, the last spike being driven May 10. Having carried through so gigantic a scheme, Mr. Huntington had the confidence of all the great financiers of the country, and was enabled to command unlimited capital in any of his later undertakings. At the time of his death there were merged into the Southern Pacific Railroad Company, of which he had been the promoter and was the president, 26 corporations, with more than 9,000 miles of railroad track and 5,000 miles of steamship line. He had succeeded in completing the Chesapeake and Ohio Railroad, in which many other contractors had been ruined. He turned the village of Newport News, Va., into a thriving town, and had invested more than \$7,000,000 in a shipyard there, which employs thousands of men. He had the reputation of being one of the largest single landholders in the country, holding title to vast tracts of undeveloped land in California, Kentucky, West Virginia, Mexico, and Guatemala, as well as valuable real estate in New York city, and four large hotels. Some of his vast wealth he used in philanthropic ways. In 1886 he erected a massive granite church in his native town, to the memory of his mother. In October, 1891, he gave to the town of Westchester, N. Y., a library and reading room. In February, 1897, he presented to the Metropolitan Museum of Art the celebrated portrait of Washington painted by C. W. Peale. For colored people he aided greatly in the construction and equipment of the Hampton (Va.) Normal Agricultural Institute and the Tuskegee (Ala.) Normal and Industrial Institute; to the latter he gave as an endowment fund \$50,000 on Dec. 6, 1899. His collection of art objects—paintings, carvings, etc.—was worth \$500,000; he left an estate valued at \$35,000,000.

Ingalls, John James, lawyer, born in Middleton, Mass., Dec. 29, 1833; died in Las Vegas, New Mexico, Aug. 16, 1900. He was graduated at Williams College in 1855, and was admitted to the bar in 1857. In October, 1858, he removed to Atchison, Kan. In 1859 he became a member of the Wyandotte Constitutional Convention; in 1860 was made secretary of the Territorial Council, and in 1861 secretary of the Kansas Senate. In 1862 he was elected to the State Senate, and the same year he was the unsuccessful candidate for Lieutenant Governor. After his defeat he became editor of the Atchison Champion, which place he held from 1863 till 1865. He was again defeated as a candidate for Lieutenant Governor in 1864. In 1872 he was elected to the United States Senate, and he served continuously in that body from 1873 till 1891. During the last three years of that time he was president *pro tem.* of the Senate. He gained wide fame as a Senator, his speeches attracting attention throughout the country. When the Farmers' Alliance party had gained control of Kansas, as Senator Ingalls had dealt with that element in anything but a gentle way, he was compelled to retire from public life in 1891. He then devoted most of his time to newspaper work, and traveled about the country as correspondent for a New York paper. He also lectured.

Ingate, Clarence L. A., naval officer, born in Alabama; died in Guam, Ladrone Islands, Dec. 24, 1899. He was graduated at the United States Naval Academy, July 1, 1890, entered the marine corps as second lieutenant, and was promoted first lieutenant, April 30, 1892, and captain, Sept. 26,

1898. He served through the war with Spain, and later was stationed on the receiving ship Vermont in Brooklyn Navy Yard. He was on his way to Manila at the time of his death.

Ingham, Hannah May (Mrs. E. T. Stetson), actress, born at Mokelumne Hill, Cal., in 1867; died in New York city, Jan. 16, 1900. She made her first appearance at the California Theater, San Francisco, as Ophelia, in 1885. She shortly afterward became the wife of E. T. Stetson, an actor of melodramatic plays, who traveled with a company of his own through the Western and Southern States, and with him Miss Ingham played the heroines of his various dramas. Her first appearance in New York was at the Fourteenth Street Theater, as Margaret in *The House of Mystery*, Sept. 14, 1896. In August, 1898, she appeared as the leading woman of the Murray Hill Theater, New York, where she remained, playing twice a day during the continuance of each theatrical season, until her death. In this time she played a great number of parts in the popular plays of the day, as the practice of the theater was to have a new play every week. She found time to write for periodicals stories and essays and a new version of *East Lynne*, called *The Young Wife*, first produced at the Murray Hill Theater, Oct. 3, 1898. Her last appearance was at that theater, Jan. 15, 1900, as Julie de Varion in *An Enemy to the King*.

Irby, John Laurens Manning, planter, born in Laurens County, South Carolina, Sept. 10, 1854; died in Laurens, S. C., Dec. 9, 1900. He was educated at the University of Virginia and at Princeton University, and was admitted to the South Carolina bar in 1876. The same year he took an active part in the Democratic campaign. He continued in the practice of law till 1879, when he retired to his farm near Laurens and devoted himself to planting on a large scale. In 1878, in a personal quarrel, he killed his opponent, for which he was subsequently tried and acquitted. He served in the South Carolina Legislature from 1886 till 1890, and was Speaker during the latter year. He entered the reform movement as a supporter of Tillman, and was made chairman of the Reform Executive Committee, organized the campaign, and won the victory for Tillman. He was elected United States Senator Dec. 11, 1890, defeating Gen. Wade Hampton by 105 votes against 42, with 10 for M. L. Donaldson. March 14, 1893, he was elected chairman of the Senate Committee on Transportation Routes to the Seaboard. His term, during which he was the youngest member of the Senate, expired March 4, 1897. In the meantime he had quarreled with Tillman, and refused to stand for re-election. On the death of Senator Earle he made a contest, and sustained his first political defeat at the hands of Mr. McLaurin.

Irons, Martin, labor leader, born in Dundee, Scotland, March 1, 1832; died in Bunceville, Texas, Nov. 17, 1900. He came to New York with his parents when fourteen years of age, and learned the trade of machinist. Several years afterward he went to Carrollton, La., where he was foreman in a machine shop. He tried the grocery business in New Orleans, but made a failure of it; and after leaving that city for Frankfort, Ky., he became widely known as an agitator in the movement among railway men for shorter hours. From Frankfort he went to St. Louis, then to Hannibal and Lexington, Mo., speaking to and making the acquaintance of the laboring classes. In the latter place he was also connected with the Granger movement. He organized and led the famous Missouri Pacific strike of 1886.

Mr. Powderly, then the head of the Knights of Labor, was opposed to the strike, and this eventually led to his retirement from the leadership of the organization. Irons entered the contest for the presidency, but failed of election.

Jackson, Henry Melville, clergyman, born in Leesburg, Va., July 28, 1848; died, May 4, 1900. He was educated at the Virginia Military Institute and at the Virginia Theological Seminary, in Alexandria, and after taking deacon's orders in the Episcopal Church, in 1873, he was admitted to the priesthood the next year. He was in charge successively of Montgomery parish, Virginia, and Christ Church, Greenville, S. C., and was rector of Grace Church, Richmond, Va., in 1876-'91. He was one of the editors of the Southern Pulpit, afterward united with the Pulpit Treasury, and for a time was in the editorial staff of the Southern Churchman. In January, 1891, he was consecrated Bishop Coadjutor of Alabama, which office he resigned in April, 1900.

Jessing, Joseph, educator, born in Münster, Westphalia, Nov. 17, 1836; died in Columbus, Ohio, Nov. 2, 1899. He entered the Prussian army at an early age, and attended the royal military academy.

In 1860 he gave up his military studies for an ecclesiastical career, but he returned to the army to serve through the Schleswig-Holstein War of 1864 and the Austrian War of 1866. He then resolved to devote himself to missionary work, and came to the United States. He completed his theological course at Mount St. Mary's of the West, was

ordained, and began his labors in Columbus, Ohio. Afterward he was assigned to the charge of the Sacred Heart Church, in Pomeroy, Ohio. There he began the publication of a journal, entitled *Ohio Waisenfreund*, the profits of which he devoted to the support and education of homeless orphan boys. The venture was very successful, and in 1875 he established an orphan asylum in Pomeroy. Two years later he gave up his parochial charge, and removed to Columbus, where he began at once the work of building up an institution that now covers an entire square and is entitled the Pontificium Collegium Josephinum de Propaganda Fide. It has 11 fine buildings, and comprises an orphanage, a house for the Franciscan Sisters, who attend to the domestic duties that arise in connection with the institution, a college for theological training, an industrial school of art, a printing office, and mechanical workshops. Father Jessing also purchased 100 acres near Columbus for farm work, where supplies are raised for the institution. Students who are unable to pay for tuition receive it free. In 1892 the Congregation for the Propagation of the Faith gave the college canonical constitutions, and this action was ratified by Pope Leo XIII. It is also incorporated under the laws of Ohio, and has power to confer degrees. It now has about 170 students. In 1894 Father Jessing was appointed to the dignity of domestic prelate, which gave him the title of Monsignor.

Jones, Alfred, engraver, born in Liverpool, England, April 7, 1819; died in New York city, April 29, 1900. He came to New York in 1824. He apprenticed himself to a firm of bank-note engravers, and when still a young man he was put in full charge of the engraving department. Mr. Jones made many of the best plates used by New York publishers of half a century ago. His first piece of art work to attract attention was *The Proposal*, engraved for *Graham's Magazine*. In 1839 he took a first prize in the New York Academy of Design for a drawing from *Thorwaldsen's Mercury*. *The Proposal* and *The Farmer's Wooing* also took first prizes. In 1840 he went to Europe and spent several months in perfecting himself in engraving. After 1848 he devoted himself almost entirely to bank-note engraving. He designed the 2-cent, 30-cent, 4-dollar, and 5-dollar postage stamps in the Columbian series for the American Bank Note Company. In 1841 he was made an associate and in 1851 a full member of the National Academy of Design, and he was for many years its secretary and treasurer. Among his engravings are *The Image Breaker*, after *Leutze*, a half-sitting sketch of *Adoniram Judson*; *William Cullen Bryant*; *The Capture of Major André*, after *Durand*; *Sparking*, after *Edmonds*; *The New Scholar*, after *Edmonds*; and *Mexican News*, after *Woodrich*. Among his later works were a large portrait of *George Washington*, and two portraits of *Thomas Carlyle* for the *Grolier Club*, New York.

Jones, Patrick Henry, lawyer, born in the county of Westmeath, Ireland, Nov. 20, 1830; died in Port Richmond, N. Y., July 23, 1900. He came to the United States in 1840, and worked on his father's farm in Cattaraugus County, New York. In 1850 he became connected with a New York paper as correspondent, and later he was local editor of the *Buffalo Republic*. In 1853 he gave up journalism to study law, and in 1856 was admitted to practice at *Ellicottville*, N. Y. At the outbreak of the civil war he enlisted in the 37th New York Regiment as second lieutenant. He was promoted to adjutant and then to major of that regiment, and was made colonel of the 154th New York Regiment, Oct. 8, 1862. He was wounded and taken prisoner at *Chancellorsville*, and after his exchange, in October, 1863, served in the West and in the Atlanta campaign, and in June, 1864, was assigned to the command of a brigade. He was commissioned brigadier general of volunteers, Dec. 4, 1864. In June, 1865, he returned to his law practice. In 1865 he was elected clerk of the Court of Appeals of New York State, which office he held three years. April 1, 1869, he was appointed postmaster of New York city, and he served as such during President Grant's first term, after which he again returned to his law practice. In 1875 he was appointed register of the city and county of New York, and he held the office three years.

Judd, Albert Francis, jurist, born in Honolulu, Hawaiian Islands, Jan. 7, 1838; died there May 20, 1900. His father was Dr. Gerrit Parmele Judd, a medical missionary under the auspices of the American Board. Chief-Justice Judd was graduated at Yale University in 1862, and at Harvard Law School in 1864. He returned to Honolulu and began the practice of law. From 1868 till 1872 he served in the Hawaiian Legislature. In 1873 he was made Attorney-General by King Lunalilo. The following year he became a justice of the Supreme Court, and since 1881 had been Chief Justice. In comment upon this court, in a letter to a friend, he wrote: "I feel that no court has ever had such a diversified num-

ber and quantity of questions to decide as has fallen to the lot of the Hawaiian Supreme Court in the last quarter of a century, during the time the islands began their development and lasting till they became a part of the United States." He was also a leader in the religious and educational movements in the islands.

Keeler, James Edward, astronomer, born in Lasalle, Ill., Sept. 10, 1857; died in San Francisco, Cal., Aug. 12, 1900. In 1869 his parents removed to Mayport, Fla., where his fondness for astronomical studies was developed, and where in 1875-'77 he had charge of the Mayport Astronomical Observatory, in which were a quadrant, a two-inch telescope, a meridian circle, and a clock. At that time he constructed a meridian-circle instrument, which he subsequently described. He entered Johns Hopkins University in 1877, and was graduated there in 1881. Meanwhile, with Charles S. Hastings, he served on the United States Naval Observatory expedition under Edward S. Holden that observed the solar eclipse of July 29, 1878, from Central City, Col. Before graduation he was appointed assistant at the Allegheny Observatory, Pittsburg, Pa., under Samuel P. Langley, whom he also accompanied on his expedition to Mount Whitney, Cal., in June to September, 1881. He continued at the Allegheny Observatory two years, and then spent a year in Heidelberg and Berlin, pursuing higher scientific studies. In 1884 he returned to the Allegheny Observatory, and aided Dr. Langley in his work on lunar heat and the infra-red portion of the solar spectrum. He was appointed assistant to the Lick trustees in 1886, and proceeded to establish a time system, also aiding in the installation of the instruments on Mount Hamilton. When the observatory was completed he was appointed astronomer and placed in charge of the spectroscopic work. The large star spectroscope was constructed mainly from his designs, and the results of his observations of the atmospheres of Saturn's rays and of Uranus, and of the spectra of the nebula in Orion, did much to establish his reputation. He had charge of a successful expedition sent by Lick Observatory to Bartlett Springs, Cal., to observe the solar eclipse of Jan. 1, 1889. He resigned from Lick Observatory in 1891 to succeed Dr. Langley as director of Allegheny Observatory and as Professor of Astrophysics in the Western University of Pennsylvania. Here he remained seven years and continued his valuable spectroscopic work. His investigations included a study of the nebula in Orion and the stars immersed in it, establishing the fact that the nebula and the stars are closely related in physical condition; also observations of Saturn's rings, proving that they are a cluster of meteorites—myriads of little moons. In 1898 he returned to Mount Hamilton as director of the observatory, which place he held until his death. He devoted his observing time to the Crossley reflector, and began a study of the Pleiades and the nebula in Orion. He also began photographing all the brighter nebulae in Herschel's Catalogue, at least half of which he completed. His observations on the great nebula of Orion, published in 1899, gave "an impression of the scope of a work that was designed to distinguish a new epoch in astronomical research." The honorary degree of Sc. D. was conferred on him by the University of California in 1893. He received the Rumford medal from the American Academy of Arts and Sciences in 1898, and also received the Henry Draper medal of the National Academy of Sciences in 1899, of which academy he was elected a member in 1900.

Keeley, Leslie E., physician, born in 1842; died in Los Angeles, Cal., Feb. 21, 1900. He was graduated at Rush Medical College in 1864. He founded the Keeley Institute system for the cure of inebriety and the use of narcotic drugs, commonly known as the gold or Keeley cure, and was president of the company that bears his name.

Keep-Schley, Emma A., philanthropist, born in Watertown, N. Y., Sept. 19, 1827; died in New York city, May 10, 1900. She was a daughter of Norris M. Woodruff, and married Henry Keep, at one time president of the New York Central Railroad, in 1847. Mr. Keep died in 1869, and in 1876 Mrs. Keep married Judge Schley, of Savannah, Ga., who died in 1882. Her gifts to charitable societies and individuals were numerous and of large amount. She gave to the New York Ophthalmic Hospital \$250,000, and endowed the Keep Memorial Home for Old Ladies, in Watertown, N. Y. The rents from office buildings in Watertown are set aside for the maintenance of this institution.

Key, David McKendree, lawyer, born in Greene County, Tennessee, Jan. 27, 1824; died in Chattanooga, Tenn., Feb. 3, 1900. He spent his early years on a farm, and in 1850 he was graduated at Hiwassee College, in East Tennessee. He studied law, and began its practice at Chattanooga in 1853. During the civil war, although opposed to secession, he yielded to the authorities of his State and became lieutenant colonel of the 43d Tennessee Infantry. He served through the war, and surrendered under Gen. Joseph E. Johnston in North Carolina. In 1865 he was pardoned by President Johnson, who was his old friend, and resumed the practice of law in Chattanooga. In 1869 he was a member of the Tennessee constitutional convention. In 1870 he was elected chancellor of the Chattanooga circuit, which office he held until 1875. In 1872 he was a candidate for Congress, but was defeated. In August, 1875, he was appointed United States Senator to fill the unexpired term of Andrew Johnson, but he failed of election to succeed himself. In 1877 President Hayes selected him as Postmaster-General in his Cabinet. In 1880 he was appointed United States district judge for the Eastern District of Tennessee, and he served till 1894, when he retired, having reached the limit of age. In July, 1891, he was made dean of the law school of Grant University, at Nashville, Tenn.

King, John Alsop, born in Jamaica, Long Island, in 1817; died in New York city, Nov. 21, 1900. He was graduated at Harvard in 1835, studied law, and began to practice in New York city. In later years he abandoned the law and was engaged in the real-estate business. He was a Republican presidential elector in 1872, and in 1874-'75 he was a State Senator. He was one of the oldest and most enthusiastic members of the New York Historical Society, and was its president from 1887 till the time of his death.

Knox, Charles Eugene, clergyman, born in Knoxville, N. Y., Dec. 27, 1833; died in Point Pleasant, N. J., April 30, 1900. He was graduated at Hamilton College in 1856, and studied theology at Auburn and Union Seminaries. He was ordained to the ministry and installed as pastor of the First Presbyterian Church, in Bloomfield, N. J., June 8, 1864, and continued in charge till 1873. In that year he was chosen president of the German Theological Seminary of Newark, situated in Bloomfield. He received the degree of D. D. from Princeton College in 1874. He published *A Year with St. Paul* (New York, 1862); *The Second Year* (1864); *The Third Year* (1865); *Love to the End* (Philadelphia, 1866); *David the King and the Order of the Psalms in his Life* (New York, 1876).

Koehler, Sylvester Rosa, art critic, born in Leipsic, Germany, Feb. 11, 1837; died in Littleton, N. H., Sept. 15, 1900. He came to the United States in 1849. He edited the *American Art Review* during its existence, and contributed largely on art subjects to periodicals in the United States and in Europe. He was for many years curator of the print department of the Museum of Fine Arts, Boston, and he made several trips abroad in the interests of that institution. He was honorary curator of the section of graphic arts in the National Museum, Washington, and was a fellow of the American Academy of Arts and Sciences. He lectured on engraving, etching, etc. He published translations of von Betzold's *Theory of Color*, edited by Prof. Edward C. Pickering (1876), and of Lalanne's *Treatise on Etching*, with notes (1880). He was the author of *Art Education and Art Patronage in the United States* (1882); *Etching, an Outline of its Technical Processes and its History, with Some Remarks on Collections and Collecting* (1895); and of the text for *Original Etchings by American Artists* (1883); *Twenty Original American Etchings* (1884); and for *American Art* (1887). He also prepared the *Catalogue of the Engravings, Dry Points, and Etchings of Albrecht Dürer*, published by the Grolier Club, New York, and edited the *United States Art Directory and Yearbook for 1882 and 1884*. At the time of his death he was at work on a history of color printing, which remains incomplete.

Landis, Charles K., lawyer, born in Philadelphia, Pa., March 16, 1834; died in Vineland, N. J., June 12, 1900. He studied law, and in 1851 was admitted to the bar. He made considerable money in his practice, and in 1857, with the idea of retiring to the country and founding a colony, he established the village of Hammonton, N. J. In 1861 he purchased several thousand acres in Cumberland County, New Jersey, which was sold in building lots, and from this grew the village and city of Vineland. For a time he was the first man in the place, and owned the only newspaper there. Later an opposition newspaper was established, and its editor harassed Mr. Landis so much that the latter shot him. For this Landis was tried and acquitted. Sea Isle City, Landisville, New Italy, and other south Jersey towns were also founded by him.

Lane, Thomas Henry, artist, born in Philadelphia, Pa., Feb. 24, 1815; died in Elizabeth, N. J., Sept. 27, 1900. Early in life he made the acquaintance of Edgar Allan Poe, with whom he was connected as business manager in the publication of the *Broadway Journal*. Later he removed to Washington, where he studied art under Leutze. As an artist Mr. Lane was best known for his dainty and charming miniatures on ivory and porcelain; he did excellent work with his brush till three years before his death. He lived for a time in Westchester, N. Y., and in 1892 removed to Elizabeth, N. J.

Langlois, Augustus Bartholomew, clergyman, born in Chavaney, Department of the Rhône, France, April 24, 1832; died in St. Martinville, La., July 31, 1900. He came to the United States in 1855, and, finishing his studies at the College of Mount St. Mary of the West, Cincinnati, was ordained on June 11, 1855. Six months later he was stationed at Point à la Hache, Plaquemines Parish, where he labored thirty years; in 1887 he was transferred to St. Martinville, and he remained its rector till the time of his death. When very young he became interested in botany, and at the age of sixteen made an herbarium of 1,200 plants gathered in the neighborhood of Mont-

brison, France. On his appointment to Point à la Hache he renewed his studies, and he was known throughout the scientific world as a botanist of rare attainment. His studies of the flowers of Louisiana have covered that field completely. His collection of plants, the work of more than fifty years, was very large; and in addition he supplied museums with the flora of this region, and in recognition of his work several plants have been named for him. He published several volumes on the fungi of Louisiana, and his *Catalogue-Provisoire des Plantes Phanérogames et Cryptogames de la Basse Louisiane* is a standard. All his literary work was written in French, and his name is better known to the scientific bodies of Europe than to those of the United States.

Lawler, Francis Xavarius, clergyman, born in County Cavan, Ireland, June 22, 1822; died in Alexandria, S. D., Sept. 10, 1900. He removed with his parents to Franklin County, New York, in 1824, studied for the priesthood, and was ordained subdeacon in 1844 and priest, Dec. 26, 1845. He was at once sent on missions. He was vice-president four years and president four years of St. Mary's College, Marion, Ky. After a short vacation he was made master of discipline at Notre Dame, Ind., where he remained two years. Later he served a year as Superior of St. Pius Seminary, in Kentucky. From 1859 till 1870 he was in charge of the church at Laporte, Ind., and from 1871 till 1878 at Logansport. He later served as priest at Lawrence and other places in Kansas, and in 1881 went to Dakota, serving as superintendent of the Yankton Indian School till December, 1884. He then removed to Alexandria, where he was priest of the Church of Our Lady of Mercy. May 20, 1896, he was appointed domestic prelate to the Pope. He was also vicar general of South Dakota, and one of the deans of the diocese.

Lawrence, Ada, actress, born in New York, July 7, 1821; died in Quincy, Ill., April 1, 1900. She was a daughter of Robert Bensell, leader of the orchestra of the Old Bowery Theater. Her first appearance was in this theater, at the age of eleven, and she played in various theaters and companies of the country until her retirement, in 1885. Of this time the greater portion was spent in Southern theaters, where before and during the war she was very popular as a leading woman under her second married name of Ada Logan. Her first husband was Samuel Browne, a comedian of ability.

Lester, John Henry, inventor, born in Montville, Conn., Sept. 27, 1815; died in Brooklyn, N. Y., Jan. 10, 1900. He invented a lock-stitch sewing machine, and was one of the pioneer sewing-machine manufacturers in the United States. He also invented a wood-planing machine and several minor mechanical appliances. In the winter of 1859-'60, with Samuel C. Robinson, he formed a stock company for making wood-planing machines in Richmond, Va. This plant was pressed into service by the Confederates, and the firm was directed to alter arms for the Southern army. Mr. Lester, being a Northerner and a loyal man, objected, and had the plant appraised. The value was fixed at \$300,000, which was paid in Confederate money. He obtained an assignment as a purchasing agent for the Confederate Government, which enabled him to get through the lines to Washington, where he surrendered his documents to Gen. Benjamin F. Butler, after an interview with President Lincoln. The Government, however, was not satisfied with his loyalty, and he was sentenced by a military commission to ten years' imprisonment. He was pardoned after serving twenty months. He subsequently

brought suit against Gen. Butler in the Supreme Court of the United States. The Government was made the defendant, and on the trial Gen. Butler appeared for the Government. After pending twenty years, the suit was dismissed on a technicality.

Lewelling, Lorenzo D., ex-Governor, born in Salem, Iowa, Dec. 21, 1846; died in Arkansas City, Kan., Sept. 3, 1900. At the age of sixteen he began work as a laborer on the Chicago, Burlington and Quincy Railroad. Later he went to St. Louis and became a driver of cattle for the quartermaster's department of the National army in Tennessee, and then one of a bridge-building corps at Chattanooga. After the war he had a varied career; he studied at Knox College, taught in a Quaker institute at Salem, edited a Republican newspaper there, and then for fifteen years had charge of the Iowa State Reform School. He represented Iowa in national conferences of charities, and was a member and for a time president of the Iowa State Normal School Board. In 1880 he established at Des Moines an anti-ring Republican newspaper. In 1887 he removed to Wichita, Kan., and engaged in the commission business. In 1888 he was defeated as the Liberal candidate for Secretary of State. In 1892 he was nominated by the Democratic and Populist parties as the fusion candidate for Governor and was elected. In 1894 he was renominated, but was defeated. After the expiration of his term as Governor he engaged in real-estate and dairy business.

Lewis, John Randolph, soldier, born in Edinburg, Pa., in 1835; died in Chicago, Ill., Feb. 8, 1900. At the outbreak of the civil war he enlisted, May 2, 1861, as sergeant in the 1st Vermont Infantry; later he mustered a company, and, Sept. 10, 1861, was commissioned captain. He was advanced to major, July 16, 1862; lieutenant colonel, Oct. 6, 1862; colonel, June 5, 1864; and mustered out of the service, Sept. 11, 1864. He was made colonel in the Veteran Reserve Corps, Sept. 12, 1864, and brigadier general by brevet, March 13, 1865. In the regular army he was commissioned major of the 44th Infantry, Jan. 22, 1867, and retired with the rank of colonel, April 28, 1870. He participated with the Army of the Potomac in 12 battles, and lost his left arm in the last. In 1872 he settled in Atlanta; he soon became identified with the public life of that city and was appointed postmaster, and served as secretary of the Atlanta Exposition. Later he settled in Chicago.

Lippincott, Job Hilliard, lawyer, born near Mount Holly, N. J., Nov. 12, 1842; died in Jersey City, N. J., July 5, 1900. He was graduated at Harvard Law School, was admitted to the bar in 1867, and began practice in Hudson City, N. J. He was elected as a Democrat to the Board of Education in 1868, and served as its president till 1871, when Hudson City became a part of Jersey City. In 1874 he was elected counsel of the Hudson County Board of Freeholders, and he was annually re-elected for thirteen years. In 1886 he was appointed United States district attorney for New Jersey. He resigned in 1887 to become law judge of Hudson County for an unexpired term, and in 1888 was reappointed for a full term of five years. During this term as judge he became prominent on account of his imprisonment of ballot-box stuffers in 1892. After the election for Governor in 1889 an investigation showed that about 5,000 fraudulent ballots were cast, and Judge Lippincott was one of the most active in pushing the trials of the 67 election officers, who were mainly concerned in the crime. In Janu-

ary, 1893, he was appointed to the Supreme Court bench, and in 1900 was reappointed.

Liscum, Emerson H., soldier, born in Vermont, July 16, 1841; died near Tientsin, China, July 13, 1900. He enlisted May 2, 1861, as a corporal in the 1st Vermont Infantry, and served till August of the same year, when he was mustered out and immediately re-enlisted as a private in the 12th Regular Infantry. On March 22, 1863, he was commissioned second lieutenant, and two months later first lieutenant. For gallant service at the battle of Bethesda Church, and during the campaign before Richmond he was, Aug. 1, 1864, brevetted captain. He was transferred to the 30th Infantry in September, 1866. March 26, 1867, he accepted a captaincy in the 25th Infantry. His advancement in rank from that time was as follows: Captain, 19th Infantry, July, 1870; major, 22d Infantry, May 4, 1892; lieutenant colonel, 24th Infantry, May 23, 1896; colonel, 9th Infantry, April 25, 1899. He was severely wounded at the battle of Gettysburg. From 1870 till the beginning of the Spanish War he was in service in Louisiana, the Departments of the Missouri and Texas, and the Division of the Atlantic. He was known in the army as one of the best of the old Indian fighters. His regiment, the 24th, formed part of the 3d Brigade, 1st Division, 5th Army Corps before Santiago, and he was brigade commander after two commanding officers had been disabled. He was badly wounded at the battle of San Juan Hill. For this service he was made brigadier general of volunteers, July 12, 1898, and was honorably discharged from the volunteer service Dec. 31, 1898. His sick leave terminated with his appointment as colonel, April 25, 1899, of the 9th Infantry, assigned to duty in the Philippine Islands. He served more than a year there, being twice detached from his regiment to command the 1st Brigade, 2d Division, 8th Army Corps. His name was to have been presented at the next session of Congress for promotion to the rank of brigadier general. He sailed from Manila for Taku with his regiment, June 27, 1900, and fell at the head of his men, while leading an attack, in co-operation with the allied armies, on the city of Tientsin.

Little, John Zebulon, American actor and dramatist, born in Philadelphia, Pa., in 1838; died in New York city (Brooklyn), March 9, 1900. Was one of the most popular melodramatic actors of the United States, and among the first to engage in the profitable presentation of that class of drama at cheap prices by traveling from city to city with a company under his own management and playing in second-class theaters. He was a member of the company at Wood's Museum (now Daly's Theater) in New York city in 1873, and made his first success as Abbé Faria in *The Ocean of Life*. In this theater the actors played many parts during the season, and Little won a good reputation as a hard-working and careful man. In 1874 his first original play, called *Santiago Avenged*, was produced, with Mr. Little in the principal character. Another of his plays, *The Golden Gulch*, was produced by him at Tony Pastor's Theater in August, 1879. He wrote and produced in 1880 *The World*, in which he starred for years.

Locke, Elbridge W., song writer, born in Stoddard, N. H., Jan. 1, 1818; died in Chelsea, Mass., June 11, 1900. He served as blacksmith's apprentice, then as country schoolmaster, and taught his pupils music in the evening, often composing his own words and music. A few years before the civil war he was teaching his songs in the large towns of the Northern States.

In the campaign of 1860 he accompanied the orators on the stump, singing his songs. In 1862, with President Lincoln's approval, he went to the front to sing for the soldiers, and he spent three years with the different armies, East and West. Among his songs were Peter Butternut's Lament, Marching on to Richmond, We Must Not Fall Back any More, Ulysses Leads the Van, and Our Free America.

Lowrie, John Cameron, clergyman, born in Butler, Pa., Dec. 16, 1808; died in East Orange, N. J., May 31, 1900. He was graduated at Jefferson College in 1829. He attended Western Theological and Princeton Seminaries, was graduated at the latter in 1832, and was licensed to preach. He went to India as a missionary in 1833, but his health failed, and he returned to the United States in 1836. He became assistant secretary of the Presbyterian Board of Foreign Missions in 1838, and served till 1850. He was pastor of the 42d Street Presbyterian Church, New York, from 1845 till 1850. In 1850 he became secretary of the Presbyterian Board, and served till 1891, when he retired and was made secretary emeritus. He was moderator of the Presbyterian General Assembly in Pittsburg in 1865. Dr. Lowrie published *Travels in Northern India; Two Years in Upper India; Memoirs of the Hon. Walter Lowrie; Manual of Foreign Missions; Missionary Papers; Presbyterian Missions*; and many articles in periodicals.

Ludlow, George Craig, jurist, born in Milford, N. J., April 6, 1830; died in New Brunswick, N. J., Dec. 18, 1900. He was graduated at Rutgers College in 1850, and in 1853 was admitted to the bar and began practice in New Brunswick. He was counsel for that city, was a member of the Board of Freeholders of Middlesex County, and for several years was president of the New Brunswick Board of Education. In 1876 he was elected to the State Senate, and in 1878 was chosen president of that body. In 1880 he was elected Governor of New Jersey on the Democratic ticket. In 1894 he was a member of the Constitutional Commission. June 13, 1895, he was appointed justice of the Supreme Court, which office he held at the time of his death.

McCartee, Divie Bethune, missionary, born in Philadelphia, Pa., Jan. 13, 1820; died July 17, 1900. He was graduated at the University of Pennsylvania, from which institution he received the degrees of A. M. and M. D., and began the practice of medicine in Philadelphia. In June, 1843, he was requested by the Board of Foreign Missions of the Presbyterian Church to go to China as a medical missionary. In 1844 he opened a mission at Ningpo, and for nearly forty years thereafter devoted his life to work among the Chinese and Japanese. He received a gold medal from the Chinese Government in recognition of his services in connection with the suppression of the Macao coolie traffic, and later received the title of consul general for services in the Chinese legation. From the Japanese Government he received the decoration of the Fifth Order of the Rising Sun.

McClermand, John Alexander, lawyer, born in Breckenridge County, Kentucky, May 30, 1812; died in Springfield, Ill., Sept. 20, 1900. In 1832 he was admitted to the bar, and in the same year he was a volunteer in the war against the Sacs and Foxes. In 1835 he established the Shawneetown, Ill., Democrat. From 1837 till 1842 he was a member of the Illinois Legislature. In 1843 he was elected to Congress, where he served till 1851, was re-elected in 1858, and resigned at the outbreak of the civil war. He was

appointed brigadier general of volunteers, accompanied Gen. Grant to Belmont, and did good service at Fort Donelson. March 21, 1862, he was promoted major general of volunteers. He commanded a division at Shiloh, and in January, 1863, relieved Gen. Sherman in command of the expedition to Vicksburg. He afterward commanded the force that captured Arkansas Post, and was present at the battle of Champion Hills. In July, 1863, he was relieved from command of the 13th Army Corps, pending an investigation of charges made against him by Gen. Grant. These charges were not sustained, and, in January, 1864, he was restored to active command. He resigned from the army in November, 1864. In 1870 he was elected circuit judge for the Sangamon, Ill., district, and he served till 1873. In 1876 he was chairman of the Democratic convention at St. Louis, and under President Cleveland he served as a member of the Utah Commission.

McClure, Daniel, soldier, born in Indiana, in 1830; died in Louisville, Ky., Oct. 31, 1900. He was graduated at West Point in 1849, and was brevetted second lieutenant of mounted rifles. He served at the Cavalry School for Practice, Carlisle, Pa., 1849-50, at Fort Laramie, Dak., in 1850, resigning from the service Nov. 30, 1850. He was colonel of the Indiana militia from 1854 till 1858, and was Secretary of State of Indiana from 1856 till 1858. During the civil war he was a paymaster, receiving the following appointments: Major and paymaster, Oct. 23, 1858; brevet lieutenant colonel, March 13, 1865, for faithful and meritorious conduct during the war; brevet colonel, March 13, 1865, for faithful and meritorious conduct in the pay department; colonel and assistant paymaster general, July 25, 1866. He retired from the army Dec. 30, 1888.

McClurg, Joseph W., lawyer, born in St. Louis County, Missouri, Feb. 17, 1818; died in Lebanon, Mo., Dec. 2, 1900. He studied at Oxford College, Ohio. In 1841 he went to Texas, was admitted to the bar, and became clerk of the circuit court. He returned to Missouri in 1844, and engaged in mercantile pursuits. In the civil war he was colonel of an infantry regiment in the National service. He was elected as a Republican to Congress in 1862, 1864, and 1868. In the latter year he was elected Governor of Missouri on the Republican ticket. In recent years he was extensively engaged in mining.

McCormick, Leander James, inventor, born in Walnut Grove, Va., Feb. 8, 1819; died in Chicago, Ill., Feb. 20, 1900. At an early age he became associated with his father in the reaper-manufacturing industry, and in 1846 had a third interest in the 75 reaping machines built and sold by the company. In 1847 he removed to Cincinnati, and in 1848 to Chicago, where he and his brother, Cyrus H., formed a partnership in 1849. He supervised the manufacturing department of the business till 1879, when it was incorporated as the McCormick Harvesting Machine Company. He remained actively engaged in the affairs of the corporation till 1889, when he retired. He invented many improvements in the machine that made his family celebrated. In 1871 he presented an observatory and a 24-inch refracting telescope to the University of Virginia.

McGill, Alexander Taggart, lawyer, born in Allegheny City, Pa., in 1843; died in Jersey City, N. J., April 21, 1900. He was graduated in 1864 at Princeton College, where his father was a professor, and at the Columbia Law School in 1866. He was admitted to the New Jersey bar as an attorney in 1867, and as a counselor in 1870. He removed from Trenton to Jersey City in 1868. In

1874 and 1875 he was city attorney for Bayonné, N. J. In these years he was also a member of the New Jersey Legislature. In April, 1878, he was appointed prosecutor of the pleas for Hudson County. In 1883 he became law judge of the same county. March 29, 1887, he was appointed Chancellor of New Jersey, and in 1894 was re-appointed, holding the office at the time of his death. In 1895 he was defeated as the Democratic candidate for Governor. He received the degree of LL. D. from Princeton College, and that of LL. B. from Columbia Law School.

McGlynn, Edward, clergyman, born in New York city, Sept. 27, 1837; died in Newburg, N. Y., Jan. 7, 1900. He attended the public schools and the Free Academy. At fourteen he was sent by Archbishop Hughes to the College of the Propaganda, in Rome. He received the degree of doctor

of philosophy in 1856 and of theology in 1860. He was ordained a priest in March, 1860. In October he was recalled to New York by Archbishop Hughes, and appointed assistant to the Rev. Thomas Farrell at St. Joseph's Church, on Sixth Avenue. His zeal, learning, and eloquence soon attracted general attention. For a time he was pro-rector of St. Bridget's, in Avenue B; then assistant at St. James's, in Oliver Street; then rector of St. Ann's, in Twelfth Street; and also chaplain of the Central Park Military Hospital; and finally pastor of St. Stephen's, early in 1865. He was in requisition everywhere to speak at the laying of corner stones and dedication of churches, and for lectures for charitable purposes. He aided substantially the Rev. Dr. (now Cardinal) Vaughan in establishing in the United States Catholic missions for the colored race. His artistic taste and judgment are recorded in the enlargement and paintings of St. Stephen's, and he erected its splendid altars. Convinced that the state was wise in bringing the children of all races in the country into contact in the public schools, he maintained that the Church could do its work effectively among the children without competing with the state in their secular education; and, dreading lest the Church should ever have the appearance of being bribed into political partisanship, he favored an amendment to the Constitution providing that state money should be given only to state institutions. During the Irish land league agitation under Davitt in 1879-'80 Dr. McGlynn's sympathies were strongly enlisted. He was captivated by Henry George's Progress and Poverty, and when Davitt came to New York, in June, 1882, to enlist the people here against landlordism in Ireland, Dr. McGlynn told him that "the new gospel was not only for Ireland, England, and Scotland, but for America too." Henry George shortly afterward paid him a visit, which was the beginning of an intimate friendship. When Cardinal Simeoni, head of the Propaganda in Rome, notified Cardinal McCloskey, in the autumn of 1882, to require from Dr. McGlynn a condemnation of his teachings, the doctor published in the

New York Tablet an explanation which was a justification of them, but, by an agreement with Cardinal McCloskey, he refrained from land league meetings. In the autumn of 1886 he took an earnest interest in Henry George's candidacy for the mayoralty of New York, and he was announced to speak at the opening meeting of the campaign, in Chickering Hall, on Sept. 30. Archbishop Corrigan sent him a private prohibition from attending this meeting, but he excused himself because of his public engagement to speak. The archbishop thereupon suspended him for two weeks. To a summons from Cardinal Simeoni to go to Rome, he replied that his poor health prevented this, but he reiterated the strongest expression of his teaching of the land theory. Archbishop Corrigan renewed the suspension, and in January, 1887, summarily removed him from St. Stephen's. Later, in March, 1887, being assured by Cardinal Gibbons, then in Rome, that neither the Pope nor Cardinal Simeoni had passed judgment on him, but invited him to go to Rome, he agreed to go if reinstated. By a misunderstanding, this message was not properly delivered, and the Pope, persuaded that he absolutely refused, ordered Dr. McGlynn's excommunication to take effect if within forty days he did not go to Rome. The time elapsed on July 2, 1887. This excommunication for his supposed contumacy lasted till Dec. 23, 1892, when the Pope's delegate, Mgr. Satolli, released him from it, after Dr. McGlynn had submitted to him the exposition of his economical teaching, which was declared to contain nothing contrary to Catholic faith. Dr. McGlynn, on March 29, 1887, had made an address on The Cross of the New Crusade, which led to the formation of the Anti-Poverty Society for the spreading of his theories of political economy. This society held meetings in the Academy of Music and Cooper Institute on Sunday evenings till the end of January, 1893, at which Dr. McGlynn gave a series of eloquent explanations of the theory, mainly in its relations to the brotherhood of men as founded on the fatherhood of God. By his own wish, Dr. McGlynn was not attached for some time to any parish, that he might be free to lecture, but in the beginning of 1895 he was assigned by Archbishop Corrigan to the rectorship of St. Mary's parish, in Newburg, where he zealously exercised the duties of the sacred ministry till his death. Dr. McGlynn gave proofs of his great knowledge and wonderful command of language in his sermons, addresses, and lectures, none of which were written. His charity was unbounded; his sympathy with distress made him give his all for its relief.

McNair, Frederick Valletta, naval officer, born in Jenkintown, Pa., Jan. 13, 1839; died in Washington, D. C., Nov. 28, 1900. He was graduated at the United States Naval Academy in 1857; made passed midshipman, June 25, 1860; promoted master, Oct. 24, 1860; lieutenant, April 18, 1861; lieutenant commander, April 20, 1864; commander, Jan. 29, 1872; captain, Oct. 30, 1883; commodore, May 10, 1895; and rear-admiral, July 3, 1898. His first service was on the frigate Minnesota; later he served in China and in the East India service. In 1859 he was attached to the coast survey steamer Varuna. In 1861 he was transferred to the Iroquois, of the Western Gulf squadron, and participated in the bombardment of Forts Jackson and St. Philip, the capture of New Orleans, passage both ways of the Vicksburg batteries, and the destruction of the Confederate ram Arkansas. From October, 1862, till February, 1863, he was executive officer of the Juniata, and from February till August, 1863, he

fought on the Seminole. He was again on the Juniata during May and June, 1864, and took part in the attacks on Fort Fisher. After the civil war he was assigned to duty in the Brazil squadron in 1865-'66; from June, 1866, till September, 1867, he was executive officer of the flagship Brooklyn, of the South Atlantic station. From September, 1867, till November, 1868, he was an instructor at the Naval Academy. From 1868 till 1895 he served for various periods as executive officer of the Macedonian and of the Franklin, equipment officer at Philadelphia, head of the department of seamanship at the Naval Academy, commander of the Yantic, of the Kearsarge, of the Portsmouth, and of the Constitution, member of the court of inquiry on the loss of the Jeannette, commander of the Omaha, superintendent of the Naval Observatory, and member of the Naval Officers' Retirement Board. Dec. 21, 1895, he was placed in command of the Asiatic squadron, serving till Jan. 4, 1898, when he was appointed member of the Government Lighthouse Board. In July, 1898, he was made superintendent of the Naval Academy, and served till February, 1900, when he was given sick leave.

McNulta, John, lawyer, born in New York city, Nov. 9, 1837; died in Washington, D. C., Feb. 22, 1900. In 1852 he settled in Attica, Ind., and in 1858 was made a partner in the firm of Dick & Co., wholesale tobacco dealers. In March, 1859, he removed to Bloomington, Ill. May 3, 1861, he was commissioned captain in the 1st Illinois Cavalry. Aug. 20, 1862, he was made lieutenant colonel of the 94th Illinois Infantry; he served with this regiment to the close of the war, was promoted colonel, and was brevetted brigadier general. He returned to Bloomington, and in 1866 was admitted to the bar. In 1868 he was elected to the State Senate. In 1873 he was elected to Congress. In June, 1885, he was made receiver of what is now the Toledo, St. Louis and Kansas City Railway; in April, 1887, he was appointed to the same office for the Wabash Railway; in February, 1895, for the Whisky Trust; Jan. 3, 1898, for the Calumet Electric Street Railway Company; and Jan. 4, 1898, for the National Bank of Illinois. Because of the success he attained in managing the affairs of these organizations, he became known as the "Great American Receiver."

Marble, Edward Stevenson, actor and dramatist, born in Louisville, Ky., in 1848; died in Brooklyn, N. Y., Aug. 3, 1900. He was a son of Danford Marble, one of the first comedians of Yankee dialect. His mother was Anna Warren Marble, a sister of William Warren, the actor. As with children of all theatrical families, his first appearance on the stage was made as a child. His first speaking part was that of Count Winterson's son in Kotzebue's *Stranger*, at Rice's Theater, Chicago, in 1860. He passed to McVicker's Theater in 1862, from which after a season he was engaged by Mrs. John Drew for the Arch Street Theater, Philadelphia. He went in the following season to the Walnut Street Theater, in the same city, then under the management of Edwin Booth and John S. Clark. While playing important parts in that company he was engaged for the first company of the California Theater, San Francisco, under the management of John McCullough and Lawrence Barrett. He played Dolly Spanker in *London Assurance* at the opening of that theater, and remained a popular member of the company for four years of almost continuous work. During the summer of 1874 Marble played with Joseph Proctor on a tour through the Pacific States.

Returning to the East, he became in 1875 the comedian of the Macauley Theater, Louisville, Ky., where he was in the first support of Mary Anderson as Peter in *Romeo and Juliet*. In 1877 he joined Lotta, and played for several seasons the parts opposite her in her plays. He was then three years the principal comedian in Mr. E. H. Sothern's support, when he became comedian of the Madison Square Theater, New York, in which his first part was Buckstone Scott in *Young Mrs. Winthrop*. He wrote a burlesque called *Patchwork* for The Saalsbury Troubadours, *Tuxedo* for Thatcher's Minstrels, *Spot Cash* for M. B. Curtis, and *The New Olympus* and *The Modern Rip Van Winkle* for the students of Lafayette College, all of which were played successfully. In addition he wrote many ballads that have had temporary popularity. Since 1889 he had conducted a dramatic school in Baltimore.

Mather, Fred, fish culturist, born in Greenbush, N. Y., Aug. 2, 1833; died at Lake Nebago-main, Wisconsin, Feb. 14, 1900. He was educated at an academy in Albany, N. Y. Later he spent several years hunting and fishing in the West. In 1862 he enlisted as a private in the 113th Regiment, New York Volunteers, and later became a sergeant in the 7th New York Artillery. In 1868 he became a fish culturist and settled in Honeoye Falls, N. Y., where he began to hatch fish. In 1872 he became an assistant to the United States Fish Commission. In 1875 he succeeded in transporting salmon eggs to Germany in a refrigerator box, and about the same time he invented an apparatus by means of which shad eggs were hatched in bulk. In 1884 he succeeded in hatching the adhesive eggs of the smelt. In 1880 he had charge of the American exhibit at the Fisheries Exhibition in Berlin. In 1883 he was appointed superintendent of the New York Fish Commission station at Cold Spring Harbor, where he began the hatching of lobsters and codfish. In 1877 he became fish editor of the *Field*, Chicago, and afterward he held a similar place on the staff of *Forest and Stream*, New York. He was the author of *Fish Culture: Ichthyology of the Adirondacks* (1885); and *Men I Have Fished With* (1897).

Maury, Dabney Herndon, soldier, born in Fredericksburg, Va., May 21, 1822; died in Peoria, Ill., Jan. 11, 1900. He was graduated at West Point in 1846. He served in the Mexican War, and was brevetted first lieutenant for bravery at the battle of Cerro Gordo, where he was severely wounded. In 1847 he was appointed Assistant Professor of Geography, History, and Ethics at West Point, and in 1850 became assistant instructor in infantry tactics. In 1852 he was assigned to frontier duty in Texas; from 1856 till 1859 he was cavalry instructor at Carlisle barracks; and in 1860 he became adjutant general of the Department of New Mexico. At the outbreak of the civil war he resigned his commission and became a colonel in the Confederate army. For bravery in the Elk Horn campaign he was brevetted brigadier general, and for gallant conduct at Corinth and Hatchie he was made major general. He participated in the defense of Mobile and in the operations about Vicksburg. At the close of the war he was in command of the Department of the Gulf. He returned to Virginia, where in 1868 he organized the Southern Historical Society. In 1885 he was appointed minister to the United States of Colombia, serving till 1889. He was the author of many contributions to periodical literature, and published *History of Virginia: System of Tactics in Single Rank* (1859); *Skirmish Drill for Mounted Troops*

(1859); and *Recollections of a Virginian in the Mexican, Indian, and Civil Wars* (1894).

Mayo, Edwin Frank, actor, born in San Francisco, Cal., March 18, 1864; died in Quebec, Canada, Feb. 18, 1900. He was the only son of the late Frank Mayo, who was famous for his impersonations of Davy Crockett. The family name, abandoned by the father for the stage name "Mayo," was Maguire. Edwin made his first appearance at his father's theater, Rochester, N. Y., in 1868, as the boy in Davy Crockett. For eleven years he played as a member of his father's company, assuming from time to time different rôles in Davy Crockett and *The Streets of New York*, which constituted the elder Mayo's very limited but greatly popular repertory. During the season of 1881-'82 he was a member of his father's company in a traveling season of Shakespearean and standard plays, in which he played minor characters. For four years thereafter he was his father's principal support in the latter's play *Nordick*, first produced at the Union Square Theater, New York, May 20, 1885. On June 13, 1887, he began a series of engagements as a star in his father's play Davy Crockett at the Grand Opera House, New York. He traveled over the country, filling engagements for a season, and in January, 1889, produced *The Silver Age* at the Thalia Theater, New York. He rejoined his father's company in May, 1890, and remained with him for a season. Dec. 20, 1892, he began an engagement in a production of *After Twenty Years*, at Niblo's Garden, in the dual rôle of Aaron Abraham and Major Douglas. After the death of the elder Mayo, in 1896, his son succeeded him as the representative of Pudd'nhead Wilson, which character he played with much success during the regular seasons up to the day of his death. His last appearance was in this character at Montreal, Feb. 17, 1900.

Mayo, William Kennon, naval officer, born in Drummondtown, Va., May 29, 1829; died in Washington, D. C., April 10, 1900. He was appointed midshipman, Oct. 18, 1841; promoted passed midshipman, Aug. 10, 1847; master, Sept. 14, 1855; lieutenant, Sept. 15, 1855; lieutenant commander, July 16, 1862; commander, July 25, 1866; captain, Dec. 12, 1873; commodore, July 2, 1882; and retired, May 18, 1886. He took part in the blockade of Tampico and Vera Cruz. He was detailed for special service in connection with scientific observations in the North Atlantic, in surveying a route over the Isthmus of Panama, and in the work of the coast survey. He also served for a time as instructor at the Naval Academy, and wrote the *System of Naval Tactics and Fleet Sailing*, used there as a text-book. He was in command of the corvette *Housatonic* in the blockade of Charleston in January, 1862. In November of that year he was placed in command of the *Kanawha*, in the Western Gulf squadron. In February, 1864, he was stationed in Washington on special duty, but in July he took command of the *Nahant*, and made the blockade of Charleston more effective; he ran ashore nine steamers in seven months, for which he received the commendation of the Secretary of the Navy. After the fall of Charleston he became ordnance officer of the South Atlantic blockading fleet. After the war he spent three years on navigation duty at Boston, and later commanded several vessels in station service. He was commandant of the Norfolk Navy Yard from 1882 till 1885. He was retired upon his own application.

Mestayer, Charles Henry, actor, born in New York city in 1846; died in Ottawa, Canada, Jan. 22, 1900. He was a son of Henry Mestayer and

brother of the late William Mestayer, all of a family long connected with the American stage. Charles made his first appearance as an infant in the arms of his mother, who was a popular singer at Niblo's Garden, New York. He was taken to California in 1853, and continued to appear as a mute actor of children until old enough to go to school. He was educated at St. Ignatius College, in San Francisco, and in 1869 became a member of the stock company at the California Theater. He was afterward a member of various traveling companies, supporting Edwin Booth, Thomas Keene, the Lingards, and others, and for two years before his death had been playing the part of Gen. Fitzhugh Lee in the drama entitled *Remember the Maine*. His last appearance was in that rôle, Jan. 20, 1900, at Cornwall, Ontario.

Mitchell, Edward Cushing, educator, born in East Bridgewater, Me., Sept. 20, 1829; died in New Orleans, La., March 2, 1900. He was graduated at Waterville (now Colby) College, and continued his studies at Newton Theological Seminary. He was pastor in Calais, Me., for a year, and then removed to Rockford, Ill. Later he was Professor of Theology in the college at Alton, Ill. In 1872 the theological department was transferred to Chicago University, and he went there as Professor of Hebrew. In 1876 he went to London as professor in Regent's Park College, serving two years. In 1878 he established a Baptist theological school in Paris; he remained there four years, and graduated one class. In 1883-'84 he reorganized the colored schools of the South under the American Home Missionary Society. In 1887 he was appointed president of Leland University, New Orleans, which place he filled at his death. He published *Principles of Hebrew Grammar* (Andover, 1880); *Critical Handbook of the Greek New Testament* (1880); *Les Sources du Nouveau Testament* (Paris, 1882); and *Hebrew Introduction* (Andover, 1884).

Mitchell, William, jurist, born in Welland County, Ontario, Nov. 19, 1832; died in Alexandria, Minn., Aug. 21, 1900. He was graduated at Jefferson College, Pennsylvania, in 1853, and was admitted to the bar in Virginia in 1857. In the same year he removed to Winona, Minn., where he practiced from 1857 till 1873. He was appointed judge of the Third Judicial District of Minnesota, and served from January, 1874, till March, 1881, when he became a justice of the Supreme Court of that State.

Moore, Marcus Marcellus, clergyman, born near Quincy, Fla., March 15, 1856; died in Jacksonville, Fla., Nov. 23, 1900. He was the son of a slave. He entered the first private school established in Florida for negroes, and later studied at Howard University and Cookman Institute, Jacksonville. He was appointed sheriff of Bradford County in 1875, but was too young to qualify. He was licensed to preach in 1876, became presiding elder, and in 1896 was made general financial secretary of the African Methodist Episcopal Church. In May, 1900, he was elected bishop of the diocese including the State of Louisiana and Liberia and Sierra Leone, Africa. He was also president of the American Preachers' Aid Society.

Morgan, William James, editor, born in Peterborough, Canada, Oct. 16, 1840; died in Albany, N. Y., Sept. 5, 1900. He was educated in the public schools of Buffalo, N. Y. He enlisted as a private in the 116th Regiment, New York Volunteers. He participated in all the battles in which his regiment was engaged, and was severely wounded at Port Hudson, and he was brevetted lieutenant colonel. Returning in 1864, he joined the editorial staff of the *Buffalo Commercial*, and

remained with that paper twenty years. During the administration of Gov. Cornell he was made a canal appraiser, and served as chairman of the board. Later he was appointed collector of the port of Buffalo by President Harrison, and served four years. In 1894 he was selected by Comptroller Roberts as deputy comptroller. In 1898 he was nominated by the Republican party to succeed Mr. Roberts, and was elected. His death occurred on the day after his renomination for the office, at a convention where he had been in attendance.

Morrill, Mary S., missionary of the American Board, born in Deering, Me., March 24, 1864; killed in Paoting-Fu, Chi-Li province, China, July 1, 1900. She studied at Farmington Normal School, embarked for China, March 20, 1889, and was stationed in Paoting-Fu.

Morris, William Hopkins, soldier, born in New York city, April 22, 1827; died in North Long Branch, N. J., Aug. 26, 1900. He was graduated at West Point in 1851, and entered the army as brevet second lieutenant, 2d Infantry; promoted second lieutenant, Dec. 3, 1851; and resigned on account of ill health, Feb. 28, 1854. He was appointed assistant adjutant general with the rank of captain, Aug. 20, 1861; he was assigned as chief of staff to Gen. Peck, and served during the Peninsula campaign. Sept. 2, 1862, he was made colonel of the 135th Regiment, New York Volunteers, which later became the 6th New York Artillery. He was in command of the garrison at Fort McHenry, and was ordered to Harper's Ferry, where he was made brigadier general. When Harper's Ferry was abandoned he was ordered to join the 3d Corps, Army of the Potomac; he was in reserve at the battle of Gettysburg, and participated in the action of Wapping Heights and in the Rapidan campaign. He was transferred to the 6th Corps, and took part in the Richmond campaign, being engaged in the battles of the Wilderness and Spottsylvania, where he was severely wounded. He was mustered out of the service, Aug. 24, 1864, and was made brevet major general, March 13, 1865, for services in the battle of the Wilderness.

Morrow, George Espy, educator, born in Cincinnati, Ohio, in 1840; died in Paxton, Ill., March 27, 1900. He served in the civil war as a member of the 2d Regiment, Ohio Volunteers. He was graduated at the law department of the University of Minnesota in 1866, and then became editor of an agricultural journal, serving till 1875. In 1876 he was elected president of Iowa Agricultural College. In 1877 he became dean of the College of Agriculture of the University of Illinois, and he remained there till the close of 1896, when he accepted the presidency of the Agricultural College of Oklahoma, where he served till 1899.

Mullen, Tobias, clergyman, born in Clundy, Ireland, March 4, 1818; died in Erie, Pa., April 22, 1900. He was educated at Maynooth College, came to the United States in 1843, and was ordained a priest, Sept. 1, 1844. Aug. 2, 1868, he was consecrated Bishop of Erie, and he served till Aug. 10, 1899, when he was appointed to the titular see of Germanicopolis.

Newell, Charles M., physician, born in Concord, N. H., Nov. 21, 1823; died in Watertown, Mass., May 24, 1900. At the age of fourteen he ran away to sea as a cabin boy. He became captain of the *Copia*, and spent nineteen years on the Pacific Ocean. He then began the study of medicine in Lowell, Mass., and for thirty-five years practiced the vacuum cure there and in Boston. He was at one time a correspondent of the Boston Transcript, signing his articles Captain Barnacle. His published works are *Leaves from an Old Log* (Boston, 1877); *Kalau'i of Oahu* (1881);

Kamehameha, the Conquering King (New York, 1885); *The Voyage of the Fleetwing* (Boston, 1887); *The Isle of Palms* (1888); and *Wreck of the Greyhound* (1889).

Northrup, George Washington, educator, born in Antwerp, N. Y., Oct. 15, 1826; died in Chicago, Ill., Dec. 30, 1900. He was graduated at Williams College in 1854, and at Rochester Theological Seminary in 1857, where he remained for a time as Professor of Church History. He was ordained a Baptist minister at Rochester in 1857. From 1867 till 1892 he was president of the Baptist Union Theological Seminary, at Morgan Park, Ill., acting also as Professor of Systematic Theology. When the seminary became the divinity school of the University of Chicago, in 1892, he was placed at the head of the department of theology. He received the degree of D. D. from Rochester University in 1864, and that of LL. D. from Kalamazoo College in 1879.

Oliver, Marshall, educator, born in Massachusetts, April 29, 1843; died in Annapolis, Md., Nov. 25, 1900. In 1869 he was appointed assistant professor in the department of drawing in the United States Naval Academy, and later he became the head of the department of drawing. May 20, 1881, he was appointed Professor of Mathematics in the United States navy, serving also as instructor in drawing and librarian of the Naval Academy. At the time of his death he was instructor in the department of marine engineering and naval construction. He held the relative rank of captain in the United States navy.

Olsson, Olaf, educator, born in the province of Vermland, Sweden, March 31, 1841; died in Rock Island, Ill., May 12, 1900. He was educated at Fjelsted College, Upsala, and entered the ministry of the Lutheran Church in 1863. For six years he served as assistant pastor in the parish of Karstad, but in 1869, with a large number of his parishioners, settled in Smoky Hill valley, McPherson County, Kansas. He helped to organize the colony, and served the people in secular and spiritual matters. He was a member of the Kansas Legislature in 1871-'72. In 1877 he was called to Augustana College, Rock Island, as Professor of Theology, where he remained until 1888, when failing health compelled him to resign. The following year he traveled in Europe, but he was recalled from his travels to take charge of a Swedish congregation at Woodhull, Ill. He served this congregation until 1891, when he was called to the presidency of Augustana College and Seminary, which office he held until his death. He received the degree of D. D. in 1892, and in the following year the University of Upsala conferred on him the degree of Ph. D. He published *Det Christna Hoppet* (The Christian Hope) in 1888; *Till Rom och Hem igen* (To Rome and Home Again) in 1891; *At the Cross* (reprinted in Sweden); *Greetings from Abroad: being Recollections of Travel in England and Germany* (also translated into Norwegian). All these are published by the Augustana Book Concern, Rock Island, Ill. He was also the author of numerous articles in the Swedish periodicals of his synod.

Otis, Fessenden Nott, physician, born in Ballston, N. Y., in 1834; died in New Orleans, La., May 24, 1900. He was graduated at the New York Medical College in 1852. From 1853 till 1861 he served as surgeon on the steamers of the United States Mail and Pacific Mail companies. In 1862 he became a police surgeon in New York city, and he was president of the medical board of the Police Department from 1870 till 1872. He served for a time as clinical lecturer, and afterward as clinical professor, at the College of Physicians and Sur-

geons. He was president of the medical board of the Strangers' Hospital from 1871 till 1873, and consulting surgeon to several other hospitals. In 1872 he was president of the American Dermatological Society. He published *Lessons in Drawing* (1849-'50); *Tropical Journeys* (1856); *History of the Panama Railroad and of the Pacific Mail Steamship Company* (New York, 1862); *Stricture of the Male Urethra* (1878); *Clinical Lectures on the Physiology and Pathology and Treatment of Syphilis* (1881); *Practical Clinical Lectures on Syphilis and the Genito-urinary Diseases* (1883); and *Diseases of the Male Urethra* (Detroit, 1887).

Ott, Joseph, actor, born in Chelsea, Mass., in 1862; died in New York city, Nov. 19, 1900. He made his first appearance in a company managed by William Mestayer, playing a version of *Le Voyage en Suisse* in the autumn of 1882. His first prominent engagement was with Kate Castleton in *The Dazzler*. He succeeded so well in eccentric comedy that in this play he subsequently starred equally with Miss Castleton. In the season of 1893-'94 he was a star in a play of his own called *The Star Gazer*. For the season of 1894-'95 he was engaged for the leading part in *Rice's Excelsior, Jr.* In 1898 he became a member of the company at the New York (formerly Olympia), New York city, and played the principal male rôles in *From Broadway to Tokio* and in *A Million Dollars*. His last appearance was in the character of King Charles II in the burlesque of *Nell Gwyn*, at the New York, Nov. 3, 1900.

Ottendorfer, Oswald, journalist, born in Zwittau, Moravia, Feb. 26, 1826; died in New York city, Dec. 16, 1900. He spent his youth at Brünn, and at the age of twenty entered the University of Vienna. It was intended that he should enter the public service, and he was matriculated in the faculty of jurisprudence. One year later he was transferred to the University of Prague, that he might learn the Czech language. In 1848 he returned to Vienna, and took an active part in the movement to overthrow the Metternich Government. He joined a volunteer corps, which in the first Schleswig-Holstein war participated in several engagements with the Danish forces. During the uprising in Vienna he was a lieutenant in the battalion commanded by Robert Blum, and with him was sentenced to death. Blum was executed, but Ottendorfer escaped, and the sentence remained on the books twenty years, when it was removed by a general pardon. He subsequently joined in the popular revolution in Saxony and Baden, after the failure of which he fled to Switzerland in 1849, and to the United States in 1850. He was employed in the countingroom of the *New York Staats-Zeitung*, and after the death of Jacob Uhl, its proprietor, in 1852, the management of the paper devolved upon the widow, and the services of Mr. Ottendorfer became gradually more important. He became editor in chief in 1858, and from that time directed the policy of the paper. He married Mrs. Uhl in 1859. In politics he was a reform Democrat, and was active in all the anti-Tammany movements. He was an alderman from 1872 till 1874, and in the latter year was a candidate for mayor. His more important gifts were \$300,000 to build and endow an educational institution in his native town; the Ottendorfer Free Library in Second Avenue, New York; the Isabella Home for old men and chronic invalids; and the woman's pavilion of the German Hospital.

Palmer, John McAuley, lawyer, born on Eagle creek, Scott County, Kentucky, Sept. 13, 1817; died in Springfield, Ill., Sept. 25, 1900. His early

education was gained in the common schools. In 1831 he removed with his father to Madison County, Illinois. In the spring of 1834 he entered Alton College, but lack of money compelled him to leave in the autumn of 1835. He worked for a time in a cooper's shop, then became a clock peddler, and finally, in the autumn of 1838, became teacher of a school near Canton. While teaching he studied law, and in December, 1839, was admitted to practice. In 1840 he entered politics, supporting Martin Van Buren for the presidency. In 1843 he was elected probate judge of Macoupin County. In 1847 he was elected to the Illinois State constitutional convention. In 1849 he was elected county judge, which office he held till 1851, when he was elected to the State Senate for four years. In 1854 he opposed the Nebraska bill, and, differing from his party, he resigned, went before the people on the new issue, and was again returned to the Senate in 1855. In 1856 he was president of the first Illinois Republican State convention. In 1859 he was defeated as a candidate for Congress, and in 1860 was elector at large on the Republican ticket. He was a delegate to the Peace Congress at Washington, in 1861, and favored the compromise measures adopted by the convention. When the second call for troops was made, he was elected colonel of the 14th Regiment, Illinois Volunteers. Dec. 21, 1861, he was commissioned brigadier general. Early in 1862 he took part in the operations at New Madrid and Island No. 10. He was also present at Corinth, and took part in the operations against Gen. Bragg in the retreat from Nashville. He commanded a division in the battle of Chickamauga, and was promoted to the command of the 14th Army Corps in October, 1863. He was engaged in the operations about Chattanooga, taking part in the battles of Lookout Mountain and Missionary Ridge. For gallantry at the battle of Stone River he was made major general of volunteers. Aug. 4, 1864, he was relieved of active field command at his own request. From February, 1865, till May, 1866, he was in command of the military department of Kentucky. He then settled in Springfield, Ill., and in 1868 was elected Governor of the State, serving four years. In 1872 he left the Republican party, and in 1877 was the Democratic candidate for United States Senator; he was defeated, as he was also twice thereafter; again nominated in 1890, he was successful, and served till March 4, 1897. In 1896 he accepted the nomination for the presidency by the gold Democrats, as a protest against the surrender of the Democratic party to the free-silver element. In the campaign that began just before his death he declared in favor of the re-election of President McKinley.

Park, Edwards Amasa, theologian, born in Providence, R. I., Dec. 29, 1808; died in Andover, Mass., June 4, 1900. He was graduated at Brown University in 1826, and at Andover Theological Seminary in 1831. Dec. 31, 1831, he was ordained pastor of the Congregational Church in Braintree, Mass. In May, 1835, he was appointed Professor of Moral and Intellectual Philosophy in Amherst College, where he remained till September, 1836, when he became Professor of Sacred Rhetoric at Andover. From 1847 till 1881 he held the chair of Christian Theology at Andover, and at the time of his death was Professor Emeritus of Sacred Rhetoric. Prof. Park contributed numerous essays to theological periodicals, and in 1844 was one of the founders of the *Bibliotheca Sacra*, of which he was chief editor from 1851 till 1884. His published works include *Discourses on Some Theological Doctrines as Related to the Religious Character* (Andover, 1885). He edited *Selections from*

German Literature (Andover, 1839); The Atonement; and Preacher and Pastor; and arranged with Austin Phelps and Lowell Mason the New Sabbath Hymn and Tune Book.

Parke, John Grubb, soldier, born in Chester County, Pennsylvania, Sept. 22, 1827; died in Washington, D. C., Dec. 16, 1900. He was graduated at West Point, July 1, 1849, and assigned

to the topographical engineers as brevet second lieutenant; promoted second lieutenant, April 18, 1854; first lieutenant, July 1, 1856; captain, Sept. 9, 1861; transferred to the engineer corps, March 3, 1863; promoted major, June 17, 1864; lieutenant colonel, March 4, 1879; colonel, March 17, 1884; and retired at his own request, July 2, 1889. He was brevetted major general, March 13, 1865. In

the volunteer service he was commissioned brigadier general, Nov. 23, 1861; major general, July 18, 1862; and mustered out of the service, Jan. 15, 1866. As topographical engineer he was engaged in 1849-'50 in determining the starting point of the boundary line between Iowa and Minnesota, and later on the survey of Little Colorado river. From March 2, 1857, till the beginning of the civil war, he was chief astronomer and surveyor in the delimitation of the northwestern boundary between the United States and British America. Early in 1862 he accompanied Gen. Burnside's expedition to North Carolina, and was brevetted lieutenant colonel of volunteers for services at Fort Macon. He served as chief of staff of the 9th Corps during the Maryland campaign, and was engaged at South Mountain and Antietam, and in the pursuit of the enemy to Warrenton. He took part in the movement of the 9th Corps into Kentucky, and commanded it on the march to Vicksburg. He was brevetted colonel for services at Jackson, Miss. He was engaged at Blue Spring in the defense of Knoxville, Tenn., and was brevetted brigadier general. He served at Wilderness and Spottsylvania, and from Aug. 13, 1864, commanded the 9th Corps before Petersburg. He resumed charge of the northwestern boundary survey, Sept. 28, 1866. He superintended the construction of fortifications in Maryland in 1867-'68; June 1, 1868, he was placed in charge of a department in the office of the chief of engineers in Washington, and served till June, 1887, when he was appointed superintendent of the United States Military Academy. He held this post till his retirement. He was the author of Government survey reports, and also of Compilations of Laws Relating to Public Works for the Improvement of Rivers and Harbors (Washington, 1877); Laws Relating to the Construction of Bridges over Navigable Waters (1882); and Compilation of Opinions of Attorneys-General Relative to Acquisition of Lands, Bridges, Contracts, etc. (1882).

Parker, Julia (Mrs. J. B. Polk), actress, born in Baltimore, Md., in 1852; died there, June 20, 1900. She was a daughter of Joseph Parker, a well-known actor. She studied for grand opera in Italy, and made her *début* at La Scala in 1875. She made her first appearance in America as Violetta in La Traviata, at Booth's Theater, Jan. 14, 1879, under the name of Giulia Mario. At Haverly's Theater, New York, Oct. 11, 1880, she created the part of Rosamond in William A. Croffut's comic opera Deseret. She was the original Bathilda in

the first production of Olivette in America, at the Park Theater, New York, Jan. 17, 1881. She joined her husband, who was a popular comedian, in a play called Mixed Pickles, in which she played Cherry Brown for the first time at the Fourteenth Street Theater, New York, Aug. 17, 1885. Mr. and Mrs. Polk traveled over the country for several successive seasons with great financial and artistic profit. Their last play was The Silent Partner, produced at the Fourteenth Street Theater, New York, May 19, 1890, in which Mrs. Polk played Tillie Coombs.

Partridge, Mary L., missionary of the American Board, born in Stockholm, N. Y., March 27, 1865; killed in Taku, Shensi province, China, July 31, 1900. She was educated at Mount Holyoke, Rollins, and Oberlin Colleges, and joined the Shensi mission in Taku, Oct. 19, 1893.

Patton, Frank Jarvis, inventor and soldier, born in Bath, Me., in 1852; died in New York city, Nov. 12, 1900. He was graduated at West Point in 1877, and assigned to the 21st Infantry as second lieutenant; promoted first lieutenant, Sept. 22, 1884; and resigned, Sept. 28, 1889. He served in the battles of Wounded Knee and Forlorn Hope. While in the army he experimented with electricity, and he left the service to pursue his studies. He invented the multiplex telegraph system, which was considered an improvement on the Edison quadruplex system. He also invented the gyroscope used on ocean vessels for giving their position in mid-ocean. At the time of his death he was vice-president of the Columbia Carbide Company, formed to exploit his invention for the manufacture of carbide.

Pennington, Samuel Hayes, physician, born in Newark, N. J., Oct. 16, 1806; died there, March 14, 1900. He was graduated at Princeton College in 1825, and attended lectures of the Rutgers medical faculty of Geneva College. He began the practice of medicine with his uncle, and in 1839 succeeded to the latter's practice. At various times he served as a member of the Public School Board, trustee of Princeton College, trustee of the Theological Seminary, president of the New Jersey State Medical Society, and president of the New Jersey Historical Society. He was the oldest living graduate of Princeton.

Phelps, Edward John, diplomatist, born in Middlebury, Vt., July 11, 1822; died in New Haven, Conn., March 9, 1900. He was graduated at Middlebury College in 1840. He taught school for a year in Virginia, and then studied law with his father. He was admitted to the bar in 1843, after spending a year in the Yale Law School, practiced two years in Middlebury, and then settled in Burlington, where he practiced till 1851. Sept. 30, 1851, he became second comptroller of the Treasury, and he retained that office till the close of President Fillmore's administration. He then practiced his profession several years in New York city, but in 1857 again settled in Burlington, which continued to be his home and the center of his activities for a quarter century. Without giving up his law practice, he held, from 1881 till 1885, the chair of Law in Yale Law School, and was also lecturer on constitutional law in Boston University. In 1881 he was elected president of the American Bar Association. In politics he was

an old-time Whig and a proslavery and antiwar Democrat. He was nominated for Governor of Vermont in 1880, and defeated. In 1885 he was appointed by President Cleveland minister to England, which post he held four years. In 1890 he was defeated as the candidate of the Democrats in the Vermont Legislature for the office of United States Senator. In 1893 he was appointed senior counsel for the United States Government before the court of arbitration to settle the Bering Sea controversy. On his return to this country he resumed his chair in Yale College. In 1896 he publicly opposed the candidacy of William J. Bryan. He was also a bitter opponent of the war with Spain in 1898, and after the war became a pronounced "anti-expansionist." He received the degree of LL. D. from Middlebury College in 1870, and from the University of Vermont and from Harvard University in 1887. Among his published writings are *The Life and Character of Charles Linsley*; a *Memoir of the Hon. Isaac F. Redfield* (in Vol. XLIX of the Vermont Law Reports); and a series of articles on *The Constitution of the United States*, contributed to the *Nineteenth Century* in 1888.

Phelps, James, jurist, born in Colebrook, Conn., Jan. 12 1822; died in Essex, Conn., Jan. 15, 1900. He studied law and was admitted to the bar in 1845. He was elected to the Legislature in 1853, and re-elected in 1854 and 1856. In 1858-'59 he served in the State Senate. In 1863 he was appointed judge of the Superior Court, resigning ten years later to become justice of the Supreme Court. In 1875 he was elected to Congress, and he served continuously six years.

Philip, John Woodward, naval officer, born in New York city, Aug. 26, 1840; died in Brooklyn, N. Y., June 30, 1900. He was appointed midshipman, Jan. 1, 1861; promoted acting master, June 1, 1861; lieutenant, July 16, 1862; lieutenant commander, July 25, 1866; commander, Dec. 18, 1874; captain, March 31, 1889; commodore, Aug. 10, 1898; and rear-admiral, March 3, 1899. His first active duty was on the frigate *Constitution* and the *Santee*. On his promotion to acting master he was attached to the sloop of war *Marion* of the Gulf blockading squadron, as executive officer; later he was assigned to the gunboat *Sonoma*, of the James river fleet. From September, 1862, till January, 1865, he served on the *Chippewa*, the *Pawnee*, and the monitor *Montauk*; he took an active part in the siege of Charleston, S. C. While on the *Pawnee* he was wounded in the leg in an engagement on Stono river. At the close of the war he was sent to the China station as executive officer of the *Wachusett*, serving from January, 1865, till September, 1867; he was transferred to the flagship *Hartford*, where he served till August, 1868. From 1869 till 1871 he served on the *Richmond*, of the European squadron. He was detached in November, 1871, returned to the *Hartford* in September, 1872, and was ordered to command the *Monocacy* in June, 1873. He left the *Monocacy* in February to take command of one of the Pacific mail steamers running between San Francisco and Hong-Kong. In July, 1876, he was ordered to the command of the *Adams*, but was again detached in April, 1877, and he received leave to command the Woodruff scientific expedition around the world. In December, 1877, he was placed in command of the *Tuscarora*, engaged in surveying the western coast of Mexico. He commanded the *Ranger* from August, 1880, till October, 1883. From April, 1884, till April, 1887, he was lighthouse inspector, and later he became commander of the receiving ship *Independence*, at Mare Island Navy Yard, serving till May, 1890.

He was a member of the Board of Inspection at San Francisco early in 1890, in May of that year was ordered to command the *Atlanta*, and in December, 1891, was detailed to superintend the construction of the *New York*; and when that vessel was finished, Aug. 1, 1893, he was placed in command. He filled that post till August, 1894, when he became captain of Boston Navy Yard. Oct. 18, 1897, he was placed in command of the battle ship *Texas*. In the Spanish-American War he made himself famous for his part in the sea fight at Santiago, July 3, 1898. It was the *Texas* that, with the help of the *Oregon*, ran ashore the *Almirante Oquendo* of the Spanish admiral's squadron; and it was on that occasion that he uttered the since historic words: "Don't cheer, boys. The poor devils are dying." After the battle was over he called all his men to the quarter-deck and gave thanks to God for the victory. Aug. 30, 1898, he was detached from the *Texas* and placed in temporary command of the second squadron of the North Atlantic fleet, with the *New York* as his flagship. Jan. 15, 1899, he was placed in charge of Brooklyn Navy Yard, where he was serving at the time of his death.

Pitkin, Horace T., missionary of the American Board, born in Philadelphia, Pa., Oct. 28, 1869; killed in Paoting-Fu, Chi-Li province, China, July 1, 1900. He was graduated at Yale University in 1892, and at Union Theological Seminary in 1896, and he embarked for China, Nov. 11, 1896. Before going abroad (1894-'95) he was traveling secretary of the Student Volunteer movement.

Platt, Franklin, geologist, born in Philadelphia, Pa., in 1844; died in Cape May, N. J., July 25, 1900. He was educated at the University of Pennsylvania. During the civil war he served in a Pennsylvania regiment. In 1864 he was appointed to the United States Coast Survey, and assigned to work with the North Atlantic squadron. Later he was appointed on the staff of Gen. Poe, chief engineer of the military division of the Mississippi. In July, 1874, he was appointed assistant geologist of Pennsylvania, which post he held till May, 1881. He then became president of the Rochester and Pittsburg Coal and Iron Company. He was the author of a text-book on mining, and of the following volumes of the geological reports of Pennsylvania: *On Clearfield and Jefferson Counties* (1875); *Coke Manufacture* (1876); *On Blair County* (1880); and *The Causes, Kinds, and Amount of Waste in Mining Anthracite* (1881).

Porter, John Addison, journalist, born in New Haven, Conn., April 17, 1856; died in Putnam, Conn., Dec. 15, 1900. He was graduated at Yale in 1878. He studied law in an office in Cleveland, Ohio, but soon abandoned that profession to engage in newspaper work. He was on the staffs of the *New Haven Daily Palladium* and the *Hartford Courant*, and in 1888 purchased an interest in the *Hartford Post*. Two years later he secured a controlling interest and became its editor in chief. He represented the town of Pomfret in the Connecticut General Assembly in 1891, and was elected a delegate to the Republican National Convention in 1892. On two occasions he was a candidate for the nomination for the governorship of Connecticut, and in each instance received a large number of votes. He was an earnest advocate of the nomination of Mr. McKinley in 1896, and took an active part in the campaign of that year. Mr. Porter, without solicitation on his part, was chosen for secretary to the President in February, 1897, and assumed the office, March 4, 1897. He continued in this capacity till May 1, 1900, when ill health compelled him to resign his office. He was

the author of a monograph on The Corporation of Yale College (1885); The Administration of the City of Washington (1886); and Sketches of Yale Life (1886).

Porter, Sarah, educator, born in Farmington, Conn., Aug. 17, 1813; died there, Feb. 18, 1900. She was a daughter of the Rev. Dr. Noah Porter, pastor of the Congregational Church of Farmington, and sister of President Noah Porter of Yale College. She began her life work with a small day school for girls, which grew into a large seminary, and attracted students from all parts of the United States. Some years previous to her death she retired from the active direction of her school.

Price, Charles W., missionary of the American Board, born in Richland, Ind., Dec. 28, 1847; **Eva Jane (Keasey) Price**, born in Constantine, Mich., Aug. 19, 1855; one child; all killed near Wenshui, Shensi province, China, Aug. 16, 1900. Mr. Price studied at Oberlin College, and was graduated at the Theological Seminary in 1889. Mrs. Price was also a student at Oberlin. They joined the Shensi mission in 1889.

Prime, Frederick Edward, soldier, born in Florence, Italy, Sept. 24, 1829; died in Litchfield, Conn., Aug. 12, 1900. He was graduated at West Point in 1850, and was assigned to work on the fortifications about New York harbor, including the building of Fort Schuyler. At the outbreak of the civil war he was captured at Pensacola, Fla., while on his way to Fort Pickens, but was released in time for duty as assistant engineer on the construction of the defenses of Washington. He served in the Manassas campaign in 1861 as captain of engineers, and later was engaged on the defenses of Baltimore. He then became chief engineer successively of the departments of Kentucky, of the Cumberland, and of the Ohio. While in the latter he was wounded and taken prisoner, Dec. 5, 1861, near Mill Spring, Ky., but was released in the following spring. He was chief engineer in Grant's Mississippi campaign, and was promoted major of engineers, June 1, 1863. He was brevetted major for gallantry at the battle of Corinth, lieutenant colonel for gallantry at Vicksburg, and, March 13, 1865, colonel for meritorious services during the war. After the war he was a member of the special board of engineers in charge of work at Willett's Point about a year, and later he served in connection with the improvements at the mouth of the Mississippi river and at Galveston. He was retired, Sept. 5, 1871.

Pryor, Luke E., lawyer, born in Madison County, Ala., July 5, 1820; died in Athens, Ala., Aug. 5, 1900. He was admitted to the bar in 1841, and began practice in Athens. In 1879 he was appointed United States Senator to fill the unexpired term of Senator Houston; he was afterward elected to the office for the full term, but declined. In 1882 he was elected a Representative in Congress, and served one term. He also represented his county in the Alabama Legislature.

Purple, Samuel Smith, physician, born in Lebanon, N. Y., June 24, 1822; died in New York city, Sept. 30, 1900. He was graduated at the medical department of the University of New York in 1844. From 1846 till 1848 he was physician in the New York city dispensary, and in 1849 was ward physician under the Board of Health during the cholera epidemic. He was vice-president of the New York Academy of Medicine from 1870 till 1875, and its president from 1876 till 1880. He was the author of medical works, including *The Corpus Luteum, Menstruation, Contributions to the Practice of Midwifery, and Observations on Wounds of the Heart.*

Rademacher, Joseph, clergyman, born in Westphalia, Mich., Dec. 3, 1840; died in Fort Wayne, Ind., Jan. 12, 1900. He was educated at St. Vincent's College, Pennsylvania, and at St. Michael's Seminary, Pittsburg. He was ordained a priest Aug. 2, 1862, at Fort Wayne. After serving about six years at missions in Indiana, he was appointed pastor of the Church of St. Paul of the Cross, at Columbia City. In 1877 he became pastor of the Church of St. Mary, at Fort Wayne. In a short time he was made chancellor of the diocese. Later he was for a short period pastor of the Church of St. Mary, at Lafayette. June 24, 1883, he was consecrated Bishop of Nashville, Tenn., and Aug. 1, 1893, he was transferred to the bishopric of Fort Wayne, which place he held at his death.

Ramsdell, George Allen, lawyer, born in Milford, N. H., March 11, 1834; died in Nashua, N. H., Nov. 16, 1900. He studied at Amherst College, in 1857 was admitted to the bar, and practiced six years in Peterboro, N. H. In 1864 he was appointed clerk of the Supreme Court of Hillsborough, and removed to Amherst, where he resided till 1866, when the records were removed to Nashua. In 1867 he resigned the office and resumed practice. Later he became treasurer of the City Guarantee Savings Bank, and at the same time was president of the First National Bank of Nashua. From 1870 till 1872 he was a member of the Legislature, and in 1876 was a member of the constitutional convention. In 1891-'92 he was a member of the Governor's Council. He was elected Governor of the State in 1896, and served till 1898. (For portrait, see *Annual Cyclopædia for 1897*, page 550.)

Reed, George William, actor, born in Philadelphia, Pa., in 1844; died there, Aug. 11, 1900. He was an elder brother of Roland Reed, and like his father, who was known as "Pop" Reed, had been associated with the Walnut Street Theater, Philadelphia, from boyhood. His first appearance was made there when he was a baby, and for many years he played minor parts as a member of the old stock company under the management of John S. Clarke. He enlisted in the navy at the beginning of the civil war, and served through the contest and for some years thereafter. For an act of signal heroism in volunteering to go down into the magazine during a fire on board his ship, in a Chinese port, Congress voted him a medal of honor. In 1882 he returned to the stage and played in companies, supporting Frederick Warde and with other stars, but retired after a few years.

Reilly, Henry J., soldier, born in Ireland, Sept. 24, 1845; died in Pekin, China, Aug. 15, 1900. In the civil war he enlisted in the navy, joining the Mississippi squadron, and took part in the Red river expedition and in the bombardment of Vicksburg. Sept. 22, 1864, he entered the regular army as a private in the 5th Artillery. He was promoted second lieutenant, Dec. 1, 1866; first lieutenant, Sept. 18, 1868; and captain, Jan. 3, 1894. In 1876 he was graduated at the artillery school. In 1894 he was placed in command of Light Battery F, 5th Artillery, and with it was stationed at the Presidio, San Francisco, and later at Fort Riley, Kansas, and at Fort Hamilton, New York. In the Spanish-American War he commanded his battery at Santiago, and later he took part in Gen. Miles's expedition to Porto Rico. After a short stay in the United States he was sent to Manila, where he arrived April 23, 1899. He took part in nineteen engagements against the Filipinos, the most important being that at Putol Bridge. His battery was selected for service in China, and he was killed by a stray bullet two days after the fall of Pekin.

Rice, Dan (Daniel McLaren), circus clown, born in New York city in 1823; died in Long Branch, N. J., Feb. 22, 1900. He was the son of an Irishman of the same name, who nicknamed him as a child after the popular old Irish clown Dan Rice. Dan's early life was spent on a dairy farm near Freehold, N. J., under a stepfather named Monahan, from whom he ran away. After some vicissitudes in western Pennsylvania, he set up in the show business with a learned pig. In 1844 he went to New York and was engaged by John Tryon at the old Bowery Amphitheater, as a song-and-dance man. Among his comrades here were Dan Emmett and Barney Williams. His career as a circus clown began with Seth B. Howe's circus in 1845, at Welch's National Amphitheater, Philadelphia, and in a short time he became the most popular man in the city. In 1847 he went to New Orleans, where he was the principal attraction of Spaulding's Circus. While filling his engagements with Dr. Spaulding he became an enthusiastic student of Shakespeare, and his familiarity with the great poet won for him the name of the "Shakespearean clown." He became a partner with Spaulding in the circus, and the firm was very successful until 1850. He traveled over the entire country during the circus season, and made a large fortune. He was in the South during the first year of the civil war, and on his return to Philadelphia was accused of rebel sympathy. In spite of his denial his season in that city was a failure, and the result was bankruptcy. In 1864 he was engaged by Adam Forepaugh at a salary of \$35,000 a year. In 1866 he was with O'Brien's Circus at a salary of \$1,000 a week. He became careless and dissipated, and in spite of his great popularity throughout the land he gradually lost the respect of his business associates. In 1878 he made a strong effort to regain habits of sobriety, but without lasting success. He was fond of doing charity work, and gave away a great part of his money. He built a soldiers' monument in Girard, Pa., his home, at a cost of \$35,000, and he gave President Lincoln \$32,000 for the benefit of wounded soldiers and their families. He retired from active life in 1882, and occupied his later years in writing his autobiography.

Richardson, Abby Sage, author, born in Massachusetts in 1837; died in Rome, Italy, Dec. 5, 1900. She made her first appearance at the Winter Garden Theater, New York city, in the company of Edwin Booth, in 1866, as Nerissa in *The Merchant of Venice*. She had been married a few years before to Daniel MacFarland, a lawyer, from whom she was divorced in 1868. Soon after her divorce she was engaged to be married to Albert D. Richardson, formerly war correspondent of the New York Tribune and afterward on the editorial staff of that journal. On Nov. 26, 1869, MacFarland shot Richardson in the Tribune office. Before the latter's death, which followed a few days after the shooting, he and Mrs. MacFarland were married. Mrs. Richardson never appeared on the stage after this tragedy, but devoted herself to literature. Her early books were *Familiar Talks on English Literature*, *Old Love Letters*, *Stories from Old English Poetry*, and *Abélard and Héloïse*. She also edited some of Richardson's writings. When the Lyceum stock company was inaugurated by Daniel Frohman in New York city, Mrs. Richardson was engaged to prepare adaptations from the French. Her best works of this character are *Americans Abroad* and *A Woman's Silence*. In collaboration with Miss Grace Furniss she wrote *The Colonial Girl* and *The Pride of Jennico*. Her last work was a dramatization of Weyman's novel, *Sophia*.

Ridpath, John Clark, historian, born in Putnam County, Indiana, April 26, 1841; died in New York city, July 31, 1900. He was graduated at Asbury (now De Pauw) University in 1863. During his senior year he had taught in the Thornton (Ind.) Academy, and upon his graduation he was made its principal. In 1866 he was elected Superintendent of Public Instruction for Lawrenceburg, Ind., and in 1869 he was called to the chair of English Literature in his *alma mater*. Two years later he was transferred to the chair of Belles Lettres and History, and later to the chair of History and Political Philosophy. He continued as an instructor till 1885, and was vice-president of the university from 1879. In the latter capacity he was largely instrumental in securing the De Pauw endowment. After resigning his professorship he devoted himself to literary work. He was one of the editors of the *People's Cyclopædia* (1881), and compiled a library of universal literature. In 1897-98 he was editor of *The Arena*. His published works are: *An Academic History of the United States* (1875); *A Popular History of the United States* (1876); *A Grammar-school History of the United States* (1877); *An Inductive Grammar of the English Language* (1879); *A Monograph on Alexander Hamilton* (1880); *Life and Work of James A. Garfield* (1882); *Cyclopædia of Universal History* (1884); *A History of Texas* (1884); *The Life and Work of James G. Blaine* (1893); *The Great Races of Mankind* (1894); *Bishop Taylor's Story of my Life; The Life and Times of William E. Gladstone* (1898); and *An Epic of Life* (poem).

Robinson, Rowland Evans, author, born in Ferrisburg, Vt., May 14, 1833; died there, Oct. 15, 1900. He was brought up on a farm and received a common-school education. After reaching manhood he went to New York city, where he learned wood engraving. His eyesight gradually failed, and in 1893 he became blind. His published works include *Uncle Lisha's Shop* (New York, 1887); *Sam Lovell's Camps* (1889); *Vermont: A Study of Independence* (Boston, 1892); *Danvis Folks* (1894); *In New England Fields and Woods* (1896); *Uncle Lisha's Outing* (1897); *A Hero of Ticonderoga* (Burlington, 1898); and *Danvis Pioneer* (Boston, 1900).

Rogers, Fairman, civil engineer, born in Philadelphia, Pa., Nov. 15, 1833; died in Vienna, Austria, Aug. 23, 1900. He was a son of Evans Rogers, a merchant in Philadelphia and a member of the Society of Friends. He was graduated at the University of Pennsylvania in 1853. While an undergraduate he devoted his attention specially to mathematics and mechanics, and on graduating he was appointed lecturer on mechanics in Franklin Institute, which place he held until 1865. Meanwhile, in 1855, he was called to the chair of Civil Engineering in the University of Pennsylvania, which he held until 1871. On retiring from this chair he was chosen a member of the board of trustees of his *alma mater*, and he continued as such until 1886, when, owing to his continued residence abroad, he relinquished his trusteeship. In 1878 he presented to the university a large library of works on engineering. He was tendered the appointment of provost of the university in 1880, but declined it. At the beginning of the civil war he was a member of the First Troop, Philadelphia City Cavalry, with which organization he saw active service, and he was for a time its commander. Subsequently he served as a volunteer engineer officer on the staffs of Gen. John F. Reynolds and Gen. William F. Smith. Under the auspices of the United States Coast Survey in 1862, he completed the survey of the Potomac

river northward from Blakiston island. He was widely known by his active interest in outdoor sports, being one of the first to introduce polo into the United States. He was for many years a manager of the Pennsylvania Academy of Fine Arts, and he was one of a committee having charge of the erection of the exhibition building at the world's fair held in Philadelphia in 1876. Besides being a member of the American Philosophical Society and the American Society of Civil Engineers, he was one of the original members of the National Academy of Sciences. His more important scientific papers were *Combinations of Mechanism representing Mental Processes* (1874) and *Notes on Grant's Difference Engine* (1874); also he was the author of *Terrestrial Magnetism and the Magnetism of Iron Ships* (1877; rev. ed., 1883) and *Manual of Coaching* (1890).

Sargent, Hannah, Mrs. (Hannah Bailey), actress, born in Providence, R. I., in 1850; died in New York city, May 2, 1900. She made her first appearance with Edwin Booth in Richard III, as Edward V, in the Providence Theater, in 1865. She rose to a leading place as a stock actress in a short time, and for several seasons was very popular in the permanent companies of Cincinnati and Columbus, Ohio, and Indianapolis, Ind. In 1874 she married Harry Jones Sargent (Harry Sargent Jones), manager of the Columbus Theater. In 1876 they visited San Francisco, and while there saw the first performances of Helena Modjeska at the California Theater, and on his wife's suggestion Mr. Sargent engaged the Polish actress to play under his management. Mrs. Sargent actively assisted her husband in all his eminently successful presentations of Mme. Modjeska in the United States and England, during the continuance of which she remained off the stage; but eventual financial misfortune obliged her to resume her work. When her desire to return to the stage became known to Mme. Modjeska, that lady offered her a place in her support. For more than ten years Mrs. Sargent was a member of Modjeska's companies, and as such made her last appearance at Wilmington, Del., April 3, 1900.

Sargent, John Singer, artist, born in Florence, Italy, in 1856; died in London, England, April 13, 1900. His parents were Americans residing in Florence. He was educated partly in Italy and partly in Germany. He entered the Academy of Fine Arts, in Florence, at an early age, and spent several years in art study. At the age of eighteen he entered the studio of Carolus Duran, in Paris. In 1877 he exhibited in the Salon a portrait of his master, which excited a great deal of comment. In 1879 he received honorable mention in the Salon, and in 1891 a medal of the second class. In 1884 he removed to London, where he exhibited in the Royal Academy and the Grosvenor Gallery, and his pictures met with instant success. In 1894 he was elected an associate member of the Royal Academy, and in 1897 he was made a member. He visited the United States several times, and in 1887 he painted many portraits there. During his visit in 1889 he painted the picture of *Carmenita*, which was purchased by the French Government. He was commissioned to decorate the ends of the upper corridor of the new Boston Public Library, and chose for his theme the progress of religion. Some of his best known pictures are *A Street in Venice*; *Carnation, Lily, Rose*; *Fishing for Oysters at Cancale* (1878); *En Route pour la Pêche* (1878); *Portrait of Carolus Duran* (1879); *Neapolitan Children Bathing* (1879); *El Jaleo* (1882); *Portrait of Two Children* (1883); and many portraits. He was a member of the American National Academy of Design.

Saunders, William, horticulturist, born in St. Andrews, Scotland, in 1822; died in Washington, D. C., Sept. 11, 1900. Several of his youthful years were spent in India, where his father was a gardener. He was educated at the college of Madras and the Divinity School at St. Andrews. He studied the cultivation of plants and flowers in Kew Gardens, London. In 1845 he came to the United States, and contributed to the improvement of Fairmount and Hunting Parks, in Philadelphia, and of Clifton Park, Baltimore. In 1862, on the establishment of the United States Department of Agriculture, he was placed in charge of the division of experimental gardens and grounds, which place he held at his death. He was also president of the Park Commission of the District of Columbia, and was interested in beautifying the parks of Washington. It was through the development of his ideas and largely through his labors that the Patrons of Husbandry, known as the National Grange, was organized. Of the plants introduced by the experimental gardens under his direction, the most conspicuous is the seedless navel orange, the first trees having been secured by him in Brazil in 1870.

Sawyer, Philetus, manufacturer, born in Whiting, Vt., Sept. 22, 1816; died in Oshkosh, Wis., March 29, 1900. He removed with his parents to Crown Point, N. Y., in 1817, where he was educated in the district schools. At the age of seventeen he began working as a farm hand. In ten years he had saved \$2,000, and in 1847 he removed to Wisconsin, where he engaged in the lumber business. He was elected to the Legislature in 1857 and 1861, and in 1863 was elected mayor of Oshkosh. In 1864 he was elected to Congress, and served continuously for ten years. In 1880 and 1886 he was elected United States Senator. In the lower house he was chairman of the Committee on Pacific Railroad and a member of the Committees on Commerce, Manufactures, and Invalid Pensions.

Sayre, Lewis Albert, surgeon, born in Battle Hill (now Madison), N. J., Feb. 29, 1820; died in New York city, Sept. 21, 1900. He was graduated at Transylvania University, Lexington, Ky., in 1839, and at the College of Physicians and Surgeons, New York city, in 1842. In that year he became prospector to the Professor of Surgery in the College of Physicians and Surgeons, and he held the place till made emeritus prospector in 1852. In 1853-73 he was surgeon to Bellevue Hospital. In 1859 he was made surgeon to the Charity Hospital on Blackwell's island. From 1873 he was consulting surgeon for both hospitals. He was one of the active founders of the Bellevue Hospital Medical College in 1861, and was made its Professor of Orthopædic Surgery; he retained this chair until the college was consolidated with New York University in 1898, when he was made emeritus professor. He was the first American to remove the head of the femur in hip-joint disease. He performed the operation in 1854, and in seven years had created by this and other original methods a practically new department in his profession, orthopædic surgery. He performed his hip-joint operation before the International Medical Congress at Philadelphia in 1876. He invented numerous instruments and appliances, and was the author of the following medical works: *On the Mechanical Treatment of Chronic Inflammation of the Joints of the Lower Extremities* (Philadelphia, 1865); *Practical Manual of the Treatment of Clubfoot* (New York, 1869); *Spinal Disease and Spinal Curvature* (Philadelphia, 1878); and *Lectures on Orthopædic Surgery and Diseases of the Joints* (New York, 1883).

Schieffelin, Samuel Bradhurst, druggist, born in New York city, Feb. 24, 1811; died there, Sept. 13, 1900. He succeeded his father, Henry Hamilton Schieffelin, as head of the wholesale drug business in 1849, and retired in 1865. He devoted much of his time to the writing of religious literature. His published works include *Message to Ruling Elders*, *Music for our Churches*, *The Church in Ephesus* and the *Presbyterian and Reformed Churches*, *The People's Hymn Book*, *Children's Bread*, *Milk for Babies*, *The Foundations of History*, and a *Word to Christian Teachers and Students for the Ministry*.

Scott, Robert Kingston, ex-Governor of South Carolina, born in Armstrong County, Pennsylvania, July 8, 1826; died in Napoleon, Ohio, Aug. 13, 1900. He studied medicine in Navarre, Ohio, and later attended lectures at Starling Medical College, Columbus. He practiced medicine in Henry County, Ohio, from 1851 till 1857, and was then engaged in mercantile business till 1861. In October, 1861, he was commissioned lieutenant colonel of the 68th Ohio Regiment, and in 1862 was promoted colonel. He served at Fort Donelson, Shiloh, and Corinth, led a brigade at Hatchie river, Tenn., and was engaged at Port Gibson, Raymond, and Champion Hills, Miss. He was commissioned brigadier general of volunteers, Jan. 12, 1865, and brevetted brigadier and major general. From 1865 till 1868 he was assistant commissioner of the Freedmen's Bureau in South Carolina. In 1868 he was elected, as a Republican, the first Governor of reconstructed South Carolina, and in 1870 was re-elected. In the autumn of 1871, with other State officers, he was charged with a fraudulent overissue of State bonds, but he justified his course, and a resolution for his impeachment was defeated. Dec. 25, 1880, he shot and killed Warren G. Drury; on trial he was acquitted, the defense being that the pistol was discharged accidentally. For several years he was engaged in the real-estate business in Columbia, S. C., and Napoleon, Ohio.

Scoville, John F., educator, born in Sandy Hill, N. Y., May 9, 1812; died in Brooklyn, N. Y., March 25, 1900. He was graduated at Yale College in 1832, and in 1833 was appointed the first president of Oberlin College. In 1849 he gave up teaching and removed to Brooklyn, where he engaged in the publishing business. He retired from active business in 1865.

Sewall, Arthur, shipbuilder, born in Bath, Me., Nov. 25, 1835; died in Small Point, Me., Sept. 5, 1900. He was educated in the public schools of his native city, and then entered his father's shipyards as an apprentice. In 1854 he formed a partnership with his brother Edward, under the name of E. & A. Sewall, taking over the business of his father's firm. In January, 1855, the two brothers launched their first ship, the *Holyhead*, and from that time till 1879 they built 46 wooden vessels. In 1879, at the death of his brother, he became the head of the business, and as such continued till his death. In 1890 he began the equipment of the firm's shipyards for the complete construction of steel sailing vessels, and in 1894 the iron ship *Dirigo*, of 3,000 tons, was launched, the first of its class ever constructed in New England. He was a member of the Bath Board of Aldermen in 1876 and 1877. In 1880 he was a delegate at large from Maine to the National Democratic Convention, and again in 1896. He was the Democratic candidate for United States Senator in 1893. He was a member of the National Democratic Committee from 1888 till 1896; in June, 1895, he declared in favor of free coinage of silver, and in consequence was not continued on the national committee by his colleagues.

At the national convention held July 11, 1896, to which he was a delegate, he was nominated as the candidate for Vice-President, with William J. Bryan as the candidate for President. He became a director of the Maine Central Railroad Company in 1875, and in 1884 its president, serving till 1893. During this time he was also president of the Portland, Mount Desert and Machias Steamboat Company, and of the Eastern Railroad, as well as a director in the Mexican Central Railway, the Boston and Maine Railroad, the New York and New England Railroad, the Portland and Rochester Railroad, and some of the lines of the Atchison, Topeka and Santa Fé system. He was president of the Bath National Bank, and until 1893 of the Poland Paper Company.

Seymour, Louis Irving, civil engineer, born in Whitney's Point, N. Y., in 1860; died near Bloemfontein, South Africa, June 14, 1900. He was reared on a farm, and studied mathematics and civil engineering at night. His first regular work was with the Lackawanna Steel and Iron Company, in Scranton, Pa., and there he continued his studies. In 1882 he was sent by the Dickson Manufacturing Company to set up machinery in a Venezuela gold mine. There he remained three years, becoming superintendent. In 1888 he went to Kimberley for the De Beers Mining Company, and later he spent three years in London as consulting engineer for the Kimberley mine owners. He then went to Johannesburg as superintendent of the Rand mines. At the outbreak of the war in the Transvaal he organized a regiment in Cape Town, and was made its major. He designed and constructed aerial bridges for Gens. Roberts and Kitchener as they advanced northward toward the Transvaal. In the battle at the Zand river, June 14, while leading a charge through an open veldt, he was mortally wounded.

Shakespeare, Edward Oram, surgeon, born in Dover, Del., May 19, 1846; died in Philadelphia, Pa., June 1, 1900. He was descended from Edmund Shakespeare, a brother of the poet. He was graduated at Dickinson College in 1867, and at the University of Pennsylvania in 1869. He began the practice of medicine in his native town, but in 1875 removed to Philadelphia, where later he was appointed lecturer on ophthalmic surgery in the University of Pennsylvania. He soon became an authority on diseases of the eye, and was elected president of the Pathological Society of Pennsylvania, and pathological and ophthalmic surgeon to the Philadelphia Hospital. In 1885 he was the representative of the United States Government to investigate the causes and conditions under which cholera thrived in Europe and India; his report was exhaustive, and was published in 1889. In the war with Spain he was appointed brigade surgeon with the rank of major of volunteers, and at the time of his death he was one of a commission attached to the office of the surgeon general at Washington to investigate the causes of typhoid fever in the army. He was a frequent contributor to medical periodicals, and with J. H. C. Simes translated *Manual of Pathological Histology* (Philadelphia, 1880).

Sharpe, George Henry, lawyer, born in Kingston, N. Y., Feb. 26, 1828; died in New York city, Jan. 13, 1900. He was graduated at Rutgers College in 1847, studied at Yale Law School, and was admitted to the bar in New York city. In 1851-'52 he was attached to the American legation in Vienna. In 1854 he returned to the United States and began practice in Kingston. At the outbreak of the civil war he entered the National army as a captain in the 20th New York Regiment; in 1862 he was promoted to the colonelcy

of the 120th New York Regiment. He took part in all the battles from Fredericksburg to Appomattox. He was brevetted brigadier general in 1864, and major general in 1865. At the close of the war he was designated by Gen. Grant to parole the Army of Northern Virginia. In 1867 he was sent abroad as a special agent for the Department of State. In 1870 he was appointed United States marshal for the southern district of New York, and against the most violent opposition he took the census that demonstrated the great election frauds of 1868 in New York city, which led to the overthrow of the Tweed ring. He was surveyor of customs at New York from 1873 till 1878. From 1879 till 1882 he was a member of the State Assembly, and in 1880 and 1881 he was the Speaker of that body during the famous deadlock over the re-election of Senators Conkling and Platt. For a short time in 1883 he was at the head of the commission to Central and South America for promoting commercial relations with the United States. In 1890 he was appointed a member of the Board of United States General Appraisers, created to exercise judicial and administrative powers on appeals in customs cases; he resigned this office March 1, 1899.

Shearman, John Adams, naval officer, born in Jamestown, N. Y., in 1854; died in Chelsea, Mass., Aug. 29, 1900. He was graduated at the United States Naval Academy, June 21, 1875; entered the service as ensign, Sept. 8, 1876; promoted master, Nov. 28, 1882; lieutenant (junior grade), March 3, 1883; lieutenant, May 4, 1889; and lieutenant commander, March 3, 1899. He served on the Hartford, of the North Atlantic station, from 1875 till 1877; on the Passaic from 1877 till 1879. In 1880 he was transferred to the Pensacola, of the Pacific station, where he served till 1885. He was on duty at a torpedo station from 1885 till 1887, when he was placed on the Nipsic, of the Pacific station. The most notable incident in his career was his heroic conduct in the hurricane at Samoa, March 16, 1889, which resulted in the wrecking of the Trenton, the Vandalia, and the Nipsic. In 1894 he was attached to the coast survey steamer Blake. In December, 1899, he was at the treatment hospital in Yokohama.

Shearman, Thomas Gaskell, lawyer, born in Birmingham, England, Nov. 25, 1834; died in Brooklyn, N. Y., Sept. 29, 1900. When nine years old he came to New York with his parents; he attended school for a time, and then became clerk in a dry-goods store. In 1857 he removed to Brooklyn, where, after a course under private tutors, he was admitted to the bar in 1859. For six years he devoted himself almost entirely to the literature of the law, and for some time he was secretary to the Code Commission of New York. He also edited a law journal. In 1868 he entered the law firm of which David Dudley Field was the head. At its dissolution in 1873 he became the senior partner in the firm of Shearman & Sterling. In 1874 he undertook the defense of his personal friend and pastor, Henry Ward Beecher, in the celebrated case brought against the famous preacher by Theodore Tilton. The trial, with its preparation and entire proceedings, occupied two years, and although the expenses amounted to \$100,000, the firm refused to accept any pay for its services. Of late years the business of the firm drifted toward the management of large estates and the conduct of the affairs of railroad corporations. Mr. Shearman devoted a great deal of his time to public questions and social and political economy. He was a Republican from the organization of that party till 1884, when he supported

Mr. Cleveland for the presidency. In 1896 he returned to the Republican party. He was an enthusiastic supporter of free trade and single-tax theories. His writings are voluminous, and include *Taxation and Revenue* (New York, 1892); *Natural Taxation* (1895); *Taxation of Personal Property* (1895); and, with Mr. Tillinghast, *Practice, Pleadings, and Forms*, and, with A. A. Redfield, *Treatise on the Law of Negligence*.

Sheeleigh, Matthias, author, born in Montgomery County, Pennsylvania, in 1820; died in Fort Washington, Pa., July 15, 1900. His ancestors were among the Palatinate refugees who settled in Montgomery County in 1732. He received his training at Pennsylvania College and Theological Seminary, Gettysburg, Pa., and was ordained in the Lutheran Church in 1852. He was pastor of Lutheran congregations in New York, New Jersey, and Pennsylvania. He was secretary of the General Synod, for more than a quarter of a century a member of the Lutheran Board of Publication, acting as president of it a few years, and twelve years as reader and reviser of works offered for publication, and for thirty-four years a member of the Board of Directors of the Theological Seminary at Gettysburg. He was editor of the Lutheran Sunday-school Herald from the time of its establishment in 1860 until his death, and editor of the Lutheran Almanac and Yearbook from 1871. He was the author of a thousand poems, including hymns that have found their way into the hymnals. He was also an enthusiastic student of local history, and was an authority in the Montgomery County Historical Society.

Sicard, Montgomery, naval officer, born in Utica, N. Y., Sept. 30, 1836; died in Westernville, N. Y., Sept. 14, 1900. He was appointed acting midshipman, Oct. 1, 1851; promoted passed midshipman, April 15, 1858; master, Nov. 4, 1858; lieutenant, May 31, 1860; lieutenant commander, July 16, 1862; commander, March 2, 1870; captain, Aug. 7, 1881; commodore, July 10, 1894; rear admiral, April 6, 1897; and retired on reaching the age limit, Sept. 30, 1898. At the beginning of the civil war he was on duty on various vessels in the blockading squadron. As executive officer of the Oneida he was present at the bombardment of Forts Jackson and St. Philip, and took an active part in the destruction of the Confederate flotilla in April, 1862, in the passage of the Vicksburg batteries in June, and in the engagement with the ram Arkansas in July of the same year. He commanded the Seneca in both attacks on Fort Fisher, and had charge of the left wing, 2d Division, in the naval land assault on that fort, Jan. 15, 1865. After the war he spent two years at the Naval Academy, and after two years more of service on the Pensacola was assigned to the Saginaw on the Pacific coast. In 1876 he was in command of the Swatara. In 1880 he was appointed inspector of ordnance at the Boston Navy Yard. From 1882 till 1890 he served as chief of the Bureau of Ordnance. To him is given the credit for the introduction of steel high-power ordnance into the navy about this time. In January, 1894, he was placed in charge of the Portsmouth Navy Yard, and in November of that year was transferred to the Brooklyn Navy Yard as commandant. April 20, 1897, he was made commander in chief of the North Atlantic squadron, but at the outbreak of the Spanish-American War was placed on sick leave, having contracted malaria. After partial recovery he applied for active duty, and was made president of the Board of Strategy. After his retirement he continued to serve, acting as chairman of the board for rewarding officers for gallant and meritorious service.

Simcox, F. E., missionary of the Presbyterian Board, born in Bullion, Pa., April 30, 1867; **May L. (Gilson) Simcox**, born in London, Pa.; both killed in Paoting-Fu, Chi-Li province, China, June 30, 1900. Mr. Simcox was graduated at Grove City College, Pennsylvania, in 1889, and at the Western Theological Seminary in 1893.

Skene, Alexander Johnston Chalmers, physician, born in Fyvie, Scotland, June 17, 1837; died in High Mount, N. Y., July 4, 1900. He was graduated at the Long Island College Hospital in 1863, and was a surgeon in the National army in 1863 and 1864. He evolved a plan for a hospital corps which is now in use in the army and the National Guard. In 1864 he was appointed adjunct professor in the Long Island College Hospital; in 1872 he was made Professor of Gynecology, and in 1886 became dean of the faculty of that institution. He was the author of many medical works, including *Diseases of the Bladder and Urethra in Women* (New York, 1878); *Treatise on the Diseases of Women* (1888); *Education and Culture as Correlated to the Health and Diseases of Women* (Detroit, 1888); *Text-book on the Diseases of Women* (New York, 1888); and *Medical Gynecology* (1895).

Smart, James Henry, educator, born in Center Harbor, N. H., June 30, 1841; died in Lafayette, Ind., Feb. 21, 1900. He was educated chiefly at the Concord, N. H., high school. He taught in Concord and other New England schools from 1858 till 1861. From 1863 till 1865 he was principal of the intermediate school in Toledo, Ohio. From 1865 till 1875 he was superintendent of schools in Fort Wayne, Ind., and then for six years was Superintendent of Public Instruction in Indiana. In 1883 he became president of Purdue University, which office he held at his death. Dr. Smart was a member of the Indiana State Board of Education twenty-seven years; was assistant commissioner of Indiana to the Vienna exposition in 1873; United States commissioner to the Paris exposition in 1878; and commissioner from the United States Department of Agriculture to the agricultural congress at The Hague in 1891. He was president of the Indiana Teachers' Association in 1871, of the National Educational Association in 1880, and of the Association of Agricultural Colleges and Experiment Stations in 1890. He received the degree of LL. D. from Indiana University in 1883. He was the author of *An Ideal School System for a State*, *The Institute System for the United States*, *The School Laws of Indiana*, *Books and Reading for the Young*, *Indiana Schools*, and *Manual of School Gymnastics*.

Smith, James Cosslett, jurist, born in Phelps, N. Y., Aug. 14, 1817; died in Canandaigua, N. Y., Sept. 26, 1900. He was graduated at Union College, and began the practice of law soon after his graduation. He was a member of the Peace Commission that met in Washington a short time before the civil war. In 1862 he was appointed to the supreme bench of New York, and he served till 1887, when he was retired.

Smith, James G., telegraph operator, born in Durham, N. H., April 14, 1836; died in New York city, March 3, 1900. In 1850 he was a messenger in the telegraph office in Durham, where he learned to operate the instrument. In 1862 he went to New York city, and during the civil war had charge of all dispatches sent from New York to the South. In 1864 he was appointed superintendent of a division of the line between Boston and Nova Scotia. In 1869, with Stephen B. Stearns, he purchased the Franklin Telegraph Company, whose wires ran from New York to Boston. Together they invented a duplex system of telegra-

phy. In 1877 he withdrew from the Franklin Company, and for a few years engaged in the electric-light business. Later he organized the Continental Telegraph Company and established the rapid stock exchange service between New York and Philadelphia. In 1881 he organized the Builders' and Merchants' Telegraph Company as a rival to the Western Union. In 1885 his latest company failed, and from that time he devoted his attention to telephones. At the time of his death he was president of the Smith Vassar Telephone Company.

Smyth, Frederick, jurist, born in County Galway, Ireland, in 1832; died in Atlantic City, N. J., Aug. 18, 1900. He came to New York city in 1849, and began work as a lawyer's office boy. In 1855 he was admitted to the bar. In 1857 he became assistant in the office of United States District-Attorney McKeon, and upon the latter's retirement, they formed a law partnership, which was continued till 1879. From 1863 till 1865 Mr. Smyth was a commissioner of schools; he also served as a member of the Board of Education and as counsel to the Excise Board. In 1875 he was defeated as the Tammany candidate for Recorder; in December, 1879, he was appointed to fill the unexpired term of Recorder Hackett, and in 1880 was elected for the full term of fourteen years. In 1894 he was a candidate for re-election, but was defeated by John W. Goff. In 1896 he was elected a justice of the Supreme Court of New York, which office he held at his death. He was a member of Tammany Hall from the time he became a voter.

Sonntag, William Louis, artist, born near Pittsburg, Pa., March 2, 1822; died in New York city, Jan. 22, 1900. His youth was passed in Cincinnati, and there he began the study of art in 1848. In 1851 he removed to New York city. From 1853 till 1857, and in 1861, he studied abroad. He devoted himself to the painting of American landscapes, keeping as far as he could from the realistic school. Some of his works are *View on Licking River, Kentucky* (1846); four pictures entitled *The Progress of Civilization* (1848); *The Spirit of Solitude* (1851); *Evangeline* (1852); *A Dream of Italy* (1860); *A Morning in the Alleghanies* (1865); *Sunset in the Wilderness*, exhibited at the Centennial Exhibition in 1876; and *The Fog Rising off Mount Adams*. He was a member of the National Academy of Design, of the Water Color Society, and of the Artists' Fund Society.

Squibb, Edward B., chemist, born in Wilmington, Del., July 4, 1819; died in Brooklyn, N. Y., Oct. 26, 1900. He was graduated at Jefferson Medical College, Philadelphia, was appointed a surgeon in the United States navy, and later was placed in charge of the medical station of the Brooklyn Navy Yard. During the civil war his skill was utilized by the Government in the preparation of pharmaceutical supplies. About this time he prepared a cholera remedy, which has been a standard ever since. Later he resigned from the navy and established a private laboratory in Brooklyn. In 1885 he retired.

Stallo, John Bernhard, lawyer, born in Sierhausen, Oldenburg, March 16, 1823; died in Rome, Italy, Jan. 6, 1900. He came to the United States in 1839. He taught in a private school in Cincinnati, and later he was made Professor of German in St. Xavier's College, serving till 1843. In that year he became Professor of Mathematics and Chemistry in St. John's College, Fordham, N. Y. In 1847 he returned to Cincinnati and studied law, and was admitted to the bar in 1849. In 1853 he was appointed judge of the Court of Common

Pleas. After serving two years he resigned to resume his law practice. In political life he was originally a Democrat, but he became a Republican during the contest over slavery in the Territories, and again became a Democrat to support Horace Greeley for the presidency. In 1885 he was appointed minister to Italy, which post he filled until 1889. After retirement to private life he resided in Italy. His published works include *General Principles of the Philosophy of Nature* (Boston, 1848); *Concepts and Theories of Modern Physics* (New York, 1882); and *Abhandlungen und Briefe* (1893).

Stanton, Thaddeus H., soldier, born in Indiana, Jan. 30, 1835; died in Omaha, Neb., Jan. 23, 1900. At the age of twenty-two he joined John Brown and Gen. James H. Lane, and engaged in nearly all the conflicts between the Free-State and Proslavery parties in 1857-'58. Later he was a press correspondent in the House of Representatives at Washington. At the outbreak of the civil war he enlisted as a private in the 3d Battalion, District of Columbia Volunteers, and served three months. He went to Iowa, and was elected to the Legislature. In August, 1862, he became a captain in the 19th Iowa Infantry, taking part in the campaigns in the border States. Later he was detailed for duty on the staff of Major-Gen. S. R. Curtis, and Dec. 19, 1862, became a paymaster attached to the Army of the Tennessee. Jan. 17, 1867, he was appointed major paymaster in the United States army; March 15, 1890, he was made lieutenant colonel in the department of the paymaster general; Jan. 22, 1893, he was promoted assistant paymaster general, with the rank of colonel; and March 27, 1895, was appointed paymaster general with the rank of brigadier general. Jan. 30, 1899, he retired. In 1871 he was a member of the board that adjusted the war claims of Kansas against the United States. In the following years he saw much hard service on the Western frontier. He was with Gen. Crook in the Black Hills expedition in 1875, and later became his chief of scouts in his operations against Sitting Bull, Crazy Horse, and other chiefs. He became known as the "Fighting Paymaster" on account of his insistence on a place in the line in the Indian outbreaks. He was brevetted lieutenant colonel of volunteers, March 13, 1865, and lieutenant colonel, United States army, Feb. 27, 1890.

Steinitz, William, chess player, born in Prague, Bohemia, May 14, 1836; died in New York city, Aug. 12, 1900. He was educated in his native city and at the Polytechnic School in Vienna. He early attained distinction as a chess player, and took prizes in tournaments in Vienna in 1859, 1860, and 1861. He went to England in 1862 as the Austrian delegate to an international tournament and won sixth prize, successfully playing with Anderssen and Paulsen. In 1866 he defeated Anderssen in an individual match, and the same year he took first prize in the handicap tournament of the British Chess Association. In 1870 he won a series from Blackburn, but was in turn defeated by Anderssen by half a game. In the London International Tournament of 1872 he won first prize and championship of the world. At the Vienna International Tournament of 1873 he made the greatest run on record, winning 16 straight games. In 1873 he settled in London, and for a time devoted himself to chess literature. In 1882 he removed to the United States. In 1883 he secured second prize at the London International Tournament; in 1886 he defeated Zukertort in a 10-game match in New York city; and in 1889 he won a best-out-of-20 match with Tachigorin in Havana. From 1885 till 1891 he was

editor of the *International Chess Magazine*. In December, 1890, he played with Gunsberg for the world's championship, defeating him on the 18th game. In 1894 and again in 1897 he met defeat at the hands of Emanuel Lasker, and from that time his mind began to fail. For a time he was confined in an asylum in Moscow, in which city the second match was held. He published *The Modern Chess Instructor* (New York, 1889).

Stembel, Roger Nelson, naval officer, born in Middleton, Md., Dec. 27, 1810; died in New York city, Nov. 20, 1900. He was appointed to the United States Naval Academy, March 27, 1832; became passed midshipman, June 23, 1838; promoted lieutenant, Oct. 26, 1843; commander, July 1, 1861; captain, July 25, 1866; commodore, July 13, 1870; and retired, Dec. 27, 1872; he was promoted rear-admiral retired, June 5, 1874. As midshipman he was stationed for a time at the depot of charts and instruments in Washington. From 1839 till 1842 he served on the frigate *Brandywine*, on the Mediterranean station. As lieutenant he was attached to the Coast Survey for several years. In 1849-'50 he served on the *Germentown*, and in 1851-'54 on the *Jamestown*. From 1855 till the outbreak of the civil war he served in various stations on the Mississippi and at the Naval Asylum. During the civil war he was in active service in the Mississippi flotilla, commanding the gunboat *Lexington*, and later the *Cincinnati*; he took part in the engagements at Lucas's Bend, Belmont, Fort Henry, and Island No. 10. May 10, 1862, he was severely wounded during the action with the Confederate rams at Craighead's Bend, near Fort Pillow, and disabled from further active service. In 1864 he was stationed at the recruiting rendezvous in Philadelphia. In 1866 he was in command of the sloop of war *Canandaigua*, attached to the Mediterranean squadron. He returned to the United States in 1867, and commanded the naval rendezvous at Boston in 1869, and the northern squadron of the Pacific fleet in 1871 and 1872.

Stillé, Alfred, physician, born in Philadelphia, Pa., Oct. 30, 1813; died there, Sept. 24, 1900. He was graduated at the University of Pennsylvania in 1832, and at the medical department in 1836. The same year he was elected resident physician of the Philadelphia Hospital, but resigned to continue his medical studies in Europe. In 1839 he returned and became resident physician of the Pennsylvania Hospital, serving till 1841. From 1854 till 1859 he was Professor of the Theory and Practice of Medicine in Pennsylvania Medical College; he occupied the same chair in the University of Pennsylvania from 1864 till 1884. From 1865 till 1871 he was also lecturer on clinical medicine in the Philadelphia Hospital. He was active in the formation of the American Medical Association, and was a member of various medical and scientific societies. The degree of LL. D. was conferred upon him by Pennsylvania College in 1876, and by the University of Pennsylvania in 1889. His writings include *Epidemic Meningitis* (Philadelphia, 1867); *Cholera* (1886); *Epidemic or Malignant Cholera*; *Therapeutics and Materia Medica*; *Elements of General Pathology*; *Humboldt's Life and Character*; *Medical Instruction in the United States*; *Unity of Medicine*; *War as an Element of Civilization*; and *National Dispensatory*, with John M. Maisch (1879).

Stockton, John Potter, lawyer, born in Princeton, N. J., Aug. 2, 1826; died in New York city, Jan. 22, 1900. He was graduated at Princeton College in 1843, and was admitted to the bar in 1847. Soon afterward he was appointed to revise and simplify the proceedings and practice in the courts of the State, and later he was State re-

porter in chancery. In 1857 he was appointed minister to Rome, and in 1861 was recalled at his own request. In 1865 he was elected United States Senator, but the validity of his election was questioned, and he was unseated, March 27, 1866. In 1869 he was again elected, and he served till 1875. He was appointed Attorney-General of New Jersey in 1877, and was re-elected in 1882, 1887, and 1892. He was a delegate at large to all the Democratic national conventions after 1864. He was also a delegate to the Unionist convention at Philadelphia in 1866. He received the degree of LL. D. from Princeton College in 1882. He published *Equity Reports*.

Stone, John Marshall, ex-Governor of Mississippi, born in Gibson County, Tenn., April 30, 1830; died in Holly Springs, Miss., March 2, 1900. In 1855 he removed to Mississippi. During the civil war he served in the Confederate army. In the battles around Petersburg he commanded a brigade. After the war he was station agent of the Memphis and Charleston Railroad at Iuka. He was mayor of Iuka and treasurer of Tishomingo County, Mississippi, but was removed from the latter office by military authority. In 1869 he was elected to the State Senate, and he served there continuously till 1876. When Gov. Ames resigned, in March, 1876, he became acting Governor, and in November, 1877, he was elected for a full term. In 1884 he was appointed Railroad Commissioner. In 1889 he was again elected Governor, and he served till 1895. At the time of his death he was president of Starkville Agricultural and Mechanical College.

Storrs, Richard Salter, clergyman, born in Braintree, Mass., Aug. 21, 1821; died in Brooklyn, N. Y., June 5, 1900. He was graduated at Amherst College in 1839, taught in Monson Academy

and Williston Seminary, and later entered the law office of Rufus Choate. But he gave up the study of law, entered Andover Theological Seminary, and was graduated there in 1845. His first pastorate was in Harvard Congregational Church, Brookline, where he was ordained, Oct. 22, 1845. In November, 1846, he was called to the Church of the Pilgrims, in Brooklyn, where he was pastor emeritus at the time of his death. He was one of the founders of the Independent in 1848, and remained one of its editors till 1861. From 1871 till 1879 he served on the Brooklyn Park Commission. In 1873 he was made president of the Long Island Historical Society. He was well known as an orator throughout the United States. He was president of the American Board of Commissioners for Foreign Missions in 1887-'97. The degree of D. D. was conferred on him by Union College in 1853 and by Harvard in 1859; that of LL. D. by Princeton in 1874, and L. H. D. by Columbia in 1887. His published works include a dozen occasional discourses, sermons, and orations, contributed to Broadway Tabernacle sermons (1860); *Introductory Essays to Punchard's View of Congregationalism* (Boston, 1860); *Kindling* (New York, 1856); *An Oration Commemorative of President Lincoln* (1869); *Conditions of Success in Preaching* (1875); *Early American Spirit and the Genesis of it* (1875); *John Wyckliffe and the First English Bible* (1880); *Recognition of the Supernatural in Letters and Life* (1881); *Manliness in*

the Scholar (1883); *The Psalter* (1883); *The Divine Origin of Christianity* (1884); *The Prospective Advance of Christian Missions* (1885); *Forty Years of Pastoral Life* (1886); *Declaration of Independence* (1886); *The Broader Range and Outlook of the Modern College Training* (1887); *Puritan Spirit* (1889); and *Bernard of Clairvaux* (1892).

Strong, William L., merchant, born in Loudonville, Ohio, March 22, 1827; died in New York city, Nov. 2, 1900. He was a dry-goods clerk in Wooster and Mansfield, Ohio, till 1853, when he removed to New York city to engage in similar business. In 1863 he became a member of the firm of Sutton, Smith & Co., and in 1870 the firm's name was changed to William L. Strong & Co. Mr. Strong was the organizer of business men's clubs in several presidential campaigns, and in 1882 was an unsuccessful candidate for Congress on the Republican ticket. In 1894 he was elected mayor of New York by a combination of Republicans and Anti-Tammany Democrats, and he served till January, 1898. For portrait, see *Annual Cyclopædia* for 1894, page 536.

Stryker, William Scudder, lawyer, born in Trenton, N. J., June 6, 1838; died there, Oct. 29, 1900. He was graduated at Princeton College in 1858. In 1861 he assisted in raising the 14th New Jersey Regiment; served on Major-Gen. Gillmore's staff, and distinguished himself at the capture of Morris island and in the night assault on Fort Wagner, and was brevetted lieutenant colonel. Later he was made paymaster at Parole Camp, Columbus, Ohio. He was attached to the staff of Gov. Ward of New Jersey, and, April 12, 1867, was made brigadier general in the State Guard and adjutant general. In 1874 he was brevetted major general. He was admitted to practice at the bar in 1866. He was devoted to historical research, and published *Official Register of the Officers and Men of New Jersey in the Revolutionary War* (Trenton, 1872); *Roster of the New Jersey Volunteers in the Civil War* (1872); *Washington's Reception by the People of New Jersey in 1789* (1882); *Gen. Maxwell's Brigade of the New Jersey Continental Line* (1885); *The New Jersey Volunteers* (1887); *The Affair at Egg Harbor* (1894); *The Continental Army at the Crossing of the Delaware River* (1896); and *The Battles of Trenton and Princeton* (Boston, 1898).

Sullivan, Timothy, soldier, born in Cork, Ireland, April 14, 1820; died in Oswego, N. Y., April 21, 1900. About 1850 he removed to Oswego, where he had a shoe store. He was captain of the Oswego Guard thirteen years. When the civil war broke out he was commissioned colonel of the 24th New York Regiment. At the battles of Bull Run and South Mountain he was brigade commander, and he was made brigadier general for gallantry. Later he was detailed on recruiting service. He also served a year as president of the examining board of the 1st Army Corps.

Tasker, Stephen P. M., mechanical engineer, born in Philadelphia, Pa., Dec. 21, 1834; died there, March 19, 1900. In early youth he served in the pattern shop and drawing room of the firm of which his father was a member, and at the age of twenty-one he was taken into partnership. Under his supervision the Newcastle Iron Works were constructed. He perfected and patented several important mechanical inventions.

Tavares, Morton, actor, born in Kingston, Jamaica, in 1821; died there, June 15, 1900. He made his first appearance at the age of eleven with a company that visited his native place. A few years later he went to New York and secured an engagement under the name of Tavares Mor-

ton. He was for several years a useful member of stock companies in the United States and Canada, and finally he became one of William E. Burton's players in the Chambers Street Theater. During the civil war he was a member of Harry Crisp's company in the South. In 1870 he went to London, where he played at Sadler's Wells Theater. During this engagement he resumed the use of his real name. From London he went to Australia, where for twelve years he was a very successful actor and manager. His last appearance was in Kingston, where a few months before his death he played Shylock.

Taylor, George Yardley, a missionary of the Presbyterian Board, born in Taylorsville, Pa., May 18, 1862; killed in Paoting-Fu, Chi-Li province, China, June 30, 1900. Dr. Taylor was graduated at Princeton in 1882, and at the University of Pennsylvania, medical department, in 1885. He was sent to China, Nov. 15, 1886.

Thompson, Richard Wigginton, lawyer, born in Culpeper County, Virginia, June 9, 1809; died in Terre Haute, Ind., Feb. 9, 1900. In 1831 he removed to Louisville, Ky., where he became a clerk in a store. Later he went to Lawrence County, Indiana, where he was admitted to the bar in 1834. The same year he was elected to the Legislature, serving two terms. In 1836 he was elected to the State Senate. In 1840 he was an elector on the Harrison and Tyler ticket, and in 1841 was elected to Congress. In 1843 he began the practice of law in Terre Haute. In 1847 he was again elected to Congress. He was appointed minister to Austria in 1849, and later President Fillmore appointed him general solicitor of the Land Office, but he declined both places. During the civil war he was in charge of a recruiting post near Terre Haute, and was provost marshal of the district. In 1867 he was appointed judge of the Fifth Indiana Circuit, serving two years. He was also for one term collector of internal revenue. In 1877 he became Secretary of the Navy, but he retired in 1881, before the expiration of his term of office, to become chairman of the American committee of the Panama Canal Company. He published *The Papacy and the Civil Power* (New York, 1877); *The History of the Protective Tariff* (Chicago, 1888); *Footprints of the Jesuits* (New York and Boston, 1894); and *Recollections of Sixteen Presidents, from Washington to Lincoln* (2 vols., Indianapolis, 1894).

Tower, Zealous Bates, soldier, born in Cohasset, Mass., Jan. 12, 1819; died there, March 21, 1900. He was graduated at West Point in 1841, and entered the engineer corps as second lieutenant; was promoted first lieutenant, April 24, 1847; captain, July 1, 1855; major, Aug. 6, 1861; lieutenant colonel, Nov. 11, 1865; colonel, Jan. 13, 1874; and retired, Jan. 10, 1883. In the volunteer service he was commissioned brigadier general, Nov. 23, 1861; brevetted major general, June 12, 1865; and mustered out, Jan. 15, 1866. From 1843 till 1846 he was engaged in the construction of the defenses about Hampton Roads. As lieutenant he served with a battalion of engineers in the Mexican War, and was recommended for gallantry at Cerro Gordo, Contreras, and Chapultepec. From 1848 till 1861 he was employed in the construction of defenses on the Pacific coast. During the civil war he conducted the defense of Fort Pickens, Florida, Nov. 23, 1861, took part in the first battle of Bull Run, and also participated in the campaigns of Gens. Banks and Pope in northern Virginia. At the second battle of Bull Run he received a wound that incapacitated him for duty at the front, and he was brevetted major general for gallantry in that action. For a while in 1864

he was superintendent at West Point. He again went to the front, and took part in the battle of Nashville. After the war he was on duty in the regular army, for a time in the West and later in New York.

Tyler, Moses Coit, author and clergyman, born in Griswold, Conn., Aug. 2, 1835; died in Ithaca, N. Y., Dec. 28, 1900. He was graduated at Yale University in 1857, and studied theology at Yale and at Andover. He was pastor of the First Congregational Society, in Poughkeepsie, N. Y., in 1860-'62, and Professor of English in the University of Michigan in 1867-'81. In 1881 he was ordained deacon in the Episcopal Church, and two years later was admitted to priest's orders. He, however, never took up parochial duties, his time being devoted to teaching and to literary work. On leaving the University of Michigan he became Professor of American History at Cornell University, and he occupied that chair at the time of his death. The character of his work closely allied him to the best type of English clerical scholars. He had planned a complete history of American literary development on a very broad scale, but had published only four volumes of the work. His writing displays great charm of style, his admirable English being adorned with both wit and humor. His literary judgments are well weighed, while his fine sense of literary perspective is almost never at fault. His published books include *The Brawnville Papers* (Boston, 1867); *History of American Literature during the Colonial Period* (1878; revised, 1890); *Manual of English Literature* (1879); *Life of Patrick Henry* (1887); *Three Men of Letters* (1895); *The Literary History of the American Revolution* (1897); and *Glimpses of England: Social, Political, and Literary* (1898).

Van Lew, Elizabeth, postmistress and department clerk, born in Richmond, Va., in 1827; died there, Sept. 25, 1900. She was the daughter of John Van Lew, a wealthy New Yorker, who for many years was a hardware merchant in Richmond. She was a Union woman all through the civil war, and made use of her intimacy with the family of Jefferson Davis to secure much valuable information relative to the Confederate army, which she sent through the lines to the Federal authorities. March 19, 1869, she was appointed postmistress of Richmond by President Grant, and she was reappointed four years later, and held the office till May 19, 1877. In 1883 she was appointed to a clerkship in the third assistant postmaster general's department, which she held till 1887, when she resigned rather than accept a reduction to an inferior clerkship.

Villard, Henry, financier, born in Speyer, Rhenish Bavaria, April 11, 1835; died in Dobbs Ferry, N. Y., Nov. 11, 1900. He came to the United States in 1853, after studying in the schools in Zweibrucken, Speyer, and Phalsburg. His name was Heinrich Hilgard, his father being Gustav Hilgard, a judge of the Supreme Court in Munich. The father's opposition to his son's departure caused the latter to adopt the surname of a French schoolmate, and he became Henry Villard. He spent the winter of 1854-'55 on an uncle's farm in Belleville, Ill., where he contributed to the local papers. He next read law in Peoria, and then went to Chicago, where he became a newspaper correspondent. In 1858 he reported the Lincoln-Douglas debate for Eastern newspapers. In 1860 he attended the convention that nominated Abraham Lincoln, and in the campaign that followed was a correspondent of the New York Herald. During the civil war he achieved a wide reputation as a war correspondent, and for a time he conducted a correspondent's bureau in Wash-

ington. In 1866 he was sent by the New York Tribune to report the Austro-Prussian War, but was too late in the field. He remained abroad to report the Paris Exposition of 1867. Before going abroad he married a daughter of William Lloyd Garrison. From 1868 till 1871 he was secretary of the Social Science Association in Boston. He resigned in 1871 to travel in Germany. He returned to this country in 1873, and bought for the German bondholders the property of the Oregon and California Railroad Company and the Oregon Steamship Company. He also became a member of a Frankfort committee of Kansas Pacific Railroad bondholders, and in 1875, with C. S. Greeley, of St. Louis, became receiver of the property. By means of a so-called blind pool of \$20,000,000 he formed the Oregon and Transcontinental, which acquired control of the Oregon Railway and Navigation Company and the Northern Pacific, and in September, 1881, he was elected president of the Northern Pacific. In 1884 the companies in which he was interested became so involved that there was a collapse, in which he suffered heavily. Mr. Villard returned to Germany, where he formed new financial relations which enabled him to repair his fortunes, and in three years came back to the United States. In October, 1889, he became chairman of the Board of Directors of the Northern Pacific, which place he held until the panic of 1893. He gave aid to Edison, the inventor, and in 1890 he purchased from the latter the Edison Lamp Company of Newark and the Edison Machine Works at Schenectady, from which he organized the Edison General Electric Company, serving as its president for two years. In 1881 he purchased a controlling interest in the Evening Post and the Nation, and placed Edwin L. Godkin and Horace White at their head. Mr. Villard made many gifts to educational and charitable institutions.

Vincent, James, actor, born in Dublin, Ireland, in 1846; died in Brooklyn, N. Y., Aug. 12, 1900. He made his first appearance at the old Olympic Theater, New York, Jan. 2, 1874, and was for several years a member of the vaudeville company which occupied that house. June 6, 1879, at the Lyceum Theater, New York, he began a long engagement with Rice's *Evangeline*, in which he played King Boorobola Gah. Oct. 12, 1880, he began an engagement with Henry Jarrett's company, playing *Cinderella* at Booth's Theater, New York. In the season of 1884-'85 he was a member of H. C. Miner's *Silver King* company. From 1886 to 1890 he supported Pat Rooney in the latter's plays, and for the later years he was a member of Andrew Mack's company. His last appearance was in the rôle of Andy McCue in *The Rebel*, at Providence, May 19, 1900.

Wallace, Robert B., soldier, born in Illinois; died at Fort Huachuca, Arizona, March 13, 1900. He was graduated at West Point, June 12, 1890, and assigned to the 2d Cavalry as second lieutenant; promoted first lieutenant, Jan. 4, 1897. In the war with Spain he assisted in the organization of the 1st Montana Volunteers, was commissioned lieutenant colonel of that regiment, and accompanied it to the Philippines. He was severely wounded in the action at Calocan, Feb. 10, 1899. He was made brevet colonel of volunteers and brevet captain and major, United States army, for services at the battles in front of Manila, Feb. 5 and 10, 1899, and at the crossing of the Rio Grande de la Pampagna, April 27, 1899. Later he was appointed colonel of the 37th Regiment, United States Volunteer Infantry, which he commanded till Sept. 25, 1899, when he was compelled to return to the United States on sick leave.

Walworth, Clarence Alphonsus, clergyman, born in Plattsburg, N. Y., May 30, 1820; died in Albany, N. Y., Sept. 19, 1900. He was the eldest son of Chancellor Walworth, and was graduated at Union College in 1838. After studying law he practiced his profession in Rochester a few years, and then entered the General Theological Seminary of the Episcopal Church in New York city, but before completing his studies he became a Roman Catholic and entered the order of Redemptorists. He studied for the priesthood in Belgium, and then, after two years of church work in England, he returned to the United States. With Father Hecker and others he founded the order of Paulists in 1858. He was subsequently transferred to the secular priesthood, and after serving for a short time as pastor of Saint Peter's Church, Troy, N. Y., assumed in 1868 the charge of Saint Mary's Church, Albany, and was its pastor at the time of his death. He was active in the temperance cause, was a practical geologist, and was especially well versed in the geology of his native State. He published *The Gentle Skeptic*, *The Doctrine of Hell*, and *Andiatorocte* (1888).

Warner, Charles Dudley, author, born in Plainfield, Mass., Sept. 12, 1829; died in Hartford, Conn., Oct. 20, 1900. His father, Justus Warner, who was of Puritan stock and a man of culture, died when Charles was four years of age. Charles inherited his father's taste for literature, but in his early boyhood he had access only to Calvinistic treatises, biblical commentaries, and the biographies of austere divines. At the age of twelve he became a member of his uncle's household at Cazenovia,

Madison County, N. Y., and there he pursued his classical studies until he entered Hamilton College, Clinton, N. Y., at which institution he was graduated in 1851, having won the first prize in English. While an undergraduate he had contributed to *The Knickerbocker* and *Putnam's Magazine*. Shortly after leaving college he prepared *A Book of Eloquence*, a compilation for the use of school children, which displayed his keen critical judgment. Although his inclinations were toward a literary career, he spent a year, 1853-'54, with a surveying party on the Missouri frontier. On his return to the East he entered the law school of the University of Pennsylvania, where he was graduated in 1856, and began the practice of his profession in Chicago. He married in that year Susan, daughter of William Eliot Lee, of New York, who survives him. In 1860, at the solicitation of Gen. Joseph R. Hawley, who had known him at school and college, Mr. Warner took up his residence in Hartford, Conn., to aid in the publication of the *Press*, a Republican evening newspaper. When Gen. Hawley went to the front in the following year Mr. Warner assumed control of the paper. In 1867 the press was consolidated with the *Courant*, a morning journal, of which Mr. Warner became part owner. He had traveled extensively in this country when, in 1868, he first went to Europe, remaining there for fourteen months. His bright and entertaining letters to the *Courant* won instant success, and were widely quoted. Mr. Warner's writings as a tourist are among his most popular works. He spent a large part

of his life in wanderings through the United States, Mexico, Europe, and the Orient, and his keenness of observation, charm of style, and ever-present humor will give his books of travel a permanent place in their class. My Summer in a Garden, the book that first brought fame to Mr. Warner, appeared in 1870. It was made up of a series of papers that had appeared in the *Courant*, and the public at once recognized the fascination of its gentle humor and sane philosophy. In 1877 Mr. Warner's *Being a Boy*, a realistic and amusing picture of rural life in a Calvinistic New England community, was published, and added much to the reputation that he had already won from his *My Summer in a Garden* and *Backlog Studies*, published in 1872. In 1884 Mr. Warner became co-editor of *Harper's Magazine*, and for many years he conducted the *Editor's Drawer*, a department of the magazine, and was for a time in charge of the *Editor's Study*. Several of his books were published serially in the magazine, and he was a frequent contributor of essays, stories, and sketches of travel. Mr. Warner's was a many-sided nature, his points of contrast with life being more numerous than is usual with the professional man of letters. The late George William Curtis, referring to American authors, asks: "Shall they be stoled priests ministering always at the high altar, with their gorgeous backs to the people, or apostles going into many lands and homes, bearing gifts of healing for the sorrows and wants of to-day?" For the relief of these sorrows and wants Mr. Warner strove not only in words, but in deeds. The education of the Southern negro and the reform of abuses in our prisons were incentives to much of the activity of his latter years. The reader of Mr. Warner's works can not fail to be impressed by the author's common sense, a misnamed quality that served him well in his untiring endeavors as a social scientist. Bookish and scholarly although he was, he was also a practical man of affairs, as is proved by the many places of honor and trust that he occupied. Mr. Warner was a vice-president of the Egypt Exploration Fund of England, a member of the Park Board of Hartford, Conn., one of the Connecticut Commission on Sculpture, and a trustee of the Wadsworth Athenæum. He was a member of the *Century*, the *Authors'*, and the *Players' Clubs* of New York, the *Authors'* and the *Tavern Clubs* of Boston, and the *Colonial Club* of Hartford. He was a vice-president of the National Prison Congress, and president of the American Social Science Association. He received the degree of A. M. from Yale in 1872, and from Dartmouth and Hamilton in 1884. Hamilton gave him the degree of L. H. D. in 1886, and Princeton conferred the same degree in 1896. He received the degree of D. C. L. from the University of the South in 1889. The list of Mr. Warner's published works is as follows: *A Book of Eloquence* (1853); *My Summer in a Garden* (1870); *Saunterings* (1872); *Backlog Studies* (1872); *The Gilded Age* (with S. L. Clemens, 1873); *Baddeck*, and *That Sort of Thing* (1874); *Mummies and Moslems* (1876; reissued under the title *My Winter on the Nile*); *In the Levant* (1877); *Being a Boy* (1877); *In the Wilderness* (1878); *The American Newspaper* (1879); *Studies of Irving* (with W. C. Bryant and George P. Putnam, 1880); *Life of Washington Irving* (1881); edited *American Men of Letters*, of which his Irving was the initial volume; *Captain John Smith*, Sometime Governor of Virginia and Admiral of New England: A Study of his Life and Writings (1881); *A Roundabout Journey* (1883); *Papers on Penology* (with

others; Reformatory Press, Elmira, N. Y., 1886); *Their Pilgrimage* (1886); *On Horseback: A Tour in Virginia, North Carolina, and Tennessee*, Published with *Notes of Travel in Mexico and California* (1888); *Studies in the South and West, with Comments on Canada* (1889); *A Little Journey in the World: A Novel* (1889); *Looking Forward: The Dual Government Realized* (1890); *Our Italy, Southern California* (1890); *As We Were Saying* (1891); *Washington Irving* (1892); *The Work of Washington Irving* (1893); *As We Go* (1893); *The Golden House: A Novel* (1894); *The Relation of Literature to Life* (1896); and *The People for Whom Shakespeare Wrote* (1897). He edited *A Library of the World's Best Literature* (1896-'98).

Watson, James Madison, author, born in Onondaga Hill, N. Y., Feb. 8, 1827; died in Elizabeth, N. J., Sept. 29, 1900. At the age of sixteen he was teaching in a district school in Oswego County, New York. He gave up teaching to study law, and in 1853 was admitted to the bar at Albany, N. Y. Later he became connected with the publishing house of A. S. Barnes & Co., and was the author of many of their school text-books. Among his published works are a notable series of readers, with Richard Green Parker (1858); *The Complete Speller* (1878); *Handbook of Calisthenics and Gymnastics* (1879); and *The Graphic Speller* (1884).

Wells, Henry Horatio, lawyer, born in Rochester, N. Y., Sept. 17, 1823; died in Palmyra, N. Y., Feb. 12, 1900. He was educated at Romeo Academy, Michigan, studied law in Detroit, and was admitted to the bar in 1846. From 1854 till 1856 he was a member of the Michigan Legislature. In September, 1862, he became colonel of the 26th Michigan Regiment. In February, 1863, he was made provost marshal general of the defenses south of the Potomac, which office he held till the close of the war. In May, 1865, he was brevetted brigadier general of volunteers. After the assassination of President Lincoln he took part in the investigation that preceded the capture of the conspirators, and was associate counsel in the proceedings against Jefferson Davis for treason. Late in 1865 he settled in Richmond, and, April 16, 1868, was appointed Provisional Governor of Virginia. In 1869 he was defeated as the Republican candidate for Governor of the State under its new Constitution. In 1871-'72 he was United States attorney for the eastern district of Virginia, and from 1875 till 1880 was United States attorney for the District of Columbia.

Westlake, William, inventor, born in Cornwall, England, in 1831; died in Brooklyn, N. Y., Dec. 28, 1900. He came to the United States in 1847, and worked as a roller boy in the office of *The Evening Wisconsin*, Milwaukee. Later he served an apprenticeship as a tinsmith. He was employed by Capt. Ericsson to make the patterns and models for his first hot-air engine. Later he entered the employ of the La Crosse and Milwaukee Railroad Company, and there began the series of inventions that made him famous. These include the Westlake car heater, which dumps the fire in case of accident; the globe lantern, patented in 1862; the oil cook stove in 1865; and the stove board in 1869. The first practical car lamp was perfected by him in 1873. He retired with a competency in 1883, from which time he lived in Brooklyn; while in retirement he invented several articles of general utility.

Willey, Waitman T., lawyer, born in Monongalia County, West Virginia, Oct. 18, 1811; died in Morgantown, W. Va., May 2, 1900. He was graduated at Madison College in 1831, and was

admitted to the bar in 1833. In 1841 he was made clerk of the county court of Monongalia County, and later was clerk of the circuit court. In 1850 he was a member of the Virginia Constitutional Convention. He was a delegate to the State convention that met in Richmond in February, 1861, and after the adoption of the ordinance of secession, he was elected to the Unionist Legislature at Wheeling. He was a member of the convention that decided to create the State of West Virginia, and was chosen to represent that State in the United States Senate, taking his seat Dec. 3, 1863; in the following year he was re-elected. He served on the Committees on Naval Affairs, the District of Columbia, and Engrossed Bills, and was chairman of the Committee on Patents and the Patent Office. The degree of LL. D. was conferred on him by Allegheny College in 1863.

Williams, George L., a missionary of the American Board, born in Southington, Conn., Oct. 4, 1858; killed in Taku, Shensi province, China, July 31, 1900. He was graduated at Oberlin College in 1888, and at the Theological Seminary in 1891, and went to China July 29 of the same year.

Williams, Thomas A., botanist, born in Fremont County, Iowa, Nov. 25, 1865; died in Takoma Park, D. C., Dec. 23, 1900. He was graduated at the University of Nebraska in 1889, and became a teacher. In February, 1891, he was appointed assistant botanist in the Agricultural College of South Dakota; he was promoted head of the botanical department, and remained there as Professor of Botany six years. In August, 1896, he was made assistant chief in the division of agrostology of the United States Department of Agriculture, which place he held at his death. In addition to his department work he had charge of the classes in botany at Columbian University. In 1899 he became editor in chief of the *Asa Gray Bulletin*. He was the author of many articles on botany and horticulture.

Wilmer, Richard Hooker, clergyman, born in Alexandria, Va., March 15, 1816; died in Spring Hill, Ala., June 14, 1900. He was graduated at Yale University in 1836, and studied for the Episcopal ministry, being admitted to the priesthood in 1840. Until his elevation to the episcopate he was rector of the following Virginia parishes successively: St. Paul's, Goochland County, and St. John's, Fluvanna County, 1830-'43; Grace and Wickliffe, Clark County, 1844-'49; Emmanuel, Loudon County, and Trinity, Fauquier County, 1850-'53; St. Stephen's and Trinity, Bedford County, 1855-'58; Emmanuel, Henrico County, 1858-'62. He was consecrated Bishop of Alabama in March, 1862, but as his election and consecration took place during the civil war, when the Southern dioceses were organized as a separate church, he was received into the episcopate of the Church in the United States in 1865 only after signing an equivalent to the promise of conformity prescribed in the ordinal. When Gen. Thomas issued an order closing all churches in Alabama till Bishop Wilmer should direct the use of the prayer for the President of the United States, the bishop protested that this was secular interference with religious liberty, and declared that he would never use the prayer till the interference ceased. He appealed to higher authorities in turn, including the President of the United States, and finally secured a revocation of the order. The matter, as he contended, was not a question of his loyalty or disloyalty, but concerned the larger issue of religious liberty. He published *The Recent Past from a Southern Standpoint* (1887) and a *Guide-book for Young Churchmen*.

Wilson, George Washington, lawyer, born in Preble County, Ohio, Sept. 13, 1843; died in Washington, D. C., Nov. 27, 1900. He enlisted as a private in the 54th Ohio Volunteers in 1861, served through the war, and was mustered out as first lieutenant. In 1866 he was admitted to the bar and began practice. He served two terms as prosecuting attorney of Madison County, one term in the lower house of the Ohio Legislature, and one in the State Senate. From 1869 till his death he was engaged in the internal revenue service in various capacities; in 1869 he was made gauger for the third district of Ohio; in 1889 he was appointed deputy commissioner for the United States, and in January, 1899, he was appointed commissioner of internal revenue.

Wilson, John Wall, naval officer, born in 1832; died in Brooklyn, N. Y., Aug. 21, 1900. He was graduated at Annapolis and entered the navy. In 1853 he joined the Kane arctic expedition for the relief of Sir John Franklin. He was navigator of the expedition, and after their ship, the *Advance*, had been beached in Kane Basin, he led a detached expedition into the interior of Greenland. The cold was so severe that he lost part of one foot. The *Advance* was crushed by an iceberg, and the party returned to the open sea in small boats. He served through the civil war, and took part in the capture of New Orleans. At the close of the war he resigned from the navy, and engaged in commercial pursuits.

Wilson, William Lyne, educator, born in Jefferson County, Virginia, May 3, 1843; died in Lexington, Va., Oct. 17, 1900. He was graduated at Columbian College in 1860, and took a post-graduate course at the University of Virginia. In the civil war he served as a private in the 12th Virginia Cavalry. From 1865 till 1871 he was Professor of Ancient Languages in Columbian College, and at the same time studied law. He was admitted to the bar in 1867. When the test oath for lawyers was abolished in West Virginia, he entered upon practice in Charlestown. He was a delegate to the Democratic National Convention in 1880, and in the same year was elector at large for West Virginia. In September, 1882, he was elected president of the University of West Virginia, and in the same month he was elected to Congress. He resigned the presidency of the university in June, 1883. He was re-elected to Congress five times in succession, but was defeated in 1894. He was a member of the Committee of Ways and Means in 1888, during the agitation over the Mills tariff bill, and took part in the debate on that measure. When the Democrats regained control of the House of Representatives in 1893 he was made chairman of the Committee of Ways and Means, and as such was responsible for the tariff bill that became a law in 1894. In 1895 he was appointed Postmaster-General, serving two years. In July, 1897, he became president of Washington and Lee University, and he held that office at the time of his death. Mr. Wilson also served from 1884 till 1887 as a regent of the Smithsonian Institution. He received the degree of LL. D. from Columbian University in 1883, and from Hampden Sidney College in 1886.

Wing, Josiah Norris, librarian, born in Bedford County, Virginia, Sept. 29, 1848; died in New York city, Dec. 20, 1900. His father, a native of Maine, was a bridge builder, and constructed some of the finest bridges in the South. He was a Union man, and after the siege of Knoxville (in the winter of 1863-'64) he removed to New York city. There the son was prepared for college, but instead of entering he became a clerk in the Mercantile Library, where he rose by promotion to

the place of assistant librarian, and where he spent thirteen years. At the end of that time he entered the house of Charles Scribner's Sons as an expert at the head

of the library department. Here he carried on an extensive system of correspondence with the managers of small libraries in all parts of the country, who constantly sought his advice as to the choice and purchase of books. His knowledge of books was extensive, intimate, and accurate, not of the titles only, but of the character and contents as well, and of their rank as authorities. On one occasion the proprietor of a large publishing house told him that a customer had asked for the best books on a certain subject, but neither he nor any of his clerks could tell what they were or where they were to be had. Mr. Wing immediately gave the titles of the books required, and added, "You published them yourself, in such and such a year," mentioning the exact dates. In May, 1890, he was appointed chief librarian of the Free Circulating Libraries of New York city. He was a founder of the Booksellers' League, and was active in the work of the Good Government clubs and the Citizens' Union. He lived and died in the house that was the home of Mrs. Parton (Fanny Fern) in her last years.

Wingard, Henry S., theologian, born in 1844; died in Springfield, Ga., Dec. 1, 1899. He was educated at Newberry, S. C., and labored for many years in various Lutheran parishes in South Carolina and Georgia. Newberry College conferred on him the degree of D. D. He was a contributor to the Church periodicals and held many places of honor and trust in the synods to which he belonged. At the time of his death he was vice-president of the United Synod of the South and president of the Board of Directors of the Lutheran Theological Seminary at Mount Pleasant, Charleston, S. C.

Wise, Isaac Mayer, rabbi, born in Steingrub, Bohemia, April 3, 1819; died in Cincinnati, Ohio, March 26, 1900. He was graduated at the University of Prague and at the Jewish Theological Seminary there, and took charge of a congregation in Radnitz, Bohemia. He came to the United States in 1846. His first charge was the Congregation Beth El, at Albany, N. Y. He also opened a school in that city for the purpose of Americanizing the Jews. He attempted to reform Judaism, and, on account of his utterances, was compelled by the orthodox element to withdraw from his Albany charge. He then founded an independent congregation. In April, 1854, he removed to Cincinnati to take charge of the Congregation B'nai Jeshurun, which place he held until his death. In July, 1854, he established the Israelite, now called the American Israelite, a weekly paper, and in 1855 *Die Deborah*, a German weekly. In 1873 he was largely instrumental in the organization of the Union of American Hebrew Congregations. He established the Hebrew Union College, from which the first class was graduated in 1883. After many vain efforts to establish a synod, he finally succeeded in 1889 in organizing the Central Conference of American Rabbis, which meets annually. He served six years on

the Cincinnati school board. His published works include *Combat of the People*; *First of the Maccabees*; *History of the Jews of the First Commonwealth*; *Essence of Judaism* (1860); *Prayer-book and Book of Hymns* (1868); *Origin of Christianity* (1870); *Judaism, its Doctrines and Duties* (1872); *The Martyrdom of Jesus of Nazareth* (1874); *The Cosmic God* (1876); *The History of the Hebrews' Second Commonwealth* (1880); *Moses, the Man and the Statesman* (1883); *Judaism and Christianity: Their Agreements and Disagreements* (1883); *A Defense of Judaism versus Proselytizing Christianity* (1889); and *Pronaos to Holy Writ* (1891).

Wittenmyer, Annie (Turner), reformer, born in Sandy Springs, Ohio, Aug. 26, 1827; died in Sanatoga, Pa., Feb. 2, 1900. She was the daughter of John G. Turner, and in 1847 married William Wittenmyer. In 1850 she removed to Keokuk, Iowa, where she engaged in charity work and opened a free school. When the civil war broke out she became Iowa's volunteer agent to distribute supplies, and she was the first sanitary agent of the State elected by its Legislature. She was under fire at Pittsburg Landing and Vicksburg. She introduced a special diet kitchen in army hospitals, for which she was commended by President Lincoln. In 1863 she established the Soldiers' Orphans' Home in Davenport, Iowa, and later was a promoter of the Pennsylvania Memorial Home for Soldiers. She was the first president of the Woman's Christian Temperance Union, and also a prominent member of the Woman's Relief Corps. She was the founder of the Christian Woman, and also the Christian Child, and served for a time as associate editor of *Home and Country*. She published *Handbook of the Woman's National Christian Temperance Union* (1878); *History of the Woman's Christian Temperance Crusade* (1882); *Women of the Reformation* (1885); and *Under the Guns* (1895).

Wolcott, Roger, lawyer, born in Boston, Mass., July 13, 1847; died there, Dec. 21, 1900. He was a great-grandson of Oliver Wolcott, one of the signers of the Declaration of Independence and a Governor of Connecticut. He was graduated at Harvard University in 1870, being the orator of his class, and at Harvard Law School in 1874. The same year he was admitted to the bar. He practiced law but little, his time being chiefly occupied with his duties as trustee of various estates. He was a member of the city council from 1877 till 1879. In 1882 he was elected to the Legislature, serving three terms, and there he won distinction both for his constructive ability and his oratorical talents. He was a Republican in politics, but in 1884 he supported the nomination of Grover Cleveland for the presidency. In 1885, however, he was recognized by the Boston Republicans and sent as a delegate to the State convention. From 1893 till 1896 he was Lieutenant Governor of Massachusetts, and he became Governor after the death of Gov. Greenhalge, March 5, 1896. In November, 1896, he was elected Governor, and in 1897 and 1898 was re-elected. In 1899 he was offered the ambassadorship to Italy, but declined it. He was the first president of the Massachusetts Republican Club, an overseer of Harvard University, and a trustee of the Massachusetts General Hospital. He received the degree of LL. D. from Williams College. See portrait in the *Annual Cyclopædia* for 1897, page 501.

Wood, Benjamin, journalist, born in Shelbyville, Ky., Oct. 13, 1820; died in New York city, Feb. 21, 1900. He received a common-school education. When a young man he shipped as a sailor

and led an adventurous life till he finally settled in business in New York city. In a few years he accumulated a fortune. In the presidential campaign of 1860 he bought the New York Daily News, and used it in support of Stephen A. Douglas. Mr. Wood was elected to Congress in 1860 and 1862. He was what was termed a Copperhead, and as such was offensive to the Union men. The issue of the Daily News was suppressed by the Federal authorities from December, 1861, till May, 1863. In 1866 he was elected to the New York State Senate. In 1880 he was again elected to Congress. In April, 1867, he changed the Daily News from a morning to an evening paper, and in 1870 he began the German Daily News, and in 1872 the German Sunday News. These papers had a long career of prosperity. In November, 1898, he sold his stock to his wife, but continued to perform the duties of editor in chief till a week before his death.

Young, Alfred, clergyman, born in Bristol, England, in 1831; died in New York city, April 4, 1900. He was graduated at Princeton College in 1848, and at the medical department of the University of New York in 1852. In 1850 he embraced the Roman Catholic faith. He practiced medicine for a year, and in 1853 went to Paris, where he studied for the priesthood at the Seminary of St. Sulpice. He was ordained a priest in St. Patrick's Cathedral, Newark, N. J., Aug. 24, 1856. In 1857 he was vice-president of Seton Hall College; he was afterward rector of the Roman Catholic Church at Princeton, and later at Trenton. In 1861 he was received as a member of the newly founded Paulist community, and became a missionary of great zeal. He was a musician, and composed many devotional hymns; he was enthusiastic in restoring the Gregorian chant for the entire services of the Roman Catholic Church, and trained a choir of men and boys to render it in the Church of St. Paul the Apostle in New York city. He was the author of *The Complete Sodality Hymn Book* (New York, 1863); *The Office of Vespers* (1869); *The Catholic Hymnal* (1884); *Carols for a Merry Christmas and a Joyous Easter* (2 vols., 1885-'86); *Catholic Hymns and Canticles* (1888); and *Catholic and Protestant Countries Compared* (1895).

OBITUARIES, FOREIGN. **Acland, Sir Henry**, an English sanitarian, born in 1815; died in Oxford, Oct. 16, 1900. He was a younger son of a baronet of ancient family, and was sent to Harrow and Christ Church, Oxford, where he took the degree of doctor of medicine in 1840. He was elected a fellow of All Souls, was reader in anatomy at Christ Church from 1845 to 1854, and in conjunction with Prof. Beale gathered the collection of physiological studies that now forms part of the university museum which he and Dean Liddell brought into existence. When the School of Natural Science was founded he was chosen an examiner, an easy office until the study of science took root in Oxford. In 1857 he succeeded Dr. Ogle in the medical professorships of the university, the clinical and the regius. He was also Radcliffe librarian and curator of the Bodleian Library and of the university galleries, being himself an artist. As an expert in sanitary science he was appointed a member of the Royal Sanitary Commission in 1869, having previously worked on the Cubic Space Commission. In the British Medical Association, the Social Science Congress, and the British Association he took a prominent part. He accompanied the Prince of Wales on his visit to America, and was president of the General Medical Council in 1874-'87. He published a tract on Village Health, and con-

tributed many articles to the press on hygienic and sanitary questions. He took an active interest in sending female physicians to India, in the public health of Egypt, and in medical missions in Asia and Africa.

Adenis de Colombeau, Jules, a French dramatist, born in Paris, June 28, 1823; died there in 1900. He was educated at the Collège Bourbon, and entered upon a mercantile career, which he soon abandoned for dramatic writing. His first work was a piece in one act, *Le Fils du Bonnetier*, played at the Théâtre Comté, Paris, in 1841. He wrote generally in collaboration with others, and the titles of his principal works are: *Une Nuit Orageuse*, first played at the Vaudeville, Paris, Sept. 18, 1852; *Ne Touchez pas à la Hache*, *Folies-Dramatiques*, April 15, 1854; *O! le Meilleur des Pères*, *Variétés*, June 23, 1854; *Philanthropie et Repentir*, *Variétés*, April 25, 1855; *Trop Beau pour Rien Faire*, *Bouffes*, Feb. 9, 1856; *Une Femme qui n'y est pas*, *May*, 3, 1856; *Une Bonne pour Tout Faire*, *Déjazet*, March 16, 1860; *La Bouquetière de Trianon*, *Théâtre St. Germain*, Nov. 24, 1864; *La Folie Fille de Perth*, *Théâtre Lyrique*, Dec. 26, 1867; *L'Officier de Fortune*, *Ambigu*, Sept. 11, 1874; and *La Fée des Bruyères*, *Alcazar*, Brussels, Feb. 27, 1878. He was also author of several novels.

Adye, Sir John Miller, a British soldier, born in 1819; died in Rothbury, Northumberland, Aug. 26, 1900. His father and grandfather were officers of artillery, and he was sent to Woolwich at an early age, and entered the corps of royal artillery in 1836. In 1843 he was appointed adjutant at Dublin. In 1848, when in command of the artillery detachment at the Tower, he prepared for a Chartist uprising in London. He was brigade major in the Crimean War, and when Gen. Gator's health failed it fell to him to discuss artillery maneuvers with Lord Raglan. He was promoted major, and took part in the battles of Alma, Balaklava, and Inkerman, and in the siege of Sebastopol. On the outbreak of the Indian mutiny in 1857 he went out as assistant adjutant general, saw plenty of fighting, and when it was over he remained nine years, commanded the artillery in Bombay, was in active service on the Afghan frontier and in the Bhutan campaign, and in the intervals of warfare enjoyed the sports of India. He was appointed director of artillery at the War Office four years after his return to England, was associated with the changes in administration and the conditions of service made by Lord Cardwell, received the order of knighthood in 1873, and in 1875 was made governor of the Woolwich Academy. In 1880 Mr. Gladstone appointed him surveyor general of ordnance. In 1882 he left the War Office to serve as chief of staff in Sir Garnet Wolseley's Egyptian expedition, the success of which was partly due to his assistance. After filling the post of Governor of Gibraltar for four years, he retired from active service. He published accounts of some of the campaigns in which he had a part, also a volume on Indian frontier policy, and in the leisure of his later years he produced a book of *Recollections of a Military Life*.

Ahmed ben Musa, Grand Vizier of Morocco, died May 13, 1900. His father was a Grand Vizier, and he himself in the reign of Mulai el Hassan held the post of Lord Chamberlain while Sid el Haj Amaati was Vizier. He had freer access to the Sultan at all times than the Vizier. When the Sultan died while on an expedition against revolted tribes, he and a few slaves knew of the death, and he brought the corpse back to the coast in a closed palanquin, issuing orders to the

army in the Sultan's name as though he were still alive and sending messengers ahead with sealed letters containing directions in accordance with which Mulai Abdul Aziz (a boy of fourteen) was proclaimed Sultan at Rabat. The Grand Vizier and his brother, the Minister of War, and the high court officials who were their creatures were cast into dungeons before the new Sultan reached Fez, and their property was confiscated. Sid Ahmed had himself proclaimed Grand Vizier, filled the chief offices with members of his own family, and till the day of his death was the ruler of Morocco, a masterful and cruel ruler, who kept the wild tribes in order with an iron hand. The Rahannas were exterminated, an army was quartered on the semi-independent tribes of Sus, and the peaceful agricultural tribes suffered nearly as much from the ceaseless extortions of the Grand Vizier, who diverted to his own coffers the moneys collected for the imperial treasury, and bought house property and built himself palaces almost as grand as the Sultan's own in every city of Morocco. Gifts of money were the price of every favor or consideration at his hands, and whoever ceased to bring gold lost his position and influence if not his life as well.

Ahmed Djevad Pasha, a Turkish statesman, born in 1848; died in August, 1900. He entered the cadet school at Kuleli at the age of ten, passed into the military academy at Pancaldi in 1864, and on his graduation in 1869 was appointed adjutant to the Sultan Abdul Aziz. He acquired a reputation as a military writer by publishing a history of the Turkish military system. In the Russo-Turkish War of 1877 he had charge of the fortification of Shumla, and on receiving promotion to lieutenant colonel was made chief of staff at that station. He was a member of the Frontier Delimitation Commission after the peace, was advanced to the grade of brigadier general in 1884, and was appointed Turkish plenipotentiary to Montenegro, where he remained over four years and contributed a great deal to the improvement of relations with the principality. He was recalled to take the post of a military inspector. When the Cretan insurrection began he was appointed chief of staff to the troops dispatched to the island, and was made Provisional Governor of Crete. He succeeded in re-establishing order, and was made Mushir in 1890. From this post he was called by the Sultan in September, 1891, to the office of Grand Vizier. His vizierate lasted till June, 1895. He was regarded as a man of progress, and an admirable diplomatist. He failed, however, to prevent the interference of the powers in the Armenian question, and when they had presented their demands for radical reforms he was unable to induce the Sultan to yield. The murder of the English and Russian consuls by Bedouins near Jeddah in Arabia made a change of viziers necessary, and he gave up his post to Said Pasha. When, in 1897, the last Cretan insurrection broke out he was again appointed to command the Turkish troops in Crete, but was restrained from putting down the rebellion by the intervening powers. Later he commanded a corps in Damascus.

Albert, John, a German violinist, born in Kiel, June 24, 1800; died in Philadelphia, Pa., Jan. 2, 1900. He was in his early years a violinist and organist of high repute among European concert performers. His fondness for mechanics led him eventually to become a maker of violins, and gave him the name of the American Stradivarius. He came to the United States at the time of the civil war, and discovered by accident that certain American woods are the best in the world for

violins. He settled in Philadelphia, where he remained until his death. His instruments are much prized.

Althaus, Julius, an English neurologist, born in Detmold, Germany, in 1833; died in London, England, June 11, 1900. He was the son of a clergyman of the Reformed Church, was sent to the University of Bonn, and subsequently studied medicine at Göttingen, Heidelberg, and Berlin. He settled in London, adopting the treatment of nervous diseases as his specialty, and becoming in 1860 a member of the Royal College of Physicians. In 1866 he founded the Regent's Park Hospital for Epilepsy and Paralysis. He was the acknowledged authority in England on the use of electricity in medical treatment, and his fame as a neurologist was world-wide. He wrote extensively on professional subjects, many of his books being translated into French, German, and Italian. A partial list of his writings includes *The Spas of Europe* (London, 1872); *The Value of Galvanism in the Treatment of Paralysis, Neuralgia, and other Affections* (3d ed., 1864); *Epilepsy, Hysteria, and Ataxy* (1866); *Electrolytic Treatment of Tumors and other Surgical Diseases* (1867); *Galvanism and Electro-magnetism in Medical Surgery* (1868); *Treatise on Medical Electricity* (1869); *Diseases of the Nervous System* (1877); *Infantile Paralysis and some Allied Diseases of the Spinal Cord* (1878); *The Functions of the Brain* (1880); *Sclerosis of the Spinal Cord* (1884); *Tinnitus Aurium: Its Treatment by Electricity* (1887); *Failure of Brain Power* (5th ed., 1898); *The Value of Electrical Treatment* (1895); *Influenza*.

Anderson, John, a Scottish scientist, born in Edinburgh, Oct. 4, 1833; died in Buxton, England, in August, 1900. He was educated at Edinburgh University, taking the degree of M. D. in 1861, and winning a gold medal for his thesis *Observations in Zoölogy*. He was Professor of Natural Science at the Free Church College, 1863-'64, and Professor of Comparative Anatomy in the Medical College, Calcutta, 1864-'86. He twice accompanied expeditions to western China in the capacity of scientific officer, and in 1881 was sent to investigate the marine zoölogy of the Mergui Archipelago. He retired from the Government service in India in 1897. His published works embrace *A Report on the Expedition to Western China via Bhamò* (1871); *Mandalay to Momien; Anatomical and Zoölogical Researches* (1878); *Catalogue of the Mammalia in the Indian Museum* (1879); *Handbook to the Archæological Collection of the Indian Museum* (1881-'82); *Fauna of Mergui and its Archipelago* (1889); *English Intercourse with Siam in the Seventeenth Century* (1890); *Herpetology of Arabia* (1890); and *Zoölogy of Egypt, Part First, Reptilia and Batrachia* (1898).

Argyll, George Douglas Campbell, Duke of, born April 30, 1823; died at Inverary Castle, April 24, 1900. His father, the seventh duke, who succeeded his elder brother, took his seat in the House of Lords as a Moderate Conservative supporter of Sir Robert Peel, breaking with the tradition of the Campbells, for MacCallum More, the chief of the clan, had till then been party chief of the Scottish Whigs also. Without the training of the public school or a university education, but well read and with many intellectual accomplishments and a strong bent for dialectics, he came out in support of the Church of Scotland in its contest with the civil power by printing a pamphlet entitled *A Letter to the Peers by a Peer's Son*, in 1842, followed by others in which he developed a vigorous controversial style, and

evinced thus early his proud independence of character by taking a ground opposed to the opinions of his family. The very title of the first pamphlet revealed as the author Lord Lorne, the heir of the Campbells. His moral independence led him to become a communicant for a season of the Episcopalian Church, because he disapproved of disruption, and would not follow his friends into the Free Kirk that they founded. A Presbyterian he was, however, by nature as much as by birth and environment, and he returned to the Kirk of Scotland and drew a fulmination of the Bishop of Glasgow upon his head by his arraignment of the Scotch Episcopalians of the Stuart period in a book called *Presbytery Examined*. He succeeded to the titles and estates of the main branch of the Campbells on the death of his father, in 1848. On taking his seat in the House of Lords he gave an independent support to Lord John Russell, and gradually renewed the connection of his family with the Whigs. His first speech was in support of the bill removing Jewish disabilities. He spoke frequently on Scotch subjects, and on ecclesiastical questions he engaged in spirited arguments with Bishop Wilberforce. When Peelites and Whigs formed a coalition ministry in 1852 the Duke of Argyll, connected as he was with both parties, was admitted at once into the Cabinet as Lord Privy Seal. When the Aberdeen ministry was disrupted on the question of war with Russia, and resigned on Feb. 8, 1855, the Duke of Argyll gave his support to Lord Palmerston, and adhered to him after the desertion of the Peelites, led by Mr. Gladstone, sharing the latter's sympathies for the Christians of Turkey, but convinced that Russia threatened Great Britain's power and prestige in the East. In the Palmerston Cabinet he exchanged his office for that of Postmaster-General at the end of 1855. In those stirring times of war and international politics he had no opportunity to show his administrative ability. Lord Palmerston gave way to Lord Derby on Feb. 22, 1858, and came in again on June 17, 1859. In his second Cabinet the Duke of Argyll resumed the office of Lord Privy Seal, which he held until the fall of Lord John Russell's Cabinet on the reform question in 1866. He was the most fearless and aggressive debater in the upper house, not hesitating to measure swords with Lord Derby. He delighted in public controversy at all times, and had a vast fund of knowledge on the most various subjects, from which he forged arguments wherewith to meet the champions in every field; Bishop Wilberforce, Lord Derby, Mr. Gladstone, Mr. Disraeli, Prof. Huxley, Herbert Spencer—all these and many others he challenged on their own ground, his armory that of a keen and polished controversialist, his spirit that of a Highland chieftain. His earnest and independent convictions he would never suppress for reasons of expediency or allow to be clogged with social or party trammels. He had been long before the civil war broke out in the United States on terms of friendship with Emerson, Charles Sumner, Harriet Beecher Stowe, and other opponents of slavery, and when the South seceded he stood almost alone among the British aristocracy and quite alone in the Cabinet in his outspoken and consistent sympathy and support of the Unionist cause. He was the only other member of the Cabinet who approved the Foreign Secretary's demand that the Alabama should be held if she re-entered a British port. His logical mind acquiesced in the justice of the Geneva award, against which all England murmured. His opinions on the American question made him popular with the advanced Liberals;

not so his views regarding Indian policy, which he expounded in 1865 in a book on India under Dalhousie and Canning, defending Lord Dalhousie's annexations, to which as a member of the Cabinet he had assented. His imperialistic convictions won for him the post of Secretary of State for India in the Cabinet constituted by Mr. Gladstone on Dec. 9, 1868, which lasted till Feb. 21, 1874. When in opposition again he took sides with the Conservatives and against Mr. Gladstone on the Scotch patronage bill, but in 1876 he vigorously attacked Mr. Disraeli's Eastern policy, and took up the cry of Bulgarian atrocities as soon as it was raised by Mr. Gladstone. From the beginning of the Afghan complications in 1878 he assailed the Government not only in Parliament, but in the press, and his polemics contributed to the defeat of the Conservatives after the dissolution of Parliament. He became Lord Privy Seal in Mr. Gladstone's second Cabinet, constituted on April 28, 1880. His resolute attitude on the Irish land question had considerable effect on the subsequent history of English parties. He accepted the compensation for disturbance bill as a temporary charitable measure, but objected to vesting in a special tribunal the power to fix rents, and when the land bill was adopted by the Cabinet in the spring of 1881 he resigned, and became the most severe and ingenious critic of the Irish policy of the leader with whom he had been connected by the closest political ties for thirty years. In 1884 he gave a qualified support to the Gladstone Government on the question of Parliamentary reform, and he approved the negotiations with Russia. When Irish home rule was espoused by Mr. Gladstone in 1886 the Duke of Argyll was one of the most active and formidable antagonists of the Liberal policy, although he kept his seat as an independent on the cross benches in the House of Lords. When the Unionists defeated home rule in the general election he supported the general policy of Lord Salisbury's Government, and gave a hearty approval to Mr. Balfour's Irish administration. In 1887 he moved a vote of confidence in the Irish policy of the Government, and as none of the Liberal peers cared to answer the irresponsible utterances of their former associate it was passed without a dissenting voice. The cleft between him and Mr. Gladstone widened after the latter's return to office in 1892. He denounced the home rule bill of 1893 as unsparingly as he had that of 1886. His hostility toward the Irish agrarians grew intensely bitter when Mr. Davitt and his Scotch disciples attempted to apply the principles of Irish land legislation in Scotland for the benefit of the crofters on the islands and in the Highlands and thus affect his own great estates. In the beginning of 1895 when he was assailing Lord Rosebery's plan of mending or ending the House of Lords on a public platform he was seized with symptoms of heart failure, which warned him to desist from the strenuous excitement of political controversy. His last prominent act in public life was to move the rejection of the deceased wife's sister bill in 1896. The Duke of Argyll sat as an English peer with the unfamiliar title of Baron Sundridge until he was created a peer of the United Kingdom in 1892. His long and conspicuous political career was only half of his claim to distinction. His broad and many-sided mind and his trenchant and vigorous style earned for him a hearing in theological controversies, in metaphysical speculations, in physical science, in economical theories, in historical research, and in literary criticism. Besides innumerable and incessant contributions to the reviews and to the

Times and other newspapers, some of the books that he published are *The Reign of Law* (1866); *Primeval Man* (1869); *The Unity of Nature* (1884); *Scotland as it was and as it is*; *Unseen Foundations of Society*; *The Eastern Question* (1879); *History and Antiquities of Iona*; and *The Burdens of Belief* (1894).

Armstrong, William George, Baron, an English scientist, born Nov. 26, 1810; died at Rothbury, Northumberland, England, Dec. 27, 1900. He was educated at a school in Bishop Auckland, and adopting the profession of the law, practiced as a solicitor in Newcastle from 1832 to 1847. He then became an engineer and founded the since famous Elswick Works, near Newcastle. From 1859 to 1863 he was engineer of rifled ordnance at Woolwich. He was the first to put into practice the principles now almost universally governing the manufacture of heavy ordnance. Among his inventions are the Armstrong gun, the hydraulic crane, and the accumulator, which substituted an artificial head for that gained by mere altitude. He was president of the British Association in 1863. He received the degree of LL.D. from Cambridge in 1862 and D.C.L. from Oxford in 1870, as well as many foreign degrees. He published *A Visit to Egypt* (1875); *Electric Movement in Air and Water* (1897); and many professional pamphlets. He was an enthusiastic lover of art, and his picture gallery at Craigside contained many celebrated paintings.

Arnold, Thomas, an English author, born at Laleham in 1823; died in Dublin, Nov. 12, 1900. He was a son of Dr. Arnold of Rugby, younger by a year than his brother Matthew. He went to school at Winchester for a year, then entered Rugby, obtained a scholarship at University College, Oxford, in 1842, took his degree in the first class in 1845, was a clerk in the Colonial Office for a few months, and then, tired of Europe, he sought a life free from false aims and shackling conventionalities in the distant colony, whither other Oxford idealists had gone before him. After a while he went to Tasmania as inspector of schools, married there the governor's granddaughter, entered the Roman Catholic Church in 1856 as the result of the Oxford movement, which was at the crisis when he was an undergraduate, and returned to England to take a professorship in the Catholic college founded by Newman, whom he afterward followed to the Oratory School in Birmingham, where his *Manual of English Literature* was prepared. Then he conformed again to the Church of England and returned to Oxford, taught English literature and history there, edited Wycliff, translated Beowulf, and prepared other works of archaic literature for the press. In 1877 he became a Catholic once more, and on being appointed a fellow of the newly established University of Ireland he went to Dublin to spend the remainder of his life in teaching, examining, and writing. Mrs. Humphry Ward, the novelist, is the eldest of his numerous children.

Atkinson, John Christopher, an English clergyman, born at Goldhanger, Essex, England, in 1814; died at Danby-in-Cleveland, Yorkshire, March 31, 1900. He was educated at Cambridge, and was ordained in 1841. In 1847 he became vicar of Danby, Yorkshire, and held that living until his death. He is best known to the general public by his admirable *Forty Years in a Moorland Parish* (1891), which has often been compared to White's *Natural History of Selborne*. His knowledge of birds and flowers was extraordinary. Despite his manifold interests outside of his profession, he was a devoted clergyman, and the claims of his remote and rugged parish were

always first with him. Besides the book already named, he published *Walks, Talks, Travels, and Exploits of Two Schoolboys* (1859); *Play Hours and Half Holidays* (1860); *Sketches in Natural History* (1861); *British Birds' Eggs and Nests* (1861); *Stanton Grange, or Life at a Private Tutor's* (1863); *A Glossary of the Cleveland Dialect, the work of nearly twenty years* (1868); *Lost, or What Came of a Slip from Honor Bright* (1869); *The History of Cleveland, Ancient and Modern* (1872); *Additions to a Glossary of the Cleveland Dialect* (1876); *A Handbook for Ancient Whitby and its Abbey* (1882); *Memorials of Old Whitby* (1896); *The Last of the Giant Killers*; and *Scenes in Fairy Land*.

Bara, Jules, a Belgian statesman, born in Tournay in 1835; died in Brussels, June 26, 1900. He was a physician's son, and on completing his studies at the Brussels University at the age of twenty-two, receiving a doctor's degree in political science as well as in laws, he began a career in politics and at the bar simultaneously, coming forward as a Liberal of extreme anticlerical views, a frank agnostic. His eloquence and business ability won for him a seat in the Chamber from Tournay in 1862, and at the age of thirty he was called into the Cabinet as Minister of Justice. During the five years that the ministry of Frère-Orban lasted he carried through a reform of the criminal code. He defended the rights of the state against all the ingenious claims of the Church, and when in the Opposition after 1870 his gifts of humor and sarcasm, his knowledge of law and politics, and the alert and indefatigable attention that he gave to parliamentary business gave him a sure claim to the Ministry of Justice in Frère-Orban's second Cabinet, in which it fell mainly to him to uphold in theory and practice, in the Chamber and in the schoolrooms, the principle of nonconfessional state education and the exclusion of the clergy from the direction of studies or from admission to the schools except in the hours allowed for religious instruction. The Premier received valuable assistance from him in the diplomatic and religious difficulties created by the severance of relations with the Vatican. When the Clericals finally upset the nonreligious public-school system in 1884, Bara continued the struggle as one of the leaders of the Liberal Opposition. In 1893 he opposed the electoral reform adopted by the Clerical majority on the basis of universal suffrage, and thereby he sacrificed his seat for Tournay, being defeated in the election of 1894. The provincial council then sent him to the Senate, in which body, as the oldest and ablest member of the Opposition, his utterances still had weight and influence.

Barry, Charles, an English architect, born Sept. 21, 1823; died in Worthing, Sussex, June 2, 1900. He studied architecture under his father, whom he assisted when the latter was building the Houses of Parliament, and at the age of twenty-six began practice on his own account. In 1858 he was appointed architect to Dulwich College, the new buildings of which were designed by him. Among other works of his are Bylaugh Hall, Norfolk; Stevenstone, North Devon; the Dulwich Public Library; New Burlington House, Piccadilly; the rebuilding of Clumber House; and the Civil Engineers' Institute, Westminster. He was a fellow of the Royal Institute of British Architects from 1864, and its president in 1876-'79.

Beale, Anne, an English novelist, died April 2, 1900. She was the author of popular evangelical tales for girls, and of a good many novels also. Her published works comprise *Poems*; *Vale*

of the Towey, or Sketches of South Wales; The Baronet's Family; Simplicity and Fascination (1855); Nothing Venture, Nothing Have (1864); Country Courtships (1869); Fay Arlington (1875); The Pennant Family (1876); The Miller's Daughter (1877); Rose Mervyn of Whitelake (1879); Gladys, the Reaper (1881); Idonea (1881); The Queen o' the May (1882); The Young Refugee (1882); Squire Lisle's Bequest (1883); Fisher Village (1885); Seven Years for Rachel (1886); Courtleroy (1887); Restitution (1888); and Charlie is my Darling (1897).

Beatty-Kingston, William, an English journalist, born in 1837; died at sea, Oct. 4, 1900. He obtained an appointment in the Public Record Office in 1852, and four years later entered the Austrian consular service as vice-chancellor of the consulate general in London, but was transferred in 1857 to Cardiff. He remained at Cardiff until 1865, when he became a special correspondent of the London Daily Telegraph, and in this capacity he lived in various Continental cities, and was present in the Austro-Prussian, Franco-Prussian, and Russo-Turkish campaigns. From 1879 he was on the editorial staff of the Daily Telegraph. His published books are *The Battle of Berlin* (1871); *William I, German Emperor and King of Prussia* (1883); *Our Chancellor*, translated from the German of Moritz Busch (1884); *Music and Manners: Personal Reminiscences and Sketches of Character* (1887); *Monarchs I Have Met* (1887); *A Wanderer's Notes* (1888); *The Chumplebunnys, and Some Other Oddities* (1889); *A Journalist's Jottings* (1890); *Men, Cities, and Events* (1895).

Benedetti, Count Vincent, a French diplomat, born in Bustia, Corsica, April 27, 1817; died in Paris, March 28, 1900. His father was the local magistrate, and he went to Paris to study law. After taking his degree he began his career in 1840 as a clerk in the consulate at Alexandria, where he performed his duties so well that in 1845 he was appointed consul in Cairo. In 1848 he became consul general at Palermo, and in 1852 his early chief and patron, on being appointed ambassador at Constantinople, called him thither as secretary of legation. He declined the legation to Persia in 1855, and returned to Paris to take the office of director of political relations in the Ministry of Foreign Affairs, serving in 1856 as secretary of the Congress of Paris. From 1857 till 1862 he was minister to Turin, whence he was recalled on account of the active sympathy that he showed for the cause of Italian unification. In 1864 he was sent as ambassador to Berlin. He endeavored without success to hinder the aggrandizement of Prussia as the result of the Prusso-Austrian War of 1866, and was even cajoled into proposing the annexation of Belgium to France as compensation, furnishing Count Bismarck with a document that proved very damaging to Napoleon when made public at the beginning of the Franco-Prussian War. Benedetti asserted in a pamphlet published after his retirement that the Belgian proposal was Bismarck's, and that he had written it out from Bismarck's dictation. The question of French compensation for the aggrandizement of Prussia was the subject of negotiations in Berlin and Paris from the time of the Austrian campaign. Benedetti was in a difficult position after he had presented Napoleon's proposal to obtain compensation in German territory. The negotiations were spun out by Bismarck while Prussia was perfecting her armaments. All that Benedetti could obtain was the neutralization of Luxembourg, with the suggestion that France seek compensation elsewhere than in German territory. When affairs between

France and Prussia approached a crisis he did little to avert war. He was unable to fathom the designs of Bismarck or influence the decisions of Napoleon and his ministers. When he demanded from King Wilhelm a pledge that the Hohenzollern candidature for the Spanish throne should not be renewed he foresaw discomfiture as clearly as when he proposed French expansion on the Rhine. He carried out the orders of his Government, and he was not gruffly rebuffed by the King, as has been reported. He was a diplomatist of fine Italian tact and delicacy of feeling, not hostile to German unity, but seeking the advantage of his own country, shrewd and capable in affairs, though unable to match the cunning of Bismarck, knowing that the King preferred peace, yet scenting war in the atmosphere of Paris as well as Berlin. His personal agreeableness and cleverness enabled him to stave off the rupture on occasions when a less experienced and less subtle ambassador would have been entrapped into the indiscretion that Bismarck and Moltke desired, so that they finally had to resort to the device of altering the King's dispatch, making it read as a decisive announcement when it was intended to leave negotiations still open. Benedetti was retired when he returned to Paris, and since then he has lived quietly there, in Ajaccio, or in Italy. Napoleon gave him the grand cross of the Legion of Honor in 1866, and in 1869 made him a count.

Bertrand, Joseph, a French mathematician, born in Paris, March 11, 1822; died there, April 3, 1900. He was an infant prodigy who passed the entrance examination of the Ecole Polytechnique at the age of eleven, and when he entered at seventeen he astonished his teachers by the power and maturity of his reasoning faculties. He served in the mining bureau after leaving college until he was appointed a professor in the St. Louis Lyceum, and after that he was successively examiner and then professor in the Polytechnique, professor in the Ecole Normale, and professor in the Collège de France. He was elected a member of the Academy of Sciences in 1856, and in 1874 he succeeded Élie de Beaumont as perpetual secretary. In 1884 he succeeded the chemist Dumas in the French Academy. Of his treatise on the differential and integral calculus the third part never appeared, the manuscript having been burned in the fires of the Commune. His lectures on the calculus of probabilities, on thermodynamics, and on electricity have been published, and innumerable original papers on mechanics and geometry printed in mathematical journals or the reports of the Academy of Sciences. His principal contributions to literature are studies of D'Alembert, Lavoisier, Auguste Comte, and Pascal.

Betz, Franz, a German singer, born in Mainz, March 19, 1835; died in Berlin, Aug. 12, 1900. He was educated at the Polytechnic, in Carlsruhe. His *début* was made at Hanover, in 1856, and he remained in the operatic company of that city until 1859, when he was engaged for the Royal Opera in Berlin, where he remained during his life. His Berlin *début* was in the rôle of Don Carlos in Ernani, a part in which he was always very popular. He was the original Hans Sachs in Wagner's *Meistersinger* in Munich, June 21, 1868, and Wotan at the Bayreuth festival of 1876. In 1862 he visited England and sang at the Crystal Palace, May 6 and 27. All these occasions were during his vacations from the Berlin Opera.

Binns, Richard William, an English porcelain manufacturer, born in Dublin, Ireland, in 1819; died in Worcester, England, Dec. 28, 1900. He

became a partner in the Royal Porcelain Works, at Worcester, in 1851, and under his management a much improved grade of porcelain was manufactured and the fame of the Worcester china greatly extended. He published *A Century of Potting in the City of Worcester: A History of the Royal Porcelain Works* (2d ed., 1877); and *Worcester China: A Record of the Work of Forty-five Years, 1852-1897*.

Blackmore, Richard Doddridge, an English novelist, born in Longworth, Berkshire, June 9, 1825; died near London, Jan. 20, 1900. On the maternal side he was descended from Philip Doddridge, the well-known divine of the eighteenth century. He was educated at Blundell School, at Tiverton, familiar to all readers of Lorna Doone, and at Exeter College, Oxford. He was called to the bar of the Middle Temple in 1852, and for some time practiced as a conveyancer. He subsequently engaged in the business of market gardening at Teddington, a few miles out of London, near Hampton Court, and had several acres under cultivation. His earliest literary efforts were in verse, and attracted no particular attention. He then turned to fiction, but had published two novels before the issue of *Lorna Doone* (1869) made him quickly famous. Blackmore's disposition was extremely retiring, and he allowed no details of his private life to appear in print. His published books comprise *Poems by Melanter* (London, 1854); *Epullia, and Other Poems* (1855); *The Bugle of the Black Sea* (1855); *The Fate of Franklin* (1860); *The Farm and Fruit of All: a translation in verse of the First and Second Georgics of Virgil, by a Market Gardener* (1862); *Clara Vaughan: A Novel* (1864); *Craddock Nowell: A Tale of the New Forest* (1866); *Lorna Doone: A Romance of Exmoor* (1869); *The Georgics of Virgil, a translation* (1871); *The Maid of Sker* (1872); *Alice Lorraine: A Tale of the South Downs* (1875); *Cripps the Carrier: A Woodland Tale* (1876); *Erema, or My Father's Sin* (1877); *Mary Anerley: A Yorkshire Tale* (1880); *Christowell: A Dartmoor Tale* (1882); *The Remarkable History of Sir Thomas Upmore* (1884); *Springhaven: A Tale of the Great War* (1887); *Kit and Kitty* (1889); *Percyross* (1894); *Fringilla, or Tales in Verse* (1895); *Tales from the Telling House* (1896); and *Dariel* (1897). The fame of *Lorna Doone* has in a measure overshadowed his other romances, but such books as *The Maid of Sker* and *Cripps the Carrier* do not fall far behind his masterpiece, while none of his stories can be styled unworthy of his literary reputation. In all appears a rich vein of humor, full of quaint turns and individuality, but never exaggerated, while pathos, appearing more rarely, is at no time overstrained. Blackmore's strength can not be said to lie in his plots, which are usually very much involved, the progress toward the event being hesitating and uneven. The complication of the plot is explained with perfect clearness, it is true, yet the solution of the mystery is apt to be a little confusing. It must be admitted, too, that several of his narratives suffer from a plethora of incident, and that the canvas displays too many characters. But the impetuosity of his narrative carries the reader along so swiftly that minor defects affect his enjoyment slightly, if at all. Although excelling in rapid, animated narration, he was equally successful with descriptive passages of a quiet, peaceful nature, as any one familiar with his books needs not to be told. His imagination was fertile, and his insight into character and motive very keen. His stories possess an abiding charm, and *Lorna Doone* and *The Maid of Sker* seem destined to endure.

Brohan, Emilie Madeleine (Mme. Pio Uchard), a French actress, born in Paris, Oct. 22, 1833; died there, Feb. 25, 1900. She was a sister of Josephine Brohan and a daughter of Suzanne Brohan, famous actresses of the French theater. She entered the Conservatoire in 1848, and was graduated with the first prize for comedy, July 25, 1850. Her first appearance was made at the Théâtre Français, Oct. 13, 1850, as Marguerite in *Les Contes de la Reine de Navarre*, a drama written by Scribe and Legouv . Her success was instantaneous. She married Mario Uchard, 1854, but their union was not happy, and after a few months she withdrew from the Théâtre Français and went to Russia. Uchard wrote a play called *La Fiammina*, supposed to present a picture of their unfortunate domestic relations, and it was produced with some success at the Français in 1857. In the same year Madeleine returned to Paris, and was re-engaged with the Com die Francaise, with which she remained as an employee and *soci taire* till her retirement in 1885. During this long career she retained her great popularity with the public of Paris and played all the r les in comedy that belong to the famous repertory of France's national theater. Her most notable creations, in addition to her first part, were Marianne in *Les Caprices de Marianne* of Alfred de Musset; the title r le of *Mademoiselle de la Seigli re*, by Jules Sandeau; Mme. de Briac in *Une Journ e d'Agrippa d'Aubign *, by  douard Fournier; the leading part in *Par Droit de Conqu te*, by Ernest Legouv ; that of *Les Deux Veuves*, by F licien Malletille; H l ne de Lesneveu in *Les Doigts de F e* of Scribe; Jeanne Dalibon in *R ves d'Amour*, by Scribe; and Bi ville, the leading r le in *Loge d'Op ra*, by Jules Lecomte; and those of *Une Amie* and *Le Lion Amoureux*, by Ponsard. One of her finest performances was the part of Elmire in *Tartufe*.

Burton, Sir Frederic William, an Irish artist, born near Limerick, in 1816; died in London, March 16, 1900. He was educated in Dublin, and studied drawing under the brothers Brocas, making such rapid progress that the Dublin Society exhibited works by him in 1834, and elected him an associate in 1837 and a full member in 1839. In 1842 he exhibited at the London Academy *The Arran Fisherman's Drowned Child* and *A Connaught Toilet*. In 1851 he went to Munich, and his later work showed in consequence the influence of German methods. In 1855 he became an associate of the Royal Society of Painters in Water Colors, and in 1856 a full member, his headquarters being in London henceforth. From 1874 to 1894 he was director of the National Gallery, and was chiefly responsible for the large and important additions within that time. From 1863 Burton was a fellow of the Society of Antiquaries, and in 1884 was knighted. Owing to a malformation of his right hand, Burton painted with his left.

Bute, John Patrick Crichton-Stuart, Marquis of, a British nobleman, born Sept. 12, 1847; died in Old Cumnock, Ayrshire, Oct. 9, 1900. He succeeded his father, who was the second Marquis of Bute, but of ancient and royal ancestry, in the first year of his life, and was brought up as an Anglican by his mother, though his father had been royal commissioner to the Church of Scotland, and was sent to Harrow and to Christ Church, Oxford, after a contest in the courts between his English and Scottish guardians. Before he could take his degree, however, he was received into the Roman Catholic Church by Monsignor Capel. He was a scholar of retiring temperament, author of several books on ecclesiastical and antiquarian subjects, an authority on Byzantine art

and history, but above all an efficient man of business, who devoted himself to the development of his mining property in Wales and invested over a million sterling in the canal, docks, and harbor at Cardiff. This town, built up by his enterprise, made him its mayor in 1890. He planted the largest and the only successful vineyard in Great Britain. He was a generous supporter of education and learning and a benefactor to Anglicans and Presbyterians as well as to Catholics.

Butterfield, William, an English architect, born in 1814; died in London, Feb. 23, 1900. He was one of the masters of the Gothic revival in England started by Pugin, who was two years his senior. His work was more original, though not always as successful, as that of Pugin, and bolder and more original than that of Clement Scott. He designed the buildings of St. Augustine's College, in Canterbury, and thereby won the favor of the Tractarians of Oxford. The chapel of Balliol College and the buildings of Keble College; the churches of All Saints and St. Augustine, in London; the chapel and other buildings at Fulham palace; St. Mary Magdalene, in Enfield; St. Augustine, at Bournemouth; the chapel and school buildings at Rugby; and the grammar school at Exeter, are his principal works. He also restored many ancient buildings, and in doing so destroyed some excellent examples of the architecture of the Renaissance to produce uniformity of style.

Canossa, Luigi di, an Italian prelate, born in 1809; died in Verona, March 12, 1900. He was Bishop of Verona, and was created a cardinal in 1877.

Cave, Alfred, an English clergyman, born in London, Aug. 29, 1847; died at Hampstead, Dec. 19, 1900. He was educated at New College, London, prepared himself for the Congregational ministry, and held pastorates at Berkhamstead, 1872-'76, and Watford, 1876-'80. He resigned the second charge to become Professor of Hebrew and Church History at Hackney College, of which he was made principal in 1882. He held an honored place among biblical scholars, and ranked as an extremely conservative theologian. His writings include *The Scriptural Doctrine of Sacrifice and Atonement* (1877); *The Inspiration of the Old Testament Inductively Considered* (1888); *Introduction to Theology* (1888); *The Battle of the Standpoints: The Old Testament and the Higher Criticism* (1890); *The Spiritual Word the Last of Philosophy and the First of Christ* (1894).

Christian Victor, Prince, of Schleswig-Holstein, born in Windsor Castle, April 14, 1867; died in South Africa, Oct. 29, 1900. He was the eldest child of the Prince of Schleswig-Holstein and Princess Helena, fourth child of Queen Victoria of England. He was educated at Wellington College and at Magdalen College, Oxford, then entered the military academy at Sandhurst, and in 1888 joined the army as second lieutenant in the King's Rifles, became a lieutenant in 1890, and in 1896 a captain with the brevet rank of major after having served in India as orderly officer to Major-Gen. Elles in the Hazara expedition and in the Miranzai expedition in 1891, in the Isazai expedition in 1892, and as aid-de-camp to Major-Gen. Sir Francis Scott in West Africa when the expedition was sent to Ashanti against King Prempeh in 1895. He served in Gen. Kitchener's Sudan expedition in 1898 as staff officer to the troops on board the gunboat flotilla, and in October, 1899, went out to South Africa to serve on the staff of Gen. Roberts. He was with a column that lost its guns and a third of its men in a Boer ambush. His death was due to enteric fever.

Cluseret, Gustave Paul, a French soldier, born in Paris, June 13, 1823; died in La Crau, Aug. 22,

1900. He was the son of a colonel, and had a priest for his tutor until he entered the military school of St. Cyr, which he left in 1843. As a lieutenant in 1848 he distinguished himself by leading a detachment of the Garde Mobile against the barricades of the Republicans, and received the ribbon of the Legion of Honor. In 1851 he was suspected of republicanism himself, and with hundreds of other officers was relieved of active duty. In 1854 he was reinstated on application and sent to Algeria. Disappointed because his services there were not recognized, he resigned his commission, tried farming for a while, emigrated to New York and speculated without success, and then joined Garibaldi's legion in Sicily, and was appointed a colonel. He was disabled by a wound received at Capua, returned to New York, and when the civil war began obtained an appointment on Gen. McClellan's staff, with the rank of brigadier general. After the war he conducted a newspaper, then joined the Fenians in Ireland, escaped arrest by fleeing to France, and was expelled from there as a Republican agitator. He returned to France at the beginning of the war of 1870, started a Socialist newspaper in Marseilles, called himself commander of the Army of the South, went to Paris when the government of the Commune was set up, and received the post in it of Minister of War, but in the last month of its existence was accused of treachery and thrown into prison. On the suppression of the Paris Commune he escaped to England, and thence to Switzerland, where he undertook to paint under the teaching of Courbet, having been summoned for trial and condemned to death in Paris. In 1878 he joined the Turkish army, and fought against Russia. After the amnesty of 1881 he returned to France, painted pictures, wrote for newspapers, and published a volume of memoirs, in which he charged his colleagues of the Commune with follies and enormities. In 1888 he was elected a Deputy for the Var, and since 1889 he had sat for Toulon.

Cochery, Louis Adolphe, a French politician, born in Paris, April 26, 1819; died there, Oct. 15, 1900. He was admitted to the bar at the age of twenty, and after the February revolution he was appointed to a post in the Ministry of Justice, which he resigned after a little while in order to devote himself to pleading and to journalism. In the elections of 1869 he was elected by the Democratic Opposition a member of the Corps Législatif for the department of Loiret, and took his seat in the Left Center, voting against war with Prussia. The Government of the Fourth of September placed him as commissary general in charge of the defense of Loiret, and that department, on Feb. 8, 1871, sent him to the National Assembly, where he sat in the Left Center, attaching himself later to the Republican Left. In 1876 he was elected to the Chamber of Deputies from Montargis, and voted against the Broglie ministry. He was re-elected after the dissolution of the Chamber, and when the Dufaure ministry was constituted he became undersecretary in the Department of Finance. On March 1, 1878, he united the posts and telegraphs under one administration, which was transformed into a separate department in 1879, of which he remained the chief until the fall of Ferry's last Cabinet, in 1885. As Minister of Posts and Telegraphs he instituted important reforms in the service. The cheap and rapid means of communication with the postal telegraph card, called the *petit bleu*, was his invention. On Jan. 5, 1888, he passed into the Senate.

Coghlán, Elizabeth Eily May, an English singer, born in Paris, France, in 1864; died in Stamford, Conn., April 8, 1900. She was a sister

of Charles and Rose Coghlan, and was educated at the Conservatory of Music, in Paris, where she attracted the attention of Carl Rosa, who engaged her as the leading contralto of his opera company, which place she occupied for years, singing with great success in England and on the Continent. She came to the United States as a member of Mapleson's Opera Company. In 1889 she married Sydney Battam, secretary of the Leadenhall Bank, London. Her last appearance was at Rochester, N. Y., Feb. 24, 1900, with the Joe Ott Comic Opera Company.

Cowie, Benjamin Morgan, an English clergyman, born June 8, 1816; died in London, May 1, 1900. He was educated at Cambridge, and took orders in 1841. From 1844 to 1851 he was principal of the College of Civil Engineers, at Putney, and he was Hulsean lecturer at Cambridge in 1853 and 1854. In the year last named he was Professor of Geometry at Gresham College. He received the living of St. Lawrence, Jewry, London, and was made a minor canon of St. Paul's in 1858, and from 1872 to 1883 he held the deanery of Manchester. He became dean of Exeter in 1883, and held that office until his death. He was a high churchman, though not an extreme ritualist, and was one of the earliest to introduce choral celebrations and vested processions. He published, besides lesser works, *Scripture Difficulties* (1853-'54); *On Sacrifice* (1856); *The Voice of God* (1870); *Ministerial Work* (1872).

Del Puente, Giuseppe, an Italian singer, born in Naples, in 1845; died in New York city, May 25, 1900. He was educated at the Conservatory of Music, in Naples, under the famous masters Garcia and Scafato. He was an enthusiastic Garibaldian, and served as a soldier in the revolution in Italy. After resuming his studies he made his *début* as a baritone at Jassy, Wallachia, in company with Italo Campanini, the celebrated tenor, in 1871. His success was immediate and substantial, and he was successively engaged in the Teatro San Carlo in Naples, La Scala in Milan, the Apollo in Rome, and the Grand Italian Opera in London. Maurice Strakosch heard him in Rome in 1873 in the rôle of Rigoletto, and engaged him for a three years' visit to America. His first appearance in New York was a triumph, and he remained in possession of the baritone rôles at the Academy of Music and the Metropolitan Opera House for successive seasons until his retirement in 1890, when he took up his residence in Philadelphia, and devoted himself to teaching. His greatest rôles were Rigoletto in the opera of that name and the *torador* in *Carmen*.

Desbordes, Borgnis, a French soldier, born in Paris in 1839; died in Saigon, Indo-China, July 14, 1900. He had earned the reputation of a daring and resourceful officer, and had served in various campaigns, when in 1880 he was ordered to occupy upper Senegal as far as Kita, and to make a survey for a railroad to the Niger. He carried on operations against Samory, defeated his forces on Feb. 20, 1882, reached the Niger and built a fort at Bammation in 1883, and drove Samory back to the south. In 1884 Col. Desbordes was appointed to the command of the artillery in the Tonquin expedition. He was promoted to be a general in 1886, commanded a brigade in Tonquin and Annam in 1887, and continued to serve in Indo-China, rising to be commander in chief of the forces.

Didon, Henri, a French preacher, born in Touvet, Isère, March 17, 1840; died in Toulouse about the middle of March, 1900. He was trained for the Catholic priesthood in a French seminary, studied in Berlin and Leipsic, joined the Domini-

can order, gained fame as an orator, and occupied in succession the principal pulpits of Paris. His resonant voice, free gesticulation, impassioned style, and bold and vigorous language attracted immense audiences. His addresses in the Church of St. Roch made a profound impression, and his freedom of thought and expression disquieted his superiors, who in 1880 sent him to a monastery in Corsica to do penance for eighteen months. He held liberal views in religion and politics, and preached that the Catholic Church is not opposed to the fullest liberty, and that religion and science are not in conflict. In his later life he directed the college of Albert-le-Grand, at Arcueil. Père Didon was the author of a book on the Germans and of a *Life of Jesus*, written in response to the work of Ernest Renan on the same subject.

Dixon, Richard Watson, an English clergyman, born in London, in 1833; died Jan. 2, 1900. He was the son of a noted Wesleyan minister, and was educated at Oxford, where with Burne-Jones and William Morris he edited the *Oxford and Cambridge Magazine* as an exponent of pre-Raphaelite opinions. After being admitted to orders in 1858 he became curate of the parish of Saint Mary-the-Less in Lambeth, and in 1863 was appointed second master of the high school at Carlisle. He was made honorary canon of Carlisle in 1874, vicar of Hayton the next year, and vicar of Warkworth in 1883. Dixon was never a popular writer, for although he possessed both sincerity and power, he was prolix. He was not wanting in poetic insight, and as a historian he was acute and painstaking, but his choice of words was sometimes infelicitous, and his style suffered from audacity of phrase. His writings include *The Close of the Tenth Century of the Christian Era* (Oxford, 1858); *Christ's Company and Other Poems* (London, 1861); *Historical Odes and Other Poems* (1864); *Essay on the Maintenance of the Church of England* (1875); *The Life of James Dixon* (1874); *History of the Church of England from the Abolition of the Roman Jurisdiction* (1877-'90); *Mano: A Poetical History* (1883); *Odes and Eclogues* (Oxford, 1884); *Lyrical Poems* (1885); *The Story of Eudocia and her Brothers*, a narrative poem (1887); *Songs and Odes* (1896).

Doche, Madame (Lady Marie Charlotte Eugénie de Plunkett), a French actress, born in Brussels, Nov. 4, 1823; died in Paris, July 21, 1900. She was the daughter of an Irish family domiciled in Belgium since the migration of the Irish families with the Stuarts. She made her first appearance at Versailles in October, 1837, as Juliette in *Moiroud et Compagnie*. On Jan. 8, 1838, she made her *début* at the Théâtre Vaudeville, Paris, in the play of *Renaudin de Caen*. With this theater particularly Mme. Doche's fame is most intimately associated, for it was her wonderful popularity that made this house one of the principal theaters of France. It was here that she originated the part of Stella in *Serment de Collège*. During these early years of her public life she used a *nom de théâtre*, Eugénie Fleury. In March, 1839, she married Pierre Alexandre Joseph Doche, conductor of the orchestra at the Vaudeville. In March, 1845, she left the Vaudeville for the Gymnase, where she first appeared, April 17, as Madeleine in *L'Image*. In December following she returned to the Vaudeville, which she again left in 1848. In February, 1852, she returned once more to the Vaudeville to make an epoch in the history of the French stage, for it was then that she created the rôle of Marguerite Gautier in *La Dame aux Camélias* of Alexandre Dumas, *filis*, known to the American stage as

Camille. She was also the principal actress in *Louise de Nanteuil*, *La Vie en Rose*, *Madame Lovelace*, and *Pénélope Normande*. In 1859 she created *Rose Bernard* at the *Ambigu*, and afterward she played successively at the *Gaieté* and the *Porte St. Martin*. She retired many years ago.

Dornton, Charles (Charles Dornton Duff), an English actor, born in Aberdeen, Scotland, Oct. 24, 1837; died in Edgebaston, England, May 11, 1900. He made his first appearance in *King John* as a page, in his native town, in 1849. He occupied subordinate places in the stock companies of Aberdeen, Belfast, and Jersey successively. In this last theater he was the original *Hardress Cregan* in *Boucicault's Colleen Bawn*. Here he met his first wife, a sister of Tom Robertson and Mrs. W. H. Kendal. He was then at Nottingham, Glasgow, and Bradford. In this last-named theater in 1868 he was associated with *Madge Robertson* (Mrs. Kendal), *Charles Matthews*, and *E. A. Sothorn*. His next engagement was at the *Prince of Wales's Theater*, Liverpool, where he remained as leading man for several years. In 1872 he played the leading parts with Mrs. Scott-Siddons for a tour, and in 1873 held a like place with *John S. Clarke*. In 1875 he began a long and profitable connection with the play *The Two Orphans*, in which he played *Pierre* more than three thousand times. He also made very successful tours with *The Silver King* and *Michael Strogoff*. March 21, 1891, he became lessee of the *Theater Royal*, Birmingham, and retired from work as an actor. He married as his second wife *Miss Amy Balfour*.

Dowson, Ernest Christopher, an English man of letters, born in Lee, Kent, Aug. 2, 1867; died in Catford, Kent, Feb. 23, 1900. He studied at Oxford, and after several years' residence in London spent much time in Paris and Brittany. His health had been failing for some time, and he returned to England in 1899 only to die. Besides publishing translations from the French he wrote two novels with *Arthur Moore*, *A Comedy of Masks* (1893) and *Adrian Rome* (1899). His reputation rests mainly upon his small volume of *Verses*, issued in 1896, which contained poems of great beauty. Still other works by him are *The Pierrot of the Minute*, a dramatic fantasy in one act (1897); and *Decorations*, a collection of prose and verse (1900).

Eça de Queiroz, Jose Maria, a Portuguese novelist, born in Povoá do Varzim, Portugal, Nov. 25, 1845; died in Neuilly, France, in September, 1900. He was educated at the University of Coimbra, and after being editor of a political journal at Evora, was successively consul at Havana, Newcastle, and Bristol, and at the time of his death was consul general for Portugal at Paris. He was the most eminent Portuguese novelist of his time, and was the principal exponent in his country of the realistic school of fiction. His romances were translated into Spanish, German, French, and English. He possessed great powers of observation and description, and was very severe in his portrayal of the failings of Portuguese society. His works include *O Crimo de Padre Amaro* (*The Crime of Father Amaro*) (1874); *O Mandarin* (1880); *Scenas da Vida Devota* (1880); *O Primo Basilio*, his greatest work, which appeared in French as *Cousin Basile*, in German as *Eine wie Tausend*, and in English as *The Dragon's Teeth* (1885); *A Reliquia* (*A Relic*) (1886); *Os Maias*, or *Episodias da Vida Romantica*, a spirited satire upon fashionable Portuguese life. With *Ramalhõ-Ortigão* he wrote a noteworthy story of adventure entitled *The Mystery of Cintra Street*. He was a member of the Lisbon Academy of Sciences.

Edwards, Alphonse Milne, a French naturalist, born in Paris in 1835; died there April 27, 1900. He was the son of *Henri Milne Edwards*, an eminent zoölogist, and grandson of *Bryan Edwards*, a West Indian planter, ex-member of the British Parliament, and historian, who settled in Bruges. Graduating in medicine in 1859, he became professor in the School of Pharmacy in 1865, and in 1876 acted as his father's deputy as Professor of Zoölogy at the *Jardin des Plantes*. He was the colleague of *Edmond Perrier* in deep-sea explorations on the *Travailleur* and the *Talisman*. In 1877 he succeeded *Gervais* in the Academy of Sciences, and in 1885 was elected to the Academy of Medicine. In 1891 he was appointed Professor of Zoölogy and director of the *Jardin des Plantes*. He published researches on the fossil birds of France (1866-'72), researches on the extinct birds of Madagascar (1866-'74), an elementary treatise on the natural history of animals (1881-'82), an account of his deep-sea explorations in 1881-'82 and 1888, and the chapters on mammals and birds in *Grandier's* historical and geographical work on Madagascar.

Elton, Charles Isaac, an English lawyer, born in 1839; died at Chard, Somerset, England, April 23, 1900. His education was obtained at Oxford, and in 1865 he was called to the bar. He rapidly acquired a large practice, and in February, 1884, was returned to Parliament. He failed of reelection the next year, but was returned again in 1886, and sat six years. He published *Norway, the Road and the Fell* (1864); *The Tenures of Kent* (1867); *Common and Waste Lands* (1868); *Copyholds and Customary Tenures* (1874); *Custom and Tenant Right* (1882); *Origins of English History* (1882); *The Career of Columbus* (1892); *The Great Book Collectors* (1893).

Faed, Thomas, a British painter, born in Kirkcudbright in 1826; died in London, Aug. 17, 1900. He was an engineer and the younger brother of *John Faed*, whose success as an artist inspired him with a like ambition. He entered the School of Design in Edinburgh and acquired under the tuition of *Sir William Allan* a thorough training in draughtsmanship and the elementary principles of painting. When he began to paint he at once struck a vein that appealed to the multitude and won for him a wider appreciation and a greater measure of popular and pecuniary success than the greatest of British artists have attained. He chose the field of domestic genre, and in this a class of subjects that appeal to the emotions and sympathies—sad scenes of domestic life or anecdotes conveying moral lessons or stirring religious feelings. *The Mitherless Bairn*, *The First Break in the Family*, and the rest had no technical qualities to commend them except good drawing and conscientious workmanship, but in exhibitions their homely, pathetic sentiment made them the center of attraction. To artists of the younger schools they served as a warning and an example to deter them from seeking the adventitious aid of pathos and story so obviously and crudely set forth. Faed went to London in 1852, became an associate of the Royal Academy in 1859, a full member in 1864, and for ten years longer continued to turn out pictures that were readily sold for high prices, even the copyrights of the more effective ones being a valuable property. About the time that his facility and his industry began to decline the critics condemned his work as of slight artistic value, and his influence as deleterious to the development of sound art, though he has never lacked partisans and admirers. His ideal portrait of *Longfellow's Evangeline*, engraved, has been very popular in the United States.

Falguière, Jean Alexandre Joseph, a French sculptor, born in Toulouse, Sept. 7, 1831; died in Paris, April 19, 1900. He studied under Jouffroy, whom he succeeded in 1882 at the Academy of Fine Arts, exhibited in the Salon of 1857, obtained the Rome prize in 1859, and in 1865 sent home the *Vainqueur au Combat des Coqs*, his most famous piece of sculpture, which was purchased by the state. Others of his works are a statue of Lamartine at Macon, one of Gambetta at Cahors, Admiral Courbet at Abbeville, Lafayette at Washington, and Alphonse Daudet at Nîmes, this last completed immediately before his death. He executed numerous symbolical and historical sculptures of striking merit, designed public monuments, made many portrait busts, and was also a painter of repute. He became a professor in the National School of Art in 1882.

Falk, Paul, a German statesman, born in Metschkau, Silesia, in 1827; died in Hamm, Westphalia, July 7, 1900. He was the son of a Lutheran pastor, and was educated for the law at the University of Breslau, graduated as doctor, and appointed in 1847 public prosecutor at Lyck, East Prussia, where he was elected in 1858 to the Prussian Diet as a Liberal. He held a post in the Ministry of Justice, left the Chamber, and was appointed appellate judge at Glogau in 1862, returned to Berlin in 1868 as a member of the North German Parliament and of the Prussian Diet, was appointed reporter and counsel to the Ministry of Justice, and intrusted with the codification of the laws of the North German Confederation, and at the birth of the German Empire was nominated by the Emperor in February, 1871, Prussian Minister Plenipotentiary to the Federal Council. In 1872, when the conflict began between the German Government and the Roman Catholic Curia that lasted till the death of Pius IX, Bismarck selected Dr. Falk to be his lieutenant and adviser and the representative of the Government in the struggle, having need of a man of firmness and energy and of the most expert knowledge of laws and legislation. He was made Minister of Education and Worship, and in January, 1873, submitted to the Prussian Chamber the comprehensive scheme of legislation known as the May laws because they were passed in May, 1873, which laicized the national schools, restricted the jurisdiction of bishops over the clergy, extended the rights of the state regarding the appointment and the discipline of the clergy, and dissolved and expelled some of the religious orders. Under the administration of Dr. Falk these laws were applied with such perseverance and thoroughness that a bitter religious conflict resulted, rendering difficult the consolidation and development of the new empire. The Kulturkampf began over the school inspection law, which gave the Government the right to inspect private as well as public educational institutions. The bill was carried through both houses of the Prussian Diet in spite of the determined opposition of the numerous and well-organized Clerical, or Center, party. The Reichstag having passed an act against the Jesuits, Dr. Falk next issued an edict rendering members of their society ineligible for positions as teachers in the Prussian state schools. The general body of the May laws followed next, and for resisting their application the Government did not hesitate to punish bishops with fines and to close seminaries as well as monastic establishments. In 1874 the civil contract was rendered compulsory as a part of the marriage ceremony in Prussia. Supplementary legislation extended the May laws. For resisting them the Archbishops of Posen and Cologne and the Bishops of Paderborn and Treves were sent to prison. The

Pope declared the laws invalid and forbade the clergy to conform to them, and the imprisoned Archbishop Ledochowski he made a cardinal. The Prussian Government then suspended the stipends of the priests and bishops until they should be ready to sign a pledge to obey the laws. Other severe measures followed, until the clergy were brought to terms and only a dozen bishoprics remained vacant in Prussia when Pius IX died in February, 1878. Pope Leo XIII and Prince Bismarck were alike anxious to bring the conflict to an end, the latter on condition that the Center should support his new commercial and financial policy. Dr. Falk could not remain after the readjustment of amicable relations between the Catholic Church and the Government, especially since he had given offense to the Evangelical Protestant Church by his secularizing policy, and had never possessed the full confidence of the Emperor Wilhelm I. His resignation was tendered and accepted on July 14, 1879, and from that date he ceased to play a prominent part in politics, although he was a member of the Prussian Chamber of Deputies and of the Reichstag till 1882, when he was appointed president of the provincial court of Westphalia, a post which he filled with distinguished ability until his death.

Ferraris, Count Luigi, an Italian politician, born in Sostegno, March 6, 1813; died in Turin, Oct. 21, 1900. He studied and practiced law, and in 1848 was elected to the Chamber from Turin, in which he quickly attained a high position. In 1871 he was nominated an Italian Senator, having served as Minister of the Interior in the Menebrea Cabinet of 1869. In the first Cabinet formed by Rudini in 1891 he was Minister of Justice. He was an eminent juriconsult, and during a long period he was mayor of Turin.

Fibich, Zdenko, a Bohemian composer, born in Seborschitz, Bohemia, Dec. 21, 1850; died in Prague, Oct. 16, 1900. He studied at Prague and Leipsic, and was a pupil of Vincenz Lachner. He was appointed assistant musical director of the National Theater of Prague in 1876, and in 1885 director of the Russian church choir. His operas, which were in Bohemian and were produced in Prague, were: *Bakowin* (1881); *The Bride of Messina* (1883); *The Storm* (1895); *Hedy*, the Haidee incident from Byron's *Don Juan* (1896); and *Sarka* (1898). Other works were: *The music of Brchliky's dramatic trilogy Hippodamia* (1891), and the symphonic poems *Othello*, *Zboj* and *Slavoj*, *Toman* and the *Nymph*, and *Vesna*. He was also the author of several orchestral overtures: *Lustspiel Ouverture* (1892); *A Night on Karlstein*, etc.; *Spring Romanza*; and songs and choruses. In 1899 he was appointed dramaturgist of the Bohemian National Theater, Prague.

Forbes, Archibald, a British journalist, born in Morayshire in 1838; died in London, March 29, 1900. He was the son of a Scottish minister, and studied in the University of Aberdeen, after which he enlisted in a dragoon regiment. When the Franco-German War broke out the London Daily News sent out the young Scotch journalist, who had practical experience of military life, to follow the German army. Sir W. H. Russell, by his letters to the London Times from the Crimea, had won a standing for the war correspondent as independent chronicler and military critic and opened a new and important field of newspaper activity and influence. Archibald Forbes impressed upon the new profession the character and style, and gave it the direction that its best exponents have followed since he sent his letters from the front in 1870. A vivid and rapid presentment of the broad features of the campaign, of the object of

each maneuver, of the dispositions of each battle, a graphic account of the fighting and of salient or picturesque details of the march, the camp, the reconnoissance, the skirmish, the strategical plans as far as they were disclosed or could be divined, the life and sentiments of the soldiers, were all interpreted in attractive, stirring newspaper language, lucid, and eloquent. Where he set the example for future correspondents in a still more important matter was in the speed with which he got his copy to London, so that the public could read his details of operations on the day after they had happened. He was the first to use the telegraph so extensively for newspaper correspondence. His enterprise, energy, ingenuity, and courage enabled him to see enough of every battle to give a graphic and discriminating account of the operation, and then he rode with the utmost speed, no matter how long the way, to where he could telegraph his letter to London. When the Prince of Wales visited India in 1875, Forbes went out to report in his picturesque style the incidents of the tour, and then was sent to the Balkan peninsula to watch the course of events in Serbia and describe the war with Turkey. When Russia intervened he accompanied the Russian army and added to his reputation by being present at all the important engagements—at Shipka Pass, at Plevna, and elsewhere—and describing them with a military acumen that had grown keener with practice. When he returned to England he lectured upon the events and incidents of the war and its political bearings and results. He went as a correspondent to Cyprus when Lord Beaconsfield acquired that island for British occupation, and when the Afghan War began he went to India. The Zulu War took him to South Africa. After the battle of Ulundi he rode 120 miles through an unknown region, reached the telegraph station, and telegraphed the news to London and also to Sir Garnet Wolseley, the commander in chief, and to Sir Bartle Frere, the High Commissioner, who sent the dispatch to the British Government, and it was read in both houses of Parliament before a line had been received from the official staff. That was the last campaign that Forbes reported. The fatigues and privations of war had sapped his great strength, and he chose a more restful life. He revised his correspondence and recast it into a historical narrative of the various campaigns that he had seen, making a large number of books, and he gave lectures in Great Britain, Australia, and America. His wife was a daughter of Gen. Meigs, of Washington. The intelligence and authority with which he was able to describe the greater operations of war, to learn all that was going on, and to be present at the key of the position and at the critical moment of every engagement was because he was the first army correspondent who was able to treat with military commanders on equal terms, to exact respect and consideration as a representative of the press, and thus to compel them to yield information that there was no military reason for longer retaining. They respected him and feared him somewhat as a military critic who judged the operations of war from a purely military standpoint, betraying no sympathy or political bias in his writings, and in his review of a movement frank and ready to point out the errors on whichever side they were committed, without pretension to strategical ability or technical learning, but with a practical insight and an intuitive appreciation of a military situation that seldom led him astray.

Gouthe-Soulard, Archbishop, born in Saint-Jean-la-Vêtre, Loire, Sept. 1, 1820; died Sept. 9, 1900. He studied for the priesthood in the grand

seminary of Lyons, took the degree of doctor in theology in 1854, and became vicar general of Lyons and *curé* of the important parish of Vaise in 1877. Premier Goblet, contrary to the universal practice of selecting metropolitans from among the bishops, nominated him Archbishop of Aix, and he was consecrated on July 25, 1886. When in 1891, in consequence of an agitation provoked in Rome by French pilgrims, M. Fallières requested the bishops to suspend the pilgrimages that they had arranged, Monsignor Gouthe-Soulard responded in a letter, for which he was condemned by the Paris Court of Appeals on the charge of insulting the Government. He published thereupon *Mon Procès, mes Avocats*, in which were collected the eulogiums he had received from the French clergy for his attitude. His resistance led to parliamentary incidents that resulted in the fall of the Fallières ministry. This was the beginning of several contests with the Government, in the course of which he was deprived of his allowance. In June, 1892, the Archbishop of Aix was condemned for an electoral abuse in publishing a catechism for voters.

Gregory, Benjamin, an English clergyman, born in 1820; died Aug. 24, 1900. He became a Wesleyan preacher in 1840, and was long a conspicuous figure in his denomination. He was the author of *Memoir of Emma Tatham* (London, 1859); *The Thorough Business Man: Memoirs of Walter Powell, Merchant* (1871); *The Holy Catholic Church, the Communion of Saints* (1873); *Sermons, Addresses, and Pastoral Letters* (1881); *The Life of F. J. Jobson* (1884); *Consecrated Culture* (1885); *Handbook of Scriptural Church Principles of Wesleyan Methodist Polity and History* (1888); *Side Lights on the Conflicts of Methodism*, which revealed the author as not so strictly conservative as he had usually been considered (1898).

Grimaux, Édouard, a French chemist, born in Rochefort in 1835; died May 2, 1900. He studied medicine and was surgeon on a naval vessel before he studied chemistry under Wurtz in Paris, and was appointed assistant in the Polytechnic School in 1874, becoming professor in succession to Cahours, and also holding a professorship in the Agronomic Institute. He was elected to the Academy of Sciences in 1894. He lost his chair in the Polytechnic School because he publicly declared his belief in the innocence of Dreyfus during the Zola trial, and subsequently he became a vice-president of the Rights of Man League. He published a treatise on *hasheesh* in 1865, one on *equivalents, atoms, and molecules* in 1866, *organic chemistry* in 1872, *elementary inorganic chemistry* in 1874, *chemical theories and notations* in 1884, and a study of Lavoisier in 1888.

Grove, Sir George, an English musical critic, born in London, Aug. 13, 1820; died there, May 28, 1900. He was articled to an engineer after leaving Clapham Grammar School, worked for two years in a factory near Glasgow, was employed in building the lighthouse on Morant Point in Jamaica in 1841, and that on Gibb's Hill in Bermuda in 1845, and after his return to England in the construction of the Britannia bridge. He became secretary of the Society of Arts in 1849, became one of the managers of the Crystal Palace, and had a part in organizing the concerts which began in 1855, and thenceforth his name was associated with musical matters rather than with the profession in which he had first made his mark, although in music he had only the training of an amateur. He wrote notes and analyses of the Crystal Palace concerts for the programmes that served to impart to friends of

music among the general public something of his own enthusiasm for the higher delights of music to which people of popular tastes had not awakened, and which they could not have caught from the technical criticisms of a writer professionally educated. From 1868 to 1883 he edited Macmillan's Magazine and labored on the Dictionary of Music and Musicians, begun in 1868 and completed in 1889. When the Royal College of Music was founded in 1882 he was made its first director, retiring in 1894 from the post. He published analyses of Beethoven's symphonies in 1896, having given to that composer and to Mendelssohn and Schubert a degree of attention in his dictionary that was somewhat out of proportion to the geography and antiquities, of which he wrote an account for Smith's Dictionary of the Bible. He was knighted in 1882.

Haller, Johann, an Austrian prelate, born April 30, 1825; died in Salzburg in April, 1900. He was Prince Archbishop of Salzburg, and was created a cardinal on Nov. 29, 1895.

Halvorsen, Jens Braage, a Norwegian lexicographer, born in Bergen, March 7, 1845; died at Christiania, Norway, Feb. 22, 1900. He was head librarian at the Royal Library of Christiania, and editor for Norway of Salmonsens's Danish-Norwegian Conversations-Lexicon. He was a man of great erudition, and was the leading bibliographer of the three Scandinavian countries. His monumental work, a Dictionary of Norwegian Writers, 1814-1880, in many volumes, was nearly completed at the time of his death.

Harper, Henry Andrew, an English artist and author, born about 1835; died Nov. 3, 1900. His work, both as painter and as writer, was mainly concerned with the Holy Land, and for a quarter of a century he was on the executive committee of the Palestine Exploration Fund. Besides painting the popular picture Mount Sinai, he published Illustrated Letters to my Children from the Holy Land (1880); Walks in Palestine (1888); The Bible and Modern Discoveries (1889); From Abraham to David: The Story of their Country and their Times (1892).

Harrowby, Dudley Francis Stuart Ryder, Earl of, born in 1831; died in Sandon Hall, Staffordshire, March 26, 1900. He was the son of the second Earl of Harrowby, and was educated at Harrow and Christ Church, Oxford, where he took his degree in 1853. As Viscount Sandon he entered Parliament in 1856 as a Liberal Conservative, and sat without a contest for Litchfield till 1859. In 1860 he unsuccessfully contested Stafford as a Conservative. In 1868 he was elected as one of the members for Liverpool, which he continued to represent till he succeeded to the peerage in 1882. He held a subordinate post in Lord Beaconsfield's ministry in 1874, that of vice-president of the Committee of the Council on Education, and in 1878 he was admitted to the Cabinet as President of the Board of Trade, having twice refused the chief secretaryship for Ireland. In Lord Salisbury's Government, formed in June, 1885, he was Lord Privy Seal. He was interested in education and was elected to the London School Board in 1873, and in 1886 he served on the royal Commission on Education. He was intimately associated, as his father had been, with the evangelical party in the English Church, and consequently when Lord Shaftesbury died he was elected as the latter's successor in the presidency of various Protestant societies, and became the chief adviser of the Earl of Beaconsfield in the selection of candidates for ecclesiastical offices.

Hatzfeld, Adolphe, a French scholar, born in Paris in 1824; died Oct. 6, 1900. He was of Jew-

ish birth, but early in life became a Roman Catholic. He published an essay on the Republic of Plato in 1850, conducted the Revue Critique et Bibliographique in 1864, and was for many years Professor of Rhetoric at the Lycée Louis-le-Grand. With the late Arsène Darmesteter he edited *Morceaux Choisis des Principaux Écrivains du XVI^e Siècle*, a very popular work (1870); *La Seizième Siècle en France* (1878); and the important *Dictionnaire Général de la Langue Française*, which occupied nearly thirty years in preparation, the work being completed just in time to receive the Grand Prix at the Paris Exposition of 1900. With Georges Meunier he published *Les Critiques Littéraires du XIX^e Siècle*. He was also the author of a work upon St. Augustine.

Hawkins, Frederick, an English author, born in 1849; died June 30, 1900. He became connected with the London Times in 1863, his father being then employed upon it, and from 1876 to 1894 was on the editorial staff of that paper. He was always greatly interested in matters pertaining to the stage, and was editor of *The Theater* 1877-'79 and 1895-'98, the paper ceasing to exist in the last-named year. He published a *Life of Edmund Kean* (1869); *Annals of the French Stage to the Death of Racine*, a work of permanent value (1884); and *The French Stage in the Eighteenth Century* (1888).

Heyden, Karel van den, a Dutch soldier, born in Batavia, Jan. 12, 1826; died in Bronbeck, near Arnhem, Jan. 26, 1900. He was taken as a child to Holland and was educated there, enlisted as a common soldier in the Dutch East Indian army at the age of fifteen, won his epaulettes on the battlefield, and rose through all the grades to the highest in the Dutch army, that of lieutenant general, which he attained in 1881. He was in the Bali, Palembang, and Borneo campaigns, and from 1874 till 1880 was commander in chief of the troops in Acheen. In the battle of Samalangan he was shot in the eye. No commander before him had met with such success against the rebels of Sumatra. At the stage when they seemed ready to surrender the Government policy changed, and he was removed from his post as Military Governor of Acheen and replaced by a civil official. He returned to Holland in 1881, was retired from active service in the following year, and passed the remainder of his life as governor of the military asylum at Bronbeck.

Holm, Adolf, a German historian, born in 1830; died in Freiburg, June 9, 1900. He was educated in German universities, went to Italy to devote himself to the study of classic antiquities, was called to the chair of Ancient History in the University of Palermo, and after several years of residence there took the same chair in Naples, holding it till he retired and returned to his native country a year before his death. He published the first volume of his important historical work on the ancient history of Sicily in 1870, and completed it in 1898. He wrote also a history of Greece, which has been translated into English.

Horner, Ann Susan, an English artist and author; died Dec. 2, 1900. She was the daughter of Leonard Horner, an eminent naturalist, and a niece of Francis Horner. From an early age she devoted herself to painting and sculpture, attaining proficiency in both arts, although she never followed either of them as a profession. For many years her home was in Florence, and afterward in Paris, but her latest years were passed in London. Her writings include *Hungary and its Revolutions from the Earliest Period to the Nineteenth Century* (1854); *A Translation of Colleta's History of Naples*, with supplement

bringing it up to 1856 (1858); *A Century of Despotism in Naples and Sicily* (1860); *The Tuscan Poet, Giuseppe Giusti, and his Times* (1864); *A Translation of Gervinus's Introduction to the History of the Nineteenth Century*; *Isolina, or the Actor's Daughter* (1875); *Walks in Florence* (with Joanna Horner) (1875; reissued 1877); *Greek Vases, Historical and Descriptive* (1898).

Hughes, Edward, an English electrician, born in London, May 16, 1831; died there, Jan. 22, 1900. He went to the United States as a boy, showed such talent for music that he was engaged as a teacher in Bardstown, Ky., and afterward became Professor of Natural Philosophy in the college there. In 1855 he invented the type-printing telegraph instrument, which, by means of wheels revolving synchronously at both ends of the wire, enables the operator when he strikes a letter on a keyboard like that of the typewriting machine, to cause the receiving instrument at the other end to print the same letter on a continuous strip of paper. It was adopted in the United States in competition with the Morse system. He went to England in 1857, but could not induce the telegraph companies to try his invention. It was accepted by the French Government for its important lines in 1861, and subsequently by other Continental governments. In 1878 Prof. Hughes made public his discovery of the microphone, and his experiments in connection with it, which not only enabled the inventors of the telephone to construct instruments sensitive enough to be of practical use, but anticipated in some measure the later discovery of wireless telegraphy. He discovered that a divided electrical conductor, such as metallic particles or wires in loose contact, when introduced into a circuit, are sensitive to sound, and produce an undulatory electrical current with waves corresponding to the sonorous waves, the molecules arranging themselves in such manner as to increase or decrease the electrical resistance. By experimenting with such broken conductors he was able to detect electric waves, and succeeded in transmitting signals by such waves for a distance of 500 yards without wires. Prof. Hughes invented also the induction balance, an electrical contrivance that has been employed to test the sensitiveness of hearing, to detect the position of a bullet in a wounded man, and to locate ores under the earth. He published various investigations in electricity and magnetism, and was admitted into the Royal Society in 1880.

Humbert I, King of Italy, born in Turin, March 14, 1844; died in Monza, July 29, 1900. (For portrait see *Annual Cyclopædia* for 1884, page 412.) He was the eldest son of Victor Emmanuel II and Archduchess Adelaide of Austria, and as a boy he accompanied his father in the Austrian campaign of 1859. Before the war of 1866 he had gone to Paris to sound the Emperor Napoleon III as to the attitude he would take in regard to an alliance of Italy with Prussia against Austria, and when hostilities began he took command of a division in Gen. Cialdini's army, which was defeated by the Austrians under the Archduke Albrecht at Custoza. He, by his prompt and able tactics and his personal bravery, which he had in common with all the members of the house of Savoy, extricated the army from its desperate situation, forming his regiments into squares to hold back the Austrian cavalry, and inspiring his men by placing himself in the most exposed position until Gen. Bixio brought up his force to help cover the retreat. He had a considerable part in the reorganization of the Italian army that was the work of the succeeding period. When Rome was occupied in 1870 he received the

command of the Roman corps and took up his residence in the new capital with his wife, Princess Marguerite of Savoy, his cousin, whom he had married in 1868. He visited the court of Prussia in 1872, the Russian court in 1873, and in 1875 he went to Vienna, afterward going to England incognito. In 1878 he succeeded his father as King of Italy, in a time of financial embarrassment, economic depression, disappointed national ambition, and internal discord, when the tariff war with France was at its height, when the Clericals, the Irredentists, and the Republicans were assailing the Government and its policy, and the socialists and anarchists were lifting their heads, and when the friends of the monarchy felt disheartened and humiliated because Italy, notwithstanding the sacrifices the people had been called upon to make and the crushing burdens imposed upon them, had gained no apparent advantage from such sacrifices and burdens and had returned empty-handed from the Congress of Berlin. The period of ministerial instability had already begun. King Humbert was personally popular, and the attempt of Passanante to stab him when he visited Naples in November, 1878, tended to strengthen his position except with those who aimed to sweep the monarchy away. But the dangers and difficulties of the Government increased, and of the statesmen who succeeded each other at the helm—Depretis, then Cairoli, then Zanardelli, then the Cairoli-Depretis coalition—none seemed able to guide the ship off the shoals. When France occupied Tunis in 1881 Italians saw all their hopes of greatness dispelled, and began to regret the unification that had cost so much and brought no substantial return. In this moment of despair and isolation Bismarck offered the triple alliance. Humbert visited Vienna in October, 1881, as the first move toward closer relations between Italy and the two empires of central Europe. Energetic measures were taken to strengthen the naval and military forces of the kingdom as the condition of the alliance to be fulfilled by Italy. At the same time, despite the additional outlay, the ministers succeeded in bringing about a temporary equilibrium in the budget and abolishing the forced paper currency. The parliamentary situation also became more settled, and Depretis, until he died, was able to command a working majority in the Chamber. The definite treaty of defensive alliance between Italy, Austria-Hungary, and Germany was concluded on March 13, 1887, supplementing and strengthening the Austro-German alliance that had existed since 1879. This led to a renewal of the tariff war with France in 1888, which dealt a staggering blow to Italian commerce and industry. The secret Mediterranean naval alliance with England, which had been arranged meantime, had lured Italy, which with the encouragement of England occupied Mas-sowah in 1885, hoping to redeem some of the prestige lost by the encroachments of France upon the chosen Italian sphere in northern Africa, into a desperate situation on the Red Sea. The colonial enterprise in Erythrea was a serious drain on the financial resources of the country, already overburdened with taxation. Humbert was a strictly constitutional king, who never intervened in domestic politics at that time, following his father's example and his dying injunction to be always the jealous custodian of liberty, but in foreign affairs he insisted on letting his voice be heard in critical junctures. When Crispi fell in 1891 and the Rudini Cabinet was formed, it was the King's influence that prevented a weakening or rupture of the triple alliance and

a *rapprochement* with France, and it was he who encouraged the ministers to persevere in the colonial policy, though the reduction of military expenditures was necessary. The King visited Berlin once more to demonstrate adherence to the alliance. With Crispi's return to power the old policy was continued with more vigor until the disaster of Adowa in 1896 caused his final fall, endangered the dynasty even, and compelled the abandonment of the Abyssinian enterprise, and extinguished the hope of a colonial empire. The reverse to Italian arms actually brought about a better situation at home after the popular passions had subsided. The Government amnestied all political prisoners and endeavored to conciliate the revolutionary elements. Normal relations were restored between Italy and France by the renunciation of Italian pretensions in Tunis, and a commercial treaty was concluded in November, 1898. No sooner were external relations comfortable again than unrest and discord began to disturb the internal situation. When another anarchist, Acciarato, attempted to kill Humbert before the gates of Rome on April 22, 1897, the popular affection and respect for the simple soldier King were shown not less unmistakably than on the previous occasion. In the following year the proceedings of the Government in suppressing the labor disturbances in Milan and other cities affected the popularity of the King, and when he signed the decrees that Gen. Pelloux considered necessary to give him power to preserve public order in spite of parliamentary obstruction, the King was involved in the odium created by the stern repressive policy of his ministers because the constitutionality of such extra-parliamentary legislation was denied by the Radicals. No reasoned political incentives can be attributed, however, to the murderous acts of fanatical Italian anarchists, who choose as victims the most conspicuous representatives of the ranks and distinctions that excite their malice and hatred, and strike down a shining mark, such as a President of the French Republic or an Empress of Austria, to give distinction to their own exit from a world whose conditions disgust them with life. The assassin who shot King Humbert, going from the United States expressly for the purpose, was not rendered desperate by poverty, nor was he personally affected by the arbitrary acts of the Italian Government that caused the agitation, nor an immediate member of the community in which the grievances were felt, but a skilled workman who lived in the United States, earning good wages and saving money. King Humbert had but one child, Victor Emmanuel, Prince of Naples, who succeeded him as King. His eldest sister, Princess Clotilde, is the widow of Prince Bonaparte. His deceased brother Amadeus, who occupied the Spanish throne from 1870 to 1875, left four sons—Emmanuel, the present Duke of Aosta; Victor, Count of Turin; Louis, Duke of Abruzzi; and Humbert, Count of Salemi. His younger sister, Princess Pia, is the widow of the late King Louis I of Portugal. The house of Savoy is one of the most ancient now occupying a European throne, being traced to a German Count Berthold, whose domain in the eleventh century was in the Alps between Lake Lemano and Mont Blanc and whose descendants at different periods acquired Turin and Susa, Nice, Piedmont, Sicily, afterward exchanged for Sardinia, and Genoa. The younger branch of Savoy-Carignano succeeded in the person of Charles Albert to the kingdom of Sardinia when the direct male line died out in 1831, and Victor Emmanuel II. in whose favor his father abdicated in 1849, obtained

Lombardy in 1859, and assumed the part of unifier of Italy. The annexation of Parma, Modena, the Romagna, and Tuscany to Sardinia was effected by the free vote of the people, who expelled their former rulers and welcomed the liberating army early in 1860, as did the people of Sicily and Naples, a section of the Papal States, the Marches, and Umbria later in the year, and Rome after the withdrawal of the French garrison in 1870. The King of Italy has a civil list of 15,050,000 francs a year, out of which he must pay the allowances of other members of his family.

Hunter, Sir William Wilson, an English civil servant, born July 15, 1840; died near Oxford, England, Feb. 7, 1900. He was educated at the University of Glasgow, at Paris, and at Bonn, and entered the Bengal civil service in 1862. His energy and ability met with suitable recognition, and by 1871 he had become undersecretary to the Government of India and director general of statistics. He was a member of the Viceroy's Legislative Council, 1881-'87, and in the latter year retired from the civil service. He had written largely before his return to England in 1887, and after that event continued his literary pursuits, and was a frequent contributor to the Times. His writings include *A Comparative Dictionary of the Languages of India and High Asia* (London, 1869); *The Annals of Rural Bengal*, perhaps his best work (1872); *The Uncertainties of Indian Finance* (Calcutta, 1869); *Orissa* (1872); *A Life of the Earl of Mayo* (1875); *A Statistical Account of Bengal* (1875-'77); *A Statistical Account of Assam* (1880); *England's Work in India* (1881); *The Imperial Gazetteer of India* (1885-'87); *The Indian Empire: Its History, People, and Products* (1882); *A Brief History of the Indian People* (1884); *Life and Work of the Marquess of Dalhousie*; *Life of Brian Hodgson* (1896); *The Old Missionary* (1896); *The Thackerays in India* (1897); *A History of British India* (Vol. I, 1899).

Jacobini, Domenico, an Italian ecclesiastic, born in Rome, Sept. 3, 1837; died there, Feb. 1, 1900. He was of no patrician family, although the only Roman in the Sacred College, but the son of the steward of an estate. After studying in the Roman seminary he became a tutor in Greek after his ordination, worked for a time in the archives of the Propaganda, passed into the Congregation of Briefs in 1874, was appointed papal house chaplain soon after and a canon of St. Peter's, and in 1881 was made Archbishop of Tyre. A year later he was appointed secretary of the Propaganda. While filling this office and previously he took a leading part in organizing the Clerical political forces, helping to found Catholic workmen's societies and electoral unions. He alone among the clergy joined Prince Borghese and other laymen in the request to Leo XIII to recall the papal command prohibiting Italian Catholics from voting in the national elections. This act destroyed for the time his influence at the Vatican and brought upon him various embarrassments. In 1891 he was sent away from Rome as papal nuncio at Lisbon, where he won great influence and regained the favor of the Vatican by inducing the Government and King of Portugal to cancel the promised visit of the King to the Italian court in 1895. After this diplomatic success Jacobini was made a cardinal, June 22, 1896, and he was protector of the theological academy until in November, 1899, he was appointed cardinal vicar for the Roman diocese.

Johnson, Samuel, an English actor, born in Ayrshire, Scotland, in 1831; died in London, Feb. 15, 1900. He was a son of an actor and manager of the same name, well known in Scotland in the

last century. His first appearance was in the part of Bartolo in *The Wife*, at the Maryport Theater, Cumberland, in 1845. He became manager of the Theater Royal, Sheffield, in partnership with John Coleman, in 1853, and there produced *Uncle Tom's Cabin*, which had a run of forty nights—extraordinary for that period. He became a member of the Lyceum Theater, Sunderland, in 1855, playing the comedy rôles. This theater having been burned, Dec. 25, 1855, he went to Newcastle-on-Tyne, and when the Lyceum was reopened returned for the opening in September, 1856, when Mr. Henry Irving made his first appearance. His London *début* was at the Lyceum in 1859, when he played Cassim Baba in *The Forty Thieves*. In 1860 he began a three years' service as comedian of the Theater Royal, Edinburgh. Oct. 10, 1864, he began a ten years' engagement at the Theater Royal, Dublin. He was very popular in Ireland, and besides playing the standard comedy parts he was a favorite in *Shaun the Post*, *Myles-na-Coppaleen*, and *Conn the Shaughraun*. He was then for four years the comedian of the Theater Royal, Belfast, and when Henry Irving began his management of the Lyceum Theater, London, Dec. 30, 1878, with *Hamlet*, Mr. Johnson was the comedian of the company. He remained a member of the Irving company until the end of the season of 1898—twenty years of continuous service. His last appearance was in the part of *Maitre Van Spennen* in *The Black Tulip*.

Joinville, François Ferdinand Philippe d'Orleans, Prince de, born in Neuilly castle, Aug. 18, 1818; died in Paris, June 17, 1900. He was the third son of Louis Philippe, King of the French, younger than the Duc d'Orleans and the Duc de Nemours, but older than the Duc d'Aumale and the Duc de Montpensier, and he survived all his brothers. He chose a naval career, went to sea at the age of thirteen, and became a favorite with the French navy and the most popular of the Orleans princes, devoting himself entirely to his profession. In 1837 he commanded a vessel in the Mediterranean and saw vigorous service. He commanded a corvette in Admiral Baudin's expedition to Mexico, taking part in the bombardment of San Juan d'Ulloa and leading the storming party into the gate of Vera Cruz. Later he was sent to St. Helena to bring Napoleon's ashes back to France. He married Donna Francisca de Braganza, sister of Dom Pedro II, Emperor of Brazil, on May 1, 1843, while visiting Rio de Janeiro in his ship. In 1845 he commanded a squadron in Marshal Bugeaud's expedition against Morocco, and with his ships he bombarded Tangier and took Mogador, gaining the rank of vice-admiral. He was in command of a squadron at Algiers, where the Duc d'Aumale was governor general, when the revolution of 1848 broke out, and after their father's deposition both brothers resigned their commands to the republican authorities and sailed for England to join the rest of the family at Claremont. In 1849 a party rose in France that wished to elect the Prince de Joinville to the office of President of the French Republic. When Napoleon III overrode the republic he was disquieted by the popularity of the Duc d'Aumale and the Prince de Joinville, although they did not conspire or do aught to stimulate it, and in 1852 the Emperor confiscated the Orleans estates. The Prince de Joinville was in the United States with his son and the Comte de Paris and the Duc de Chartres when the civil war was going on in the United States. His two nephews obtained commissions and were attached to the headquarters staff, while he remained with them in Gen. McClellan's camp. They saw much active

service before the French intervention in Mexico seemed likely to involve France in a war with the United States, when they resigned and departed. The Prince de Joinville had witnessed the principal actions of the Virginian campaign of 1862, and he wrote an impartial account of them in an article printed in the *Revue des Deux Mondes*. When the Franco-Prussian War broke out all the Orleans princes offered their services to Gen. Trochu, and were refused. Nevertheless the Prince de Joinville succeeded in entering under the name of Col. Lutherod, and served with the army of the Loire in the operations around Orleans. Gambetta concluded then that a French prince was dangerous in the army, even when fighting incognito, and after detaining him five days at Le Mans sent him back to England. When the law of banishment against his family was abrogated on June 8, 1871, he returned to France, having already been elected a member of the National Assembly for the department of Haute Marne, and he took his seat, breaking, according to the statement of Thiers, a promise he had made. He and the Duc d'Aumale discreetly refrained from speaking or voting on political questions. The repeal of the law of banishment had been carried by an anti-republican majority as a preliminary step toward the restoration of the monarchy, yet after the princes had been some time in the country the republican Government relaxed its proscriptions still further by restoring a part of the Orleans properties. Although the Prince de Joinville helped to bring about the fall of Thiers in 1873, he did not vote for the new Constitution, and in 1876 he requested his electors not to send him back to the Chamber. He had taken no active part in the efforts to bring about a reconciliation between the house of France, as the main stem of the Bourbon family was called by the Legitimists, and the Orleans branch. He went with the Comte de Paris, however, to Frohsdorf to render homage to the Comte de Chambord in token of the acceptance of his nephew, the head of the Orleans branch, as the legitimate heir to the French throne and the consequent fusion of the Legitimists and the Orleanists into one political party. When the last representative of the direct line was buried in Frohsdorf, in 1883, he went with the rest of the Orleans family to the funeral. The union of the two royalist parties and the accession of some of the Bonapartists in support of the pretensions of the Comte de Paris created a new political situation; and when in the elections of 1885 the Conservatives increased their strength in the Chamber from 80 to 210 out of 580 members the Republican majority sanctioned various repressive measures culminating in the renewal of the law of exile in 1886, denying the right to live or sojourn in France of pretenders or their eldest sons. The Prince de Joinville with the rest of his family went into exile once again. The prince had a finely cultured mind and most affable manners. In military and naval matters he always took the deepest interest, and in all questions of the day he was well informed. The Princess de Joinville died in 1898, leaving two children—Françoise Marie Amelie, born in 1844 and married to the Duc de Chartres, and Pierre Philippe, Duc de Penthièvre, born in 1845, who was a cadet at the naval academy in Annapolis while his father was in the United States. The Prince de Joinville was the author of studies that were highly praised on navies and maritime warfare. When the second law exiling the heads of families that once reigned was enacted it excluded from office all other members of the dynastic families, and thus the Prince de Joinville lost his rank as vice-admiral of the French navy.

Jones, Harry, an English clergyman, born Dec. 8, 1823; died at Bury St. Edmund's, Sept. 30, 1900. He was educated at Cambridge, and after being admitted to holy orders in 1848 was a curate at Baddow, in Essex, till 1850. He held other curacies until his appointment in 1858 to the vicarage of St. Luke's, Berwick Street, near the famous Seven Dials district of London. He remained fourteen years in this parish, then one of the worst of the London slums, and was rector of St. George's-in-the-East, 1873-'82. For the next three years he was vicar of the rural parish of Great Barton, and then, returning to London, was rector of St. Peter's, Great Windmill Street, 1882-'85; St. Philip's, Regent Street; and from 1897 rector of St. Vedast's, Foster Lane. He became a prebendary of St. Paul's Cathedral in 1880, and was for ten years a chaplain in ordinary to the Queen. He traveled extensively on the Continent in his various summer holidays, and was a war correspondent at the battle of Sedan. Although he did not ally himself definitely with any party in the Church, his sympathies lay naturally with Maurice and Kingsley, and he would have been classed with Broad Churchmen, if classed at all. He was an indefatigable worker among the London poor, with whom he was exceedingly popular. He was a favorite, however, with men of all ranks. His published books comprise *Conscience versus the Quarterly: A Plea for Fair Play toward the Writers of the Essays and Reviews* (1861); *The Church of England and Common Sense* (1864); *Holiday Papers* (1864-'89); *The Regular Swiss Round in Three Trips* (1865); *Life in the World* (1865); *Priest and Parish* (1866); *The Perfect Man* (1869); *East and West London: Being Notes of Common Life* (1875); *Past and Present in the East* (1881); *Social Science* (1887); *Dead Leaves and Living Seeds*.

Joubert, Petrus Jacobus, a Boer soldier, born in Cango, Cape Colony, in 1834; died in Pretoria, March 27, 1900. He was an orphan child of

well-to-do parents, descended from a Huguenot refugee who went to South Africa when the edict of Nantes was revoked in 1687. He received an elementary education, accompanied traders who traveled with wine and spirits through the Boer republics, and when he arrived at manhood settled in the Wakkerstroom district of the Transvaal as a farmer. His intelligence, shrewdness,

and enterprise made him a man of mark in that community, and his knowledge of business and law and his reputation for probity and judicial discrimination led to his being frequently called upon to settle disputes between his neighbors, this to his giving up farming for the law, and this in turn to his being elected, about 1863, to the Volksraad as member for Wakkerstroom. He was re-elected, received the appointment of Attorney-General, and acted as President of the republic during President Burger's visit to Europe in 1874. When the ambitious improvements undertaken by President Burger bankrupted the treasury, and his unorthodox and modern views alienated the old-fashioned Boers, the traders in

the towns, mostly newcomers, welcomed British annexation. From the beginning of the British administration Paul Kruger and Piet Joubert, who had withdrawn from political life during the period of confusion and financial insolvency, began a bitter opposition against Sir Theophilus Shepstone, the British Commissioner. Joubert accompanied Kruger and the committee of the Volksraad that went to England in the hope of securing by friendly negotiation the restoration of independence. He refused offers of well-paid posts in the British administration, and took the leading part in getting all the Boers to sign a protest against annexation. When a committee went to Sir Bartle Frere in Natal to present the protest, Slim Piet, or crafty Piet, as he was nicknamed, carried on the negotiations with the British High Commissioner as the spokesman and advocate of the burghers. He was more active and determined even than Kruger in keeping up the agitation against British rule, and when the burghers decided on armed resistance and established a Provisional Government in 1880 he became a member of the triumvirate charged with the conduct of the war. While Kruger assumed control of diplomatic negotiations Joubert was made commandant general of the Boer forces, which at first were not disposed to take orders from a commander in chief, but which he succeeded in thoroughly organizing and impressing with his generalship as the war proceeded. He commanded at Laing's Nek, Ingogo, and Majuba, defeating the British every time. In the last engagement, fought on Feb. 27, 1881, he scaled a table mountain where the British were encamped, gained a commanding eminence with his small force without being observed, and opened a sudden rifle fire that caused the British regulars to run in a wild rout from a tenth of their numbers. This ended the war. Joubert conducted the earlier peace negotiations. After the retrocession the Invincible, as he was now called, was retained in the post of commandant general, and could not attain the presidency because the burghers would not feel safe with any other general at the head of their military organization. He was a member of the commission that superintended the location and government of the natives in the Transvaal. In 1893 he was put forward as the candidate for the presidency of the party that opposed President Kruger on account of his favoring Hollanders and granting monopolies, and his resistance to the demands of the Uitlanders for a wider franchise and favorable legislation. He received 7,009 votes, only 872 fewer than Paul Kruger, but when he ran again in 1898 he got no more than 2,001. He advocated a policy of greater liberality toward Uitlanders, and thus it came that some of his countrymen suspected him of treachery when the country magazines were found to be ill supplied with ammunition at the time of the Johannesburg rising. His vote in the Executive Council was generally given in favor of conciliatory measures, yet he advocated severe punishment for Dr. Jameson and his raiders. Nevertheless, the friends of President Kruger put him out of his office of Superintendent of Native Affairs, and threatened his post of commandant general. There was no open breach in the old friendship of the rival politicians; Kruger knew how necessary to himself and to the republic were the good will and assistance of the most popular politician in South Africa, and the only soldier whom the Transvaalers would follow with confidence into battle. Joubert was acting President when Kruger was in Europe in 1883 and 1884 negotiating for the withdrawal of British suzerainty

over the Transvaal. In 1891 the commandant general went to Europe to select arms for the defense of the independence of the republic. The training and tactics of the Boer army were the work of Joubert, who was well versed in military science and history, and who studied out the methods of administration, discipline, and fighting that were best adapted to the character of the Boers and the conditions and conformation of their country. When the war came and the Boers marched into the war his general plan of campaign was good, but owing to his own lack of energy and promptitude, the effect perhaps of growing old or of his pacific leanings, owing also to the want of co-operation and obedience on the part of the commanders, always more marked in the Boer army at the beginning of a campaign than in other armies, it was not successful either in Natal or in Cape Colony; and he might have chosen a better plan, more likely to succeed, that of an immediate invasion of Cape Colony, had not sectional jealousy prevented, and the unwillingness of the Boers to leave their homes unprotected. Indecision and excessive caution, undue deference to the opinions of his subordinates, and acquiescence in their independent movements, characterized his conduct of the campaign in Natal, which was carried on with more vigor after he was compelled by infirmity of health to leave the front. His death was sudden and unexpected. Gen. Louis Botha, the victor at Spion Kop and on the Tugela, succeeded to the supreme command. Piet Joubert was a typical Boer of the old sort, understanding farming and cattle breeding as well as any one, keen at a bargain, yet ready to sacrifice selfish and pecuniary interests for the public good, simple and frugal in his habits, plain and frank of speech, kindly, unassuming, such a man as the Boers like and admire; none was more popular among all the Dutch of South Africa. And he had intellectual gifts of a remarkable kind, and an ability to use them that gave him recognition and weight. There was no malice or depreciation implied in the epithet *slim*. His mental activity, facility, and versatility, and his thirst for knowledge, made him almost a master of jurisprudence, history, politics, and strategy, and he was the master of a noble, forcible, and eloquent style of writing, and made frequent use of his ready pen.

Ketteler, Baron K. von, a German diplomatist, died in Peking, China, June 18, 1900. He was a nephew of the celebrated Bishop of Mayence, and was trained first for a military life. He resigned his commission as a Prussian officer in 1882 to enter the German legation in China as a student interpreter, was transferred to Canton, and the courage and understanding that he displayed in saving Germans and other Europeans during the disturbances of 1883 gained for him the order of the Red Eagle. He returned to Peking, filled as substitute for a time the post of consul in Tientsin, was transferred in 1890 to Washington as secretary of legation, was appointed minister to Mexico in 1895 after marrying an American lady, and in 1899 returned to China to succeed Baron von Heyking as minister plenipotentiary at Peking. He could speak Chinese with ease, and for this reason and because of the German activity in Shantung took the lead in making representations and uttering warnings to the Chinese Government when the Boxer troubles began in northern China. He was engaged in such an errand when he was shot in the street by a Chinese patrol (see CHINA).

Kingsley, Mary H., an English traveler and writer, born about 1865; died in Simonstown,

Cape Colony, June 5, 1900. She was the daughter of Dr. George Kingsley, a brother of Charles Kingsley. She was known principally in relation to west Africa through her books and lectures. Her statements are all founded on personal observation, and in one of her books, *West African Studies*, she criticises with considerable sharpness the system of government adopted for the Crown colonies of West Africa. Early in 1900 she went to South Africa as a special correspondent, and soon after arriving there offered her services as nurse in the military hospital at Simonstown. While engaged in this work she contracted the illness of which she died. Her published books include *Travels in West Africa* (1897); *West African Studies* (1899); and *The Story of West Africa* (1900). Her style was both original and distinctive, displaying at times a peculiar quality that might almost be called sardonic, and is seldom found in a woman's writing.

Lankester, Mrs. Phebe (Pope), an English writer on popular science, born in Manchester, England, in 1825; died in London, April 9, 1900. She was the daughter of a manufacturer, and in 1845 married Dr. Edwin Lankester, and subsequently assisted her husband in preparing articles for the *Penny Cyclopædia* and the *English Cyclopædia*. She was the mother of eleven children, one of whom is the noted scientist, Prof. E. Ray Lankester. Her published works comprise *Wild Flowers worth Notice* (1861); the literary portion of *Sowerby's British Botany*; *Talks about Health* (1874); and *Talks about Plants* (1878).

Lavroff, Pierre, a Russian revolutionist, born in 1821; died in Paris in the beginning of February, 1900. He was of noble birth and entered the army, becoming an eminent professor in the St. Petersburg military academy. His contributions to various Russian periodicals roused the suspicion of the authorities, and after the attempt of Karakasoff on the life of Alexander II he was proved to have held relations with the nihilist conspirators, for which he was deprived of his rank of colonel of artillery in the guards and relegated to the government of Vologda, whence he escaped. Going to France, he entered into relations with Bakunin and plunged into the revolutionary agitation. After staying for a while in Zurich and then in London, consorting with other nihilists in exile, he returned to Paris and assisted in editing an anthropological review. He was expelled in 1882, but returned again and remained in Paris thenceforward.

Lawes, Sir John Bennett, an English agriculturist, born in Hertfordshire in 1814; died there, Aug. 31, 1900. He was educated at Eton and Brasenose College, Oxford, giving more attention to independent scientific studies than to the classics. He acquired a thorough acquaintance with the pharmacopœia, and after succeeding to the paternal estates in 1834 he experimented with the culture and studied the properties of the poppy, hemlock, henbane, belladonna, and other plants the therapeutic action of which was engaging the attention of the medical world. The agricultural crisis caused by the decline of the price of wheat in spite of protection to 39s. a quarter in 1835 roused his interest in this staple and suggested investigations and experiments in agriculture for the public good. He took the home farm of 250 acres for his researches in debated questions and unsolved problems of agriculture. From 1837 till 1839 he tested the effects of different kinds of manure on plants growing in pots, and was the first one to discover the value of the process of treating phosphates with sulphuric acid. He obtained remarkable results from the

application of this fertilizer to turnips, continued the experiment in the open field for two years longer, and in 1842 took out a patent for treating mineral phosphates with sulphuric acid and became the pioneer manufacturer of commercial fertilizers. He associated with himself in 1843 Dr. J. Henry Gilbert, who was fresh from his studies in agricultural chemistry under Liebig, and together they started the Rothamsted agricultural experiment station, the earliest of all with the exception of Boussingault's station at Bechelbronn in Alsace, antedating by nine years the German station at Mückern, and by the length of a human generation the station at Middletown, Conn. Their experiments covered the field of stock breeding and the feeding of animals as well as farm crops. In relation to the latter their favorite method of investigation was to sow the chief rotation crops, such as wheat, barley, oats, beans, clover, turnips, or potatoes, each through a long succession of years on the same piece of ground, a crop of each one on one plot year after year with no manure at all, on another plot with barnyard manure, on other plots with all the different varieties of manufactured manures. They studied also different courses of rotation without manure and with the various kinds of manure. On one field wheat has been grown every year for over fifty years without any manure, and given an average yield of between 13 and 14 bushels an acre. Experiments in manuring mixed perennial grasses have yielded valuable practical results, especially by showing how greatly meadows are affected by the weather. The benefits of nitrogenous manures to cereal crops, of potash to leguminous plants, and of phosphates to roots were first demonstrated at Rothamsted. The relative merits of sulphate of ammonia and of nitrate of soda as a source of nitrogen, the composition of rain and of drainage waters, the utilization of sewage, and the making of silos were other lines of inquiry. In 1861 a memoir on the sources of nitrogen for the nutrition of plants was published which marks an epoch in the development of physiological botany, proving that plants do not in general assimilate free nitrogen, though in a paper issued in 1891 it was admitted that leguminous crops do absorb in their growth considerable quantities of uncombined nitrogen, Lawes having revised to this extent the opinions that he had reaffirmed ten years previously in his treatise on Fertility, which laid down the principle that the store of nitrogen contained in the soil or supplied by manures is the source of practically all the nitrogen found in vegetation. The experiments on animals were conducted by watching the increment of live weight in cattle, sheep, and hogs obtained in a given time by feeding different quantities, kinds, and combinations of food; also the relative growth and development of different parts and organs of the animals; the relations of age and other conditions to the fattening of animals; the composition of the manure in relation to the food consumed; and the influence of different kinds and quantities of food on the yield and composition of milk. The source of fat in the food and of muscular energy, and the comparative values of animal and vegetable foods for human beings, were studied incidentally. The results of the Rothamsted experiments were published in the *Journal of the Royal Agricultural Society* from 1847 onward, and in serial publications and in about 130 special memoirs, notable among which are a paper printed in 1847 dealing with turnip culture, one on the amount of water given off by plants that was published in 1850, papers issued in 1851 and 1855 treating of

the fattening qualities of different breeds of sheep, one in 1858 on the composition and quality of various fattened animals, one in 1866 on feeding stock with malted and unmalted barley, one in 1875 on the valuation of unexhausted manures, one in 1878 on nitrification, one in 1879 on higher farming as a remedy for lower prices, one in 1879 giving the results of twenty years of experimentation on the mixed herbage of permanent meadow, one in 1880 on the English climate in relation to wheat crops, one in 1881 on the composition of rain and drainage waters, one in 1882 on nitrogen in soils, one in 1887 on the growth for many years in succession of root crops on the same soil, one in 1888 on the growth of potatoes for twelve years on the same land, one in 1889 on growing leguminous crops in succession, one in 1890 on the food of agricultural crops, one in 1891 on the sources of the nitrogen of leguminous crops, one in 1892 on allotments and small holdings, one in 1893 on home produce, imports, consumption, and price of wheat over forty harvest years, one in 1894 on crop rotation, one in 1895 on the feeding of animals for the production of meat, milk, and manure and for the exercise of force, one in 1896 on the depression in the price of grain and the production of wheat, one in 1897 giving new tables of the value of unexhausted manures and dealing with the question of compensation, one in 1898 on the valuation of manures obtained from food given for milk production, and a later one treating of the growth of the sugar beet and the manufacture of sugar in the United Kingdom. Sir John Lawes, who was created a baronet in 1882, made yearly an estimate of the wheat crop of Great Britain and Ireland. He was a member of the Royal Agricultural Society from 1846, and was active in establishing its experimental farm at Woburn in 1876. The laboratory in which most of the chemical work connected with the experiments at Rothamsted was conducted was itself built and equipped by means of a subscription raised among British agriculturists in 1854, and intended as a testimonial to Mr. Lawes in recognition of the national importance of the work he was carrying out. In the same year he was elected a fellow of the Royal Society, and in 1867 he and Sir Henry Gilbert jointly received the royal medal. In order that the work at Rothamsted might go on after his death, and that the continuous experiments conducted from the beginning without a break might still be persevered with, Sir John Lawes in 1889 set apart by a trust deed the sum of £100,000, with the laboratory and certain areas of land, for the prosecution of the investigations in perpetuity.

Leathes, Stanley, an English clergyman, born in Ellesborough, England, March 21, 1830; died in Much Hadham, Hertfordshire, April 30, 1900. He was educated at Cambridge, and took orders in 1856. He was curate of St. Martin's, Salisbury, 1856-'58; rector of St. Philip's, Regent Street, London, 1869-'80; of Cliffe-at-Hoe, 1880-'89; and of Much Hadham from 1889 until his death. He held the chair of Hebrew at King's College, London, from 1863, and was a prebend of St. Paul's from 1870. His published works include *The Birthday of Christ* (London, 1866); *A Short Practical Hebrew Grammar* (1868); *The Witness of the Old Testament to Christ* (1868); *The Witness of St. Paul to Christ* (1869); *The Witness of St. John to Christ* (1870); *Truth and Life* (1872); *The Structure of the Old Testament* (1873); *The Cities Visited by St. Paul* (1873); *The Gospel its own Witness* (1874); *The Religion of the Christ* (1874); *The Grounds of Christian Hope* (1877); *The Christian's Creed*

(1877); Old Testament Prophecy: Its Witness as a Record of Divine Foreknowledge (1880); The Foundations of Morality (1882); Characteristics of Christianity (1883); Christ and the Bible (1885); and The Law in the Prophets (1891). Prebendary Leathes was a very thorough but extremely conservative scholar, and had little sympathy with the modern school of higher criticism.

Léonce (Nicole), Édouard Théodore, a French actor, born in Paris, in 1820; died in Raincy, Feb. 20, 1900. He was educated at the École de Droit in Paris. He first appeared as a singer at Belleville, whence he went to the Théâtre Vaudeville, Paris, and eventually to the Bouffes, then under the management of Offenbach. He was a very popular figure in all the original productions of that composer's operas, and was especially notable in Orphée aux Enfers. Other creations in which he became a favorite were Croquefer and M. Chouffeur in Deux Aveugles. At the Théâtre des Variétés he was the original player of Menelas in La Belle Hélène, of the rôle of the banker in Les Brigands, of Pepitt in Trente Millions de Gladiateur, and Lorient in Mam'zelle Nitouche. In 1888 Léonce retired, and was soon forgotten by the world he had so long amused.

Liebknecht, Wilhelm, a German politician, born in Giessen in 1826; died in Charlottenburg, Aug. 7, 1900. He was educated in the universities of Giessen, Bonn, and Marburg, studying deep into philosophy, plunged into journalism when he went out into the world, and made a name as a strong political controversialist. The revolutionary movement of 1848 drew him into its vortex, and in the insurrection in Baden he took a lively part. On its failure he fled into Switzerland, and from there to England, where he lived for twelve years, consorting with the revolutionists from all parts of Europe who sought asylum in that country from the reaction prevailing all over the Continent. The general amnesty of 1862 allowed him to return to Germany. His mind seethed with the labor question. He had become a thorough Marxist, and was determined to make the organization of the proletariat the aim of his life, convinced that the political solidarity of the working classes, facilitated by the formation of trade unions, could alone bring about the economic emancipation of the laborer. He entered into the socialist propaganda with a stern energy, a fanatic zeal, a dauntless and uncompromising spirit, that soon made him a leader. He became an editorial writer after his arrival in Berlin on the Norddeutsche Allgemeine Zeitung, an Opposition journal then, which was later purchased by Bismarck and turned into an official organ. The repression of the labor troubles of 1865 involved Liebknecht among the earliest victims. Expelled from Prussia, he became editor of the Mitteldeutsche Volkszeitung in Leipsic, which was soon suppressed. Though dogged by the political police, he preached socialism in all the towns of Germany and taught the workingmen to form themselves into groups. He even essayed a propagandist tour in Prussia, and was arrested and condemned to three months' imprisonment. By this time the Social-Democratic party that he had organized, disciplined, inspired with a devotion to the Marxist ideal approaching religious zeal, and instructed in a method of incessant missionary effort for the recruitment of the party, began to be a power in the land. In 1867 a Saxon constituency elected him to the North German Reichstag. He created at this time an organ for the German Socialist party, the Demokratisches Wochenblatt. In the Reichstag Liebknecht boldly assailed the foreign and military policy of Bismarck. He op-

posed the war against France, and later the proclamation of the empire and the annexation of Alsace-Lorraine. At the risk of compromising the future of his young party he steered a course directly counter to the enthusiastic sentiment of the nation, declaring that socialism must necessarily be international and antimilitary. Bismarck stigmatized this attitude of the Social-Democrats as unpatriotic and detestable, and on March 26, 1872, the two Socialist leaders, Liebknecht and Bebel, were condemned to two years' imprisonment on a charge of high treason. They were confined in the fortress of Hubertusburg. When he was free again Liebknecht was elected in 1875 to the Reichstag in spite of prodigious efforts that the Government made to hinder his election. Bismarck tried to keep him out of the Reichstag, nevertheless, by having the Reichstag pronounce the election invalid. Liebknecht then in a series of violent articles demonstrated the official interference in the election, and charged the Government with violating the mails by opening his letters. This accusation created a scandal that excited all Germany and led to an investigation which led to no conclusion. He was re-elected to the Reichstag by the workingmen of Mayence in 1881, and took the parliamentary leadership among the small group of Socialists, the champion of the party who bearded the Iron Chancellor who denounced and oppressed. The audacious affronts that he flung at the all-powerful Reichskanzler in his supreme hour of greatness, for which he was often disciplined by the Reichstag, the unbecoming anger to which he stirred Prince Bismarck, and the far more unbecoming petty tricks and abuses of power that he showed up as inherent in Bismarckian political methods, the debasement of the police, the prostitution of the press, the coercion of voters by officials, the telling blows that Liebknecht dealt Bismarck in relation to his own conduct, as well as the constant attacks on the imperial policies, excited the interest of everybody, the admiration of the Socialists, and the sympathetic delight of the South Germans, who dreaded the overweening influence of Prussia. The Conservative journals characterized Liebknecht himself as a Prussian hater, and did not fail to hold up to general odium the internationalist principles that he had engrafted on the programme of the German Socialist party. He was the principal leader and organizer, almost the dictator, of the party in the country, under whose stern discipline it waxed in spite of repressive laws and police persecution. Before Bismarck passed off the scene the policy of proscription was found to be useless. The Socialist party became co-extensive with the industrial working population of Germany, and forced Bismarck to offer accident, invalid, and old-age insurance, the most daring innovation in economic legislation yet attempted in any country. Other measures for the protection and benefit of labor were extracted from the Government, and were treated by Liebknecht and his comrades, not with jealous mistrust nor with boasting triumph, but with malicious complacency, with benevolent neutrality. They had brought the anti-Socialist Government to its knees, drawn it into inaugurating Socialistic legislation on its own responsibility, without entangling themselves with any conditions or pledges and less danger than ever of losing their following. If the authors of the Socialistic legislation, which was at bottom inspired from the same source as that from which the Social-Democrats drew their doctrines, the teachings of the great German philosophers, were disappointed in the hope of weakening the Socialistic party, but rather added to its strength and importance, the

party itself underwent a change. It became temperate and more considerate of interests dominating the practical conditions of politics in proportion as the Government became mild and conciliatory. Liebknecht himself no longer laid stress on internationalism as an element in German politics, and some of the Socialist leaders were willing to accept the Prussian military system as temporarily necessary in Germany. They showed themselves sometimes more in accord with current patriotic and imperialistic sentiments than the Radicals, whom the Socialists now overshadowed. In many questions of foreign and domestic policy the Socialists took similar grounds with the Radicals, and Liebknecht advised forming electoral alliances with the Radicals to help them with votes in districts where Socialist candidates had no chance in return for Radical support in districts where Socialists were numerous. Thus it came that Liebknecht, the staunch upholder of pure Socialist theories, was accused of parliamentary opportunism, of compromising the cause by cooperating with the bourgeois parties. A proposal was even made at the Socialist Congress to expel him from the party. Later other leaders of the party were inclined to go farther than he approved in the direction of moderation and compromise. He took a prominent part always in the international congresses of Socialists and in trade-union congresses, and his influence was felt, his authority acknowledged, by the labor parties of all countries. He retained his seat in the Reichstag until his death. After the expiration of the anti-Socialist law of Prussia in 1890 he resided in Berlin and edited *Vorwärts*, the central organ of the German Social-Democrats.

Loch, Henry, Baron, a British colonial administrator, born May 23, 1827; died in London, June 20, 1900. He went into the British navy as a midshipman at the age of fifteen, left it when two years older to join the Bengal cavalry, took part in the Sutlej campaign, became aid-de-camp to Lord Gough, and saw considerable service in India. In 1854 he did special service in Bulgaria in the organization of the Turkish troops for the Crimean War, crossed with the army from Varna to the Crimea, and served through the campaign. In 1856 he went to China with the military expedition sent out after the Arrow incident to enforce the demand for reparation for the insult to the British flag. He remained in China, explored the Peiho river, and when Lord Elgin became minister to China a second time in 1860 accompanied him as private secretary. In association with Harry Parkes he negotiated the surrender of Pehatang and the Taku forts to the Anglo-French expedition. In negotiating for the admission of the embassies to Peking they were seized and thrown into prison. Peace was not made by the British until the prisoners were released and the summer palace was burned in retaliation for the treachery of the Chinese. Loch returned to England with the convention of Peking and the ratifications of the treaty of Tientsin. He became secretary to Sir George Grey in 1861, and from 1863 till 1881 was lieutenant governor of the Isle of Man, receiving the honor of knighthood in 1880. In 1882 he was appointed Commissioner of Woods, Forests, and Land Revenues. In 1884 he was appointed Governor of Victoria, where he remained till 1889, when he was transferred to Cape Colony to succeed Sir Hercules Robinson as Governor and High Commissioner. The Australian colony had never had a more popular and satisfactory governor than Sir Henry Loch, but in South Africa he pleased neither imperialists nor Afrikanders. He retired in 1895 and was created a peer.

Lumley, Ralph Robert, an English dramatist, born in London in 1865; died there, May 27, 1900. He was editor of the *Court Journal*, a place which his father and grandfather had held before him. He was a barrister of the Middle Temple, but never practiced. He wrote a comedietta called *Palmistry*, produced in London, April 13, 1888. His next work was a collaboration with Horace Ledger, called *The Deputy Registrar*, produced likewise in 1888. The success of this production brought him a commission from Mrs. John Wood, for whom he wrote *Aunt Jack*, produced by her with great success July 13, 1890. He then wrote *The Volcano*, produced March 14, 1891. Mr. Toole produced Mr. Lumley's three-act farce, *The Best Man*, March 6, 1894, and *Thoroughbred*, Feb. 13, 1895. His last production was *Belle Belair*, a drama in four acts, with Mrs. John Wood in the leading rôle, May 19, 1897.

McIlwraith, Sir Thomas, an Australian statesman, born in Ayrshire in 1835; died in London, July 17, 1900. He was educated at Glasgow University, went to Victoria at the age of nineteen, and was employed as an engineer in the construction of the Government railroads. He became interested in land in Queensland in 1861, settled in that colony in 1870, after having been elected to represent Maranoa in the Legislative Assembly, joined the Macalister Cabinet as Minister of Public Works and Mines in January, 1874, resigning in the following October, was elected for Mulgrave in 1878, and when the Douglas ministry was defeated in January, 1879, he became Premier and Colonial Treasurer, his administration lasting till November, 1883. His annexation of New Guinea on April 4, 1883, was not approved by Lord Derby, then Colonial Minister in England, whose veto led to the intercolonial convention held in Sydney in November of that year, which formulated the basis on which the Federal Council of Australia was afterward established. He retired from politics in 1886, but returned in 1888, when he was elected for North Brisbane by a large majority over the Premier, Sir Samuel Griffith. When Parliament met he became Premier. He engaged in a dispute with the Governor, Sir Antony Musgrave, over the power of pardon, which the Governor considered a part of the royal prerogative, but which Sir Thomas McIlwraith, whose view was sustained by the Colonial Office, contended could not be constitutionally exercised except on advice of the ministers. On the death of Sir Antony Musgrave, in 1888, the Queensland Premier claimed that his Government ought to be consulted regarding the choice of a successor, but this the Imperial Government, in which Lord Knutsford was Secretary for the Colonies, would not concede. When Sir Henry Blake was appointed, Sir Thomas McIlwraith protested, and a deadlock ensued which was only broken by the voluntary retirement of Sir Henry Blake. In November, 1888, Sir Thomas McIlwraith resigned the premiership on the ground of ill health. In 1890 he joined with Sir Samuel Griffith in overturning the Government, and became Treasurer in the Cabinet formed by the latter. In 1892 he headed an administration himself, and in 1893 he finally retired from public life.

McLeay, Franklin, an English actor, born in Watford, Canada, June 28, 1867; died in London, England, July 6, 1900. He was educated at Toronto University, and for three years was associated with James E. Murdoch in the latter's School of Oratory, Boston, as a lecturer on the Shakespearean drama. In 1894 he attracted the attention of Wilson Barrett and accepted a place in that actor's company. His first appearance at the Shakespeare Theater, Liverpool, in the autumn

of that year, was in a small part in Claudian. He was a member of Mr. Barrett's company four years, during which he was steadily promoted. His most important parts were the tetrarch in Claudian, the bishop in Ben-ma-Chree, the ghost in Hamlet, Nero in The Sign of the Cross, Jediah in Daughters of Babylon, and Dentatus in Virginius. In Mr. Barrett's revival of Othello, in London, May 22, 1897, he played Iago with much success. Early in 1898 he joined Mr. Beerbohm Tree's company for the revival of Julius Cæsar, in which he played Cassius, Jan. 22. In Ragged Robin, produced by Mr. Tree, June 23, 1898, he was Farmer Stokes; Cardinal Richelieu in The Musketeers, Nov. 3, 1898; and Quince in A Midsummer-Night's Dream, Jan. 10, 1900. His last appearance was made June 21, 1900, in the part of Derrick in Tree's revival of Rip Van Winkle. He married, Dec. 18, 1898, Grace, daughter of the actor Charles Warner.

Marchand, Gabriel, a Canadian statesman, born in St. John's, Jan. 9, 1832; died in Quebec, Sept. 25, 1900. He was educated in the St. Hyacinthe College, settled as a notary in his native place, was elected to the first Legislative Assembly of Quebec in 1867, and represented his town in that body continuously till his death. He was Provincial Secretary and later Commissioner for Crown Lands in H. G. Joly's Liberal Cabinet of 1878. When the Liberals were in power from 1887 to 1892 under the Mercier Cabinet he served as Speaker of the House of Assembly. After the return of the Conservatives he took the place of Mercier as leader of the Opposition, and in 1897, when the Liberals triumphed at the polls, he became Premier of Quebec with the portfolio of Colonial Treasurer, and died in office. He was an active organizer of the volunteers among the French Canadians during the Fenian excitement, and commanded a brigade in 1870 when the Fenians invaded the province. He was also a newspaper writer and editor and a dramatist, author of four comedies.

Martineau, James, an English theologian and philosopher, born in Norwich, England, April 21, 1805; died in London, Jan. 11, 1900. He was of Huguenot descent. His father was a camlet manufacturer and wine merchant of Norwich. The son was sent to Dr. Lant Carpenter's school at Bristol, and at eighteen entered Manchester New College, then at York. He was ordained in 1828 as junior pastor of the Presbyterian (more properly Unitarian) Chapel, in Eustace Street, Dublin. His unwillingness to accept the *regium donum*, or annual allowance made to the Irish Presbyterian churches by the Crown, caused him to resign this charge and accept a call to Paradise Street Chapel, Liverpool, in 1832. Here he remained till 1857, and his congregation erected a new chapel for him in Hope Street in 1848. At this period he became known, both as writer and preacher, far beyond the limits of the Unitarian body, and after his removal to London in 1857 to become at first the colleague of his friend Taylor at the Little Portland Street Chapel, and from 1861 to 1872 sole minister, he was ranked among the foremost English preachers of his time. On his resignation in 1872 his congregation and his friends presented him with a purse of nearly £10,000. He was appointed Professor of Philosophy at Manchester New College in 1840, was principal of the college in 1869-'85, president in 1886-'87, and vice-president in 1888-1900. During the building of his chapel at Liverpool he spent many months in the study of philosophy at Berlin and Dresden, and how greatly he was influenced by this experience may be seen in his own words, in which the

change in his thought is described "as a new intellectual birth." A marked characteristic of his long career was his steady growth. Says one writer of him in this connection: "His early works are good; incomparably better are his latest, and the best are the monuments of patient work constructed at an age when the most active-minded become weary and long for repose." As an acute thinker he is perhaps seen at his best in his Study of Religion, which contains a searching examination of agnosticism and elaborate study of the doctrine of causality. As a reviewer he wrote with vigor and even severity on occasion, and in the discussion of speculative theories displayed small patience with verbal evasions of familiar difficulties. Until the age of ninety it was his custom to rise at six o'clock and work several hours at his desk till the midday luncheon, resuming labor after dinner, and continuing to write or study till midnight. Long before his death he had come to be ranked as the foremost philosophical thinker in Great Britain, and the passage of each year deepened the reverence with which he was regarded. In certain respects he resembled his distinguished sister Harriet, but they were far apart in their convictions, and it is doubtful if she ever comprehended the serenity of his thought. He was a voluminous writer, but he published only a comparatively small part of what he composed, his habit being to subject all that he wrote to the severest condensation. Besides editing several collections of devotional literature, he published Rationale of Religious Inquiry (1836); Endeavors after the Christian Life (1843-'47); Unitarianism Defended, with J. N. Thom and H. Giles (1839); Miscellanies (1852); Studies of Christianity (1858); Essays: Philosophical (first series, 1866; second series, 1868); A Word for Scientific Theology (1868); New Affinities of Faith (1869); Why Dissent? an address (1869); The Place of Mind in Nature, a lecture (1872); Hymns of Praise and Prayer (1874); Religion as Affected by Modern Materialism (1874); Modern Materialism: Its Attitude toward Theology (1876); Hours of Thought on Sacred Things (1876-'80); Ideal Substitutes for God, a lecture (1878); Loss and Gain in Recent Theology (1881); The Relation between Ethics and Religion (1881); A Study of Spinoza (1892); Types of Ethical Theory (1895); A Study of Religion: Its Sources and Contents (1888); The Seat of Authority in Religion (1890); Essays, Reviews, and Addresses (1890-'91). "To Dr. Martineau's Huguenot ancestry," says one writer, "may perhaps be traced some of the sterner sides of his character—his independence, his ready sacrifice of all and everything for the truth's sake, his rapierlike thrusts in argument. But the influence exercised by him over the minds and hearts of men, women, children, flowed from his own individuality. . . . The test of a public speaker's utterances lies in the effect they produce when read, and here Dr. Martineau never failed. The printed word has all the charm of the spoken one."

Martinez de Campos, Arsenio, a Spanish soldier, born Dec. 14, 1834, in Segovia; died in Zarauz, Sept. 23, 1900. He was the son of a general and was educated for the army in the Staff College at Madrid, taking a high stand in his studies and leaving in 1852 with the rank of lieutenant. He served as aid-de-camp to Gen. O'Donnell in the campaign in Morocco in 1859, winning a medal by his bravery. In 1864 he was sent to Cuba at his own request, and in the pursuit of the insurgents he distinguished himself by his fearless and tireless devotion to duty, never sleeping twice under the same roof during nine months. His services brought him promotion to

the grade of brigadier, and on his return to Spain in 1870 he led a command with equal activity and skill against the Carlist insurgents. He accepted Don Amadeo, the Italian King, although he had always been identified with the Conservatives. When Amadeo was forced to abdicate, and the federal republic was set up, Martinez de Campos made himself so conspicuous by his open and contemptuous hostility to the new order that he was not only deprived of his command, but imprisoned in a fortress. When the garrison of Madrid under Pavia's command overthrew the federal republic Martinez de Campos requested permission to serve against the Carlists in any capacity, and the Government of Serrano released him and made him military governor of Gerona with the rank of general of division. He fought against the Carlist bands until the Salmeron ministry appointed him captain general of Valencia. The city declared itself a canton, and he bombarded it and entered with his troops on the fifth day; advanced soon afterward on Cartagena, but returned to Valencia to suppress a Carlist rising, and when that was accomplished marched to the relief of the garrison of Alicante, to prevent a cantonal government being established there; opposed with energy the proposal of the local authorities to invoke English interference, and when the republican Government in Madrid assented to such a step he sent in his resignation, which was accepted. After this he scarcely concealed his Alfonsist principles, and tried to persuade Gen. Concha, to whom Marshal Serrano had resigned the command of the army, to proclaim the King. Concha hesitated and Canovas del Castillo thought the time not yet ripe. Martinez de Campos commanded a division under the Marquis del Duero, and fought the sanguinary battles of Muñecas and Galdanes, extricating himself with difficulty on the day on which Gen. Concha fell at Estella, and afterward covering the retreat to Tafalla. His royalist sympathies were so well known that Serrano recalled him in spite of his services against the Carlists, and again placed him on the retired list. The Minister of War vouched for his fidelity, but his intrigues could not be long concealed, and imprisonment would have been his lot if he had not forestalled the action of the Government by hurrying to Murviedo, where his cousin, Luis Daban, had a command, and with these troops issuing a *pronunciamiento* for King Alfonso XII on Dec. 20, 1874. The Serrano Government at once gave way to the monarchy, and the general who had brought about the restoration was naturally selected for the most important command, that of captain general of Catalonia, where he had full direction of the operations against the Carlists. As soon as the army was sufficiently organized and trained to take the offensive against the Carlist forces he advanced in the spring of 1876, and by a series of flanking movements drove the Carlist army out of Arragon, Navarre, and Biscaya over the French border, and thus ended the civil war. For this service he was made a field marshal, and by his own desire was sent to put down the revolution in Cuba. He was entrusted with complete discretionary powers, and he brought about the peace of Zanjon more by promising to secure for the Cubans the removal of their main grievances than by his operations in the field. The Government at home refused to carry out the reforms for which he had pledged his word, and consequently he resigned the post of Captain General of Cuba, and returned to Spain in 1879. Canovas del Castillo, who was then Prime Minister, gave up his post to Martinez de

Campos rather than let him communicate his indignation to the army. He did not long remain at the head of affairs, nor did he accomplish the objects he had in view, and the experiment seems to have opened his eyes to the difficulties that beset Spanish statesmen and determined him to remain a soldier to whose political views the chiefs of both political parties paid the greatest deference because he alone could control the army. He controlled the King and afterward the Queen-Regent and all the political powers, and could make Canovas or Sagasta Premier whenever he was displeased with the action of the party in office. To bring about his Cuban reforms he accepted the post of Minister of War in the Sagasta Government of 1881, with no greater success than before, and thereafter he never held a Cabinet office. In September, 1893, an anarchist threw a bomb that slightly wounded him while he was reviewing his troops at Barcelona. In the same year he took command in Morocco when the Moors attacked Melilla. In this campaign he was not successful, but the Government would not venture to recall him, and he negotiated the terms of peace with the Sultan in 1894. In 1895 he was made captain general of New Castile in order that he might deal with the military riots in Madrid, and when a fresh revolution was started in Cuba the task of dealing with it was given to him. Here he met the same difficulties as before. His troops would not undergo the privations and dangers necessary to deal with the elusive tactics of Gomez and Maceo, and yet the Spanish Cortes could not be induced to grant self-government to Cuba and by so doing deprive Spanish trade of a monopoly and Spanish politicians of fat offices. His conciliatory measures and promises of reform could have no effect, because the Spanish Government had broken faith before, and when he tried offensive tactics neither he nor his men had the heart for the work. When his army was practically shut up in Havana at the end of a year's fighting he was recalled, and Gen. Weyler was sent out to prosecute the war with more energy. In Madrid he defended his policy of conciliation from his seat in the Senate, and declared that if the Government would let him carry it out in good faith he would make it successful. In the early part of 1899 he was elected president of the Senate, holding that office to the end. He played a singular rôle in Spanish politics, influencing and sometimes deciding the policy of each party in turn, liked quite as well by his political opponents as by his own party, and popular among all classes of Spaniards. He made both of the constitutional parties in Spain after first setting the present dynasty on the throne, but could get neither party to carry out his views. Almost at any moment he could have had the premiership from either party or from a new fusion party of his own creation, but when he was Premier his subordinate ministers circumvented him, and at all times the subtle politicians frustrated the policy he sought to impose, whether in domestic or in colonial affairs.

Max Müller, Friedrich, a German Orientalist, born in Dessau, Germany, Dec. 6, 1823; died in Oxford, England, Oct. 28, 1900. He was the son of Wilhelm Müller, the German poet, but in 1850 took one of his Christian names as a part of his surname. His godfather was Von Weber, the composer, and he was at first destined to become a musician, but Mendelssohn advised him to "keep to Greek and Latin." He was educated at the Universities of Berlin and Leipsic, and in 1844 translated the *Hitopadesa* into German. During a visit to Paris the next year what proved to be

his life work was happily suggested to him—an edition of the Rig-Veda with a commentary. Intending to study and examine manuscripts in the Bodleian Library and East India Company's house, he went to England in 1846, and two years afterward took up his residence in Oxford. After holding several posts of honor in the university,

he was appointed Professor of Comparative Philology in 1868, resigning in 1875. As a lecturer he was very successful. He possessed a clear and at times even brilliant style, and the dullest theme became of interest when handled by him. His scholarship, however, was not of a progressive type, and the adverse criticisms that have been made regarding various conclusions of his

by contemporary philologists in Germany and America are no doubt due to this circumstance, while specialists in general were disposed to consider that he overestimated the influence of language. His more important writings include *The Hitopadesa*, a collection of Indian fables (Leipzig, 1844); *Meghadūta*, an Indian Elegy (trans. (Königsberg, 1847); a translation of the Rig-Veda (Oxford, 1848-'74); *Essay on Bengali* (1847); *Essay on Indian Logic* (1853); *Proposals for a Uniform Missionary Alphabet* (1854); *Letter to Chevalier Bunsen on the Classification of the Turanian Languages* (1854); *The Survey of Languages* (1855); *The Hymns of the Rig-Veda in German and translation of the Prātisākhya* (1857); *Buddhism and Buddhist Pilgrims* (1857); *The German Classics from the Fourth to the Nineteenth Centuries* (1858); *Essay on Comparative Mythology* (1858); *History of Ancient Sanskrit Literature* (1859); *Lectures on the Science of Language* (1861-'64; revised 1891); *A Sanskrit Grammar for Beginners* (1866); *Chips from a German Workshop*, a collection of essays (1867-'75); *On the Stratification of Languages* (1868); *Rig-Veda Hymns to the Maruts or Storm Gods* (trans.) (1869); *Introduction to the Science of Religion* (1878); *Two Texts of the Rig-Veda* (1873); *The Origin and Growth of Religion* (1878); *The Upanishads* (trans.) (1879-'84); *Selected Essays on Languages, Mythology, and Religion* (1884); a translation of Kant's *Critique of Pure Reason* (1882); *India: What can it Teach Us?* (1883); *Biographical Essays* (1884); *The Science of Thought* (1887); *The Dhammapada and the Sutta Nipāta* (trans.) (1881); *The Laws of Manu* (trans.) (1887); *The Vedic Ceremonies, Part I* (1887); *Biographies of Words and the Home of the Aryas* (1888); *Natural Religion* (1880); *Physical Religion* (1891); *Anthropological Religion* (1892); *Theosophy, or Psychological Religion* (1893); *Three Lectures on the Vedānta Philosophy* (1894); *Contributions to the Science of Mythology* (1897); *Rāmākrishna: His Life and Sayings* (1898); *Auld Lang Syne* (1898-'99); *The Six Systems of India's Philosophy* (1899). At the time of his resignation of his Oxford professorship he was intending to return to Germany; but the university requested him to remain at Oxford and undertake the editorship of

a series of translations of the Sacred Books of the East, at the same time appointing a deputy professor. In 1888 and in 1891 he was appointed Gifford lecturer on natural religion at Glasgow University.

Mazzella, Camillo, an Italian prelate, born in Vitulano, Feb. 10, 1833; died in Rome, March 26, 1900. He was a member of the Society of Jesus and its chief representative in the Sacred College, having been created a cardinal on June 7, 1886, and consecrated as Bishop of Palestrina on April 19, 1897. On all theological questions he was the trusted adviser of Pope Leo XIII.

Momerie, Alfred Williams, an English clergyman, born in London, March 22, 1848; died there Dec. 6, 1900. He was the son of a Congregational minister, and after being educated for that ministry at the University of Edinburgh, went to Cambridge. In 1879 he was ordained deacon in the Established Church, and priest in 1879. He was appointed Professor of Logic and Metaphysics at King's College, London, and in 1883 was elected to the morning preaching at the Foundling Hospital. He was an extreme Broad Churchman, and as his liberal views created dissatisfaction in the governing boards of the two institutions with which he was connected, his relations with them terminated in 1891. He possessed a brilliant style, and his preaching attracted large numbers to hear him. His published works, which had a wide circulation, include *Personality* (1879); *The Origin of Evil and Other Sermons* (1879); *The Basis of Religion* (1883); *Defects of Modern Christianity and Other Sermons* (1883); *Agnosticism* (1884); *The Corruption of the Church; The English Church and the Romish Schism; Belief in God* (1886); *Preaching and Hearing* (1886); *Inspiration and Other Sermons* (1889); *Church and Creed* (1890); *The Religion of the Future and Other Essays* (1898).

Morris, Felix, an English actor, born in London, April 25, 1850; died in New York city, Jan. 13, 1900. He was the son of an English sea captain, and was educated in Switzerland. He studied medicine and was graduated in 1871, but resolved to become an actor, and removed to the United States. His first appearance was in Albany, N. Y., a few weeks after his arrival, and while engaged in the business office of the Division Street Theater. He was so affected by stage fright that his desire to act was smothered for several months, during which he was a drug clerk in Boston, a laborer in a foundry, and for a short time a sailor. Finally he obtained, in 1872, a place in the Capitol Theater, Albany, as captain of the supernumeraries, and spoke his first lines Aug. 19, 1872, in *A Heart of Gold*. Here he remained, playing unimportant parts, until 1875, when he went to Canada with a company playing Boucicault's *Shaughraun*. The only beneficial result of this tour was an engagement for the season of 1876-'77 at the Academy of Music, Montreal, where Morris quickly won great popularity as a representative of comedy and character parts. He was especially successful in Touchstone, with Miss Adelaide Neilson. In 1877, in association with Neil Warner, he assumed the management of the Academy of Music, Montreal, but was bankrupted at the end of the year, and went to New York, where he secured an engagement at the Fifth Avenue Theater. During this engagement he played comedy rôles with Mary Anderson and Madame Modjeska, and became associated with James Lewis. The summer of 1878 he spent in a very successful engagement in Halifax, Nova Scotia, where he first met the lady who subsequently became his wife, Miss Florence

Wood, an actress of Mr. Augustin Daly's original New York company. In the autumn of 1878 Morris went to San Francisco under engagement as comedian of the California Theater, where he scored an enthusiastic success as the Pasha in the first American presentation of the comic opera *Fatinitza*, and thenceforward was a favorite. He remained here until 1880, playing the leading comedy parts with Barrett, Boucicault, Lester Wallack, John T. Raymond, Robson and Crane, the Florences, John McCullough, and the usual routine of stock work. On May 15, 1879, he married Miss Wood. The "Old California" company, as it is affectionately called by its friends, was disbanded forever in 1880, and Morris sought engagement in the East. He was for a time in Lester Wallack's company, and for a longer time endured much ill fortune in various short engagements, including a disastrous trip through the West Indies. During this period he made a very great success as the English correspondent in the first production of *Michael Strogoff* at Booth's Theater, New York, and was finally engaged as a member of the Union Square company. He then adapted the story of Young Mrs. Geoffrey for Miss Helen Dauvray, under the name *Mona*. The only useful result of this work was that the production of the play first introduced E. H. Sothorn to favorable notice. In the summer of 1885 Mr. and Mrs. Morris went to London, but soon became homesick for America and secured passage to return. While waiting for the departure day, Morris was offered and accepted the part of the professor in a version of *Ultimo* called *On 'Change*, which was to be produced for a single morning performance two days before the sailing of his steamer. He played the part with an inimitable Scotch dialect, and, to the astonishment of himself, the author, and all London, the play was so great a success and his own impersonation so captivating, that Morris and the Scotch professor became from that day institutions of the British stage. This production occurred at Toole's Theater in August, and the play ran without interruption for three hundred and sixty performances. While enjoying this success, Morris first entered into the business connection with Miss Rosina Vokes, during the long continuation of which these players delighted thousands in England and America with their performances in such plays as *The Game of Cards*, *The Old Musician*, and *A Pantomime Rehearsal*. After Miss Vokes's death he became a member of the Lyceum Stock Company of New York, under the management of Daniel Frohman, and with these players made his last appearance, except in vaudeville, as Walter Hinzelman in *At the White Horse Tavern* at Wallack's Theater, New York, in February, 1899. He had been for several seasons a great favorite in short performances in the vaudeville theaters throughout the country, and found this kind of work more profitable than a regular stock engagement. His last appearance was at Brooklyn, N. Y., Dec. 24, 1899, in a little sketch called *Behind the Scenes*, preceded by his beautiful personation of Kerry, in a scene from Boucicault's play of that name.

Mulhall, Michael George, an Irish statistician, born in Dublin, Ireland, in 1836; died in Killiney, Ireland, Dec. 12, 1900. His education was obtained at the Irish College in Rome. In 1861 he founded the *Buenos Ayres Standard*, the first English daily in South America. He was widely known as a statistician, and was a constant contributor to the *Contemporary Review*. In 1880 he estimated that the population of the United States in 1900 would amount

to 76,200,000, and the astonishing accuracy of his forecast was shown when the census of 1900 was reported as 76,295,000. He was the author of *Rio Grande do Sul and its German Colonies* (London, 1873); *Europe to Paraguay and Matto Grosso* (1877); *The Progress of the World in Arts, etc., since the Beginning of the Nineteenth Century* (1880); *The Balance Sheet of the World, 1870-'80* (1880); *A Dictionary of Statistics* (1883); *History of Prices since the Year 1850* (1885); *The Argentine Republic: A Handbook of the River Plate* (with E. T. Mulhall) (1869; 6th edition, 1886); *Fifty Years of National Progress, 1837-'87* (1887); *Industries and Wealth of Nations* (1896).

Munkacsy, Michael de, a Hungarian painter, born in Munkacs, Oct. 10, 1844; died in Bonn, Germany, May 1, 1900. His original name was Lieb and his early training was as a carpenter. His father, a petty official, and his mother having both died, he was bound out to a trade at the age of ten, and was treated so brutally by his master that he ran away. He was befriended by a portrait painter, and having learned his artistic gift, made his way to Pesh, where Ligeti, a landscape painter, gave him a few lessons, went on to Vienna, and thence, in 1865, to Munich, earning his living as best he could while studying in the academy, and gaining hope and inspiration as he acquired knowledge and facility, and finally reached Düsseldorf in 1868. The painters Bautier and Knaus interested themselves in him, and his work found recognition immediately. In 1870 he sent to the Paris Salon *Le Dernier Jour d'un Condamné*, which by its strong painting and dramatic power created a sensation. He had already been hailed as one of the brightest of the young painters of the Düsseldorf school, and the vigor and boldness of his style had a reflex influence upon the others. His first exhibit was so enthusiastically received in Paris that he went there to work, but for some years he kept up the Düsseldorf traditions, turning out *genre* paintings giving anecdotes based on types and episodes of his native country, but striking in execution and marked by individuality. The influence of French art showed itself first clearly in his *Intérieur d'Atelier*, containing his portrait and that of his wife. His *Milton Dictating Paradise Lost*, exhibited in 1878, won for him the admiration of the multitude and spread his fame to many lands. His *Christ before Pilate*, in 1881, made him the most popular painter of the day. The artists of Paris gave him a feast to compliment him on his triumph, and the speculator who bought his painting exhibited it in all the countries of Europe, brought it in 1889 to the Universal Exhibition, and finally sold it to John Wanamaker for \$100,000. *Christ on Calvary*, in 1884, renewed his triumph. Although artists find in him a lack of refinement and invention, and call his work shallow and theatrical, his use of blacks and bitumens vicious, still he is recognized as the strongest of the painters who have endeavored to interpret the Gospel story with modern taste and technique. He painted an *Ecce Homo* later. These works brought him wealth, enabling him to entertain magnificently in his Parisian mansion. Mozart Dying was the last of his historical paintings in oil. He painted small *genre* pictures of elegant life in bright tones, and some effective portraits. Afterward he devoted himself almost exclusively to decorative allegorical and historical compositions for the Vienna Museum and the hall of Parliament in Buda-Pesth, until his brain became diseased several years before his death.

Muravieff, Count Michael Nikolaievich, a Russian diplomatist, born April 19, 1845; died in St. Petersburg, June 21, 1900. He was the son of the Governor of Lithuania, and grandson of Count Michael Muravieff who stamped out with an iron heel the Polish insurrection of 1863. He studied for a short time in Heidelberg, and began his diplomatic career without further preparation in the Ministry of Foreign Affairs in St. Petersburg at the age of eighteen, soon afterward was attached to the legation at Stuttgart, where he won the good will of Queen Olga of Württemberg, who was a Russian princess, was transferred to Berlin, thence to Stockholm, thence back to Berlin as second secretary, and in 1877 in the same capacity to The Hague. In the Russo-Turkish War he took charge of an ambulance train that was furnished to the Red Cross Society by the Queen of Württemberg. As soon as the war ended he returned to the service, rising to be first secretary at Paris, counselor of the Berlin embassy, and minister to Denmark, where he was brought into contact with members of the imperial family, and won the good opinion of the Emperor Nicholas II, who was so impressed with his historical and diplomatic knowledge, judgment, and tact that when Prince Lobanof died and M. de Staal declined to take the post he was, on Jan. 13, 1897, appointed Minister of Foreign Affairs. Count Muravieff had the subtle art of impressing the great persons with whom he had to do with his ability as a diplomatist, and at the same time pleasing them with his *flênese* and social charm and the elegant superiority with which he sank his professional ability out of sight. His skill and knowledge in diplomacy was not known except to those to whom he had chosen to reveal himself until he became the Czar's Minister of Foreign Affairs, and then it was soon revealed to the whole world. Prince Lobanof had made no forward move in China, although he was preparing for a further assertion of Russian influence when the Siberian Railroad should be completed. Count Muravieff saw that the intrusion of Germany into the Chinese problem and the impatience of England necessitated prompt and dexterous action. The leasing of Port Arthur and Talienwan and the extension of the Siberian Railroad through Chinese territory to the sea and toward Peking came as a surprise to British diplomacy, and no counter-move could be invented. In the Cretan question he decided on an independent course which did not impair the influence of Russia, and did leave her hands free for all future contingencies. The arrangements for the Peace Conference at The Hague, which was an idea of the Czar's, were carried out with such skill and completeness that Russia gained in prestige and renown, turning the tables on the power that has always posed as the champion of freedom and progress, whereas if liberal sympathies everywhere had not been so thoroughly enlisted and other governments handled so gently it might have placed Russia in a ridiculous position. In the Chinese complications he preserved with admirable skill the independent position of Russia, and without breaking with the powers still preserved the attitude of friend and protector of China. In the Korean question also, and in Persian affairs, he understood how to strengthen materially the position and prestige of Russia without causing danger to peace or even friction. Count Muravieff died suddenly while working at his desk.

Murio-Celli, Adelina (Mme. Adelina Murio-Celli d'Elpeux), a German singer, born in Breslau in 1844; died in New York city, April 10, 1900.

She was taken by her parents to Paris in her infancy, and at the age of fifteen was graduated at the Conservatoire. She was engaged by Arditi, and under his management made many tours through Europe. She became the principal singer of the Italian opera company established in the city of Mexico by Maximilian, on whose death she went first to Havana, then to New York, where she remained as a popular member of the opera at the Academy of Music for several years. In 1870 she married M. Ravin d'Elpeux, French consul at Chicago, and retired from the stage to devote herself to musical instruction in that city. In 1880 she removed her school to New York. She was also a composer of great ability, and her songs have been favorites with Patti, Gerster, and Parepa-Rosa.

Nesville, Juliette (Juliette Lesle), a French actress, born in Paris in 1870; died there, July 26, 1900. She took the second prize at the Paris Conservatoire for comic opera, and soon thereafter, in January, 1890, made her first appearance as a page in Sarah Bernhardt's production of *Jeanne d'Arc*. In February of the same year she joined the company of the Folies-Dramatiques and originated the title rôle of *Ma Mie Rosette* with brilliant success. She was soon afterward engaged to play *Miss Helyett* in Brussels. She was seen then in that part by Charles Wyndham, who at once engaged her for the same part in the English adaptation called *Miss Decimo*. After a popular run of that piece she was engaged for the Gaiety Theater, London, and came to the United States as the first singer of *The Gaiety Girl*, in which she made her first appearance as *Mina* at Daly's Theater, New York, Sept. 18, 1894. She came again in 1897, and played *Juliette Belleville* in *In Town* at the Knickerbocker Theater, Sept. 6. Her last appearance in London was as *Suzette* in *The Elixir of Life*, produced at the Vaudeville, Sept. 9, 1899. She then played an engagement at the Folies-Dramatiques, Paris, and another in Brussels, and was rehearsing for *Mariage Princier* at the Théâtre de la Renaissance, Paris, at the time of her death.

Nietsche, Friedrich Wilhelm, a German philosopher, born in Röcken, near Lützen, Oct. 15, 1844; died in Weimar, Aug. 25, 1900. He was the son of a country pastor, passed through the gymnasium at Schulpforte, studied philology at Bonn, and under Ritschl at Leipsic, and on the recommendation of his preceptor was called as professor to the Pädagogium in Basle as soon as he obtained his doctorate. A year later came the Franco-German War, to which he went as a nurse, since as a Swiss professor he could not fight. He became early acquainted with Schopenhauer, and formed an intimacy with Richard Wagner, which he broke off in 1876, the year of the first Bayreuth festival. Till then he was a Teutonic enthusiast like Wagner, afterward a European skeptic. Against the Wagnerian tendencies he conceived an æsthetic and intellectual repugnance that was natural to his earnest and strong temperament, rendered morbidly intense by a severe disease of the eyes and an irritation of the brain that were themselves the effect of too severe application to work and earnest thought and introspection. About the same time his infirmities made it necessary for him to resign his professorship, and from that time he became a restless wanderer, flitting through Switzerland, the south of France, and northern Italy, writing all the time book upon book, with feverish impulse and hurried speed, in spite of illness, pain, and failing sight. This rushing mental labor in connection with the excessive use of sedatives to induce sleep and allay pain brought on an

affection of the brain in 1889 that put a stop to all his productivity, and his later years were passed in a torpid condition of mind, in which he showed some quiet enjoyment of music and the beauties of Nature and appreciation of the tender care of his mother, who nursed him at Baumberg, and of his sister, Frau Elisabeth Förster, who tended him in his final decline at Weimar. Before his mind failed he was such an unconscionable skeptic, such an unsparing analyst, that he drove his intellectual companions and admirers away from him, one after another, until he was left in solitude. His earliest published work was an explanation and justification of Wagnerian art entitled *Die Geburt der Tragödie aus der Geiste der Musik* (1872), distinguishing two kinds of art, one of the dream, illustrated by Homer and Greek sculpture, the other the phrenetic kind, to which belongs tragedy. In his early period he wrote also *Unzeitgemässen Betrachtungen*, four volumes of essays, the first in 1873, the last in 1876. In his period of wandering and mental rebellion he began with *Menschliches, Alzumenschliches, Morgenroth*, and *Die fröhliche Wissenschaft*, produced between 1878 and 1882, full of his famous aphorisms that sound the abysses of the soul, analyze in a sentence confusing problems, and make sport of all that is held sacred or hallowed by tradition. Psychological and ethical problems engage his attention most, and the accepted morality and the holy traditions of European civilization he finds to be all the basest superstition, which he seeks to trace historically and to explain by the new theories of natural science, but finds philosophical explanations of later. In *Also sprach Zarathustra* he first unfolded the doctrine of the *Übermensch*, the goal of an endless progressive evolution of humanity that never is reached because the same conditions return. In *Jenseits von Gut und Böse* (1886) and *Zur Genealogie der Moral* (1887) he expounded a new doctrine of morality, heathen and Roman in its origin, the morality of lordship, the glorification of force, far happier and more fruitful than the Christian morality, which with its self-abnegation and hope of future happiness is the morality of slavery. This idea he carried to the most cynical conclusions in his ironical contempt for the sentimentalism of the age. In *Der Fall Wagner* (1888) and *Götzendämmerungen; oder, Wie man mit dem Hammer philosophirt* (1889) he treated the problems in a still more radical fashion, applying his skeptic iconoclasm in a bitter and cruel polemic against his former friend, and in these books the approach of insanity is discernible in this attack and in the predominance given to the examination of morbid conditions and questions of decadence. He concludes that we are physiologically false, have inborn impulses and tendencies of a contradictory nature. *Der Wille zur Macht, ein Versuch zur Umwertung aller Werte*, which was to be his great work, was only begun when his mind became clouded, and *Antichrist*, the fiercest attack on Christianity written in modern times, was left unfinished.

Nott, Cicely (Mrs. Sarah Ann Adams), an English actress, died in London, Jan. 3, 1900. In early youth she was a singer of remarkable popularity in Julien's promenade concerts. She made her first appearance at Plymouth in 1854, and soon was engaged by Samuel Phelps and played Ophelia, Ariel, and other singing characters during that actor's tour of Ireland. She was similarly engaged in Edinburgh in 1856 and 1857. She married in the last-named city Signor Pio Bellini, a singer and composer. With her husband she became a member of Mr. Nye Chart's musical company in Brighton in 1858, and there her hus-

band died. After a term of retirement from the stage, during which she traveled in Germany, she again joined Mr. Chart's company in 1860, and was for a short time a member of the company at the Theater Royal, Manchester. Her first appearance as an actress in London was at the Lyceum with Miss Lydia Thompson in the burlesque *Little Red Riding-hood*, as Colin, the *Little Boy Blue*, Dec. 26, 1861. While engaged at this theater, where she played some years, she married Samuel Adams and again retired from the stage, only to return in 1869 at the opening of *Charing Cross Theater*, when she played *Pollio* in William S. Gilbert's burlesque of *Norma*, then first presented. She retired to private life again about 1880, and devoted herself to the care of her children.

Osman Pasha, a Turkish soldier, born in Amasia, in Asia Minor, in 1837; died in Constantinople, April 4, 1900. He was of pure Turkish race, and entered the military academy at Constantinople in 1850, leaving it as an officer of cavalry in 1854. In the war with Russia that began soon after he served under Omer Pasha. In 1860 he was engaged in the Lebanon campaign, when under pressure from France and Great Britain the Porte undertook to check the excesses of the Druses and promised a charter of rights for the Maronites. In the Cretan campaign of 1867 Osman, who had won a high reputation in the army as a fearless and indefatigable soldier, distinguished himself by capturing the fortified convent of Hagia Georgia. He was marked for promotion, and after taking part in Redif Pasha's expedition into Yemen in 1874 he received the rank of brigadier general, and in 1876 was appointed to the command of an army corps to operate against the Servians, who were beaten by him one time after another. The Russians intervened, crossing the Danube in July, 1877. Osman confronted them with his forces at Plevna, where he erected formidable earthworks in an incredibly short time on the plans of Tewfik Pasha, an accomplished engineer. With rapid marches he first outflanked the Russians unobserved, and defeated a division of Gen. Krudener's army, and afterward the re-enforcements that were sent up, winning the title of Ghazi, the highest in the Turkish army. Intrenched in the hills, Osman Pasha with 60,000 men held the huge Russian army in check for five months. Time and again the Russians and Roumanians attempted to carry the position by assault, and were beaten back with enormous losses. Their crushing superior numbers enabled the Russians to cut off supplies, and by starving the intrepid Turks they forced Osman Pasha to capitulate on Dec. 10, 1877, after the failure of a supreme effort to cut his way through the investing lines. His troops, drawn from all parts of the Ottoman Empire, and all alike in their devotion to him, who held the position without murmuring when their rations were reduced to a third and there was no wood to cook with or warm themselves, rushed the first Russian intrenchments, were brought to a stop by the enemy's supporting troops, rallied and renewed the attack, and when the marshal, struck by a fragment of a shell, fell from his saddle, broke ranks and fled. Osman signed the capitulation on his litter, surrendering 40,000 men, and thus virtually ended the war. The Ghazi, whose heroic defense won the admiration of the world, was made a prisoner by his captors, and was held till the conclusion of peace, when he returned to Constantinople and was charged by the Sultan with the task of reorganizing the Turkish army. He fortified Constantinople in spite of Russian protests. Afterward he was appointed Minister of War, and was loaded

with honors and gifts by the Sultan. Twice afterward he was recalled to the post of Minister of War. Osman Pasha published a history of the defense of Plevna, containing curious public and private documents relating to that celebrated feat of arms. He retired from the Ministry of War in 1885 and was appointed Grand Marshal of the Palace and kept away from the army, as has been the fate of all great Turkish generals.

Palacio, Andueza, ex-President of Venezuela, died in August, 1900. He was carried into the presidency by the Liberal party in 1890, and in 1892 his Government was overturned by a revolution headed by Gen. Crespo, who was the victim of a counter-revolution in 1898. This brought the Liberals again into power, and in the first Cabinet formed by President Cipriano Castro the exiled Palacio, on his return from Paris, received the portfolio of Foreign Affairs. He ceased to be a minister shortly before his death, and was about to depart on a mission to Europe.

Pellechet, Marie Catherine Helene, a French bibliographer, born in Paris in 1840; died at Marly-le-Roi, near Paris, Dec. 11, 1900. Her interest in bibliography manifested itself early, and her later years were entirely devoted to the scientific study of incunabula. Mlle. Pellechet was held in the highest esteem by all French scholars for her literary attainments, and was an honorary librarian of the Bibliothèque Nationale. She published *Notes sur les Livres Liturgiques des Diocèses d'Autun, Chalon, et Mâcon* (Paris, 1883); *Catalogue des Incunables de la Bibliothèque de Dijon* (Dijon, 1886); *Notes sur des Imprimeurs du Comtat-Venaissin et de la Principauté d'Orange et Catalogue des Livres imprimés par eux, qui se trouvent à Bibliothèque de Carpentras* (1887); *Catalogue des Incunables et des Livres Imprimés de la Bibliothèque Publique de Versailles de MD a MDXX* (1889); *Catalogue des Livres de la Bibliothèque d'un Chanoine d'Autun: Claude Guillaud, 1495-1551* (1890); *Alphabet des Imprimeurs du XV^e Siècle* (1893); *Catalogue des Incunables des Bibliothèques de Lyon* (Lyons, 1893); *Catalogue des Incunables de la Bibliothèque de la Ville de Colmar* (1895); *Une Association d'Imprimeurs Parisiens au XV^e Siècle* (1897); *Catalogue Général des Incunables des Bibliothèques Publiques de France*. The last named was her chief work, and the first volume was issued in 1897.

Pellieux, Gen. de, a French soldier, born in 1842; died in Quimper, July 15, 1900. He held one of the highest posts in the general staff from the beginning of the Dreyfus affair, and was one of those chiefly responsible for the prevention of a revision of the trial of 1894. He had charge of the first investigation of Major Esterhazy, and systematically suppressed evidence against that officer. In the Zola trial and in the second Dreyfus trial at Rennes he preserved the same attitude, and made every effort to save Gen. de Boisdeffre and Gen. Gonse. When the reaction came he was one of the first generals to fall into disgrace.

Peter, Grand Duke of Oldenburg, born July 8, 1827; died in Rastede, June 13, 1900. He was the son and heir of the Grand-Duke August, who died Feb. 27, 1853. One of the most liberal constitutions in Germany came into operation at the dawn of the young grand duke's reign, and under the guidance of excellent ministers who possessed his full confidence the land was developed on a liberal basis, the communes receiving extensive powers of self-government, roads and railroads being promoted, the system of education being brought up to a high standard, and great attention being bestowed by the Government on the im-

provement of agriculture. The grand duke was a benefactor to art and literature. He was a furtherer of German unity under Prussian headship, rejecting overtures from Denmark. His successor is Friedrich August, who enters on his reign at the age of forty-seven.

Pickersgill, Frederick Richard, an English artist, born in London in 1820; died at Yarmouth, Isle of Wight, Dec. 27, 1900. He was the son of a painter of note, and a nephew of H. W. Pickersgill, royal academician, and studied under Witherington and at the Royal Academy. His earliest work, *The Brazen Age*, was exhibited in 1839, and in 1841 his *Combat of Hercules* attracted much attention. He gained a prize at the cartoon exhibition at Westminster Hall in 1843 with *The Death of King Lear*, and in 1847 a prize of £500 for *The Burial of Harold*, which was purchased at a similar amount for the Houses of Parliament. He became a royal academician in 1858. Between 1839 and 1875 he exhibited 50 paintings at the Royal Academy, of which he was keeper in 1875-'87. After resigning his office of keeper he lived in retirement on the Isle of Wight.

Pinto, Alexandre Alberto da Rocha Serpa, a Portuguese explorer, born at the Tendeas, Portugal, April 20, 1846; died in Lisbon, Dec. 28, 1900. He studied at the Royal Military College in Lisbon, and entered the 7th Infantry Regiment in 1863, becoming ensign the next year. In 1877 he reached the rank of major, and three years later was made aid-de-camp to the King. He crossed the continent of Africa in 1877-'79 from Benguela to Durban, and his narrative of the exploit, entitled *How I Crossed Africa*, has been translated into many languages. Major Pinto received gold medals of the first class from the geographical societies of London, Paris, Antwerp, Rome, and Marseilles.

Pole, William, an English civil engineer, born in Birmingham, April 22, 1814; died in London, Dec. 30, 1900. He was articled to a civil engineer of his native town, and after the expiration of his time was occupied for several years in gas works construction and ventilating and heating projects. In 1840 he became an associate of the Institution of Civil Engineers. He was Professor of Civil Engineering at Elphinstone College, Bombay, in 1844-'47, and filled the same chair at University College, London, in 1859-'67, as well as that of lecturer at the Royal Engineers' Establishment at Chatham for the latter period. He subsequently was secretary to various royal commissions, such as those on water supply and the pollution of the Thames, and was one of the gas referees for the metropolis in 1870-'90. He was honorary secretary to the Institution of Civil Engineers in 1865-'96, Fellow of the Royal Society from 1861, and its vice-president in 1876 and 1889. He was a learned musician and musical critic, although he composed but little. He was an authority on whist and a specialist in precious stones. His writings include *A Treatise on the Cornish Pumping Engine* (1844); *The High-pressure Engine*, from the German of E. Alban (1858); *The Status of Civil Engineers in the United Kingdom and Foreign Countries* (1870); *Iron as a Material of Construction* (1872); *Life of Sir William Fairbairn* (1877); *The Story of Mozart's Requiem* (1879); *The Philosophy of Music* (1879); *The Philosophy of Whist* (1884); *Whist* (1891); *The Evolution of Whist* (1891).

Puttkamer, Robert Victor von, a Prussian statesman, born in 1830; died in Karzin, March 15, 1900. He was the son of the president of the province of Posen. He belonged to a family that has furnished many Prussian officials, and as a

relative and friend of Bismarck his own rise was extremely rapid. He was a strong Conservative, and a prominent member of the party in the German Reichstag, to which he was first elected in 1874. He was president of the provincial government of Silesia when in July, 1879, he was called to succeed Dr. Falk as Minister of Education and Worship, and carry out the details of the compact which Prince Bismarck had made with the Clericals in order to gain their support for his economical and financial schemes. His measure enabling vacant sees and pastorates to be filled did not go far enough to satisfy the Clericals, but too far to please the Liberals. When Count Botho Eulenburg resigned from the Ministry of the Interior on Feb. 27, 1881, Herr von Puttkamer succeeded to that post, and from the beginning he was the target for shafts from the whole Left, which looked upon him as the bringer of reaction and the instrument for carrying out official coercion in elections. When he proceeded with energy, not only to apply the Socialist law against the Socialists and for the prevention of public meetings in Berlin, but to drill the provincial officials into active advocates of the policy of the Government in the spirit of an edict issued by Wilhelm I and in accordance with the views and intentions of the Imperial Chancellor, the Radical leaders constantly assailed him in the severest terms, and he replied with an invective as keen, which rankled the more because it was delivered in an imperturbable, contemptuous tone. He frankly avowed the abuses which they charged, intimating that he was carrying out the King's wishes. The Puttkamer crisis came after Friedrich succeeded to the throne on March 9, 1888. Eugen Richter, on May 26, delivered a speech exposing the methods of influencing elections to the Reichstag that the Minister of the Interior had introduced. The minister at once presented to the new Emperor a memorial defending his conduct. The Emperor expressed strong displeasure at what had taken place to bring about the election of Conservative candidates, and Puttkamer immediately resigned, and the resignation was accepted, whether with the acquiescence of Bismarck, who had been the sponsor, if not the author, of the Puttkamer system, or against his advice, it is not certainly known. Wilhelm II, who came to the throne on June 15, 1888, was expected to recall the disgraced minister, but he contented himself with appointing him chief president of the province of Pomerania.

Queensberry, Marquis of, a British sportsman, born in 1844; died in London, Jan. 31, 1900. He was the son of the seventh marquis, and succeeded his father at the age of fourteen. His contentions with his successive wives and other relatives, his positive and combative declarations in favor of agnosticism and free thought, and other manifestations of a vigorous mind and militant spirit gave him a reputation for eccentricity. He served in the navy in early life, but afterward did none of the things regarded as commendable in a nobleman. After sitting in the House of Lords as a Scottish representative peer from 1872 till 1880 he was not re-elected, but his son, Lord Kelhead, who died in 1894, was created a peer of the United Kingdom. Lord Queensberry was known among sporting men as the author of the rules of the prize ring that bear his name, and as one of the highest authorities on boxing.

Ratisbonne, Louis Fortune Gustave, a French man of letters, born in Strasburg, July 29, 1827; died in Paris, Sept. 24, 1900. He contributed hundreds of literary and other articles

to the *Débats*, but his fame rests upon his poems for children, his work partaking somewhat of the character of both Lewis Carroll's and Robert Louis Stevenson's in the latter's *Child's Garden of Verses*. As a writer of verse for children he was excelled by no French author of his time. He published three collections of prose essays—*Impressions Littéraires* (1855); *Morts et Vivants: Nouvelles Impressions Littéraires* (1860); *Auteurs et Livres* (1868); a translation of Dante's *Divina Commedia* (1859); *Héro et Léandre*, a drama (1859); and the following books of verse: *Au Printemps de la Vie* (1857); *La Comédie Enfantine* (1860); *Dernières Scènes de la Comédie Enfantine* (1862); *Les Figures Jeunes* (1866); *Les Petits Hommes* (1868); *Les Petites Femmes* (1871); *Les Grandes Ombres* (1900). Ratisbonne was appointed librarian at Fontainebleau in succession to Octave Feuillet, and was transferred later to the Palais du Luxembourg.

Reeves, Sims (John Sims Reeves), an English singer, born at Shooter's Hill, Kent, England, Oct. 21, 1822; died in Worthing, Sussex, Oct. 25, 1900. He came first before the public as a singer when eight years of age in local concerts. His first studies of music were made under his father, who was a church organist. The vicar of the parish taught him French and Italian, and at the age of fourteen he became organist and choir-master of the church at North Cray, Kent. His first appearance on the stage was at Newcastle-on-Tyne in December, 1839, as the gypsy boy in *Guy Mannering*, and his success secured for him a continuous engagement. After a few months of work in the provinces, during which he was known by the stage name of Johnson, in 1841 he secured an engagement as second tenor at Drury Lane Theater, then under the management of William C. Macready. He first came into note on account of his singing of the song *Come if You Dare* in the opera of *King Arthur*. After two seasons at Drury Lane, Reeves went to Paris and studied for some months under Signor Bordogni, then to Milan, where he was under the tutelage of Mazzucato. He was invited to sing at La Scala, and made his *début* there as Edgardo in *Lucia di Lammermoor* in 1845. After a season of success in this and other Italian theaters he returned to England, and in December, 1847, made a triumphant *début* in English opera at Drury Lane in his favorite Edgardo. Hector Berlioz, who was the orchestral conductor of the theater, wrote of him: "He has a charming voice of an essentially distinguished and sympathetic character; he is a very good musician, and his face is very attractive." Early in 1848 Reeves made his first appearance in oratorio as Judas Maccabæus, under the direction of John Hullah at Exeter Hall, London. He next joined the company at Her Majesty's Theater, where he made a great success as Carlo in *Linda di Chamouni*. In the autumn of the same year he was the principal singer of the Worcester and Norwich musical festivals. Still later in 1848 he achieved great success as Elvino in *La Sonnambula* in Italian at Covent Garden, and thenceforward he was acknowledged the greatest of English tenors. He sang frequently in Paris at the *Théâtre des Italiens*, and was almost as much a favorite there as in London. One of his best stage performances was in Macfarren's opera *Robin Hood*, first produced in London in 1860. From that year he devoted himself principally to oratorio and concert singing. He was always the most notable figure at the Handel festivals in the Crystal Palace. In the winter of 1878-'79 he sang in *The Beggar's Opera* and *The Waterman* at Covent Garden

Theater, and renewed his earlier triumphs. As a ballad singer he was wonderfully popular. His rendering of Tom Bowling was unequaled by any in sweetness, pathos, and dramatic skill. As a recognition of his services to English music, Mr. Reeves was, in the last months of his life, placed on the pension roll of the civil list.

Russell, Charles, Baron of Killowen, an English jurist, born in Newry, County Down, Ireland, Nov. 10, 1832; died in London, Aug. 10, 1900. He studied at Trinity College, Dublin, where he was more known as an athlete than a student, left to enter a solicitor's office, practiced in Belfast for some time, then entered as a student at Lincoln's Inn, was called to the bar in 1859, and began his career as an advocate in Liverpool, making his way rapidly notwithstanding his hasty temper and some lack of ease and fluency. He became a Queen's counsel in 1872, and came to be recognized as the head of the English bar, who was engaged in almost every important case. His crowning triumph was in the Parnell Commission. He was a parliamentary candidate at Dundalk in 1868, and again in 1874, but was defeated, being a Catholic and an Irishman, though neither an avowed home ruler nor yet a Conservative. In 1880 he was elected as an independent supporter of Mr. Gladstone, and his speeches in support of the compensation for disturbance bill and the land act of 1881, and against the crimes act of Mr. Foster and Sir William Harcourt's more stringent one of 1882, were of great advantage to the Irish party, in the obstructive tactics of which he would have no part, and therefore held himself aloof. He declined a puisne judgeship in 1882, was returned for South Hackney in 1885, supported Mr. Gladstone's home rule policy with powerful effect, and was made Attorney-General in February, 1886, and received the honor of knighthood. In Opposition he made important speeches on the report of the Parnell Commission and other Irish matters, and when Mr. Gladstone formed a Cabinet again in 1892 he became Attorney-General once more. In 1894 he entered the House of Lords as a life peer, and on the death of Lord Coleridge he became Lord Chief Justice of England on July 3 of the same year. He sat as an arbitrator of the Venezuela boundary, and delivered later an address on arbitration before the American Bar Association. In the Bering Sea arbitration and in several others he was counsel for the British Government.

Russell, Henry, an English vocalist and song writer, born at Sheerness, England, Dec. 24, 1813; died in London, Dec. 6, 1900. He was the son of a Hebrew merchant, and in his infancy appeared in Christmas pantomimes. He left England in 1825, and was for a time an outdoor pupil at the Bologna Conservatoire. He afterward settled in Rochester, N. Y., taught piano playing there, and soon became widely known as a composer and singer. He traveled extensively in America, giving monologue entertainments, and returning to England at length, repeated his success there. He retired from the concert stage more than forty years before his death, and opened a money-lending office in London. His songs were extremely popular, and yielded him a large income. They are all wholesome, without any flavor of sickly sentimentality, and have been favorites for two generations. Among the best known are *The Ivy Green*; *The Old Armchair*; *A Life on the Ocean Wave*; *Cheer, Boys, Cheer*; and *Woodman, Spare that Tree*. His voice was a heavy baritone of limited compass, but very effective. He published *Part Songs, Dramatic Scenes, Cantatas, etc.*, with *Memoir* (London, 1846); *One Hundred*

Songs, Music and Words; *Copyright Songs* (1860); *Treatise on Singing*; *Cheer, Boys, Cheer*, a volume of reminiscences. One of his sons is the well-known novelist William Clark Russell.

Ryle, John Charles, an English clergyman, born in Macclesfield, England, May 16, 1816; died in Lowestoft, June 10, 1900. He was employed for a time in his father's bank, and was a captain in the Cheshire Yeomanry. He was educated at Oxford, and was admitted to orders in 1841. After serving as curate of Exbury in the New Forest, he was successively rector of St. Thomas's Parish, Winchester, 1843; rector of Helmingham, Suffolk, 1841-'61; and vicar of Stradbroke, Suffolk, from 1861. He was appointed rural dean of Hoxne in 1869, and honorary canon of Norwich in 1871. While dean designate of Salisbury in 1880, he was appointed bishop of the newly created diocese of Liverpool. He had long been known as one of the leaders of the evangelical party in the English Church, but he did not bring about such a complete Low Church triumph as was looked for in some quarters, nor did he especially favor the erection of a cathedral for the new diocese. He considered that the diocese stood in more need of churches and mission rooms than of a cathedral, and while he did nothing to prevent the carrying out of the cathedral scheme, he refrained from actively furthering it. Bishop Ryle published more than 200 tracts, of notable excellence for their terse, epigrammatic expression, which were translated into many European languages as well as into Chinese and Hindustani. His more formal works include *Assurance* (1850); *Home Truths, Series 1-9* (1850-'59); *The Young Man's Christian Year* (1853); *Startling Questions* (1853); *The Priest, the Puritan, and the Preacher* (1855); *Plain Speaking, Series One and Two* (1855); *Expository Thoughts on the Gospels* (1856-'59); *Only One Way of Salvation* (1870); *Spiritual Songs* (1861); *Hymns for the Church on Earth*; *Coming Events and Present Duties* (1867); *The Bishops and Clergy of Other Days* (1868); *The Christian Leaders of the Last Century* (1868); *Expository Thoughts on St. John* (1869); *Shall we Know One Another in Heaven?* (1870); *Home Truths, Eighth Series* (1872); *Knots Untied* (1874); *Hymn Book for Public Worship* (1875); *Holiness and Other Subjects*; *Old Paths* (1877); *Bible Inspiration: Its Reality and its Nature* (1877); *Practical Religion* (1878); *Church Principles and Church Comprehensiveness* (1879); *Boys and Girls Playing and Other Addresses to Children* (1880); *Facts and Men* (1882); *Thoughts on Immortality* (1883); *Principles for Churchmen* (1884); *Thoughts and Questions about Holiness* (1884); *Thoughts on Baptism* (1884); *Thoughts on Sickness* (1884); *The Thing as it is: Questions and Answers about the Lord's Supper* (1885); *Thoughts on Prayer* (1885); *Thoughts for Young Men from Many Points of View* (1886); *The Upper Room* (1887); *Christ and His People* (with W. H. Fremantle) (1888); *Is All Scripture Inspired?* (2d ed., 1898).

Saint Amand, Baron Imbert de, a French historian, born in Paris in 1834; died there, June 22, 1900. He entered the French Ministry of Foreign Affairs in 1855, and rose in the diplomatic service to be a plenipotentiary of the first class in 1882. In 1875 he published a work descriptive of life at the court of Louis XVI, full of interesting details derived from contemporary documents and of glowing sympathetic studies of the royalties and their companions and courtiers. It was entitled *Les Femmes de Versailles*, and was followed by *Les Femmes des Tuileries*, dealing with the personages of Napoleon's court with the same

warmth and admiration and a just appreciation of their faults at the same time. Other works followed in the series, one printed in 1899 treating of the court of the third Napoleon in 1860, an additional volume being in press when he died.

Samory, an African chief, died in Libreville, June 2, 1900. Before the advance of the French from Senegal he was the hereditary ruler of the Wassulu tribe on the banks of the upper Niger. Profiting by the confusion existing previous to the advent of the French, he made himself master of a vast empire by means of his well-trained and well-equipped army. From the time that the French reached the Niger, in 1884, he tried to oppose their expansion by craft and by force. In 1889 he attempted to drive out Capt. Binger, who was exploring and operating on the Niger. French envoys from the Soudan arranged treaties with him, which he invariably broke. He increased the size of his army by the slave trade and slave raids, and obtained arms and ammunition from the English settlements, where he was regarded not merely as a customer, but as a useful ally to the British in their race for the Niger, who could thwart the more forward and enterprising French. He threatened and attacked the French posts in the Soudan, necessitating the sending of formidable expeditions under Acharard, Combes, Humbert, and Monteil, which drove him away and broke up his army several times. But he escaped to the eastward or northward, rallied his army, ravaged new territories in the Soudan, and returned to harass the French posts after the expeditionary forces were withdrawn. In 1895, after Col. Monteil had returned to the Ivory Coast with his column, Samory, with the help of English munitions, extended his power into the northwestern part of Dahomey, and British political agents recommended supporting him more openly. The occupation of Mossi and Gurunsi in 1896 having enabled the French to connect their Ivory Coast territory with the Soudan, a plan of campaign was adopted by which the forces could close in on Samory from the south and the north. Troops advanced from the southern Soudan to drive him westward, and when he attempted to escape to the east after being defeated at Nzo he was pursued by a flying column under Major Gouraud, which surprised his camp at Guelemon and forced him to surrender on Sept. 29, 1898. He was taken to Kayes, and afterward to Libreville; some of his chiefs were found guilty of having assassinated Capt. Brulot, and were shot; others were interned at Timbuctu or in the French Congo.

Samuel, Sir **Saul**, an Australian public servant, born in London, Nov. 2, 1820; died there, Aug. 29, 1900. He removed to New South Wales in 1832, and received his education at Sydney College, beginning his public career as member of the Legislative Council of New South Wales in 1856. He became Colonial Treasurer in 1857, and after serving several times as Treasurer and Postmaster General was appointed agent general for the colony in London. He devoted himself especially to the finances of the colony, negotiating important loans and making expenditures in its behalf. He was cautious in his business methods, and enjoyed the fullest confidence of his Government. In 1898 he was made a baronet, and after his resignation the same year on account of failing health, he continued to reside in London.

Sanclemente, **M. A.**, President of Colombia, born in 1815; died early in January, 1900. He was elected on Aug. 7, 1898, and relinquished the active duties of his office into the hands of Vice-President Marroquin. His political rôle began

when the Conservative party came into power, and, making Nuñez, its most eminent leader, chief of the executive, united under one administration the nine states of the Colombian federation. Sanclemente became Governor of the department of Cauca, was elected a member of Congress, and was called by Acting-President Caro into his Cabinet as Minister of the Interior after the death of President Nuñez. When the term expired Sanclemente was nominated and elected President for the sake of harmony, and from his retreat of Anapoima, in Cauca, he exercised a moderating influence. Nevertheless his administration had to cope with two formidable revolutionary uprisings.

Saxe-Coburg-Gotha, **Alfred**, Duke of, Prince of Great Britain and Ireland and Duke of Edinburgh, born in Windsor Castle, Aug. 6, 1844; died in Coburg, July 30, 1900. He was the second son of Queen Victoria of England and the Prince Consort Albert of Coburg. Choosing early to follow the profession of a naval officer, he was carefully educated to that end, and was admired for the zeal he showed for his calling and for his practical knowledge of seamanship, gunnery, and naval affairs generally. He received an allowance of £15,000 a year on attaining his majority, and £10,000 more was granted by Parliament when he married Maria Alexandrovna, the only daughter of the Czar Alexander II on Jan. 23, 1874. As rear admiral, chief of marine artillery, member of the Privy Council, and holder of other offices, he drew pay from the British treasury in addition to his appanage. In 1860 he made a voyage to Cape Colony, serving like any other midshipman on board the *Euryalus*, and receiving royal honors only on shore. When King Otto fled from Athens to escape a revolutionary mob, the Boule unanimously offered the vacant Hellenic throne to the Duke of Edinburgh, who shortly before had visited the *Piræus* in his ship. His election was invalid because England, France, and Russia had agreed, at the foundation of the Hellenic kingdom in 1832, that no scion of their royal houses could ever sit on the Greek throne. In 1867 he received command of the frigate *Galatea*, on which he visited many foreign countries. In New South Wales an Irish Fenian made an attempt to assassinate him, March 12, 1868, at a picnic near Port Jackson. He had five children, including one son, Prince Alfred, born Oct. 15, 1874. It was on his son's account chiefly that he accepted the ducal throne of Saxe-Coburg and Gotha on the death of his uncle, Duke Ernst II, who died without issue, Aug. 22, 1893. In thus expatriating himself to become a reigning German prince he sacrificed the greater part of his income, retaining only his marriage grant of £10,000 a year, wherewith to keep up Clarence House, in which to reside a portion of every year in England. His rank as admiral in the British navy he retained, and after accepting the heirship to the German duchies he was appointed a general of infantry in the Prussian army. His German subjects, who looked coldly on the intrusion of a foreigner, as did also the German princes, grew to like him for complaisant ways that he had never exhibited to the British public. The wedding feasts of his daughters gave delight to the townspeople of the old residence city. Princess Maria married Prince Ferdinand of Roumania in 1893; Victoria was wedded to Ernst Ludwig, Grand Duke of Hesse, in 1894; and Alexandra to the hereditary Prince of Hohenlohe-Langenburg in 1896. The daughters retained the rank and title of princesses royal of Great Britain and Ireland, to be ad-

dressed as Royal Highness. The duchess won the hearts of the Coburgers by her manifold charity. It was a sad disappointment to the ducal pair when their son died, Feb. 6, 1899. The Duke of Saxe-Coburg was attacked by cancer of the tongue, but died from heart weakness without knowing what the malady was that undermined his health. His heir is the youthful Duke of Albany, the posthumous child of Prince Leopold, youngest son of Queen Victoria, who has received a military education at Potsdam to prepare him for the duties of a German prince, which he will not take up before 1905, the hereditary Prince of Hohenlohe-Leiningen being regent so long as he is a minor.

Schnadhorst, Francis, an English politician, born in Birmingham, Aug. 24, 1840; died in Roehampton, Jan. 2, 1900. He was educated in King Edward VI's grammar school in Birmingham, succeeded to his father's business as a draper and hosier, interested himself in local literary and educational societies, and later in politics, organized in 1870 the nonconformist committee that fought the subventioning of Church schools, and in 1873 the Birmingham Liberal Association on the system of the American primaries, which secured the defeat of the Conservatives in the town elections and made Joseph Chamberlain mayor. The caucus system was next applied to national politics, with the result that the Liberals carried Birmingham in the parliamentary election of 1874, in which the Conservatives swept the country. The Liberals therefore called upon Mr. Schnadhorst to teach his plan of organization to other politicians, and when more than a hundred such associations united in the National Liberal Federation he, with Mr. Chamberlain at his back, was its organizer and secretary. The introduction of popular party management infused new life into the Liberals, who were victorious in the general election of 1880. The new system could not be preserved in its purity, and after the desertion of Mr. Chamberlain and the gradual breakdown of Mr. Schnadhorst's health the Liberal Federation lost much of its independence and influence, while the Unionists adopted with successful results some of its features and formed closer popular organizations than the Liberals still maintained.

Sedille, Paul, a French architect and painter, born in Paris in 1836; died there, Jan. 6, 1900. He entered the *École des Beaux Arts* as a student in 1857, and in 1878 was the laureate of the grand medal of the *Société Centrale*, awarded for excellence in private architecture. Among his works are the great department store at Paris, *Au Printemps*, and the basilica of *Jeanne d'Arc* at Domremy. He exhibited many paintings from year to year, and wrote extensively on professional topics.

Shuttleworth, Henry Cary, an English clergyman, born Oct. 25, 1850; died in London, England, Oct. 24, 1900. He was the son of a Cornish clergyman, and was educated at Oxford. He was ordained curate of St. Barnabas's parish, Oxford, and in 1874 became a minor canon of Oxford Cathedral. From 1876 to 1884 he was a minor canon of St. Paul's, London, resigning in the last-named year to accept the chapter living of St. Nicholas Cole Abbey, London, the representative of six united city parishes. With the design of making his church in Queen Victoria Street of the most practical benefit to the working community in which it was situated, he opened it daily and had midday services, musical and devotional, with addresses on all kinds of subjects, "from Dante to Dickens, and from sanita-

tion to socialism." He drew a large Sunday congregation also, and on Sunday evenings he himself conducted a large volunteer choir through a series of oratorios. He much disliked the so-called "imprecatory psalms," and was accustomed to omit reading them whenever they occurred in the service, until requested not to do so by the Bishop of London, the year before his death. About 1890 he founded the Shuttleworth Club for the benefit of employees in the city warehouses. In politics he was a pronounced Liberal and thoroughly devoted to the cause of Christian socialism. His writings include *The Seven Last Words of Our Saviour* (Oxford, 1879); *Songs* (1885); *The English Church and the New Democracy* (London, 1885); *Contemporary Fiction* (1888); *The Place of Music in Public Worship* (1892); *Some Aspects of Disestablishment* (1894); *Hymns for Private Use* (1895).

Sidgwick, Henry, an English philosopher, born in Skipton, Yorkshire, May 31, 1838; died in Witham, Aug. 28, 1900. He came of a family of scholars, and had a brilliant career at Cambridge. He became a fellow of his college in 1859, but resigned ten years later because the tenure of his fellowship implied conformity to theological propositions to which he could not longer subscribe. After being lecturer at Cambridge from 1859 to 1875, he was made prelector of moral philosophy in the latter year, and professor of the same in 1883. On account of failing health he resigned his professorship not long before his death. Sidgwick exerted a deep influence upon his generation, not only as a searching critic who dispelled the indifference that had hitherto prevailed in relation to English philosophy, but as a zealous advocate of the higher education of women. His personal character won for him a wide circle of friends, and those who cared little for his subtle reasoning were attracted by his intellectual sincerity and stimulating converse. His principal works are *The Methods of Ethics* (London, 1874); *The Principles of Political Economy* (1883); and *The Elements of Politics* (1891). Besides innumerable contributions to reviews and magazines, he published also *The Ethics of Conformity and Subscription* (1879); *The Scope and Methods of Economic Science* (1885); and *Outlines of the History of Ethics, for English Readers* (1886). Prof. Sidgwick was for some time President of the Society of Psychological Research, and one of the founders of Newnham College, Cambridge. He was made honorary fellow of his college in 1881, and received the degree of LL. D. from the universities of Edinburgh, Glasgow, and St. Andrews, and D. C. L. from Oxford.

Smyth, Charles Piazzi, an English astronomer, born in Naples, Italy, Jan. 3, 1819; died Feb. 21, 1900. He was the second son of the astronomer and hydrographer Admiral Smyth, and was named Piazzi, after the discoverer of Ceres. He was employed in the Observatory at the Cape of Good Hope from 1835, and in 1845 was appointed astronomer royal for Scotland, which post he retained till 1888, when he retired on a pension. To the general public he was best known by his fantastic speculations concerning the Great Pyramid, which he had visited and investigated in 1865. In 1871 he began to prepare an exhaustive star catalogue and ephemeris of all the Edinburgh and best contemporary observations of the same stars, which were issued subsequently in the fourteenth and fifteenth volumes of the Edinburgh Observatory's publications. After his retirement he devoted much time to solar photographic spectroscopy. He published *The*

Great Pyramid and the Royal Society (1874); and New Measures of the Great Pyramid (1884).

Steevens, George Warrington, an English war correspondent, born in London, Dec. 10, 1869; died in Ladysmith, Natal, South Africa, Jan. 16, 1900. He was educated at Oxford, and adopted the profession of journalism. His journalistic writing was of the lighter kind, relieved by humor, and was both clever and effective. He accompanied Kitchener in the last Soudan campaign, was the special correspondent of the Daily Mail in 1899 in India, and was with the army in the same capacity in South Africa. He was the author of *Monologues of the Dead* (1896); *Naval Policy* (1896); *Stella's Story, a Venetian Tale* (1896); *The Land of the Dollar* (1897); *With the Conquering Turk* (1897); *Egypt in 1898* (1898); *With Kitchener to Khartoum* (1898); *In India* (1899); and *The Tragedy of Dreyfus* (1899).

Stevenson, Robert Alan Mowbray, a Scottish art critic, born in Edinburgh, March 25, 1847; died April 18, 1900. He was a cousin of Robert Louis Stevenson, the novelist. He was educated at Cambridge, and after leaving the university studied painting with Ortman at Fontainebleau, and later was a pupil of Carolus Duran. He joined the staff of the Saturday Review as art critic in 1885, and was Professor of Fine Arts at Liverpool University College in 1887-'93. In the last years of his life he was art critic of the Pall Mall Gazette. His only published books are *The Devils of Notre Dame* (1894) and *The Art of Velasquez*, a work of abiding value.

Stewart, Sir Donald, a British soldier, born near Forres, Morayshire, in 1824; died in Algiers, March 26, 1900. He was descended from a distinguished Highland family, was first sent to school when only four years old, and although not studious, acquired an early acquaintance with the classics. He left Aberdeen University at the age of sixteen to take a cadetship in the Indian army, fought with credit against the tribes on the Afghan border in 1854 and 1855, having then reached the rank of captain, and at the beginning of the mutiny made himself famous by carrying dispatches into Delhi. He served as assistant adjutant general to the Delhi field force during the rest of the campaign, making his mark as a staff officer. Toward the end of 1857 Sir Colin Campbell, when marching to the relief of Lucknow, made him assistant adjutant general of the Bengal army, and after the mutiny he was promoted to be lieutenant colonel, and retained on the staff as assistant adjutant general till 1862, and then deputy adjutant general till 1867, being promoted colonel in 1863. He had much to do with the formation of the new Bengal army which replaced the one that had mutinied. In 1867, as brigadier general in command of the contingent of the Bengal army sent to co-operate with Sir Robert Napier in Abyssinia, he performed important services, and was made a major general. He commanded the frontier division of Peshawar which held open the Khaibar pass in 1868. In 1871 he was sent by Lord Mayo to organize the convict settlements of the Andaman Islands into self-supporting industrial colonies, which he accomplished, although one of the incidents of the transformation was the murder of the Viceroy by a convict. After taking a vacation for his health he returned to India in 1875, commanded the Lahore division, and in 1878 was placed in command of the Kandahar field force, with which he advanced through the Bolak and Khojak passes, dispersed the Afghans at Saifuddin, and captured Kandahar. In consequence of the murder of Sir Louis Cavagnari he was sent with an

army of 5,000 men against Kabul. He won the battle of Ahmud Khel with his artillery, captured the Afghan capital, and exercised supreme military and civil power in Afghanistan until he was ordered by the Indian Government to evacuate the country, which he accomplished by sending one division under Gen. Roberts back to Kandahar and leading the rest of the army through the Khaibar pass. He was knighted for his services, and in 1880 was appointed military member of the Viceroy's Council. In 1881 he was created a baronet, and succeeded Sir Frederick Haines as commander in chief of the Indian army. He planned and initiated the system of defenses by which the whole northwest frontier was brought under command of a strategic series of military railroads and roads connecting fortifications with fortified camps and supply bases, the policy that was carried out by his successor, Lord Roberts of Kandahar. The campaign in Burmah ending with the occupation of Mandalay and the annexation of Thebaw's kingdom was fought under his supreme command, and he secured the increase of the army in India by 10,500 British and 21,000 native troops. His promotion to lieutenant general was in 1877, to general in 1881. He laid down the command in 1885 and returned to England, and was a member of the council of the Secretary of State for India till his death, and from 1895 governor of Chelsea Hospital, having in the preceding year received the baton of a field marshal.

Stokes, Margaret McNair, an Irish archaeologist, born in Dublin, Ireland, in 1832; died in Howth, Sept. 20, 1900. She was a daughter of the late Dr. William Stokes, and sister of Sir William Stokes, mentioned below. In 1867 she accompanied her father in an archaeological tour conducted by the Earl of Dunraven through Galway, Sligo, and the Isle of Arran, the results of which appear in the earl's *Notes on Irish Architecture*, left unfinished at his death, but completed and edited by Miss Stokes. She subsequently traveled in Italy and France, and the record of her investigations there will be found in her *Six Months in the Apennines: A Pilgrimage in Search of the Vestiges of Irish Saints* (1892) and *Three Months in the Forests of France* (1895). Other works of hers are *Early Christian Architecture in Ireland* (1876); *Early Christian Art in Ireland* (1887); *Notes on the Cross of Cong; The High Crosses of Castledermot and Durrow* (1900). She also edited *Christian Inscriptions in the Irish Language* (1872-78).

Stokes, Sir William, an Irish surgeon, born in Dublin, March 10, 1839; died at Pietermaritzburg, Natal, South Africa, Aug. 18, 1900. He was the second son of William Stokes, Professor of Medicine in the University of Dublin, and received his education at the Royal School, Armagh, at Trinity College, Dublin, and at medical schools in Berlin, Vienna, Paris, and London. He had been in active practice from 1863, and was knighted in 1886. He was president of the Royal College of Surgeons in Ireland in the last-named year, and had been surgeon in ordinary to the Queen in Ireland from 1892. Two months after the outbreak of the Transvaal War in 1899 he was nominated surgeon to the South African forces. He was the author of *The Altered Relations of Surgery to Medicine* (1888) and a life of his father (1898).

Stone, Samuel John, an English clergyman and hymn writer, born in Whitmore, Staffordshire, April 25, 1839; died in London, Nov. 19, 1900. He was educated at Oxford, and took orders in 1862. For the next eight years he was a curate at Windsor, and for the twenty years

succeeding was at St. Paul's, Hoggston, in the East End of London, as curate 1870-'75, and as rector for the remaining period. From 1890 until his death he was rector of Allhallows, London Wall, where in his latest years he practiced a singular but very helpful experiment. Having observed that hundreds of working women came up to London on the early trains for workingmen, in order to take advantage of the cheaper fare, and were in consequence obliged to walk about the streets until the hour for opening the factories, he caused Allhallows Church to be opened very early every week day for their accommodation while waiting. The opportunity was taken advantage of by a very large number who otherwise would have been forced to wait in the open air in all weathers. He published *Lyra Fidelium* (1866); *The Knight of Intercession* (1872; 7th ed. 1892); *Sonnets of the Sacred Year* (1895); and *Lays of Iona* (1898). He will probably be longest remembered by his familiar hymn, *The Church's One Foundation*.

Sullivan, Sir Arthur Seymour, an English composer, born in London, May 13, 1842; died there, Nov. 21, 1900. He was a son of Thomas Sullivan, bandmaster in the Royal Military College, Sandhurst. By his mother he was of Italian Jewish descent. His youth was spent under the instruction of his father until at twelve years of age he became a member of the boy choir in the Chapel Royal at St. James's. He published his first composition at the age of thirteen, an arrangement of the anthem *Teach Me, O Lord, the Way of Thy Statutes*. In the following year he won the Mendelssohn scholarship at the Royal Academy of Music. He went in 1858 to the Leipsic Conservatory, and remained there until 1861. While in Leipsic he composed his *Feast of Roses* and music to *Shakespeare's Tempest*. This last was produced on his return to England at the Crystal Palace, April 5, 1862. From that date he was a recognized master among English musicians. His next work was *Kenilworth*, a cantata sung at the Birmingham festival in 1864. Then followed *L'Isle Enchantée*, played at Covent Garden in 1864; *In Memoriam*, an overture, played at the Norwich festival in 1866; *The Prodigal Son*, an oratorio (1869); *Overture de Ballo* (1870); *On Sea and Shore*, a cantata with words by Tom Taylor (1871); a *Te Deum* on the recovery of the Prince of Wales (1872); *The Light of the World*, an oratorio, at the Birmingham festival (1873); *The Martyr of Antioch*, an oratorio sung at the Leeds festival (1880); and *The Golden Legend*, a cantata sung at the Leeds festival (1886). Besides these, Sullivan's serious work includes the music of *Onward, Christian Soldiers*, and *The Lost Chord*, both world known. Sullivan's work on what came to be a national school of comic opera began in 1866, when in collaboration with Francis C. Burnand he wrote the operetta *Box and Cox*, produced at the Adelphi, London. From its success he began to devote his abilities to dramatic work, and in 1871 entered into the famous association with William S. Gilbert. Their first effort was *Thespis*, or *The Gods Grown Old*, a burlesque, produced at the Gaiety Theater, London, Dec. 26, 1871, with John L. Toole and Nellie Farren in the principal rôles. A little known work which followed *Box and Cox* in 1867 was *The Contrabandista*, produced in New York under the name of *The Chieftain*. In 1875 they wrote *Trial by Jury*, a one-act operetta, for D'Oyly Carte, manager of the Royalty Theater. This sketch—written, rehearsed, and produced (March 25, 1875) in three weeks—was enormously successful. For nearly twenty years from that time Gilbert and

Sullivan worked together toward the highest distinction in comedy and its music. Their works, nearly all of which were first produced by D'Oyly Carte at the Opéra Comique and Strand Theaters, in London, were not only wonderfully popular in England, but speedily passed to equal renown in all civilized countries and languages. The names and dates of these are: *The Sorcerer*, Nov. 17, 1877; *H. M. S. Pinafore*, May 25, 1878 (ran two years); *The Pirates of Penzance*, April 3, 1880; *Patience*, April 25, 1881; *Iolanthe*, Nov. 25, 1882; *Princess Ida*, Jan. 5, 1884; *The Mikado*, March 14, 1885; *Ruddigore*, Jan. 27, 1887; *The Yeoman of the Guard*, Oct. 3, 1888; and *the Gondoliers*, Dec. 7, 1890. Sullivan and Gilbert separated in 1890 on account of a quarrel between Mr. Gilbert and D'Oyly Carte. Sullivan's grand opera *Ivanhoe* was produced by the latter at his new opera house, Jan. 31, 1891, and ran for one hundred nights. Sydney Grundy wrote the libretto of *Haddon Hall*, which was produced with Sullivan's music in September, 1892. Sullivan and Gilbert came together again, and *Utopia Limited*, their united work, was played Oct. 7, 1893. Their next opera was *The Grand Duke*, March 7, 1896. Pinero and Comyns Carr wrote the libretto of Sullivan's romantic opera *The Beauty Stone*, May 28, 1898; *Captain Basil Hood* that of *The Rose of Persia*, first played Nov. 29, 1899. Sir Arthur composed a national ballet entitled *Victoria and Merrie England*, in honor of the Queen's sixtieth year, produced May 25, 1897. He recently composed music for Kipling's poem *The Absent-minded Beggar*, and had completed a new opera, to be called *The Emerald Isle*, in collaboration with Capt. Basil Hood. He was knighted in 1883, and was made a chevalier of the Legion of Honor of France in the same year. He received the degree of doctor of music from Oxford and Cambridge.

Symons, George James, an English meteorologist, born in London in August, 1838; died there, March 10, 1900. He was educated at St. Peter's Collegiate School, and at the age of sixteen offered his services to James Glaisher, founder of the Meteorological Society, who discouraged his scientific aspirations as leading to a life of poverty. He persisted, however, and in 1857 became one of the meteorological reporters for the registrar general. He assisted Admiral Fitzroy to organize the British system of storm warnings, and independently began to collect records of rainfall, publishing his first annual report in 1860, having found volunteers to furnish the records of 168 stations. For forty years he persisted in organizing voluntary observers, and in 1898 he had records from 3,404 stations. In 1866 he began his *Monthly Meteorological Magazine*.

Tarbé des Sablons, Edmond Joseph Louis, a French dramatist, born in Paris, Feb. 20, 1838; died there, Dec. 15, 1900. He was first educated for the law, but took up journalism in early life. After some years of successful work in Paris, he founded, in association with Henri de Pène, the Parisian journal *Gaulois*, in 1868. In 1877 he devoted himself to novel writing, in which he became very popular. He wrote, in association with Adolphe d'Ennery, a drama in five acts called *Martyre*, produced March 4, 1886. His next piece was *Monsieur de Morat*, a comedy in five acts, first played March 16, 1887. With Pierre Decourcelle he wrote *Gigolette*, a drama in five acts, first played Nov. 25, 1893. *La Maitresse de l'École* and *L'Histoire d'Angèle Valoy* were also from his pen. His published novels were *Les Drames Parisiens* (1884); *Monsieur de Morat* (1886); *Le Roman d'un Crime* (1887); and *L'Histoire d'Angèle Valoy*.

Tarleton, Ernest (Ernest Thompson), an English actor, born in London in 1869; died in Toronto, Canada, March 20, 1900. He was a son of Alfred Thompson, an English artist. His first appearance was in London in the company of John Hare, and within a few months thereafter he was engaged for the first stock company of the Lyceum Theater, New York city. He was continuously and actively a member of this organization until transferred to the support of Mr. E. H. Sothern, with whom he was playing the part of D'Artagnan's valet in *The King's Musketeers* at the time of his fatal illness.

Teck, Francis, Duke of, born in Vienna, Aug. 27, 1837; died in Richmond, England, Jan. 21, 1900. He was the only son of Duke Alexander of Württemberg and hismorganatic wife, Countess Claudine de Rhede, who received the title Countess of Hohenstein. He studied in the Austrian Academy of Engineers from 1849 to 1853, was commissioned a lieutenant of lancers in 1854, later as a captain of hussars, and in the Italian campaign of 1859 he served with gallantry at Solferino as orderly officer to Field-Marshal Count Wimpfen. After the campaign of 1866 he left the Austrian army, having married on June 12 Mary Adelaide, Princess of Great Britain and Ireland, the youngest sister of the Duke of Cambridge. The first years of their married life were passed in Kensington Palace, where the allowance of £5,000 a year granted to the duchess by Parliament proved insufficient. In 1883 they left England, raising money by selling valuables of the duchess at auction, and lived for a time in the Tyrol, afterward at Florence, returning ultimately and taking up their residence at White Lodge, Richmond, the gift of Queen Victoria. In 1882 the duke served on Sir Garnet Wolseley's staff in Egypt, and was present at Tel-el-Mahuta and Tel-el-Kebir. He was made a colonel in the British army on his return, and promoted major general in 1893. He held the honorary rank of lieutenant general in the German army. The Duchess of Teck died on Oct. 27, 1897, and the duke, whose health was shattered, lived in complete seclusion from that time. Of their four children Princess Mary, born May 26, 1867, married George, the Duke of York, on July 6, 1893; Prince Adolphus, born Aug. 13, 1868, married the third daughter of the Duke of Westminster in 1894, and served in the Boer war as a captain in the Life Guards; Prince Francis, born Jan. 9, 1870, was educated at Sandhurst, became a captain in 1894, served with the Egyptian army in the Soudan, and saw active service in the war in South Africa; and Prince Alexander, born April 14, 1874, was educated at Sandhurst also, and commissioned a lieutenant of hussars.

Tirebuck, William Edwards, an English novelist, born in Liverpool; died there, Jan. 22, 1900. He was educated in his native city, and after some commercial experience was subeditor of the Liverpool Mail, and subsequently was for six years subeditor of the Yorkshire Post. Afterward he was entirely devoted to authorship. He possessed extensive art knowledge, and his work in fiction was conscientious. His published works comprise *William Daniels: Artist* (1879); *Dante Gabriel Rossetti: His Work and Influence* (1882); *Great Minds in Art* (1888); *The Discontented Maidens*, a dramatic cantata (1887); and the following novels: *Saint Margaret* (1888); *Dorrie* (1891); *Sweetheart Gwen* (1893); *The Little Widow and Other Episodes* (1894); *Miss Grace of All Souls* (1895); *Jenny Jones and Other Tales from the Welsh Hills* (1896); *Meg of the Scarlet Foot* (1898); and *The White Woman* (1899).

Trall, Henry Duff, an English man of letters, born in Blackheath, Kent, Aug. 14, 1842; died Feb. 21, 1900. He was educated at Oxford, and in 1868 was called to the bar. Three years later he engaged in journalism, and he was on the staff of the *Pall Mall Gazette* in 1873-'80; the *St. James Gazette*, 1880-'82; the *Telegraph*, 1882-'96; and the *Saturday Review*, 1883-'94; and he was editor of the *Observer* in 1889-'91, and of *Literature* in 1898-1900. Trall was a sound critic, a man of wide attainments, and the possessor of an excellent style. He edited the six volumes of *Social England* (1892-'96), and contributed to the *English Citizen Series*, *Central Government* (1882); to the *English Men of Letters Series*, *Sterne* (1882) and *Coleridge* (1884); to the *English Worthies Series*, *Shaftesbury* (1886); to the *Twelve English Statesmen Series*, *William the Third* (1888); to the *English Men of Action Series*, *Strafford* (1889); and to the *Queen's Prime Ministers Series*, *Lord Salisbury* (1891). His other works are: *Recaptured Rhymes* (1882); *The New Lucian*, his finest bit of writing (1884; revised and enlarged, 1900); *Saturday Songs*, a collection of clever satirical verse (1890); *Number Twenty* (1892); *The Life of Sir John Franklin* (1896); *From Cairo to the Soudan Frontier* (1896); *Barbarous Britishers*, a novel (1896); *Life of Lord Cromer* (1897); and *The New Fiction and Other Essays on Literary Subjects* (1897).

Tuer, Andrew White, an English publisher, born in Sunderland in 1839; died in London, March 24, 1900. Soon after coming of age he entered a London firm of stationers and printers as a partner, and, after his invention of "Stick-phast" paste, founded and edited the *Paper and Printing Trades' Journal*. A little later he engaged in book publishing and became an author himself, his tastes inclining toward antiquarian research. His writings include *Luxurious Bathing* (London, 1880); *Bartolozzi and his Works*, a carefully written monograph (1881); *London Cries* (1883); *John Bull's Womankind* (1884); *Old London Street Cries and the Cries of To-day* (1885); *Follies and Fashions of Our Grandfathers* (1887); *The First Year of a Silken Reign, 1837-'38*, with C. E. Fagan (1887); and *History of the Hornbook* (1896).

Valfrey, M., a French journalist, born in 1838; died in Paris, Nov. 23, 1900. He wrote articles on foreign policy and events for the *Figaro* under the signature of Whist, was called into the diplomatic service by the Duc Decazes and placed on the Committee of Archives, with the rank of a minister plenipotentiary. He lost his office when the Conservative ministry was driven out in 1877, but was employed by subsequent ministries, first on a mission sent to Portugal to arrange financial matters, and several times afterward to adjust international debts in the interest of French creditors, developing much ability in the negotiation of financial settlements. He became for a while the editor of the *Moniteur*, an Orleanist organ, and then joined the staff of the *Figaro* to write the daily article on foreign affairs. In times of popular excitement over international questions his articles had a moderating influence.

Vicaire, Louis Gabriel Charles, a French poet, born in Belfort, Jan. 24, 1848; died in Paris, Sept. 24, 1900. His earlier years were passed at Bresse and Bugey, but he studied law at a later period and became an advocate. He published in 1884 *Emaux Bressans*, a successful book, which constitutes his best title to inclusion among the French poets of his day. This was followed by *L'Heure Enchantée*; *Les Déliaquescences d'Adore Floupette* (1885); *La Légende de Saint Nicolas*

(1888); *Au Bois Joli* (1894); *Le Clos des Fées* (1898). In 1883 he contributed a long prose introduction to Guillon's *Chansons Populaires de l'Ain*, his only prose writing of importance, and in 1888 he obtained a gold medal for his lyric poem, *Quatre-vingt-neuf, Chant Séculaire*.

Villaume, Karl von, a German soldier, born in 1840; died in Berlin, June 3, 1900. He was an ordnance expert who served on the staff almost from the time of his entrance into the army. In 1877, as a captain of the general staff, he was attached to the Russian headquarters during the war in the Balkans, and at its close he was appointed military *attaché* of the embassy in Rome, which post he exchanged in 1882 for that of first military *attaché* in Paris, having reached the rank of lieutenant colonel. There he obtained documents from a French traitor that revealed the operations of the French spy system, and to the French, who were wrought up by suspicions of German spies and angered against military *attachés* as a class, he appeared to be the head and front of the espionage that they dreaded, and had to give up the post, having won as much credit at home as he lost in France. He was nominated aid-de-camp to the Emperor, and in 1886 he succeeded Gen. von Werder as military plenipotentiary at St. Petersburg. He served several years in this post to the satisfaction of his Government, was then recalled to take command of an artillery brigade at Stettin, the first time that he was with the troops since he was a lieutenant, and in 1896 was appointed director of the staff college in Berlin.

Villebois-Mareuil, Col. de, a French soldier, born in 1847; died in South Africa, April 5, 1900. He was educated for the army at St. Cyr, received a commission in 1867, served in Cochinchina, was captain of chasseurs in the Army of the Loire in 1870, received a severe wound at the recapture of Blois, and for his brave conduct was decorated on the battlefield. He was attached to the war school in 1871, and in 1882, when Gen. Boulanger became Minister of War, he received an appointment on the general staff. He was sent to Algeria in 1888, having then the rank of lieutenant colonel, was promoted to a colonelcy in 1892, held commands successively in Mayenne, Soissons, and in Algeria, and in 1895 resigned from the army on account of a family bereavement and devoted himself to old soldiers' societies. He was the author of a romance entitled *Sacrificés*, which appeared in the *Revue des Deux Mondes* in 1890, under the pseudonym of Georges Simny; of one called *Entre Civilisés*, published in 1896; and of a third, *Audessus de Tout*, printed in 1899. When the war in South Africa broke out he went to offer his services to the Transvaal, and was the chief adviser of the Boer generals on artillery tactics. Passing near Boshof with a small detachment he was overtaken by a British scouting party and killed.

Wilde, Oscar Fingall O'Flaherty Wills, an Irish poet, born in Dublin, Oct. 16, 1856; died in Paris, Nov. 30, 1900. He was the son of Sir William Wilde, surgeon-oculist to the Queen, and Lady Jane Wilde, who as Speranza was a well-known Irish lyricist in the fifties. After a brilliant university career at Trinity College, Dublin, and at Oxford, he traveled in Italy and Greece, and, returning to London in 1879, originated the peculiar æsthetic movement satirized in the opera of *Patience*. In 1881 he went to the United States and lectured on art, and he afterward lectured in England and in Paris. He met with great social success, and his poems and society plays were popular. In 1894 he was convicted of felony, for which he served a sentence of two years in prison.

After his release in 1897 he lived in the Latin Quarter of Paris, under the name of Sebastian Melnotte. In his last hours he was received into the Roman Catholic Church as a penitent. He published *Newdigate Prize Poem Ravenna* (London, 1878); *Poems* (1880); *Vera*, a comedy (1882); *The Happy Prince, and Other Tales* (1888); *Dorian Gray*, a novel; *The Portrait of Mr. W. H.*, a theory respecting Shakespeare's Sonnets; *Intentions*, a collection of essays (1891); *Guido Ferranti* (1890); *The Duchess of Padua*, a blank-verse tragedy (1891); *Lady Windermere's Fan*, a skillfully written comedy (1893); *Salome*, a tragedy (1894); *A Woman of no Importance*, a comedy (1893); *The House of Pomegranates*, poems in prose; *The Sphinx*, a poem; *Lord Arthur Saville's Crime*, a collection of short stories; *An Ideal Husband*, a play; *The Importance of Being in Earnest*, a play (1895); and *The Ballad of Reading Gaol* (1898). The last-named work, which appeared anonymously, is a strong poem, and has been called his finest literary effort. His verse is almost always melodious, and abounds in exquisite descriptive passages. The authorship, in part at least, of *Mr. and Mrs. Daventry*, a problem play (1900), has been attributed to him.

Williams, Frederick, an Irish actor, born in Dublin in 1829; died in New York city, Sept. 5, 1900. He was educated in his native city as an architect. He made his first appearance at the Smock Alley Theater, Dublin, as Tybalt in *Romeo and Juliet*, in 1850. For two years he played the usual succession of rôles in the stock companies in Ireland, and in 1852 was engaged at the old National Theater, Cincinnati. His first appearance was *Catesby* in Richard III. in the autumn of 1852. He remained an active and important member of that company for seven years. He then toured as a star from 1859 to 1861. He was next engaged as leading actor of the Holliday Street Theater, Baltimore, where he played until the civil war, during which he again made a starring tour lasting two years. In the spring of 1864 he went to New York city as leading man of George Wood's Theater (afterward Wallack's), and in the autumn of the same year accepted a place as light comedian in the Boston Museum. In 1865 he became stage manager of that house, and he remained in that place fourteen years, during which all productions were supervised by him, and many adaptations of foreign plays arranged for the stage. In 1879 he became stage manager of Daly's Theater, New York, where he remained four years. He then traveled two seasons with the company of the late Frank Mayo, and three with the Boston Ideals. In 1887 he was engaged as stage manager of the Lyceum Theater, New York, the duties of which he performed faithfully up to the date of his last illness. His last important work was the preparation of E. H. Southern's production of *Hamlet*.

Wimperis, Edmund M., an English artist, born in 1835; died at Southbourne, England, Dec. 25, 1900. He went to London in early life, and learned wood engraving under Birket Foster. As an engraver he attained a high degree of excellence, and many exquisite examples of his workmanship may be found in the illustrated books of the sixties. When wood engraving declined he turned his attention to water-color painting and, though almost entirely self-taught, met with great success. His taste was almost entirely for landscapes, and he cared little or nothing for human incident. In later life he painted in oils, and was almost equally successful in this branch of art. He followed Haag as vice-president of the Royal Institute of Painters in Water Colors.

Woodgate, Sir Edward Robert Prevost, a British soldier, born in Belbroughton, Worcestershire, in 1845; died in Natal, March 25, 1900. He was the son of a clergyman, was educated at Radley, joined the army in 1865, served in the Abyssinian expedition of 1868, being present at the action of Arogee and the capture of Magdala, was employed on special service in 1873 and 1874 in the Ashanti war, taking part with gallantry in the various engagements and the capture of Kumassi. Lieut. Woodgate passed through the staff college in 1877, and when the South African War of 1879 broke out he was again selected for special employment, and won fresh honors as staff officer of the flying column in the Zulu campaign, being brevetted a major for his conduct at Kambula and Ulundi. From 1880 till 1885 he served in the West Indies as brigade major. In 1898 he was sent out to Sierra Leone to organize the new West Indian regiment, with which he conducted operations against Bai Bureh and other chiefs who rebelled against the hut tax. He returned home in 1899 with broken health, which was scarcely restored when he was given command of a brigade that was ordered to South Africa in the division commanded by Sir Charles Warren. Crossing the Tugela about a month after his arrival, Gen. Woodgate occupied Spion Kop with his command, and was dangerously wounded in the head in the fighting that ensued on the following day, so that he was relieved of the command before the force was withdrawn. His wound ultimately proved fatal. He was knighted for his services in Sierra Leone.

Wright, George Robert Nicol, an English antiquary, born in 1810; died in Kew, April 2, 1900. He was connected with the British Archaeological Association from its foundation in 1843, and for many years arranged the congresses of the association, the success of which was due largely to his efforts. He wrote *Local Lays and Legends, Fantastic and Imaginary* (1885) and *Archæologic and Historic Fragments* (1888), and he was also a frequent contributor to the periodical press.

Young, William, a British architect, born in Paisley, Scotland, in 1843; died in Putney, England, Nov. 1, 1900. He went to London in the early sixties and opened an office, but was without business connections or professional acquaintance. By a mere chance he was employed soon after his arrival by Lord Wemyss (then Lord Elcho), and his rise in his profession was rapid and continuous from that time. His most important completed work is the Municipal Buildings at Glasgow, an imposing structure in the severely classical style, finished in 1889. It was several years in building, having been begun about 1880, and the design submitted by Mr. Young was selected from among 126. Not long before his death he was appointed architect of the new War Office. He had completed his designs in detail, and work had been begun upon the structure, when overwork resulted in the illness that caused his death. He was the architect of a large number of country mansions, including Holmewood, Hampshire, and Dunscombe House, as well as many costly and elegant town residences. For a long series of years he edited the annual volumes of Spohn's *Architect's Pocket Book*, and he was the author of a considerable number of books, including *Picturesque Architectural Studies; Picturesque Examples of Old English Churches and Cottages* (1869); *Town and Country Mansions and Suburban Houses* (1879); and *The Glasgow Municipal Buildings* (1889). From 1891 he was a fellow of the Royal Institute of British Architects.

OHIO, a Central Western State, admitted to the Union in 1803; area (according to the geological survey), 41,060 square miles, of which 300 are water surface. The population, according to each decennial census since its admission, was: 230,760 in 1810; 581,295 in 1820; 937,903 in 1830; 1,519,467 in 1840; 1,980,329 in 1850; 2,339,511 in 1860; 2,665,260 in 1870; 3,198,062 in 1880; 3,672,316 in 1890; and 4,157,545 in 1900. It ranks fourth among the States in point of population. Capital, Columbus.

Government.—The State officers during 1900 were: Governor, George K. Nash; Lieutenant Governor, John A. Caldwell; Secretary of State, Charles Kinney; Auditor of State, Walter L. Guilbert; Treasurer of State, Isaac B. Cameron; Attorney-General, John M. Sheets; Board of Public Works, Frank A. Huffman, Charles A. Goddard, W. J. Johnston; Commissioner of Common Schools, Lewis D. Bonebrake; Judges of Supreme Court, John A. Shauck, Thad A. Minshall, Marshall J. Williams, Jacob F. Burket, William T. Spear, William C. Davis; Clerk of Supreme Court, Josiah B. Allen; Dairy and Food Commissioner, Joseph E. Blackburn.

The term of the Governor, Lieutenant Governor, Treasurer of State, and Attorney-General is two years, beginning in January of the even-numbered years; of the Secretary of State two years, beginning in January of the odd-numbered years; of the Dairy and Food Commissioner two years, beginning in February of the odd-numbered years; of members of the Board of Public Works and Clerk of the Supreme Court three years, beginning in February; of the Commissioner of Common Schools three years, beginning in July; of the Auditor of State four years, beginning in January of even-numbered years; of Judges of the Supreme Court six years, beginning in February. All are elected in November. The Legislature meets biennially in January; there is no limit to length of the session.

Finances.—The total value of the real and personal property in the State, as returned for taxation, was \$1,834,053,228, divided as follows: lands, \$599,678,045; real estate in cities and villages, \$674,525,676; personal property, \$559,849,507.

At the beginning of the fiscal year, Nov. 15, 1899, there was in the treasury \$1,179,492.88. The receipts during the year were \$8,031,817.72, and expenditures \$7,712,507.32, leaving a balance, Nov. 15, 1900, of \$1,498,743.28, credited to the different funds as follows: General revenue fund, \$1,129,050.03; sinking fund, \$207,327.63; common school fund, \$78,145.06; university fund, \$84,220.56.

During the year \$300,000 of the funded debt was paid, leaving the debt at the close of the year \$701,665, of which \$300,000 is due July 1, 1901; \$300,000 July 1, 1902; and the remainder July 1, 1903. The debt bears interest at 3 per cent.

The aggregate local debt is \$96,193,513.94, of which \$77,606,261.40 are municipal debts, and \$10,521,247.58 debts of counties.

Canal Finances.—The expenditures for the State canals during the year amounted to \$220,381.23 and the receipts \$86,779.95. The Legislature appropriated \$134,500. At the end of the year the balance on hand was \$39,148.95.

Educational.—The educational statistics are for the year ending Aug. 31, 1900. The number of pupils enrolled in the public schools was 829,160; number of teachers, 26,017; number of school-houses, 13,073; during the year 222 new school-houses were built. The value of public school property is \$44,017,179. Balance of school fund on hand at the close of the year, \$6,566,046.37.

The report of the Commissioner of Schools shows also 27,327 students in private schools and 7,990 in universities and colleges.

Military.—The total strength of the Ohio National Guard is 5,362, organized in 2 military brigades, comprising 6 regiments of infantry, 4 battalions of infantry, 1 battalion of engineers, 6 batteries of light artillery, and a cavalry troop. There is also a naval brigade of 2 battalions, with headquarters at Cleveland and Toledo.

State Institutions.—The State educational, benevolent, and penal institutions include the Ohio State University at Columbus, Ohio University at Athens, Miami University at Oxford, combined normal and industrial department of Wilberforce University, Ohio Institution for the Blind at Columbus, Ohio Institution for the Education of the Deaf and Dumb at Columbus, Ohio Institution for the Education of Feeble-minded Youth at Columbus, Girls' Industrial Home at Rathbone, Ohio Soldiers' and Sailors' Home at Sandusky, Ohio Soldiers' and Sailors' Orphans' Home at Xenia, Boys' Industrial School near Lancaster, Athens State Hospital, Cleveland State Hospital, Columbus State Hospital, Dayton State Hospital, Longview Hospital at Carthage, Massillon State Hospital, Ohio Hospital for Epileptics at Gallipolis, Toledo State Hospital, Ohio Penitentiary at Columbus, Ohio State Reformatory at Mansfield.

Railroads.—The railroad mileage in 1900 was 8,691, of which 8,132 miles were main line and 559 miles branches and spurs. The earnings, as reported to the Commissioner of Railroads and Telegraphs, were \$86,049,117.88, being an increase of \$13,679,269.20 on the previous year. The Ohio dividends reported aggregated \$6,367,746.04, an increase of \$983,417.39. There were 512 fatal accidents, an increase of 122 over 1899. Of the whole number killed 11 were passengers, 164 employees, 258 trespassers, and 79 travelers on the highway.

Live Stock.—The report of the Auditor, showing the number of domestic stock animals in the State, as returned by the several county auditors, with the changes from the returns of the preceding year, gives these figures: Horses, 711,146, increase 5,949; cattle, 1,427,661, increase 75,943; mules, 14,521, decrease 148; sheep, 2,544,070, increase 26,710; swine, 1,489,518, decrease 60,596.

Legislative Session.—The seventy-fourth General Assembly organized Monday, Jan. 1, and adjourned Monday, April 16, after enacting into laws 556 bills. Among those of general interest were the following.

Putting foreign stockholders in Ohio concerns under the double-liability law.

Relieving Ohio holders of stock in foreign corporations from double taxation.

Permitting the consolidation of lighting companies.

Requiring all private banking institutions to list their property for taxation in the same manner as incorporated and national banks.

Requiring all insurance companies formed on the stock plan to have a capital stock of not less than \$100,000.

Providing that no part of a fire risk shall be renewed in a company not authorized to do business in Ohio.

Supplementing the anti-compact law so as to prevent insurance companies combining for the purpose of controlling agents' rates.

Requiring steam railways to construct suitable waiting rooms at all stations.

Providing for an eight-hour working day.

Creating a State Board of Examiners of Engineers.

Requiring that music be taught in all public schools.

Providing that instruction in the evils of alcohol be given in the public schools.

Providing for the centralization of township schools.

Permitting controlling political committees to purchase voting machines when a majority of the electors voting are in favor.

Granting two hours to factory and mill hands on Election Day to go to the polls.

Regulating the practice of medicine.

Amending the game laws so as to make the open season from Nov. 10 to Dec. 1, and requiring a written permission from the owner of the property.

Providing for the appointment of county game wardens, vested with police powers.

The political complexion of the Legislature was: Senate—Republicans 19, Democrats 11, Independent Republican 1; House—Republicans 62, Democrats 48.

Political.—The Republican State Convention was held at Columbus, April 24 and 25, and the following ticket was nominated: For Secretary of State, Lewis C. Laylin; Supreme Court Judge, John A. Shauck; Member of Board of Public Works, Charles A. Goddard; School Commissioner, Lewis D. Bonebrake; Dairy and Food Commissioner, Joseph E. Blackburn. With the exception of the head of the ticket all these were renominations. The convention also named for State presidential electors Myron T. Herrick and W. P. Orr, and for delegates-at-large to the National Republican Convention, Joseph B. Foraker, Charles Dick, George K. Nash, Charles H. Grosvenor. The platform commended the administration of President McKinley, and declared that:

"It has met an unavoidable war for humanity with unequalled vigor and success, has crowned the matchless triumph of our arms on sea and land with the courageous acceptance of its high and solemn obligations, has faithfully studied and sought equally the true honor of the nation and the greatest good of the peoples who have come under our flag, and has, through the wise use of expanded opportunity, led our country on pathways of greatness and renown.

"We reaffirm the principles in which the Republican party had its birth and on which Abraham Lincoln was elected President, that the representatives of the people have full power over territory belonging to the United States, in harmony with and subject to the fundamental safeguards of our free institutions for liberty, justice, and personal rights. We sustain the President and Congress in exercising this power with due regard for the safety and welfare of the Union, and with the most just, generous, humane, and fraternal consideration for those over whom the authority of the nation is extended. We advocate for them free schools, full security for life, liberty, and property, the most liberal measures for the development of their agriculture and industry, and the largest degree of local self-rule for which they are fitted.

"We recognize in George K. Nash a Governor worthy of our highest confidence and unqualified support. The administration of our State affairs by him and his official associates has been clean, efficient, and commendable, and its policy tending to good government, economy, and wisdom."

The Democratic State Convention was held at Columbus, June 12 and 13, and the following ticket was nominated: For Secretary of State, Henry H. McFadden; Supreme Court Judge, Allen Smalley; Member of Board of Public Works, Peter W. Brown; School Commissioner, Joshua D. Simp-

kings; Dairy and Food Commissioner, Ballard B. Yates. The convention also named for State presidential electors Isaac R. Sherwood and A. J. Warner, and for delegates at large to the National Democratic Convention James Kilbourne, Abraham W. Patrick, William S. Thomas, and Horace L. Chapman. The platform declared:

"We enter our protest against the doctrine that the President or Congress can govern acquired territory outside and independently of the Constitution of the United States, as a doctrine utterly subversive of every foundation principle of our Government. The Declaration of Independence, the flag, and the Constitution must everywhere stand together as emblems of human liberty and equal rights for all, and where one goes all go. We therefore denounce imperialism under any pretense as necessarily leading to militarism, and as wholly foreign to our system of government.

"We denounce the currency law passed by the present Congress, which transfers to the banks the entire control of the paper currency, thus laying the foundation for a money trust. We demand that the General Government shall not only coin the metals, but shall issue and regulate the volume of paper currency also in the interests of all the people.

"We express our deepest sympathies for the Boers of South Africa, who, against such fearful odds, are heroically struggling for that same liberty for which our fathers fought a century and a quarter ago, and which at so much sacrifice they gained and handed down to us.

"We demand also that the unrighteous, unnecessary, and unjust war now being waged for conquest against the Filipinos, who ask only for the right of self-government, be brought to a speedy close by a peace honorable to us and just to them, and in accordance with the principles of the American Declaration of Independence.

"We favor an unflinching adherence to the Monroe doctrine and oppose entangling alliances, secret or open, with any foreign powers.

"We favor the construction and control by the United States alone of an interocean canal as a commercial highway for all nations.

"We favor the election of the President, the Vice-President, and United States Senators by the direct vote of the people.

"We affirm anew our undiminished faith in the acknowledged leader of our party, William J. Bryan, and demand his nomination at Kansas City for President of the United States, and the delegates elected by this convention are instructed to so cast their votes."

The Socialist-Labor party held no convention, but nominated a full ticket by the referendum, votes having been sent in from more than 50 sections of the party in the State. The ticket was announced by the Executive Committee of the party at Columbus, May 5, as follows: For Secretary of State, Samuel Borton; Supreme Court Judge, Daniel W. Wallace; Member of Board of Public Works, David F. Cronin; School Commissioner, William Garrity; Dairy and Food Commissioner, Otto Steinhoff.

The Prohibition State Convention was held at Columbus, May 25, and put in nomination the following ticket: For Secretary of State, J. Knox Montgomery; Supreme Court Judge, E. Jay Pinney; Member of Board of Public Works, Enos H. Brosius; School Commissioner, Samuel A. Gillett; Dairy and Food Commissioner, Joseph M. Scott. The platform reaffirmed the position of the party against the liquor traffic, and also indorsed woman suffrage.

The Union Reform party placed the following

ticket in nomination: For Secretary of State, Frank Frankenberg; Supreme Court Judge, Lambert B. Logan; Member of Board of Public Works, Rei Rathbun; School Commissioner, William J. Seelye; Dairy and Food Commissioner, William F. Barr.

There was also a Socialist-Democratic ticket, as follows: For Secretary of State, Louis F. Hemse; Supreme Court Judge, Albert Corbin; Member of Board of Public Works, William C. Edwards; School Commissioner, Harry D. Thomas; Dairy and Food Commissioner, William H. Patterson.

The election, Nov. 6, resulted in the success of the entire Republican State ticket, the vote on Secretary of State being as follows: L. C. Laylin, Republican, 543,389; H. H. McFadden, Democrat, 474,078; J. Knox Montgomery, Populist, 9,983; Louis F. Hemse, Socialist-Democrat, 4,650; Frank Frankenberg, Union Reform, 4,647; Samuel Borton, Socialist-Labor, 1,707.

In the presidential election, McKinley received 543,918 votes; Bryan, 474,882; Woolley, 10,203; Debs, 4,847; Ellis, 4,284; Malloney, 1,688; Barker, 251.

OKLAHOMA, a Territory of the United States, organized in 1890; area, 38,715 square miles. The population in 1890 was 61,834; in 1900 it was 398,245. Capital, Guthrie.

Government.—The following were the Territorial officers in 1900: Governor, Cassius M. Barnes; Secretary, William M. Jenkins; Treasurer, Frank M. Thompson; Attorney-General, Harper S. Cunningham, succeeded in March by J. C. Strang; Superintendent of Instruction and Auditor, Stuart N. Hopkins; Adjutant General, Bert C. Orner; Bank Commissioner, John M. Pugh (resigned in July, succeeded by W. S. Search); Superintendent of Public Health, L. H. Buxton; School Land Commissioner, Charles H. Filson; Chief Justice of the Supreme Court, J. H. Burford; Associate Justices, B. F. Burwell, B. T. Hainer, John L. McAtee, and C. F. Irwin. All are Republicans except Judge McAtee, who is a Gold Democrat.

Population.—The Federal census of 1890, giving Oklahoma a population of 61,834, included 12,041 Indians. Add to the figures above given for 1900, embracing only the white population, the 13,873 Indians also returned, and the total population of the Territory is seen to be 412,118. The number of Indians not taxed in 1900 was 5,927. The population of Guthrie in 1900 was 9,981; that of Oklahoma City, 9,976. The other cities having a population of more than 2,000 were: Shawnee, 3,462; Enid, 3,444; El Reno, 3,383; Perry, 3,351; Ponca City, 2,528; Stillwater, 2,431; Kingfisher, 2,301; Blackwell, 2,293; Norman, 2,225.

Finances.—The fifth biennial report of the Territorial Treasurer shows the financial transactions of Oklahoma for the period beginning Dec. 1, 1898, and ending Nov. 30, 1900. The receipts of the treasury for this period were \$1,075,387.01; expenditures, \$726,493.92; leaving a balance on hand, Nov. 30, 1900, of \$348,893.09, as against a balance, Nov. 30, 1898, of \$66,110.79. The delinquent taxes were: 1898, \$26,548.86; 1899, \$29,434.52. Balances from the counties on account of unpaid taxes, Nov. 30, 1900, aggregated \$174,167.65; tax levies for all Territorial purposes for 1900 still to be collected, \$254,094.23.

The assessed valuation of the property of the Territory for 1900 was \$49,338,661. The Territorial tax was 5.15 mills. The bonded debt of the Territory was \$48,000, and the general warranty indebtedness \$379,054.18.

The proceeds from the lease of school lands since the organization of the Territory aggregate

\$1,000,000. The receipts for the last fiscal year were \$189,486.44.

Education.—The last school enumeration was 114,736; number in actual attendance, 85,635; number of teachers in service, 2,191; school districts, 2,000. The tax collected for schools amounted almost to \$750,000.

The total attendance in 1900 at the five Territorial institutions of learning—the University, Normal School, Northwestern Normal School, Agricultural and Mechanical College, and Colored Agricultural and Normal University—was about 1,700. The attendance at the 18 Indian schools conducted by the Government was 2,100.

The enrollment at the university in all departments was 295. The number graduated in 1900 was 14.

At the Agricultural and Mechanical College the enrollment in September had reached 366. The college has two new buildings—a library and a chemical building.

The graduating class of 1900 at the Territorial Normal School numbered 20.

At the Northwestern Normal School the enrollment in September rose to 353. The dedication of the new building of this school, March 8, was marked by elaborate ceremonies.

Additional purchase of land adjoining the tract of the Langston University made that institution in 1900 the possessor of 160 acres of rich tillable soil. The equipment of the farm with machinery, etc., has kept pace with this expansion of its workable area.

Penitentiary.—The Penitentiary contract for Oklahoma with Kansas remained the same in 1900 as in 1899. The report of the warden at Lansing, Kan., to Gov. Barnes gives these details regarding Oklahoma convicts there confined: Number of prisoners on hand, Jan. 1, 1900, 176; number received to Dec. 1, 1900, 109; number discharged to Dec. 1, 1900, 64; number on hand, Dec. 1, 1900, 223; number remanded for new trial, 2; number pardoned, 10; number died, 2.

Social and Religious Conditions.—This topic is treated by the Governor in his annual report as follows: "There are in the Territory about 900 church organizations, with a membership of 70,000, and owning church property valued at \$500,000. There are about 600 fraternal organizations, with a membership of about 25,000. The deaf-mutes and insane of the Territory are cared for in private institutions by contract. There are 50 in attendance at the deaf-mute institution and 283 in the insane asylum. The cost of caring for the insane for the past year was \$67,429.03. During the past year 603,527 acres of Government land were filed on in the Territory by homestead settlers. There are still vacant 5,733,385 acres of Government land. Most of this vacant land is in the western part of the Territory, and adapted more generally to stock raising, although some good agricultural land is still vacant."

Free Homes.—One of the most important events of 1900 to the people of Oklahoma was the passage in Congress of the free homes bill, which passed the Senate May 14, having already been passed in the House. This bill provides for free homesteads on the public lands for actual and bona fide settlers, and reserves the public lands for that purpose. The news of its passage was received in the Territory with great rejoicing. It saves about \$16,000,000 to the people of Oklahoma.

Banks.—In 1900 there were 79 Territorial and 11 National banks in operation in Oklahoma. There had been no bank failure in three years. The resources of the Territorial banks aggregated \$5,147,181.51. Of this, \$2,409,262.85 represented

loans and discounts and \$2,340,250.03 cash in hand. The capital stock of the Territorial banks was \$744,588.66; the surplus and profits, \$483,970.73; deposits, \$3,918,622.12. They had a reserve of 60 per cent. and had gained \$2,410,472.43 in deposits in three years. The national banks had \$1,336,965.34 in loans and discounts, and \$363,300 in Government bonds, their aggregate resources being \$3,098,377.47. Liabilities included \$525 in capital stock; \$40,800 in surplus; \$82,837.08 in undivided profits; \$2,042,295.15 in deposits; \$74,902.13 in United States deposits.

Building and Loan Associations.—There are 6 building and loan associations in the Territory, with an aggregate amount of \$60,000 invested in real estate securities, and paying dividends to their stockholders of from 12 to 20 per cent. per annum.

Insurance.—Forty-six insurance companies do business in the Territory, the aggregate amount of fire insurance written in the year being \$15,274,519.14; premium collected, \$255,425.41; losses incurred, \$62,026.36; losses paid, \$49,663.45. The 15 life insurance companies doing business in the Territory wrote \$4,634,227 of insurance, collected \$102,396.86 premium, and paid \$39,873 in losses. There are 8 bond and surety and casualty companies doing business in the Territory, who collected \$7,748.26 premium on \$1,229,434.65 business in the year, and paid \$643.15 in losses.

Railroads.—There are about 1,000 miles of main-track railway in the Territory, 200 miles having been built during the year. Every county but two is reached by rail. The lines operating in the Territory are the Santa Fé, Rock Island, Frisco, and Choctaw. Much new construction is projected for the near future, 18 railway companies, aggregating \$44,270,000 of capital stock, having been chartered in 1900. The Oklahoma and Southern Railroad Company filed its charter with the Territorial Secretary. The length of this railway is estimated at 400 miles. It will begin at Kiowa, Kan., and pass through Woods, Garfield, Blaine, Kingfisher, Logan, Canadian, Oklahoma, Payne, and Lincoln.

Militia.—In 1900 the Territorial militia greatly improved in strength and organization. For the first time the Oklahoma National Guard grew to a full regiment, well equipped and trained.

Productions.—The wheat crop of 1900 was about 25,000,000 bushels, and the average yield per acre about 19 bushels, while the highest was 50 bushels. Oklahoma, according to the report of the Agricultural Department at Washington, leads all the States and Territories in the estimated yield of cotton to the acre by more than 100 pounds. The estimate for Oklahoma in pounds of lint per acre is 381, Indian Territory ranking next with 280, while Louisiana, Texas, and Arkansas follow in order. The Oklahoma cotton crop of 1900 was 125,000 bales. The yield of oats is estimated at 12,000,000 bushels, the peach and apple crops at about 500,000 bushels each.

Bulletin 45 of the Agricultural and Mechanical College names nearly 750 native plants of Oklahoma.

The number of horses listed for taxation was 243,203; mules, 49,525; cattle, 990,524; sheep, 43,475; swine, 245,431.

There are in the Territory 117 grain elevators, with an aggregate capacity of 1,860,000 bushels.

The geological survey of Oklahoma was begun in 1900, and indications were revealed of mineral wealth in salt, coal, oil, gas, limestone, copper, etc.

Anti-horse-thief Association.—This organization has 199 subordinate lodges and 5,000 members in Oklahoma, reaching into every county.

Memorial.—At Blackwell, Nov. 19, a large gathering of people of the Territory held memorial exercises in a church in honor of Capt. David L. Payne, the original "Oklahoma boomer," who died in 1884.

Political.—The People's party held its Territorial convention in Enid, April 10. A determined bolt divided the convention, and each faction nominated national committeemen and ten delegates—the "regulars" to the Sioux Falls National Convention and the bolters to that at Cincinnati. The resolutions of the "regulars" recognized the call for a national convention at Sioux Falls, S. D., May 9; favored union of all the elements opposed to trusts, imperialism, and monopoly in the interest of the reform candidates in the presidential election and of those in the Territorial elections; reaffirmed adherence to the St. Louis platform of 1896; declared for the initiative and referendum, and for public ownership of public utilities; denounced the Republican party for placing the public money in the hands of banking corporations; regretted the evidence of the Republican administration's sympathy with England in her efforts to crush the Boer republics; deplored the administration's conduct of insular affairs; and pledged loyal support to William J. Bryan.

The Territorial convention of the Republican party was held in Enid, May 10, and transacted its business promptly and without unusual incident. Resolutions were adopted declaring belief in all the principles of the Republican party, approving the national administration, favoring expansion, commending Delegate Flynn and the free-homes measure, and demanding statehood, the creation of a county out of Osage and Kaw Reservations, and the allotment and opening of all the Indian reservations to settlement.

The Democratic Territorial Convention met in El Reno, June 5. This convention resulted in a split, two sets of resolutions and of delegates to the national convention being the outcome. Both factions declared in favor of the nomination of William J. Bryan for the presidency. The platform of the "regular" wing denounced the administration of President McKinley, imperialism, plutocracy, and trusts. It demanded statehood for Oklahoma, and favored the organization of the Osage and Kaw Reservations into one county, to be called Osage County.

At the joint congressional convention of the Democratic and People's parties, which met in Oklahoma City, July 31, Robert A. Neff was nominated for Delegate to Congress. In the platform, anti-imperialism and hostility to trusts were among the most prominent features, the currency legislation of the last Congress was denounced, and free coinage of silver at 16 to 1 demanded.

The Republican Congressional Convention assembled at Guthrie, Aug. 8, and renominated D. T. Flynn for Delegate to Congress. The resolutions approved the Philadelphia platform of 1900; declared that every pledge of the Republican party in 1896 had been fulfilled; congratulated Oklahoma on her prosperity, and especially on the extension of the free-homes policy to the Indian lands; extolled the services of Delegate Flynn; pledged the party to strive for the earliest possible statehood of Oklahoma; declared in favor of standing for all the results of the Spanish War, and of expansion "externally and internally"; commended the appropriation by Congress of \$5,000,000 for the St. Louis exposition; denounced the disfranchisement of citizens in North Carolina in violation of the fourteenth and fifteenth amendments to the United States Constitution; and favored the extension of county rights and government to

the Indian reservations of the Territory and the early opening of all the reservations to settlement.

The antifusion wing of the People's party held their congressional convention in Oklahoma City, Sept. 1, and nominated J. S. Allan for Delegate to Congress. The resolutions affirmed unshaken belief in the cardinal tenets of the People's party as set forth in the Cincinnati platform; approved the nominations of Barker and Donnelly for President and Vice-President; denounced the Republican and Democratic parties as tools of plutocracy, and opposed all entangling alliances with them; favored single statehood for Oklahoma and Indian Territory, and the speedy allotment and opening to settlement of all the Indian reservations in Oklahoma; and opposed any legislation looking toward the sale of the school lands of the Territory.

At the election, Nov. 6, the vote for Delegate to Congress gave Flynn, Republican, 38,253; Neff, Fusionist, 33,539; Tucker, Social-Democrat, 780; Allan, Middle-of-the-Road Populist, 780. Flynn's plurality, 4,714.

To the Council of the Territorial Legislature were elected 7 Democrats, 5 Republicans, and 1 Populist; to the House, 16 Republicans and 10 Fusionists.

OLD CATHOLIC CHURCH. The twentieth Old Catholic Synod of Austria met in Vienna, Sept. 8 and 9. Sixty members and a representative of the Government were present. The number of members was returned as 16,885, against 6,113 in 1882. The accessions since 1898 had been 3,620, of which 1,183 had accrued in the first seven months of 1900. Four new congregations had been organized and four churches built during the year. The moderator spoke of growing friendship between Old Catholics and Protestants. It was represented that the Old Catholic movement was gaining ground in Bohemia, where 17 priests and 2,500 people were ready to join it.

ONTARIO, a province of the Dominion of Canada; area, 222,000 square miles; population in 1891, 2,214,321.

Politics and Government.—The early part of 1900 saw the new Ross Government installed in office. It was composed of the following members: Premier and Treasurer, G. W. Ross; Attorney-General, J. M. Gibson; Commissioner of Crown Lands, E. J. Davies; Commissioner of Public Works, F. R. Latchford; Secretary and Registrar, J. R. Stratton; Minister of Education, R. Harcourt; Minister of Agriculture, J. Dryden; ministers without portfolio, W. Harty and J. T. Garrow. As a reorganization of the previous Hardy Government, which in turn had been a reorganization of the Liberal Government of Sir Oliver Mowat, in power since 1872, it had certain elements of weakness which made the session of 1900 very active. The majority was small, and the Conservative Opposition, under the provincial leadership of Mr. J. P. Whitney, had come very near to success in the elections of 1898. By-elections had gone only slightly with the Government, and Messrs. Latchford, Dryden, Stratton, and Preston were elected, against Brower, McDiarmid, and Robson. The House of Assembly was opened on Feb. 13 by Lieut.-Gov. Sir Oliver Mowat, with a speech from the throne, in which he said:

"The lumbering industry of the province is in a flourishing condition. The legislation of 1898 requiring all pine logs cut under license to be manufactured in Canada took effect first in the season of 1898-'99. The practical operation of this legislation has proved wise and timely. While the quantity of pine timber cut last season showed little if any diminution, compared with previous

years, the sawmilling business of the province, on the other hand, has received a powerful stimulus. Many existing mills have been enlarged, idle ones have resumed work, and new mills have been built and equipped to meet the demand for sawed lumber. In pursuance of the policy of encouraging the development of industries for which the circumstances of the province are specially adapted, an order in Council has been passed that pulp wood cut on Crown lands should be manufactured in Canada. A measure confirming this order in Council will be laid before you.

"The desirability of preserving the forests in districts not adapted for agriculture, so as to constitute a permanent source of timber supply, has been fully recognized in connection with the administration of the Crown domain; accordingly, districts capable of being reforested are being set apart as forest reserves.

"The healthy condition of the mining industry is shown by the growth of revenue from sales and rents of mining lands, the increase of investments in mining enterprises, and a larger output from mines and mining works.

"The agricultural condition of the province is much more favorable than it has been for many years. The great improvement in the quality of all dairy produce has increased the popularity of our butter and cheese in the British market, and has consequently stimulated this branch of industry. Our fruit interests are also increasing in importance and value, as the exports of our orchards for the last year make manifest. The attendance at the Agricultural College has reached the highest limit yet attained, and it will be necessary to provide additional accommodation if the attendance continues to increase as it has during the last few years.

"It is to be noted with regret that the increasing numbers of insane tax the accommodation of our asylums beyond their capacity. Notwithstanding the liberal provision already made and the large expenditure incurred in carrying on these services, it becomes imperative that increased accommodation be provided.

"Measures will be submitted for the improvement of public highways, the drainage of swamp lands, the encouragement of cold-storage stations in rural districts, and the colonization of those portions of northern Ontario best adapted for agricultural purposes. Your attention will be invited to bills respecting the revenue, elections, education, and mining, and also to a measure for a comprehensive exploration of the district between the main line of the Canadian Pacific Railway and Hudson's Bay, in order that more accurate information may be obtained as to its timber and its suitability for farming.

"Your attention is invited to the present relative jurisdiction of the courts of the province and of their respective judges, and to the suggestions of experience for further promoting the efficient, prompt, and inexpensive administration of justice throughout the province."

On Feb. 19 Mr. Whitney led in an onslaught upon the Government, which may be summarized in the following words, giving the Conservative platform as well as denouncing the Government policy:

"The Government has confessed itself unable to deal with financial questions when it appointed a commission to investigate the financial condition of the province. The Government acted indecently in appointing John Hoskin, a Government official, to the commission.

"If the Government is saving money, why not apply it to the removal of the direct taxation

under which the artisan, laborer, and farmer are living?

"Cold storage and transportation are subjects which should properly be considered by the Dominion Government.

"The Government regulations on nickel will discourage the development of that metal, and will make the monopoly of the Canadian Copper Company still more powerful.

"No grant should be given to any railroad company without a provision that in the future, when the company arrived at a paying basis, the grant should be returned.

"The question of the Government ownership of public franchises should be carefully considered.

"A member of the Government should not be at the head of corporations which will gain or lose by Government action, and members of Parliament should be debarred.

"A consultative committee should be appointed to assist the Minister of Education, such committee to be chosen from high school, public school, and separate school teachers.

"The University of Toronto should practically be divorced from the province.

"The pulp-wood policy will strangle the pulp-wood industry.

"The West Elgin Commission is a farce. The people demanded a judicial committee to inquire into the irregularities in all the constituencies.

"Let the Premier dissolve the house and go to the country for a decision."

Mr. Ross, in his reply, defended the appointment of a finance commission, on the ground that the worst should be known, and declared that Mr. Hoskin's appointment was admirable despite the fact of his being a Liberal in politics; declared that under existing conditions of export many of the small products of the farmer went to waste or yielded hardly any profit, while butter and cheese were often spoiled for lack of cold-storage facilities, which he proposed to provide upon a pattern that had proved successful in Australia and New Zealand. Regarding nickel, he declared the policy of the Government to be one of encouraging the local manufacture of the raw material. Large areas of valuable nickel still remained despite the grants to the Canada Copper Company. "Ontario's products for Ontario's sons will be our policy," said the Premier, as he promised a rebate or bounty on every pound of ore refined in the province. In regard to railways, he purposed to introduce legislation by which settlers on the colonization lands of Ontario, as well as their stock and effects, should be carried free. He denied to a great extent the party corruption alleged by his opponents, deprecated the charges made against the Education Department, and opposed the plans proposed by Mr. Whitney. The two speeches which followed may be summarized as including the whole political discussion on both sides during the succeeding session. The first was delivered by Mr. G. F. Marter, a leader of the Opposition, and included the following proposals and remarks:

"The Opposition is willing to co-operate with the Government in an effort to stamp out bribery. The election law should have the following provisions: (a) Deputy returning officers and poll clerks must live in divisions for which they act; (b) deputy returning officers should announce on nomination day the deputies; (c) deputy returning officers and clerks should be in attendance half an hour before the polls, to count and examine the blank ballots; (d) deputies should be forced to issue warrants when called by agents, and constables should detain such men until warrants

are served; (e) any person having a ballot paper outside of the polling booth may be arrested and punished; (f) any minister or candidate who intimates that certain public finances shall follow the election may be unseated and disfranchised; (g) the numbered ballot to be abolished; (h) make it a criminal offense for a license inspector to attempt to intimidate license holders; (i) all offenses to be punished by imprisonment. The Government should not have gone outside of the house to secure a Minister of Public Works. To appoint a committee to investigate the timber wealth of the province. The investigation into the finances of the province should have been postponed until after the award of the arbitration between Ontario and Quebec."

The reply to these suggestions was made by Mr. Andrew Pattullo, a Liberal member of the house. He declared that the Legislature should not deal with nickel and similar questions as party questions. They are business questions, and should be treated as such. The Government should go still further in the control of railways. There was no more danger in a member of the Cabinet being at the head of a financial corporation than if a private member were in the same position. He had an ardent desire to punish the bribers on his side. He would not follow the Premier one minute if he did not believe that he was sincere on this question. He would support any sensible amendment to the election laws, but hoped that the house would not rush off under popular clamor and pass laws which could not be enforced. The true remedy for corruption was to give people something worthy to think about, give them great leaders and great measures. Then people would have more marked convictions; then there would be no corruption. He would like to get farmers from England into old Ontario.

On March 10 Mr. Whitney proposed various changes in the election law, but they were ultimately voted down by the Government. A few days later he presented to the house a sworn statement by a reputable man named Pritchard which appeared to prove distinctly a condition of gross corruption in the constituency of West Elgin, engineered and controlled by a paid gang of Government party men. The dominant public opinion of the province at the time apparently was that the Government were not anxious to punish the perpetrators of undoubted corruption in the constituencies of West Elgin, Brockville, and South Ontario during the provincial elections. The Commission of Inquiry, which was appointed early in the session and was composed of County Court Judges Barron, McTavish, and Morgan, eventually reported in such a way as to clear the Government of any direct share in the actual corruption. Every confidence was felt in the commissioners, but it was known that they had been limited in their powers, and that the chief men connected with the actual bribery and ballot-box stuffing had fled the country.

On March 13 the Government presented to the house details of their agreement with the Spanish River Paper Company, and a grant of 250 square miles of unoccupied and unlicensed public land for cutting pulp wood and erecting mills. It was found that a right of granting cutting privileges in other tracts of country was included, and that in return the company was to expend \$500,000 in erecting a pulp and paper mill within the next three years. In defending the arrangement in the house, on April 10, Mr. Ross said the object of this contract was to promote a very valuable industry in New Ontario. He pointed out that for years the Government had pursued a system of building

colonization roads and otherwise encouraging settlement in New Ontario, and he was pleased to say their efforts had met with good success, as he believed at the next census it would be found that there is now a population of 120,000 in that district. In New Ontario there was a great deal of land, but it was of no value unless developed. Much of this land was of little value from an agricultural point of view, but there were some fertile belts, much timber, and considerable mineral wealth. In 1885 the Government had entered into its first pulp-mill contract with Mr. F. H. Clergue, of Sault Ste. Marie, and the success of Mr. Clergue's undertaking had been most remarkable. In fact, it showed him to be a very remarkable man, and quite justified the Government in the course they had taken. Mr. Clergue had agreed to expend \$400,000 and employ 260 persons. He had already expended over \$2,000,000, and now employs more than 700 persons. Mr. Clergue was now engaged in the building of a railway at an estimated cost of \$6,000,000, but was not asking the public for a cent. It was true that Mr. Clergue asked a certain land grant; but with the completion of the enterprises he had now under construction Mr. Clergue will have expended from \$14,000,000 to \$16,000,000.

Mr. Ross went on to say that the second industry which the Government had endeavored to bring into the country was a pulp mill on Lake Nipigon, but this had fallen through. The next industry of this character was the one on Sturgeon river. This company had a capital of \$1,000,000 and employed 250 persons. The thriving town of Sturgeon Falls had sprung up as a result of the operations of this company, and the district had been greatly benefited. All these contracts, with the exception of the one on Lake Nipigon, had been crowned with success, and all had received the unqualified approval of members on both sides of the house. The fourth contract, he declared, was more favorable to the Government than any of the others. In this the company was limited to the spruce, poplar, and jack pine, while all the hard woods reverted to the Crown. This was an agreement entered into with Canadian capitalists, while the first one had been with Americans.

The agreement was opposed by Mr. Whitney on the ground of favoritism, failure to open these lands and privileges to public competition, and an evident lack of knowledge as to the extent of the resources of the province in connection with its stores of timber and pulp wood. But it was approved by a party vote. Some further discussion took place regarding the duties placed upon Canadian lumber by the United States, and the Ontario Lumbermen's Association declared again in favor of "free logs for free lumber." At their annual meeting, on Feb. 22, the following resolution was passed:

"That the Lumbermen's Association of Ontario express their satisfaction with the provincial Government in putting the manufacturing clause in all licenses; and further, that this association reiterate the opinion, expressed on former occasions, that in the absence of reciprocity in lumber between Canada and the United States the Government of Canada be requested to impose an import duty on lumber corresponding with that imposed by the Government of the United States, and thereby remove any injustice which at present exists to Canadian lumbermen."

On May 1 the Legislature adjourned after a congratulatory speech from the Lieutenant Governor and his assent to the following measures, among many others:

The provincial drainage aid act.

For granting aid to the sufferers by the late disastrous fire in the cities of Ottawa and Hull.

Respecting provincial aid toward the establishment of municipal cold-storage buildings.

Respecting the manufacture of spruce and other pulp wood cut on the Crown domain.

To amend the act to establish forest reserves.

To amend the mines act.

To amend the act respecting cheese and butter manufacturing associations and companies.

To provide for the incorporation of co-operative cold-storage associations.

To amend the loan corporations act.

Respecting aid by land grant to the Algoma Central Railway Company.

Respecting certain subsidies granted to the Manitoulin and North Shore Railway.

Authorizing municipal and other grants for the benefit of Canadians on military service in South Africa.

To permit municipalities to use voting machines.

To amend the act respecting brewers' and distillers' and other licenses.

To amend the Ontario shops regulation act.

To amend the act for the prevention of accidents by fire in hotels and other like buildings.

To amend the act to preserve the forests from destruction by fire.

To amend the San José scale act.

For the prevention and destruction of certain noxious insects.

To amend and consolidate the Ontario game protection act.

Respecting municipal sanitaria for consumptives.

Finances.—On March 6 the report of the Finance Commission, composed of Messrs. John Hoskin, Q. C., Byron E. Walker, and Angus Kirkland, was submitted to the house, and it set at rest in great measure the long-standing dispute between Government and Opposition as to what did and what did not constitute provincial assets. According to this statement, the assets of the province on Oct. 31, 1899, included bank balances and special deposits of \$597,526.38; funds held by the Dominion in behalf of Ontario, upon which interest at 5 per cent. has been settled and is paid, \$4,758,135.13; common school fund of preconfederation period held by the Dominion in trust for Ontario, and paying 5 per cent., \$1,479,656.10; miscellaneous Dominion securities, \$305,100.59—a total of \$7,140,418.22. The liabilities included \$2,000,000 as a balance of account current with the Dominion and a capitalization of certain Indian tribal bounties due by the old province of Upper Canada (now Ontario) and assumed by the Dominion; the present value of certain annuity payments and railway certificates, \$3,117,714.90; miscellaneous sums, \$14,830.03—total, \$5,132,544.93. This left a surplus of assets over liabilities of \$1,957,873.29, instead of the \$4,000,000 or \$5,000,000 which the Government had claimed for two decades.

On March 8 the Hon. G. W. Ross delivered his first budget speech as Treasurer in the reorganized Government. As illustrating the conflict of opinion and statement regarding the finances of the province, it may be said that two days after the commissioners reported the Treasurer varied his figures from theirs and gave the assets of the province as \$7,368,917 and the liabilities as \$5,117,986. The receipts for 1899 were announced as \$4,096,494, the expenditures as \$3,710,420, leaving a surplus of \$386,074. The estimated revenue for 1900 was \$5,019,682, and the estimated expenditure \$3,723,292. The chief items of revenue in 1899 were: Crown lands, \$87,286; rent, \$111,

169; woods and forests, \$1,092,848; liquor licenses, \$373,803; succession duties, \$150,111; public institutions, \$97,432. The increase over the revenue of 1898 was \$449,141. The final division upon the Treasurer's statement and financial proposals showed a Government majority of 7 votes.

Licenses and Temperance.—In 1874 there were 4,793 tavern licenses in Ontario; in 1899 there were 2,641. Concurrently with the curtailment in the number of licenses there had been apparently a lessening of drunkenness. The average yearly commitments for drunkenness in the five years from 1876 to 1880 inclusive was 3,812; from 1881 to 1885 it was 4,016; from 1886 to 1890, 4,311; while from 1891 to 1895 it was only 2,703. During the Scott act period, from 1881 to 1890, the average yearly commitments for drunkenness exceeded 4,000, while under the restrictive license system prevailing since then the commitments have only averaged 2,703 per annum.

Crime.—An interesting report was the one prepared by the Inspector of Prisons and Reformatories. In 1899, 8,203 persons were committed to the jails. This was the lowest number in twenty-six years. In 1898, 8,256 persons were committed. Of those committed last year, 6,846 were men, 1,057 were women, 267 were boys under sixteen years of age, and 33 were girls. There was a decrease in crimes against public morals from 354 in 1898 to 247 in 1899. Committals for crimes against the person numbered 638 in 1899, being a decrease of 11 compared with the year previous. For drunkenness, 1,892 people were committed, while the number in 1898 was 1,707. Seven people were committed for bigamy, and 1,428 were sent to jail for vagrancy. Of the total of 8,203 committals, there were brought to trial and discharged 1,584. By order of the judge, 806 were let go. The remainder, 5,034, were sentenced or kept for some reason or other. To jail 4,060 of those guilty were sentenced, while 613 went to prison and 133 to Kingston and the reformatories. By the report it is seen that 3,297 of those sentenced were temperate, and 6,855 of the total number of 8,203 could read and write. The total cost of the jails last year was \$136,617, while in 1898 the cost was \$137,310. The average cost per patient was 20½ cents a day. During 1898 there were committed 389 lunatics and idiots.

Education.—The financial condition of the University of Toronto, which is in some measure subsidized and controlled by the province, came in for considerable discussion during the year. The Hon. Edward Blake, M. P. (now living in England), resigned the chancellorship which he had held for many years, as did the Hon. William Mulock the vice-chancellorship. Sir W. R. Meredith, Chief Justice of Ontario, and Mr. Justice Charles Moss were elected unanimously to be their successors. The income of the university last year was \$127,445.59, of which the larger items were: Interest on purchase moneys, \$566.83; interest on loans, \$20,507; interest on debentures, \$11,896.87; rents, \$17,209.57; city of Toronto grant as rent for Queen's Park, \$6,000; legislative grant, \$7,000; wild land sales, \$8,191.81; interest on advances to Upper Canada College, \$7,658.92; university and college fees, \$44,441.35; gymnasium fees, \$909. There was a deficit for the current year of \$20,000.

The latest official figures available regarding general education in Ontario are those of 1898, in the annual report of 1899. They show 5,932 public schools, 478,394 pupils registered, an average attendance of 273,451, 6,466 female teachers, 2,743 male teachers, receipts of \$5,219,444, and expenditures amounting to \$4,392,714. The Roman Catholic separate schools numbered 345, the pupils

41,667, the average attendance 25,671, the receipts \$389,185, the expenses \$349,481. The high schools, standing between the public schools and the universities, had 571 teachers, 23,301 pupils, with receipts amounting to \$779,451 and expenses to \$729,009, and showed 130 schools, with an average attendance of 14,066.

Agriculture.—The assets of the farmers of Ontario in 1899 were given in the Annual Report of the Bureau of Statistics as follow: Land, \$563,271,777; buildings, \$213,440,281; live stock, \$115,806,455; implements, \$54,995,857. The total was \$847,513,360. The following is the value of crops produced on the farms of Ontario in 1899: Hay and clover, \$27,010,003; oats, \$24,901,670; fall wheat, \$9,631,365; peas, \$8,675,673; potatoes, \$6,538,144; barley, \$5,858,202; turnips, \$5,807,839; spring wheat, \$4,682,476; husking corn, \$4,291,300; silage or fodder corn, \$3,395,510; mangolds, \$1,671,871; rye, \$1,142,423; buckwheat, \$2,501; beans, \$703,090; carrots, \$459,254; total, \$104,771,321. Besides this, there were fruits, wool, honey, and orchard produce. The value of these articles is estimated at \$4,000,000. The following is the value, as stated by the same authority, of the live stock, sold or slaughtered, from Ontario farms in 1899: Cattle, \$17,303,426; hogs, \$14,157,394; horses, \$3,204,006; sheep, \$2,629,201; poultry, \$1,162,991; total, \$38,457,018.

Mines.—The gold produced in Ontario in nine months of 1899 was 20,210 ounces; silver, 98,000 ounces; nickel, 4,608,000 pounds; copper, 4,642,000 pounds; pig iron, 48,216 tons. The rush to incorporate mining companies in 1897, which resulted in 140, with a capital of \$101,531,000, was not maintained in 1898. The total number in the latter year was 49, with a capital of \$30,762,998. There were 19,529 acres of land sold for mining in 1898, 48,911 acres leased, \$9,429 paid in rentals. The revenue derived by the Government for sales and rentals in the year ending June 30, 1899, was \$109,140. The total mineral production of 1898 included \$2,328,110 for oil, gas, and carbide, and \$282,886 for salt and gypsum. The number of employees was 7,495, and the wages paid were \$2,464,239. The iron industry continued to prosper in 1898 and 1899. Large blast furnaces were established in Hamilton and Deseronto.

ORANGE FREE STATE, a republic in South Africa, founded by Boers who emigrated from Cape Colony in 1836 and 1837, recognized as independent in 1854, occupied in March, 1900, by a British army commanded by Lord Roberts, and formally annexed under the name of the Orange River Colony, although the burghers remained under arms to maintain their independence. The President of the republic is M. T. Steyn, elected Feb. 19, 1896. The legislative assembly, called the Volksraad, has 60 members, elected for four years by the burghers, who are white male citizens born in the country or residents for three years, owners of property or leaseholders, or having an income of £200.

Area and Population.—The area is estimated at 48,326 square miles. The white population was 77,716 in 1890, composed of 40,571 males and 37,145 females, 51,910 of the total number having been born in the Free State, and 21,116 in Cape Colony. The number of natives was 129,787. Bloemfontein, the capital, had 2,077 white inhabitants and 1,302 natives. There has been considerable immigration from Germany and England. The number of illiterates at the time of the census was 23,722, including 19,508 children under seven. There were 199 Government schools in 1898, with 293 teachers and 8,157 pupils, and 42 State-aided private schools with 753 pupils.

Finances.—Jan. 1, 1897, the State took over the railroad built by the Government of Cape Colony through the republic, connecting with the Cape system at Norval's Point, on the Orange river, passing through Bloemfontein, and connecting with the Transvaal railroads at Viljoens drift over the Vaal river. The net receipts from the railroad in 1898 were £408,578, increasing the Government revenue to £799,758, other items being £32,782 from posts and telegraphs, £27,935 from transfer taxes, £15,428 from quit rents, £121,411 from import duties, £63,981 from stamps, and £19,686 from the native poll tax. The expenditure in 1898 was £956,752, of which £508,478 was railroad expenditure, while salaries amounted to £56,527, police expenses to £14,182, cost of education to £54,531, postal and telegraph expenses to £30,142, expenditure on public works to £37,270, and artillery to £10,729. The Government had a debt of £30,000 prior to the acquisition of the railroads. This operation involved the payment to the Cape Government of £1,800,000. The length of the railroads is 392 miles, built at the cost of £2,771,945. The telegraphs have a length of 1,480 miles, with 1,700 miles of wire, besides 420 miles of railroad telegraphs, with 1,119 miles of wire.

Defense.—Every able-bodied man is liable to be called out for the defense of the republic from the age of sixteen to that of sixty. In 1899 there were about 22,000. Four batteries of artillery were stationed at Bloemfontein, numbering 150 officers and men, with a reserve of 550 passed artillerists.

Commerce and Production.—There are 10,500 farms in the Free State, containing 30,000,000 acres, of which only 250,600 acres are cultivated. The live stock consisted of 248,878 horses, 276,073 oxen, 619,026 other cattle, 6,619,992 sheep, 858,155 goats, and 1,461 ostriches. Diamonds were dug in 1898 of the value of £1,508,661. Grain, wool, and horses are imported from Basutoland, and the exports consist of pastoral and agricultural produce shipped to Cape Colony, Natal, and the South African Republic, and general merchandise for Basutoland, and diamonds exported by way of the Cape. The value of the commerce with the conterminous countries in 1898 was as follows:

COUNTRIES.	Imports.	Exports.
Cape Colony	£849,540	£820,467
Natal	224,029	147,177
Basutoland	68,708	45,492
South African Republic	48,655	910,289
Total	£1,190,932	£1,923,425

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 94,560 square miles. The population was 13,294 in 1850; 52,465 in 1860; 90,923 in 1870; 174,768 in 1880; 313,767 in 1890; and 413,536 in 1900. Capital, Salem.

Government.—The following were the State officers in 1900: Governor, Theodore T. Geer; Secretary of State and Auditor, Frank I. Dunbar; Treasurer, Charles S. Moore; Attorney-General, R. D. N. Blackburn; Superintendent of Instruction, J. H. Ackerman; Adjutant General, C. U. Gantenbein; Food Commissioner, J. W. Bailey; Game and Forest Warden, L. P. W. Quimby; Land Agent, L. B. Geer; Fish and Game Protector, F. C. Reed; Printer, W. H. Leeds; Printing Expert, Ross E. Moores; President of the State Board of Agriculture, W. H. Wehrung, and of that of Horticulture, H. B. Miller, who resigned and was succeeded in April by E. L. Smith; Biologist, F. L. Washburn; Librarian, James B. Putnam; Chief

Justice of the Supreme Court, Charles E. Wolverton; Associate Justices, Robert S. Bean and Frank A. Moore; Clerk, J. J. Murphy—all Republicans.

The term of the State officers is four years, and they are elected in June of even-numbered years, alternating with the presidential elections. In June of all the even-numbered years members of Congress, the Legislature, and a justice of the Supreme Court are elected. The Legislature meets in January of the odd-numbered years. It consists of 30 Senators and 60 Representatives.

Population.—The population of the State has increased in the past decade 99,760, or 31.7 per cent. Following is the population by counties: Baker, 15,597; Benton, 6,706; Clackamas, 19,658; Clatsop, 12,765; Columbia, 6,237; Coos, 10,324; Crook, 3,986; Curry, 1,868; Douglas, 14,565; Gilliam, 3,201; Grant, 5,946; Harney, 2,596; Jackson, 13,698; Josephine, 7,517; Klamath, 3,970; Lake, 2,847; Lane, 19,604; Lincoln, 3,515; Linn, 18,603; Malheur, 4,203; Marion, 27,713; Morrow, 4,151; Multnomah, 103,167; Polk, 9,923; Sherman, 3,447; Tillamook, 4,471; Umatilla, 18,049; Union, 16,070; Wallowa, 5,538; Wasco, 13,177; Washington, 14,467; Wheeler, 2,443; Yamhill, 13,420.

Portland has 90,426 inhabitants; in 1890 it had 46,385. Salem has 4,258.

Finances.—The semiannual report of the Treasurer shows that the balance on hand July 1 was \$1,080,944.01; the receipts to Jan. 1, 1901, were \$785,279.08; total, \$1,866,223.09. The disbursements were \$921,599.69, leaving at the close of the year a balance of \$944,623.40. The receipts of the general fund were \$245,145.43, and the disbursements \$323,233.67. The receipts of the common-school fund were, principal \$330,043.72, and interest \$113,524.92; the disbursements from the principal \$270,107.58, and from the interest \$235,780.49. The receipts in the first half of the year, including a balance from 1899 of \$741,316.43, were \$1,850,041.94, and the disbursements were \$769,097.93.

Valuations.—The gross valuation of taxable property is given as \$125,738,761.13; the exemptions amount to \$7,933,887; making the amount to be taxed \$117,804,874.13. The amount of the next State tax, which is to be based on this valuation, is \$671,487.78. The tax rate will be 5.7 mills.

The number of acres of tillable land is 2,692,458, their value \$24,258,795; acres of nontillable land 12,370,543, value \$20,784,600; miles of railroad bed 1,672.96, value \$5,217,229; horses and mules 164,986, value \$2,575,379; cattle 386,431, value \$4,993,885; sheep 1,458,098, value \$2,205,874.

Education.—The report of the superintendent shows the following figures: School population—between four and twenty years—133,181; enrollment, 89,405; average daily attendance, 64,411; number of teachers, 3,742; of schoolhouses, 2,070. There are 243 graded schools, employing 1,026 teachers and giving instruction to 40,791 pupils. Statistics of 1899 show that there were 31 universities, colleges, and academies, with 270 teachers and 4,783 pupils. In 1900 there were 42 of these institutions. The apportionment of the school fund interest in August was the largest ever made—\$207,457.34. The whole cost of public education in 1900 is given as \$1,598,825.53.

The Agricultural College had 405 students in December, and graduated 37 in June. In July the Board of Regents prohibited the participation of the students in intercollegiate contests. The preamble to the resolution gives the reasons:

"Whereas, Intercollegiate athletic games have passed the bounds of reason and developed into a form of mania that is demoralizing to the moral,

mental, and physical well-being of college students; and

"Whereas, The records of all educational institutions show that the standing of those students engaged in athletics compares in nearly all cases unfavorably with the standing of other students; and

"Whereas, The same overtaxing of strength and endurance in dumb brutes that is visited upon athletes is made a misdemeanor, punishable by statute law; and

"Whereas, The doings of the few athletes absorbs the attention and demoralizes the studies of the whole body of students for long periods, to the utter prostitution of the purposes for which colleges of agriculture and mechanics were beneficently endowed; therefore," etc.

The available funds of the college were \$93,317.68, and the expenditures \$89,964.01.

The State University, at Eugene, has 8 colleges and schools, namely, the graduate school; college of literature, science, and the arts; college of engineering—civil, electrical, mining, mechanical, or municipal; school of political science and history; school of mines; school of pharmacy; school of law; school of medicine. There are 29 departments and 150 courses of instruction, aside from the schools of law and medicine. Many of the departments offer both preparatory and collegiate courses. In June the degree of B. A. was conferred on 11 students, 15 were made bachelors of law, and 11 doctors of medicine.

Graduates at other institutions were: Monmouth Normal School, 24; Ashland Normal School, 12; McMinnville College, 3; Pacific College, at Newberg, 5; Philomath College, 5; Pacific University, at Forest Grove, 10; Albany College, 9; Willamette University, at Salem, 6 in the collegiate department. Columbia College, at Milton, was dedicated Sept. 18.

The text-books for the public schools are hereafter to be selected by a commission of 5 members, who hold office four years after appointment by the Governor. In February, 1901, and every six years thereafter, a circular is to be sent to publishers of schoolbooks, asking for proposals for furnishing books for the ensuing six years. From these the commissioners are to select and report to the State Board of Education, which is then to make the contracts. Each commissioner is to receive \$100 for attendance at the meeting and 10 cents for each mile traveled. The Governor appointed five men to serve, but one declined, leaving H. W. Scott, P. L. Campbell, W. M. Ladd, and W. M. Colvig as appointees.

The question of the right of a teacher in a public school to read from the Bible and repeat the Lord's Prayer in school, and to compel pupils to rise and listen to the prayer, came before the Attorney-General for an opinion. He decided that the majority of the trustees of any school have the right to prescribe such exercises and compel respectful attention on the part of pupils.

Charities and Corrections.—The Insane Asylum had 1,160 patients Dec. 1, 1898; during the biennial term 679 were admitted, 32 escapes were returned, 217 were discharged recovered, 100 were discharged much improved, 65 discharged improved, 40 discharged not improved, 2 not insane, 224 died, and 50 escaped, leaving, Nov. 30, 1900, 1,173, of whom 821 were men. The monthly average was 1,166. The financial statement for the term shows that the total expenditures for articles consumed was \$148,461.99; total pay roll, \$131,710.74; pay of Board of Trustees and clerks, \$1,333.33; grand total, \$281,506.06.

The biennial report of the State School for the

Blind shows that during the term ending in December 34 pupils were enrolled, the present attendance being 20. The expenditures of the term were \$17,578.60.

In the two years 82 pupils were enrolled in the State School for Deaf-mutes, and 60 were in attendance at the close of the year. The total expenditures were \$13,574.59 for 1899 and \$13,183.03 for 1900, or a total of \$26,757.62 for the biennial term. Taking 60 pupils as the average attendance, it will be seen that the per capita cost per year is \$222.98, or \$18.58 per capita per month, allowing twelve months per year. The pupils go home during the summer, so that the expense is really about \$22.30 per capita per month during the time the school is in session.

The State Soldiers' Home is full, and many applicants have to be turned away. Some of these gain admission to the National Home. The last appropriation was \$20,000 for the two years, and this was exhausted and a deficit of \$10,751.71 was incurred.

The number of boys at the State Reform School at the beginning of the biennial term was 99. At the end of the term 131 were enrolled, the average having been 113. The total expenditures for the term were \$48,734.15, of which \$35,574.99 was for general maintenance, \$10,429.73 for improvements, and \$2,729.43 for lighting. Since the institution was established 443 boys have been received.

The convicts at the Penitentiary at the close of the year numbered 278. Of the appropriations, aggregating \$99,946.20, there has been expended \$97,541.17, leaving balances aggregating \$2,405.03. Early in 1899 work was begun in the brickyard, and 1,100,000 brick have since been burned. Convicts also work in the stove foundry and on public roads.

Militia.—The organized strength of the militia amounted in July to 1,433 men, while the number available for military duty was 59,896. The War Department has allowed 84 per cent. of the State's claim for equipment and supplies furnished the Oregon volunteers when they entered the United States service; some of the equipment was worn, and therefore the whole claim was not allowed. The naval battalion is to have from the Government a small cruiser and the loan of a 12-oar cutter and 2 rapid-fire 3-inch naval guns.

Game.—The Game Warden says: "The history of the past two years demonstrates the wisdom of the law passed in 1898 protecting elk for ten years. Even the violations by Indians have been greatly held in check, owing to the vigilance of the fire wardens. Elk are most plentiful in the Cascade mountains, where one deputy reported seeing a band of 80 to 100, while another counted 27 elk in one band.

"Deer are yet plentiful in Oregon, and, although many violations of the law are reported, it is extremely difficult to secure convictions. Indians are the most dangerous enemy to the deer, as they have very little regard for State laws.

"Nearly all upland birds are more plentiful this year than ever. This was especially true of the ringneck, or China torquatus pheasant, which has obtained such a firm foothold in the State that its extermination is not to be thought of.

"English partridges will shortly be introduced into the State, a shipment of 100 pairs being en route to Oregon from England."

Pheasant farming is now a recognized industry in the State.

Products.—Following are the statistics of the products of the farm, orchard, and range in the State in 1900: Wheat, 16,000,000 bushels, \$8,640,000; corn, 282,547 bushels, \$141,273; oats,

3,583,062 bushels, \$1,361,563; hay, 1,506,316 tons, \$10,544,212; potatoes, 1,545,669 bushels, \$494,614; wool, 20,000,000 pounds, \$2,500,000; hops, 16,000,000 pounds, \$2,140,000; barley and rye, 1,100,000 centals, \$825,000; mohair, 187,500 pounds, \$51,362; vegetables, hemp, etc., \$500,000; fruit, \$2,000,000; sales of stock, \$10,500,000; butter, cheese, and milk, \$5,113,013; poultry and eggs, \$4,750,000; total, \$49,561,037.

The products of the mines were: Gold, \$3,770,000; borax, \$100,000; silver, \$15,000; coal, 90,000 tons, \$720,000; total, \$4,155,000.

The fisheries produced: Columbia river salmon pack, 358,722 cases, \$2,282,295.10; salmon pack, Oregon coast streams and bays, 73,800 cases, \$323,321.60; fish consumed locally and shipped abroad, 5,580,138 pounds, \$374,967; shellfish, \$47,388; total, \$3,027,971.70.

The manufactured goods, including lumber, were estimated at a value of \$60,000,000.

Portland.—The foreign commerce of Portland for the year ending Nov. 30 was: Imports, \$1,476,801; exports, \$3,524,882. The business of Portland's jobbing trade amounts to \$110,000,000, and the bank clearings to \$106,926,536. A mining stock exchange was incorporated in February.

Lands.—The annual report of the General Land Office shows that in the six land districts of the State entries were made covering an area of 840,975 acres, for which \$326,791 was turned in. The heaviest sales were of timber and stone lands. There are now 34,377,907 acres of unappropriated and unreserved land in the State, of which 23,489,861 acres are surveyed. The reserves are the Cascade Range Forest Reserve, 4,492,800 acres; Bull Run Reserve, 142,080 acres; Ashland Forest Reserve, 18,560 acres. The amount of timber in the State, as estimated by Henry Gannett, is 234,653,000,000 feet.

The biennial report of the State Land Department shows that the receipts for the two years ending Dec. 31, 1900, were 66 per cent. higher than those for the two years preceding. The receipts for 1899-1900 aggregated \$562,081, as against \$351,586.68 for the years 1897-'98. According to the State Land Agent, on April 1, 1899, the State owned 179 farms, which were secured upon foreclosure of mortgages given to secure loans from the trust funds of the State. These farms aggregated 49,514 acres, and represented loans to the amount of \$293,395. Since that date the State has secured by similar foreclosures 35 farms, with a total of 8,682 acres, through loans amounting to \$57,000.

From this land 88 entire tracts have been sold for \$181,958.71. The cost of those sold was \$160,599.17.

The receipts of the office of State Land Agent were as follow: From tracts sold, \$181,958.71; from partial sales, \$2,781.75; from rents, \$16,043.41; total, \$200,783.87.

The Scalp Bounty.—Multnomah County refused to levy a tax for the scalp bounty fund in accordance with the law of the last Legislature. Other valley counties, though having few sheep to protect, observed the law. The 10 counties that have comparatively few sheep and goats have a total taxable property of \$76,073,388. The 10 stock counties have \$20,231,344. The whole tax, if levied, would be \$30,290; Multnomah's share would be \$7,915. Nearly 50,000 scalps have been brought to the county courts within two years; it is estimated that 47,000 were those of coyotes: the others, wild cats, cougars, mountain lions, and timber wolves.

Political.—At the State election, June 4, a justice of the Supreme Court, a dairy and food

commissioner, the two members of Congress, and the Legislature were elected. Five proposed constitutional amendments were submitted to vote. For the State offices nominations were made by the Republicans, the Prohibitionists, and the Democratic and People's party combined.

The Republican convention, April 12, named the following ticket: For Justice of the Supreme Court, C. E. Wolverton, renominated; Food and Dairy Commissioner, J. W. Bailey, renominated.

The platform commends the Republican Congress for making the gold standard a part of the statutory law of the land, and says: "So long as either of our great political parties advocates the free coinage of silver, the maintenance of the gold standard is the most important political issue, affecting as it does the value of the farmer's crops and the laborer's wages."

On the question of expansion the platform says: "We indorse the policy of the administration in securing the Philippine Islands and suppressing the insurrection there, and demand that they shall be retained as American territory. We regard trade with the Orient as one of the great sources of our national wealth in the future, and an open door in China as an important aid to the growth of our trade in the Orient."

The resolutions favor the immediate construction of the Nicaragua Canal under governmental control.

On the subject of trusts the platform says: "We recognize the vital necessity of control of the organization and curtailment of the powers of trusts and combinations of capital by the State, and pledge its support in the approaching Legislature of laws defining and carrying out these objects."

At Portland, the same day (April 12), the Democratic and the People's party held their conventions. There was a contest in the Populist convention over the question of fusion with the Democrats, and the fusion element was finally victorious. The following are the nominations: For Justice of the Supreme Court, William Ramsey, Democrat; Food and Dairy Commissioner, William M. Schulmerich, People's party.

The fusion platform reaffirms in its entirety the Chicago platform of 1896 and the money plank adopted by the fusionists of Oregon in 1898, which declared for the free and unlimited coinage of silver at the ratio of 16 to 1. The platform favors an income tax, the election of United States Senators by direct vote of the people, and the initiative and referendum, and opposes "government by injunction."

On the Philippines it says: "The Filipinos can not be citizens without endangering our civilization; they can not be subjects without endangering our form of government. We favor an immediate declaration of the nation's purpose to give to the Philippines, first, a stable form of government; second, independence; and third, protection from outside interference. We favor the expansion of trade by every legitimate and peaceful means, but we are opposed to purchasing trade at the cannon's mouth with human blood."

The Middle-of-the-Road Populist convention, with 9 delegates present, nominated a ticket and elected 17 delegates to the National Convention at Cincinnati.

The Prohibitionists, in convention, April 10, in Portland, named the following: For Supreme Judge, C. J. Bright; State Food and Dairy Commissioner, P. L. Kenady.

A platform in accordance with the principles of the party was adopted, and supplementary resolutions were passed denouncing the administration for permitting the army canteen and protecting

the liquor business in Cuba, Porto Rico, and the Philippines.

The Republican candidates were successful at the polls. For Justice of the Supreme Court, Wolverton, Republican, received 44,025 votes; Greene, Democrat, 33,388; Bright, Prohibitionist, 4,537. On joint ballot the Republicans will have a majority of 20—10 in each House.

All the five proposed constitutional amendments were rejected. They were as follow: 1. To allow any county, city, town, school district, or other municipal corporation to become indebted to an amount not exceeding 5 per cent. of the value of its taxable property, the present limit being \$5,000, except in cases of insurrection or invasion. 2. Increasing the number of judges of the Supreme Court from 3 to 5. 3. Permitting negroes to reside in the State. 4. To confer the right of eminent domain upon irrigation and drainage companies, and to declare the "right to collect taxes or compensation for the use of water" a "franchise." 5. Giving women the right of suffrage. The proposition to repeal the constitutional provision in regard to negroes residing in the State, which is a dead letter, since it is nullified by the United States Constitution, was rejected by a very small majority—19,074 for and 19,999 against. The woman suffrage amendment was rejected by a vote of 26,265 for to 28,402 against. The vote on the others showed majorities against them of about 10,000.

The vote on presidential electors in November stood: McKinley, 46,526; Bryan, 33,385; Woolley, 2,536; Debs, 1,466; Barker, 203.

OSTEOPATHY (from *ὀστέον*, *bone*, and *πάθος*, *suffering*), a method of treating diseases of the human body without the use of drugs, by means of manipulations applied to various nerve centers, chiefly those along the spine, with a view to inducing free circulation of the blood and lymph, and an equal distribution of the nerve forces. Special attention is given to the readjustment of any bones, muscles, or ligaments not in the normal position.

The system was formulated in 1874 by Dr. A. T. Still, a physician of Baldwin, Kan., who, having become dissatisfied with the results attained through the practice of medicine, determined, if possible, to discover a more natural and efficacious method of healing. He reasoned that a body so perfectly constructed mechanically should be able to protect itself against the inroads of disease without the artificial aid of external substances, except those employed as food. His next conclusion was that "a natural flow of blood is health, and disease is the effect of local or general disturbance of blood." With this as a working hypothesis, he made a series of experiments, the results of which convinced him that the various organs of the body were controlled by nerve centers located chiefly along the spine, and that these could be operated upon and controlled by pressure or stimulation of the fingers. He holds also that if the bones, muscles, arteries, veins, lymphatics, glands, organs, and tissues of the body are in their correct anatomical positions, disease can not exist. Displacement may arise from a variety of causes, such as a fall, a blow, a strain, or atmospheric changes. Pressure upon the blood vessels or nerves in the immediate vicinity of the part so affected will follow, and a consequent shutting off of the nerve or blood supply to some organ, which will then become diseased. With a readjustment of the displaced part will come "perfect freedom of motion of all the fluids, forces, and substances pertaining to life, thus re-establishing a condition known as health."

Osteopathy does not confine itself to a treatment of maladies of the bones, nor does it find in diseased bones the origin of all pathological conditions. The name was considered by Dr. Still as applicable to his system because of the relative importance which his theory gives to anatomy, and because of his belief that "the bones could be used as levers to relieve pressure on nerves, arteries, and veins."

Treatments, which do not as a rule occupy more than twenty minutes, are given through thin garments, and not, as in massage, upon the bare flesh. No machines or appliances are used.

The first institution for the training of practitioners in osteopathy was opened about seven years ago in Kirksville, Mo., under the name of the American School of Osteopathy. Since then a considerable number have been established in different parts of the United States, the most prominent being the Northern Institute of Osteopathy at Minneapolis, the Boston Institute of Osteopathy, the Philadelphia Institute of Osteopathy, the Still College of Osteopathy at Des Moines, Iowa, the Pacific School of Osteopathy at Los Angeles, Cal., and the Milwaukee College and Infirmary of Osteopathy. Several of these colleges publish periodicals in the interest of osteopathy.

The prescribed course of study covers a period of four terms of five months each. The requirements for admission are an elementary knowledge of English, arithmetic, physics, and the history and geography of the United States. The curriculum includes, in addition to the theory and clinical demonstration of osteopathy, descriptive and demonstrative anatomy, histology, chemistry, physiology, hygiene, pathology, physiological psychology, dietetics, obstetrics, and minor surgery. Upon satisfactory completion of the course, students receive the degree of doctor or diplomate in osteopathy.

It is estimated that there are about one thousand persons practicing osteopathy in the United States. Among the complaints which they say they have treated successfully are heart and lung diseases, nervous prostration, sciatica, lumbago, all forms of neuralgia and paralysis, asthma, catarrh, incipient consumption, spinal curvature, eye and ear affections, and all dislocations, liver, kidney, stomach, and intestinal affections.

The following States have by legislative action placed osteopathy upon the same legal basis as the recognized schools of medicine: Vermont, Missouri, Iowa, Illinois, Michigan, Tennessee, North and South Dakota, Ohio, Texas, Colorado, Kansas, and California.

P

PENNSYLVANIA, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,521,951 in 1870; 4,282,891 in 1880; 5,258,014 in 1890; and 6,302,115 in 1900. Capital, Harrisburg.

Government.—The following were the State officers in 1900: Governor, William A. Stone; Lieutenant Governor, J. P. S. Gobin; Secretary of the Commonwealth, William W. Griest; Secretary of Internal Affairs, James W. Latta; Treasurer, James E. Barnett; Auditor General, E. B. Hardenbergh; Attorney-General, John P. Elkin; Adjutant General, Thomas J. Stewart; Superintendent of Instruction, N. C. Schaeffer; Insurance Commissioner, Israel W. Durham; Commissioner of Banking, Thomas J. Powers; Secretary of Agriculture, John Hamilton; Commissioner of Forestry, J. H. Rothrock; Dairy and Food Commissioner, Levi S. Wells; Zoölogist, H. T. Fernald; Factory Inspector, James Campbell; Veterinarian, Leonard Pierson; Librarian, George E. Reed; Superintendent of Public Buildings and Grounds, T. L. Eyre; Chief Justice of the Supreme Court, J. B. McCollum; Associate Justices, J. Hay Brown, James T. Mitchell, William P. Potter, John Dean, D. Newlin Fell, and S. L. Mestrezat; Prothonotaries, Charles S. Greene, William Pearson, and George Pearson; Justices of the Superior Court, C. E. Rice, J. A. Beaver, J. J. Wickham, George B. Orlady, P. P. Smith, William Porter, and Dimmer Beeber. N. C. Schaeffer and Judges McCollum and Smith are Democrats; the others are Republicans.

Population.—The population of the State, according to the census of 1900, is 6,302,115, against 5,258,014 in 1890. This is an increase of 1,044,101, or 19.8 per cent. The population by counties is as follows: Adams, 34,496; Allegheny, 775,058; Armstrong, 52,551; Beaver, 56,432; Bedford, 39,468;

Berks, 159,615; Blair, 85,099; Bradford, 59,403; Bucks, 71,190; Butler, 56,962; Cambria, 104,837; Cameron, 7,048; Carbon, 44,510; Center, 42,894; Chester, 95,695; Clarion, 34,283; Clearfield, 80,614; Clinton, 29,197; Columbia, 39,896; Crawford, 63,643; Cumberland, 50,344; Dauphin, 114,443; Delaware, 94,762; Elk, 32,903; Erie, 98,473; Fayette, 110,412; Forest, 11,039; Franklin, 54,902; Fulton, 9,924; Greene, 28,281; Huntingdon, 34,650; Indiana, 42,556; Jefferson, 59,113; Juniata, 16,054; Lackawanna, 193,831; Lancaster, 159,241; Lawrence, 57,042; Lebanon, 53,827; Lehigh, 93,893; Luzerne, 257,121; Lycoming, 75,663; McKean, 51,343; Mercer, 57,387; Mifflin, 23,160; Monroe, 21,161; Montgomery, 138,995; Montour, 15,526; Northampton, 99,687; Northumberland, 90,911; Perry, 26,263; Philadelphia, 1,293,697; Pike, 8,766; Potter, 30,621; Schuylkill, 172,927; Snyder, 17,304; Somerset, 49,461; Sullivan, 12,134; Susquehanna, 40,043; Tioga, 49,086; Union, 17,592; Venango, 49,648; Warren, 38,946; Washington, 92,181; Wayne, 30,171; Westmoreland, 160,175; Wyoming, 17,152; York, 116,413.

Finances.—On Jan. 1, 1899, there was a deficit in the treasury of about \$3,000,000. Owing to unexpected increase in revenues, this deficit was entirely liquidated in 1900. "There is sufficient money to pay all unpaid appropriations as they mature, and there will be on Jan. 1, 1901, a balance, over and above the amount necessary to liquidate all demands, of about \$1,500,000."

The report of the Treasurer shows the total receipts of the treasury department from all sources for the fiscal year ending Nov. 30, 1900, to be \$17,494,211.78. Deducting the interest received on securities in the sinking fund and securities maturing and paid into the sinking fund, leaves the balance of receipts available for general disbursement of \$17,192,817.91. Taking out the \$344,371.50 transferred to the sinking fund, there was a balance of \$16,848,443.41 available for general disbursements. From this amount is deducted three fourths of the tax on personal property re-

turned to the counties, tax on premiums on foreign fire insurance, personal fees, annuities for right of way, oleomargarine licenses returned to the agricultural department, oleomargarine, impure food, and other fines returned to the agricultural department, and fines for violation of the game laws returned to the Game Commission, amounting in the aggregate to \$2,558,613.26, which leaves a balance available for the payment of appropriations of \$14,289,820.15. This latter is the amount of revenue for the last fiscal year available to meet appropriations made by the Legislature. From it, together with the revenue for the year 1899, the appropriations made by the last Legislature have been paid and the deficit liquidated.

The sinking fund amounts to \$6,021,402.12, while the public debt on Dec. 1, 1900, amounted to \$6,815,299.02, leaving a balance of funded State debt of only \$783,896.90.

Valuation and Taxation.—The latest report of the Secretary of Internal Affairs shows the value of all real estate at \$3,027,649,299, being an increase over the preceding year's total of \$46,547,210. The total of taxable real estate is given as \$2,728,163,336. The total amount of taxes collected for all purposes is reported as \$55,808,585.32, being an increase for the year of \$5,492,714.51.

Banks.—The Commissioner of Banking, in his latest report, gives us for 1899 the following totals: Banks, 91; trust companies, 95; savings institutions, 16. Capital is shown as follows: Banks, \$8,152,920; savings institutions, \$110,200; trust companies, \$36,853,497.50. Surplus: Banks, \$5,955,419.78; savings institutions, \$7,515,626.59; trust companies, \$13,124,811.88. Deposits: Banks, \$67,151,966.66; savings institutions, \$99,261,413.90; trust companies, \$158,467,325.28.

Insurance.—The Insurance Commissioner, in his latest report, gives the following figures concerning life and accident insurance as for 1899: In 1899 the companies of the State issued 7,616 policies, insuring \$20,095,459 upon the lives of residents of this State, an increase over the business of the preceding year of 1,557 policies and an increase of \$2,735,416 insurance. Companies of other States issued 602,617 policies in the State, insuring \$183,226,321, making an aggregate by all companies of 610,233 policies, insuring \$203,321,780, being an increase of 144,457 policies and an increase of \$44,784,279. The total losses paid by all life companies in the State during the year 1899 was \$12,477,959.61, of which home companies paid \$1,852,452, and companies of other States \$10,625,507.61.

The insurance in force at the end of 1899 upon the lives of residents of Pennsylvania, including industrial policies of small amounts, aggregated 2,034,017 policies, insuring \$807,973,742, of which 52,858 policies, insuring \$138,234,318, were in companies of this State, and 1,981,159 policies, insuring \$729,739,424, in companies of other States and foreign countries. The Pennsylvania life companies had in force at the close of the year 1899 a total of 162,393 policies, insuring \$410,325,423, against 114,483 policies, insuring \$304,656,265, at the close of the year 1898. The same companies had a total net premium income of \$15,443,451.10 in 1899, against \$12,086,481.75 in 1898, and a total income from all sources of \$19,498,219.41 in 1899, against \$16,286,411.95 in 1898.

Education.—In the year ending the first Monday of June, 1900, the whole number of teachers employed was 29,390, the total enrollment of pupils was 1,151,880, the total receipts for schools and buildings were \$24,916,668.69, and the total expenditures were \$21,476,994.90. The number of

school districts in the State is 2,510; number of schools, 28,330; number of graded schools, 15,720; number of superintendents, 140; number of male teachers, 9,394; number of female teachers, 19,996; whole number of teachers, 29,390; average salaries of male teachers per month, \$44.25; average salaries of female teachers per month, \$37.74; average length of school term in months, 8.33; average number of pupils in daily attendance, 854,640; teachers' wages, \$11,205,482.61; cost of school text-books, \$806,148.30; cost of school supplies other than text-books, \$422,696.87; fuel, contingencies, fees of collectors, and other expenses, \$4,978,540.36. The State appropriation for the school year ending June 5, 1899, was \$5,500,000, and the estimated value of school property was \$54,797,506.32.

Railroads.—The steam railroads of the State, on June 30, showed a capitalization, including stock, bonds, and current liabilities, of \$2,965,077,932, with assets of \$3,067,955,557. The companies included in the reports have 25,885 miles of road; own 11,747 locomotives, 10,709 passenger cars, and 512,048 freight cars. On these roads there are employed 307,737 persons, to whom there was paid during the year \$176,762,468 as compensation for services. The trains of these corporations during the year traversed 257,777,050 miles and carried 205,939,884 passengers and 578,995,338 tons of freight. The passenger earnings amounted to \$109,757,426, and freight earnings to \$331,013,955. With other earnings this makes a grand total of \$498,012,493. The operations of these steam railroads involve an expenditure, exclusive of dividends, of \$428,837,899, and result in the payment to the stockholders of dividends amounting to \$37,823,306.

Factories.—The latest report of the Factory Inspector for 1899 shows the total number of employees to be 773,443—35,440 between thirteen and sixteen years of age, or less than 5 per cent. of the total number of employees being children. Many establishments will not employ children between thirteen and sixteen years of age, on account of the law requiring age certificates and record books to be kept on file.

Forty-four selected industries in 1899 employed 154,422 persons, or 16.437 more than were employed in 1898; \$78,179,333 were paid out in wages to 154,422 persons in 1899, as against \$62,676,615 in 1898; being an increase of \$15,502,718, or 24.73 per cent.

The average yearly earnings of the 154,422 persons employed in the 44 industries, skilled and unskilled, men, women, and children, was \$506.27, against \$454.52 for the 137,985 persons employed by the same establishments in 1898, an increase of \$51.75 a year, or 11.38 per cent. The aggregate value of products for 1899 reached \$377,934,411, an increase over 1898 of \$111,889,881, or 42.06 per cent.

Iron and Tin.—The value of Pennsylvania's production of pig iron for 1899, as officially reported, was \$98,203,803. The average earnings for the year for skilled and unskilled labor was \$495.18, the average days of employment being 327, or nine days fewer than in 1898.

The aggregated tinned production for 1899 of the black plate and dipping works was 331,082,734 pounds, and Pennsylvania's share of the entire production of the United States of tin and terne plate in 1898 was about 37 per cent.

In addition to 21 black plate works, the State had seven dipping works in operation in 1899, making, with the 18 black plate works that turned out a tinned production, 25 plants making a finished product of tin and terne plate. The ag-

gregate value of the 331,082,734 pounds of tin and terne plate produced by these 25 establishments for the year was \$12,165,879. Black plate for tinning was made in 11 counties in 1899.

Lawlessness.—On Sept. 21 a serious affray occurred in Shenandoah, Schuylkill County, growing out of an extensive strike in the anthracite coal fields. Two thousand men were reported to be marching the streets of Shenandoah, firing revolvers and resisting all attempts of the civil authorities to disperse them. Two persons were killed and seventeen wounded. The sheriff of Schuylkill County reported these facts to the Governor, and his inability to suppress the disturbance, and asked that a sufficient number of the National Guard be sent there for the protection of the public peace. This call of the sheriff was seconded by a resolution of the councils of Shenandoah and the personal requests of a large number of citizens. It reached the Governor on Sept. 21. About 7 A. M., Sept. 22, 600 men with their officers were patrolling the streets of Shenandoah, and by noon of that day nearly 2,000 troops were there. No further serious disturbance occurred. By Oct. 31 the strike was adjusted, and the last of the National Guard withdrawn.

Coal Strike.—In August the coal operators refused to accept the scale of wages adopted by the Hazleton Miners' Convention, saying that the scale was too sweeping, and if put into force would reduce producers of coal to bankruptcy in a short time. The miners, on the other hand, declared that the scale was just, and that the coal companies would only be giving the men their rights by signing it. In September 112,000 mine workers in the anthracite region were reported on strike. On Oct. 30 the strike was practically ended, an advance of 10 per cent. in wages until April 1 and an adjustment of the sliding scale being the basis of agreement.

Political.—The Republican vote for President was 712,665; the Democratic, 424,232; Social-Democratic, 4,831; Prohibition, 27,908; Republican plurality, 288,433. The vote for Auditor General was: E. B. Hardenbergh, Republican, 676,846; P. G. Meek, Democrat, 410,746; J. E. Gill, Prohibition, 25,300; W. J. Eberle, Social-Democrat, 2,636; D. O. Coughlin, People's party, 917; N. Seward, Social-Democrat, 3,797. The Legislature in 1901 will consist of 36 Republicans in the Senate and 156 in the House; 13 Democrats in the Senate and 49 in the House.

PERSIA, an empire in central Asia. Muzaffereddin, Shah in Shah, or Emperor, born March 25, 1853, succeeded his father, Nasreddin, on May 1, 1896. The Valiahd, or heir apparent, is Mohammed Ali Mirza, born in 1872.

Area and Population.—The area is about 628,000 square miles, mostly desert. The population is estimated at 9,000,000. The city of Teheran has about 210,000 inhabitants; Tabriz, 180,000; Ispahan, 80,000; Meshed, 60,000. Of the population, about 8,000,000 are Shiite Mohammedans, 800,000 Sunnites, 45,000 Armenians, 35,000 Jews, 25,000 Nestorian Christians, 9,000 Guebres or Parsees, and there are probably 800 Europeans residing in the cities. Of the Mohammedans, fully 2,000,000 are nomadic Turks, Kurds, Lurs, and Arabs. The Persians of the higher classes are well educated in Persian and Arabic literature.

Finances.—The revenue of the Shah's Government for 1900 was estimated at £1,500,000 sterling. Towns, villages, and districts are required to pay each a certain assessed amount in cash or kind, these payments constituting about 82 per cent. of the revenue, customs duties 15 per cent.,

and posts and telegraphs, fisheries, mines, and other concessions furnish the remaining 3 per cent. A loan of £500,000 was obtained in England in 1892 for the purpose of canceling the unpopular tobacco monopoly. The Russian Government in January, 1900, authorized a subsidized banking company, organized specially for the object, to make a gold loan of 22,500,000 rubles to the Persian Government, secured by the customs receipts with the exception of those of the province of Fars and those of the ports on the Persian Gulf, the loan to pay 5 per cent. interest and to be redeemed at the end of seventy-five years. The Government undertakes to pay all existing foreign obligations out of the proceeds of this loan and to contract no others until it is redeemed without permission from the bank. The English loan was paid off by the Russian bank before the end of February. The bank may issue bonds equal in amount to the debt of the Persian Government to the bank, and such bonds will be guaranteed by the Russian Imperial Government.

Commerce and Production.—The foreign commerce is estimated at £10,000,000 for 1900. The estimate is based upon the amount paid by farmers of the revenue to the Government, which was £300,000 in 1899 and the preceding year, and £250,000 for two years previous, having been increased from £170,000 in 1894. The export and import trade for 1899 was estimated at £9,000,000, the average rate of duty being taken at 4 per cent. and the profit of the farmers at 20 per cent. Europeans pay a uniform duty of 5 per cent. ad valorem, Persians' rates varying from 1½ to 8 per cent. The Government on March 21, 1899, abolished the farm system in Azerbaijan, Kermanshah, and some other provinces. The chief imports are cotton cloth, woolens, glass, sugar, kerosene, tea, coffee, and drugs. The exports are dates, opium, cotton, wool, silks, carpets, pearls, turquoises, and rice. The imports of the ports of Bushire, Lingah, Bunder Abbas, and Mohammerah for 1898 were £2,091,224, and the exports £1,273,770, the bulk of the commerce being with Great Britain, India, Arabia, and China. The imports at Tabriz, amounting to £682,330 in 1899, consist of cotton goods from Manchester, French and German silks, Russian sugar, and Indian tea; the exports, amounting to £219,930, are raisins, almonds, carpets, shawls, and silk. Through Resht, on the Caspian, considerable commerce is carried on with Russia by way of Baku, the imports in 1896 having been £842,655 in value, including sugar, cloth, silkworm eggs, silver, and petroleum; the exports, amounting to £365,342, consisting of rice, fruits, and cotton. From Bombay through Bunder Abbas the value of £89,547 was imported into Khorasan, and exports to India amounted to £19,681; imports through Meshed from Russian territory were £92,547 in value, and exports £80,320; imports from Afghanistan were £6,206, and exports to Afghanistan £15,073 in value. A railroad convention concluded with Russia provided that no concessions should be granted or railroads built before 1901. The Russian Government has negotiated with the Government of Persia for the construction of a railroad from Julfa to Tabriz, Hamadan, and Bunder Abbas, with a branch line to Teheran. The telegraph lines of the Persian Government have a length of 3,400 miles, besides which 675 miles between Bushire and Teheran, with 2,025 miles of wire, are operated by an English staff, and 415 miles, with 1,245 miles of wire, belong to the Indo-European Telegraph Company.

PERU, a republic in South America. The legislative power is vested in a Congress consisting of a Senate of 48 members and a House of Repre-

sentatives containing 108, the term in both being six years, one third being elected every two years. The presidential term is four years. Eduardo L. de Romafia was elected for the term beginning Sept. 8, 1899. Dr. Isaac Alzamora and Federico Bresani are the two Vice-Presidents. The Cabinet in the beginning of 1900 was composed as follows: President and Minister of Foreign Affairs, Manuel Maria Galvez; Minister of Justice, Worship, and Public Instruction, Elidoro Romero; Minister of the Interior and Police, Col. Domingo J. Parra; Minister of War and Marine, Camillo N. Carillo; Minister of Finance and Commerce, Mariano A. Balaunde; Minister of Public Works, Dr. Carlo Basadre y Forero.

Area and Population.—The area of Peru is 695,720 square miles, according to a recent official estimate. The population in 1896 was estimated at 4,609,999. About a fifth of the native-born population is of pure Spanish descent. Lima, the capital, has over 100,000 inhabitants. Education is free and compulsory in the towns. There were

were estimated at 365,000 soles for Congress, 2,778,000 soles for the Ministry of the Interior, 698,000 soles for the Ministry of Foreign Affairs, 1,244,000 soles for the Ministry of Justice, 3,480,000 soles for the Ministry of Finance, 3,358,000 soles for the Ministry of War and Marine, 340,000 soles for the Ministry of Public Works, and 337,000 soles were for various purposes, the total being 12,600,000 soles.

The foreign debt of Peru consists of two railroad loans contracted in England, the smaller one at 6 per cent. in 1870, the greater one at 5 per cent. in 1872, both secured on the guano deposits afterward seized by Chili. Their amount was £31,579,080, and the payment of interest having ceased in 1876, there were arrears of £22,998,651 due in 1889, when the Grace-Donoughmore contract was concluded, whereby the Government ceded to the bondholders all its railroads, mines, guano deposits, and lands for the term of sixty-six years, and was released from liability for the loans. Chili agreed to pay to the bondholders a part of

LLAMAS IN DESAGUADERO.

1,152 schools, with 69,892 pupils, in 1897, not including 304 private schools, with 15,700 pupils.

Finances.—The main part of the revenue comes from customs. Land pays a tax of 3 per cent. of the rent. The duties on alcohol, tobacco, and opium and the stamps are farmed out to a company, which engaged in 1896 to pay 126,734 soles monthly and half the profits, and in 1898 renewed the contract for five years, agreeing to pay three fourths of the profits. The Congress in the same year made salt a monopoly, and set aside the revenue derived therefrom for the redemption of the provinces of Tacna and Arica held by Chili. The total revenue in 1898 was 10,785,850 soles, and the expenditure 11,488,240 soles. To cover the deficit in this year and the two preceding years the Government was authorized to raise a loan of 1,500,000 soles, and to arrange with the Tax Collection Company for its repayment. The revenue for 1899 was estimated at 6,000,000 soles from customs, 3,000,000 soles from taxes, 600,000 soles from the salt monopoly, 287,000 soles from posts and telegraphs, and 1,965,000 soles from various sources; total, 11,852,000 soles. The expenditures

the proceeds of the guano deposits, but detained the sums so set apart on account of a dispute, which is still the subject of arbitration. For the consolidation of the internal debt 36,174,150 soles of bonds bearing 1 per cent. interest were issued in 1889. After 9,416,000 soles of these had been redeemed the civil war stopped amortization, which has not been resumed, although the interest is now paid regularly. The amount outstanding and other obligations made the total internal debt 47,591,760 soles in 1898. The gold standard of currency was proclaimed on Jan. 10, 1898, and the gold libra was adopted as the national coin, having the same weight and fineness as the English sovereign, and exchanging for 10 silver soles. The silver coinage from 1874 till the adoption of the gold standard amounted to 40,510,681 soles. In 1898 there were 40,103 of the new gold coins struck and only 120,000 soles in silver. The military force in time of peace consists of 1,940 infantry, 625 cavalry, and 510 artillery. French officers have been employed to reorganize the army. The navy consists of a cruiser displacing 1,700 tons and several small vessels.

THE HIGHEST RAILWAY POINT IN THE WORLD—15,665 FEET, OROYA RAILWAY, PERU.

Commerce and Production.—Coffee is grown in the central parts of the country, where the Peruvian Company has introduced colonists on its lands, comprising 2,750,000 acres. There were 1,239 tons of coffee exported in 1897. The cultivation of cotton is increasing. Sugar plantations in the coast districts produce over a ton of raw sugar to the acre. Cacao, rice, tobacco, wine, and spirits are minor products. Rubber, cinchona, and various medicinal plants and dyes are obtained from the forests. The mines produce gold, silver, copper, lead, zinc, quicksilver, salt, sulphur, coal, and petroleum. Gold is washed by the natives, but most of the mines have been abandoned. The total silver exports in 1897 were 9,730,000 soles. The exports of gold, copper, and lead were 700,000 soles in value. The value of all imports in 1898 was 19,297,272 soles, against 16,128,649 soles in 1897; total value of exports, 30,274,775 soles, against 23,168,452 soles. The imports of cotton goods in 1898 were 4,067,668 soles; provisions, 2,261,543 soles; woollens, 1,376,643 soles; furniture, 1,273,244 soles. The mineral exports in 1898 were valued at 9,481,213 soles; sugar, 9,220,681 soles; vicuña and alpaca wool, 3,082,635 soles; cotton, 2,469,955 soles; coffee, 541,715 soles; borax, 574,226 soles; hides, 831,186 soles; rice, 633,465 soles; cocaine, 651,975 soles. The value in soles of the trade with each of the principal foreign countries in 1898 is given in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	8,682,771	17,158,936
Germany	8,401,887	2,708,772
Chili	1,868,530	4,588,479
United States.....	2,078,376	2,878,536
France.....	1,554,004	820,952
Ecuador.....	101,978	892,006
Bolivia.....	82,513	628,926
Italy.....	661,694	27,819

Navigation.—There were 486 vessels, of 581,044 tons, entered and 485, of 602,945 tons, cleared at the port of Callao during 1898, counting none under 50 tons; at Mollendo, 348, of 462,508 tons, were entered, and at Salaverry, 287, of 408,493 tons, were entered and cleared. The merchant marine in 1898 consisted of 4 steamers, of 3,413 tons, and 63 sailing vessels, of 26,752 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in Peru in 1897 was 911 miles, of which 844 miles were operated by the Peruvian Corporation; the total cost was £36,000,000. A concession has been given for a railroad, 80 miles long, from Oroya to Cerro de Pasco.

The state telegraph lines in 1897 had a length of 1,400 miles, and 533 miles belonged to the Peruvian Corporation. There are 2,300 miles of telephone wires.

The post office in 1897 forwarded 12,760,771 letters and other pieces of mail matter; receipts were 259,478 soles, and expenses 261,360 soles.

Politics.—The growth of enterprise and introduction of capital into Peru since the cessation of civil disturbances have produced a notable increase in production and wealth. The Government in accordance with legal decisions granted amnesty to political offenders in 1900. The territorial dispute with Chili relative to the retrocession of Tacna and Arica, if a plebiscite in those provinces so decides, as was stipulated in the treaty of Ancon, caused a tension of public feeling in Peru in 1900. Owing to differences of opinion on various questions changes in the Cabinet took place in the latter half of the year. On Aug. 7 the whole Cabinet resigned and a new one was constituted on Aug. 9, as follows: Minister of Foreign Affairs, Riva Agüero; Minister of Justice, Pedro Carlos

Olaechea; Minister of the Interior, Enrique Zegarra; Minister of War and Marine, Capt. Melton Carvajal; Minister of Finance, Rafael Quiroz; Minister of Public Works, José Granda. On Aug. 31 this ministry resigned because the Congress in secret session censured the Minister of Foreign Affairs, and a new one was appointed of the following composition: Minister of the Interior, Enrique Zegarra; Minister of Justice, Pedro Carlos Olaechea; Minister of Foreign Affairs, Felipe de Osma; Minister of War and Marine, Col. Diez Canseco; Minister of Finance, José Vicente Larrañura; Minister of Public Works, Miguel Rojas. On Oct. 3 a new ministry was formed by a coalition of the Democrats and the Civilistas, the two principal political parties, led by Pierola and Candamo respectively. This last Cabinet was composed as follows: President and Minister of Finance, Domingo Almenara; Minister of Foreign Affairs, Felipe de Osma; Minister of the Interior and Commerce, Col. Ernest Zapata; Minister of Justice, Rafael Villanueva; Minister of War and Marine, Col. Pedro Portillo; Minister of Public Works, Agustin Tovar.

PHILIPPINE ISLANDS, an archipelago in the Pacific Ocean, formerly a dependency of Spain, ceded to the United States by the treaty of peace signed at Paris on Dec. 10, 1898. The first military governor, Major-Gen. Merritt, was succeeded, Aug. 30, 1898, by Major-Gen. Elwell S. Otis, who under instructions from the Secretary of War exercised supreme military and civil authority until he returned to the United States and was succeeded on May 5, 1900, by Major-Gen. Arthur MacArthur. Major-Gen. Loyd Wheaton commanded in 1900 in the military district of northern Luzon, Major-Gen. John C. Bates in southern Luzon, Brig-Gen. Robert P. Hughes in the Visayas, and Brig-Gen. William A. Kobbe in Mindanao and Jolo, with the Sulu Islands.

Area and Population.—The Philippine archipelago extends over sixteen degrees of latitude, from Borneo to Formosa, and contains as many as 2,000 islands, a few of them large and productive enough to have figured in the world's commerce for centuries. The total area, including the Sulu Islands, is estimated at 115,300 square miles. The population is between 8,000,000 and 10,000,000, mostly of the Malay race, crossed with Negritos, of whom some tribes remain, and in some parts with Chinese, Spanish, and perhaps Japanese. The European population, exclusive of the American army, is about 30,000, and there are 100,000 or more Chinese, who carry on much of the trade and industry. In many of the islands the natives were practically independent under the Spanish control. Manila, the capital, had 154,062 inhabitants in 1887; Lipa, 43,408; Banang, 35,598; Batangas, 35,587; Laoang, 30,642. The sanitary and other improvements wrought in Manila under American administration and the growth of commerce and enterprise already begun promise to make it one of the greatest emporiums of the East.

Finances.—The cedula tax, which was the chief source of the Spanish revenue, was practically abolished by the Americans. Nevertheless, the revenue in 1900 was a third greater than it ever was under Spain. The customs collections were 50 per cent. greater. The military government saved a surplus of \$6,000,000 to be devoted to public works, the most needed of which was the improvement of Manila harbor according to plans made by Spanish engineers about 1880, with minor modifications made by Capt. John Biddle and his assistants. Two long breakwaters were partly constructed by the Spaniards. To finish

these and dredge out the inclosed new harbor so as to admit the largest vessels it is estimated will cost \$2,500,000. At present vessels drawing more than 16 feet must lie 2 miles off shore, and discharge or load by means of lighters, a process that becomes impossible in rough weather. For this reason freight rates from Manila to Hong-Kong are about the same as they are from San Francisco to Hong-Kong.

Commerce and Production.—The Philippine Islands have long furnished the whole world with the cheap and strong rope fiber known as Manila hemp, and Asia with tobacco, mostly in the form of cheroots manufactured in Manila. Sugar is another important product, and coffee and indigo are cultivated also. Copra is exported from many of the islands. The total value of imports in 1896 was estimated at \$10,664,000, and of exports at \$20,237,000. Rice, flour, textiles, wines, petroleum, and coal are the principal imports. Coal is found on the island of Cebu, and mines have been opened since the American occupation, yielding 5,000 tons a month. Petroleum has been discovered in several of the islands. Copper, silver, marble, kaolin, sulphur, and other minerals are found in the islands. A lead mine is in operation in Cebu, and iron is smelted in Luzon. In the fall of 1900 as many as 1,200 prospectors and practical miners scattered through the different islands, nine tenths of them Americans. They pushed their way into the more inaccessible regions, furnishing their own protection. At Man-cayan and Suyoc in the province of Lepanto immense deposits of gray copper and copper sulphide were discovered, running through which are veins of gold-bearing quartz. Lignite exists in Luzon, Batan, Mindoro, Masbate, Negros, and Mindanao, as well as in Cebu. Although they have been worked near the surface only, the quality is superior to Japanese and Australian coals, not clinkering nor soiling boiler tubes. Some of the deposits are very extensive. In southern Mindoro large fields are found within 6 miles of a deep and safe harbor, and some of the Cebu deposits have such an advantage. Gold has long been washed or extracted from rock containing considerable visible free gold by the Igorrotos in the districts of Benguet, Lepanto, and Bontoc, among the mountains of northern Luzon. American miners were received among them soon after the breaking up of the Tagalog rule, and began to dig for gold with gratifying results. Prospectors have located extensive deposits of low-grade free-milling ore which they say will yield large and certain returns as soon as concessions can be obtained and machinery put into place. Modern gold-mining machinery has never been used in the Philippines. Extensive deposits of rich iron ore can be utilized as soon as the coal mines are developed. The Philippine Commissioners have recommended the early establishment of a tribunal by which the legal status of hundreds of claims can be established and the enactment of a mining code for the archipelago at the earliest possible moment. The development of mineral deposits would give increased opportunities for the employment of labor which would benefit the Philippine people. New forestry regulations made in 1900 reduced the high price of lumber by giving impetus to the timber trade. The forests on the islands are of vast extent, and contain a great variety of timber—12 species of superior qualities, 66 of high commercial value. 307 others that have been examined, and probably 50 not yet classified. Included in the list are very hard woods, capable of taking a beautiful polish; woods that resist climatic influences and are

proof against attacks of white ants; and woods suited for piles, on account of their imperviousness to attacks of the teredo. There is a great variety of trees yielding valuable gums. Rubber and gutta-percha are abundant in Mindanao and Tawi Tawi. At least 17 dyewoods are found, and other trees produce valuable essential oils and drugs. The forestry bureau, organized on April 14, 1900, made an estimate that there are 40,000,000 acres of forests in the archipelago. The forestry regulations of the former Spanish Government have been adopted with modifications. The revenue collected from forest produce on the Government lands was at the rate of \$96,000 a year, and was capable of being largely increased. Notwithstanding the state of war the export of hemp in 1898 was 1,585,212 piculs; of sugar, 2,843,116 piculs; of tobacco, 4,061,540 pounds; and the number of cigars was 129,840,000. The export of copra in 1897 was 898,416 piculs; of sapan wood, 65,485 piculs, but only 19,606 piculs in 1898. The United States takes about half the hemp, and Great Britain and Canada the rest; China and Japan half the sugar, and the United States and Great Britain most of the rest. The imports of the United States from the Philippines, which were \$4,982,857 in value in 1896, declined to \$3,829,003 in 1898, and recovered to \$4,409,774 in 1899. The exports from the United States to the Philippines were \$162,466 in 1896, and in 1899 they were \$404,171. The British domestic exports to the Philippines in 1897 amounted to £400,264. In the year ending June 30, 1900, the imports into the Philippines were larger than in any previous year since 1880, the total value being \$23,039,587, whereas in 1895, 1896, and 1897 they scarcely exceeded \$10,000,000 in any one year, and in the period from 1880 to 1894 inclusive they averaged \$17,000,000. The average value of imports from the United States from 1887 to 1891 was \$130,662, and from 1892 to 1896 the average was \$135,228. In 1900 the imports from the United States amounted to \$1,656,469. There was an increase in French imports compared with the last years of Spanish rule of 135 per cent.; in German, 62 per cent.; in British, 27 per cent. The principal classes of imports in 1900 were cotton manufactures and cotton; chemicals, drugs, and dyes; breadstuffs; meat and dairy products; malt liquors and cider; books and printed matter; glassware; iron and steel manufactures; leather and manufactures thereof; and wines and spirits. The exports of the Philippines for the year ending June 30, 1900, were \$21,766,440 in value, an increase of 6 per cent. over the average from 1880 to 1894. The quantities of some of the principal exports have decreased, but not the value, especially in the case of Manila hemp, of which 94,000 tons were exported in 1894, with a value of \$7,243,842, and only 75,000 tons in 1900, with a value of \$11,398,943. The decline in production is partly accounted for by the disturbed condition of the country, preventing agricultural and productive development, and partly by the retention in the producing districts of the hemp until it suits the financial convenience of the interested parties to export it. There is a railroad, 122 miles long, running northward from Manila through Luzon to Dagupan. There were 720 miles of telegraph lines and cables, which have been increased since the American occupation to 3,141 miles. In Negros more sugar was in cultivation in 1900 than ever before. The cultivation of rice in some provinces was retarded by the loss of draught cattle through disease and war, and the condition was made worse by the appearance of the rinderpest among the caribao.

Military Operations.—After the first series of encounters with American troops Aguinaldo, the chief of the insurrection in Luzon, who had been proclaimed President of the Philippine Republic, abandoned his military organization, finding that his compatriots, however securely they intrenched themselves, would not stand up against a vigorous charge of the smallest body of American soldiers, and started a guerrilla warfare, for which the conditions of the country offered peculiar advantages, enabling the insurgents to appear and disappear at their convenience. Whenever a patrol or a supply train with a small escort was passing they would gather with arms in their hands for the attack, and immediately after-

erations against concentrated field forces of insurgents. The number of men shot from ambush by small guerrilla bands exceeded the number of fatal casualties of any previous time. For the six months from Jan. 31 to July 31, 1900, the total number of deaths in the army was 24 officers and 971 enlisted men, of whom 4 officers and 204 men were killed in action, 3 officers and 43 men died of wounds, and 17 officers and 724 men died from disease and other causes. The daily average of deaths was 4.7, and it has steadily increased, the men becoming more and more debilitated by service in the tropical climate. In June, 1900, out of a total of 63,284, there were 5,563, or 8.79 per cent., sick in hospital. The most difficult

QUARTERMASTER'S WHARF, MANILA.

ward they could return within the American lines in the white garb of the country, and resume the attitude of peaceful natives. A widely scattered formation of Filipinos quickly followed the adoption of guerrilla tactics, and this necessitated a corresponding dispersion of American troops and put a greater strain upon the garrison than regular warfare could. There were 53 military stations in the islands on Nov. 1, 1899. By Sept. 1, 1900, the number had increased to 413. The consequence of this extension of the field of operations was that regular combats were no longer fought, yet the losses were not inconsiderable in the large number of minor affairs. During this period the casualties among the Americans were 268 killed, 750 wounded, and 55 captured; among the Filipinos, 3,227 killed, 694 wounded, and 2,684 captured. The extensive distribution of troops and the apparently desultory work strained the endurance of the soldiers to the utmost, and demanded greater discipline and courage as high as they exhibited during the period of regular op-

problem in the commissariat service was that of supplying fresh meat to the military posts. The meat was brought to Manila in naval refrigerating ships, and in transit from there to outlying stations much of it spoiled and was condemned on arrival. The losses of stores were abnormally large, but theft or capture accounts for less than 3 per cent. of the loss. The difficulties of transport increased in proportion to the extent of territory to be protected. The native ponies proved most successful.

The policy of guerrilla warfare was adopted at a council of war held at Bayambang on Nov. 12, 1899, which was attended by Gen. Aguinaldo and many other Filipino military leaders. A resolution was adopted that Aguinaldo's insurgent forces, constituting the northern army, were incapable of further resistance in the field, and as a consequence it was decided to disband the army, the generals and the men to return to their own provinces with a view of organizing for resistance by means of guerrilla warfare. Uniforms were thenceforth

discarded, and the American soldiers, who from the first were exasperated by every form of Malay treachery and a total disregard of the rules of civilized warfare and of the restraints of honor as understood by themselves, had now no means of recognizing the foes who were the heroes of the native communities, and often the most forward in their offers of loyalty and services. This made the Americans more relentless and increased their contempt for the Filipino character, which in turn made the Filipinos more bitter in their hatred for the Americans, whom they despised for the drunkenness and debauchery in which some indulged, and more ardent and united in their alleged struggle for national liberty. The army of Trias in the

of schools, their open activity was commendable. At the same time they were exacting contributions and supplies and recruiting men for the Philippine forces and sending all possible military information to the Filipino leaders. Wherever in any part of the islands a group of insurgents was active all contiguous towns contributed to its support, and without their aid it could not subsist. The towns, therefore, although in American occupation and having a municipal organization established and controlled by the American military commanders, were the bases for all military activities of the insurgents, not only furnishing supplies for the flying columns of guerrillas, but affording secure

south was still intact, and was only broken up by the campaign of Gen. Bates, in which Gen. Schwan's column got in the rear of the rebels and shut them off when Gen. Wheaton advanced in January, 1900. The policy of the United States Government, which was loyally carried out by the commanders in the Philippines, forbade a resort to the retaliatory measures usually adopted to check the treacherous conduct of an irregular foe. Punishment was not visited on the villages and towns, in which it was attempted to institute municipal government under American auspices. While the guerrilla warfare was at its height most of the towns throughout the archipelago, under the advice and control of the military authorities, organized municipal governments, for which kind of local administration the people evinced such intelligent capacity as to encourage the expectation of rapid progress in the art of self-government when the larger political administrations could be organized. The *presidentes* and other town officials installed by the military authorities after the people had signified their choice readily subscribed to the obligation of exclusive fidelity to the sovereign power of the United States, and outwardly they complied with all due forms of decorum and loyalty. They acted openly in behalf of the Americans, yet secretly they aided the insurgents. They even appeared zealous for the success of the institutions introduced by the Americans. In all matters touching the peace of the town, the regulation of markets, the building of roads, streets, and bridges, and the institution

places of refuge. This was true of all parts of the archipelago excepting the part of Mindanao occupied by Moros and the Jolo group. The Moros were in no way subject to Tagalog influence, and while hostility to Americans ran high in Luzon and the other islands they appeared to be satisfied with American control and anxious to maintain existing conditions. The success of the guerrilla system depended upon unity of action among the native population. How such unity was brought about, the American officers could not understand. How the officials installed by the Americans and other Filipinos who professed with apparent sincerity to believe American sovereignty to be beneficial and necessary were influenced to aid the insurgents, was inexplicable. Intimidation accounted for the situation to some extent, and captured correspondence revealed the efforts of the insurgent leaders to intimidate and control the people. Fear, however, could not be the only motive, and Gen. MacArthur thought it more probable that the adhesive principle came from ethnological homogeneity, which induces men to respond for a time to the appeals of consanguineous leadership even when such action is opposed to their own interest and convictions of expediency. He tried to ascertain by inquiries among the various social classes what were the definite aspirations of the insurgents. The leaders themselves seemed to have no expectation of founding a stable independent Philippine republic except with the support of the military and naval power of the United States

to preserve and defend it. Their desires, as far as they are based on patriotic ideals and not on personal ambition, greed, and love of power, are compatible with the American policy, as conceived by Gen. MacArthur, which must result in planting republican institutions throughout the archipelago accompanied by the safeguards of personal, political, and religious liberty which are possible only under the auspices of the Constitution of the United States, so that in its ultimate form the archipelago shall assume the appearance of one or more self-supporting commonwealths, with a population attached to their institutions and capable of maintaining them, even in the improbable event of the withdrawal of the creative power. At present and for many years to come the necessity of a large American military and naval force is apparent. Education is the means required for bringing about political enlightenment. Considerable progress has been made, and, considering the circumstances, the results are surprising. The almost universal aspiration for education and the specific desire to learn the English language must be regarded as an involuntary expression of friendship and of confidence in American motives and ultimate aims. The people are intelligent, generous, and flexible, and will probably yield quickly to political tuition when thoroughly informed of American institutions and purposes.

The maintenance of a great many widely scattered garrisons, with consequent increase in the perils and hardships of the soldiers and in the cost of administration, transport, and supply, was rendered expedient because the insurgent Tagalogs deliberately adopted the policy of murdering all their countrymen who were friendly to the United States. As rapidly as the American troops occupied territory the policy was followed of inviting inhabitants to return to their peaceful vocations and of aiding them in the re-establishment of their local government, and the protection of the United States was promised. To render efficient protection to peaceful and unarmed Filipinos who submitted it was necessary to maintain the American forces in the Philippines at almost the same strength as was required when Aguinaldo had a large and well-armed army in the field. The actual power of resistance possessed by the insurgents decreased rapidly as the Americans extended the posts, until their military activity was little more than a form of brigandage, but the influence that they exercised over the sympathies or fears of the people diminished slowly. The ladrones, or robbers, who crop up in the islands always in troublous times, took advantage of the rebellion and worked in harmony with the insurrectos, who supplied them with arms. A more stringent way of proceeding was adopted later, when the guerrilla war became
